GEOMETRY
In *Geometry*, you will develop reasoning and problem solving skills as you study topics such as congruence and similarity, and apply properties of lines, triangles, quadrilaterals, and circles. You will also develop problem solving skills by using length, perimeter, area, circumference, surface area, and volume to solve real-world problems.

In addition to its geometry content, *Geometry* includes numerous examples and exercises involving algebra, data analysis, and probability. These math topics often appear on standardized tests, so maintaining your familiarity with them is important. To help you prepare for standardized tests, *Geometry* provides instruction and practice on standardized test questions in a variety of formats—multiple choice, short response, extended response, and so on. Technology support for both learning geometry and preparing for standardized tests is available at classzone.com.
About the Authors

**Ron Larson** is a professor of mathematics at Penn State University at Erie, where he has taught since receiving his Ph.D. in mathematics from the University of Colorado. Dr. Larson is well known as the author of a comprehensive program for mathematics that spans middle school, high school, and college courses. Dr. Larson’s numerous professional activities keep him in constant touch with the needs of teachers and supervisors. He closely follows developments in mathematics standards and assessment.

**Laurie Boswell** is a mathematics teacher at The Riverside School in Lyndonville, Vermont, and has taught mathematics at all levels, elementary through college. A recipient of the Presidential Award for Excellence in Mathematics Teaching, she was also a Tandy Technology Scholar. She served on the NCTM Board of Directors (2002–2005), and she speaks frequently at regional and national conferences on topics related to instructional strategies and course content.

**Timothy D. Kanold** is the superintendent of Adlai E. Stevenson High School District 125 in Lincolnshire, Illinois. Dr. Kanold served as a teacher and director of mathematics for 17 years prior to becoming superintendent. He is the recipient of the Presidential Award for Excellence in Mathematics and Science Teaching, and a past president of the Council for Presidential Awardees in Mathematics. Dr. Kanold is a frequent speaker at national and international mathematics meetings.

**Lee Stiff** is a professor of mathematics education in the College of Education and Psychology of North Carolina State University at Raleigh and has taught mathematics at the high school and middle school levels. He served on the NCTM Board of Directors and was elected President of NCTM for the years 2000–2002. He is a recipient of the W. W. Rankin Award for Excellence in Mathematics Education presented by the North Carolina Council of Teachers of Mathematics.

Essentials of Geometry

Prerequisite Skills ................................................................. xxii

1.1 Identify Points, Lines, and Planes ........................................... 2
1.2 Use Segments and Congruence ............................................... 9
1.3 Use Midpoint and Distance Formulas ..................................... 15
   Mixed Review of Problem Solving ....................................... 23
1.4 Measure and Classify Angles ................................................ 24
   Investigating Geometry Construction:
   Copy and Bisect Segments and Angles .................................. 33
1.5 Describe Angle Pair Relationships ......................................... 35
1.6 Classify Polygons ............................................................... 42
1.7 Find Perimeter, Circumference, and Area ................................ 49
   Investigating Geometry Activity: Investigate Perimeter and Area .. 48
   Problem Solving Workshop ............................................... 57
   Mixed Review of Problem Solving ....................................... 58

ASSESSMENT

Quizzes ................................................................................. 22, 41, 56
Chapter Summary and Review ................................................. 59
Chapter Test .............................................................................. 64
Algebra Review: Solve Linear Equations and Word Problems ....... 65
★ Standardized Test Preparation and Practice ............................ 66

Activities ................................................................. 1, 3, 14, 21, 25, 43, 52

Chapter 1 Highlights

PROBLEM SOLVING
• Mixed Review of Problem Solving, 23, 58
• Multiple Representations, 41, 55, 57
• Multi-Step Problems, 8, 14, 23, 46, 54, 55, 58
• Using Alternative Methods, 57
• Real-World Problem Solving Examples, 10, 15, 27, 36, 44, 51, 65

★ ASSESSMENT
• Standardized Test Practice Examples, 18, 50
• Multiple Choice, 6, 13, 20, 29, 39, 44, 46, 53
• Short Response/Extended Response, 7, 12, 14, 20, 22, 23, 30, 32, 40, 47, 54, 55, 58, 66
• Writing/Open-Ended, 5, 12, 19, 23, 28, 38, 44, 52, 58

TECHNOLOGY
At classzone.com:
• Animated Geometry, 1, 3, 14, 21, 25, 43, 52
• @Home Tutor, xxii, 7, 13, 21, 31, 40, 46, 48, 54, 60
• Online Quiz, 8, 14, 22, 32, 41, 47, 56
• Animated Algebra (Algebra Review), 65
• State Test Practice, 23, 58, 69
CHAPTER 2

Reasoning and Proof

Prerequisite Skills ................................................................. 70

2.1 Use Inductive Reasoning ...................................................... 72

2.2 Analyze Conditional Statements ....................................... 79

2.3 Apply Deductive Reasoning .............................................. 87

2.4 Use Postulates and Diagrams ............................................ 96

2.5 Reason Using Properties from Algebra ............................... 105

2.6 Prove Statements about Segments and Angles ..................... 112

2.7 Prove Angle Pair Relationships ........................................ 124

Investigating Geometry Activity: Logic Puzzles ....................... 86
Investigating Geometry Activity: Justify a Number Trick .......... 104
Investigating Geometry Activity: Angles and Intersecting Lines 122

Mixed Review of Problem Solving ........................................ 103

Problem Solving Workshop .................................................... 120

Mixed Review of Problem Solving ........................................ 132

ASSESSMENT

Quizzes .................................................................................. 93, 111, 131
Chapter Summary and Review .............................................. 133
Chapter Test ........................................................................... 138
Algebra Review: Simplify Rational and Radical Expressions ..... 139
★ Standardized Test Preparation and Practice ....................... 140

Activities ............... 71, 72, 81, 88, 97, 106, 119, 125

Chapter 2 Highlights

PROBLEM SOLVING

• Mixed Review of Problem Solving, 103, 132
• Multiple Representations, 77, 111, 120
• Multi-Step Problems, 85, 102, 103, 110, 119, 130, 132
• Using Alternative Methods, 120
• Real-World Problem Solving Examples, 74, 89, 106, 115

★ ASSESSMENT

• Standardized Test Practice Examples, 74, 127
• Multiple Choice, 75, 76, 83, 90, 99, 100, 109, 116, 128
• Short Response/Extended Response, 76, 78, 84, 92, 101, 102, 103, 110, 117, 119, 128, 130, 132, 140
• Writing/Open-Ended, 75, 82, 84, 90, 99, 100, 108, 109, 116, 127, 129, 132

Parallel and Perpendicular Lines

Prerequisite Skills .................................................. 144

3.1 Identify Pairs of Lines and Angles ....................... 147
  Investigating Geometry Activity: Draw and Interpret Lines............... 146

3.2 Use Parallel Lines and Transversals .................. 154
  Investigating Geometry Activity: Parallel Lines and Angles ............. 153

3.3 Prove Lines are Parallel ........................................ 161
  Mixed Review of Problem Solving ....................................... 170

3.4 Find and Use Slopes of Lines ............................ 171
  Investigate Slopes .......................................................... 179

3.5 Write and Graph Equations of Lines ................. 180
  Problem Solving Workshop ............................................... 188

3.6 Prove Theorems about Perpendicular Lines ......... 190
  Mixed Review of Problem Solving ....................................... 200

Assessment

Quizzes ............................................................................. 160, 178, 197
Chapter Summary and Review ........................................... 201
Chapter Test ........................................................................ 206
Algebra Review: Graph and Solve Linear Inequalities ................. 207
★ Standardized Test Preparation and Practice .................. 208
Cumulative Review, Chapters 1–3 ........................................... 212

Chapter 3 Highlights

Problem Solving

- Mixed Review of Problem Solving, 170, 200
- Multiple Representations, 174, 177, 188
- Multi-Step Problems, 166, 168, 170, 177, 186, 200
- Using Alternative Methods, 188
- Real-World Problem Solving Examples, 148, 156, 162, 164, 174, 182, 183, 193, 207

Assessment

- Standardized Test Practice Example, 173
- Multiple Choice, 151, 157, 158, 166, 176, 184, 185, 195, 208
- Short Response/Extended Response, 152, 158, 159, 166, 168, 169, 170, 176, 178, 187, 194, 196, 200
- Writing/Open-Ended, 150, 151, 157, 165, 170, 175, 184, 195, 200

Technology

- State Test Practice, 170, 200, 211
Congruent Triangles

Prerequisite Skills ................................................................. 214

4.1 Apply Triangle Sum Properties ........................................... 217
    Investigating Geometry Activity: Angle Sums in Triangles .......... 216

4.2 Apply Congruence and Triangles ........................................ 225
    Problem Solving Workshop .................................................. 232

4.3 Prove Triangles Congruent by SSS ........................................ 234
    Investigating Geometry Activity: Investigate Congruent Figures .... 233

4.4 Prove Triangles Congruent by SAS and HL ............................ 240
    Technology Activity Investigate Triangles and Congruence .......... 247
    Mixed Review of Problem Solving .......................................... 248

4.5 Prove Triangles Congruent by ASA and AAS ......................... 249

4.6 Use Congruent Triangles ..................................................... 256

4.7 Use Isosceles and Equilateral Triangles ............................... 264

4.8 Perform Congruence Transformations ................................... 272
    Investigating Geometry Activity: Investigate Slides and Flips ........ 271
    Mixed Review of Problem Solving .......................................... 280

ASSESSMENT

Quizzes .............................................................................. 239, 263, 279
Chapter Summary and Review ................................................. 281
Chapter Test ........................................................................ 286
Algebra Review: Solve Inequalities and Absolute Value Equations .... 287
★ Standardized Test Preparation and Practice ......................... 288

Chapter 4 Highlights

Indirect Measurement, p. 257
\( \triangle MLK \cong \triangle MPN \)

Activities ................. 215, 234, 242, 250, 256, 257, 274

PROBLEM SOLVING
• Mixed Review of Problem Solving, 248, 280
• Multiple Representations, 232
• Multi-Step Problems, 223, 231, 248, 269, 280
• Using Alternative Methods, 232
• Real-World Problem Solving Examples, 220, 226, 236, 242, 251, 257, 266, 274

★ ASSESSMENT
• Standardized Test Practice Examples, 235, 251
• Multiple Choice, 222, 223, 229, 237, 243, 246, 253, 260, 261, 268, 279, 288
• Short Response/Extended Response, 221, 224, 230, 231, 238, 248, 253, 254, 262, 267, 268, 270, 278, 280
• Writing/Open-Ended, 221, 228, 229, 230, 243, 244, 248, 252, 259, 267, 276, 277, 278, 280

Similarity

Prerequisite Skills ................................................................. 354

6.1 Ratios, Proportions, and the Geometric Mean ....................... 356
6.2 Use Proportions to Solve Geometry Problems ...................... 364
6.3 Use Similar Polygons ...................................................... 372
   Investigating Geometry Activity: Similar Polygons .............. 371
   Mixed Review of Problem Solving ..................................... 380
6.4 Prove Triangles Similar by AA .......................................... 381
6.5 Prove Triangles Similar by SSS and SAS .............................. 388
6.6 Use Proportionality Theorems ........................................... 397
   Investigating Geometry Activity: Investigate Proportionality 396
   Problem Solving Workshop .............................................. 404
6.7 Perform Similarity Transformations .................................... 409
   Investigating Geometry Activity: Dilations ....................... 408
   Mixed Review of Problem Solving ..................................... 416

Assessment

Quizzes .............................................................................. 370, 395, 415
Chapter Summary and Review ............................................ 417
Chapter Test ........................................................................ 422
Algebra Review: Solve Quadratic Equations and Simplify Radicals 423
★ Standardized Test Preparation and Practice ......................... 424
Cumulative Review, Chapters 1–6 ........................................ 428

Activities ............. 355, 365, 375, 391, 394, 407, 414

Chapter 6 Highlights

Applying Similar Triangles, p. 394
66 in. = x in.
7 ft = 102 ft
Right Triangles and Trigonometry

Prerequisite Skills ................................................................. 430

7.1 Apply the Pythagorean Theorem ........................................ 433
   Investigating Geometry Activity: Pythagorean Theorem ........ 432

7.2 Use the Converse of the Pythagorean Theorem .................. 441
   Investigating Geometry Activity: Converse of the Pythagorean Theorem 440

7.3 Use Similar Right Triangles .............................................. 449
   Investigating Geometry Activity: Similar Right Triangles .......... 448

7.4 Special Right Triangles ................................................... 457
   Mixed Review of Problem Solving ....................................... 465

7.5 Apply the Tangent Ratio .................................................. 466

7.6 Apply the Sine and Cosine Ratios ..................................... 473
   Problem Solving Workshop .............................................. 481

7.7 Solve Right Triangles ..................................................... 483
   Mixed Review of Problem Solving ....................................... 492

ASSESSMENT

Quizzes ................................................................. 447, 464, 489
Chapter Summary and Review ............................................ 493
Chapter Test ............................................................... 498
Algebra Review: Graph and Solve Quadratic Equations ............... 499
★ Standardized Test Preparation and Practice ......................... 500

Chapter 7 Highlights

Activities ....... 431, 434, 442, 450, 460, 462, 475

PROBLEM SOLVING

• Mixed Review of Problem Solving, 465, 492
• Multiple Representations, 439, 480, 481, 488
• Multi-Step Problems, 438, 445, 456, 463, 465, 471, 479, 488, 492
• Using Alternative Methods, 481
• Real-World Problem Solving Examples, 434, 443, 450, 452, 459, 460, 468, 474, 475, 476, 485

★ ASSESSMENT

• Standardized Test Practice Examples, 434, 458
• Multiple Choice, 437, 438, 444, 454, 461, 462, 470, 478, 486, 487, 500

TECHNOLOGY

Quadrilaterals

Prerequisite Skills .................................................................. 504

8.1 Find Angle Measures in Polygons ............................................ 507
Investigating Geometry Activity: Investigate Angle Sums in Polygons 506

8.2 Use Properties of Parallelograms ........................................ 515
Investigating Geometry Activity: Investigate Parallelograms 514

8.3 Show that a Quadrilateral is a Parallelogram ....................... 522
Problem Solving Workshop .................................................. 530
Mixed Review of Problem Solving ........................................... 532

8.4 Properties of Rhombuses, Rectangles, and Squares ............... 533

8.5 Use Properties of Trapezoids and Kites ................................. 542
Investigating Geometry Activity: Midsegment of a Trapezoid ... 541

8.6 Identify Special Quadrilaterals ............................................. 552
Mixed Review of Problem Solving ........................................... 558

ASSESSMENT
Quizzes .................................................................................. 521, 540, 557
Chapter Summary and Review .............................................. 559
Chapter Test ........................................................................... 564
Algebra Review: Graph Nonlinear Functions ......................... 565
★ Standardized Test Preparation and Practice ......................... 566

Chapter 8 Highlights
Polygon Angle Sum, p. 512
\((n - 2) \cdot 180^\circ\)

PROBLEM SOLVING
• Mixed Review of Problem Solving, 532, 558
• Multiple Representations, 513, 530
• Multi-Step Problems, 512, 532, 539, 556, 558
• Using Alternative Methods, 530
• Real-World Problem Solving Examples, 510, 517, 523, 524, 536, 543, 545

★ ASSESSMENT
• Standardized Test Practice Examples, 509, 517, 553
• Multiple Choice, 511, 518, 519, 527, 538, 546, 547, 554, 566
• Short Response/Extended Response, 511, 513, 519, 526, 529, 532, 538, 540, 547, 548, 556, 558
• Writing/Open-Ended, 510, 518, 520, 526, 537, 546, 554, 558

TECHNOLOGY

Properties of Transformations

Prerequisite Skills ................................................................. 570

9.1 Translate Figures and Use Vectors ........................................... 572
9.2 Use Properties of Matrices ....................................................... 580
9.3 Perform Reflections
  Investigating Geometry Activity: Reflections in the Plane .............. 588
  Mixed Review of Problem Solving .............................................. 597
9.4 Perform Rotations
  Problem Solving Workshop ....................................................... 598
9.5 Apply Compositions of Transformations .................................... 608
  Investigating Geometry Activity: Double Reflections .................... 607
9.6 Identify Symmetry ................................................................. 619
9.7 Identify and Perform Dilations
  Investigating Geometry Activity: Investigate Dilations ................... 625
  Technology Activity Compositions with Dilations .......................... 633
  Mixed Review of Problem Solving .............................................. 634

Assessment

Quizzes .................................................................................. 587, 615, 632
Chapter Summary and Review .................................................. 635
Chapter Test ............................................................................. 640
Algebra Review: Multiply Binomials and Use Quadratic Formula .......... 641
  ★ Standardized Test Preparation and Practice .............................. 642
Cumulative Review, Chapters 1–9 ................................................... 646

Chapter 9 Highlights

Identifying Transformations, p. 595
(a, b) → (a, −b)

PROBLEM SOLVING

Using Your Textbook

Your textbook contains many resources that you can use for reference when you are studying or doing your homework.

IN EVERY CHAPTER

**BIG IDEAS** The second page of every chapter includes a list of important ideas developed in the chapter. More information about these ideas appears in the Chapter Summary page at the end of the chapter.

**POSTULATES AND THEOREMS** The Postulate and Theorem notebook displays present geometric properties you will use in reasoning about figures. You may want to copy these statements into your notes.

**KEY CONCEPTS** The Key Concept notebook displays present main ideas of the lesson. You may want to copy these ideas into your notes.

**VOCABULARY** New words and review words are listed in a column on the first page of every lesson. Vocabulary terms appear highlighted and in bold print within the lesson. A list of vocabulary appears in the Chapter Review at the end of each chapter.

**MIXED REVIEW** Every lesson ends with Mixed Review exercises. These exercises help you review earlier lessons and include exercises to prepare you for the next lesson. Page references with the exercises point you to the lessons being reviewed.

STUDENT RESOURCES AT THE BACK OF THE BOOK

- **SKILLS REVIEW HANDBOOK** Use the Skills Review Handbook topics on pages 869–895 to review material learned in previous courses.
- **EXTRA PRACTICE** Use the Extra Practice on pages 896–919 for more exercises or to review a chapter before a test.
- **TABLES** Refer to the tables on pages 920–925 for information about mathematical symbols, measures, formulas, squares, and trigonometric ratios.
- **POSTULATES AND THEOREMS** Refer to pages 926–931 for a complete list of all postulates and theorems presented in the book.
- **ADDITIONAL PROOFS** Refer to pages 932–938 for longer proofs of some of the theorems presented in the book.
- **GLOSSARY** Use the English-Spanish Glossary on pages 939–980 to see definitions in English and Spanish, as well as examples illustrating vocabulary.
- **INDEX** Look up items in the alphabetical Index on pages 981–1000 to find where a particular math topic is covered in the book.
- **WORKED-OUT SOLUTIONS** In each lesson, exercises identified by a red circle have complete worked-out solutions starting on page WS1. These provide a model for what a full solution should include.
- **SELECTED ANSWERS** Use the Selected Answers starting on page SA1 to check your work.
1. Essentials of Geometry

1.1 Identify Points, Lines, and Planes
1.2 Use Segments and Congruence
1.3 Use Midpoint and Distance Formulas
1.4 Measure and Classify Angles
1.5 Describe Angle Pair Relationships
1.6 Classify Polygons
1.7 Find Perimeter, Circumference, and Area

Before

In previous courses, you learned the following skills, which you'll use in Chapter 1: finding measures, evaluating expressions, and solving equations.

Prerequisite Skills

VOCABULARY CHECK
Copy and complete the statement.
1. The distance around a rectangle is called its \( ? \), and the distance around a circle is called its \( ? \).
2. The number of square units covered by a figure is called its \( ? \).

SKILLS AND ALGEBRA CHECK
Evaluate the expression. (Review p. 870 for 1.2, 1.3, 1.7.)
3. \( |4 - 6| \) 4. \( |3 - 11| \) 5. \( |-4 + 5| \) 6. \( |-8 - 10| \)
Evaluate the expression when \( x = 2 \). (Review p. 870 for 1.3–1.6.)
7. \( 5x \) 8. \( 20 - 8x \) 9. \( -18 + 3x \) 10. \( -5x - 4 + 2x \)
Solve the equation. (Review p. 875 for 1.2–1.7.)
11. \( 274 = -2z \) 12. \( 8x + 12 = 60 \) 13. \( 2y - 5 + 7y = -32 \)
14. \( 6p + 11 + 3p = -7 \) 15. \( 8m - 5 = 25 - 2m \) 16. \( -2n + 18 = 5n - 24 \)

@HomeTutor Prerequisite skills practice at classzone.com
In Chapter 1, you will apply the big ideas listed below and reviewed in the Chapter Summary on page 59. You will also use the key vocabulary listed below.

**Big Ideas**

1. Describing geometric figures
2. Measuring geometric figures
3. Understanding equality and congruence

**Key Vocabulary**

- undefined terms, p. 2
  - point, line, plane
- defined terms, p. 3
- line segment, endpoints, p. 3
- ray, opposite rays, p. 3
- postulate, axiom, p. 9
- congruent segments, p. 11
- midpoint, p. 15
- segment bisector, p. 15
- acute, right, obtuse, straight angles, p. 25
- congruent angles, p. 26
- angle bisector, p. 28
- linear pair, p. 37
- vertical angles, p. 37
- polygon, p. 42
- convex, concave, p. 42
- n-gon, p. 43
- equilateral, equiangular, regular, p. 43

**Why?**

Geometric figures can be used to represent real-world situations. For example, you can show a climber’s position along a stretched rope by a point on a line segment.

**Animated Geometry**

The animation illustrated below for Exercise 35 on page 14 helps you answer this question: How far must a climber descend to reach the bottom of a cliff?

Your goal is to find the distance from a climber’s position to the bottom of a cliff.

Use the given information to enter a distance. Then check your answer.

**Animated Geometry at classzone.com**

Other animations for Chapter 1: pages 3, 21, 25, 43, and 52
**Chapter 1 Essentials of Geometry**

**1.1 Identify Points, Lines, and Planes**

**Before**
You studied basic concepts of geometry.

**Now**
You will name and sketch geometric figures.

**Why**
So you can use geometry terms in the real world, as in Ex. 13.

---

**Key Vocabulary**
- undefined terms
  - point, line, plane
- collinear points
- coplanar points
- defined terms
- line segment
- endpoints
- ray
- opposite rays
- intersection

---

In the diagram of a football field, the positions of players are represented by *points*. The yard lines suggest *lines*, and the flat surface of the playing field can be thought of as a *plane*.

In geometry, the words *point*, *line*, and *plane* are **undefined terms**. These words do not have formal definitions, but there is agreement about what they mean.

---

**TAKE NOTES**
When you write new concepts and yellow-highlighted vocabulary in your notebook, be sure to copy all associated diagrams.

---

**KEY CONCEPT**

**Undefined Terms**

**Point** A *point* has no dimension. It is represented by a dot.

**Line** A *line* has one dimension. It is represented by a line with two arrowheads, but it extends without end.

Through any two points, there is exactly one line. You can use any two points on a line to name it.

**Plane** A *plane* has two dimensions. It is represented by a shape that looks like a floor or a wall, but it extends without end.

Through any three points not on the same line, there is exactly one plane. You can use three points that are not all on the same line to name a plane.

---

**Collinear points** are points that lie on the same line. **Coplanar points** are points that lie in the same plane.
1.1 Identify Points, Lines, and Planes

**DEFINED TERMS**
In geometry, terms that can be described using known words such as point or line are called defined terms.

**EXAMPLE 1** Name points, lines, and planes

a. Give two other names for \( \overrightarrow{PQ} \) and for plane \( R \).

b. Name three points that are collinear.
Name four points that are coplanar.

**Solution**

a. Other names for \( \overrightarrow{PQ} \) are \( \overrightarrow{QP} \) and line \( n \). Other names for plane \( R \) are plane \( SVT \) and plane \( PTV \).

b. Points \( S, P, \) and \( T \) lie on the same line, so they are collinear. Points \( S, P, T, \) and \( V \) lie in the same plane, so they are coplanar.

**GUIDED PRACTICE** for Example 1

1. Use the diagram in Example 1. Give two other names for \( \overrightarrow{ST} \). Name a point that is not coplanar with points \( Q, S, \) and \( T \).

**KEY CONCEPT**
For Your Notebook

**Defined Terms: Segments and Rays**

Line \( AB \) (written as \( \overline{AB} \)) and points \( A \) and \( B \) are used here to define the terms below.

- **Segment** The **line segment** \( AB \), or **segment** \( AB \), (written as \( \overline{AB} \)) consists of the **endpoints** \( A \) and \( B \) and all points on \( AB \) that are between \( A \) and \( B \). Note that \( \overline{AB} \) can also be named \( \overline{BA} \).

- **Ray** The **ray** \( AB \) (written as \( \overrightarrow{AB} \)) consists of the endpoint \( A \) and all points on \( AB \) that lie on the same side of \( A \) as \( B \).

Note that \( \overrightarrow{AB} \) and \( \overrightarrow{BA} \) are different rays.

If point \( C \) lies on \( AB \) between \( A \) and \( B \), then \( \overrightarrow{CA} \) and \( \overrightarrow{CB} \) are **opposite rays**.

Segments and rays are collinear if they lie on the same line. So, opposite rays are collinear. Lines, segments, and rays are coplanar if they lie in the same plane.
**Example 2** Name segments, rays, and opposite rays

a. Give another name for $\overline{GH}$.

b. Name all rays with endpoint $J$. Which of these rays are opposite rays?

**Solution**

a. Another name for $\overline{GH}$ is $\overline{HG}$.

b. The rays with endpoint $J$ are $\overrightarrow{JE}$, $\overrightarrow{JG}$, $\overrightarrow{JF}$, and $\overrightarrow{JH}$. The pairs of opposite rays with endpoint $J$ are $\overrightarrow{JE}$ and $\overrightarrow{JF}$, and $\overrightarrow{JG}$ and $\overrightarrow{JH}$.

**Avoid Errors**

In Example 2, $\overrightarrow{JC}$ and $\overrightarrow{JP}$ have a common endpoint, but are not collinear. So they are not opposite rays.

**Example 3** Sketch intersections of lines and planes

a. Sketch a plane and a line that is in the plane.

b. Sketch a plane and a line that does not intersect the plane.

c. Sketch a plane and a line that intersects the plane at a point.

**Solution**

a. 

b. 

C.
EXAMPLE 4 Sketch intersections of planes

Sketch two planes that intersect in a line.

Solution

\textbf{STEP 1} Draw a vertical plane. Shade the plane.

\textbf{STEP 2} Draw a second plane that is horizontal. Shade this plane a different color. Use dashed lines to show where one plane is hidden.

\textbf{STEP 3} Draw the line of intersection.

\begin{tikzpicture}
\begin{scope}[scale=0.5]
\draw[fill=blue!20,draw=black] (0,0) -- (10,0) -- (10,5) -- (0,5) -- cycle;
\fill[fill=red!20, draw=black] (10,0) -- (20,0) -- (20,5) -- (10,5) -- cycle;
\draw[thick] (0,0) -- (10,0) -- (10,5) -- (0,5) -- cycle;
\draw[thick] (10,0) -- (20,0) -- (20,5) -- (10,5) -- cycle;
\end{scope}
\end{tikzpicture}

\textbf{Guided Practice} for Examples 3 and 4

4. Sketch two different lines that intersect a plane at the same point.

Use the diagram at the right.

5. Name the intersection of \(\overrightarrow{PQ}\) and line \(k\).

6. Name the intersection of plane \(A\) and plane \(B\).

7. Name the intersection of line \(k\) and plane \(A\).

1. \textbf{EXERCISES}

1. \textbf{VOCABULARY} Write in words what each of the following symbols means.
   \begin{itemize}
   \item a. \(Q\)
   \item b. \(MN\)
   \item c. \(\overrightarrow{ST}\)
   \item d. \(\overrightarrow{FG}\)
   \end{itemize}

2. \textbf{WRITING} \textit{Compare} collinear points and coplanar points. Are collinear points also coplanar? Are coplanar points also collinear? \textit{Explain}.

1. \textbf{NAMING POINTS, LINES, AND PLANES} In Exercises 3–7, use the diagram.

3. Give two other names for \(\overrightarrow{WQ}\).

4. Give another name for plane \(V\).

5. Name three points that are collinear. Then name a fourth point that is \textit{not} collinear with these three points.

6. Name a point that is \textit{not} coplanar with \(R, S, \text{ and } T\).

7. \textbf{WRITING} Is point \(W\) coplanar with points \(Q\) and \(R\)? \textit{Explain}.

\begin{tikzpicture}
\begin{scope}[scale=0.5]
\draw[thick] (0,0) -- (10,0) -- (10,5) -- (0,5) -- cycle;
\draw[thick] (10,0) -- (20,0) -- (20,5) -- (10,5) -- cycle;
\end{scope}
\end{tikzpicture}
NAMING SEGMENTS AND RAYS  In Exercises 8–12, use the diagram.

8. What is another name for $\overline{ZY}$?

9. Name all rays with endpoint $V$.

10. Name two pairs of opposite rays.

11. Give another name for $\overline{WV}$.

12. ERROR ANALYSIS  A student says that $\overrightarrow{VW}$ and $\overrightarrow{VZ}$ are opposite rays because they have the same endpoint. Describe the error.

13. ★ MULTIPLE CHOICE  Which statement about the diagram at the right is true?
   A  $A, B,$ and $C$ are collinear.
   B  $C, D, E,$ and $G$ are coplanar.
   C  $B$ lies on $\overrightarrow{GE}$.
   D  $\overrightarrow{EF}$ and $\overrightarrow{ED}$ are opposite rays.

SKETCHING INTERSECTIONS  Sketch the figure described.

14. Three lines that lie in a plane and intersect at one point

15. One line that lies in a plane, and one line that does not lie in the plane

16. ★ MULTIPLE CHOICE  Line $AB$ and line $CD$ intersect at point $E$. Which of the following are opposite rays?
   A  $\overrightarrow{EC}$ and $\overrightarrow{ED}$
   B  $\overrightarrow{CE}$ and $\overrightarrow{DE}$
   C  $\overrightarrow{AB}$ and $\overrightarrow{BA}$
   D  $\overrightarrow{AE}$ and $\overrightarrow{BE}$

READING DIAGRAMS  In Exercises 17–22, use the diagram at the right.

17. Name the intersection of $\overrightarrow{PR}$ and $\overrightarrow{HR}$.

18. Name the intersection of plane $EFG$ and plane $FGS$.

19. Name the intersection of plane $PQS$ and plane $HGS$.

20. Are points $P, Q,$ and $F$ collinear? Are they coplanar?

21. Are points $P$ and $G$ collinear? Are they coplanar?

22. Name three planes that intersect at point $E$.

23. SKETCHING PLANES  Sketch plane $J$ intersecting plane $K$. Then draw a line $l$ on plane $J$ that intersects plane $K$ at a single point.

24. NAMING RAYS  Name 10 different rays in the diagram at the right. Then name 2 pairs of opposite rays.

25. SKETCHING  Draw three noncollinear points $J, K,$ and $L$. Sketch $\overrightarrow{JK}$ and add a point $M$ on $\overrightarrow{JK}$. Then sketch $\overrightarrow{ML}$.

26. SKETCHING  Draw two points $P$ and $Q$. Then sketch $\overrightarrow{PQ}$. Add a point $R$ on the ray so that $Q$ is between $P$ and $R$. 

= WORKED-OUT SOLUTIONS  ★ = STANDARDIZED TEST PRACTICE
**ALGEBRA** In Exercises 27–32, you are given an equation of a line and a point. Use substitution to determine whether the point is on the line.

27. \( y = x - 4; A(5, 1) \)
28. \( y = x + 1; A(1, 0) \)
29. \( y = 3x + 4; A(7, 1) \)
30. \( y = 4x + 2; A(1, 6) \)
31. \( y = 3x - 2; A(-1, -5) \)
32. \( y = -2x + 8; A(-4, 0) \)

**GRAPHING** Graph the inequality on a number line. Tell whether the graph is a segment, a ray or rays, a point, or a line.

33. \( x \leq 3 \)
34. \( x \geq -4 \)
35. \( -7 \leq x \leq 4 \)
36. \( x \geq 5 \) or \( x \leq -2 \)
37. \( x \geq -1 \) or \( x \leq 5 \)
38. \( |x| \leq 0 \)

**CHALLENGE** Tell whether each of the following situations involving three planes is possible. If a situation is possible, make a sketch.

a. None of the three planes intersect.

b. The three planes intersect in one line.

c. The three planes intersect in one point.

d. Two planes do not intersect. The third plane intersects the other two.

e. Exactly two planes intersect. The third plane does not intersect the other two.

**EVERYDAY INTERSECTIONS** What kind of geometric intersection does the photograph suggest?

40. 
41. 
42. 

**SHORT RESPONSE** Explain why a four-legged table may rock from side to side even if the floor is level. Would a three-legged table on the same level floor rock from side to side? Why or why not?

43. A surveying instrument is placed on a tripod. The tripod has three legs whose lengths can be adjusted.

a. When the tripod is sitting on a level surface, are the tips of the legs coplanar?

b. Suppose the tripod is used on a sloping surface. The length of each leg is adjusted so that the base of the surveying instrument is level with the horizon. Are the tips of the legs coplanar? Explain.
45. **MULTI-STEP PROBLEM** In a *perspective drawing*, lines that do not intersect in real life are represented by lines that appear to intersect at a point far away on the horizon. This point is called a *vanishing point*. The diagram shows a drawing of a house with two vanishing points.

![Diagram of a house with two vanishing points](image)

a. Trace the black line segments in the drawing. Using lightly dashed lines, join points $A$ and $B$ to the vanishing point $W$. Join points $E$ and $F$ to the vanishing point $V$.

b. Label the intersection of $\overrightarrow{EV}$ and $\overrightarrow{AW}$ as $G$. Label the intersection of $\overrightarrow{FV}$ and $\overrightarrow{BW}$ as $H$.

c. Using heavy dashed lines, draw the hidden edges of the house: $\overline{AG}$, $\overline{EG}$, $\overline{BH}$, $\overline{FH}$, and $\overline{GH}$.

46. **CHALLENGE** Each street in a particular town intersects every existing street exactly one time. Only two streets pass through each intersection.

![Diagram showing 2, 3, and 4 streets](image)

a. A traffic light is needed at each intersection. How many traffic lights are needed if there are 5 streets in the town? 6 streets?

b. *Describe* a pattern you can use to find the number of additional traffic lights that are needed each time a street is added to the town.

---

1.2 Use Segments and Congruence

**Key Vocabulary**
- postulate, axiom
- coordinate
- distance
- between
- congruent segments

In Geometry, a rule that is accepted without proof is called a *postulate* or *axiom*. A rule that can be proved is called a *theorem*, as you will see later. Postulate 1 shows how to find the distance between two points on a line.

**POSTULATE**

**Postulate 1 Ruler Postulate**
The points on a line can be matched one to one with the real numbers. The real number that corresponds to a point is the coordinate of the point.

The distance between points A and B, written as AB, is the absolute value of the difference of the coordinates of A and B.

\[ AB = |x_2 - x_1| \]

In the diagrams above, the small numbers in the coordinates \( x_1 \) and \( x_2 \) are called *subscripts*. The coordinates are read as “\( x \) sub one” and “\( x \) sub two.”

The distance between points A and B, or AB, is also called the *length* of \( \overline{AB} \).

**Example 1 Apply the Ruler Postulate**

Measure the length of \( \overline{ST} \) to the nearest tenth of a centimeter.

**Solution**
Align one mark of a metric ruler with S. Then estimate the coordinate of T. For example, if you align S with 2, T appears to align with 5.4.

\[ ST = |5.4 - 2| = 3.4 \]

Use Ruler Postulate.

The length of \( \overline{ST} \) is about 3.4 centimeters.

**Before**
You learned about points, lines, and planes.

**Now**
You will use segment postulates to identify congruent segments.

**Why?**
So you can calculate flight distances, as in Ex. 33.
**Adding Segment Lengths** When three points are collinear, you can say that one point is between the other two.

![Diagram of collinear points A, B, and C.](image)

Point B is between points A and C.  

Point E is not between points D and F.

**Example 2** Apply the Segment Addition Postulate

**Maps** The cities shown on the map lie approximately in a straight line. Use the given distances to find the distance from Lubbock, Texas, to St. Louis, Missouri.

**Solution**

Because Tulsa, Oklahoma, lies between Lubbock and St. Louis, you can apply the Segment Addition Postulate.

\[LS = LT + TS = 380 + 360 = 740\]

The distance from Lubbock to St. Louis is about 740 miles.

**Guided Practice** for Examples 1 and 2

Use a ruler to measure the length of the segment to the nearest \(\frac{1}{8}\) inch.

1. ![Segment MN](image)

2. ![Segment PQ](image)

In Exercises 3 and 4, use the diagram shown.

3. Use the Segment Addition Postulate to find \(XZ\).

4. In the diagram, \(WY = 30\). Can you use the Segment Addition Postulate to find the distance between points \(W\) and \(Z\)? Explain your reasoning.
1.2 Use Segments and Congruence

**EXAMPLE 3** Find a length

Use the diagram to find \( GH \).

**Solution**

Use the Segment Addition Postulate to write an equation. Then solve the equation to find \( GH \).

\[
FH = FG + GH \quad \text{Segment Addition Postulate}
\]

\[
36 = 21 + GH \quad \text{Substitute 36 for } FH \text{ and 21 for } FG.
\]

\[
15 = GH \quad \text{Subtract 21 from each side.}
\]

**CONGRUENT SEGMENTS** Line segments that have the same length are called **congruent segments**. In the diagram below, you can say “the length of \( AB \) is equal to the length of \( CD \),” or you can say “\( AB \) is congruent to \( CD \).” The symbol \( \equiv \) means “is congruent to.”

**READ DIAGRAMS**

In the diagram, the red tick marks indicate that \( AB \equiv CD \).

**EXAMPLE 4** Compare segments for congruence

Plot \( J(−3, 4) \), \( K(2, 4) \), \( L(1, 3) \), and \( M(1, −2) \) in a coordinate plane. Then determine whether \( JK \) and \( LM \) are congruent.

**Solution**

To find the length of a horizontal segment, find the absolute value of the difference of the \( x \)-coordinates of the endpoints.

\[
JK = |2 − (−3)| = 5 \quad \text{Use Ruler Postulate.}
\]

To find the length of a vertical segment, find the absolute value of the difference of the \( y \)-coordinates of the endpoints.

\[
LM = |−2 − 3| = 5 \quad \text{Use Ruler Postulate.}
\]

\( JK \) and \( LM \) have the same length. So, \( JK \equiv LM \).

**GUIDED PRACTICE** for Examples 3 and 4

5. Use the diagram at the right to find \( WX \).

6. Plot the points \( A(−2, 4) \), \( B(3, 4) \), \( C(0, 2) \), and \( D(0, −2) \) in a coordinate plane. Then determine whether \( AB \) and \( CD \) are congruent.
1.2 EXERCISES

SKILL PRACTICE

In Exercises 1 and 2, use the diagram at the right.

1. VOCABULARY Explain what $MN$ means and what $PN$ means.

2. ★ WRITING Explain how you can find $PN$ if you know $PQ$ and $QN$. How can you find $PN$ if you know $MP$ and $MN$?

MEASUREMENT Measure the length of the segment to the nearest tenth of a centimeter.

3.

4.

5.

SEGMENT ADDITION POSTULATE Find the indicated length.

6. Find $MP$.

7. Find $RT$.

8. Find $UW$.

10. Find $BC$.

11. Find $DE$.

12. ERROR ANALYSIS In the figure at the right, $AC = 14$ and $AB = 9$. Describe and correct the error made in finding $BC$.

CONGRUENCE In Exercises 13–15, plot the given points in a coordinate plane. Then determine whether the line segments named are congruent.

13. $A(0, 1), B(4, 1), C(1, 2), D(1, 6); \overline{AB}$ and $\overline{CD}$

14. $J(-6, -8), K(-6, 2), L(-2, -4), M(-6, -4); \overline{JK}$ and $\overline{LM}$

15. $R(-200, 300), S(200, 300), T(300, -200), U(300, 100); \overline{RS}$ and $\overline{TU}$

ALGEBRA Use the number line to find the indicated distance.

16. $JK$

17. $JL$

18. $JM$

19. $KM$

20. ★ SHORT RESPONSE Use the diagram. Is it possible to use the Segment Addition Postulate to show that $FB > CB$ or that $AC > DB$? Explain.
PROBLEM SOLVING

32. SCIENCE The photograph shows an insect called a walkingstick. Use the ruler to estimate the length of the abdomen and the length of the thorax to the nearest \( \frac{1}{4} \) inch. About how much longer is the walkingstick’s abdomen than its thorax?

33. MODEL AIRPLANE In 2003, a remote-controlled model airplane became the first ever to fly nonstop across the Atlantic Ocean. The map shows the airplane’s position at three different points during its flight.

- **a.** Find the total distance the model airplane flew.
- **b.** The model airplane’s flight lasted nearly 38 hours. Estimate the airplane’s average speed in miles per hour.
34. **SHORT RESPONSE** The bar graph shows the win-loss record for a lacrosse team over a period of three years.

- Use the scale to find the length of the yellow bar for each year. What does the length represent?
- For each year, find the percent of games lost by the team.
- Explain how you are applying the Segment Addition Postulate when you find information from a stacked bar graph like the one shown.

35. **MULTI-STEP PROBLEM** A climber uses a rope to descend a vertical cliff. Let $A$ represent the point where the rope is secured at the top of the cliff, let $B$ represent the climber’s position, and let $C$ represent the point where the rope is secured at the bottom of the cliff.

- **Model** Draw and label a line segment that represents the situation.
- **Calculate** If $AC$ is 52 feet and $AB$ is 31 feet, how much farther must the climber descend to reach the bottom of the cliff?

36. **CHALLENGE** Four cities lie along a straight highway in this order: City A, City B, City C, and City D. The distance from City A to City B is 5 times the distance from City B to City C. The distance from City A to City D is 2 times the distance from City A to City B. Copy and complete the mileage chart.

Mixed Review

Simplify the expression. Write your answer in simplest radical form. (p. 874)

37. $\sqrt{45} + 99$
38. $\sqrt{14} + 36$
39. $\sqrt{42} + (-2)^2$

Solve the equation. (p. 875)

40. $4m + 5 = 7 + 6m$
41. $13 - 4h = 3h - 8$
42. $17 + 3x = 18x - 28$

Use the diagram to decide whether the statement is true or false. (p. 2)

43. Points $A$, $C$, $E$, and $G$ are coplanar.
44. $\overline{DF}$ and $\overline{AG}$ intersect at point $E$.
45. $\overline{AE}$ and $\overline{EG}$ are opposite rays.
### 1.3 Use Midpoint and Distance Formulas

**Before**
You found lengths of segments.

**Now**
You will find lengths of segments in the coordinate plane.

**Why?**
So you can find an unknown length, as in Example 1.

**Key Vocabulary**
- midpoint
- segment bisector

#### ACTIVITY FOLD A SEGMENT BISECTOR

**STEP 1**
Draw $\overline{AB}$ on a piece of paper.

**STEP 2**
Fold the paper so that $B$ is on top of $A$.

**STEP 3**
Label point $M$. Compare $AM$, $MB$, and $AB$.

**MIDPOINTS AND BISECTORS** The midpoint of a segment is the point that divides the segment into two congruent segments. A segment bisector is a point, ray, line, line segment, or plane that intersects the segment at its midpoint. A midpoint or a segment bisector bisects a segment.

- $M$ is the midpoint of $\overline{AB}$. So, $AM = MB$ and $AM = MB$.
- $\overline{CD}$ is a segment bisector of $\overline{AB}$. So, $AM = MB$ and $AM = MB$.

#### EXAMPLE 1 Find segment lengths

**SKATEBOARD** In the skateboard design, $\overline{WV}$ bisects $\overline{XY}$ at point $T$, and $XT = 39.9$ cm. Find $XY$.

**Solution**
Point $T$ is the midpoint of $\overline{XY}$. So, $XT = TY = 39.9$ cm.

\[
XY = XT + TY \quad \text{Segment Addition Postulate}
\]
\[
= 39.9 + 39.9 \quad \text{Substitute.}
\]
\[
= 79.8 \text{ cm} \quad \text{Add.}
\]
EXAMPLE 2  Use algebra with segment lengths

**ALGEBRA**  Point M is the midpoint of VW. Find the length of VM.

**Solution**

**STEP 1**  Write and solve an equation. Use the fact that VM = MW.

\[
VM = MW \\
4x - 1 = 3x + 3 \\
x - 1 = 3 \\
\text{Subtract 3x from each side.} \\
x = 4 \\
\text{Add 1 to each side.}
\]

**STEP 2**  Evaluate the expression for VM when x = 4.

\[
VM = 4x - 1 = 4(4) - 1 = 15
\]

So, the length of VM is 15.

**CHECK**  Because VM = MW, the length of MW should be 15. If you evaluate the expression for MW, you should find that MW = 15.

\[
MW = 3x + 3 = 3(4) + 3 = 15
\]

✓

**GUIDED PRACTICE**  for Examples 1 and 2

In Exercises 1 and 2, identify the segment bisector of PQ. Then find PQ.

1. 

2.

**COORDINATE PLANE**  You can use the coordinates of the endpoints of a segment to find the coordinates of the midpoint.

**KEY CONCEPT**  For Your Notebook

**The Midpoint Formula**

The coordinates of the midpoint of a segment are the averages of the x-coordinates and of the y-coordinates of the endpoints.

If \(A(x_1, y_1)\) and \(B(x_2, y_2)\) are points in a coordinate plane, then the midpoint \(M\) of \(AB\) has coordinates

\[
\left( \frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2} \right)
\]
Example 3  Use the Midpoint Formula

a. FIND MIDPOINT  The endpoints of RS are R(1, −3) and S(4, 2). Find the coordinates of the midpoint M.

b. FIND ENDPOINT  The midpoint of JK is M(2, 1). One endpoint is J(1, 4). Find the coordinates of endpoint K.

Solution
a. FIND MIDPOINT  Use the Midpoint Formula.

\[ \frac{1 + 4}{2}, \frac{-3 + 2}{2} = \left(\frac{5}{2}, \frac{-1}{2}\right) \]

The coordinates of the midpoint M are \( \left(\frac{5}{2}, \frac{-1}{2}\right) \).

b. FIND ENDPOINT  Let \((x, y)\) be the coordinates of endpoint K. Use the Midpoint Formula.

\[ \text{STEP 1 Find } x. \quad \text{STEP 2 Find } y. \]

\[ \frac{1 + x}{2} = 2, \quad \frac{4 + y}{2} = 1 \]

\[ 1 + x = 4, \quad 4 + y = 2 \]

\[ x = 3, \quad y = -2 \]

The coordinates of endpoint K are (3, −2).

Guided Practice for Example 3

3. The endpoints of AB are A(1, 2) and B(7, 8). Find the coordinates of the midpoint M.

4. The midpoint of VW is M(−1, −2). One endpoint is W(4, 4). Find the coordinates of endpoint V.

Distance Formula  The Distance Formula is a formula for computing the distance between two points in a coordinate plane.

Key Concept

The Distance Formula

If \( A(x_1, y_1) \) and \( B(x_2, y_2) \) are points in a coordinate plane, then the distance between A and B is

\[ AB = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}. \]
The Distance Formula is based on the Pythagorean Theorem, which you will see again when you work with right triangles in Chapter 7.

**Distance Formula**

\[(AB)^2 = (x_2 - x_1)^2 + (y_2 - y_1)^2\]

**Pythagorean Theorem**

\[c^2 = a^2 + b^2\]

---

**Example 4** Standardized Test Practice

What is the approximate length of \(RS\) with endpoints \(R(2, 3)\) and \(S(4, -1)\)?

- A) 1.4 units
- B) 4.0 units
- C) 4.5 units
- D) 6 units

**Solution**

Use the Distance Formula. You may find it helpful to draw a diagram.

\[
RS = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}
\]

Distance Formula

\[
= \sqrt{(4 - 2)^2 + (-1 - 3)^2}
\]

Substitute.

\[
= \sqrt{2^2 + (-4)^2}
\]

Subtract.

\[
= \sqrt{4 + 16}
\]

Evaluate powers.

\[
= \sqrt{20}
\]

Add.

\[
= 4.47
\]

Use a calculator to approximate the square root.

The correct answer is C.  A) 1.4 B) 4.0 C) 4.5 D) 6

---

**Guided Practice**

5. In Example 4, does it matter which ordered pair you choose to substitute for \((x_1, y_1)\) and which ordered pair you choose to substitute for \((x_2, y_2)\)? Explain.

6. What is the approximate length of \(AB\), with endpoints \(A(-3, 2)\) and \(B(1, -4)\)?

- A) 6.1 units
- B) 7.2 units
- C) 8.5 units
- D) 10.0 units
1. **VOCABULARY** Copy and complete: To find the length of \( \overline{AB} \), with endpoints \( A(-7, 5) \) and \( B(4, -6) \), you can use the ___.

2. ★ **WRITING** Explain what it means to bisect a segment. Why is it impossible to bisect a line?

### Finding Lengths

- **EXAMPLE 1** on p. 15 for Exs. 3–10
- **EXAMPLE 2** on p. 16 for Exs. 11–16

3. Find \( RT \) if \( RS = \frac{51}{8} \) in.
4. Find \( UW \) if \( VW = \frac{5}{8} \) in.
5. Find \( EG \) if \( EF = 13 \) cm.

6. Find \( BC \) if \( AC = 19 \) cm.
7. Find \( QR \) if \( PR = \frac{91}{2} \) in.
8. Find \( LM \) if \( LN = 137 \) mm.

9. **SEGMENT BISECTOR** Line \( RS \) bisects \( \overline{PQ} \) at point \( R \). Find \( RQ \) if \( PQ = 4\frac{3}{4} \) inches.

10. **SEGMENT BISECTOR** Point \( T \) bisects \( \overline{UV} \). Find \( UV \) if \( UT = 2\frac{7}{8} \) inches.

### Algebra

In each diagram, \( M \) is the midpoint of the segment. Find the indicated length.

11. Find \( AM \).
12. Find \( EM \).
13. Find \( JM \).

14. Find \( PR \).
15. Find \( SU \).
16. Find \( XZ \).

### Finding Midpoints

Find the coordinates of the midpoint of the segment with the given endpoints.

17. \( C(3, 5) \) and \( D(7, 5) \)
18. \( E(0, 4) \) and \( F(4, 3) \)
19. \( G(-4, 4) \) and \( H(6, 4) \)
20. \( J(-7, -5) \) and \( K(-3, 7) \)
21. \( P(-8, -7) \) and \( Q(11, 5) \)
22. \( S(-3, 3) \) and \( T(-8, 6) \)

23. ★ **WRITING** Develop a formula for finding the midpoint of a segment with endpoints \( A(0, 0) \) and \( B(m, n) \). Explain your thinking.
24. **ERROR ANALYSIS** Describe the error made in finding the coordinates of the midpoint of a segment with endpoints \( S(8, 3) \) and \( T(2, -1) \).

\[
\left( \frac{8 + 2}{2}, \frac{3 + (-1)}{2} \right) = (3, 2)
\]

**FINDING ENDPOINTS** Use the given endpoint \( R \) and midpoint \( M \) of \( \overline{RS} \) to find the coordinates of the other endpoint \( S \).

25. \( R(3, 0), M(0, 5) \)
26. \( R(5, 1), M(1, 4) \)
27. \( R(6, -2), M(5, 3) \)
28. \( R(-7, 11), M(2, 1) \)
29. \( R(4, 26), M(-27, 8) \)
30. \( R(-4, -6), M(3, -4) \)

**DISTANCE FORMULA** Find the length of the segment. Round to the nearest tenth of a unit.

31. \( x, y \) \( (1, 2) \)
32. \( x, y \) \( (2, 3) \)
33. \( x, y \) \( (3, -2) \)

34. ★ **MULTIPLE CHOICE** The endpoints of \( MN \) are \( M(-3, -9) \) and \( N(4, 8) \). What is the approximate length of \( MN \)?
   - (A) 1.4 units
   - (B) 7.2 units
   - (C) 13 units
   - (D) 18.4 units

**NUMBER LINE** Find the length of the segment. Then find the coordinate of the midpoint of the segment.

35. \( -4, -2, 0, 2, 4 \)
36. \( -8, -6, -4, -2, 0, 2, 4 \)
37. \( -20, -10, 0, 10, 20, 30 \)

38. \( -30, -20, -10, 0, 10, 20, 30 \)
39. \( -8, -6, -4, -2, 0, 2, 4 \)
40. \( -8, -6, -4, -2, 0, 2, 4 \)

41. ★ **MULTIPLE CHOICE** The endpoints of \( LF \) are \( L(-2, 2) \) and \( F(3, 1) \). The endpoints of \( JR \) are \( J(1, -1) \) and \( R(-2, -3) \). What is the approximate difference in the lengths of the two segments?
   - (A) 2.24
   - (B) 2.86
   - (C) 5.10
   - (D) 7.96

42. ★ **SHORT RESPONSE** One endpoint of \( PQ \) is \( P(-2, 4) \). The midpoint of \( PQ \) is \( M(1, 0) \). Explain how to find \( PQ \).

**COMPARING LENGTHS** The endpoints of two segments are given. Find each segment length. Tell whether the segments are congruent.

43. \( AB: A(0, 2), B(-3, 8) \)
44. \( EF: E(1, 4), F(5, 1) \)
45. \( JK: J(-4, 0), K(4, 8) \)
46. \( CD: C(-2, 2), D(0, -4) \)
47. **CHALLENGE** \( M \) is the midpoint of \( JK \). \( JM = \frac{x}{8} \) and \( JK = \frac{3x}{4} - 6 \). Find \( MK \).

★ = STANDARDIZED TEST PRACTICE

○ = WORKED-OUT SOLUTIONS on p. WS1
48. **WINDMILL** In the photograph of a windmill, \( \overline{ST} \) bisects \( \overline{QR} \) at point \( M \). The length of \( \overline{QM} \) is 18\( \frac{1}{2} \) feet. Find \( QR \) and \( MR \).

49. **DISTANCES** A house and a school are 5.7 kilometers apart on the same straight road. The library is on the same road, halfway between the house and the school. Draw a sketch to represent this situation. Mark the locations of the house, school, and library. How far is the library from the house?

**ARCHAEOLOGY** The points on the diagram show the positions of objects at an underwater archaeological site. Use the diagram for Exercises 50 and 51.

50. Find the distance between each pair of objects. Round to the nearest tenth of a meter if necessary.
   a. \( A \) and \( B \)   b. \( B \) and \( C \)   c. \( C \) and \( D \)
   d. \( A \) and \( D \)   e. \( B \) and \( D \)   f. \( A \) and \( C \)

51. Which two objects are closest to each other? Which two are farthest apart?

52. **WATER POLO** The diagram shows the positions of three players during part of a water polo match. Player \( A \) throws the ball to Player \( B \), who then throws it to Player \( C \). How far did Player \( A \) throw the ball? How far did Player \( B \) throw the ball? How far would Player \( A \) have thrown the ball if he had thrown it directly to Player \( C \)? Round all answers to the nearest tenth of a meter.
53. **EXTENDED RESPONSE** As shown, a path goes around a triangular park.

   a. Find the distance around the park to the nearest yard.
   
   b. A new path and a bridge are constructed from point Q to the midpoint M of PR. Find QM to the nearest yard.
   
   c. A man jogs from P to Q to M to R to Q and back to P at an average speed of 150 yards per minute. About how many minutes does it take? **Explain.**

54. **CHALLENGE** \(AB\) bisects \(CD\) at point \(M\), \(CD\) bisects \(AB\) at point \(M\), and \(AB = 4 \cdot CM\). Describe the relationship between \(AM\) and \(CD\).

### MIXED REVIEW

The graph shows data about the number of children in the families of students in a math class. *(p. 888)*

55. What percent of the students in the class belong to families with two or more children?

56. If there are 25 students in the class, how many students belong to families with two children?

**Solve the equation.** *(p. 875)*

57. \(3x + 12 + x = 20\)

58. \(9x + 2x + 6 - x = 10\)

59. \(5x - 22 - 7x + 2 = 40\)

**In Exercises 60–64, use the diagram at the right.** *(p. 2)*

60. Name all rays with endpoint \(B\).

61. Name all the rays that contain point \(C\).

62. Name a pair of opposite rays.

63. Name the intersection of \(\overline{AB}\) and \(\overline{BC}\).

64. Name the intersection of \(\overline{BC}\) and plane \(P\).

### QUIZ for Lessons 1.1–1.3

1. Sketch two lines that intersect the same plane at two different points. The lines intersect each other at a point not in the plane. *(p. 2)*

2. **In the diagram of collinear points, \(AE = 26, AD = 15,\) and \(AB = BC = CD\). Find the indicated length.** *(p. 9)*

   2. \(DE\)
   
   3. \(AB\)
   
   4. \(AC\)
   
   5. \(BD\)
   
   6. \(CE\)
   
   7. \(BE\)
   
8. The endpoints of \(\overline{RS}\) are \(R(−2, −1)\) and \(S(2, 3)\). Find the coordinates of the midpoint of \(\overline{RS}\). Then find the distance between \(R\) and \(S\). *(p. 15)*

**EXTRA PRACTICE** for Lesson 1.3, p. 896

**ONLINE QUIZ** at classzone.com
1. **MULTI-STEP PROBLEM** The diagram shows existing roads (BD and DE) and a new road (CE) under construction.

![Diagram showing existing and new roads]

a. If you drive from point B to point E on existing roads, how far do you travel?

b. If you use the new road as you drive from B to E, about how far do you travel? Round to the nearest tenth of a mile if necessary.

c. About how much shorter is the trip from B to E if you use the new road?

2. **GRIDDED ANSWER** Point M is the midpoint of PQ. If PM = 23x + 5 and MQ = 25x - 4, find the length of PQ.

3. **GRIDDED ANSWER** You are hiking on a trail that lies along a straight railroad track. The total length of the trail is 5.4 kilometers. You have been hiking for 45 minutes at an average speed of 2.4 kilometers per hour. How much farther (in kilometers) do you need to hike to reach the end of the trail?

4. **SHORT RESPONSE** The diagram below shows the frame for a wall. FH represents a vertical board, and EG represents a brace. If FG = 143 cm, does the brace bisect FH? If not, how long should FG be so that the brace does bisect FH? Explain.

![Diagram of wall frame]

5. **SHORT RESPONSE** Point E is the midpoint of AB and the midpoint of CD. The endpoints of AB are A(-4, 5) and B(6, -5). The coordinates of point C are (2, 8). Find the coordinates of point D. Explain how you got your answer.

6. **OPEN-ENDED** The distance around a figure is its perimeter. Choose four points in a coordinate plane that can be connected to form a rectangle with a perimeter of 16 units. Then choose four other points and draw a different rectangle that has a perimeter of 16 units. Show how you determined that each rectangle has a perimeter of 16 units.

7. **SHORT RESPONSE** Use the diagram of a box. What are all the names that can be used to describe the plane that contains points B, F, and C? Name the intersection of planes ABC and BFE. Explain.

8. **EXTENDED RESPONSE** Jill is a salesperson who needs to visit towns A, B, and C. On the map below, AB = 18.7 km and BC = 2AB. Assume Jill travels along the road shown.

![Map showing towns and roads]

a. Find the distance Jill travels if she starts at Town A, visits Towns B and C, and then returns to Town A.

b. About how much time does Jill spend driving if her average driving speed is 70 kilometers per hour?

c. Jill needs to spend 2.5 hours in each town. Can she visit all three towns and return to Town A in an 8 hour workday? Explain.
An angle consists of two different rays with the same endpoint. The rays are the sides of the angle. The endpoint is the vertex of the angle.

The angle with sides $\overrightarrow{AB}$ and $\overrightarrow{AC}$ can be named $\angle BAC$, $\angle CAB$, or $\angle A$. Point $A$ is the vertex of the angle.

**EXAMPLE 1** Name angles

Name the three angles in the diagram.

$\angle WXY$, or $\angle YWX$

$\angle YXZ$, or $\angle ZXY$

$\angle WZX$, or $\angle ZWX$

You should not name any of these angles $\angle X$ because all three angles have $X$ as their vertex.

**MEASURING ANGLES** A protractor can be used to approximate the measure of an angle. An angle is measured in units called degrees ($\text{'}$). For instance, the measure of $\angle WXZ$ in Example 1 above is $32\text{'}$. You can write this statement in two ways.

**Words** The measure of $\angle WXZ$ is $32\text{'}$.

**Symbols** $m\angle WXZ = 32\text{'}$

**POSTULATE**

**POSTULATE 3** Protractor Postulate

Consider $\overrightarrow{OB}$ and a point $A$ on one side of $\overrightarrow{OB}$.

The rays of the form $\overrightarrow{OA}$ can be matched one to one with the real numbers from 0 to 180.

The measure of $\angle AOB$ is equal to the absolute value of the difference between the real numbers for $\overrightarrow{OA}$ and $\overrightarrow{OB}$. 
**CLASSIFYING ANGLES** Angles can be classified as **acute, right, obtuse,** and **straight,** as shown below.

![Diagram showing classifications of angles](image)

**READ DIAGRAMS**

A red square inside an angle indicates that the angle is a right angle.

**EXAMPLE 2** Measure and classify angles

Use the diagram to find the measure of the indicated angle. Then classify the angle.

a. \( \angle KHJ \)  

b. \( \angle GHK \)  

c. \( \angle GHJ \)  

d. \( \angle GHL \)

**Solution**

A protractor has an inner and an outer scale. When you measure an angle, check to see which scale to use.

a. \( \overrightarrow{HJ} \) is lined up with the 0° on the inner scale of the protractor. \( \overrightarrow{HK} \) passes through 55° on the inner scale. So, \( m \angle KHJ = 55° \). It is an acute angle.

b. \( \overrightarrow{HG} \) is lined up with the 0° on the outer scale, and \( \overrightarrow{HK} \) passes through 125° on the outer scale. So, \( m \angle GHK = 125° \). It is an obtuse angle.

c. \( m \angle GHJ = 180° \). It is a straight angle.

d. \( m \angle GHL = 90° \). It is a right angle.

**GUIDED PRACTICE** for Examples 1 and 2

1. Name all the angles in the diagram at the right. Which angle is a right angle?

2. Draw a pair of opposite rays. What type of angle do the rays form?
EXAMPLE 3  Find angle measures

ALGEBRA  Given that $m \angle LKN = 145^\circ$, find $m \angle LKM$ and $m \angle MKN$.

Solution

**STEP 1**  Write and solve an equation to find the value of $x$.

$$m \angle LKN = m \angle LKM + m \angle MKN$$

$$145^\circ = (2x + 10)^\circ + (4x - 3)^\circ$$

$$145 = 6x + 7$$

$$138 = 6x$$

$$23 = x$$

**STEP 2**  Evaluate the given expressions when $x = 23$.

$$m \angle LKM = (2x + 10)^\circ = (2 \cdot 23 + 10)^\circ = 56^\circ$$

$$m \angle MKN = (4x - 3)^\circ = (4 \cdot 23 - 3)^\circ = 89^\circ$$

So, $m \angle LKM = 56^\circ$ and $m \angle MKN = 89^\circ$.

GUIDED PRACTICE  for Example 3

Find the indicated angle measures.

3. Given that $\angle KLM$ is a straight angle, find $m \angle KLN$ and $m \angle NLM$.

4. Given that $\angle EFG$ is a right angle, find $m \angle EFH$ and $m \angle HFG$.

CONGRUENT ANGLES  Two angles are congruent if they have the same measure. In the diagram below, you can say that “the measure of angle $A$ is equal to the measure of angle $B$,” or you can say “angle $A$ is congruent to angle $B$.”
EXAMPLE 4  Identify congruent angles

TRAPEZE  The photograph shows some of the angles formed by the ropes in a trapeze apparatus. Identify the congruent angles.
If $m \angle DEG = 157^\circ$, what is $m \angle GKL$?

Solution

There are two pairs of congruent angles:

$\angle DEF \equiv \angle JKL$ and $\angle DEG \equiv \angle GKL$.

Because $\angle DEG \equiv \angle GKL$, $m \angle DEG = m \angle GKL$. So, $m \angle GKL = 157^\circ$.

GUIDED PRACTICE for Example 4

Use the diagram shown at the right.

5. Identify all pairs of congruent angles in the diagram.

6. In the diagram, $m \angle PQR = 130^\circ$, $m \angle QRS = 84^\circ$, and $m \angle TSR = 121^\circ$. Find the other angle measures in the diagram.

ACTIVITY  Fold an Angle Bisector

**STEP 1**

Use a straightedge to draw and label an acute angle, $\angle ABC$.

**STEP 2**

Fold the paper so that $\overline{BC}$ is on top of $\overline{BA}$.

**STEP 3**

Draw a point D on the fold inside $\angle ABC$. Then measure $\angle ABD$, $\angle DBC$, and $\angle ABC$. What do you observe?
An **angle bisector** is a ray that divides an angle into two angles that are congruent. In the activity on page 27, $BD$ bisects $\angle ABC$. So, $\angle ABD \equiv \angle DBC$ and $m\angle ABD = m\angle DBC$.

### Example 5  Double an angle measure

In the diagram at the right, $\overrightarrow{YW}$ bisects $\angle XYZ$, and $m\angle XYW = 18^\circ$. Find $m\angle XYZ$.

**Solution**

By the Angle Addition Postulate, $m\angle XYZ = m\angle XYW + m\angle WYZ$. Because $\overrightarrow{YW}$ bisects $\angle XYZ$, you know that $\angle XYW \equiv \angle WYZ$.

So, $m\angle XYW = m\angle WYZ$, and you can write

$$m\angle XYZ = m\angle XYW + m\angle WYZ = 18^\circ + 18^\circ = 36^\circ.$$  

### Guided Practice for Example 5

7. Angle $MNP$ is a straight angle, and $\overrightarrow{NQ}$ bisects $\angle MNP$. Draw $\angle MNP$ and $\overrightarrow{NQ}$. Use arcs to mark the congruent angles in your diagram, and give the angle measures of these congruent angles.

### Exercises 1.4  Essentials of Geometry

#### Skill Practice

1. **Vocabulary** Sketch an example of each of the following types of angles: acute, obtuse, right, and straight.

2. **Writing** Explain how to find the measure of $\angle PQR$, shown at the right.

#### Naming Angles and Angle Parts

In Exercises 3–5, write three names for the angle shown. Then name the vertex and sides of the angle.

3.

4.

5.
6. **NAMING ANGLES** Name three different angles in the diagram at the right.

7. **MEASURING ANGLES** Trace the diagram and extend the rays. Use a protractor to find the measure of the given angle. Then classify the angle as acute, obtuse, right, or straight.

8. **CLASSIFYING ANGLES** Classify the angle with the given measure as acute, obtuse, right, or straight.

9. **NAMING AND CLASSIFYING** Give another name for the angle in the diagram below. Tell whether the angle appears to be acute, obtuse, right, or straight.

10. **ANGLE ADDITION POSTULATE** Find the indicated angle measure.

11. **ALGEBRA** Use the given information to find the indicated angle measure.
28. **CONGRUENT ANGLES** In the photograph below, \( m\angle AED = 34^\circ \) and \( m\angle EAD = 112^\circ \). Identify the congruent angles in the diagram. Then find \( m\angle BDC \) and \( m\angle ADB \).

ANGLE BISECTORS Given that \( \overrightarrow{WZ} \) bisects \( \angle XWY \), find the two angle measures not given in the diagram.

32. **ERROR ANALYSIS** \( \overrightarrow{KM} \) bisects \( \angle JKL \) and \( m\angle JKM = 30^\circ \). Describe and correct the error made in stating that \( m\angle JKL = 15^\circ \). Draw a sketch to support your answer.

39. **ERROR ANALYSIS** A student states that \( \overrightarrow{AD} \) can bisect \( \angle AGC \). Describe and correct the student’s error. Draw a sketch to support your answer.

43. **SHORT RESPONSE** You are measuring \( \angle PQR \) with a protractor. When you line up \( \overrightarrow{QR} \) with the 20° mark, \( \overrightarrow{QP} \) lines up with the 80° mark. Then you move the protractor so that \( \overrightarrow{QR} \) lines up with the 15° mark. What mark does \( \overrightarrow{QP} \) line up with? Explain.

44. **ALGEBRA** In each diagram, \( \overrightarrow{BD} \) bisects \( \angle ABC \). Find \( m\angle ABC \).

45. **ERROR ANALYSIS** A student states that \( \overrightarrow{AD} \) can bisect \( \angle AGC \). Describe and correct the student’s error. Draw a sketch to support your answer.

**ALGEBRA** Plot the points in a coordinate plane and draw \( \angle ABC \). Classify the angle. Then give the coordinates of a point that lies in the interior of the angle.
48. **ALGEBRA** Let \((2x - 12)^\circ\) represent the measure of an acute angle. What are the possible values of \(x\)?

49. **CHALLENGE** \(\overrightarrow{SQ}\) bisects \(\angle RST\), \(\overrightarrow{SP}\) bisects \(\angle RSQ\), and \(\overrightarrow{SV}\) bisects \(\angle RSP\). The measure of \(\angle VSP\) is 17°. Find \(m\angle TSQ\). Explain.

50. **FINDING MEASURES** In the diagram, 
   \[ m\angle AEB = \frac{1}{2} m\angle CED, \text{ and } \angle AED \]
   is a straight angle. Find \(m\angle AEB\) and \(m\angle CED\).

---

**Problem Solving**

51. **SCULPTURE** In the sculpture shown in the photograph, suppose the measure of \(\angle LMN\) is 79° and the measure of \(\angle PMN\) is 47°. What is the measure of \(\angle LMP\)?

52. **MAP** The map shows the intersection of three roads. Malcom Way intersects Sydney Street at an angle of 162°. Park Road intersects Sydney Street at an angle of 87°. Find the angle at which Malcom Way intersects Park Road.

---

**CONSTRUCTION** In Exercises 53–55, use the photograph of a roof truss.

53. In the roof truss, \(\overrightarrow{BG}\) bisects \(\angle ABC\) and \(\angle DEF\), \(m\angle ABC = 112^\circ\), and \(\angle ABC \cong \angle DEF\). Find the measure of the following angles.
   a. \(m\angle DEF\)
   b. \(m\angle ABG\)
   c. \(m\angle CBG\)
   d. \(m\angle DEG\)

54. In the roof truss, \(\overrightarrow{GB}\) bisects \(\angle DGF\). Find \(m\angle DGE\) and \(m\angle FGE\).

55. Name an example of each of the following types of angles: acute, obtuse, right, and straight.
**GEOGRAPHY** For the given location on the map, estimate the measure of $\angle PSL$, where $P$ is on the Prime Meridian (0° longitude), $S$ is the South Pole, and $L$ is the location of the indicated research station.

56. Macquarie Island  
57. Dumont d’Urville  
58. McMurdo  
59. Mawson  
60. Syowa  
61. Vostok

![Map of Antarctica](image)

**62. ★ EXTENDED RESPONSE** In the flag shown, $\angle AFE$ is a straight angle and $\overline{FC}$ bisects $\angle AFE$ and $\angle BFD$.

a. Which angles are acute? obtuse? right?

b. Identify the congruent angles.

c. If $m\angle AFB = 26^\circ$, find $m\angle DFE$, $m\angle BFC$, $m\angle CFD$, $m\angle AFC$, $m\angle AFD$, and $m\angle BFD$. Explain.

**63. CHALLENGE** Create a set of data that could be represented by the circle graph at the right. Explain your reasoning.

**MIXED REVIEW**

64. You and a friend go out to dinner and each pay for your own meal. The total cost of the two meals is $25. Your meal cost $4 more than your friend’s meal. How much does each meal cost? (p. 894)

Graph the inequality on a number line. Tell whether the graph is a segment, a ray or rays, a point, or a line. (p. 2)

65. $x \leq -8$  
66. $x \geq 6$  
67. $-3 \leq x \leq 5$

68. $x \geq -7$ and $x \leq -1$  
69. $x \geq -2$ or $x \leq 4$  
70. $|x| \geq 0$

Find the coordinate of the midpoint of the segment. (p. 15)

71.  
72.  
73.
1.4 Copy and Bisect Segments and Angles

**MATERIALS** • compass • straightedge

**QUESTION** How can you copy and bisect segments and angles?

A **construction** is a geometric drawing that uses a limited set of tools, usually a **compass** and **straightedge**. You can use a compass and straightedge (a ruler without marks) to construct a segment that is congruent to a given segment, and an angle that is congruent to a given angle.

**EXPLORE 1** Copy a segment

Use the following steps to construct a segment that is congruent to $\overline{AB}$.

**STEP 1**

*Draw a segment* Use a straightedge to draw a segment longer than $\overline{AB}$. Label point $C$ on the new segment.

**STEP 2**

*Measure length* Set your compass at the length of $\overline{AB}$.

**STEP 3**

*Copy length* Place the compass at $C$. Mark point $D$ on the new segment. $\overline{CD} \cong \overline{AB}$.

**EXPLORE 2** Bisect a segment

Use the following steps to construct a bisector of $\overline{AB}$ and to find the midpoint $M$ of $\overline{AB}$.

**STEP 1**

*Draw an arc* Place the compass at $A$. Use a compass setting that is greater than half the length of $\overline{AB}$. Draw an arc.

**STEP 2**

*Draw a second arc* Keep the same compass setting. Place the compass at $B$. Draw an arc. It should intersect the other arc at two points.

**STEP 3**

*Bisect segment* Draw a segment through the two points of intersection. This segment bisects $\overline{AB}$ at $M$, the midpoint of $\overline{AB}$.
**Explore 3** Copy an angle

Use the following steps to construct an angle that is congruent to $\angle A$. In this construction, the *radius* of an arc is the distance from the point where the compass point rests (the *center* of the arc) to a point on the arc drawn by the compass.

**STEP 1** Draw a segment

Draw a segment. Label a point $D$ on the segment.

**STEP 2** Draw an arc

Draw an arc with center $A$. Using the same radius, draw an arc with center $D$.

**STEP 3** Draw an arc

Label $B$, $C$, and $E$. Draw an arc with radius $BC$ and center $E$. Label the intersection $F$.

**STEP 4** Draw a ray

Draw $\overrightarrow{DF}$. $\angle EDF \cong \angle BAC$.

**Explore 4** Bisect an angle

Use the following steps to construct an angle bisector of $\angle A$.

**STEP 1** Draw an arc

Place the compass at $A$. Draw an arc that intersects both sides of the angle. Label the intersections $C$ and $B$.

**STEP 2** Draw arcs

Place the compass at $C$. Draw an arc. Then place the compass point at $B$. Using the same radius, draw another arc.

**STEP 3** Draw a ray

Label the intersection $G$. Use a straightedge to draw a ray through $A$ and $G$. $\overrightarrow{AG}$ bisects $\angle A$.

**Draw Conclusions** Use your observations to complete these exercises

1. *Describe* how you could use a compass and a straightedge to draw a segment that is twice as long as a given segment.
2. Draw an obtuse angle. Copy the angle using a compass and a straightedge. Then bisect the angle using a compass and straightedge.
1.5 Describe Angle Pair Relationships

**Key Vocabulary**
- complementary angles
- supplementary angles
- adjacent angles
- linear pair
- vertical angles

Two angles are **complementary angles** if the sum of their measures is 90°. Each angle is the complement of the other. Two angles are **supplementary angles** if the sum of their measures is 180°. Each angle is the supplement of the other.

Complementary angles and supplementary angles can be **adjacent angles** or **nonadjacent angles**. **Adjacent angles** are two angles that share a common vertex and side, but have no common interior points.

![Diagram of angle relationships]

**Example 1** Identify complements and supplements

In the figure, name a pair of complementary angles, a pair of supplementary angles, and a pair of adjacent angles.

**Solution**
Because $32° + 58° = 90°$, $\angle BAC$ and $\angle RST$ are complementary angles.
Because $122° + 58° = 180°$, $\angle CAD$ and $\angle RST$ are supplementary angles.
Because $\angle BAC$ and $\angle CAD$ share a common vertex and side, they are adjacent.

**Guided Practice** for Example 1

1. In the figure, name a pair of complementary angles, a pair of supplementary angles, and a pair of adjacent angles.
2. Are $\angle KGH$ and $\angle LKG$ adjacent angles? Are $\angle FGK$ and $\angle FGH$ adjacent angles? Explain.
EXAMPLE 2 Find measures of a complement and a supplement

a. Given that \( \angle 1 \) is a complement of \( \angle 2 \) and \( m\angle 1 = 68^\circ \), find \( m\angle 2 \).

b. Given that \( \angle 3 \) is a supplement of \( \angle 4 \) and \( m\angle 4 = 56^\circ \), find \( m\angle 3 \).

Solution

a. You can draw a diagram with complementary adjacent angles to illustrate the relationship.

\[
m\angle 2 = 90^\circ - m\angle 1 = 90^\circ - 68^\circ = 22^\circ
\]

b. You can draw a diagram with supplementary adjacent angles to illustrate the relationship.

\[
m\angle 3 = 180^\circ - m\angle 4 = 180^\circ - 56^\circ = 124^\circ
\]

EXAMPLE 3 Find angle measures

SPORTS When viewed from the side, the frame of a ball-return net forms a pair of supplementary angles with the ground. Find \( m\angle BCE \) and \( m\angle ECD \).

Solution

STEP 1 Use the fact that the sum of the measures of supplementary angles is \( 180^\circ \).

\[
m\angle BCE + m\angle ECD = 180^\circ
\]

Write equation.

\[
(4x + 8)^\circ + (x + 2)^\circ = 180^\circ
\]

Substitute.

\[
5x + 10 = 180
\]

Combine like terms.

\[
5x = 170
\]

Subtract 10 from each side.

\[
x = 34
\]

Divide each side by 5.

STEP 2 Evaluate the original expressions when \( x = 34 \).

\[
m\angle BCE = (4x + 8)^\circ = (4 \cdot 34 + 8)^\circ = 144^\circ
\]

\[
m\angle ECD = (x + 2)^\circ = (34 + 2)^\circ = 36^\circ
\]

The angle measures are 144° and 36°.

✓ GUIDED PRACTICE for Examples 2 and 3

3. Given that \( \angle 1 \) is a complement of \( \angle 2 \) and \( m\angle 2 = 8^\circ \), find \( m\angle 1 \).

4. Given that \( \angle 3 \) is a supplement of \( \angle 4 \) and \( m\angle 3 = 117^\circ \), find \( m\angle 4 \).

5. \( \angle LMN \) and \( \angle PQR \) are complementary angles. Find the measures of the angles if \( m\angle LMN = (4x - 2)^\circ \) and \( m\angle PQR = (9x + 1)^\circ \).
1.5 Describe Angle Pair Relationships

**ANGLE PAIRS** Two adjacent angles are a **linear pair** if their noncommon sides are opposite rays. The angles in a linear pair are supplementary angles. Two angles are **vertical angles** if their sides form two pairs of opposite rays.

![Diagram of angle pairs]

**EXAMPLE 4** Identify angle pairs

Identify all of the linear pairs and all of the vertical angles in the figure at the right.

**Solution**
To find vertical angles, look for angles formed by intersecting lines.

- ∠1 and ∠5 are vertical angles.

To find linear pairs, look for adjacent angles whose noncommon sides are opposite rays.

- ∠1 and ∠4 are a linear pair. ∠4 and ∠5 are also a linear pair.

**AVOID ERRORS**
In the diagram, one side of ∠1 and one side of ∠3 are opposite rays. But the angles are not a linear pair because they are not adjacent.

**GUIDED PRACTICE**
for Examples 4 and 5

6. Do any of the numbered angles in the diagram at the right form a linear pair? Which angles are vertical angles? Explain.

7. The measure of an angle is twice the measure of its complement. Find the measure of each angle.

**EXAMPLE 5** Find angle measures in a linear pair

**ALGEBRA** Two angles form a linear pair. The measure of one angle is 5 times the measure of the other. Find the measure of each angle.

**Solution**
Let \( x^\circ \) be the measure of one angle. The measure of the other angle is \( 5x^\circ \). Then use the fact that the angles of a linear pair are supplementary to write an equation.

\[
x^\circ + 5x^\circ = 180^\circ
\]

Write an equation.

\[
6x = 180
\]

Combine like terms.

\[
x = 30
\]

Divide each side by 6.

The measures of the angles are \( 30^\circ \) and \( 5(30^\circ) = 150^\circ \).
1.5 EXERCISES

1. VOCABULARY Sketch an example of adjacent angles that are complementary. Are all complementary angles adjacent angles? Explain.

2. ★ WRITING Are all linear pairs supplementary angles? Are all supplementary angles linear pairs? Explain.

IDENTIFYING ANGLES Tell whether the indicated angles are adjacent.

3. \( \angle ABD \) and \( \angle DBC \)
4. \( \angle WXY \) and \( \angle XYZ \)
5. \( \angle LQM \) and \( \angle NQM \)

IDENTIFYING ANGLES Name a pair of complementary angles and a pair of supplementary angles.

6. \( \angle AOB \) and \( \angle BOC \)
7. \( \angle GHL \) and \( \angle LHK \)
COMPLEMENTARY ANGLES \( \angle 1 \) and \( \angle 2 \) are complementary angles. Given the measure of \( \angle 1 \), find \( m \angle 2 \).

8. \( m \angle 1 = 43^\circ \)  \( m \angle 2 = ? \)  9. \( m \angle 1 = 21^\circ \)  \( m \angle 2 = ? \)  10. \( m \angle 1 = 89^\circ \)  \( m \angle 2 = ? \)  11. \( m \angle 1 = 5^\circ \)  \( m \angle 2 = ? \)

SUPPLEMENTARY ANGLES \( \angle 1 \) and \( \angle 2 \) are supplementary angles. Given the measure of \( \angle 1 \), find \( m \angle 2 \).

12. \( m \angle 1 = 60^\circ \)  \( m \angle 2 = ? \)  13. \( m \angle 1 = 155^\circ \)  \( m \angle 2 = ? \)  14. \( m \angle 1 = 130^\circ \)  \( m \angle 2 = ? \)  15. \( m \angle 1 = 27^\circ \)  \( m \angle 2 = ? \)

★ MULTIPLE CHOICE The arm of a crossing gate moves 37\(^\circ\) from vertical. How many more degrees does the arm have to move so that it is horizontal?

\[ \begin{align*}
\text{A} & \quad 37^\circ \\
\text{B} & \quad 53^\circ \\
\text{C} & \quad 90^\circ \\
\text{D} & \quad 143^\circ 
\end{align*} \]

ALGEBRA Find \( m \angle DEG \) and \( m \angle GEF \).

17. \( (18x - 9)^\circ \)  \( (4x + 13)^\circ \)  \( (7x - 3)^\circ \)  \( (12x - 7)^\circ \)

IDENTIFYING ANGLE PAIRS Use the diagram below. Tell whether the angles are \textit{vertical angles, a linear pair, or neither}.

20. \( \angle 1 \) and \( \angle 4 \)  21. \( \angle 1 \) and \( \angle 2 \)  22. \( \angle 3 \) and \( \angle 5 \)  23. \( \angle 2 \) and \( \angle 3 \)  24. \( \angle 7, \angle 8, \) and \( \angle 9 \)  25. \( \angle 5 \) and \( \angle 6 \)  26. \( \angle 6 \) and \( \angle 7 \)  27. \( \angle 5 \) and \( \angle 9 \)

★ MULTIPLE CHOICE The measure of one angle is 24\(^\circ\) greater than the measure of its complement. What are the measures of the angles?

\[ \begin{align*}
\text{A} & \quad 24^\circ \text{ and } 66^\circ \\
\text{B} & \quad 24^\circ \text{ and } 156^\circ \\
\text{C} & \quad 33^\circ \text{ and } 57^\circ \\
\text{D} & \quad 78^\circ \text{ and } 102^\circ 
\end{align*} \]

ALGEBRA Find the values of \( x \) and \( y \).

31. \( \frac{(9x + 20)}{2} \)  \( \frac{2y}{x} \)  32. \( \frac{(5y + 38)}{3} \)  \( \frac{(8x + 26)}{x} \)  33. \( \frac{2y}{(4x - 100)} \)  \( \frac{(3y + 30)}{(x + 5)} \)
REASONING  Tell whether the statement is always, sometimes, or never true. Explain your reasoning.
34. An obtuse angle has a complement.
35. A straight angle has a complement.
36. An angle has a supplement.
37. The complement of an acute angle is an acute angle.
38. The supplement of an acute angle is an obtuse angle.

FINDING ANGLES  \( \angle A \) and \( \angle B \) are complementary. Find \( m\angle A \) and \( m\angle B \).
39. \( m\angle A = (3x + 2)^\circ \) \( m\angle B = (x - 4)^\circ \)
40. \( m\angle A = (15x + 3)^\circ \) \( m\angle B = (5x - 13)^\circ \)
41. \( m\angle A = (11x + 24)^\circ \) \( m\angle B = (x + 18)^\circ \)

FINDING ANGLES  \( \angle A \) and \( \angle B \) are supplementary. Find \( m\angle A \) and \( m\angle B \).
42. \( m\angle A = (8x + 100)^\circ \) \( m\angle B = (2x + 50)^\circ \)
43. \( m\angle A = (2x - 20)^\circ \) \( m\angle B = (3x + 5)^\circ \)
44. \( m\angle A = (6x + 72)^\circ \) \( m\angle B = (2x + 28)^\circ \)

45. CHALLENGE  You are given that \( \angle GHJ \) is a complement of \( \angle RST \) and \( \angle RST \) is a supplement of \( \angle ABC \). Let \( m\angle GHJ \) be \( x^\circ \). What is the measure of \( \angle ABC \)? Explain your reasoning.

IDENTIFYING ANGLES  Tell whether the two angles shown are complementary, supplementary, or neither.
46. \( \angle A \)
47. \( \angle B \)
48. \( \angle C \)

ARCHITECTURE  The photograph shows the Rock and Roll Hall of Fame in Cleveland, Ohio. Use the photograph to identify an example type of the indicated type of angle pair.
49. Supplementary angles
50. Vertical angles
51. Linear pair
52. Adjacent angles

53. ★ SHORT RESPONSE  Use the photograph shown at the right. Given that \( \angle FGB \) and \( \angle BGC \) are supplementary angles, and \( m\angle FGB = 120^\circ \), explain how to find the measure of the complement of \( \angle BGC \).
54. **SHADOWS** The length of a shadow changes as the sun rises. In the diagram below, the length of $\overline{CB}$ is the length of a shadow. The end of the shadow is the vertex of $\angle ABC$, which is formed by the ground and the sun’s rays. Describe how the shadow and angle change as the sun rises.

55. **MULTIPLE REPRESENTATIONS** Let $x^\circ$ be an angle measure. Let $y_1^\circ$ be the measure of a complement of the angle and let $y_2^\circ$ be the measure of a supplement of the angle.

   a. **Writing an Equation** Write equations for $y_1$ as a function of $x$, and for $y_2$ as a function of $x$. What is the domain of each function? Explain.

   b. **Drawing a Graph** Graph each function and describe its range.

56. **CHALLENGE** The sum of the measures of two complementary angles exceeds the difference of their measures by $86^\circ$. Find the measure of each angle. Explain how you found the angle measures.

### Mixed Review

Make a table of values and graph the function. *(p. 884)*

57. $y = 5 - x$
58. $y = 3x$
59. $y = x^2 - 1$
60. $y = -2x^2$

In each figure, name the congruent sides and congruent angles. *(pp. 9, 24)*

61.

62.

63.

### Quiz for Lessons 1.4–1.5

In each diagram, $\overline{BD}$ bisects $\angle ABC$. Find $m\angle ABD$ and $m\angle DBC$. *(p. 24)*

1.

2.

3.

Find the measure of (a) the complement and (b) the supplement of $\angle 1$. *(p. 35)*

4. $m\angle 1 = 47^\circ$
5. $m\angle 1 = 19^\circ$
6. $m\angle 1 = 75^\circ$
7. $m\angle 1 = 2^\circ$
1.6 Classify Polygons

**Before**
You classified angles.

**Now**
You will classify polygons.

**Why?**
So you can find lengths in a floor plan, as in Ex. 32.

---

**Key Vocabulary**
- polygon
- side, vertex
- convex
- concave
- \( n \)-gon
- equilateral
- equiangular
- regular

---

**KEY CONCEPT**

**Identifying Polygons**

In geometry, a figure that lies in a plane is called a plane figure. A polygon is a closed plane figure with the following properties.

1. It is formed by three or more line segments called sides.
2. Each side intersects exactly two sides, one at each endpoint, so that no two sides with a common endpoint are collinear.

Each endpoint of a side is a vertex of the polygon. The plural of vertex is vertices. A polygon can be named by listing the vertices in consecutive order. For example, ABCDE and CDEAB are both correct names for the polygon at the right.

---

A polygon is convex if no line that contains a side of the polygon contains a point in the interior of the polygon. A polygon that is not convex is called nonconvex or concave.

---

**EXAMPLE 1**

Identify polygons

Tell whether the figure is a polygon and whether it is convex or concave.

**Solution**

a. Some segments intersect more than two segments, so it is not a polygon.

b. The figure is a convex polygon.

c. Part of the figure is not a segment, so it is not a polygon.

d. The figure is a concave polygon.
**CLASSIFYING POLYGONS** A polygon is named by the number of its sides.

<table>
<thead>
<tr>
<th>Number of sides</th>
<th>Type of polygon</th>
<th>Number of sides</th>
<th>Type of polygon</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>Triangle</td>
<td>8</td>
<td>Octagon</td>
</tr>
<tr>
<td>4</td>
<td>Quadrilateral</td>
<td>9</td>
<td>Nonagon</td>
</tr>
<tr>
<td>5</td>
<td>Pentagon</td>
<td>10</td>
<td>Decagon</td>
</tr>
<tr>
<td>6</td>
<td>Hexagon</td>
<td>12</td>
<td>Dodecagon</td>
</tr>
<tr>
<td>7</td>
<td>Heptagon</td>
<td>(n)</td>
<td>(n)-gon</td>
</tr>
</tbody>
</table>

The term \(n\)-gon, where \(n\) is the number of a polygon’s sides, can also be used to name a polygon. For example, a polygon with 14 sides is a 14-gon.

In an equilateral polygon, all sides are congruent.

In an equiangular polygon, all angles in the interior of the polygon are congruent. A regular polygon is a convex polygon that is both equilateral and equiangular.

**EXAMPLE 2** Classify polygons

Classify the polygon by the number of sides. Tell whether the polygon is equilateral, equiangular, or regular. Explain your reasoning.

a.  

b.  

c.  

**Solution**

a. The polygon has 6 sides. It is equilateral and equiangular, so it is a regular hexagon.

b. The polygon has 4 sides, so it is a quadrilateral. It is not equilateral or equiangular, so it is not regular.

b. The polygon has 12 sides, so it is a dodecagon. The sides are congruent, so it is equilateral. The polygon is not convex, so it is not regular.

**GUIDED PRACTICE** for Examples 1 and 2

1. Sketch an example of a convex heptagon and an example of a concave heptagon.

2. Classify the polygon shown at the right by the number of sides. *Explain* how you know that the sides of the polygon are congruent and that the angles of the polygon are congruent.
**Example 3**  Find side lengths

**ALGEBRA** A table is shaped like a regular hexagon. The expressions shown represent side lengths of the hexagonal table. Find the length of a side.

**Solution**

First, write and solve an equation to find the value of $x$. Use the fact that the sides of a regular hexagon are congruent.

\[
3x + 6 = 4x - 2
\]

Write equation.

\[
6 = x - 2
\]

Subtract $3x$ from each side.

\[
x = 8
\]

Add 2 to each side.

Then find a side length. Evaluate one of the expressions when $x = 8$.

\[
3x + 6 = 3(8) + 6 = 30
\]

The length of a side of the table is 30 inches.

---

**Guided Practice** for Example 3

3. The expressions $8y^\circ$ and $(9y - 15)^\circ$ represent the measures of two of the angles in the table in Example 3. Find the measure of an angle.

---

**1.6 Exercises**

**Skill Practice**

1. **Vocabulary** Explain what is meant by the term $n$-gon.

2. **Writing** Imagine that you can tie a string tightly around a polygon. If the polygon is convex, will the length of the string be equal to the distance around the polygon? What if the polygon is concave? Explain.

3. **Identifying Polygons** Tell whether the figure is a polygon. If it is not, explain why. If it is a polygon, tell whether it is convex or concave.

4.  

5.  

6.  

7. **Multiple Choice** Which of the figures is a concave polygon?
CLASSIFYING Classify the polygon by the number of sides. Tell whether the polygon is equilateral, equiangular, or regular. Explain your reasoning.

8.  

9. 1 in. 1 in. 1 in. 1 in.

10.  

11. 4 m 5 m

12.  

13.  

14. ERROR ANALYSIS Two students were asked to draw a regular hexagon, as shown below. Describe the error made by each student.

15. ALGEBRA The lengths (in inches) of two sides of a regular pentagon are represented by the expressions $5x - 27$ and $2x - 6$. Find the length of a side of the pentagon.

16. ALGEBRA The expressions $(9x + 5)^\circ$ and $(11x - 25)^\circ$ represent the measures of two angles of a regular nonagon. Find the measure of an angle of the nonagon.

17. ALGEBRA The expressions $3x - 9$ and $23 - 5x$ represent the lengths (in feet) of two sides of an equilateral triangle. Find the length of a side.

USING PROPERTIES Tell whether the statement is always, sometimes, or never true.

18. A triangle is convex.

19. A decagon is regular.

20. A regular polygon is equiangular.

21. A circle is a polygon.

22. A polygon is a plane figure.

23. A concave polygon is regular.

DRAWING Draw a figure that fits the description.

24. A triangle that is not regular

25. A concave quadrilateral

26. A pentagon that is equilateral but not equiangular

27. An octagon that is equiangular but not equilateral

ALGEBRA Each figure is a regular polygon. Expressions are given for two side lengths. Find the value of $x$.

28. $x^2 + x$ $x^2 + 4$

29. $x^2 + 3x$ $x^2 + x + 2$

30. $x^2 + 2x + 40$ $x^2 - x + 190$
31. **CHALLENGE** Regular pentagonal tiles and triangular tiles are arranged in the pattern shown. The pentagonal tiles are all the same size and shape and the triangular tiles are all the same size and shape. Find the angle measures of the triangular tiles. Explain your reasoning.

![Pattern Image](image)

32. **ARCHITECTURE** Longwood House, shown in the photograph on page 42, is located in Natchez, Mississippi. The diagram at the right shows the floor plan of a part of the house.

a. Tell whether the red polygon in the diagram is convex or concave.

b. Classify the red polygon and tell whether it appears to be regular.

33. 34. 35. 36. **SIGNS** Each sign suggests a polygon. Classify the polygon by the number of sides. Tell whether it appears to be equilateral, equiangular, or regular.

37. **MULTIPLE CHOICE** Two vertices of a regular quadrilateral are \(A(0, 4)\) and \(B(0, -4)\). Which of the following could be the other two vertices?

- A. \(C(4, 4)\) and \(D(4, -4)\)
- B. \(C(-4, 4)\) and \(D(-4, -4)\)
- C. \(C(8, -4)\) and \(D(8, 4)\)
- D. \(C(0, 8)\) and \(D(0, -8)\)

38. **MULTI-STEP PROBLEM** The diagram shows the design of a lattice made in China in 1850.

a. Sketch five different polygons you see in the diagram. Classify each polygon by the number of sides.

b. Tell whether each polygon you sketched is concave or convex, and whether the polygon appears to be equilateral, equiangular, or regular.
39. **SHORT RESPONSE** The shape of the button shown is a regular polygon. The button has a border made of silver wire. How many millimeters of silver wire are needed for this border? \(3x + 12\) mm

40. **EXTENDED RESPONSE** A segment that joins two nonconsecutive vertices of a polygon is called a **diagonal**. For example, a quadrilateral has two diagonals, as shown below.

<table>
<thead>
<tr>
<th>Type of polygon</th>
<th>Diagram</th>
<th>Number of sides</th>
<th>Number of diagonals</th>
</tr>
</thead>
<tbody>
<tr>
<td>Quadrilateral</td>
<td>![Diagram]</td>
<td>4</td>
<td>2</td>
</tr>
<tr>
<td>Pentagon</td>
<td>?</td>
<td>?</td>
<td>?</td>
</tr>
<tr>
<td>Hexagon</td>
<td>?</td>
<td>?</td>
<td>?</td>
</tr>
<tr>
<td>Heptagon</td>
<td>?</td>
<td>?</td>
<td>?</td>
</tr>
</tbody>
</table>

a. Copy and complete the table. Describe any patterns you see.
b. How many diagonals does an octagon have? a nonagon? Explain.
c. The expression \(\frac{n(n - 3)}{2}\) can be used to find the number of diagonals in an \(n\)-gon. Find the number of diagonals in a 60-gon.

41. **LINE SYMMETRY** A figure has **line symmetry** if it can be folded over exactly onto itself. The fold line is called the **line of symmetry**. A regular quadrilateral has four lines of symmetry, as shown. Find the number of lines of symmetry in each polygon.

a. A regular triangle  
b. A regular pentagon  
c. A regular hexagon  
d. A regular octagon  

42. **CHALLENGE** The diagram shows four identical squares lying edge-to-edge. Sketch all the different ways you can arrange four squares edge-to-edge. Sketch all the different ways you can arrange five identical squares edge-to-edge.

---

**MIXED REVIEW**

Solve the equation.

43. \(\frac{1}{2}(35) b = 140\) \((p. 875)\)  
44. \(x^2 = 144\) \((p. 882)\)  
45. \(3.14r^2 = 314\) \((p. 882)\)

Copy and complete the statement. \((p. 886)\)

46. \(500 \text{ m} = \_\_\_\_ \text{ cm}\)  
47. \(12 \text{ mi} = \_\_\_\_ \text{ ft}\)  
48. \(672 \text{ in.} = \_\_\_\_ \text{ yd}\)  
49. \(1200 \text{ km} = \_\_\_\_ \text{ m}\)  
50. \(4\frac{1}{2} \text{ ft} = \_\_\_\_ \text{ yd}\)  
51. \(3800 \text{ m} = \_\_\_\_ \text{ km}\)

Find the distance between the two points. \((p. 15)\)

52. \(D(-13, 13), E(0, -12)\)  
53. \(F(-9, -8), G(-9, 7)\)  
54. \(H(10, 5), J(-2, -2)\)

---

**EXTRA PRACTICE** for Lesson 1.6, p. 897  
**ONLINE QUIZ** at classzone.com
1.7 Investigate Perimeter and Area

**MATERIALS** • graph paper • graphing calculator

**QUESTION** How can you use a graphing calculator to find the smallest possible perimeter for a rectangle with a given area?

You can use the formulas below to find the perimeter $P$ and the area $A$ of a rectangle with length $l$ and width $w$.

$$P = 2l + 2w$$
$$A = lw$$

**EXPLORE** Find perimeters of rectangles with fixed areas

**STEP 1** Draw rectangles Draw different rectangles, each with an area of 36 square units. Use lengths of 2, 4, 6, 8, 10, 12, 14, 16, and 18 units.

**STEP 2** Enter data Use the STATISTICS menu on a graphing calculator. Enter the rectangle lengths in List 1. Use the keystrokes below to calculate and enter the rectangle widths and perimeters in Lists 2 and 3.

Keystrokes for entering widths in List 2:

$$36 + \text{[2nd] L1} \text{ ENTER}$$

Keystrokes for entering perimeters in List 3:

$$2 \times \text{[2nd] L1} + \text{[2nd] 2} \times \text{[L2]} \text{ ENTER}$$

**STEP 3** Make a scatter plot Make a scatter plot using the lengths from List 1 as the $x$-values and the perimeters from List 3 as the $y$-values. Choose an appropriate viewing window. Then use the trace feature to see the coordinates of each point.

How does the graph show which of your rectangles from Step 1 has the smallest perimeter?

**DRAW CONCLUSIONS** Use your observations to complete these exercises

1. Repeat the steps above for rectangles with areas of 64 square units.
2. Based on the Explore and your results from Exercise 1, what do you notice about the shape of the rectangle with the smallest perimeter?
1.7 Find Perimeter, Circumference, and Area

**Before**
You classified polygons.

**Now**
You will find dimensions of polygons.

**Why?**
So you can use measures in science, as in Ex. 46.

**Key Vocabulary**
- perimeter, p. 923
- circumference, p. 923
- area, p. 923
- diameter, p. 923
- radius, p. 923

Recall that **perimeter** is the distance around a figure, **circumference** is the distance around a circle, and **area** is the amount of surface covered by a figure. Perimeter and circumference are measured in units of length, such as meters (m) and feet (ft). Area is measured in square units, such as square meters (m²) and square feet (ft²).

**KEY CONCEPT**

**For Your Notebook**

**Formulas for Perimeter \( P \), Area \( A \), and Circumference \( C \)**

<table>
<thead>
<tr>
<th><strong>Square</strong></th>
<th><strong>Rectangle</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>side length ( s )</td>
<td>length ( l ) and width ( w )</td>
</tr>
<tr>
<td>( P = 4s )</td>
<td>( P = 2l + 2w )</td>
</tr>
<tr>
<td>( A = s^2 )</td>
<td>( A = lw )</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Triangle</strong></th>
<th><strong>Circle</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>side lengths ( a ), ( b ), and ( c ), base ( b ), and height ( h )</td>
<td>diameter ( d ) and radius ( r )</td>
</tr>
<tr>
<td>( P = a + b + c )</td>
<td>( C = \pi d = 2\pi r )</td>
</tr>
<tr>
<td>( A = \frac{1}{2}bh )</td>
<td>( A = \pi r^2 )</td>
</tr>
</tbody>
</table>

**Example 1** Find the perimeter and area of a rectangle

**Basketball** Find the perimeter and area of the rectangular basketball court shown.

<table>
<thead>
<tr>
<th>Perimeter</th>
<th>Area</th>
</tr>
</thead>
<tbody>
<tr>
<td>( P = 2l + 2w )</td>
<td>( A = lw )</td>
</tr>
<tr>
<td>( = 2(84) + 2(50) )</td>
<td>( = 84(50) )</td>
</tr>
<tr>
<td>( = 268 )</td>
<td>( = 4200 )</td>
</tr>
</tbody>
</table>

The perimeter is 268 feet and the area is 4200 square feet.
**Example 2** Find the circumference and area of a circle

**TEAM PATCH** You are ordering circular cloth patches for your soccer team’s uniforms. Find the approximate circumference and area of the patch shown.

**Solution**

First find the radius. The diameter is 9 centimeters, so the radius is $\frac{1}{2}(9) = 4.5$ centimeters.

Then find the circumference and area.

Use 3.14 to approximate the value of $\pi$.

- The circumference is about 28.3 cm. The area is about 63.6 cm$^2$.

**Guided Practice**

Find the area and perimeter (or circumference) of the figure. If necessary, round to the nearest tenth.

1. 
2. 
3. 

**Example 3** Standardized Test Practice

Triangle $QRS$ has vertices $Q(1, 2)$, $R(4, 6)$, and $S(5, 2)$. What is the approximate perimeter of triangle $QRS$?

- **A** 8 units
- **B** 8.3 units
- **C** 13.1 units
- **D** 25.4 units

**Solution**

First draw triangle $QRS$ in a coordinate plane. Find the side lengths. Use the Distance Formula to find $QR$ and $RS$.

- $QS = \sqrt{(5 - 1)^2} = 4$ units
- $QR = \sqrt{(4 - 1)^2 + (6 - 2)^2} = \sqrt{25} = 5$ units
- $RS = \sqrt{(5 - 4)^2 + (2 - 6)^2} = \sqrt{17} \approx 4.1$ units

Then find the perimeter.

- $P = QS + QR + RS \approx 4 + 5 + 4.1 = 13.1$ units

The correct answer is C. **C** **D**
EXAMPLE 4  Solve a multi-step problem

SKATING RINK  An ice-resurfacing machine is used to smooth the surface of the ice at a skating rink. The machine can resurface about 270 square yards of ice in one minute.

About how many minutes does it take the machine to resurface a rectangular skating rink that is 200 feet long and 90 feet wide?

Solution

The machine can resurface the ice at a rate of 270 square yards per minute. So, the amount of time it takes to resurface the skating rink depends on its area.

**STEP 1**  Find the area of the rectangular skating rink.

Area = \( lw = 200(90) = 18,000 \text{ ft}^2 \)

The resurfacing rate is in square yards per minute. Rewrite the area of the rink in square yards. There are 3 feet in 1 yard, and \( 3^2 = 9 \) square feet in 1 square yard.

\[
18,000 \text{ ft}^2 \cdot \frac{1 \text{ yd}^2}{9 \text{ ft}^2} = 2000 \text{ yd}^2 \quad \text{Use unit analysis.}
\]

**STEP 2**  Write a verbal model to represent the situation. Then write and solve an equation based on the verbal model.

Let \( t \) represent the total time (in minutes) needed to resurface the skating rink.

<table>
<thead>
<tr>
<th>Area of rink ((\text{yd}^2))</th>
<th>Resurfacing rate ((\text{yd}^2 \text{ per min}))</th>
<th>Total time ((\text{min}))</th>
</tr>
</thead>
<tbody>
<tr>
<td>2000</td>
<td>270</td>
<td>( t )</td>
</tr>
</tbody>
</table>

\[ 2000 = 270 \cdot t \quad \text{Substitute.} \]

\[ 7.4 \approx t \quad \text{Divide each side by 270.} \]

\( t \) is about 7 minutes.

It takes the ice-resurfacing machine about 7 minutes to resurface the skating rink.

GUIDED PRACTICE  for Examples 3 and 4

4. Describe how to find the height from \( F \) to \( \overline{EG} \) in the triangle at the right.

5. Find the perimeter and the area of the triangle shown at the right.

6. **WHAT IF?** In Example 4, suppose the skating rink is twice as long and twice as wide. Will it take an ice-resurfacing machine twice as long to resurface the skating rink? *Explain* your reasoning.
EXAMPLE 5  Find unknown length

The base of a triangle is 28 meters. Its area is 308 square meters. Find the height of the triangle.

Solution

\[ A = \frac{1}{2}bh \]
Write formula for the area of a triangle.

\[ 308 = \frac{1}{2}(28)h \]
Substitute 308 for \( A \) and 28 for \( b \).

\[ 22 = h \]
Solve for \( h \).

\( \star \) The height is 22 meters.

Guided Practice for Example 5

7. The area of a triangle is 64 square meters, and its height is 16 meters. Find the length of its base.

1. VOCABULARY  How are the diameter and radius of a circle related?

2. ★ WRITING  Describe a real-world situation in which you would need to find a perimeter, and a situation in which you would need to find an area. What measurement units would you use in each situation?

3. ERROR ANALYSIS  Describe and correct the error made in finding the area of a triangle with a height of 9 feet and a base of 52 feet.

\[ A = 52(9) = 468 \text{ ft}^2 \]

PERIMETER AND AREA  Find the perimeter and area of the shaded figure.

4. 5. 6. 7. 8. 9.
10. **DRAWING A DIAGRAM** The base of a triangle is 32 feet. Its height is \(16\frac{1}{2}\) feet. Sketch the triangle and find its area.

11. **CIRCUMFERENCE AND AREA** Use the given diameter \(d\) or radius \(r\) to find the circumference and area of the circle. Round to the nearest tenth.
   - \(d = 27\) cm
   - \(d = 5\) in.
   - \(r = 12.1\) cm
   - \(r = 3.9\) cm

15. **DRAWING A DIAGRAM** The diameter of a circle is 18.9 centimeters. Sketch the circle and find its circumference and area. Round your answers to the nearest tenth.

16. **DISTANCE FORMULA** Find the perimeter of the figure. Round to the nearest tenth of a unit.

19. **MULTIPLE CHOICE** What is the approximate area (in square units) of the rectangle shown at the right?
   - A) 6.7
   - B) 8.0
   - C) 9.0
   - D) 10.0

20. **CONVERTING UNITS** Copy and complete the statement.
   - 187 cm\(^2 = \_\_\text{m}^2\)
   - 13 ft\(^2 = \_\_\text{yd}^2\)
   - 8 km\(^2 = \_\_\text{m}^2\)
   - 12 yd\(^2 = \_\_\text{ft}^2\)
   - 24 ft\(^2 = \_\_\text{in.}^2\)

26. **MULTIPLE CHOICE** A triangle has an area of 2.25 square feet. What is the area of the triangle in square inches?
   - A) 27 in.\(^2\)
   - B) 54 in.\(^2\)
   - C) 144 in.\(^2\)
   - D) 324 in.\(^2\)

27. **UNKNOWN MEASURES** Use the information about the figure to find the indicated measure.
   - Area = 261 m\(^2\) Find the height \(h\).
   - Area = 66 in.\(^2\) Find the base \(b\).
   - Perimeter = 25 in. Find the width \(w\).
30. **UNKNOWN MEASURE** The width of a rectangle is 17 inches. Its perimeter is 102 inches. Find the length of the rectangle.

31. **ALGEBRA** The area of a rectangle is 18 square inches. The length of the rectangle is twice its width. Find the length and width of the rectangle.

32. **ALGEBRA** The area of a triangle is 27 square feet. Its height is three times the length of its base. Find the height and base of the triangle.

33. **ALGEBRA** Let \( x \) represent the side length of a square. Find a regular polygon with side length \( x \) whose perimeter is twice the perimeter of the square. Find a regular polygon with side length \( x \) whose perimeter is three times the length of the square. **Explain** your thinking.

**FINDING SIDE LENGTHS** Find the side length of the square with the given area. Write your answer as a radical in simplest form.

34. \( A = 184 \text{ cm}^2 \)  
35. \( A = 346 \text{ in.}^2 \)  
36. \( A = 1008 \text{ mi}^2 \)  
37. \( A = 1050 \text{ km}^2 \)

38. **★ SHORT RESPONSE** In the diagram, the diameter of the yellow circle is half the diameter of the red circle. What fraction of the area of the red circle is **not** covered by the yellow circle? **Explain**.

39. **CHALLENGE** The area of a rectangle is 30 cm\(^2\) and its perimeter is 26 cm. Find the length and width of the rectangle.

---

**PROBLEM SOLVING**

40. **WATER LILIES** The giant Amazon water lily has a lily pad that is shaped like a circle. Find the circumference and area of a lily pad with a diameter of 60 inches. Round your answers to the nearest tenth.

41. **LAND** You are planting grass on a rectangular plot of land. You are also building a fence around the edge of the plot. The plot is 45 yards long and 30 yards wide. How much area do you need to cover with grass seed? How many feet of fencing do you need?

42. **MULTI-STEP PROBLEM** Chris is installing a solar panel. The maximum amount of power the solar panel can generate in a day depends in part on its area. On a sunny day in the city where Chris lives, each square meter of the panel can generate up to 125 watts of power. The flat rectangular panel is 84 centimeters long and 54 centimeters wide.
   a. Find the area of the solar panel in square meters.
   b. What is the maximum amount of power (in watts) that the panel could generate if its area was 1 square meter? 2 square meters? **Explain**.
   c. Estimate the maximum amount of power Chris’s solar panel can generate. **Explain** your reasoning.

---

**WORKED-OUT SOLUTIONS** on p. WSI  
**STANDARDIZED TEST PRACTICE**  
**MULTIPLE REPRESENTATIONS**
43. **MULTI-STEP PROBLEM** The eight spokes of a ship's wheel are joined at the wheel's center and pass through a large wooden circle, forming handles on the outside of the circle. From the wheel's center to the tip of the handle, each spoke is 21 inches long.

a. The circumference of the outer edge of the large wooden circle is 94 inches. Find the radius of the outer edge of the circle to the nearest inch.

b. Find the length \( x \) of a handle on the wheel. *Explain.*

44. **MULTIPLE REPRESENTATIONS** Let \( x \) represent the length of a side of a square. Let \( y_1 \) and \( y_2 \) represent the perimeter and area of that square.

a. **Making a Table** Copy and complete the table.

<table>
<thead>
<tr>
<th>Length, ( x )</th>
<th>1</th>
<th>2</th>
<th>5</th>
<th>10</th>
<th>25</th>
</tr>
</thead>
<tbody>
<tr>
<td>Perimeter, ( y_1 )</td>
<td>?</td>
<td>?</td>
<td>?</td>
<td>?</td>
<td>?</td>
</tr>
<tr>
<td>Area, ( y_2 )</td>
<td>?</td>
<td>?</td>
<td>?</td>
<td>?</td>
<td>?</td>
</tr>
</tbody>
</table>

b. **Making a Graph** Use the completed table to write two sets of ordered pairs: \((x, y_1)\) and \((x, y_2)\). Graph each set of ordered pairs.

c. **Analyzing Data** *Describe* any patterns you see in the table from part (a) and in the graphs from part (b).

45. **★ EXTENDED RESPONSE** The photograph at the right shows the Crown Fountain in Chicago, Illinois. At this fountain, images of faces appear on a large screen. The images are created by light-emitting diodes (LEDs) that are clustered in groups called modules. The LED modules are arranged in a rectangular grid.

a. The rectangular grid is approximately 7 meters wide and 15.2 meters high. Find the area of the grid.

b. Suppose an LED module is a square with a side length of 4 centimeters. How many rows and how many columns of LED modules would be needed to make the Crown Fountain screen? *Explain* your reasoning.

46. **ASTRONOMY** The diagram shows a gap in Saturn’s circular rings. This gap is known as the Cassini division. In the diagram, the red circle represents the ring that borders the inside of the Cassini division. The yellow circle represents the ring that borders the outside of the division.

a. The radius of the red ring is 115,800 kilometers. The radius of the yellow ring is 120,600 kilometers. Find the circumference of the red ring and the circumference of the yellow ring. Round your answers to the nearest hundred kilometers.

b. Compare the circumferences of the two rings. About how many kilometers greater is the yellow ring’s circumference than the red ring’s circumference?
47. **CHALLENGE** In the diagram at the right, how many times as great is the area of the circle as the area of the square? *Explain* your reasoning.

48. **Algebra** You have 30 yards of fencing with which to make a rectangular pen. Let \( x \) be the length of the pen.
   a. Write an expression for the width of the pen in terms of \( x \). Then write a formula for the area \( y \) of the pen in terms of \( x \).
   b. You want the pen to have the greatest possible area. What length and width should you use? *Explain* your reasoning.

---

**Mixed Review**

49. Use the equation \( y = 2x + 1 \) to copy and complete the table of values. *(p. 884)*

<table>
<thead>
<tr>
<th>( x )</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>( y )</td>
<td>?</td>
<td>?</td>
<td>?</td>
<td>?</td>
<td>?</td>
</tr>
</tbody>
</table>

50. Each number in a pattern is 6 less than the previous number. The first number in the pattern is 100. Write the next three numbers. *(p. 894)*

In Exercises 51 and 52, draw a diagram to represent the problem. Then find the indicated measure. *(p. 42)*

51. The lengths (in inches) of two sides of a regular triangle are given by the expressions \( 5x + 40 \) and \( 8x - 13 \). Find the length of a side of the triangle.

52. The measures of two angles of an equiangular hexagon are \( 12x^\circ \) and \( 10x + 20^\circ \). Find the measure of an angle of the hexagon.

---

**Quiz for Lessons 1.6–1.7**

Tell whether the figure is a polygon. If it is not, *explain* why. If it is a polygon, tell whether it is *convex* or *concave*. *(p. 42)*

1. 

2. 

3. 

Find the perimeter and area of the shaded figure. *(p. 49)*

4. 

5. 

6. 

7. **GARDENING** You are spreading wood chips on a rectangular garden. The garden is \( 3\frac{1}{2} \) yards long and \( 2\frac{1}{2} \) yards wide. One bag of wood chips covers 10 square feet. How many bags of wood chips do you need? *(p. 49)*
Another Way to Solve Example 4, page 51

MULTIPLE REPRESENTATIONS  In Example 4 on page 51, you saw how to use an equation to solve a problem about a skating rink. Looking for a pattern can help you write an equation.

SKATING RINK An ice-resurfacing machine is used to smooth the surface of the ice at a skating rink. The machine can resurface about 270 square yards of ice in one minute. About how many minutes does it take the machine to resurface a rectangular skating rink that is 200 feet long and 90 feet wide?

METHOD

Using a Pattern  You can use a table to look for a pattern.

STEP 1  Find the area of the rink in square yards. In Example 4 on page 51, you found that the area was 2000 square yards.

STEP 2  Make a table that shows the relationship between the time spent resurfacing the ice and the area resurfaced. Look for a pattern.

<table>
<thead>
<tr>
<th>Time (min)</th>
<th>Area resurfaced (yd²)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>1 • 270 = 270</td>
</tr>
<tr>
<td>2</td>
<td>2 • 270 = 540</td>
</tr>
<tr>
<td>t</td>
<td>t • 270 = A</td>
</tr>
</tbody>
</table>

STEP 3  Use the equation to find the time t (in minutes) that it takes the machine to resurface 2000 square yards of ice.

It takes about 7 minutes.

Practice

1. PLOWING  A square field is \( \frac{1}{8} \) mile long on each side. A tractor can plow about 180,000 square feet per hour. To the nearest tenth of an hour, about how long does it take to plow the field? (1 mi = 5280 ft.)

2. ERROR ANALYSIS  To solve Exercise 1 above, a student writes the equation 660 = 180,000t, where t is the number of hours spent plowing. Describe and correct the error in the equation.

3. PARKING LOT  A rectangular parking lot is 110 yards long and 45 yards wide. It costs about $0.60 to pave each square foot of the parking lot with asphalt. About how much will it cost to pave the parking lot?

4. WALKING  A circular path has a diameter of 120 meters. Your average walking speed is 4 kilometers per hour. About how many minutes will it take you to walk around the path 3 times?
1. **MULTI-STEP PROBLEM** You are covering the rectangular roof of a shed with shingles. The roof is a rectangle that is 4 yards long and 3 yards wide. Asphalt shingles cost $0.75 per square foot and wood shingles cost $1.15 per square foot.

   a. Find the area of the roof in square feet.
   b. Find the cost of using asphalt shingles and the cost of using wood shingles.
   c. About how much more will you pay to use wood shingles for the roof?

2. **OPEN-ENDED** In the window below, name a convex polygon and a concave polygon. Classify each of your polygons by the number of sides.

3. **EXTENDED RESPONSE** The diagram shows a decoration on a house. In the diagram, \( \angle HGD \) and \( \angle HGF \) are right angles, \( m\angle DGB = 21^\circ \), \( m\angle HBG = 55^\circ \), \( \angle DGB \equiv \angle FGC \), and \( \angle HBG \equiv \angle HCG \).

   a. List two pairs of complementary angles and five pairs of supplementary angles.
   b. Find \( m\angle FGC \), \( m\angle BGH \), and \( m\angle HGC \). Explain your reasoning.
   c. Find \( m\angle HCG \), \( m\angle DBG \), and \( m\angle FCG \). Explain your reasoning.

4. **GRIDDED ANSWER** \( \angle 1 \) and \( \angle 2 \) are supplementary angles, and \( \angle 1 \) and \( \angle 3 \) are complementary angles. Given \( m\angle 1 \) is 28° less than \( m\angle 2 \), find \( m\angle 3 \) in degrees.

5. **EXTENDED RESPONSE** You use bricks to outline the borders of the two gardens shown below. Each brick is 10 inches long.

   a. You lay the bricks end-to-end around the border of each garden. How many bricks do you need for each garden? Explain.
   b. The bricks are sold in bundles of 100. How many bundles should you buy? Explain.

6. **SHORT RESPONSE** The frame of a mirror is a regular pentagon made from pieces of bamboo. Use the diagram to find how many feet of bamboo are used in the frame.

7. **GRIDDED ANSWER** As shown in the diagram, a skateboarder tilts one end of a skateboard. Find \( m\angle ZWX \) in degrees.

8. **SHORT RESPONSE** Use the diagram below.

   a. Find the perimeter of quadrilateral \( ABCD \).
   b. Find the area of triangle \( ABC \) and the area of triangle \( ADC \). What is the area of quadrilateral \( ABCD \)? Explain.
**Big Idea 1**

**Describing Geometric Figures**
You learned to identify and classify geometric figures.

<table>
<thead>
<tr>
<th>Point A</th>
<th>Line $AB$ ($\overline{AB}$)</th>
<th>Plane $M$</th>
<th>Segment $AB$ ($\overline{AB}$)</th>
</tr>
</thead>
<tbody>
<tr>
<td>$A$</td>
<td>$\overline{B}$</td>
<td>$M$</td>
<td>$\overline{B}$</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Ray $\overline{AB}$ ($\overline{AB}$)</th>
<th>Angle $A$ ($\angle A$, $\angle BAC$, or $\angle CAB$)</th>
<th>Polygon</th>
</tr>
</thead>
<tbody>
<tr>
<td>$A$ $\overline{B}$</td>
<td>$\triangle ABC$</td>
<td>Quadrilateral $ABCD$</td>
</tr>
</tbody>
</table>

| $\angle A$                          | $\angle BAC$, or $\angle CAB$                           | Pentagon $PQRST$ |

**Big Idea 2**

**Measuring Geometric Figures**

**SEGMENTS** You measured segments in the coordinate plane.

- **Distance Formula**
  Distance between $A(x_1, y_1)$ and $B(x_2, y_2)$:
  $$AB = \sqrt{(x_1 - x_2)^2 + (y_1 - y_2)^2}$$

- **Midpoint Formula**
  Coordinates of midpoint $M$ of $\overline{AB}$, with endpoints $A(x_1, y_1)$ and $B(x_2, y_2)$:
  $$M \left( \frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2} \right)$$

**ANGLES** You classified angles and found their measures.

- **Complementary angles**
  $$m\angle 1 + m\angle 2 = 90^\circ$$

- **Supplementary angles**
  $$m\angle 3 + m\angle 4 = 180^\circ$$

**Big Idea 3**

**Understanding Equality and Congruence**

Congruent segments have equal lengths. Congruent angles have equal measures.

- $\overline{AB} = \overline{BC}$ and $\overline{AB} = \overline{BC}$
- $\angle JKL = \angle LKM$ and $m\angle JKL = m\angle LKM$
VOCABULARY EXERCISES

1. Copy and complete: Points A and B are the ___ of \(\overline{AB}\).
2. Draw an example of a linear pair.
3. If \(Q\) is between points \(P\) and \(R\) on \(\overrightarrow{PR}\), and \(PQ = QR\), then \(Q\) is the ___ of \(\overrightarrow{PR}\).

REVIEW EXAMPLES AND EXERCISES

Use the review examples and exercises below to check your understanding of the concepts you have learned in each lesson of Chapter 1.

1.1 Identify Points, Lines, and Planes

**Example**

Use the diagram shown at the right.

Another name for \(\overrightarrow{CD}\) is line \(m\).

Points \(A\), \(B\), and \(C\) are collinear.

Points \(A\), \(B\), \(C\), and \(F\) are coplanar.

**Exercises**

4. Give another name for line \(g\).
5. Name three points that are not collinear.
6. Name four points that are coplanar.
7. Name a pair of opposite rays.
8. Name the intersection of line \(h\) and plane \(M\).
**1.2 Use Segments and Congruence**  
pp. 9–14

**Example**

Find the length of $\overline{HJ}$.

$GJ = GH + HJ$ \quad \text{Segment Addition Postulate}

$27 = 18 + HJ$ \quad \text{Substitute 27 for $GJ$ and 18 for $GH$.}

$9 = HJ$ \quad \text{Subtract 18 from each side.}

**Exercises**

Find the indicated length.

10. Find $NP$.

11. Find $XY$.

12. The endpoints of $\overline{DE}$ are $D(\text{-}4, 11)$ and $E(\text{-}4, \text{-}13)$. The endpoints of $\overline{GH}$ are $G(\text{-}14, 5)$ and $H(\text{-}9, 5)$. Are $\overline{DE}$ and $\overline{GH}$ congruent? Explain.

**1.3 Use Midpoint and Distance Formulas**  
pp. 15–22

**Example**

$\overline{EF}$ has endpoints $E(1, 4)$ and $F(3, 2)$. Find (a) the length of $\overline{EF}$ rounded to the nearest tenth of a unit, and (b) the coordinates of the midpoint $M$ of $\overline{EF}$.

a. Use the Distance Formula.

$b = \sqrt{(2 - 1)^2 + (4 - 2)^2} = \sqrt{2^2 + 2^2} = \sqrt{8} \approx 2.8$ units  

b. Use the Midpoint Formula.

$M\left(\frac{1 + 3}{2}, \frac{4 + 2}{2}\right) = M(2, 3)$

**Exercises**

13. Point $M$ is the midpoint of $\overline{JK}$. Find $JK$ when $JM = 6x - 7$ and $MK = 2x + 3$.

In Exercises 14–17, the endpoints of a segment are given. Find the length of the segment rounded to the nearest tenth. Then find the coordinates of the midpoint of the segment.

14. $A(2, 5)$ and $B(4, 3)$

15. $F(1, 7)$ and $G(6, 0)$

16. $H(\text{-}3, 9)$ and $J(5, 4)$

17. $K(10, 6)$ and $L(0, \text{-}7)$

18. Point $C(3, 8)$ is the midpoint of $\overline{AB}$. One endpoint is $A(\text{-}1, 5)$. Find the coordinates of endpoint $B$.

19. The endpoints of $\overline{EF}$ are $E(2, 3)$ and $F(8, 11)$. The midpoint of $\overline{EF}$ is $M$. Find the length of $\overline{EM}$. 
1.4 Measure and Classify Angles

**Example**

Given that $m \angle YXV$ is $60^\circ$, find $m \angle YXZ$ and $m \angle ZXV$.

**Step 1** Find the value of $x$.

$$m \angle YXV = m \angle YXZ + m \angle ZXV$$

$$60^\circ = (2x + 11)^\circ + (x + 13)^\circ$$

$$x = 12$$

**Step 2** Evaluate the given expressions when $x = 12$.

$$m \angle YXZ = (2x + 11)^\circ = (2 \cdot 12 + 11)^\circ = 35^\circ$$

$$m \angle ZXV = (x + 13)^\circ = (12 + 13)^\circ = 25^\circ$$

**Exercises**

20. In the diagram shown at the right, $m \angle LMN = 140^\circ$.

   Find $m \angle PMN$.

21. $\overrightarrow{VZ}$ bisects $\angle UVW$, and $m \angle UVZ = 81^\circ$.

   Find $m \angle UVW$. Then classify $\angle UVW$ by its angle measure.

1.5 Describe Angle Pair Relationships

**Example**

a. $\angle 1$ and $\angle 2$ are complementary angles. Given that $m \angle 1 = 37^\circ$, find $m \angle 2$.

$$m \angle 2 = 90^\circ - m \angle 1 = 90^\circ - 37^\circ = 53^\circ$$

b. $\angle 3$ and $\angle 4$ are supplementary angles. Given that $m \angle 3 = 106^\circ$, find $m \angle 4$.

$$m \angle 4 = 180^\circ - m \angle 3 = 180^\circ - 106^\circ = 74^\circ$$

**Exercises**

22. $m \angle 1 = 12^\circ$  
23. $m \angle 1 = 83^\circ$  
24. $m \angle 1 = 46^\circ$  
25. $m \angle 1 = 2^\circ$

26. $m \angle 3 = 116^\circ$  
27. $m \angle 3 = 56^\circ$  
28. $m \angle 3 = 89^\circ$  
29. $m \angle 3 = 12^\circ$

30. $\angle 1$ and $\angle 2$ are complementary angles. Find the measures of the angles when $m \angle 1 = (x - 10)^\circ$ and $m \angle 2 = (2x + 40)^\circ$.

31. $\angle 1$ and $\angle 2$ are supplementary angles. Find the measures of the angles when $m \angle 1 = (3x + 50)^\circ$ and $m \angle 2 = (4x + 32)^\circ$. Then classify $\angle 1$ by its angle measure.
1.6 Classify Polygons

**EXAMPLE**

Classify the polygon by the number of sides. Tell whether it is equilateral, equiangular, or regular. *Explain.*

The polygon has four sides, so it is a quadrilateral. It is not equiangular or equilateral, so it is not regular.

**EXERCISES**

Classify the polygon by the number of sides. Tell whether it is equilateral, equiangular, or regular. *Explain.*

32.

33.

34.

35. Pentagon $ABCDE$ is a regular polygon. The length of $BC$ is represented by the expression $5x - 4$. The length of $DE$ is represented by the expression $2x + 11$. Find the length of $AB$.

1.7 Find Perimeter, Circumference, and Area

**EXAMPLE**

The diameter of a circle is 10 feet. Find the circumference and area of the circle. Round to the nearest tenth.

The radius is half of the length of the diameter, so $r = \frac{1}{2}(10) = 5$ ft.

<table>
<thead>
<tr>
<th>Circumference</th>
<th>Area</th>
</tr>
</thead>
<tbody>
<tr>
<td>$C = 2\pi r \approx 2(3.14)(5) = 31.4$ ft</td>
<td>$A = \pi r^2 \approx 3.14(5^2) = 78.5$ ft$^2$</td>
</tr>
</tbody>
</table>

**EXERCISES**

In Exercises 36–38, find the perimeter (or circumference) and area of the figure described. If necessary, round to the nearest tenth.

36. Circle with diameter 15.6 meters

37. Rectangle with length $4\frac{1}{2}$ inches and width $2\frac{1}{2}$ inches

38. Triangle with vertices $U(1, 2), V(-8, 2)$, and $W(-4, 6)$

39. The height of a triangle is 18.6 meters. Its area is 46.5 square meters. Find the length of the triangle’s base.

40. The area of a circle is 320 square meters. Find the radius of the circle. Then find the circumference. Round your answers to the nearest tenth.
Use the diagram to decide whether the statement is true or false.

1. Point A lies on line m.
2. Point D lies on line n.
3. Points B, C, E, and Q are coplanar.
4. Points C, E, and B are collinear.
5. Another name for plane G is plane QEC.

Find the indicated length.

6. Find HJ.
7. Find BC.
8. Find XZ.

In Exercises 9–11, find the distance between the two points.
9. T(3, 4) and W(2, 7)
10. C(5, 10) and D(6, −1)
11. M(−8, 0) and N(−1, 3)

12. The midpoint of AB is M(9, 7). One endpoint is A(3, 9). Find the coordinates of endpoint B.

13. Line t bisects CD at point M, CM = 3x, and MD = 27. Find CD.

In Exercises 14 and 15, use the diagram.

14. Trace the diagram and extend the rays. Use a protractor to measure ∠GHJ. Classify it as acute, obtuse, right, or straight.
15. Given m∠KHZ = 90°, find m∠LHZ.

16. The measure of ∠QRT is 154°, and RS bisects ∠QRT. What are the measures of ∠QRS and ∠SRT?

In Exercises 17 and 18, use the diagram at the right.

17. Name four linear pairs.
18. Name two pairs of vertical angles.

19. The measure of an angle is 64°. What is the measure of its complement? What is the measure of its supplement?

20. A convex polygon has half as many sides as a concave 10-gon. Draw the concave polygon and the convex polygon. Classify the convex polygon by the number of sides it has.

21. Find the perimeter of the regular pentagon shown at the right.

22. CARPET You can afford to spend $300 to carpet a room that is 5.5 yards long and 4.5 yards wide. The cost to purchase and install the carpet you like is $1.50 per square foot. Can you afford to buy this carpet? Explain.
EXAMPLE 1 Solve linear equations

Solve the equation \(-3(x + 5) + 4x = 25\).

\[
\begin{align*}
-3(x + 5) + 4x &= 25 \\
-3x - 15 + 4x &= 25 \\
x - 15 &= 25 \\
x &= 40
\end{align*}
\]

Write original equation.
Use the Distributive Property.
Group and combine like terms.
Add 15 to each side.

EXAMPLE 2 Solve a real-world problem

MEMBERSHIP COSTS A health club charges an initiation fee of $50. Members then pay $45 per month. You have $400 to spend on a health club membership. For how many months can you afford to be a member?

Let \(n\) represent the number of months you can pay for a membership.

\[
\begin{align*}
400 &= \text{Initiation fee} + (\text{Monthly Rate} \times \text{Number of Months}) \\
400 &= 50 + 45n \\
350 &= 45n \\
7.8 &= n
\end{align*}
\]

You can afford to be a member at the health club for 7 months.

EXERCISES

Solve the equation.

1. \(9y + 1 - y = 49\) 
2. \(5z + 7 + z = -8\) 
3. \(-4(2 - t) = -16\)

4. \(7a - 2(a - 1) = 17\) 
5. \(\frac{4x}{3} + 2(3 - x) = 5\) 
6. \(\frac{2x - 5}{7} = 4\)

7. \(9c - 11 = -c + 29\) 
8. \(2(0.3r + 1) = 23 - 0.1r\) 
9. \(5(k + 2) = 3(k - 4)\)

10. GIFT CERTIFICATE You have a $50 gift certificate at a store. You want to buy a book that costs $8.99 and boxes of stationery for your friends. Each box costs $4.59. How many boxes can you buy with your gift certificate?

11. CATERING It costs $350 to rent a room for a party. You also want to hire a caterer. The caterer charges $8.75 per person. How many people can come to the party if you have $500 to spend on the room and the caterer?

12. JEWELRY You are making a necklace out of glass beads. You use one bead that is \(1 \frac{1}{2}\) inches long and smaller beads that are each \(\frac{3}{4}\) inch long. The necklace is 18 inches long. How many smaller beads do you need?
You want to rent portable flooring to set up a dance floor for a party. The table below shows the cost of renting portable flooring from a local company. You want to have a rectangular dance floor that is 5 yards long and 4 yards wide. How much will it cost to rent flooring? Explain your reasoning.

<table>
<thead>
<tr>
<th>If the floor area is . . .</th>
<th>Then the cost is . . .</th>
</tr>
</thead>
<tbody>
<tr>
<td>less than 100 square feet</td>
<td>$6.50 per square foot</td>
</tr>
<tr>
<td>between 100 and 200 square feet</td>
<td>$6.25 per square foot</td>
</tr>
</tbody>
</table>

Below are sample solutions to the problem. Read each solution and the comments in blue to see why the sample represents full credit, partial credit, or no credit.

**SAMPLE 1: Full credit solution**

Find the area of the dance floor. Area = \( lw = 5(4) = 20 \text{ yd}^2 \).

Then convert this area to square feet. There are \( 3^2 = 9 \text{ ft}^2 \) in 1 yd\(^2 \).

\[
20 \text{ yd}^2 \cdot \frac{9 \text{ ft}^2}{1 \text{ yd}^2} = 180 \text{ ft}^2
\]

Because 180 ft\(^2 \) is between 100 ft\(^2 \) and 200 ft\(^2 \), the price of flooring is $6.25 per square foot. Multiply the price per square foot by the area.

\[
\text{Total cost} = \frac{6.25}{1 \text{ ft}^2} \cdot 180 \text{ ft}^2 = 1125
\]

It will cost $1125 to rent flooring.

**SAMPLE 2: Partial credit solution**

The area of the dance floor is \( 5(4) = 20 \text{ square yards} \). Convert this area to square feet. There are 3 feet in 1 yard.

\[
20 \text{ yd}^2 \cdot \frac{3 \text{ ft}^2}{1 \text{ yd}^2} = 60 \text{ ft}^2
\]

The flooring will cost $6.50 per square foot because 60 ft\(^2 \) is less than 100 ft\(^2 \). To find the total cost, multiply the area by the cost per square foot.

\[
60 \text{ ft}^2 \cdot \frac{6.50}{1 \text{ ft}^2} = 390
\]

It will cost $390 to rent flooring.
**SAMPLE 3: Partial credit solution**

The area of the room is 180 ft\(^2\), so the flooring price is $6.25. The total cost is 180 \(\cdot\) 6.25 = $1125.

It will cost $1125 to rent flooring.

**SAMPLE 4: No credit solution**

Floor area = 4 \(\times\) 5 = 20.
Cost = 20 \(\times\) $650 = $13,000.

It will cost $13,000 to rent flooring.

**PRACTICE**

Apply the Scoring Rubric

Use the rubric on page 66 to score the solution to the problem below as full credit, partial credit, or no credit. Explain your reasoning.

**PROBLEM** You have 450 daffodil bulbs. You divide a 5 yard by 2 yard rectangular garden into 1 foot by 1 foot squares. You want to plant the same number of bulbs in each square. How many bulbs should you plant in each square? Explain your reasoning.

1. First find the area of the plot in square feet. There are 3 feet in 1 yard, so the length is 5(3) = 15 feet, and the width is 2(3) = 6 feet. The area is 15(6) = 90 square feet. The garden plot can be divided into 90 squares with side length 1 foot. Divide 450 by 90 to get 5 bulbs in each square.

2. The area of the garden plot is 5(2) = 10 square yards. There are 3 feet in 1 yard, so you can multiply 10 square yards by 3 to get an area of 30 square feet. You can divide the garden plot into 30 squares. To find how many bulbs per square, divide 450 bulbs by 30 to get 15 bulbs.

3. Divide 450 by the area of the plot: 450 bulbs \(\div\) 10 yards = 45 bulbs. You should plant 45 bulbs in each square.

4. Multiply the length and width by 3 feet to convert yards to feet. The area is 15 ft \(\times\) 6 ft = 90 ft\(^2\). Divide the garden into 90 squares.

Diagram of garden plot

- 2 yd = 6 ft
- 5 yd = 15 ft
1. It costs $2 per square foot to refinish a hardwood floor if the area is less than 300 square feet, and $1.75 per square foot if the area is greater than or equal to 300 square feet. How much does it cost to refinish a rectangular floor that is 6 yards long and 4.5 yards wide? Explain your reasoning.

2. As shown below, the library (point L) and the Town Hall (point T) are on the same straight road. Your house is on the same road, halfway between the library and the Town Hall. Let point H mark the location of your house. Find the coordinates of H and the approximate distance between the library and your house. Explain your reasoning.

3. The water in a swimming pool evaporates over time if the pool is not covered. In one year, a swimming pool can lose about 17.6 gallons of water for every square foot of water that is exposed to air. About how much water would evaporate in one year from the surface of the water in the pool shown? Explain your reasoning.

4. A company is designing a cover for a circular swimming pool. The diameter of the pool is 20 feet. The material for the cover costs $4 per square yard. About how much will it cost the company to make the pool cover? Explain your reasoning.

5. You are making a mat with a fringed border. The mat is shaped like a regular pentagon, as shown below. Fringe costs $1.50 per yard. How much will the fringe for the mat cost? Explain your reasoning.

6. Angles A and B are complementary angles, \( m\angle A = (2x - 4)^\circ \), and \( m\angle B = (4x - 8)^\circ \). Find the measure of the supplement of \( \angle B \). Explain your reasoning.

7. As shown on the map, you have two ways to drive from Atkins to Canton. You can either drive through Baxton, or you can drive directly from Atkins to Canton. About how much shorter is the trip from Atkins to Canton if you do not go through Baxton? Explain your reasoning.

8. A jeweler is making pairs of gold earrings. For each earring, the jeweler will make a circular hoop like the one shown below. The jeweler has 2 meters of gold wire. How many pairs of gold hoops can the jeweler make? Justify your reasoning.
9. The midpoint of \(AB\) is \(M(4, -2)\). One endpoint is \(A(-2, 6)\). What is the length of \(AB\)?
   A. 5 units  
   B. 10 units  
   C. 20 units  
   D. 28 units

10. The perimeter of a rectangle is 85 feet. The length of the rectangle is 4 feet more than its width. Which equation can be used to find the width \(w\) of the rectangle?
   A. \(85 = 2(w + 4)\)  
   B. \(85 = 2w + 2(w - 4)\)  
   C. \(85 = 2(2w + 4)\)  
   D. \(85 = w(w + 4)\)

11. In the diagram, \(\overline{YW}\) bisects \(\angle XYZ\). Find \(m\angle XYZ\) in degrees.

12. Angles \(A\) and \(B\) are complements, and the measure of \(\angle A\) is 8 times the measure of \(\angle B\). Find the measure (in degrees) of the supplement of \(\angle A\).

13. The perimeter of the triangle shown is 400 feet. Find its area in square feet.

14. The athletic director at a college wants to build an indoor playing field. The playing field will be twice as long as it is wide. Artificial turf costs $4 per square foot. The director has $50,000 to spend on artificial turf.
   a. What is the largest area that the director can afford to cover with artificial turf? Explain.
   b. Find the approximate length and width of the field to the nearest foot.

15. An artist uses black ink to draw the outlines of 30 circles and 25 squares, and red ink to fill in the area of each circle and square. The diameter of each circle is 1 inch, and the side length of each square is 1 inch. Which group of drawings uses more black ink, the circles or the squares? Which group of drawings uses more red ink? Explain.

16. Points \(A\) and \(C\) represent the positions of two boats in a large lake. Point \(B\) represents the position of a fixed buoy.
   a. Find the distance from each boat to the buoy.
   b. The boat at point \(A\) travels toward the buoy in a straight line at a rate of 5 kilometers per hour. The boat at point \(C\) travels to the buoy at a rate of 5.2 kilometers per hour. Which boat reaches the buoy first? Explain.
2 Reasoning and Proof

2.1 Use Inductive Reasoning
2.2 Analyze Conditional Statements
2.3 Apply Deductive Reasoning
2.4 Use Postulates and Diagrams
2.5 Reason Using Properties from Algebra
2.6 Prove Statements about Segments and Angles
2.7 Prove Angle Pair Relationships

In previous courses and in Chapter 1, you learned the following skills, which you’ll use in Chapter 2: naming figures, using notations, drawing diagrams, solving equations, and using postulates.

---

Prerequisite Skills

**VOCABULARY CHECK**
Use the diagram to name an example of the described figure.
1. A right angle
2. A pair of vertical angles
3. A pair of supplementary angles
4. A pair of complementary angles

**SKILLS AND ALGEBRA CHECK**
*Describe* what the notation means. Draw the figure. *(Review p. 2 for 2.4.)*
5. \( \overline{AB} \)
6. \( \overrightarrow{CD} \)
7. \( EF \)
8. \( GH \)

Solve the equation. *(Review p. 875 for 2.5.)*
9. \( 3x + 5 = 20 \)
10. \( 4(x - 7) = -12 \)
11. \( 5(x + 8) = 4x \)

Name the postulate used. Draw the figure. *(Review pp. 9, 24 for 2.5.)*
12. \( m\angle ABD + m\angle DBC = m\angle ABC \)
13. \( ST + TU = SU \)

@HomeTutor Prerequisite skills practice at classzone.com
In Chapter 2, you will apply the big ideas listed below and reviewed in the Chapter Summary on page 133. You will also use the key vocabulary listed below.

**Big Ideas**

1. Use inductive and deductive reasoning
2. Understanding geometric relationships in diagrams
3. Writing proofs of geometric relationships

**Key Vocabulary**

- conjecture, p. 73
- inductive reasoning, p. 73
- counterexample, p. 74
- conditional statement, p. 79
- converse, inverse, contrapositive
- if-then form, p. 79
- hypothesis, conclusion
- negation, p. 79
- equivalent statements, p. 80
- perpendicular lines, p. 81
- biconditional statement, p. 82
- deductive reasoning, p. 87
- proof, p. 112
- two-column proof, p. 112
- theorem, p. 113

You can use reasoning to draw conclusions. For example, by making logical conclusions from organized information, you can make a layout of a city street.

**Animated Geometry**

The animation illustrated below for Exercise 29 on page 119 helps you answer this question: Is the distance from the restaurant to the movie theater the same as the distance from the cafe to the dry cleaners?

*Animated Geometry* at classzone.com

**Other animations for Chapter 2:** pages 72, 81, 88, 97, 106, and 125
2.1 Use Inductive Reasoning

You classified polygons by the number of sides.
You will describe patterns and use inductive reasoning.
So you can make predictions about baseball, as in Ex. 32.

Geometry, like much of science and mathematics, was developed partly as a result of people recognizing and describing patterns. In this lesson, you will discover patterns yourself and use them to make predictions.

Example 1 Describe a visual pattern

Describe how to sketch the fourth figure in the pattern. Then sketch the fourth figure.

Solution

Each circle is divided into twice as many equal regions as the figure number. Sketch the fourth figure by dividing a circle into eighths. Shade the section just above the horizontal segment at the left.

Example 2 Describe a number pattern

Describe the pattern in the numbers \(-7, -21, -63, -189, \ldots\) and write the next three numbers in the pattern.

Notice that each number in the pattern is three times the previous number.

\[
\begin{align*}
-7 & \quad \rightarrow \quad -21 \quad \rightarrow \quad -63 \quad \rightarrow \quad -189 \quad \ldots \\
\times 3 & \quad \rightarrow \quad \times 3 & \quad \rightarrow \quad \times 3 & \quad \rightarrow \quad \times 3
\end{align*}
\]

Continue the pattern. The next three numbers are \(-567, -1701, \text{ and } -5103\).

Guided Practice for Examples 1 and 2

1. Sketch the fifth figure in the pattern in Example 1.
2. Describe the pattern in the numbers \(5.01, 5.03, 5.05, 5.07, \ldots\) Write the next three numbers in the pattern.
**INDUCTIVE REASONING** A **conjecture** is an unproven statement that is based on observations. You use **inductive reasoning** when you find a pattern in specific cases and then write a conjecture for the general case.

**Example 3** Make a conjecture

Given five collinear points, make a conjecture about the number of ways to connect different pairs of the points.

**Solution**

Make a table and look for a pattern. Notice the pattern in how the number of connections increases. You can use the pattern to make a conjecture.

<table>
<thead>
<tr>
<th>Number of points</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>Picture</td>
<td><img src="image" alt="Picture" /></td>
<td><img src="image" alt="Picture" /></td>
<td><img src="image" alt="Picture" /></td>
<td><img src="image" alt="Picture" /></td>
<td><img src="image" alt="Picture" /></td>
</tr>
<tr>
<td>Number of connections</td>
<td>0</td>
<td>1</td>
<td>3</td>
<td>6</td>
<td>?</td>
</tr>
</tbody>
</table>

**Conjecture** You can connect five collinear points \(6 + 4\), or 10 different ways.

**Example 4** Make and test a conjecture

Numbers such as 3, 4, and 5 are called **consecutive numbers**. Make and test a conjecture about the sum of any three consecutive numbers.

**Solution**

**Step 1** Find a pattern using a few groups of small numbers.

\[
3 + 4 + 5 = 12 = 4 \cdot 3 \\
7 + 8 + 9 = 24 = 8 \cdot 3 \\
10 + 11 + 12 = 33 = 11 \cdot 3 \\
16 + 17 + 18 = 51 = 17 \cdot 3
\]

**Conjecture** The sum of any three consecutive integers is three times the second number.

**Step 2** Test your conjecture using other numbers. For example, test that it works with the groups \(-1, 0, 1\) and \(100, 101, 102\).

\[
-1 + 0 + 1 = 0 = 0 \cdot 3 \\
100 + 101 + 102 = 303 = 101 \cdot 3
\]

**Guided Practice** for Examples 3 and 4

3. Suppose you are given seven collinear points. Make a conjecture about the number of ways to connect different pairs of the points.

4. Make and test a conjecture about the sign of the product of any three negative integers.
**DISPROVING CONJECTURES** To show that a conjecture is true, you must show that it is true for all cases. You can show that a conjecture is false, however, by simply finding one **counterexample**. A **counterexample** is a specific case for which the conjecture is false.

**Example 5** Find a counterexample

A student makes the following conjecture about the sum of two numbers. Find a counterexample to disprove the student’s conjecture.

**Conjecture** The sum of two numbers is always greater than the larger number.

**Solution**

To find a counterexample, you need to find a sum that is less than the larger number.

\[-2 + (-3) = -5\]
\[-5 \gg -3\]

Because a counterexample exists, the conjecture is false.

**Example 6** Standardized Test Practice

Which conjecture could a high school athletic director make based on the graph at the right?

- **A** More boys play soccer than girls.
- **B** More girls are playing soccer today than in 1995.
- **C** More people are playing soccer today than in the past because the 1994 World Cup games were held in the United States.
- **D** The number of girls playing soccer was more in 1995 than in 2001.

**Solution**

Choices A and C can be eliminated because they refer to facts not presented by the graph. Choice B is a reasonable conjecture because the graph shows an increase from 1990–2001, but does not give any reasons for that increase.

The correct answer is B. **A** **B** **C** **D**

**Guided Practice** for Examples 5 and 6

5. Find a counterexample to show that the following conjecture is false.

**Conjecture** The value of \(x^2\) is always greater than the value of \(x\).

6. Use the graph in Example 6 to make a conjecture that could be true. Give an explanation that supports your reasoning.
2.1 EXERCISES

1. **VOCABULARY** Write a definition of *conjecture* in your own words.

2. **WRITING** The word *counter* has several meanings. Look up the word in a dictionary. Identify which meaning helps you understand the definition of *counterexample*.

**SKETCHING VISUAL PATTERNS** Sketch the next figure in the pattern.

3.

4.

5. **MULTIPLE CHOICE** What is the next figure in the pattern?

   A
   B
   C
   D

**DEscribing Number Patterns** Describe the pattern in the numbers. Write the next number in the pattern.

6. 1, 5, 9, 13, ...

7. 3, 12, 48, 192, ...

8. 10, 5, 2.5, 1.25, ...

9. 4, 3, 1, −2, ...

10. 1, \(\frac{2}{3}\), \(\frac{1}{3}\), 0, ...

11. −5, −2, 4, 13, ...

**Making Conjectures** In Exercises 12 and 13, copy and complete the conjecture based on the pattern you observe in the specific cases.

12. Given seven noncollinear points, make a conjecture about the number of ways to connect different pairs of the points.

<table>
<thead>
<tr>
<th>Number of Points</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
<th>7</th>
</tr>
</thead>
<tbody>
<tr>
<td>Picture</td>
<td>![triangle]</td>
<td>![quadrilateral]</td>
<td>![pentagon]</td>
<td>![hexagon]</td>
<td>![heptagon]</td>
</tr>
<tr>
<td>Number of Connections</td>
<td>3</td>
<td>6</td>
<td>10</td>
<td>15</td>
<td>?</td>
</tr>
</tbody>
</table>

   **Conjecture** You can connect seven noncollinear points in ? different ways.

13. Use these sums of odd integers: \(3 + 7 = 10\), \(1 + 7 = 8\), \(17 + 21 = 38\)

   **Conjecture** The sum of any two odd integers is ?.
FINDING COUNTEREXAMPLES In Exercises 14–17, show the conjecture is false by finding a counterexample.

14. If the product of two numbers is positive, then the two numbers must both be positive.

15. The product \((a + b)^2\) is equal to \(a^2 + b^2\), for \(a \neq 0\) and \(b \neq 0\).

16. All prime numbers are odd.

17. If the product of two numbers is even, then the two numbers must both be even.

18. ERROR ANALYSIS Describe and correct the error in the student’s reasoning.

19. ★ SHORT RESPONSE Explain why only one counterexample is necessary to show that a conjecture is false.

20. ★ ALGEBRA In Exercises 20 and 21, write a function rule relating \(x\) and \(y\).

<table>
<thead>
<tr>
<th>(x)</th>
<th>1</th>
<th>2</th>
<th>3</th>
</tr>
</thead>
<tbody>
<tr>
<td>(y)</td>
<td>-3</td>
<td>-2</td>
<td>-1</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>(x)</th>
<th>1</th>
<th>2</th>
<th>3</th>
</tr>
</thead>
<tbody>
<tr>
<td>(y)</td>
<td>2</td>
<td>4</td>
<td>6</td>
</tr>
</tbody>
</table>

22. ★ MULTIPLE CHOICE What is the first number in the pattern?

\(? , ? , ? , 81, 243, 729\)

A. 1  
B. 3  
C. 9  
D. 27

MAKING PREDICTIONS Describe a pattern in the numbers. Write the next number in the pattern. Graph the pattern on a number line.

23. \(2, \frac{3}{2}, \frac{4}{3}, \frac{5}{4}, \ldots\)  
24. \(1, 8, 27, 64, 125, \ldots\)  
25. \(0.45, 0.7, 0.95, 1.2, \ldots\)

26. \(1, 3, 6, 10, 15, \ldots\)  
27. \(2, 20, 10, 100, 50, \ldots\)  
28. \(0.4(6), 0.4(6)^2, 0.4(6)^3, \ldots\)

29. ★ ALGEBRA Consider the pattern \(5, 5r, 5r^2, 5r^3, \ldots\). For what values of \(r\) will the values of the numbers in the pattern be increasing? For what values of \(r\) will the values of the numbers be decreasing? Explain.

30. REASONING A student claims that the next number in the pattern

\(1, 2, 4, \ldots\) is 8, because each number shown is two times the previous number. Is there another description of the pattern that will give the same first three numbers but will lead to a different pattern? Explain.

31. CHALLENGE Consider the pattern \(1, \frac{1}{2}, \frac{3}{4}, \frac{7}{8}, \ldots\).

a. Describe the pattern. Write the next three numbers in the pattern.

b. What is happening to the values of the numbers?

c. Make a conjecture about later numbers. Explain your reasoning.
32. **BASEBALL** You are watching a pitcher who throws two types of pitches, a fastball (F, in white below) and a curveball (C, in red below). You notice that the order of pitches was F, C, F, F, C, C, F, F, F. Assuming that this pattern continues, predict the next five pitches.

33. **STATISTICS** The scatter plot shows the number of person-to-person e-mail messages sent each year. Make a conjecture that could be true. Give an explanation that supports your reasoning.

34. **VISUAL REASONING** Use the pattern below. Each figure is made of squares that are 1 unit by 1 unit.

   - a. Find the distance around each figure. Organize your results in a table.
   - b. Use your table to describe a pattern in the distances.
   - c. Predict the distance around the 20th figure in this pattern.

35. **MULTIPLE REPRESENTATIONS** Use the given function table relating \(x\) and \(y\).
   - a. **Making a Table** Copy and complete the table.
   - b. **Drawing a Graph** Graph the table of values.
   - c. **Writing an Equation** Describe the pattern in words and then write an equation relating \(x\) and \(y\).
36. **EXTENDED RESPONSE** Your class is selling raffle tickets for $.25 each.
   a. Make a table showing your income if you sold 0, 1, 2, 3, 4, 5, 10, or 20 raffle tickets.
   b. Graph your results. Describe any pattern you see.
   c. Write an equation for your income y if you sold x tickets.
   d. If your class paid $14 for the raffle prize, at least how many tickets does your class need to sell to make a profit? Explain.
   e. How many tickets does your class need to sell to make a profit of $50?

37. **FIBONACCI NUMBERS** The Fibonacci numbers are shown below. Use the Fibonacci numbers to answer the following questions.
   1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89, . . .
   a. Copy and complete: After the first two numbers, each number is the ? of the ? previous numbers.
   b. Write the next three numbers in the pattern.
   c. Research This pattern has been used to describe the growth of the nautilus shell. Use an encyclopedia or the Internet to find another real-world example of this pattern.

38. **CHALLENGE** Set A consists of all multiples of 5 greater than 10 and less than 100. Set B consists of all multiples of 8 greater than 16 and less than 100. Show that each conjecture is false by finding a counterexample.
   a. Any number in set A is also in set B.
   b. Any number less than 100 is either in set A or in set B.
   c. No number is in both set A and set B.

---

**MIXED REVIEW**

Use the Distributive Property to write the expression without parentheses.

(p. 872)

39. \(4(x - 5)\)  
40. \(-2(x - 7)\)  
41. \((-2n + 5)4\)  
42. \(x(x + 8)\)

You ask your friends how many pets they have. The results are: 1, 5, 1, 0, 3, 6, 4, 2, 10, and 1. Use these data in Exercises 43–46. (p. 887)

43. Find the mean.  
44. Find the median.  
45. Find the mode(s).

46. Tell whether the mean, median, or mode(s) best represent(s) the data.

Find the perimeter and area of the figure. (p. 49)

47. [Diagram of a rectangle with sides 7 in. and 3 in.]
48. [Diagram of a square with side 4 cm]
49. [Diagram of a triangle with sides 6 ft, 8 ft, and 10 ft]
2.2 Analyze Conditional Statements

Before
You used definitions.

Now
You will write definitions as conditional statements.

Why?
So you can verify statements, as in Example 2.

Key Vocabulary
- conditional statement
- converse, inverse, contrapositive
- if-then form
- hypothesis, conclusion
- negation
- equivalent statements
- perpendicular lines
- biconditional statement

A conditional statement is a logical statement that has two parts, a hypothesis and a conclusion. When a conditional statement is written in if-then form, the “if” part contains the hypothesis and the “then” part contains the conclusion. Here is an example:

If it is raining, then there are clouds in the sky.

Hypothesis Conclusion

EXAMPLE 1 Rewrite a statement in if-then form

Rewrite the conditional statement in if-then form.

a. All birds have feathers.
   b. Two angles are supplementary if they are a linear pair.

Solution
First, identify the hypothesis and the conclusion. When you rewrite the statement in if-then form, you may need to reword the hypothesis or conclusion.

a. All birds have feathers.
   If an animal is a bird, then it has feathers.

b. Two angles are supplementary if they are a linear pair.
   If two angles are a linear pair, then they are supplementary.

GUIDED PRACTICE for Example 1

Rewrite the conditional statement in if-then form.

1. All $90^\circ$ angles are right angles.
2. $2x + 7 = 1$, because $x = -3$.
3. When $n = 9$, $n^2 = 81$.
4. Tourists at the Alamo are in Texas.

NEGATION The negation of a statement is the opposite of the original statement. Notice that Statement 2 is already negative, so its negation is positive.

Statement 1 The ball is red.
Negation 1 The ball is not red.
Statement 2 The cat is not black.
Negation 2 The cat is black.
VERIFYING STATEMENTS  Conditional statements can be true or false. To show that a conditional statement is true, you must prove that the conclusion is true every time the hypothesis is true. To show that a conditional statement is false, you need to give only one counterexample.

RELATED CONDITIONALS  To write the converse of a conditional statement, exchange the hypothesis and conclusion. To write the inverse of a conditional statement, negate both the hypothesis and the conclusion. To write the contrapositive, first write the converse and then negate both the hypothesis and the conclusion.

<table>
<thead>
<tr>
<th>Conditional statement</th>
<th>If $m\angle A = 99^\circ$, then $\angle A$ is obtuse.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Converse</td>
<td>If $\angle A$ is obtuse, then $m\angle A = 99^\circ$.</td>
</tr>
<tr>
<td>Inverse</td>
<td>If $m\angle A \neq 99^\circ$, then $\angle A$ is not obtuse.</td>
</tr>
<tr>
<td>Contrapositive</td>
<td>If $\angle A$ is not obtuse, then $m\angle A \neq 99^\circ$.</td>
</tr>
</tbody>
</table>

EXAMPLE 2  Write four related conditional statements

Write the if-then form, the converse, the inverse, and the contrapositive of the conditional statement “Guitar players are musicians.” Decide whether each statement is true or false.

Solution

If-then form  If you are a guitar player, then you are a musician. True, guitar players are musicians.

Converse  If you are a musician, then you are a guitar player. False, not all musicians play the guitar.

Inverse  If you are not a guitar player, then you are not a musician. False, even if you don’t play a guitar, you can still be a musician.

Contrapositive  If you are not a musician, then you are not a guitar player. True, a person who is not a musician cannot be a guitar player.

Guided Practice  for Example 2

Write the converse, the inverse, and the contrapositive of the conditional statement. Tell whether each statement is true or false.

5. If a dog is a Great Dane, then it is large.
6. If a polygon is equilateral, then the polygon is regular.

EQUIVALENT STATEMENTS  A conditional statement and its contrapositive are either both true or both false. Similarly, the converse and inverse of a conditional statement are either both true or both false. Pairs of statements such as these are called equivalent statements. In general, when two statements are both true or both false, they are called equivalent statements.
**DEFINITIONS** You can write a definition as a conditional statement in if-then form or as its converse. Both the conditional statement and its converse are true. For example, consider the definition of *perpendicular lines*.

**KEY CONCEPT**

**Perpendicular Lines**

**Definition** If two lines intersect to form a right angle, then they are perpendicular lines.

The definition can also be written using the converse: If two lines are perpendicular lines, then they intersect to form a right angle.

You can write “line $l$ is perpendicular to line $m$” as $l \perp m$.

**Example 3** Use definitions

Decide whether each statement about the diagram is true. Explain your answer using the definitions you have learned.

**Solution**

a. $\overrightarrow{AC} \perp \overrightarrow{BD}$

b. $\angle AEB$ and $\angle CEB$ are a linear pair.

c. $\overrightarrow{EA}$ and $\overrightarrow{EB}$ are opposite rays.

**Guided Practice** for Example 3

Use the diagram shown. Decide whether each statement is true. Explain your answer using the definitions you have learned.

7. $\angle JMF$ and $\angle FMG$ are supplementary.

8. Point $M$ is the midpoint of $\overrightarrow{FH}$.

9. $\angle JMF$ and $\angle HMG$ are vertical angles.

10. $\overrightarrow{FH} \perp \overrightarrow{FG}$
BICONDITIONAL STATEMENTS When a conditional statement and its converse are both true, you can write them as a single biconditional statement. A biconditional statement is a statement that contains the phrase “if and only if.” Any valid definition can be written as a biconditional statement.

**Example 4** Write a biconditional

Write the definition of perpendicular lines as a biconditional.

**Solution**

<table>
<thead>
<tr>
<th>Definition</th>
<th>If two lines intersect to form a right angle, then they are perpendicular.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Converse</td>
<td>If two lines are perpendicular, then they intersect to form a right angle.</td>
</tr>
<tr>
<td>Biconditional</td>
<td>Two lines are perpendicular if and only if they intersect to form a right angle.</td>
</tr>
</tbody>
</table>

---

**Guided Practice** for Example 4

11. Rewrite the definition of right angle as a biconditional statement.
12. Rewrite the statements as a biconditional.

If Mary is in theater class, she will be in the fall play. If Mary is in the fall play, she must be taking theater class.

---

### 2.2 Exercises

#### Skill Practice

1. **Vocabulary** Copy and complete: The _?_ of a conditional statement is found by switching the hypothesis and the conclusion.
2. **Writing** Write a definition for the term collinear points, and show how the definition can be interpreted as a biconditional.

#### Rewriting Statements

Rewrite the conditional statement in if-then form.

3. When \( x = 6 \), \( x^2 = 36 \).
4. The measure of a straight angle is \( 180^\circ \).
5. Only people who are registered are allowed to vote.
6. **Error Analysis** Describe and correct the error in writing the if-then statement.

*Given statement:* All high school students take four English courses.

*If-then statement:* If a high school student takes four courses, then all four are English courses.
2.2 Analyze Conditional Statements

WRITING RELATED STATEMENTS  For the given statement, write the if-then form, the converse, the inverse, and the contrapositive.

7. The complementary angles add to 90°.  
8. Ants are insects.  
9. 3x + 10 = 16, because x = 2.  
10. A midpoint bisects a segment.

ANALYZING STATEMENTS  Decide whether the statement is true or false. If false, provide a counterexample.

11. If a polygon has five sides, then it is a regular pentagon.  
12. If \( m\angle A = 85^\circ \), then the measure of the complement of \( \angle A \) is 5°.  
13. Supplementary angles are always linear pairs.  
14. If a number is an integer, then it is rational.  
15. If a number is a real number, then it is irrational.

USING DEFINITIONS  Decide whether each statement about the diagram is true. Explain your answer using the definitions you have learned.

16. \( m\angle ABC = 90^\circ \)  
17. \( PQ \perp ST \)  
18. \( m\angle 2 + m\angle 3 = 180^\circ \)

REWRITING STATEMENTS  In Exercises 19–21, rewrite the definition as a biconditional statement.

19. An angle with a measure between 90° and 180° is called obtuse.  
20. Two angles are a linear pair if they are adjacent angles whose noncommon sides are opposite rays.  
21. Coplanar points are points that lie in the same plane.

DEFINITIONS  Determine whether the statement is a valid definition.

22. If two rays are opposite rays, then they have a common endpoint.  
23. If the sides of a triangle are all the same length, then the triangle is equilateral.  
24. If an angle is a right angle, then its measure is greater than that of an acute angle.

25. ★ MULTIPLE CHOICE  Which statement has the same meaning as the given statement?

   GIVEN  You can go to the movie after you do your homework.

   A  If you do your homework, then you can go to the movie afterwards.

   B  If you do not do your homework, then you can go to the movie afterwards.

   C  If you cannot go to the movie afterwards, then do your homework.

   D  If you are going to the movie afterwards, then do not do your homework.
**ALGEBRA** Write the converse of each true statement. Tell whether the converse is true. If false, explain why.

26. If \( x > 4 \), then \( x > 0 \).

27. If \( x < 6 \), then \( -x > -6 \).

28. If \( x \leq -x \), then \( x \leq 0 \).

29. ★ OPEN-ENDED MATH Write a statement that is true but whose converse is false.

30. CHALLENGE Write a series of if-then statements that allow you to find the measure of each angle, given that \( m\angle 1 = 90^\circ \). Use the definition of linear pairs.

---

**PROBLEM SOLVING**

In Exercises 31 and 32, use the information about volcanoes to determine whether the biconditional statement is true or false. If false, provide a counterexample.

**VOLCANOES** Solid fragments are sometimes ejected from volcanoes during an eruption. The fragments are classified by size, as shown in the table.

<table>
<thead>
<tr>
<th>Type of fragment</th>
<th>Diameter ( d ) (millimeters)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ash</td>
<td>( d &lt; 2 )</td>
</tr>
<tr>
<td>Lapilli</td>
<td>( 2 \leq d \leq 64 )</td>
</tr>
<tr>
<td>Block or bomb</td>
<td>( d &gt; 64 )</td>
</tr>
</tbody>
</table>

31. A fragment is called a *block or bomb* if and only if its diameter is greater than 64 millimeters.

32. A fragment is called a *lapilli* if and only if its diameter is less than 64 millimeters.

33. ★ SHORT RESPONSE How can you show that the statement, “If you play a sport, then you wear a helmet,” is false? Explain.

34. ★ EXTENDED RESPONSE You measure the heights of your classmates to get a data set.

   a. Tell whether this statement is true: If \( x \) and \( y \) are the least and greatest values in your data set, then the mean of the data is between \( x \) and \( y \). Explain your reasoning.

   b. Write the converse of the statement in part (a). Is the converse true? Explain.

   c. Copy and complete the statement using mean, median, or mode to make a conditional that is true for any data set. Explain your reasoning.

      Statement If a data set has a mean, a median, and a mode, then the ___ of the data set will always be one of the measurements.

35. ★ OPEN-ENDED MATH The Venn diagram below represents all of the musicians at a high school. Write an if-then statement that describes a relationship between the various groups of musicians.
36. **MULTI-STEP PROBLEM** The statements below describe three ways that rocks are formed. Use these statements in parts (a)–(c).

- Igneous rock is formed from the cooling of molten rock.
- Sedimentary rock is formed from pieces of other rocks.
- Metamorphic rock is formed by changing temperature, pressure, or chemistry.

**a.** Write each statement in if-then form.

**b.** Write the converse of each of the statements in part (a). Is the converse of each statement true? *Explain* your reasoning.

**c.** Write a true if-then statement about rocks. Is the converse of your statement *true* or *false*? *Explain* your reasoning.

37. **ALGEBRA** Can the statement, “If \(x^2 - 10 = x + 2\), then \(x = 4\),” be combined with its converse to form a true biconditional?

38. **REASONING** You are given that the contrapositive of a statement is true. Will that help you determine whether the statement can be written as a true biconditional? *Explain*.

39. **CHALLENGE** Suppose each of the following statements is true. What can you conclude? *Explain* your answer.

- If it is Tuesday, then I have art class.
- It is Tuesday.
- Each school day, I have either an art class or study hall.
- If it is Friday, then I have gym class.
- Today, I have either music class or study hall.

### Mixed Review

**Find the product of the integers. (p. 869)**

- 40. \((-2)(10)\)
- 41. \((15)(-3)\)
- 42. \((-12)(-4)\)
- 43. \((-5)(-4)(10)\)
- 44. \((-3)(6)(-2)\)
- 45. \((-4)(-2)(-5)\)

**Sketch the figure described. (p. 2)**

- 46. \(\overrightarrow{AB}\) intersects \(\overrightarrow{CD}\) at point \(E\).
- 47. \(\overrightarrow{XY}\) intersects plane \(P\) at point \(Z\).
- 48. \(\overrightarrow{GH}\) is parallel to \(\overrightarrow{JK}\).
- 49. Vertical planes \(X\) and \(Y\) intersect in \(\overrightarrow{MN}\).

**Find the coordinates of the midpoint of the segment with the given endpoints. (p. 15)**

- 50. \(A(10, 5)\) and \(B(4, 5)\)
- 51. \(P(4, -1)\) and \(Q(-2, 3)\)
- 52. \(L(2, 2)\) and \(N(1, -2)\)

**Tell whether the figure is a polygon. If it is not, explain why. If it is a polygon, tell whether it is convex or concave. (p. 42)**

- 53.
- 54.
- 55.
2.3 Logic Puzzles

**MATERIALS**
- graph paper
- pencils

**QUESTION**
How can reasoning be used to solve a logic puzzle?

**EXPLORE**
Solve a logic puzzle

Using the clues below, you can determine an important mathematical contribution and interesting fact about each of five mathematicians.

Copy the chart onto your graph paper. Use the chart to keep track of the information given in Clues 1–7. Place an X in a box to indicate a definite “no.” Place an O in a box to indicate a definite “yes.”

**Clue 1**  Pythagoras had his contribution named after him. He was known to avoid eating beans.

**Clue 2**  Albert Einstein considered Emmy Noether to be one of the greatest mathematicians and used her work to show the theory of relativity.

**Clue 3**  Anaxagoras was the first to theorize that the moon’s light is actually the sun’s light being reflected.

**Clue 4**  Julio Rey Pastor wrote a book at age 17.

**Clue 5**  The mathematician who is fluent in Latin contributed to the study of differential calculus.

**Clue 6**  The mathematician who did work with $n$-dimensional geometry was not the piano player.

**Clue 7**  The person who first used perspective drawing to make scenery for plays was not Maria Agnesi or Julio Rey Pastor.

**DRAW CONCLUSIONS**
Use your observations to complete these exercises

1. Write Clue 4 as a conditional statement in if-then form. Then write the contrapositive of the statement. *Explain* why the contrapositive of this statement is a helpful clue.

2. *Explain* how you can use Clue 6 to figure out who played the piano.

3. *Explain* how you can use Clue 7 to figure out who worked with perspective drawing.
2.3 Apply Deductive Reasoning

Key Vocabulary

- deductive reasoning

Deductive reasoning uses facts, definitions, accepted properties, and the laws of logic to form a logical argument. This is different from inductive reasoning, which uses specific examples and patterns to form a conjecture.

**EXAMPLE 1** Use the Law of Detachment

Use the Law of Detachment to make a valid conclusion in the true situation.

a. If two segments have the same length, then they are congruent. You know that $BC = XY$.

b. Mary goes to the movies every Friday and Saturday night. Today is Friday.

Solution

a. Because $BC = XY$ satisfies the hypothesis of a true conditional statement, the conclusion is also true. So, $\overline{BC} \cong \overline{XY}$.

b. First, identify the hypothesis and the conclusion of the first statement. The hypothesis is “If it is Friday or Saturday night,” and the conclusion is “then Mary goes to the movies.” “Today is Friday” satisfies the hypothesis of the conditional statement, so you can conclude that Mary will go to the movies tonight.
Example 2 Use the Law of Syllogism

If possible, use the Law of Syllogism to write a new conditional statement that follows from the pair of true statements.

a. If Rick takes chemistry this year, then Jesse will be Rick’s lab partner.
   If Jesse is Rick’s lab partner, then Rick will get an A in chemistry.

b. If \( x^2 > 25 \), then \( x^2 > 20 \).
   If \( x > 5 \), then \( x^2 > 25 \).

c. If a polygon is regular, then all angles in the interior of the polygon are congruent.
   If a polygon is regular, then all of its sides are congruent.

Solution

a. The conclusion of the first statement is the hypothesis of the second statement, so you can write the following new statement.
   If Rick takes chemistry this year, then Rick will get an A in chemistry.

b. Notice that the conclusion of the second statement is the hypothesis of the first statement, so you can write the following new statement.
   If \( x > 5 \), then \( x^2 > 20 \).

c. Neither statement’s conclusion is the same as the other statement’s hypothesis. You cannot use the Law of Syllogism to write a new conditional statement.

Avoid Errors

The order in which the statements are given does not affect whether you can use the Law of Syllogism.

Guided Practice for Examples 1 and 2

1. If \( 90^\circ < m\angle R < 180^\circ \), then \( \angle R \) is obtuse. The measure of \( \angle R \) is \( 155^\circ \). Using the Law of Detachment, what statement can you make?

2. If Jenelle gets a job, then she can afford a car. If Jenelle can afford a car, then she will drive to school. Using the Law of Syllogism, what statement can you make?

State the law of logic that is illustrated.

3. If you get an A or better on your math test, then you can go to the movies. If you go to the movies, then you can watch your favorite actor.
   If you get an A or better on your math test, then you can watch your favorite actor.

4. If \( x > 12 \), then \( x + 9 > 20 \). The value of \( x \) is 14.
   Therefore, \( x + 9 > 20 \).

Analyzing Reasoning

In Geometry, you will frequently use inductive reasoning to make conjectures. You will also be using deductive reasoning to show that conjectures are true or false. You will need to know which type of reasoning is being used.
**Example 3**  Use inductive and deductive reasoning

**Problem**

What conclusion can you make about the product of an even integer and any other integer?

**Solution**

**Step 1** Look for a pattern in several examples. Use inductive reasoning to make a conjecture.

\[
(\text{-}2)(2) = -4, \quad (-1)(2) = -2, \quad 2(2) = 4, \quad 3(2) = 6, \\
(-2)(-4) = 8, \quad (-1)(-4) = 4, \quad 2(-4) = -8, \quad 3(-4) = -12
\]

**Conjecture**  Even integer • Any integer = Even integer

**Step 2** Let \(n\) and \(m\) each be any integer. Use deductive reasoning to show the conjecture is true.

2\(n\) is an even integer because any integer multiplied by 2 is even.

2\(nm\) represents the product of an even integer and any integer \(m\).

2\(nm\) is the product of 2 and an integer \(nm\). So, 2\(nm\) is an even integer.

The product of an even integer and any integer is an even integer.

---

**Example 4**  Reasoning from a graph

Tell whether the statement is the result of **inductive reasoning** or **deductive reasoning**. Explain your choice.

a. The northern elephant seal requires more strokes to surface the deeper it dives.

b. The northern elephant seal uses more strokes to surface from 60 feet than from 250 feet.

**Solution**

a. Inductive reasoning, because it is based on a pattern in the data

b. Deductive reasoning, because you are comparing values that are given on the graph

---

**Guided Practice** for Examples 3 and 4

5. Use inductive reasoning to make a conjecture about the sum of a number and itself. Then use deductive reasoning to show the conjecture is true.

6. Use inductive reasoning to write another statement about the graph in Example 4. Then use deductive reasoning to write another statement.
1. **VOCABULARY** Copy and complete: If the hypothesis of a true if-then statement is true, then the conclusion is also true by the Law of __?__.

**★ WRITING** Use deductive reasoning to make a statement about the picture.

2. 

3. 

**LAW OF DETACHMENT** Make a valid conclusion in the situation.

4. If the measure of an angle is $90^\circ$, then it is a right angle. The measure of $\angle A$ is $90^\circ$.

5. If $x > 12$, then $-x < -12$. The value of $x$ is 15.

6. If a book is a biography, then it is nonfiction. You are reading a biography.

**LAW OF SYLLOGISM** In Exercises 7–10, write the statement that follows from the pair of statements that are given.

7. If a rectangle has four equal side lengths, then it is a square. If a polygon is a square, then it is a regular polygon.

8. If $y > 0$, then $2y > 0$. If $2y > 0$, then $2y - 5 \neq -5$.

9. If you play the clarinet, then you play a woodwind instrument. If you play a woodwind instrument, then you are a musician.

10. If $a = 3$, then $5a = 15$. If $\frac{1}{2}a = 1 \frac{1}{2}$, then $a = 3$.

11. **REASONING** What can you say about the sum of an even integer and an even integer? Use inductive reasoning to form a conjecture. Then use deductive reasoning to show that the conjecture is true.

12. **★ MULTIPLE CHOICE** If two angles are vertical angles, then they have the same measure. You know that $\angle A$ and $\angle B$ are vertical angles. Using the Law of Detachment, which conclusion could you make?
   
   - [A] $m\angle A > m\angle B$
   - [B] $m\angle A = m\angle B$
   - [C] $m\angle A + m\angle B = 90^\circ$
   - [D] $m\angle A + m\angle B = 180^\circ$

13. **ERROR ANALYSIS** Describe and correct the error in the argument: “If two angles are a linear pair, then they are supplementary. Angles $C$ and $D$ are supplementary, so the angles are a linear pair.”
2.3 Apply Deductive Reasoning

USING THE LAWS OF LOGIC

In Exercises 16 and 17, what conclusions can you make using the true statement?

16. CAR COSTS
   If you save $2000, then you can buy a car. You have saved $1200.

17. PROFIT
   The bakery makes a profit if its revenue is greater than its costs. You will get a raise if the bakery makes a profit.

USING DEDUCTIVE REASONING

Select the word(s) that make(s) the conclusion true.

18. Mesa Verde National Park is in Colorado. Simone vacationed in Colorado. So, Simone (must have, may have, or never) visited Mesa Verde National Park.

19. The cliff dwellings in Mesa Verde National Park are accessible to visitors only when accompanied by a park ranger. Billy is at a cliff dwelling in Mesa Verde National Park. So, Billy (is, may be, is not) with a park ranger.

PROBLEM SOLVING

EXAMPLES 1 and 2 on pp. 87–88 for Exs. 16–17

USING THE LAWS OF LOGIC

In Exercises 16 and 17, what conclusions can you make using the true statement?

16. CAR COSTS
   If you save $2000, then you can buy a car. You have saved $1200.

17. PROFIT
   The bakery makes a profit if its revenue is greater than its costs. You will get a raise if the bakery makes a profit.

USING DEDUCTIVE REASONING

Select the word(s) that make(s) the conclusion true.

18. Mesa Verde National Park is in Colorado. Simone vacationed in Colorado. So, Simone (must have, may have, or never) visited Mesa Verde National Park.

19. The cliff dwellings in Mesa Verde National Park are accessible to visitors only when accompanied by a park ranger. Billy is at a cliff dwelling in Mesa Verde National Park. So, Billy (is, may be, is not) with a park ranger.
20. ✷ EXTENDED RESPONSE Geologists use the Mohs scale to determine a mineral’s hardness. Using the scale, a mineral with a higher rating will leave a scratch on a mineral with a lower rating. Geologists use scratch tests to help identify an unknown mineral.

<table>
<thead>
<tr>
<th>Mineral</th>
<th>Talc</th>
<th>Gypsum</th>
<th>Calcite</th>
<th>Fluorite</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mohs rating</td>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
</tr>
</tbody>
</table>

a. Use the table to write three if-then statements such as “If talc is scratched against gypsum, then a scratch mark is left on the talc.”

b. You must identify four minerals labeled A, B, C, and D. You know that the minerals are the ones shown in the table. The results of your scratch tests are shown below. What can you conclude? Explain your reasoning.

- Mineral A is scratched by Mineral B.
- Mineral C is scratched by all three of the other minerals.

c. What additional test(s) can you use to identify all the minerals in part (b)?

REASONING In Exercises 21 and 22, decide whether inductive or deductive reasoning is used to reach the conclusion. Explain your reasoning.

21. The rule at your school is that you must attend all of your classes in order to participate in sports after school. You played in a soccer game after school on Monday. Therefore, you went to all of your classes on Monday.

22. For the past 5 years, your neighbor goes on vacation every July 4th and asks you to feed her hamster. You conclude that you will be asked to feed her hamster on the next July 4th.

23. ✷ SHORT RESPONSE Let an even integer be $2n$ and an odd integer be $2n + 1$. Explain why the sum of an even integer and an odd integer is an odd integer.

24. LITERATURE George Herbert wrote a poem, *Jacula Prudentum*, that includes the statements shown. Use the Law of Syllogism to write a new conditional statement. Explain your reasoning.

For want of a nail the shoe is lost, for want of a shoe the horse is lost, for want of a horse the rider is lost.

REASONING In Exercises 25–28, use the true statements below to determine whether you know the conclusion is true or false. Explain your reasoning.

- If Arlo goes to the baseball game, then he will buy a hot dog.
- If the baseball game is not sold out, then Arlo and Mia will go to the game.
- If Mia goes to the baseball game, then she will buy popcorn.
- The baseball game is not sold out.

25. Arlo bought a hot dog.

26. Arlo and Mia went to the game.

27. Mia bought a hot dog.

28. Arlo had some of Mia’s popcorn.
29. **CHALLENGE** Use these statements to answer parts (a)–(c).

- Adam says Bob lies.
- Bob says Charlie lies.
- Charlie says Adam and Bob both lie.

a. If Adam is telling the truth, then Bob is lying. What can you conclude about Charlie’s statement?

b. Assume Adam is telling the truth. Explain how this leads to a contradiction.

c. Who is telling the truth? Who is lying? How do you know?

---

**MIXED REVIEW**

In Exercises 30–33, use the diagram. (p. 2)

30. Name two lines.
31. Name four rays.
32. Name three collinear points.
33. Name four coplanar points.

Plot the given points in a coordinate plane. Then determine whether \( \overline{AB} \) and \( \overline{CD} \) are congruent. (p. 9)

34. \((A(1, 4), B(5, 4), C(3, −4), D(3, 0))\)
35. \((A(−1, 0), B(−1, −5), C(1, 2), D(−5, 2))\)

Rewrite the conditional statement in if-then form. (p. 79)

36. When \( x = −2, x^2 = 4 \).
37. The measure of an acute angle is less than 90°.
38. Only people who are members can access the website.

---

**QUIZ for Lessons 2.1–2.3**

Show the conjecture is false by finding a counterexample. (p. 72)

1. If the product of two numbers is positive, then the two numbers must be negative.

2. The sum of two numbers is always greater than the larger number.

In Exercises 3 and 4, write the if-then form and the contrapositive of the statement. (p. 79)

3. Points that lie on the same line are called collinear points.
4. \(2x − 8 = 2\), because \(x = 5\).

5. Make a valid conclusion about the following statements:

   If it is above 90°F outside, then I will wear shorts. It is 98°F. (p. 87)

6. Explain why a number that is divisible by a multiple of 3 is also divisible by 3. (p. 87)
Extension

Use after Lesson 2.3

Symbolic Notation and Truth Tables

**Goal** Use symbolic notation to represent logical statements.

Conditional statements can be written using *symbolic notation*, where letters are used to represent statements. An arrow (→), read “implies,” connects the hypothesis and conclusion. To write the negation of a statement \( p \) you write the symbol for negation (\( \sim \)) before the letter. So, “not \( p \)” is written \( \sim p \).

### KEY CONCEPT

**Symbolic Notation**

Let \( p \) be “the angle is a right angle” and let \( q \) be “the measure of the angle is 90°.”

<table>
<thead>
<tr>
<th>Statement Type</th>

<td>( p ) if and only if ( q ).</td>
<td>( p \leftrightarrow q )</td>
</tr>
</tbody>
</table>

### Example 1

**Use symbolic notation**

Let \( p \) be “the car is running” and let \( q \) be “the key is in the ignition.”

a. Write the conditional statement \( p \to q \) in words.

b. Write the converse \( q \to p \) in words.

c. Write the inverse \( \sim p \to \sim q \) in words.

d. Write the contrapositive \( \sim q \to \sim p \) in words.

**Solution**

a. Conditional: If the car is running, then the key is in the ignition.

b. Converse: If the key is in the ignition, then the car is running.

c. Inverse: If the car is not running, then the key is not in the ignition.

d. Contrapositive: If the key is not in the ignition, then the car is not running.
**TRUTH TABLES** The truth value of a statement is either true (T) or false (F). You can determine the conditions under which a conditional statement is true by using a truth table. The truth table at the right shows the truth values for hypothesis \( p \) and conclusion \( q \). The conditional \( p \rightarrow q \) is only false when a true hypothesis produces a false conclusion.

<table>
<thead>
<tr>
<th></th>
<th>( p )</th>
<th>( q )</th>
<th>( p \rightarrow q )</th>
</tr>
</thead>
<tbody>
<tr>
<td>T</td>
<td>T</td>
<td>T</td>
<td>T</td>

<td>F</td>
</tr>
<tr>
<td>F</td>
<td>T</td>
<td>T</td>
<td>T</td>
</tr>
<tr>
<td>F</td>
<td>F</td>
<td>T</td>
<td>T</td>
</tr>
</tbody>
</table>

**EXAMPLE 2** Make a truth table

Use the truth table above to make truth tables for the converse, inverse, and contrapositive of a conditional statement \( p \rightarrow q \).

Solution

<table>
<thead>
<tr>
<th>Converse</th>
<th>Inverse</th>
<th>Contrapositive</th>
</tr>
</thead>
<tbody>
<tr>
<td>( p )</td>
<td>( q )</td>
<td>( q \rightarrow p )</td>
</tr>
<tr>
<td>T</td>

<td>F</td>
<td>T</td>
</tr>
<tr>
<td>F</td>
<td>T</td>
<td>T</td>
</tr>
<tr>
<td>F</td>
<td>F</td>
<td>F</td>
</tr>
</tbody>
</table>

**READ TRUTH TABLES**

A conditional statement and its contrapositive are equivalent statements because they have the same truth table. The same is true of the converse and the inverse.

**EXAMPLE 1**

1. **WRITING** Describe how to use symbolic notation to represent the contrapositive of a conditional statement.

2. **WRITING STATEMENTS** Use \( p \) and \( q \) to write the symbolic statement in words.
   
   \( p \): Polygon \( ABCDE \) is equiangular and equilateral.
   
   \( q \): Polygon \( ABCDE \) is a regular polygon.

3. \( \neg p \)

4. \( \neg q \rightarrow \neg p \)

5. \( p \leftrightarrow q \)

6. **LAW OF SYLLOGISM** Use the statements \( p, q, \) and \( r \) below to write a series of conditionals that would satisfy the Law of Syllogism. How could you write your reasoning using symbolic notation?

   \( p \): \( x + 5 = 12 \)
   
   \( q \): \( x = 7 \)
   
   \( r \): \( 3x = 21 \)

7. **WRITING** Is the truth value of a statement always true (T)? Explain.

8. **TRUTH TABLE** Use the statement “If an animal is a poodle, then it is a dog.”
   
   a. Identify the hypothesis \( p \) and the conclusion \( q \) in the conditional.
   
   b. Make a truth table for the converse. Explain what each row in the table means in terms of the original statement.

---

*Extension: Symbolic Notation and Truth Tables*  
95
2.4 Use Postulates and Diagrams

Before
You used postulates involving angle and segment measures.

Now
You will use postulates involving points, lines, and planes.

Why?
So you can draw the layout of a neighborhood, as in Ex. 39.

Key Vocabulary
• line perpendicular to a plane
• postulate, p. 8

In geometry, rules that are accepted without proof are called postulates or axioms. Rules that are proved are called theorems. Postulates and theorems are often written in conditional form. Unlike the converse of a definition, the converse of a postulate or theorem cannot be assumed to be true.

You learned four postulates in Chapter 1.

POSTULATE 1 Ruler Postulate page 9
POSTULATE 2 Segment Addition Postulate page 10
POSTULATE 3 Protractor Postulate page 24
POSTULATE 4 Angle Addition Postulate page 25

Here are seven new postulates involving points, lines, and planes.

POSTULATES

For Your Notebook

Point, Line, and Plane Postulates

POSTULATE 5 Through any two points there exists exactly one line.
POSTULATE 6 A line contains at least two points.
POSTULATE 7 If two lines intersect, then their intersection is exactly one point.
POSTULATE 8 Through any three noncollinear points there exists exactly one plane.
POSTULATE 9 A plane contains at least three noncollinear points.
POSTULATE 10 If two points lie in a plane, then the line containing them lies in the plane.
POSTULATE 11 If two planes intersect, then their intersection is a line.

ALGEBRA CONNECTION You have been using many of Postulates 5–11 in previous courses.

One way to graph a linear equation is to plot two points whose coordinates satisfy the equation and then connect them with a line. Postulate 5 guarantees that there is exactly one such line. A familiar way to find a common solution of two linear equations is to graph the lines and find the coordinates of their intersection. This process is guaranteed to work by Postulate 7.
EXAMPLE 1  Identify a postulate illustrated by a diagram

State the postulate illustrated by the diagram.

a. If two lines intersect, then their intersection is exactly one point.

b. If two planes intersect, then their intersection is a line.

EXAMPLE 2  Identify postulates from a diagram

Use the diagram to write examples of Postulates 9 and 10.

Postulate 9  Plane P contains at least three noncollinear points, A, B, and C.

Postulate 10  Point A and point B lie in plane P, so line n containing A and B also lies in plane P.

GUIDED PRACTICE for Examples 1 and 2

1. Use the diagram in Example 2. Which postulate allows you to say that the intersection of plane P and plane Q is a line?
2. Use the diagram in Example 2 to write examples of Postulates 5, 6, and 7.

CONCEPT SUMMARY

Interpreting a Diagram

When you interpret a diagram, you can only assume information about size or measure if it is marked.

YOU CAN ASSUME

All points shown are coplanar.
\(<AHB\) and \(<BHD\) are a linear pair.
\(<AHF\) and \(<BHD\) are vertical angles.
A, H, J, and D are collinear.
\(\overrightarrow{AD}\) and \(\overrightarrow{BF}\) intersect at H.

YOU CANNOT ASSUME

G, F, and E are collinear.
\(\overrightarrow{BF}\) and \(\overrightarrow{CE}\) intersect.
\(\overrightarrow{BF}\) and \(\overrightarrow{CE}\) do not intersect.
\(\angle BHA \equiv \angle CJA\)
\(\overrightarrow{AD} \perp \overrightarrow{BF}\) or \(m\angle AHB = 90^\circ\)
**Example 3** Use given information to sketch a diagram

Sketch a diagram showing $\overrightarrow{TV}$ intersecting $\overline{PQ}$ at point $W$, so that $\overline{TW} \cong \overline{WV}$.

**Solution**

1. **Step 1** Draw $\overrightarrow{TV}$ and label points $T$ and $V$.
2. **Step 2** Draw point $W$ at the midpoint of $\overline{TV}$. Mark the congruent segments.
3. **Step 3** Draw $\overline{PQ}$ through $W$.

**Avoid Errors**
Notice that the picture was drawn so that $W$ does not look like a midpoint of $\overline{PQ}$. Also, it was drawn so that $\overline{PQ}$ is not perpendicular to $\overrightarrow{TV}$.

**Perpendicular Figures** A line is a line perpendicular to a plane if and only if the line intersects the plane in a point and is perpendicular to every line in the plane that intersects it at that point.

In a diagram, a line perpendicular to a plane must be marked with a right angle symbol.

**Example 4** Interpret a diagram in three dimensions

Which of the following statements cannot be assumed from the diagram?

- $A$, $B$, and $F$ are collinear.
- $E$, $B$, and $D$ are collinear.
- $\overline{AB} \perp \text{plane } S$
- $\overline{CD} \perp \text{plane } T$
- $\overrightarrow{AF}$ intersects $\overline{BC}$ at point $B$.

**Solution**

No drawn line connects $E$, $B$, and $D$, so you cannot assume they are collinear. With no right angle marked, you cannot assume $\overline{CD} \perp \text{plane } T$.

**Guided Practice** for Examples 3 and 4

In Exercises 3 and 4, refer back to Example 3.

3. If the given information stated $\overline{PW}$ and $\overline{QW}$ are congruent, how would you indicate that in the diagram?

4. Name a pair of supplementary angles in the diagram. *Explain.*

5. In the diagram for Example 4, can you assume plane $S$ intersects plane $T$ at $\overline{BC}$?

6. *Explain* how you know that $\overrightarrow{AB} \perp \overline{BC}$ in Example 4.
1. **VOCABULARY** Copy and complete: A **line** that intersects the plane in a point and is perpendicular to every line in the plane that intersects it.

2. **WRITING** Explain why you cannot assume \( \angle BHA \cong \angle CJA \) in the Concept Summary on page 97.

**IDENTIFYING POSTULATES** State the postulate illustrated by the diagram.

3. If \( \angle A \) then \( \angle B \)

4. If \( \angle A \) then \( \angle B \)

5. **CONDITIONAL STATEMENTS** Postulate 8 states that through any three noncollinear points there exists exactly one plane.
   a. Rewrite Postulate 8 in if-then form.
   b. Write the converse, inverse, and contrapositive of Postulate 8.
   c. Which statements in part (b) are true?

**USING A DIAGRAM** Use the diagram to write an example of each postulate.

6. Postulate 6
7. Postulate 7
8. Postulate 8

9. **SKETCHING** Sketch a diagram showing \( \overrightarrow{XY} \) intersecting \( \overrightarrow{WV} \) at point \( T \), so \( XY \perp WV \). In your diagram, does \( WT \) have to be congruent to \( TV \)? Explain your reasoning.

10. **MULTIPLE CHOICE** Which of the following statements cannot be assumed from the diagram?
   - A Points \( A, B, C, \) and \( E \) are coplanar.
   - B Points \( F, B, \) and \( G \) are collinear.
   - C \( \overrightarrow{HC} \perp \overrightarrow{GE} \)
   - D \( \overrightarrow{E} \) intersects plane \( M \) at point \( C \).

**ANALYZING STATEMENTS** Decide whether the statement is true or false. If it is false, give a real-world counterexample.

11. Through any three points, there exists exactly one line.
12. A point can be in more than one plane.
13. Any two planes intersect.
USING A DIAGRAM  Use the diagram to determine if the statement is true or false.

14. Planes $W$ and $X$ intersect at $\overline{KL}$.
15. Points $Q$, $J$, and $M$ are collinear.
16. Points $K$, $L$, $M$, and $R$ are coplanar.
17. $\overrightarrow{MN}$ and $\overrightarrow{RP}$ intersect.
18. $\overrightarrow{RP} \perp$ plane $W$
19. $\overrightarrow{FR}$ lies in plane $X$.
20. $\angle PLK$ is a right angle.
21. $\angle NKL$ and $\angle JKM$ are vertical angles.
22. $\angle NKJ$ and $\angle JKM$ are supplementary angles.
23. $\angle JKM$ and $\angle KLP$ are congruent angles.

24. ★ MULTIPLE CHOICE  Choose the diagram showing $\overrightarrow{LN}$, $\overrightarrow{AB}$, and $\overrightarrow{DC}$ intersecting at point $M$, $\overrightarrow{AB}$ bisecting $\overrightarrow{LN}$, and $\overrightarrow{DC} \perp \overrightarrow{LN}$.

25. ★ OPEN-ENDED MATH  Sketch a diagram of a real-world object illustrating three of the postulates about points, lines, and planes. List the postulates used.

26. ERROR ANALYSIS A student made the false statement shown. Change the statement in two different ways to make it true.

27. REASONING  Use Postulates 5 and 9 to explain why every plane contains at least one line.

28. REASONING  Point $X$ lies in plane $M$. Use Postulates 6 and 9 to explain why there are at least two lines in plane $M$ that contain point $X$.

29. CHALLENGE Sketch a line $m$ and a point $C$ not on line $m$. Make a conjecture about how many planes can be drawn so that line $m$ and point $C$ lie in the plane. Use postulates to justify your conjecture.
REAL-WORLD SITUATIONS Which postulate is suggested by the photo?

30.  

31.  

32.  

33. **SHORT RESPONSE** Give a real-world example of Postulate 6, which states that a line contains at least two points.

34. **DRAW A DIAGRAM** Sketch two lines that intersect, and another line that does not intersect either one.

**USING A DIAGRAM** Use the pyramid to write examples of the postulate indicated.

35. Postulate 5
36. Postulate 7
37. Postulate 9
38. Postulate 10

39. **EXTENDED RESPONSE** A friend e-mailed you the following statements about a neighborhood. Use the statements to complete parts (a)–(e).

<table>
<thead>
<tr>
<th>Subject</th>
<th>Neighborhood</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Building B is due west of Building A.</td>
</tr>
<tr>
<td></td>
<td>Buildings A and B are on Street 1.</td>
</tr>
<tr>
<td></td>
<td>Building D is due north of Building A.</td>
</tr>
<tr>
<td></td>
<td>Buildings A and D are on Street 2.</td>
</tr>
<tr>
<td></td>
<td>Building C is southwest of Building A.</td>
</tr>
<tr>
<td></td>
<td>Buildings A and C are on Street 3.</td>
</tr>
<tr>
<td></td>
<td>Building E is due east of Building B.</td>
</tr>
<tr>
<td></td>
<td>$\angle CAE$ formed by Streets 1 and 3 is obtuse.</td>
</tr>
</tbody>
</table>

a. Draw a diagram of the neighborhood.
b. Where do Streets 1 and 2 intersect?c. Classify the angle formed by Streets 1 and 2.
d. Is Building E between Buildings A and B? Explain.e. What street is Building E on?
40. **MULTI-STEP PROBLEM** Copy the figure and label the following points, lines, and planes appropriately.
   a. Label the horizontal plane as $X$ and the vertical plane as $Y$.
   b. Draw two points $A$ and $B$ on your diagram so they lie in plane $Y$, but not in plane $X$.
   c. Illustrate Postulate 5 on your diagram.
   d. If point $C$ lies in both plane $X$ and plane $Y$, where would it lie? Draw point $C$ on your diagram.
   e. Illustrate Postulate 9 for plane $X$ on your diagram.

41. **SHORT RESPONSE** Points $E$, $F$, and $G$ all lie in plane $P$ and in plane $Q$. What must be true about points $E$, $F$, and $G$ if $P$ and $Q$ are different planes? What must be true about points $E$, $F$, and $G$ to force $P$ and $Q$ to be the same plane? Make sketches to support your answers.

**DRAWING DIAGRAMS** $\overrightarrow{AC}$ and $\overrightarrow{DB}$ intersect at point $E$. Draw one diagram that meets the additional condition(s) and another diagram that does not.

42. $\angle AED$ and $\angle AEB$ are right angles.
43. Point $E$ is the midpoint of $\overline{AC}$.
44. $\overrightarrow{EA}$ and $\overrightarrow{EC}$ are opposite rays. $\overrightarrow{EB}$ and $\overrightarrow{ED}$ are not opposite rays.

45. **CHALLENGE** Suppose none of the four legs of a chair are the same length. What is the maximum number of planes determined by the lower ends of the legs? Suppose exactly three of the legs of a second chair have the same length. What is the maximum number of planes determined by the lower ends of the legs of the second chair? Explain your reasoning.

---

**MIXED REVIEW**

Draw an example of the type of angle described. (*p. 9*)

46. Find $MP$.
47. Find $AC$.
48. Find $RS$.

![Diagram](image)

Line $l$ bisects the segment. Find the indicated length. (*p. 15*)

49. Find $JK$.
50. Find $XZ$.
51. Find $BC$.

![Diagram](image)

Draw an example of the type of angle described. (*p. 24*)

52. Right angle  
53. Acute angle  
54. Obtuse angle  
55. Straight angle  
56. Two angles form a linear pair. The measure of one angle is 9 times the measure of the other angle. Find the measure of each angle. (*p. 35*)
Lessons 2.1–2.4

1. **MULTI-STEP PROBLEM** The table below shows the time of the sunrise on different days in Galveston, Texas.

<table>
<thead>
<tr>
<th>Date in 2006</th>
<th>Time of sunrise (Central Standard Time)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Jan. 1</td>
<td>7:14 A.M.</td>
</tr>
<tr>
<td>Feb. 1</td>
<td>7:08 A.M.</td>
</tr>
<tr>
<td>Mar. 1</td>
<td>6:45 A.M.</td>
</tr>
<tr>
<td>Apr. 1</td>
<td>6:09 A.M.</td>
</tr>
<tr>
<td>May 1</td>
<td>5:37 A.M.</td>
</tr>
<tr>
<td>June 1</td>
<td>5:20 A.M.</td>
</tr>
<tr>
<td>July 1</td>
<td>5:23 A.M.</td>
</tr>
<tr>
<td>Aug. 1</td>
<td>5:40 A.M.</td>
</tr>
</tbody>
</table>

a. **Describe** the pattern, if any, in the times shown in the table.

b. Use the times in the table to make a reasonable prediction about the time of the sunrise on September 1, 2006.

2. **SHORT RESPONSE** As shown in the table below, hurricanes are categorized by the speed of the wind in the storm. Use the table to determine whether the statement is **true** or **false**. If false, provide a counterexample.

<table>
<thead>
<tr>
<th>Hurricane category</th>
<th>Wind speed ( w ) (mi/h)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>( 74 \leq w \leq 95 )</td>
</tr>
<tr>
<td>2</td>
<td>( 96 \leq w \leq 110 )</td>
</tr>
<tr>
<td>3</td>
<td>( 111 \leq w \leq 130 )</td>
</tr>
<tr>
<td>4</td>
<td>( 131 \leq w \leq 155 )</td>
</tr>
<tr>
<td>5</td>
<td>( w &gt; 155 )</td>
</tr>
</tbody>
</table>

a. A hurricane is a category 5 hurricane if and only if its wind speed is greater than 155 miles per hour.

b. A hurricane is a category 3 hurricane if and only if its wind speed is less than 130 miles per hour.

3. **GRIDDED ANSWER** Write the next number in the pattern.

\[ 1, 2, 5, 10, 17, 26, \ldots \]

4. **EXTENDED RESPONSE** The graph shows concession sales at six high school football games. Tell whether each statement is the result of **inductive reasoning** or **deductive reasoning**. **Explain** your thinking.

- a. If 500 students attend a football game, the high school can expect concession sales to reach $300.
- b. Concession sales were highest at the game attended by 550 students.
- c. The average number of students who come to a game is about 300.

5. **SHORT RESPONSE** Select the phrase that makes the conclusion true. **Explain** your reasoning.

- a. A person needs a library card to check out books at the public library. You checked out a book at the public library. You (must have, may have, or do not have) a library card.
- b. The islands of Hawaii are volcanoes. Bob has never been to the Hawaiian Islands. Bob (has visited, may have visited, or has never visited) volcanoes.

6. **SHORT RESPONSE** Sketch a diagram showing \( \overline{PQ} \) intersecting \( \overline{RS} \) at point \( N \). In your diagram, \( \angle PNS \) should be an obtuse angle. Identify two acute angles in your diagram. **Explain** how you know that these angles are acute.
2.5 Justify a Number Trick

MATERIALS  • paper  • pencil

QUESTION How can you use algebra to justify a number trick?

Number tricks can allow you to guess the result of a series of calculations.

EXPLORE Play the number trick

STEP 1 Pick a number  Follow the directions below.

a. Pick any number between 11 and 98 that does not end in a zero.
   23
   23 \cdot 2
   46
   46 + 4
   50
   50 \cdot 5
   250
   250 + 12
   262
   262 \cdot 10
   2620
   2620 - 320
   2300

b. Double the number.
   c. Add 4 to your answer.
   d. Multiply your answer by 5.
   e. Add 12 to your answer.
   f. Multiply your answer by 10.
   g. Subtract 320 from your answer.
   h. Cross out the zeros in your answer.

STEP 2 Repeat the trick  Repeat the trick three times using three different numbers. What do you notice?

DRAW CONCLUSIONS Use your observations to complete these exercises

1. Let \( x \) represent the number you chose in the Explore. Write algebraic expressions for each step. Remember to use the Order of Operations.

2. Justify each expression you wrote in Exercise 1.

3. Another number trick is as follows:
   Pick any number.
   Multiply your number by 2.
   Add 18 to your answer.
   Divide your answer by 2.
   Subtract your original number from your answer.

   What is your answer? Does your answer depend on the number you chose? How can you change the trick so your answer is always 15? Explain.

4. REASONING Write your own number trick.
You used deductive reasoning to form logical arguments.

You will use algebraic properties in logical arguments too.

So you can apply a heart rate formula, as in Example 3.

When you solve an equation, you use properties of real numbers. Segment lengths and angle measures are real numbers, so you can also use these properties to write logical arguments about geometric figures.

**Example 1**  Write reasons for each step

Solve $2x + 5 = 20 - 3x$. Write a reason for each step.

<table>
<thead>
<tr>
<th>Equation</th>
<th>Explanation</th>
<th>Reason</th>
</tr>
</thead>
<tbody>
<tr>
<td>$2x + 5 = 20 - 3x$</td>
<td>Write original equation.</td>
<td>Given</td>
</tr>
<tr>
<td>$2x + 5 + 3x = 20 - 3x + 3x$</td>
<td>Add $3x$ to each side.</td>
<td>Addition Property of Equality</td>
</tr>
<tr>
<td>$5x + 5 = 20$</td>
<td>Combine like terms.</td>
<td>Simplify.</td>
</tr>
<tr>
<td>$5x = 15$</td>
<td>Subtract $5$ from each side.</td>
<td>Subtraction Property of Equality</td>
</tr>
<tr>
<td>$x = 3$</td>
<td>Divide each side by $5$.</td>
<td>Division Property of Equality</td>
</tr>
</tbody>
</table>

The value of $x$ is $3$. 

**For Your Notebook**

**Algebraic Properties of Equality**

Let $a$, $b$, and $c$ be real numbers.

**Addition Property**  If $a = b$, then $a + c = b + c$.

**Subtraction Property**  If $a = b$, then $a - c = b - c$.

**Multiplication Property**  If $a = b$, then $ac = bc$.

**Division Property**  If $a = b$ and $c 
eq 0$, then $\frac{a}{c} = \frac{b}{c}$.

**Substitution Property**  If $a = b$, then $a$ can be substituted for $b$ in any equation or expression.
**KEY CONCEPT**

**Distributive Property**

\[ a(b + c) = ab + ac, \text{ where } a, b, \text{ and } c \text{ are real numbers.} \]

---

**EXAMPLE 2**  **Use the Distributive Property**

Solve \(-4(11x + 2) = 80\). Write a reason for each step.

**Solution**

<table>
<thead>
<tr>
<th>Equation</th>
<th>Explanation</th>
<th>Reason</th>
</tr>
</thead>
<tbody>
<tr>
<td>(-4(11x + 2) = 80)</td>
<td>Write original equation.</td>
<td>Given</td>
</tr>
<tr>
<td>(-44x - 8 = 80)</td>
<td>Multiply.</td>
<td>Distributive Property</td>
</tr>
<tr>
<td>(-44x = 88)</td>
<td>Add 8 to each side.</td>
<td>Addition Property of Equality</td>
</tr>
<tr>
<td>(x = -2)</td>
<td>Divide each side by (-44).</td>
<td>Division Property of Equality</td>
</tr>
</tbody>
</table>

---

**EXAMPLE 3**  **Use properties in the real world**

**HEART RATE** When you exercise, your target heart rate should be between 50% to 70% of your maximum heart rate. Your target heart rate \(r\) at 70% can be determined by the formula \(r = 0.70(220 - a)\) where \(a\) represents your age in years. Solve the formula for \(a\).

**Solution**

<table>
<thead>
<tr>
<th>Equation</th>
<th>Explanation</th>
<th>Reason</th>
</tr>
</thead>
<tbody>
<tr>
<td>(r = 0.70(220 - a))</td>
<td>Write original equation.</td>
<td>Given</td>
</tr>
<tr>
<td>(r = 154 - 0.70a)</td>
<td>Multiply.</td>
<td>Distributive Property</td>
</tr>
<tr>
<td>(r - 154 = -0.70a)</td>
<td>Subtract 154 from each side.</td>
<td>Subtraction Property of Equality</td>
</tr>
<tr>
<td>(\frac{r - 154}{-0.70} = a)</td>
<td>Divide each side by (-0.70).</td>
<td>Division Property of Equality</td>
</tr>
</tbody>
</table>

---

**GUIDED PRACTICE**  **for Examples 1, 2, and 3**

In Exercises 1 and 2, solve the equation and write a reason for each step.

1. \(4x + 9 = -3x + 2\)
2. \(14x + 3(7 - x) = -1\)

3. Solve the formula \(A = \frac{1}{2}bh\) for \(b\).
**PROPERTIES** The following properties of equality are true for all real numbers. Segment lengths and angle measures are real numbers, so these properties of equality are true for segment lengths and angle measures.

### Key Concept

**Reflexive Property of Equality**
- **Real Numbers**: For any real number \( a, a = a \).
- **Segment Length**: For any segment \( \overline{AB}, AB = AB \).
- **Angle Measure**: For any angle \( \angle A, \angle A = \angle A \).

**Symmetric Property of Equality**
- **Real Numbers**: For any real numbers \( a \) and \( b \), if \( a = b \), then \( b = a \).
- **Segment Length**: For any segments \( \overline{AB} \) and \( \overline{CD} \), if \( AB = CD \), then \( CD = AB \).
- **Angle Measure**: For any angles \( \angle A \) and \( \angle B \), if \( \angle A = \angle B \), then \( \angle B = \angle A \).

**Transitive Property of Equality**
- **Real Numbers**: For any real numbers \( a, b, \) and \( c \), if \( a = b \) and \( b = c \), then \( a = c \).
- **Segment Length**: For any segments \( \overline{AB}, \overline{CD}, \) and \( \overline{EF} \), if \( AB = CD \) and \( CD = EF \), then \( AB = EF \).
- **Angle Measure**: For any angles \( \angle A, \angle B, \) and \( \angle C \), if \( \angle A = \angle B \) and \( \angle B = \angle C \), then \( \angle A = \angle C \).

### Example 4

**Use properties of equality**

**LOGO** You are designing a logo to sell daffodils. Use the information given. Determine whether \( \angle EBA = \angle DBC \).

**Solution**

<table>
<thead>
<tr>
<th>Equation</th>
<th>Explanation</th>

</tr>
</tbody>
</table>
1. **VOCABULARY** The following statement is true because of what property? The measure of an angle is equal to itself.

2. ★ **WRITING** Explain how to check the answer to Example 3 on page 106.

**WRITING REASONS** Copy the logical argument. Write a reason for each step.

3. \(3x - 12 = 7x + 8\)  
   \(-4x - 12 = 8\) \(\text{Given}\)  
   \(-4x = 20\) \(?\)  
   \(x = -5\) \(?\)

4. \(5(x - 1) = 4x + 13\)  
   \(5x - 5 = 4x + 13\) \(\text{Given}\)  
   \(x - 5 = 13\) \(?\)  
   \(x = 18\) \(?\)
5. ★ **MULTIPLE CHOICE** Name the property of equality the statement illustrates: If \(XY = AB\) and \(AB = GH\), then \(XY = GH\).

A   Substitution   B   Reflexive   C   Symmetric   D   Transitive

**WRITING REASONS** Solve the equation. Write a reason for each step.

6. \(5x - 10 = -40\)

7. \(4x + 9 = 16 - 3x\)

8. \(5(3x - 20) = -10\)

9. \(3(2x + 11) = 9\)

10. \(2(-x - 5) = 12\)

11. \(44 - 2(3x + 4) = -18x\)

12. \(4(5x - 9) = -2(x + 7)\)

13. \(2x - 15 - x = 21 + 10x\)

14. \(3(7x - 9) - 19x = -15\)

**ALGEBRA** Solve the equation for \(y\). Write a reason for each step.

15. \(5x + y = 18\)

16. \(-4x + 2y = 8\)

17. \(12 - 3y = 30x\)

18. \(3x + 9y = -7\)

19. \(2y + 0.5x = 16\)

20. \(\frac{1}{2}x - \frac{3}{4}y = -2\)

**COMPLETING STATEMENTS** In Exercises 21–25, use the property to copy and complete the statement.

21. Substitution Property of Equality: If \(AB = 20\), then \(AB + CD = \_\_\_.\)

22. Symmetric Property of Equality: If \(m\angle 1 = m\angle 2\), then \(\_\_\_\_\_\_\_.\)

23. Addition Property of Equality: If \(AB = CD\), then \(\_\_\_\_\_\_ + EF = \_\_\_\_\_\_ + EF\).

24. Distributive Property: If \(5(x + 8) = 2\), then \(\_\_\_\_\_\_ x + \_\_\_\_\_ = 2\).

25. Transitive Property of Equality: If \(m\angle 1 = m\angle 2\) and \(m\angle 2 = m\angle 3\), then \(\_\_\_\_\_\_\_\_.\)

26. **ERROR ANALYSIS** Describe and correct the error in solving the equation for \(x\).

\[
\begin{align*}
7x &= x + 24 & \text{Given} \\
8x &= 24 & \text{Addition Property of Equality} \\
x &= 3 & \text{Division Property of Equality}
\end{align*}
\]

27. ★ **OPEN-ENDED MATH** Write examples from your everyday life that could help you remember the Reflexive, Symmetric, and Transitive Properties of Equality.

**PERIMETER** In Exercises 28 and 29, show that the perimeter of triangle \(ABC\) is equal to the perimeter of triangle \(ADC\).

28.

29.

30. **CHALLENGE** In the figure at the right, \(\overline{ZY} \equiv \overline{XW}\), \(ZX = 5x + 17\), \(YW = 10 - 2x\), and \(YX = 3\). Find \(ZY\) and \(XW\).
31. **PERIMETER** The formula for the perimeter $P$ of a rectangle is $P = 2l + 2w$ where $l$ is the length and $w$ is the width. Solve the formula for $l$ and write a reason for each step. Then find the length of a rectangular lawn whose perimeter is 55 meters and whose width is 11 meters.

32. **AREA** The formula for the area $A$ of a triangle is $A = \frac{1}{2}bh$ where $b$ is the base and $h$ is the height. Solve the formula for $h$ and write a reason for each step. Then find the height of a triangle whose area is 1768 square inches and whose base is 52 inches.

33. **PROPERTIES OF EQUALITY** Copy and complete the table to show $m\angle 2 = m\angle 3$.

<table>
<thead>
<tr>
<th>Equation</th>
<th>Explanation</th>
<th>Reason</th>
</tr>
</thead>
<tbody>
<tr>
<td>$m\angle 1 = m\angle 4, m\angle EHF = 90^\circ$, $m\angle GHF = 90^\circ$</td>
<td></td>
<td>Given</td>
</tr>
<tr>
<td>$m\angle EHF = m\angle GHF$</td>
<td></td>
<td>Substitution Property of Equality</td>
</tr>
<tr>
<td>$m\angle EHF = m\angle 1 + m\angle 2$, $m\angle GHF = m\angle 3 + m\angle 4$</td>
<td>Add measures of adjacent angles.</td>
<td></td>
</tr>
<tr>
<td>$m\angle 1 + m\angle 2 = m\angle 3 + m\angle 4$</td>
<td>Write expressions equal to the angle measures.</td>
<td></td>
</tr>
<tr>
<td>?</td>
<td>Substitute $m\angle 1$ for $m\angle 4$.</td>
<td></td>
</tr>
<tr>
<td>$m\angle 2 = m\angle 3$</td>
<td></td>
<td>Subtraction Property of Equality</td>
</tr>
</tbody>
</table>

34. **MULTI-STEP PROBLEM** Points $A$, $B$, $C$, and $D$ represent stops, in order, along a subway route. The distance between Stops $A$ and $C$ is the same as the distance between Stops $B$ and $D$.

a. Draw a diagram to represent the situation.

b. Use the Segment Addition Postulate to show that the distance between Stops $A$ and $B$ is the same as the distance between Stops $C$ and $D$.

c. Justify part (b) using the Properties of Equality.

35. **SHORT RESPONSE** A flashlight beam is reflected off a mirror lying flat on the ground. Use the information given below to find $m\angle 2$.

$m\angle 1 + m\angle 2 + m\angle 3 = 180^\circ$
$m\angle 1 + m\angle 2 = 148^\circ$
$m\angle 1 = m\angle 3$
36. **MULTIPLE REPRESENTATIONS** The formula to convert a temperature in degrees Fahrenheit (°F) to degrees Celsius (°C) is \( C = \frac{5}{9}(F - 32) \).

   a. **Writing an Equation** Solve the formula for \( F \). Write a reason for each step.

   b. **Making a Table** Make a table that shows the conversion to Fahrenheit for each temperature: 0°C, 20°C, 32°C, and 41°C.

   c. **Drawing a Graph** Use your table to graph the temperature in degrees Celsius (°C) as a function of the temperature in degrees Fahrenheit (°F). Is this a linear function?

**CHALLENGE** In Exercises 37 and 38, decide whether the relationship is reflexive, symmetric, or transitive.

37. **Group:** two employees in a grocery store
   **Relationship:** “worked the same hours as”
   **Example:** Yen worked the same hours as Jim.

38. **Group:** negative numbers on a number line
   **Relationship:** “is less than”
   **Example:** -4 is less than -1.

**MIXED REVIEW**

In the diagram, \( m\angle ADC = 124^\circ \). (p. 24)

39. Find \( m\angle ADB \).
40. Find \( m\angle BDC \).
41. Find a counterexample to show the conjecture is false.
   **Conjecture** All polygons have five sides. (p. 72)
42. Select the word(s) that make(s) the conclusion true. If \( m\angle X = m\angle Y \) and \( m\angle Y = m\angle Z \), then \( m\angle X \) (is, may be, or is not) equal to \( m\angle Z \). (p. 87)

**QUIZ for Lessons 2.4–2.5**

Use the diagram to determine if the statement is true or false. (p. 96)

1. Points \( B, C, \) and \( D \) are coplanar.
2. Point \( A \) is on line \( l \).
3. Plane \( P \) and plane \( Q \) are perpendicular.

Solve the equation. Write a reason for each step. (p. 105)

4. \( x + 20 = 35 \)
5. \( 5x - 14 = 16 + 3x \)

Use the property to copy and complete the statement. (p. 105)

6. Subtraction Property of Equality: If \( AB = CD \), then \( ? - EF = ? - EF \).
7. Transitive Property of Equality: If \( a = b \) and \( b = c \), then \( ? = ? \).
2.6 Prove Statements about Segments and Angles

Key Vocabulary
• proof
• two-column proof
• theorem

A **proof** is a logical argument that shows a statement is true. There are several formats for proofs. A **two-column proof** has numbered statements and corresponding reasons that show an argument in a logical order.

In a two-column proof, each statement in the left-hand column is either given information or the result of applying a known property or fact to statements already made. Each reason in the right-hand column is the explanation for the corresponding statement.

**Example 1** Write a two-column proof

Write a two-column proof for the situation in Example 4 on page 107.

**Given** \( m\angle 1 = m\angle 3 \)

**Prove** \( m\angle EBA = m\angle DBC \)

<table>
<thead>
<tr>
<th>Statements</th>
<th>Reasons</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. ( m\angle 1 = m\angle 3 )</td>
<td>1. Given</td>
</tr>
<tr>
<td>2. ( m\angle EBA = m\angle 3 + m\angle 2 )</td>
<td>2. Angle Addition Postulate</td>
</tr>
<tr>
<td>3. ( m\angle EBA = m\angle 1 + m\angle 2 )</td>
<td>3. Substitution Property of Equality</td>
</tr>
<tr>
<td>4. ( m\angle 1 + m\angle 2 = m\angle DBC )</td>
<td>4. Angle Addition Postulate</td>
</tr>
<tr>
<td>5. ( m\angle EBA = m\angle DBC )</td>
<td>5. Transitive Property of Equality</td>
</tr>
</tbody>
</table>

**Guided Practice** for Example 1

1. Four steps of a proof are shown. Give the reasons for the last two steps.

**Given** \( AC = AB + AB \)

**Prove** \( AB = BC \)

<table>
<thead>
<tr>
<th>Statements</th>
<th>Reasons</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. ( AC = AB + AB )</td>
<td>1. Given</td>
</tr>
<tr>
<td>2. ( AB + BC = AC )</td>
<td>2. Segment Addition Postulate</td>
</tr>
<tr>
<td>3. ( AB + AB = AB + BC )</td>
<td>3. ?</td>
</tr>
<tr>
<td>4. ( AB = BC )</td>
<td>4. ?</td>
</tr>
</tbody>
</table>
**THEOREMS** The reasons used in a proof can include definitions, properties, postulates, and *theorems*. A *theorem* is a statement that can be proven. Once you have proven a theorem, you can use the theorem as a reason in other proofs.

**THEOREMS**

**THEOREM 2.1 Congruence of Segments**

Segment congruence is reflexive, symmetric, and transitive.

- **Reflexive** For any segment \( AB \), \( \overline{AB} \equiv \overline{AB} \).
- **Symmetric** If \( \overline{AB} \equiv \overline{CD} \), then \( \overline{CD} \equiv \overline{AB} \).
- **Transitive** If \( \overline{AB} \equiv \overline{CD} \) and \( \overline{CD} \equiv \overline{EF} \), then \( \overline{AB} \equiv \overline{EF} \).

*Proofs:* p. 137; Ex. 5, p. 121; Ex. 26, p. 118

**THEOREM 2.2 Congruence of Angles**

Angle congruence is reflexive, symmetric, and transitive.

- **Reflexive** For any angle \( \angle A \), \( \angle A \equiv \angle A \).
- **Symmetric** If \( \angle A \equiv \angle B \), then \( \angle B \equiv \angle A \).
- **Transitive** If \( \angle A \equiv \angle B \) and \( \angle B \equiv \angle C \), then \( \angle A \equiv \angle C \).

*Proofs:* Ex. 25, p. 118; Concept Summary, p. 114; Ex. 21, p. 137

**EXAMPLE 2** Name the property shown

Name the property illustrated by the statement.

a. If \( \angle R \equiv \angle T \) and \( \angle T \equiv \angle P \), then \( \angle R \equiv \angle P \).

b. If \( \overline{NK} \equiv \overline{BD} \), then \( \overline{BD} \equiv \overline{NK} \).

**Solution**

a. Transitive Property of Angle Congruence

b. Symmetric Property of Segment Congruence

**GUIDED PRACTICE** for Example 2

Name the property illustrated by the statement.

2. \( \overline{CD} \equiv \overline{CD} \)

3. If \( \angle Q \equiv \angle V \), then \( \angle V \equiv \angle Q \).

In this lesson, most of the proofs involve showing that congruence and equality are equivalent. You may find that what you are asked to prove seems to be obviously true. It is important to practice writing these proofs so that you will be prepared to write more complicated proofs in later chapters.
**Example 3** Use properties of equality

Prove this property of midpoints: If you know that M is the midpoint of \( AB \), prove that \( AB = 2 \cdot AM \) and \( AM = \frac{1}{2} AB \).

**GIVEN**  
\( M \) is the midpoint of \( AB \).

**PROVE**  
\( a. \ AB = 2 \cdot AM \)  
\( b. \ AM = \frac{1}{2} AB \)

<table>
<thead>
<tr>
<th>STATEMENTS</th>
<th>REASONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. ( M ) is the midpoint of ( AB ).</td>
<td>1. Given</td>
</tr>
<tr>
<td>2. ( AM = MB )</td>
<td>2. Definition of midpoint</td>
</tr>
<tr>
<td>3. ( AM = MB )</td>
<td>3. Definition of congruent segments</td>
</tr>
<tr>
<td>4. ( AM + MB = AB )</td>
<td>4. Segment Addition Postulate</td>
</tr>
<tr>
<td>5. ( AM + AM = AB )</td>
<td>5. Substitution Property of Equality</td>
</tr>
<tr>
<td>a. 6. ( 2AM = AB )</td>
<td>6. Distributive Property</td>
</tr>
<tr>
<td>b. 7. ( AM = \frac{1}{2} AB )</td>
<td>7. Division Property of Equality</td>
</tr>
</tbody>
</table>

**Guided Practice** for Example 3

4. **WHAT IF?** Look back at Example 3. What would be different if you were proving that \( AB = 2 \cdot MB \) and that \( MB = \frac{1}{2} AB \) instead?

---

**Concept Summary**

**Writing a Two-Column Proof**

In a proof, you make one statement at a time, until you reach the conclusion. Because you make statements based on facts, you are using deductive reasoning. Usually the first statement-and-reason pair you write is given information.

**Proof of the Symmetric Property of Angle Congruence**

**GIVEN**  
\( \angle 1 \equiv \angle 2 \)

**PROVE**  
\( \angle 2 \equiv \angle 1 \)

<table>
<thead>
<tr>
<th>STATEMENTS</th>
<th>REASONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. ( \angle 1 \equiv \angle 2 )</td>
<td>1. Given</td>
</tr>
<tr>
<td>2. ( m\angle 1 = m\angle 2 )</td>
<td>2. Definition of congruent angles</td>
</tr>
<tr>
<td>3. ( m\angle 2 = m\angle 1 )</td>
<td>3. Symmetric Property of Equality</td>
</tr>
<tr>
<td>4. ( \angle 2 \equiv \angle 1 )</td>
<td>4. Definition of congruent angles</td>
</tr>
</tbody>
</table>

Remember to give a reason for the last statement.

Definitions, postulates, or proven theorems that allow you to state the corresponding statement.

The number of statements will vary.

Copy or draw diagrams and label given information to help develop proofs.
Example 4  Solve a multi-step problem

Shopping Mall  Walking down a hallway at the mall, you notice the music store is halfway between the food court and the shoe store. The shoe store is halfway between the music store and the bookstore. Prove that the distance between the entrances of the food court and music store is the same as the distance between the entrances of the shoe store and bookstore.

Solution

Step 1  Draw and label a diagram.

\[ \text{food court} \quad \text{music store} \quad \text{shoe store} \quad \text{bookstore} \]

\[ A \quad B \quad C \quad D \]

Step 2  Draw separate diagrams to show mathematical relationships.

\[ A \quad B \quad C \quad D \quad \]

\[ A \quad B \quad C \quad D \]

Step 3  State what is given and what is to be proved for the situation. Then write a proof.

**GIVEN**  \( B \) is the midpoint of \( \overline{AC} \).

\( C \) is the midpoint of \( \overline{BD} \).

**PROVE**  \( AB = CD \)

<table>
<thead>
<tr>
<th>Statements</th>
<th>Reasons</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. ( B ) is the midpoint of ( \overline{AC} ). ( C ) is the midpoint of ( \overline{BD} ).</td>
<td>1. Given</td>
</tr>
<tr>
<td>2. ( AB \cong BC )</td>
<td>2. Definition of midpoint</td>
</tr>
<tr>
<td>3. ( BC \cong CD )</td>
<td>3. Definition of midpoint</td>
</tr>
<tr>
<td>4. ( AB \cong CD )</td>
<td>4. Transitive Property of Congruence</td>
</tr>
<tr>
<td>5. ( AB = CD )</td>
<td>5. Definition of congruent segments</td>
</tr>
</tbody>
</table>

Guided Practice  for Example 4

5. In Example 4, does it matter what the actual distances are in order to prove the relationship between \( AB \) and \( CD \)? Explain.

6. In Example 4, there is a clothing store halfway between the music store and the shoe store. What other two store entrances are the same distance from the entrance of the clothing store?
1. **VOCABULARY** What is a *theorem*? How is it different from a *postulate*?

2. ★ **WRITING** You can use theorems as reasons in a two-column proof. What other types of statements can you use as reasons in a two-column proof? Give examples.

3. **DEVELOPING PROOF** Copy and complete the proof.

   **GIVEN**
   \[ AB = 5, \ BC = 6 \]

   **PROVE**
   \[ AC = 11 \]

   **STATEMENTS** | **REASONS**
   --- | ---
   1. \[ AB = 5, \ BC = 6 \] | 1. Given
   2. \[ AC = AB + BC \] | 2. Segment Addition Postulate
   3. \[ AC = 5 + 6 \] | 3. ?

4. ★ **MULTIPLE CHOICE** Which property listed is the reason for the last step in the proof?

   **GIVEN**
   \[ m\angle 1 = 59^\circ, \ m\angle 2 = 59^\circ \]

   **PROVE**
   \[ m\angle 1 = m\angle 2 \]

   **STATEMENTS** | **REASONS**
   --- | ---
   1. \[ m\angle 1 = 59^\circ, \ m\angle 2 = 59^\circ \] | 1. Given
   2. \[ 59^\circ = m\angle 2 \] | 2. Symmetric Property of Equality
   3. \[ m\angle 1 = m\angle 2 \] | 3. ?

   (A) Transitive Property of Equality  (B) Reflexive Property of Equality
   (C) Symmetric Property of Equality  (D) Distributive Property

**USING PROPERTIES** Use the property to copy and complete the statement.

5. Reflexive Property of Congruence: \[ \_\_\_ = SE \]

6. Symmetric Property of Congruence: If \[ \_\_\_ = \_\_\_ \], then \[ \angle RST \equiv \angle JKL \].

7. Transitive Property of Congruence: If \[ \angle F \equiv \angle J \] and \[ \_\_\_ \equiv \_\_\_ \], then \[ \angle F \equiv \angle L \].

**NAMING PROPERTIES** Name the property illustrated by the statement.

8. If \[ DG \equiv CT \], then \[ CT \equiv DG \].

9. \[ \angle VWX \equiv \angle VWX \]

10. If \[ JK \equiv MN \] and \[ MN \equiv XY \], then \[ JK \equiv XY \].

11. \[ YZ = ZY \]

12. ★ **MULTIPLE CHOICE** Name the property illustrated by the statement
   “If \[ CD \equiv MN \], then \[ MN \equiv CD \].”

   (A) Reflexive Property of Equality  (B) Symmetric Property of Equality
   (C) Symmetric Property of Congruence  (D) Transitive Property of Congruence
13. **ERROR ANALYSIS** In the diagram below, $MN \equiv LQ$ and $LQ \equiv PN$. Describe and correct the error in the reasoning.

Because $MN \equiv LQ$ and $LQ \equiv PN$, then $MN \equiv PN$ by the Reflexive Property of Segment Congruence.

**MAKING A SKETCH** In Exercises 14 and 15, sketch a diagram that represents the given information.

14. **CRYSTALS** The shape of a crystal can be represented by intersecting lines and planes. Suppose a crystal is cubic, which means it can be represented by six planes that intersect at right angles.

15. **BEACH VACATION** You are on vacation at the beach. Along the boardwalk, the bike rentals are halfway between your cottage and the kite shop. The snack shop is halfway between your cottage and the bike rentals. The arcade is halfway between the bike rentals and the kite shop.

16. **DEVELOPING PROOF** Copy and complete the proof.

| GIVEN | $RT = 5$, $RS = 5$, $RT \equiv TS$ |
| PROVE | $RS \equiv TS$ |

<table>
<thead>
<tr>
<th>STATEMENTS</th>
<th>REASONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. $RT = 5$, $RS = 5$, $RT \equiv TS$</td>
<td>1. $?$</td>
</tr>
<tr>
<td>2. $RS = RT$</td>
<td>2. Transitive Property of Equality</td>
</tr>
<tr>
<td>3. $RT = TS$</td>
<td>3. Definition of congruent segments</td>
</tr>
<tr>
<td>4. $RS = TS$</td>
<td>4. Transitive Property of Equality</td>
</tr>
<tr>
<td>5. $RS \equiv TS$</td>
<td>5. $?$</td>
</tr>
</tbody>
</table>

**ALGEBRA** Solve for $x$ using the given information. Explain your steps.

17. **GIVEN** $QR \equiv PQ$, $RS \equiv PQ$

18. **GIVEN** $m \angle ABC = 90^\circ$

19. ★ **SHORT RESPONSE** Explain why writing a proof is an example of deductive reasoning, not inductive reasoning.

20. **CHALLENGE** Point $P$ is the midpoint of $MN$ and point $Q$ is the midpoint of $MP$. Suppose $AB$ is congruent to $MP$, and $PN$ has length $x$. Write the length of the segments in terms of $x$. Explain.

- a. $AB$
- b. $MN$
- c. $MQ$
- d. $NQ$
21. **BRIDGE** In the bridge in the illustration, it is known that $\angle 2 \equiv \angle 3$ and $\overline{TV}$ bisects $\angle UTW$. Copy and complete the proof to show that $\angle 1 \equiv \angle 3$.

<table>
<thead>
<tr>
<th>STATEMENTS</th>
<th>REASONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. $\overline{TV}$ bisects $\angle UTW$.</td>
<td>1. Given</td>
</tr>
<tr>
<td>2. $\angle 1 \equiv \angle 2$</td>
<td>2. ?</td>
</tr>
<tr>
<td>3. $\angle 2 \equiv \angle 3$</td>
<td>3. Given</td>
</tr>
<tr>
<td>4. $\angle 1 \equiv \angle 3$</td>
<td>4. ?</td>
</tr>
</tbody>
</table>

22. **DEVELOPING PROOF** Write a complete proof by matching each statement with its corresponding reason.

**GIVEN** $\overrightarrow{QS}$ is an angle bisector of $\angle PQR$.

**PROVE** $m\angle PQS = \frac{1}{2} m\angle PQR$

<table>
<thead>
<tr>
<th>STATEMENTS</th>
<th>REASONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. $\overrightarrow{QS}$ is an angle bisector of $\angle PQR$.</td>
<td>A. Definition of angle bisector</td>
</tr>
<tr>
<td>2. $\angle PQS \equiv \angle SQR$</td>
<td>B. Distributive Property</td>
</tr>
<tr>
<td>3. $m\angle PQS = m\angle SQR$</td>
<td>C. Angle Addition Postulate</td>
</tr>
<tr>
<td>4. $m\angle PQS + m\angle SQR = m\angle PQR$</td>
<td>D. Given</td>
</tr>
<tr>
<td>5. $m\angle PQS + m\angle PQS = m\angle PQR$</td>
<td>E. Division Property of Equality</td>
</tr>
<tr>
<td>6. $2 \cdot m\angle PQS = m\angle PQR$</td>
<td>F. Definition of congruent angles</td>
</tr>
<tr>
<td>7. $m\angle PQS = \frac{1}{2} m\angle PQR$</td>
<td>G. Substitution Property of Equality</td>
</tr>
</tbody>
</table>

**PROOF** Use the given information and the diagram to prove the statement.

23. **GIVEN** $2AB = AC$

**PROVE** $AB = BC$

24. **GIVEN** $m\angle 1 + m\angle 2 = 180^\circ$

**PROVE** $m\angle 2 = 118^\circ$

**PROVING PROPERTIES** Prove the indicated property of congruence.

25. Reflexive Property of Angle Congruence

**GIVEN** $A$ is an angle.

**PROVE** $\angle A \equiv \angle A$

26. Transitive Property of Segment Congruence

**GIVEN** $WX \equiv XY$ and $XY \equiv YZ$

**PROVE** $WX \equiv YZ$
27. ★ SHORT RESPONSE In the sculpture shown, \( \angle 1 \cong \angle 2 \) and \( \angle 2 \cong \angle 3 \). Classify the triangle and justify your reasoning.

28. ★ SHORT RESPONSE You use a computer drawing program to create a line segment. You copy the segment and paste it. You copy the pasted segment and then paste it, and so on. How do you know all the line segments are congruent?

29. MULTI-STEP PROBLEM The distance from the restaurant to the shoe store is the same as the distance from the cafe to the florist. The distance from the shoe store to the movie theater is the same as the distance from the movie theater to the cafe, and from the florist to the dry cleaners.

Use the steps below to prove that the distance from the restaurant to the movie theater is the same as the distance from the cafe to the dry cleaners.

a. Draw and label a diagram to show the mathematical relationships.

b. State what is given and what is to be proved for the situation.

c. Write a two-column proof.

30. CHALLENGE The distance from Springfield to Lakewood City is equal to the distance from Springfield to Bettsville. Janisburg is 50 miles farther from Springfield than Bettsville is. Moon Valley is 50 miles farther from Springfield than Lakewood City is.

a. Assume all five cities lie in a straight line. Draw a diagram that represents this situation.

b. Suppose you do not know that all five cities lie in a straight line. Draw a diagram that is different from the one in part (a) to represent the situation.

c. Explain the differences in the two diagrams.

---

**EXAMPLE 4** on p. 115 for Ex. 29

Given \( m \angle 1 \), find the measure of an angle that is complementary to \( \angle 1 \) and the measure of an angle that is supplementary to \( \angle 1 \). (p. 35)

31. \( m \angle 1 = 47^\circ \) 
32. \( m \angle 1 = 29^\circ \) 
33. \( m \angle 1 = 89^\circ \)

Solve the equation. Write a reason for each step. (p. 105)

34. \( 5x + 14 = -16 \) 
35. \( 2x - 9 = 15 - 4x \) 
36. \( x + 28 = -11 - 3x - 17 \)
Another Way to Solve Example 4, page 115

MULTIPLE REPRESENTATIONS The first step in writing any proof is to make a plan. A diagram or visual organizer can help you plan your proof. The steps of a proof must be in a logical order, but there may be more than one correct order.

SHOPPING MALL Walking down a hallway at the mall, you notice the music store is halfway between the food court and the shoe store. The shoe store is halfway between the music store and the bookstore. Prove that the distance between the entrances of the food court and music store is the same as the distance between the entrances of the shoe store and bookstore.

Using a Visual Organizer

STEP 1 Use a visual organizer to map out your proof.

The music store is halfway between the food court and the shoe store. The shoe store is halfway between the music store and the bookstore.

<table>
<thead>
<tr>
<th>Given information</th>
<th>M is halfway between F and S.</th>

</tbody>
</table>
1. **COMPARE PROOFS** Compare the proof on the previous page and the proof in Example 4 on page 115.
   a. How are the proofs the same? How are they different?
   b. Which proof is easier for you to understand? Explain.

2. **REASONING** Below is a proof of the Transitive Property of Angle Congruence. What is another reason you could give for Statement 3? Explain.

   **GIVEN** \( \angle A \cong \angle B \) and \( \angle B \cong \angle C \)

   **PROVE** \( \angle A \cong \angle C \)

   **STATEMENTS** | **REASONS**
   --- | ---
   1. \( \angle A \cong \angle B, \angle B \cong \angle C \) | 1. Given
   2. \( m\angle A = m\angle B, m\angle B = m\angle C \) | 2. Definition of congruent angles
   3. \( m\angle A = m\angle C \) | 3. Transitive Property of Equality
   4. \( \angle A \cong \angle C \) | 4. Definition of congruent angles

3. **SHOPPING MALL** You are at the same mall as on page 120 and you notice that the bookstore is halfway between the shoe store and the toy store. Draw a diagram or make a visual organizer, then write a proof to show that the distance from the entrances of the food court and music store is the same as the distance from the entrances of the book store and toy store.

4. **WINDOW DESIGN** The entrance to the mall has a decorative window above the main doors as shown. The colored dividers form congruent angles. Draw a diagram or make a visual organizer, then write a proof to show that the angle measure between the red dividers is half the measure of the angle between the blue dividers.

5. **COMPARE PROOFS** Below is a proof of the Symmetric Property of Segment Congruence.

   **GIVEN** \( DE \equiv FG \)

   **PROVE** \( FG \equiv DE \)

   **STATEMENTS** | **REASONS**
   --- | ---
   1. \( DE \equiv FG \) | 1. Given
   2. \( DE = FG \) | 2. Definition of congruent segments
   3. \( FG = DE \) | 3. Symmetric Property of Equality
   4. \( FG \equiv DE \) | 4. Definition of congruent segments

   a. *Compare* this proof to the proof of the Symmetric Property of Angle Congruence in the Concept Summary on page 114. What makes the proofs different? *Explain.*

   b. *Explain* why Statement 2 above cannot be \( FG \equiv DE \).
2.7 Angles and Intersecting Lines

**MATERIALS**: graphing calculator or computer

**QUESTION**: What is the relationship between the measures of the angles formed by intersecting lines?

You can use geometry drawing software to investigate the measures of angles formed when lines intersect.

**EXPLORE 1** Measure linear pairs formed by intersecting lines

**STEP 1** Draw two intersecting lines

- Draw and label \( \overrightarrow{AB} \). Draw and label \( \overrightarrow{CD} \) so that it intersects \( \overrightarrow{AB} \). Draw and label the point of intersection \( E \).

**STEP 2** Measure \( \angle AEC \), \( \angle AED \), and \( \angle DEB \). Move point \( C \) to change the angles.

**STEP 3** Save as “EXPLORE1” by choosing Save from the F1 menu and typing the name.

**DRAW CONCLUSIONS**: Use your observations to complete these exercises

1. Describe the relationship between \( \angle AEC \) and \( \angle AED \).
2. Describe the relationship between \( \angle AED \) and \( \angle DEB \).
3. What do you notice about \( \angle AEC \) and \( \angle DEB \)?
4. In Explore 1, what happens when you move \( C \) to a different position? Do the angle relationships stay the same? Make a conjecture about two angles supplementary to the same angle.
5. Do you think your conjecture will be true for supplementary angles that are not adjacent? Explain.
2.7 Prove Angle Pair Relationships

**EXPLORE 3** Measure vertical angles formed by intersecting lines

**STEP 1** Draw two intersecting lines

Draw and label $\overrightarrow{AB}$. Draw and label $\overrightarrow{CD}$ so that it intersects $\overrightarrow{AB}$. Draw and label the point of intersection $E$.

**STEP 2** Measure angles

Measure $\angle AEC$, $\angle AED$, $\angle BEC$, and $\angle DEB$. Move point $C$ to change the angles. Save as “EXPLORE3”.

**EXPLORE 2** Measure complementary angles

**STEP 1** Draw two perpendicular lines

Draw and label $\overrightarrow{AB}$. Draw point $E$ on $\overrightarrow{AB}$. Draw and label $\overrightarrow{EC} \perp \overrightarrow{AB}$. Draw and label point $D$ on $\overrightarrow{EC}$ so that $E$ is between $C$ and $D$ as shown in Step 2.

**STEP 2** Draw another line

Draw and label $\overrightarrow{EG}$ so that $G$ is in the interior of $\angle CEB$. Draw point $F$ on $\overrightarrow{EG}$ as shown. Save as “EXPLORE2”.

**STEP 3** Measure angles

Measure $\angle AEF$, $\angle FED$, $\angle CEG$, and $\angle GEB$. Move point $G$ to change the angles.

**DRAW CONCLUSIONS** Use your observations to complete these exercises

6. In Explore 2, does the angle relationship stay the same as you move $G$?

7. In Explore 2, make a conjecture about the relationship between $\angle CEG$ and $\angle GEB$. Write your conjecture in if-then form.

8. In Explore 3, the intersecting lines form two pairs of vertical angles.
   Make a conjecture about the relationship between any two vertical angles. Write your conjecture in if-then form.

9. Name the pairs of vertical angles in Explore 2. Use this drawing to test your conjecture from Exercise 8.
Sometimes, a new theorem describes a relationship that is useful in writing proofs. For example, using the Right Angles Congruence Theorem will reduce the number of steps you need to include in a proof involving right angles.

**THEOREM 2.3 Right Angles Congruence Theorem**

All right angles are congruent.

*Proof:* below

**Example 1**

Use right angle congruence

Write a proof.

**GIVEN** \( \overline{AB} \perp \overline{BC}, \overline{DC} \perp \overline{BC} \)

**PROVE** \( \angle B \equiv \angle C \)

<table>
<thead>
<tr>
<th>STATEMENTS</th>
<th>reasons</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. ( \overline{AB} \perp \overline{BC}, \overline{DC} \perp \overline{BC} )</td>
<td>1. Given</td>
</tr>
<tr>
<td>2. ( \angle B ) and ( \angle C ) are right angles.</td>
<td>2. Definition of perpendicular lines</td>
</tr>
<tr>
<td>3. ( \angle B \equiv \angle C )</td>
<td>3. Right Angles Congruence Theorem</td>
</tr>
</tbody>
</table>
### THEOREMS

**THEOREM 2.4 Congruent Supplements Theorem**

If two angles are supplementary to the same angle (or to congruent angles), then they are congruent.

\[ \angle 1 \text{ and } \angle 2 \text{ are supplementary and } \angle 3 \text{ and } \angle 2 \text{ are supplementary, then } \angle 1 \equiv \angle 3. \]

*Proof:* Example 2, below; Ex. 36, p. 129

**THEOREM 2.5 Congruent Complements Theorem**

If two angles are complementary to the same angle (or to congruent angles), then they are congruent.

\[ \angle 4 \text{ and } \angle 5 \text{ are complementary and } \angle 6 \text{ and } \angle 5 \text{ are complementary, then } \angle 4 \equiv \angle 6. \]

*Proof:* Ex. 37, p. 129; Ex. 41, p. 130

To prove Theorem 2.4, you must prove two cases: one with angles supplementary to the same angle and one with angles supplementary to congruent angles. The proof of Theorem 2.5 also requires two cases.

---

### EXAMPLE 2

**Prove a case of Congruent Supplements Theorem**

Prove that two angles supplementary to the same angle are congruent.

**GIVEN** \( \angle 1 \text{ and } \angle 2 \text{ are supplements.} \)

\( \angle 3 \text{ and } \angle 2 \text{ are supplements.} \)

**PROVE** \( \angle 1 \equiv \angle 3 \)

<table>
<thead>
<tr>
<th>STATEMENTS</th>
<th>REASONS</th>
</tr>

<td>1. ( \angle 1 \text{ and } \angle 2 \text{ are supplements.} ) ( \angle 3 \text{ and } \angle 2 \text{ are supplements.} )</td>
<td>1. Given</td>
</tr>
<tr>
<td>2. ( m\angle 1 + m\angle 2 = 180^\circ ) ( m\angle 3 + m\angle 2 = 180^\circ )</td>
<td>2. Definition of supplementary angles</td>
</tr>
<tr>
<td>3. ( m\angle 1 + m\angle 2 = m\angle 3 + m\angle 2 )</td>
<td>3. Transitive Property of Equality</td>
</tr>
<tr>
<td>4. ( m\angle 1 = m\angle 3 )</td>
<td>4. Subtraction Property of Equality</td>
</tr>
<tr>
<td>5. ( \angle 1 \equiv \angle 3 )</td>
<td>5. Definition of congruent angles</td>
</tr>
</tbody>
</table>

---

### GUIDED PRACTICE

**for Examples 1 and 2**

1. How many steps do you save in the proof in Example 1 by using the *Right Angles Congruence Theorem*?

2. Draw a diagram and write GIVEN and PROVE statements for a proof of each case of the *Congruent Complements Theorem*. 
INTERSECTING LINES When two lines intersect, pairs of vertical angles and linear pairs are formed. The relationship that you used in Lesson 1.5 for linear pairs is formally stated below as the **Linear Pair Postulate**. This postulate is used in the proof of the **Vertical Angles Congruence Theorem**.

**POSTULATE For Your Notebook**

**Postulate 12 Linear Pair Postulate**

If two angles form a linear pair, then they are supplementary.

\[ \angle 1 \text{ and } \angle 2 \text{ form a linear pair, so } \angle 1 \text{ and } \angle 2 \text{ are supplementary and } m\angle 1 + m\angle 2 = 180^\circ. \]

**Theorem For Your Notebook**

**Theorem 2.6 Vertical Angles Congruence Theorem**

Vertical angles are congruent.

\[ \angle 1 = \angle 3, \quad \angle 2 = \angle 4 \]

**Example 3 Prove the Vertical Angles Congruence Theorem**

Prove vertical angles are congruent.

**Given** \( \angle 5 \text{ and } \angle 7 \text{ are vertical angles.} \)**

**Prove** \( \angle 5 \cong \angle 7 \)

**Statements**

1. \( \angle 5 \text{ and } \angle 7 \text{ are vertical angles.} \)
2. \( \angle 5 \text{ and } \angle 6 \text{ are a linear pair.} \)
3. \( \angle 6 \text{ and } \angle 7 \text{ are a linear pair.} \)
4. \( \angle 5 \text{ and } \angle 6 \text{ are supplementary.} \)
5. \( \angle 6 \text{ and } \angle 7 \text{ are supplementary.} \)
6. \( \angle 5 \equiv \angle 7 \)

**Reasons**

1. Given
2. Definition of linear pair, as shown in the diagram
3. Linear Pair Postulate
4. Congruent Supplements Theorem

**Guided Practice For Example 3**

In Exercises 3–5, use the diagram.

3. If \( \angle 1 = 112^\circ \), find \( \angle 2, \angle 3, \text{ and } \angle 4 \).
4. If \( \angle 2 = 67^\circ \), find \( \angle 1, \angle 3, \text{ and } \angle 4 \).
5. If \( \angle 4 = 71^\circ \), find \( \angle 1, \angle 2, \text{ and } \angle 3 \).
6. Which previously proven theorem is used in Example 3 as a reason?
2.7 Prove Angle Pair Relationships

Example 4 Standardized Test Practice

Which equation can be used to find x?

A $32 + (3x + 1) = 90$
B $32 + (3x + 1) = 180$
C $32 = 3x + 1$
D $3x + 1 = 212$

Solution

Because $\angle TPQ$ and $\angle QPR$ form a linear pair, the sum of their measures is $180^\circ$.

The correct answer is B. (B) (C) (D)

Guided Practice for Example 4

Use the diagram in Example 4.

7. Solve for $x$.
8. Find $m\angle TPS$.

2.7 Exercises

Skill Practice

1. Vocabulary Copy and complete: If two lines intersect at a point, then the ___ angles formed by the intersecting lines are congruent.

2. ★ Writing Describe the relationship between the angle measures of complementary angles, supplementary angles, vertical angles, and linear pairs.

Identify Angles Identify the pair(s) of congruent angles in the figures below. Explain how you know they are congruent.

3. ______________
4. $\angle ABC$ is supplementary to $\angle CBD$.
   $\angle CBD$ is supplementary to $\angle DEF$.

5. ______________
6. ______________
7. **SHORT RESPONSE** The x-axis and y-axis in a coordinate plane are perpendicular to each other. The axes form four angles. Are the four angles congruent right angles? *Explain.*

**FINDING ANGLE MEASURES** In Exercises 8–11, use the diagram at the right.

8. If \( m \angle 1 = 145^\circ \), find \( m \angle 2 \), \( m \angle 3 \), and \( m \angle 4 \).
9. If \( m \angle 3 = 168^\circ \), find \( m \angle 1 \), \( m \angle 2 \), and \( m \angle 4 \).
10. If \( m \angle 4 = 37^\circ \), find \( m \angle 1 \), \( m \angle 2 \), and \( m \angle 3 \).
11. If \( m \angle 2 = 62^\circ \), find \( m \angle 1 \), \( m \angle 3 \), and \( m \angle 4 \).

**ALGEBRA** Find the values of \( x \) and \( y \).

12. \((7y + 2)\) \( \implies \) \((3y - 2)\)
13. \((9y + 3)\) \( \implies \) \((6y - 2)\)
14. \((10x - 4)\) \( \implies \) \((6x + 2)\)

15. **ERROR ANALYSIS** Describe the error in stating that \( \angle 1 \equiv \angle 4 \) and \( \angle 2 \equiv \angle 3 \).

16. **MULTIPLE CHOICE** In a figure, \( \angle A \) and \( \angle D \) are complementary angles and \( m \angle A = 4x^\circ \). Which expression can be used to find \( m \angle D \)?
   
   A) \((4x + 90)^\circ\)  
   B) \((180 - 4x)^\circ\)  
   C) \((180 + 4x)^\circ\)  
   D) \((90 - 4x)^\circ\)

**FINDING ANGLE MEASURES** In Exercises 17–21, copy and complete the statement given that \( m \angle FHE = m \angle BHG = m \angle AHF = 90^\circ \).

17. If \( m \angle 3 = 30^\circ \), then \( m \angle 6 = \) ?.
18. If \( m \angle BHF = 115^\circ \), then \( m \angle 3 = \) ?.
19. If \( m \angle 6 = 27^\circ \), then \( m \angle 1 = \) ?.
20. If \( m \angle DHF = 133^\circ \), then \( m \angle CHG = \) ?.
21. If \( m \angle 3 = 32^\circ \), then \( m \angle 2 = \) ?.

**ANALYZING STATEMENTS** Two lines that are not perpendicular intersect such that \( \angle 1 \) and \( \angle 2 \) are a linear pair, \( \angle 1 \) and \( \angle 4 \) are a linear pair, and \( \angle 1 \) and \( \angle 3 \) are vertical angles. Tell whether the statement is true.

22. \( \angle 1 \equiv \angle 2 \)  
23. \( \angle 1 \equiv \angle 3 \)  
24. \( \angle 1 \equiv \angle 4 \)  
25. \( \angle 3 \equiv \angle 2 \)  
26. \( \angle 2 \equiv \angle 4 \)  
27. \( m \angle 3 + m \angle 4 = 180^\circ \)

**ALGEBRA** Find the measure of each angle in the diagram.

28. \( (3y + 11)^\circ \) \( \implies \) \( (4x - 22)^\circ \) 
29. \( (5y + 5)^\circ \) \( \implies \) \( (7y - 9)^\circ \) 

\( \text{★ STANDARDIZED TEST PRACTICE} \)
30. ★ OPEN-ENDED MATH In the diagram, \( m \angle CBY = 80^\circ \) and \( \overline{XY} \) bisects \( \angle ABC \). Give two more true statements about the diagram.

**DRAWING CONCLUSIONS** In Exercises 31–34, use the given statement to name two congruent angles. Then give a reason that justifies your conclusion.

31. In triangle \( GFE \), \( \overrightarrow{GH} \) bisects \( \angle EGF \).
32. \( \angle 1 \) is a supplement of \( \angle 6 \), and \( \angle 9 \) is a supplement of \( \angle 6 \).
33. \( AB \) is perpendicular to \( CD \), and \( AB \) and \( CD \) intersect at \( E \).
34. \( \angle 5 \) is complementary to \( \angle 12 \), and \( \angle 1 \) is complementary to \( \angle 12 \).

35. CHALLENGE Sketch two intersecting lines \( j \) and \( k \). Sketch another pair of lines \( l \) and \( m \) that intersect at the same point as \( j \) and \( k \) and that bisect the angles formed by \( j \) and \( k \). Line \( l \) is perpendicular to line \( m \). Explain why this is true.

---

**PROBLEM SOLVING**

36. **PROVING THEOREM 2.4** Prove the second case of the Congruent Supplements Theorem where two angles are supplementary to congruent angles.

\[ \begin{align*}
\text{GIVEN} & : \angle 1 \text{ and } \angle 2 \text{ are supplements.} \\
& \quad \angle 3 \text{ and } \angle 4 \text{ are supplements.} \\
& \quad \angle 1 \equiv \angle 4 \\
\text{PROVE} & : \angle 2 \equiv \angle 3
\end{align*} \]

37. **PROVING THEOREM 2.5** Copy and complete the proof of the first case of the Congruent Complements Theorem where two angles are complementary to the same angles.

\[ \begin{align*}
\text{GIVEN} & : \angle 1 \text{ and } \angle 2 \text{ are complements.} \\
& \quad \angle 1 \text{ and } \angle 3 \text{ are complements.} \\
\text{PROVE} & : \angle 2 \equiv \angle 3
\end{align*} \]

<table>

</tbody>
</table>
**PROOF** Use the given information and the diagram to prove the statement.

38. **GIVEN** ▶ \(\angle ABD\) is a right angle.
   \(\angle CBE\) is a right angle.
   **PROVE** ▶ \(\angle ABC \cong \angle DBE\)

39. **GIVEN** ▶ \(JK \perp JM, KL \perp ML\),
   \(\angle J \equiv \angle M, \angle K \equiv \angle L\)
   **PROVE** ▶ \(JM \perp ML\) and \(JK \perp KL\)

40. **MULTI-STEP PROBLEM** Use the photo of the folding table.
   a. If \(\angle 1 = x\), write expressions for the other three angle measures.
   b. Estimate the value of \(x\). What are the measures of the other angles?
   c. As the table is folded up, \(\angle 4\) gets smaller. What happens to the other three angles? *Explain* your reasoning.

41. **PROVING THEOREM 2.5** Write a two-column proof for the second case of Theorem 2.5 where two angles are complementary to congruent angles.

**WRITING PROOFS** Write a two-column proof.

42. **GIVEN** ▶ \(\angle 1 \equiv \angle 3\)
   **PROVE** ▶ \(\angle 2 \equiv \angle 4\)

43. **GIVEN** ▶ \(\angle QRS\) and \(\angle PSR\) are supplementary.
   **PROVE** ▶ \(\angle QRL \equiv \angle PSR\)

44. **STAIRCASE** Use the photo and the given information to prove the statement.
   **GIVEN** ▶ \(\angle 1\) is complementary to \(\angle 3\).
   \(\angle 2\) is complementary to \(\angle 4\).
   **PROVE** ▶ \(\angle 1 \equiv \angle 4\)

45. **★ EXTENDED RESPONSE** \(\angle STV\) is bisected by \(\overline{TW}\), and \(\overline{TX}\) and \(\overline{TW}\) are opposite rays. You want to show \(\angle STX \equiv \angle VTX\).
   a. Draw a diagram.
   b. Identify the GIVEN and PROVE statements for the situation.
   c. Write a two-column proof.
46. **USING DIAGRAMS** Copy and complete the statement with <, >, or =.

   a. \( m\angle 3 \ ? m\angle 7 \)
   
   b. \( m\angle 4 \ ? m\angle 6 \)
   
   c. \( m\angle 8 + m\angle 6 \ ? 150^\circ \)
   
   d. If \( m\angle 4 = 30^\circ \), then \( m\angle 5 \ ? m\angle 4 \)

**CHALLENGE** In Exercises 47 and 48, write a two-column proof.

47. **GIVEN** \( m\angle WYZ = m\angle TWZ = 45^\circ \)
   
   **PROVE** \( \angle SWZ \equiv \angle XYW \)

48. **GIVEN** \( \) The hexagon is regular.
   
   **PROVE** \( m\angle 1 + m\angle 2 = 180^\circ \)

---

**MIXED REVIEW**

**PREVIEW** Prepare for Lesson 3.1 in Exs. 49–52.

In Exercises 49–52, sketch a plane. Then sketch the described situation. *(p. 2)*

49. Three noncollinear points that lie in the plane

50. A line that intersects the plane at one point

51. Two perpendicular lines that lie in the plane

52. A plane perpendicular to the given plane

53. Sketch the next figure in the pattern. *(p. 72)*

---

**QUIZ for Lessons 2.6–2.7**

Match the statement with the property that it illustrates. *(p. 112)*

1. If \( \overline{HJ} \equiv \overline{LM} \), then \( \overline{LM} \equiv \overline{HJ} \).
   
   **A.** Reflexive Property of Congruence

2. If \( \angle 1 \equiv \angle 2 \) and \( \angle 2 \equiv \angle 4 \), then \( \angle 1 \equiv \angle 4 \).
   
   **B.** Symmetric Property of Congruence

3. \( \angle XYZ \equiv \angle XYZ \)
   
   **C.** Transitive Property of Congruence

4. Write a two-column proof. *(p. 124)*
   
   **GIVEN** \( \angle XWY \) is a straight angle.
   
   \( \angle ZWV \) is a straight angle.
   
   **PROVE** \( \angle XWV \equiv \angle ZWY \)

---

**EXTRA PRACTICE** for Lesson 2.7, p. 899 **ONLINE QUIZ** at classzone.com
1. **MULTI-STEP PROBLEM** In the diagram below, 
\[ \overline{BD} \text{ bisects } \angle ABC \text{ and } \overline{BC} \text{ bisects } \angle DBE. \]

   a. Prove \( m\angle ABD = m\angle CBE \).
   
   b. If \( m\angle ABE = 99^\circ \), what is \( m\angle DBC? \) 
   Explain.

2. **SHORT RESPONSE** You are cutting a rectangular piece of fabric into strips that you will weave together to make a placemat. As shown, you cut the fabric in half lengthwise to create two congruent pieces. You then cut each of these pieces in half lengthwise. Do all of the strips have the same width? Explain your reasoning.

3. **GRIDDED ANSWER** The cross section of a concrete retaining wall is shown below. Use the given information to find the measure of \( \angle 1 \) in degrees.

   \[ 
   \begin{align*}
   m\angle 1 &= m\angle 2 \\
   m\angle 3 &= m\angle 4 \\
   m\angle 3 &= 80^\circ \\
   m\angle 1 + m\angle 2 + m\angle 3 + m\angle 4 &= 360^\circ 
   \end{align*}
   \]

4. **EXTENDED RESPONSE** Explain how the Congruent Supplements Theorem and the Transitive Property of Angle Congruence can both be used to show how angles that are supplementary to the same angle are congruent.

5. **EXTENDED RESPONSE** A formula you can use to calculate the total cost of an item including sales tax is \( T = c(1 + s) \), where \( T \) is the total cost including sales tax, \( c \) is the cost not including sales tax, and \( s \) is the sales tax rate written as a decimal.

   a. Solve the formula for \( s \). Give a reason for each step.
   
   b. Use your formula to find the sales tax rate on a purchase that was $26.75 with tax and $25 without tax.
   
   c. Look back at the steps you used to solve the formula for \( s \). Could you have solved for \( s \) in a different way? Explain.

6. **OPEN-ENDED** In the diagram below, \( m\angle GAB = 36^\circ \). What additional information do you need to find \( m\angle BAC \) and \( m\angle CAD? \) Explain your reasoning.

7. **SHORT RESPONSE** Two lines intersect to form \( \angle 1, \angle 2, \angle 3, \) and \( \angle 4 \). The measure of \( \angle 3 \) is three times the measure of \( \angle 1 \) and \( m\angle 1 = m\angle 2 \). Find all four angle measures. Explain your reasoning.

8. **SHORT RESPONSE** Part of a spider web is shown below. If you know that \( \angle CAD \) and \( \angle DAE \) are complements and that \( \overline{AB} \) and \( \overline{AF} \) are opposite rays, what can you conclude about \( \angle BAC \) and \( \angle EAF? \) Explain your reasoning.
Big Idea 1
Using Inductive and Deductive Reasoning
When you make a conjecture based on a pattern, you use inductive reasoning. You use deductive reasoning to show whether the conjecture is true or false by using facts, definitions, postulates, or proven theorems. If you can find one counterexample to the conjecture, then you know the conjecture is false.

Big Idea 2
Understanding Geometric Relationships in Diagrams
The following can be assumed from the diagram:
- $A$, $B$, and $C$ are coplanar.
- $\angle ABH$ and $\angle HBF$ are a linear pair.
- Plane $T$ and plane $S$ intersect in $\overline{BC}$.
- $\overline{CD}$ lies in plane $S$.
- $\angle ABC$ and $\angle HBF$ are vertical angles.
- $\overline{AB} \perp$ plane $S$.
Diagram assumptions are reviewed on page 97.

Big Idea 3
Writing Proofs of Geometric Relationships
You can write a logical argument to show a geometric relationship is true. In a two-column proof, you use deductive reasoning to work from GIVEN information to reach a conjecture you want to PROVE.

<table>
<thead>
<tr>
<th>GIVEN</th>
<th>The hypothesis of an if-then statement</th>
</tr>
</thead>
<tbody>
<tr>
<td>PROVE</td>
<td>The conclusion of an if-then statement</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>STATEMENTS</th>
<th>REASONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Hypothesis</td>
<td>1. Given</td>
</tr>
<tr>
<td>n. Conclusion</td>
<td>n.</td>
</tr>
</tbody>
</table>

Use postulates, proven theorems, definitions, and properties of numbers and congruence as reasons.

Proof summary is on page 114.
CHAPTER REVIEW

REVIEW KEY VOCABULARY

• conjecture, p. 73
• inductive reasoning, p. 73
• counterexample, p. 74
• conditional statement, p. 79
  converse, inverse, contrapositive
• if-then form, p. 79
  hypothesis, conclusion
• negation, p. 79
• equivalent statements, p. 80
• perpendicular lines, p. 81
• biconditional statement, p. 82
• deductive reasoning, p. 87
• line perpendicular to a plane, p. 98
• proof, p. 112
• two-column proof, p. 112
• theorem, p. 113

VOCABULARY EXERCISES

1. Copy and complete: A statement that can be proven is called a(n) ? .

2. WRITING Compare the inverse of a conditional statement to the converse of the conditional statement.

3. You know $m\angle A = m\angle B$ and $m\angle B = m\angle C$. What does the Transitive Property of Equality tell you about the measures of the angles?

REVIEW EXAMPLES AND EXERCISES

Use the review examples and exercises below to check your understanding of the concepts you have learned in each lesson of Chapter 2.

2.1 Use Inductive Reasoning

Example

Describe the pattern in the numbers 3, 21, 147, 1029, ..., and write the next three numbers in the pattern.

Each number is seven times the previous number.

\[ \begin{align*}
3 & \quad 21, \\
\times 7 & \quad 147, \\
\times 7 & \quad 1029, \\
\times 7 & \quad \ldots
\end{align*} \]

So, the next three numbers are 7203, 50,421, and 352,947.

Exercises

4. Describe the pattern in the numbers $-20,480, -5120, -1280, -320, \ldots$ Write the next three numbers.

5. Find a counterexample to disprove the conjecture:
   If the quotient of two numbers is positive, then the two numbers must both be positive.
### 2.2 Analyze Conditional Statements

**Example**

Write the if-then form, the converse, the inverse, and the contrapositive of the statement “Black bears live in North America.”

- **a. If-then form:** If a bear is a black bear, then it lives in North America.
- **b. Converse:** If a bear lives in North America, then it is a black bear.
- **c. Inverse:** If a bear is not a black bear, then it does not live in North America.
- **d. Contrapositive:** If a bear does not live in North America, then it is not a black bear.

**Exercises**

6. Write the if-then form, the converse, the inverse, and the contrapositive of the statement “An angle whose measure is 34° is an acute angle.”

7. Is this a valid definition? Explain why or why not.
   “If the sum of the measures of two angles is 90°, then the angles are complementary.”

8. Write the definition of *equiangular* as a biconditional statement.

### 2.3 Apply Deductive Reasoning

**Example**

Use the Law of Detachment to make a valid conclusion in the true situation.

If two angles have the same measure, then they are congruent. You know that \( m\angle A = m\angle B \).

Because \( m\angle A = m\angle B \) satisfies the hypothesis of a true conditional statement, the conclusion is also true. So, \( \angle A \cong \angle B \).

**Exercises**

9. Use the Law of Detachment to make a valid conclusion.
   If an angle is a right angle, then the angle measures 90°. \( \angle B \) is a right angle.

10. Use the Law of Syllogism to write the statement that follows from the pair of true statements.
    - If \( x = 3 \), then \( 2x = 6 \).
    - If \( 4x = 12 \), then \( x = 3 \).

11. What can you say about the sum of any two odd integers? Use inductive reasoning to form a conjecture. Then use deductive reasoning to show that the conjecture is true.
2.4  Use Postulates and Diagrams  pp. 96–102

**Example**

\[ \angle ABC, \text{ an acute angle, is bisected by } \overrightarrow{BE}. \text{ Sketch a diagram that represents the given information.} \]

1. Draw \( \angle ABC \), an acute angle, and label points \( A, B, \) and \( C \).
2. Draw angle bisector \( \overrightarrow{BE} \). Mark congruent angles.

**Exercises**

12. Straight angle \( CDE \) is bisected by \( \overrightarrow{DK} \). Sketch a diagram that represents the given information.

13. Which of the following statements cannot be assumed from the diagram?
   - A  \( A, B, \) and \( C \) are coplanar.
   - B  \( \overrightarrow{CD} \perp \) plane \( P \)
   - C  \( A, F, \) and \( B \) are collinear.
   - D  Plane \( M \) intersects plane \( P \) in \( \overrightarrow{FH} \).

2.5  Reason Using Properties from Algebra  pp. 105–111

**Example**

Solve \( 3x + 2(2x + 9) = -10 \). Write a reason for each step.

\[
\begin{align*}
3x + 2(2x + 9) &= -10 & \text{Write original equation.} \\
3x + 4x + 18 &= -10 & \text{Distributive Property} \\
7x + 18 &= -10 & \text{Simplify} \\
7x &= -28 & \text{Subtraction Property of Equality} \\
x &= -4 & \text{Division Property of Equality}
\end{align*}
\]

**Exercises**

14. \( -9x - 21 = -20x - 87 \)  
15. \( 15x + 22 = 7x + 62 \)  
16. \( 3(2x + 9) = 30 \)  
17. \( 5x + 2(2x - 23) = -154 \)
2.6 Prove Statements about Segments and Angles  

**Example**
Prove the Reflexive Property of Segment Congruence.

**Given**  
$\overline{AB}$ is a line segment.

**Prove**  
$\overline{AB} \cong \overline{AB}$

<table>
<thead>
<tr>
<th>Statements</th>
<th>Reasons</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. $\overline{AB}$ is a line segment.</td>
<td>1. Given</td>
</tr>
<tr>
<td>2. $AB$ is the length of $\overline{AB}$.</td>
<td>2. Ruler Postulate</td>
</tr>
<tr>
<td>3. $\overline{AB} = AB$</td>
<td>3. Reflexive Property of Equality</td>
</tr>
<tr>
<td>4. $\overline{AB} \cong \overline{AB}$</td>
<td>4. Definition of congruent segments</td>
</tr>
</tbody>
</table>

**Exercises**
Name the property illustrated by the statement.

18. If $\angle DEF \cong \angle JKL$, then $\angle JKL \cong \angle DEF$.

19. $\angle C \cong \angle C$

20. If $MN = PQ$ and $PQ = RS$, then $MN = RS$.

2.7 Prove Angle Pair Relationships  

**Example**

Given  
$\angle 5 \cong \angle 6$

Prove  
$\angle 4 \cong \angle 7$

<table>
<thead>
<tr>
<th>Statements</th>
<th>Reasons</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. $\angle 5 \cong \angle 6$</td>
<td>1. Given</td>
</tr>
<tr>
<td>2. $\angle 4 \cong \angle 5$</td>
<td>2. Vertical Angles Congruence Theorem</td>
</tr>
<tr>
<td>3. $\angle 4 \cong \angle 6$</td>
<td>3. Transitive Property of Congruence</td>
</tr>
<tr>
<td>4. $\angle 6 \cong \angle 7$</td>
<td>4. Vertical Angles Congruence Theorem</td>
</tr>
<tr>
<td>5. $\angle 4 \cong \angle 7$</td>
<td>5. Transitive Property of Congruence</td>
</tr>
</tbody>
</table>

**Exercises**

In Exercises 22 and 23, use the diagram at the right.

22. If $m\angle 1 = 114^\circ$, find $m\angle 2$, $m\angle 3$, and $m\angle 4$.

23. If $m\angle 4 = 57^\circ$, find $m\angle 1$, $m\angle 2$, and $m\angle 3$.

24. Write a two-column proof.

**Given**  
$\angle 3$ and $\angle 2$ are complementary.

**Prove**  
$\angle 3 \cong \angle 1$

$m\angle 1 + m\angle 2 = 90^\circ$
Sketch the next figure in the pattern.

1. 

2. 

Describe the pattern in the numbers. Write the next number.

3. 

4. 

In Exercises 5–8, write the if-then form, the converse, the inverse, and the contrapositive for the given statement.

5. All right angles are congruent.

6. Frogs are amphibians.

7. $5x + 4 = -6$, because $x = -2$.

8. A regular polygon is equilateral.

9. If you decide to go to the football game, then you will miss band practice. Tonight, you are going to the football game. Using the Law of Detachment, what statement can you make?

10. If Margot goes to college, then she will major in Chemistry. If Margot majors in Chemistry, then she will need to buy a lab manual. Using the Law of Syllogism, what statement can you make?

Use the diagram to write examples of the stated postulate.

11. A line contains at least two points.

12. A plane contains at least three noncollinear points.

13. If two planes intersect, then their intersection is a line.

Solve the equation. Write a reason for each step.

14. $9x + 31 = -23$

15. $-7(-x + 2) = 42$

16. $26 + 2(3x + 11) = -18x$

In Exercises 17–19, match the statement with the property that it illustrates.

17. If $\angle RST \cong \angle XYZ$, then $\angle XYZ \cong \angle RST$.

18. $\overline{PQ} \cong \overline{PQ}$

19. If $\overline{FG} \cong \overline{JK}$ and $\overline{JK} \cong \overline{LM}$, then $\overline{FG} \cong \overline{LM}$.

A. Reflexive Property of Congruence

B. Symmetric Property of Congruence

C. Transitive Property of Congruence

20. Use the Vertical Angles Congruence Theorem to find the measure of each angle in the diagram at the right.

21. Write a two-column proof.

**GIVEN** $\overline{AX} \cong \overline{DX}, \overline{XB} \cong \overline{XC}$

**PROVE** $\overline{AC} \cong \overline{BD}$
**ALGEBRA REVIEW**

**SIMPLIFY RATIONAL AND RADICAL EXPRESSIONS**

**Example 1**  Simplify rational expressions

a. \( \frac{2x^2}{4xy} \)

Solution

To simplify a rational expression, factor the numerator and denominator. Then divide out any common factors.

\[
\frac{2x^2}{4xy} = \frac{2 \cdot x \cdot x \cdot y}{2 \cdot 2 \cdot x \cdot y} = \frac{x}{2y}
\]

b. \( \frac{3x^2 + 2x}{9x + 6} \)

\[
\frac{3x^2 + 2x}{3(3x + 2)} = \frac{x}{3}
\]

**Example 2**  Simplify radical expressions

a. \( \sqrt{54} \)

Solution

\[
\sqrt{54} = \sqrt{9} \cdot \sqrt{6} = 3\sqrt{6}
\]

b. \( 2\sqrt{5} - 5\sqrt{2} - 3\sqrt{5} \)

Combine like terms.

\[
2\sqrt{5} - 5\sqrt{2} - 3\sqrt{5} = -\sqrt{5} - 5\sqrt{2}
\]

c. \( (3\sqrt{2})(-6\sqrt{6}) \)

Use product property and associative property.

\[
(3\sqrt{2})(-6\sqrt{6}) = -18\sqrt{12}
\]

Simplify \( \sqrt{12} \).

\[
= -18 \cdot 2\sqrt{3}
\]

\[
= -36\sqrt{3}
\]

**Exercises**

**Example 1**  for Exs. 1–9

Simplify the expression, if possible.

1. \( \frac{5x^4}{20x^2} \)

2. \( \frac{-12ab^3}{9a^2b} \)

3. \( \frac{5m + 35}{5} \)

4. \( \frac{36m - 48m}{6m} \)

5. \( \frac{k + 3}{-2k + 3} \)

6. \( \frac{m + 4}{m^2 + 4m} \)

7. \( \frac{12x + 16}{8 + 6x} \)

8. \( \frac{3x^3}{5x + 8x^2} \)

9. \( \frac{3x^2 - 6x}{6x^2 - 3x} \)

**Example 2**  for Exs. 10–24

Simplify the expression, if possible. All variables are positive.

10. \( \sqrt{75} \)

11. \( -\sqrt{180} \)

12. \( \pm \sqrt{128} \)

13. \( \sqrt{2} - \sqrt{18} + \sqrt{6} \)

14. \( \sqrt{28} - \sqrt{63} - \sqrt{35} \)

15. \( 4\sqrt{8} + 3\sqrt{32} \)

16. \( (6\sqrt{5} \cdot 2\sqrt{2}) \)

17. \( (-4\sqrt{10} \cdot -5\sqrt{5}) \)

18. \( (2\sqrt{6})^2 \)

19. \( \sqrt{(25)^2} \)

20. \( \sqrt{x^2} \)

21. \( \sqrt{-a^2} \)

22. \( \sqrt{(3p)^2} \)

23. \( \sqrt{3^2 + 2^2} \)

24. \( \sqrt{h^2 + k^2} \)
Seven members of the student government (Frank, Gina, Henry, Isabelle, Jack, Katie, and Leah) are posing for a picture for the school yearbook. For the picture, the photographer will arrange the students in a row according to the following restrictions:

- Henry must stand in the middle spot.
- Katie must stand in the right-most spot.
- There must be exactly two spots between Gina and Frank.
- Isabelle cannot stand next to Henry.
- Frank must stand next to Katie.

a. Describe one possible ordering of the students.

b. Which student(s) can stand in the second spot from the left?

c. If the condition that Leah must stand in the left-most spot is added, will there be exactly one ordering of the students? Justify your answer.

Below are sample solutions to the problem. Read each solution and the comments in blue to see why the sample represents full credit, partial credit, or no credit.

**SAMPLE 1: Full credit solution**

a. Using the first letters of the students’ names, here is one possible ordering of the students:

   I L G H J F K

b. The only students without fixed positions are Isabelle, Leah, and Jack. There are no restrictions on placement in the second spot from the left, so any of these three students can occupy that location.

c. Henry, Frank, Katie, and Gina have fixed positions according to the restrictions. If Leah must stand in the left-most spot, the ordering looks like:

   L _ G H _ F K

Because Isabelle cannot stand next to Henry, she must occupy the spot next to Leah. Therefore, Jack stands next to Henry and the only possible order would have to be:

   L I G H J F K

Yes, there would be exactly one ordering of the students.
**SAMPLE 2: Partial credit solution**

a. One possible ordering of the students is:
   Jack, Isabelle, Gina, Henry, Leah, Frank, and Katie.

b. There are three students who could stand in the second spot from the left. They are Isabelle, Leah, and Jack.

c. No, there would be two possible orderings of the students. With Leah in the left-most spot, the ordering looks like:
   Leah, , Gina, Henry, , Frank, and Katie.

Therefore, the two possible orderings are
   Leah, Isabelle, Gina, Henry, Jack, Frank, and Katie
   or
   Leah, Jack, Gina, Henry, Isabelle, Frank, and Katie.

**SAMPLE 3: No credit solution**

a. One possible ordering of the students is $L G J H I F K$.

b. There are four students who can stand in the second spot from the left. Those students are Leah, Gina, Isabelle, and Jack.

c. The two possible orderings are $L G J H I F K$ and $L J G H I F K$.

**PRACTICE**

Apply the Scoring Rubric

1. A student’s solution to the problem on the previous page is given below. Score the solution as full credit, partial credit, or no credit. Explain your reasoning. If you choose partial credit or no credit, explain how you would change the solution so that it earns a score of full credit.

   a. A possible ordering of the students is $I - J - G - H - L - F - K$.

   b. There are no restrictions on the second spot from the left. Leah, Isabelle, and Jack could all potentially stand in this location.

   c. The positions of Gina, Henry, Frank, and Katie are fixed.

   $\_ - \_ - G - H - \_ - F - K$.

   Because Isabelle cannot stand next to Henry, she must occupy the left-most spot or the second spot from the left. There are no restrictions on Leah or Jack. That leaves four possible orderings:

   $L - I - G - H - J - F - K$  
   $I - L - G - H - J - F - K$  
   $L - I - G - H - J - F - K$  

   If the restriction is added that Leah must occupy the left-most spot, there is exactly one ordering that would satisfy all conditions:

The answer to part (a) is correct.

Part (b) is correct but not explained.

The student did not recall that Isabelle cannot stand next to Henry; therefore, the conclusion is incorrect.

Parts (b) and (c) are based on the incorrect conclusion in part (a).
1. In some bowling leagues, the handicap \( H \) of a bowler with an average score \( A \) is found using the formula \( H = \frac{4}{5}(200 - A) \). The handicap is then added to the bowler’s score.
   a. Solve the formula for \( A \). Write a reason for each step.
   b. Use your formula to find a bowler’s average score with a handicap of 12.
   c. Using this formula, is it possible to calculate a handicap for a bowler with an average score above 200? Explain your reasoning.

2. A survey was conducted at Porter High School asking students what form of transportation they use to go to school. All students in the high school were surveyed. The results are shown in the bar graph.
   a. Does the statement “About 1500 students attend Porter High School” follow from the data? Explain.
   b. Does the statement “About one third of all students at Porter take public transit to school” follow from the data? Explain.
   c. John makes the conclusion that Porter High School is located in a city or a city suburb. Explain his reasoning and tell if his conclusion is the result of inductive reasoning or deductive reasoning.
   d. Betty makes the conclusion that there are twice as many students who walk as take a car to school. Explain her reasoning and tell if her conclusion is the result of inductive reasoning or deductive reasoning.

3. The senior class officers are planning a meeting with the principal and some class officers from the other grades. The senior class president, vice president, treasurer, and secretary will all be present. The junior class president and treasurer will attend. The sophomore class president and vice president, and freshmen treasurer will attend. The secretary makes a seating chart for the meeting using the following conditions.
   The principal will sit in chair 10. The senior class treasurer will sit at the other end.
   The senior class president will sit to the left of the principal, next to the junior class president, and across from the sophomore class president.
   All three treasurers will sit together. The two sophomores will sit next to each other.
   The two vice presidents and the freshman treasurer will sit on the same side of the table.
   a. Draw a diagram to show where everyone will sit.
   b. Explain why the senior class secretary must sit between the junior class president and junior class treasurer.
   c. Can the senior class vice-president sit across from the junior class president? Justify your answer.
MULTIPLE CHOICE

4. If $d$ represents an odd integer, which of the expressions represents an even integer?
   - A. $d + 2$
   - B. $2d - 1$
   - C. $3d + 1$
   - D. $3d + 2$

5. In the repeating decimal $0.23142314\ldots$, where the digits 2314 repeat, which digit is in the 300th place to the right of the decimal point?
   - A. 1
   - B. 2
   - C. 3
   - D. 4

SHORT RESPONSE

9. Is this a correct conclusion from the given information? If so, explain why. If not, explain the error in the reasoning.
   If you are a soccer player, then you wear shin guards. Your friend is wearing shin guards. Therefore, she is a soccer player.

10. Describe the pattern in the numbers. Write the next number in the pattern.
    192, $-48$, 12, $-3$, \ldots

11. Points $A$, $B$, $C$, $D$, $E$, and $F$ are coplanar. Points $A$, $B$, and $F$ are collinear. The line through $A$ and $B$ is perpendicular to the line through $C$ and $D$, and the line through $C$ and $D$ is perpendicular to the line through $E$ and $F$. Which four points must lie on the same line? Justify your answer.

12. Westville High School offers after-school tutoring with five student volunteer tutors for this program: Jen, Kim, Lou, Mike, and Nina. On any given weekday, three tutors are scheduled to work. Due to the students’ other commitments after school, the tutoring work schedule must meet the following conditions.
    Jen can work any day except every other Monday and Wednesday.
    Kim can only work on Thursdays and Fridays.
    Lou can work on Tuesdays and Wednesdays.
    Mike cannot work on Fridays.
    Nina cannot work on Tuesdays.
    Name three tutors who can work on any Wednesday. Justify your answer.

GRIDDED ANSWER

6. Use the diagram to find the value of $x$.

7. Three lines intersect in the figure shown. What is the value of $x + y$?

8. $R$ is the midpoint of $PQ$, and $S$ and $T$ are the midpoints of $PR$ and $RQ$, respectively. If $ST = 20$, what is $PT$?
Parallel and Perpendicular Lines

3.1 Identify Pairs of Lines and Angles
3.2 Use Parallel Lines and Transversals
3.3 Prove Lines are Parallel
3.4 Find and Use Slopes of Lines
3.5 Write and Graph Equations of Lines
3.6 Prove Theorems About Perpendicular Lines

In previous chapters, you learned the following skills, which you’ll use in Chapter 3: describing angle pairs, using properties and postulates, using angle pair relationships, and sketching a diagram.

Prerequisite Skills

VOCABULARY CHECK
Copy and complete the statement.
1. Adjacent angles share a common ___.
2. Two angles are ___ angles if the sum of their measures is 180°.

SKILLS AND ALGEBRA CHECK
The midpoint of $AB$ is $M$. Find $AB$. (Review p. 15 for 3.2.)
3. $AM = 5x - 2$, $MB = 2x + 7$
4. $AM = 4z + 1$, $MB = 6z - 11$

Find the measure of each numbered angle. (Review p. 124 for 3.2, 3.3.)
5. 6. 7.

Sketch a diagram for each statement. (Review pp. 2, 96 for 3.3.)
8. $QR$ is perpendicular to $WX$.
9. Lines $m$ and $n$ intersect at point $P$. 

@HomeTutor Prerequisite skills practice at classzone.com
In Chapter 3, you will apply the big ideas listed below and reviewed in the Chapter Summary on page 201. You will also use the key vocabulary listed below.

**Big Ideas**

1. Using properties of parallel and perpendicular lines
2. Proving relationships using angle measures
3. Making connections to lines in algebra

**Key Vocabulary**

- parallel lines, p. 147
- skew lines, p. 147
- parallel planes, p. 147
- transversal, p. 149
- corresponding angles, p. 149
- alternate interior angles, p. 149
- alternate exterior angles, p. 149
- consecutive interior angles, p. 149
- paragraph proof, p. 163
- slope, p. 171
- slope-intercept form, p. 180
- standard form, p. 182
- distance from a point to a line, p. 192

**Why?**

You can use slopes of lines to determine steepness of lines. For example, you can compare the slopes of roller coasters to determine which is steeper.

**Animated Geometry**

The animation illustrated below for Example 5 on page 174 helps you answer this question: How steep is a roller coaster?

A roller coaster track rises a given distance over a given horizontal distance. For each track, use the vertical rise and the horizontal run to find the slope.

Other animations for Chapter 3: pages 148, 155, 163, and 181
3.1 Draw and Interpret Lines

**MATERIALS**
- pencil
- straightedge
- lined paper

**QUESTION** How are lines related in space?

You can use a straightedge to draw a representation of a three-dimensional figure to explore lines in space.

**EXPLORE** Draw lines in space

**STEP 1** Draw rectangles
Use a straightedge to draw two identical rectangles.

**STEP 2** Connect corners
Connect the corresponding corners of the rectangles.

**STEP 3** Erase parts
Erase parts of “hidden” lines to form dashed lines.

**DRAW CONCLUSIONS** Use your observations to complete these exercises

Using your sketch from the steps above, label the corners as shown at the right. Then extend \( \overrightarrow{JM} \) and \( \overrightarrow{LQ} \). Add lines to the diagram if necessary.

1. Will \( \overrightarrow{JM} \) and \( \overrightarrow{LQ} \) ever intersect in space? (Lines that intersect on the page do not necessarily intersect in space.)

2. Will the pair of lines intersect in space?
   a. \( \overrightarrow{JK} \) and \( \overrightarrow{NR} \)
   b. \( \overrightarrow{QR} \) and \( \overrightarrow{MR} \)
   c. \( \overrightarrow{LM} \) and \( \overrightarrow{MR} \)
   d. \( \overrightarrow{KL} \) and \( \overrightarrow{NQ} \)

3. Does the pair of lines lie in one plane?
   a. \( \overrightarrow{JK} \) and \( \overrightarrow{QR} \)
   b. \( \overrightarrow{QR} \) and \( \overrightarrow{MR} \)
   c. \( \overrightarrow{JN} \) and \( \overrightarrow{LR} \)
   d. \( \overrightarrow{JL} \) and \( \overrightarrow{NQ} \)

4. Do pairs of lines that intersect in space also lie in the same plane? Explain your reasoning.

5. Draw a rectangle that is not the same as the one you used in the Explore. Repeat the three steps of the Explore. Will any of your answers to Exercises 1–3 change?
3.1 Identify Pairs of Lines and Angles

Before You identified angle pairs formed by two intersecting lines.

Now You will identify angle pairs formed by three intersecting lines.

Why? So you can classify lines in a real-world situation, as in Exs. 40–42.

Key Vocabulary
• parallel lines
• skew lines
• parallel planes
• transversal
• corresponding angles
• alternate interior angles
• alternate exterior angles
• consecutive interior angles

Two lines that do not intersect are either parallel lines or skew lines. Two lines are parallel lines if they do not intersect and are coplanar. Two lines are skew lines if they do not intersect and are not coplanar. Also, two planes that do not intersect are parallel planes.

Lines m and n are parallel lines (m \parallel n).
Lines m and k are skew lines.
Planes T and U are parallel planes (T \parallel U).
Lines k and n are intersecting lines, and there is a plane (not shown) containing them.

Small directed triangles, as shown on lines m and n above, are used to show that lines are parallel. The symbol \parallel means “is parallel to,” as in m \parallel n.

Segments and rays are parallel if they lie in parallel lines. A line is parallel to a plane if the line is in a plane parallel to the given plane. In the diagram above, line n is parallel to plane U.

Example 1 Identify relationships in space

Think of each segment in the figure as part of a line. Which line(s) or plane(s) in the figure appear to fit the description?

a. Line(s) parallel to \overrightarrow{CD} and containing point A
b. Line(s) skew to \overrightarrow{CD} and containing point A
c. Line(s) perpendicular to \overrightarrow{CD} and containing point A
d. Plane(s) parallel to plane EFG and containing point A

Solution
a. \overrightarrow{AB}, \overrightarrow{HG}, and \overrightarrow{EF} all appear parallel to \overrightarrow{CD}, but only \overrightarrow{AB} contains point A.
b. Both \overrightarrow{AG} and \overrightarrow{AH} appear skew to \overrightarrow{CD} and contain point A.
c. \overrightarrow{BC}, \overrightarrow{AD}, \overrightarrow{DE}, and \overrightarrow{FC} all appear perpendicular to \overrightarrow{CD}, but only \overrightarrow{AD} contains point A.
d. Plane ABC appears parallel to plane EFG and contains point A.
PARALLEL AND PERPENDICULAR LINES Two lines in the same plane are either parallel or intersect in a point. Through a point not on a line, there are infinitely many lines. Exactly one of these lines is parallel to the given line, and exactly one of them is perpendicular to the given line.

POSTULATE 13 Parallel Postulate
If there is a line and a point not on the line, then there is exactly one line through the point parallel to the given line.

There is exactly one line through $P$ parallel to $l$.

POSTULATE 14 Perpendicular Postulate
If there is a line and a point not on the line, then there is exactly one line through the point perpendicular to the given line.

There is exactly one line through $P$ perpendicular to $l$.

EXAMPLE 2 Identify parallel and perpendicular lines

PHOTOGRAPHY The given line markings show how the roads are related to one another.

a. Name a pair of parallel lines.
b. Name a pair of perpendicular lines.
c. Is $\vec{FE}$ parallel to $\vec{AC}$? Explain.

Solution
a. $\vec{MD} \parallel \vec{FE}$
b. $\vec{MD} \perp \vec{BF}$
c. $\vec{FE}$ is not parallel to $\vec{AC}$, because $\vec{MD}$ is parallel to $\vec{FE}$ and by the Parallel Postulate there is exactly one line parallel to $\vec{FE}$ through $M$.

Guided Practice for Examples 1 and 2

1. Look at the diagram in Example 1. Name the lines through point $H$ that appear skew to $\vec{CD}$.
2. In Example 2, can you use the Perpendicular Postulate to show that $\vec{AC}$ is not perpendicular to $\vec{BF}$? Explain why or why not.
**KEY CONCEPT**

**Angles Formed by Transversals**

Two angles are **corresponding angles** if they have corresponding positions. For example, $\angle 2$ and $\angle 6$ are above the lines and to the right of the transversal $t$.

Two angles are **alternate interior angles** if they lie between the two lines and on opposite sides of the transversal.

Two angles are **alternate exterior angles** if they lie outside the two lines and on opposite sides of the transversal.

Two angles are **consecutive interior angles** if they lie between the two lines and on the same side of the transversal.

**Example 3** Identify angle relationships

Identify all pairs of angles of the given type.

a. Corresponding  b. Alternate interior
   c. Alternate exterior  d. Consecutive interior

**Solution**

a. $\angle 1$ and $\angle 5$
   $\angle 2$ and $\angle 6$
   $\angle 3$ and $\angle 7$
   $\angle 4$ and $\angle 8$

b. $\angle 2$ and $\angle 7$
   $\angle 4$ and $\angle 5$
   $\angle 3$ and $\angle 6$
   $\angle 4$ and $\angle 7$

**Guided Practice** for Example 3

Classify the pair of numbered angles.

3.  
4.  
5.  

**Guided Practice** for Example 3

Classify the pair of numbered angles.

3.  
4.  
5.
1. **VOCABULARY** Copy and complete: A line that intersects two other lines is a **[line segment]**.

2. **★ WRITING** A table is set for dinner. Can the legs of the table and the top of the table lie in parallel planes? **Explain** why or why not.

**IDENTIFYING RELATIONSHIPS** Think of each segment in the diagram as part of a line. Which line(s) or plane(s) contain point **B** and appear to fit the description?

3. **Line(s) parallel to** \(\overline{CD}\)

4. **Line(s) perpendicular to** \(\overline{CD}\)

5. **Line(s) skew to** \(\overline{CD}\)

6. **Plane(s) parallel to plane** \(\overline{CDH}\)

**PARALLEL AND PERPENDICULAR LINES** Use the markings in the diagram.

7. **Name a pair of parallel lines.**

8. **Name a pair of perpendicular lines.**

9. **Is** \(\overrightarrow{PN} \parallel \overrightarrow{KM}\)? **Explain.**

10. **Is** \(\overrightarrow{PR} \perp \overrightarrow{NP}\)? **Explain.**

**ANGLE RELATIONSHIPS** Identify all pairs of angles of the given type.

11. **Corresponding**

12. **Alternate interior**

13. **Alternate exterior**

14. **Consecutive interior**

15. **ERROR ANALYSIS** **Describe** and correct the error in saying that \(\angle 1\) and \(\angle 8\) are corresponding angles in the diagram for Exercises 11–14.

**APPLYING POSTULATES** How many lines can be drawn that fit each description? Copy the diagram and sketch all the lines.

16. **Lines through \(B\) and parallel to** \(\overrightarrow{AC}\)

17. **Lines through \(A\) and perpendicular to** \(\overrightarrow{BC}\)

**USING A DIAGRAM** Classify the angle pair as **corresponding**, **alternate interior**, **alternate exterior**, or **consecutive interior** angles.

18. \(\angle 5\) and \(\angle 1\)

19. \(\angle 11\) and \(\angle 13\)

20. \(\angle 6\) and \(\angle 13\)

21. \(\angle 10\) and \(\angle 15\)

22. \(\angle 2\) and \(\angle 11\)

23. \(\angle 8\) and \(\angle 4\)
**ANALYZING STATEMENTS** Copy and complete the statement with *sometimes, always, or never*. Sketch examples to *justify* your answer.

24. If two lines are parallel, then they are _?_ coplanar.
25. If two lines are not coplanar, then they _?_ intersect.
26. If three lines intersect at one point, then they are _?_ coplanar.
27. If two lines are skew to a third line, then they are _?_ skew to each other.

28. ★ **MULTIPLE CHOICE** \(\angle RPQ\) and \(\angle PRS\) are what type of angle pair?
   - (A) Corresponding
   - (B) Alternate interior
   - (C) Alternate exterior
   - (D) Consecutive interior

**ANGLE RELATIONSHIPS** Copy and complete the statement. List all possible correct answers.

29. \(\angle BCG\) and _?_ are corresponding angles.
30. \(\angle BCG\) and _?_ are consecutive interior angles.
31. \(\angle FCJ\) and _?_ are alternate interior angles.
32. \(\angle FCA\) and _?_ are alternate exterior angles.

33. **CHALLENGE** Copy the diagram at the right and extend the lines.
   a. Measure \(\angle 1\) and \(\angle 2\).
   b. Measure \(\angle 3\) and \(\angle 4\).
   c. Make a conjecture about alternate exterior angles formed when parallel lines are cut by transversals.

---

**PROBLEM SOLVING**

**CONSTRUCTION** Use the picture of the cherry-pick*er for Exercises 34 and 35.

34. Is the platform *perpendicular*, *parallel*, or *skew* to the ground?
   - [HomeTutor](https://classzone.com) for problem solving help

35. Is the arm *perpendicular*, *parallel*, or *skew* to a telephone pole?
   - [HomeTutor](https://classzone.com) for problem solving help

36. ★ **OPEN-ENDED MATH** Describe two lines in your classroom that are parallel, and two lines that are skew.

37. ★ **MULTIPLE CHOICE** What is the best description of the horizontal bars in the photo?
   - (A) Parallel
   - (B) Perpendicular
   - (C) Skew
   - (D) Intersecting
38. **CONSTRUCTION** Use these steps to construct a line through a given point \( P \) that is parallel to a given line \( m \).

**STEP 1** Draw points \( Q \) and \( R \) on \( m \). Draw \( \overrightarrow{PQ} \). Draw an arc with the compass point at \( Q \) so it crosses \( \overrightarrow{QP} \) and \( \overrightarrow{QR} \).

**STEP 2** Copy \( \angle PQR \) on \( \overrightarrow{QP} \). Be sure the two angles are corresponding. Label the new angle \( \angle TPS \). Draw \( \overrightarrow{PS} \). \( \overrightarrow{PS} \parallel \overrightarrow{QR} \).

39. **SHORT RESPONSE** Two lines are cut by a transversal. Suppose the measure of a pair of alternate interior angles is 90°. Explain why the measure of all four interior angles must be 90°.

**TREE HOUSE** In Exercises 40–42, use the photo to decide whether the statement is true or false.

40. The plane containing the floor of the tree house is parallel to the ground.

41. All of the lines containing the railings of the staircase, such as \( \overrightarrow{AB} \), are skew to the ground.

42. All of the lines containing the balusters, such as \( \overrightarrow{CD} \), are perpendicular to the plane containing the floor of the tree house.

**CHALLENGE** Draw the figure described.

43. Lines \( \ell \) and \( m \) are skew, lines \( \ell \) and \( n \) are skew, and lines \( m \) and \( n \) are parallel.

44. Line \( \ell \) is parallel to plane \( A \), plane \( A \) is parallel to plane \( B \), and line \( \ell \) is not parallel to plane \( B \).

**MIXED REVIEW**

Use the Law of Detachment to make a valid conclusion. (p. 87)

45. If the measure of an angle is less than 90°, then the angle is acute. The measure of \( \angle A \) is 46°.

46. If a food has less than 140 milligrams of sodium per serving, then it is low sodium. A serving of soup has 90 milligrams of sodium per serving.

Find the measure of each numbered angle. (p. 124)

47. \( \angle 1 = 120° \)  \( \angle 2 = 130° \)  \( \angle 3 = 120° \)

48. \( \angle 1 = 110° \)  \( \angle 2 = 110° \)  \( \angle 3 = 110° \)

49. \( \angle 1 = 50° \)  \( \angle 2 = 100° \)  \( \angle 3 = 50° \)
### 3.2 Parallel Lines and Angles

**MATERIALS** - graphing calculator or computer

**QUESTIONS** What are the relationships among the angles formed by two parallel lines and a transversal?

You can use geometry drawing software to explore parallel lines.

### EXPLORE

**Draw parallel lines and a transversal**

**STEP 1** Draw line         
Draw and label two points A and B. Draw \( \overrightarrow{AB} \).

**STEP 2** Draw parallel line    
Draw a point not on \( \overrightarrow{AB} \). Label it \( C \). Choose Parallel from the F3 menu and select \( \overrightarrow{AB} \). Then select \( C \) to draw a line through \( C \) parallel to \( \overrightarrow{AB} \). Draw a point on the parallel line you constructed. Label it \( D \).

**STEP 3** Draw transversal      
Draw two points \( E \) and \( F \) outside the parallel lines. Draw transversal \( \overrightarrow{EF} \). Find the intersection of \( \overrightarrow{AB} \) and \( \overrightarrow{EF} \) by choosing Point from the F2 menu. Then choose Intersection. Label the intersection \( G \). Find and label the intersection \( H \) of \( \overrightarrow{CD} \) and \( \overrightarrow{EF} \).

**STEP 4** Measure angle        
Measure all eight angles formed by the three lines by choosing Measure from the F5 menu, then choosing Angle.

### DRAW CONCLUSIONS

**Use your observations to complete these exercises**

1. Record the angle measures from Step 4 in a table like the one shown. Which angles are congruent?

<table>
<thead>
<tr>
<th>Angle</th>
<th>( \angle AGE )</th>
<th>( \angle EGB )</th>
<th>( \angle AGH )</th>
<th>( \angle BGH )</th>
<th>( \angle CHG )</th>
<th>( \angle GHD )</th>
<th>( \angle CHF )</th>
<th>( \angle DHF )</th>
</tr>
</thead>
</table>

2. Drag point \( E \) or \( F \) to change the angle the transversal makes with the parallel lines. Be sure \( E \) and \( F \) stay outside the parallel lines. Record the new angle measures as row “Measure 2” in your table.

3. Make a conjecture about the measures of the given angles when two parallel lines are cut by a transversal.
   a. Corresponding angles  
   b. Alternate interior angles

4. **REASONING** Make and test a conjecture about the sum of the measures of two consecutive interior angles when two parallel lines are cut by a transversal.
3.2 Use Parallel Lines and Transversals

Before
You identified angle pairs formed by a transversal.

Now
You will use angles formed by parallel lines and transversals.

Why?
So you can understand angles formed by light, as in Example 4.

Key Vocabulary
• corresponding angles, p. 149
• alternate interior angles, p. 149
• alternate exterior angles, p. 149
• consecutive interior angles, p. 149

ACTIVITY EXPLORE PARALLEL LINES

Materials: lined paper, tracing paper, straightedge

STEP 1 Draw a pair of parallel lines cut by a nonperpendicular transversal on lined paper. Label the angles as shown.

STEP 2 Trace your drawing onto tracing paper.

STEP 3 Move the tracing paper to position ∠1 of the traced figure over ∠5 of the original figure. Compare the angles. Are they congruent?

STEP 4 Compare the eight angles and list all the congruent pairs. What do you notice about the special angle pairs formed by the transversal?

POSTULATE For Your Notebook

POSTULATE 15 Corresponding Angles Postulate
If two parallel lines are cut by a transversal, then the pairs of corresponding angles are congruent.

EXAMPLE 1 Identify congruent angles
The measure of three of the numbered angles is 120°. Identify the angles. Explain your reasoning.

Solution
By the Corresponding Angles Postulate, m∠5 = 120°.
Using the Vertical Angles Congruence Theorem, m∠4 = 120°.
Because ∠4 and ∠8 are corresponding angles, by the Corresponding Angles Postulate, you know that m∠8 = 120°.
GUIDED PRACTICE for Examples 1 and 2

Use the diagram at the right.

1. If \( m\angle 1 = 105^\circ \), find \( m\angle 4 \), \( m\angle 5 \), and \( m\angle 8 \). Tell which postulate or theorem you use in each case.

2. If \( m\angle 3 = 68^\circ \) and \( m\angle 8 = (2x + 4)^\circ \), what is the value of \( x \)? Show your steps.
EXAMPLE 3  Prove the Alternate Interior Angles Theorem

Prove that if two parallel lines are cut by a transversal, then the pairs of alternate interior angles are congruent.

Solution

Draw a diagram. Label a pair of alternate interior angles as \( \angle 1 \) and \( \angle 2 \). You are looking for an angle that is related to both \( \angle 1 \) and \( \angle 2 \). Notice that one angle is a vertical angle with \( \angle 2 \) and a corresponding angle with \( \angle 1 \). Label it \( \angle 3 \).

GIVEN \( p \parallel q \)

PROVE \( \angle 1 \equiv \angle 2 \)

<table>
<thead>
<tr>
<th>STATEMENTS</th>
<th>REASONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. ( p \parallel q )</td>

EXAMPLE 4  Solve a real-world problem

SCIENCE  When sunlight enters a drop of rain, different colors of light leave the drop at different angles. This process is what makes a rainbow. For violet light, \( m\angle 2 = 40^\circ \). What is \( m\angle 1 \)? How do you know?

Solution

Because the sun’s rays are parallel, \( \angle 1 \) and \( \angle 2 \) are alternate interior angles. By the Alternate Interior Angles Theorem, \( \angle 1 \equiv \angle 2 \). By the definition of congruent angles, \( m\angle 1 = m\angle 2 = 40^\circ \).

Guided Practice for Examples 3 and 4

3. In the proof in Example 3, if you use the third statement before the second statement, could you still prove the theorem? Explain.

4. WHAT IF? Suppose the diagram in Example 4 shows yellow light leaving a drop of rain. Yellow light leaves the drop at an angle of 41°. What is \( m\angle 1 \) in this case? How do you know?
1. **VOCABULARY** Draw a pair of parallel lines and a transversal. Label a pair of corresponding angles.

2. ★ **WRITING** Two parallel lines are cut by a transversal. Which pairs of angles are congruent? Which pairs of angles are supplementary?

3. ★ **MULTIPLE CHOICE** In the figure at the right, which angle has the same measure as $\angle 1$?
   - **A** $\angle 2$
   - **B** $\angle 3$
   - **C** $\angle 4$
   - **D** $\angle 5$

**USING PARALLEL LINES** Find the angle measure. Tell which postulate or theorem you use.

4. If $m\angle 4 = 65^\circ$, then $m\angle 1 = ?$.
5. If $m\angle 7 = 110^\circ$, then $m\angle 2 = ?$.
6. If $m\angle 5 = 71^\circ$, then $m\angle 4 = ?$.
7. If $m\angle 3 = 117^\circ$, then $m\angle 5 = ?$.
8. If $m\angle 8 = 54^\circ$, then $m\angle 1 = ?$.

**USING POSTULATES AND THEOREMS** What postulate or theorem justifies the statement about the diagram?

9. $\angle 1 \cong \angle 5$
10. $\angle 4 \cong \angle 5$
11. $\angle 2 \cong \angle 7$
12. $\angle 2$ and $\angle 5$ are supplementary.
13. $\angle 3 \cong \angle 6$
14. $\angle 3 \cong \angle 7$
15. $\angle 1 \cong \angle 8$
16. $\angle 4$ and $\angle 7$ are supplementary.

**USING PARALLEL LINES** Find $m\angle 1$ and $m\angle 2$. Explain your reasoning.

17. 
18. 
19. 

20. ★ **ERROR ANALYSIS** A student concludes that $\angle 9 \cong \angle 10$ by the Corresponding Angles Postulate. Describe and correct the error in this reasoning.

---

**Examples 1 and 2** on pp. 154–155 for Exs. 3–16

**Homework Key**
- WORKED-OUT SOLUTIONS on p. WS1 for Exs. 5, 9, and 39
- STANDARDIZED TEST PRACTICE Exs. 2, 3, 21, 33, 39, and 40
21. ★ SHORT RESPONSE Given \( p \parallel q \), describe two methods you can use to show that \( \angle 1 \equiv \angle 4 \).

22. USING PARALLEL LINES Find \( m\angle 1 \), \( m\angle 2 \), and \( m\angle 3 \). Explain your reasoning.

23. ANGLES Use the diagram at the right.

24. ★ MULTIPLE CHOICE What is the value of \( y \) in the diagram?

25. ALGEBRA Find the values of \( x \) and \( y \).

26. DRAWING Draw a four-sided figure with sides \( MN \parallel PQ \), such that \( MN \parallel PQ \), \( MP \parallel NQ \), and \( \angle MNQ \) is an acute angle. Which angle pairs formed are congruent? Explain your reasoning.

27. CHALLENGE Find the values of \( x \) and \( y \).
37. PROVING THEOREM 3.2 If two parallel lines are cut by a transversal, then the pairs of alternate exterior angles are congruent. Use the steps below to write a proof of the Alternate Exterior Angles Theorem.

GIVEN \( p \parallel q \)

PROVE \( \angle 1 \equiv \angle 2 \)

a. Show that \( \angle 1 \equiv \angle 3 \).

b. Then show that \( \angle 1 \equiv \angle 2 \).

38. PARKING LOT In the diagram, the lines dividing parking spaces are parallel. The measure of \( \angle 1 \) is 110°.

a. Identify the angle(s) congruent to \( \angle 1 \).

b. Find \( m\angle 6 \).

39. ★ SHORT RESPONSE The Toddler™ is a walking robot. Each leg of the robot has two parallel bars and a foot. When the robot walks, the leg bars remain parallel as the foot slides along the surface.

a. As the legs move, are there pairs of angles that are always congruent? always supplementary? If so, which angles?

b. Explain how having parallel leg bars allows the robot’s foot to stay flat on the floor as it moves.

40. ★ EXTENDED RESPONSE You are designing a box like the one below.

a. The measure of \( \angle 1 \) is 70°. What is \( m\angle 2 \)? What is \( m\angle 3 \)?

b. Explain why \( \angle ABC \) is a straight angle.

c. What If? If \( m\angle 1 \) is 60°, will \( \angle ABC \) still be a straight angle? Will the opening of the box be more steep or less steep? Explain.

41. PROVING THEOREM 3.3 If two parallel lines are cut by a transversal, then the pairs of consecutive interior angles are supplementary. Write a proof of the Consecutive Interior Angles Theorem.

GIVEN \( n \parallel p \)

PROVE \( \angle 1 \) and \( \angle 2 \) are supplementary.
42. **PROOF** The Perpendicular Transversal Theorem (page 192) states that if a transversal is perpendicular to one of two parallel lines, then it is perpendicular to the other. Write a proof of the Perpendicular Transversal Theorem.

**GIVEN** $t \perp r$, $r \parallel s$

**PROVE** $t \perp s$

43. **CHALLENGE** In the diagram, $\angle 4 \equiv \angle 5$. $\overline{SE}$ bisects $\angle RSF$. Find $m \angle 1$. Explain your reasoning.

## Mixed Review

44. Find the length of each segment in the coordinate plane at the right. Which segments are congruent? (p. 15)

Are angles with the given measures **complementary**, **supplementary**, or **neither**? (p. 35)

45. $m \angle 1 = 62^\circ$, $m \angle 2 = 128^\circ$
46. $m \angle 3 = 130^\circ$, $m \angle 4 = 70^\circ$
47. $m \angle 5 = 44^\circ$, $m \angle 6 = 46^\circ$

Find the perimeter of the equilateral figure with the given side length. (pp. 42, 49)

48. Pentagon, 20 cm
49. Octagon, 2.5 ft
50. Decagon, 33 in.

Write the converse of the statement. Is the converse true? (p. 79)

51. Three points are collinear if they lie on the same line.
52. If the measure of an angle is $119^\circ$, then the angle is obtuse.

## Quiz for Lessons 3.1–3.2

Copy and complete the statement. (p. 147)

1. $\angle 2$ and ___ are corresponding angles.
2. $\angle 3$ and ___ are consecutive interior angles.
3. $\angle 3$ and ___ are alternate interior angles.
4. $\angle 2$ and ___ are alternate exterior angles.

Find the value of $x$. (p. 154)

5. $128^\circ$ \hspace{2cm} $2x^\circ$
6. $151^\circ$ \hspace{2cm} $(2x + 1)^\circ$
7. $72^\circ$ \hspace{2cm} $(7x + 24)^\circ$
3.3 Prove Lines are Parallel

You used properties of parallel lines to determine angle relationships.
You will use angle relationships to prove that lines are parallel.
So you can describe how sports equipment is arranged, as in Ex. 32.

Key Vocabulary
• paragraph proof
• converse, p. 80
• two-column proof, p. 112

Postulate 16 below is the converse of Postulate 15 in Lesson 3.2. Similarly, the theorems in Lesson 3.2 have true converses. Remember that the converse of a true conditional statement is not necessarily true, so each converse of a theorem must be proved, as in Example 3.

**EXAMPLE 1** Apply the Corresponding Angles Converse

**ALGEBRA** Find the value of \( x \) that makes \( m \parallel n \).

**Solution**
Lines \( m \) and \( n \) are parallel if the marked corresponding angles are congruent.

\[
(3x + 5)° = 65° \quad \text{Use Postulate 16 to write an equation.}
\]

\[
3x = 60 \quad \text{Subtract 5 from each side.}
\]

\[
x = 20 \quad \text{Divide each side by 3.}
\]

The lines \( m \) and \( n \) are parallel when \( x = 20 \).

**Guided Practice** for Example 1

1. Is there enough information in the diagram to conclude that \( m \parallel n \)? Explain.
2. Explain why Postulate 16 is the converse of Postulate 15.
**THEOREMS**

**THEOREM 3.4** Alternate Interior Angles Converse
If two lines are cut by a transversal so the alternate interior angles are congruent, then the lines are parallel.

*Proof:* Example 3, p. 163

**THEOREM 3.5** Alternate Exterior Angles Converse
If two lines are cut by a transversal so the alternate exterior angles are congruent, then the lines are parallel.

*Proof:* Ex. 36, p. 168

**THEOREM 3.6** Consecutive Interior Angles Converse
If two lines are cut by a transversal so the consecutive interior angles are supplementary, then the lines are parallel.

*Proof:* Ex. 37, p. 168

**EXAMPLE 2** Solve a real-world problem

**SNAKE PATTERNS** How can you tell whether the sides of the pattern are parallel in the photo of a diamond-back snake?

**Solution**

Because the alternate interior angles are congruent, you know that the sides of the pattern are parallel.

**GUIDED PRACTICE** for Example 2

Can you prove that lines $a$ and $b$ are parallel? *Explain* why or why not.

3. 

4. 

5. $m\angle 1 + m\angle 2 = 180^\circ$
Example 3  Prove the Alternate Interior Angles Converse

Prove that if two lines are cut by a transversal so the alternate interior angles are congruent, then the lines are parallel.

Solution

**GIVEN**  \( \angle 4 \cong \angle 5 \)

**PROVE**  \( g \parallel h \)

<table>

Paragraph Proofs

A proof can also be written in paragraph form, called a paragraph proof. The statements and reasons in a paragraph proof are written in sentences, using words to explain the logical flow of the argument.

Example 4  Write a paragraph proof

In the figure, \( r \parallel s \) and \( \angle 1 \) is congruent to \( \angle 3 \).
Prove \( p \parallel q \).

Solution

Look at the diagram to make a plan. The diagram suggests that you look at angles 1, 2, and 3. Also, you may find it helpful to focus on one pair of lines and one transversal at a time.

**Plan for Proof**

- a. Look at \( \angle 1 \) and \( \angle 2 \).
- b. Look at \( \angle 2 \) and \( \angle 3 \).

\[ \angle 1 \cong \angle 2 \text{ because } r \parallel s. \]

**Plan in Action**

- a. It is given that \( r \parallel s \), so by the Corresponding Angles Postulate, \( \angle 1 \cong \angle 2 \).
- b. It is also given that \( \angle 1 \cong \angle 3 \). Then \( \angle 2 \cong \angle 3 \) by the Transitive Property of Congruence for angles. Therefore, by the Alternate Interior Angles Converse, \( p \parallel q \).
**THEOREM**

**THEOREM 3.7 Transitive Property of Parallel Lines**

If two lines are parallel to the same line, then they are parallel to each other.

*Proofs: Ex. 38, p. 168; Ex. 38, p. 177*

**EXAMPLE 5 Use the Transitive Property of Parallel Lines**

**U.S. FLAG** The flag of the United States has 13 alternating red and white stripes. Each stripe is parallel to the stripe immediately below it. Explain why the top stripe is parallel to the bottom stripe.

**Solution**

The stripes from top to bottom can be named $s_1$, $s_2$, $s_3$, $s_4$, $s_5$, $s_6$, $s_7$, $s_8$, $s_9$, $s_{10}$, $s_{11}$, $s_{12}$, and $s_{13}$. Each stripe is parallel to the one below it, so $s_1 \parallel s_2$, $s_2 \parallel s_3$, and so on. Then $s_1 \parallel s_2$ by the Transitive Property of Parallel Lines. Similarly, because $s_9 \parallel s_{10}$, it follows that $s_1 \parallel s_{13}$. By continuing this reasoning, $s_1 \parallel s_{13}$. So, the top stripe is parallel to the bottom stripe.

**GUIDED PRACTICE for Examples 3, 4, and 5**

6. If you use the diagram at the right to prove the Alternate Exterior Angles Converse, what GIVEN and PROVE statements would you use?

7. Copy and complete the following paragraph proof of the Alternate Interior Angles Converse using the diagram in Example 3.

   It is given that $\angle 4 \equiv \angle 5$. By the $\angle ? \equiv \angle ?$, $\angle 1 \equiv \angle 4$. Then by the Transitive Property of Congruence, $\angle ? \equiv \angle ?$. So, by the $\angle ? \parallel \angle h$.

8. Each step is parallel to the step immediately above it. The bottom step is parallel to the ground. *Explain* why the top step is parallel to the ground.
1. **VOCABULARY** Draw a pair of parallel lines with a transversal. Identify all pairs of alternate exterior angles.

2. ★ **WRITING** Use the theorems from the previous lesson and the converses of those theorems in this lesson. Write three biconditionals about parallel lines and transversals.

3. **ALGEBRA** Find the value of $x$ that makes $m \parallel n$.

   3. $120^\circ\quad 3x^\circ\quad m\quad n$
   4. $135^\circ\quad (2x + 15)^\circ\quad m\quad n$
   5. $150^\circ\quad (3x - 15)^\circ\quad m\quad n$
   6. $(180 - x)^\circ\quad x^\circ\quad m\quad n$
   7. $2x^\circ\quad x^\circ\quad m\quad n$
   8. $m\quad n\quad (2x + 20)^\circ\quad 3x^\circ$

9. **ERROR ANALYSIS** A student concluded that lines $a$ and $b$ are parallel. Describe and correct the student’s error.

10. **IDENTIFYING PARALLEL LINES** Is there enough information to prove $m \parallel n$? If so, state the postulate or theorem you would use.

   10. \hspace{1cm} 11. \hspace{1cm} 12.

   13. \hspace{1cm} 14. \hspace{1cm} 15.

16. ★ **OPEN-ENDED MATH** Use lined paper to draw two parallel lines cut by a transversal. Use a protractor to measure one angle. Find the measures of the other seven angles without using the protractor. Give a theorem or postulate you use to find each angle measure.
17. **MULTI-STEP PROBLEM** Complete the steps below to determine whether \( \overleftrightarrow{DB} \) and \( \overleftrightarrow{HF} \) are parallel.

a. Find \( m\angle DCG \) and \( m\angle CGH \).

b. Describe the relationship between \( \angle DCG \) and \( \angle CGH \).

c. Are \( \overleftrightarrow{DB} \) and \( \overleftrightarrow{HF} \) parallel? Explain your reasoning.

18. **PLANNING A PROOF** Use these steps to plan a proof of the Consecutive Interior Angles Converse, as stated on page 162.

a. Draw a diagram you can use in a proof of the theorem.

b. Write the GIVEN and PROVE statements.

**REASONING** Can you prove that lines \( a \) and \( b \) are parallel? If so, explain how.

19. 20. 21.

22. **ERROR ANALYSIS** A student decided that \( \overleftrightarrow{AD} \parallel \overleftrightarrow{BC} \) based on the diagram below. Describe and correct the student’s error.

23. **MULTIPLE CHOICE** Use the diagram at the right. You know that \( \angle 1 \equiv \angle 4 \). What can you conclude?

- A. \( p \parallel q \)
- B. \( r \parallel s \)
- C. \( \angle 2 \equiv \angle 3 \)
- D. None of the above

**REASONING** Use the diagram at the right for Exercises 24 and 25.

24. **SHORT RESPONSE** In the diagram, assume \( j \parallel k \). How many angle measures must be given in order to find the measure of every angle? Explain your reasoning.

25. **PLANNING A PROOF** In the diagram, assume \( \angle 1 \) and \( \angle 7 \) are supplementary. Write a plan for a proof showing that lines \( j \) and \( k \) are parallel.

26. **REASONING** Use the diagram at the right. Which rays are parallel? Which rays are not parallel? Justify your conclusions.
27. **VISUAL REASONING** A point $R$ is not in plane $ABC$.
   a. How many lines through $R$ are perpendicular to plane $ABC$?
   b. How many lines through $R$ are parallel to plane $ABC$?
   c. How many planes through $R$ are parallel to plane $ABC$?

28. **CHALLENGE** Use the diagram.
   a. Find $x$ so that $p \parallel q$.
   b. Find $y$ so that $r \parallel s$.
   c. Can $r$ be parallel to $s$ and $p$ be parallel to $q$ at the same time? *Explain.*

---

**PROBLEM SOLVING**

**EXAMPLE 2** on p. 162 for Exs. 29–30

29. **PICNIC TABLE** How do you know that the top of the picnic table is parallel to the ground? [Image]

30. **KITEBOARDING** The diagram of the control bar of the kite shows the angles formed between the control bar and the kite lines. How do you know that $n$ is parallel to $m$? [Image]

31. **DEVELOPING PROOF** Copy and complete the proof.
   
   **GIVEN** $\angle 1 = 115^\circ$, $\angle 2 = 65^\circ$
   
   **PROVE** $m \parallel n$

   **STATEMENTS**
   1. $\angle 1 = 115^\circ$ and $\angle 2 = 65^\circ$
   2. $115^\circ + 65^\circ = 180^\circ$
   3. $\angle 1 + \angle 2 = 180^\circ$
   4. $\angle 1$ and $\angle 2$ are supplementary.
   5. $m \parallel n$

   **REASONS**
   1. Given
   2. Addition
   3. ?
   4. ?
   5. ?
32. **BOWLING PINS** How do you know that the bowling pins are set up in parallel lines?

33. **SHORT RESPONSE** The map shows part of Denver, Colorado. Use the markings on the map. Are the numbered streets parallel to one another? *Explain* how you can tell.

34. **PROOF** Use the diagram and the given information to write a two-column or paragraph proof.

35. **PROOF** In Exercises 36 and 37, use the diagram to write a paragraph proof.

36. **PROVING THEOREM 3.5** Prove the Alternate Exterior Angles Converse.

37. **PROVING THEOREM 3.6** Prove the Consecutive Interior Angles Converse.

38. **MULTI-STEP PROBLEM** Use these steps to prove Theorem 3.7, the Transitive Property of Parallel Lines.
   a. Copy the diagram in the Theorem box on page 164. Draw a transversal through all three lines.
   b. Write the GIVEN and PROVE statements.
   c. Use the properties of angles formed by parallel lines and transversals to prove the theorem.
39. ★ EXTENDED RESPONSE Architects and engineers make drawings using a plastic triangle with angle measures 30°, 60°, and 90°. The triangle slides along a fixed horizontal edge.

a. Explain why the blue lines shown are parallel.

b. Explain how the triangle can be used to draw vertical parallel lines.

**REASONING** Use the diagram below in Exercises 40–44. How would you show that the given lines are parallel?

40. a and b

41. b and c

42. d and f

43. e and g

44. a and c

45. CHALLENGE Use these steps to investigate the angle bisectors of corresponding angles.

a. Construction Use a compass and straightedge or geometry drawing software to construct line \( l \), point \( P \) not on \( l \), and line \( n \) through \( P \) parallel to \( l \). Construct point \( Q \) on \( l \) and construct \( PQ \). Choose a pair of alternate interior angles and construct their angle bisectors.

b. Write a Proof Are the angle bisectors parallel? Make a conjecture. Write a proof of your conjecture.

**MIXED REVIEW**

Solve the equation. (p. 875)

46. \( \frac{3}{4}x = -1 \) 47. \( -\frac{2}{3}x = -1 \) 48. \( \frac{1}{5}x = -1 \) 49. \( -6x = -1 \)

50. You can choose one of eight sandwich fillings and one of four kinds of bread. How many different sandwiches are possible? (p. 891)

51. Find the value of \( x \) if \( AB \parallel AD \) and \( CD \parallel AD \). Explain your steps. (p. 112)

Simplify the expression.

52. \( \frac{-7 - 2}{8 - (-4)} \) (p. 870) 53. \( \frac{0 - (-3)}{1 - 6} \) (p. 870) 54. \( \frac{3x - x}{-4x + 2x} \) (p. 139)
Lessons 3.1–3.3

1. **MULTI-STEP PROBLEM** Use the diagram of the tennis court below.

   a. Identify two pairs of parallel lines so each pair is on a different plane.
   b. Identify a pair of skew lines.
   c. Identify two pairs of perpendicular lines.

2. **MULTI-STEP PROBLEM** Use the picture of the tile floor below.

   a. Name the kind of angle pair each angle forms with \( \angle 1 \).
   b. Lines \( r \) and \( s \) are parallel. Name the angles that are congruent to \( \angle 3 \).

3. **OPEN-ENDED** The flag of Jamaica is shown. Given that \( n \parallel p \) and \( m \angle 1 = 53^\circ \), determine the measure of \( \angle 2 \). Justify each step in your argument, labeling any angles needed for your justification.

4. **SHORT RESPONSE** A neon sign is shown below. Are the top and the bottom of the Z parallel? Explain how you know.

5. **EXTENDED RESPONSE** Use the diagram of the bridge below.

   a. Find the value of \( x \) that makes lines \( l \) and \( m \) parallel.
   b. Suppose that \( l \parallel m \) and \( k \parallel n \). Find \( m \angle 1 \). Explain how you found your answer. Copy the diagram and label any angles you need for your explanation.

6. **GRIDDED ANSWER** In the photo of the picket fence, \( m \parallel n \). What is \( m \angle 1 \) in degrees?

7. **SHORT RESPONSE** Find the values of \( x \) and \( y \). Explain your steps.
### Key Vocabulary
- **slope**, p. 879
- **rise**, p. 879
- **run**, p. 879

The **slope** of a nonvertical line is the ratio of vertical change (**rise**) to horizontal change (**run**) between any two points on the line.

If a line in the coordinate plane passes through points \((x_1, y_1)\) and \((x_2, y_2)\) then the slope \(m\) is

\[
m = \frac{\text{rise}}{\text{run}} = \frac{\text{change in } y}{\text{change in } x} = \frac{y_2 - y_1}{x_2 - x_1}.
\]

### Example 1
**Find slopes of lines in a coordinate plane**

**Find the slope of line \(a\) and line \(d\).**

**Solution**
- **Slope of line \(a\):**
  
  \[
  m = \frac{y_2 - y_1}{x_2 - x_1} = \frac{4 - 2}{6 - 8} = \frac{2}{-2} = -1
  \]
- **Slope of line \(d\):**
  
  \[
  m = \frac{y_2 - y_1}{x_2 - x_1} = \frac{4 - 0}{6 - 6} = \frac{4}{0}
  \]
  which is undefined.

### Guided Practice for Example 1
**Use the graph in Example 1. Find the slope of the line.**

1. **Line \(b\)**
2. **Line \(c\)**
**COMPARING SLOPES** When two lines intersect in a coordinate plane, the steeper line has the slope with greater absolute value. You can also compare slopes to tell whether two lines are parallel or perpendicular.

**POSTULATES**

**POSTULATE 17  Slopes of Parallel Lines**
In a coordinate plane, two nonvertical lines are parallel if and only if they have the same slope. Any two vertical lines are parallel.

**POSTULATE 18  Slopes of Perpendicular Lines**
In a coordinate plane, two nonvertical lines are perpendicular if and only if the product of their slopes is \(-1\).

Horizontal lines are perpendicular to vertical lines.

**EXAMPLE 2  Identify parallel lines**

Find the slope of each line. Which lines are parallel?

**Solution**

Find the slope of \(k_1\) through \((-2, 4)\) and \((-3, 0)\).

\[
m_1 = \frac{0 - 4}{-3 - (-2)} = \frac{-4}{-1} = 4
\]

Find the slope of \(k_2\) through \((4, 5)\) and \((3, 1)\).

\[
m_2 = \frac{1 - 5}{3 - 4} = \frac{-4}{-1} = 4
\]

Find the slope of \(k_3\) through \((6, 3)\) and \((5, -2)\).

\[
m_3 = \frac{-2 - 3}{5 - 6} = \frac{-5}{-1} = 5
\]

Compare the slopes. Because \(k_1\) and \(k_2\) have the same slope, they are parallel. The slope of \(k_3\) is different, so \(k_3\) is not parallel to the other lines.

**GUIDED PRACTICE** for Example 2

3. Line \(m\) passes through \((-1, 3)\) and \((4, 1)\). Line \(t\) passes through \((-2, -1)\) and \((3, -3)\). Are the two lines parallel? Explain how you know.
EXAMPLE 3  Draw a perpendicular line

Line \( h \) passes through \((3, 0)\) and \((7, 6)\). Graph the line perpendicular to \( h \) that passes through the point \((2, 5)\).

Solution

**STEP 1**  
Find the slope \( m_1 \) of line \( h \) through \((3, 0)\) and \((7, 6)\).

\[
m_1 = \frac{6 - 0}{7 - 3} = \frac{6}{4} = \frac{3}{2}
\]

**STEP 2**  
Find the slope \( m_2 \) of a line perpendicular to \( h \). Use the fact that the product of the slopes of two perpendicular lines is \(-1\).

\[
\frac{3}{2} \cdot m_2 = -1 \quad \text{Slopes of perpendicular lines}
\]

\[
m_2 = -\frac{2}{3} \quad \text{Multiply each side by \(\frac{2}{3}\)}
\]

**STEP 3**  
Use the rise and run to graph the line.

EXAMPLE 4  Standardized Test Practice

A skydiver made jumps with three parachutes. The graph shows the height of the skydiver from the time the parachute opened to the time of the landing for each jump. Which statement is true?

- **A** The parachute opened at the same height in jumps \(a\) and \(b\).
- **B** The parachute was open for the same amount of time in jumps \(b\) and \(c\).
- **C** The skydiver descended at the same rate in jumps \(a\) and \(b\).
- **D** The skydiver descended at the same rate in jumps \(a\) and \(c\).

Solution

The rate at which the skydiver descended is represented by the slope of the segments. The segments that have the same slope are \(a\) and \(c\).

The correct answer is D.  **A**  **B**  **C**  **D**

Guided Practice for Examples 3 and 4

4. Line \( n \) passes through \((0, 2)\) and \((6, 5)\). Line \( m \) passes through \((2, 4)\) and \((4, 0)\). Is \( n \perp m \)? Explain.

5. In Example 4, which parachute is in the air for the longest time? Explain.

6. In Example 4, what do the \(x\)-intercepts represent in the situation? How can you use this to eliminate one of the choices?
**Example 5** Solve a real-world problem

**ROLLER COASTERS** During the climb on the Magnum XL-200 roller coaster, you move 41 feet upward for every 80 feet you move horizontally. At the crest of the hill, you have moved 400 feet forward.

a. **Making a Table** Make a table showing the height of the Magnum at every 80 feet it moves horizontally. How high is the roller coaster at the top of its climb?

b. **Calculating** Write a fraction that represents the height the Magnum climbs for each foot it moves horizontally. What does the numerator represent?

c. **Using a Graph** Another roller coaster, the Millenium Force, climbs at a slope of 1. At its crest, the horizontal distance from the starting point is 310 feet. Compare this climb to that of the Magnum. Which climb is steeper?

**Solution**

a. 

<table>
<thead>
<tr>
<th>Horizontal distance (ft)</th>
<th>80</th>
<th>160</th>
<th>240</th>
<th>320</th>
<th>400</th>
</tr>
</thead>
<tbody>
<tr>
<td>Height (ft)</td>
<td>41</td>
<td>82</td>
<td>123</td>
<td>164</td>
<td>205</td>
</tr>
</tbody>
</table>

The Magnum XL-200 is 205 feet high at the top of its climb.

b. **Slope of the Magnum**

\[
\text{Slope of the Magnum} = \frac{\text{rise}}{\text{run}} = \frac{41}{80} = \frac{41 \div 80}{80 \div 80} = \frac{0.5125}{1}
\]

The numerator, 0.5125, represents the slope in decimal form.

c. **Using a Graph** Another roller coaster, the Millenium Force, climbs at a slope of 1. At its crest, the horizontal distance from the starting point is 310 feet. Compare this climb to that of the Magnum. Which climb is steeper?

The graph shows that the Millenium Force has a steeper climb, because the slope of its line is greater (1 > 0.5125).

**Guided Practice**

7. Line \(q\) passes through the points \((0, 0)\) and \((-4, 5)\). Line \(t\) passes through the points \((0, 0)\) and \((-10, 7)\). Which line is steeper, \(q\) or \(t\)?

8. **WHAT IF?** Suppose a roller coaster climbed 300 feet upward for every 350 feet it moved horizontally. Is it more steep or less steep than the Magnum? than the Millenium Force?
3.4 Find and Use Slopes of Lines

1. **VOCABULARY** Describe what is meant by the slope of a nonvertical line.

2. **★ WRITING** What happens when you apply the slope formula to a horizontal line? What happens when you apply it to a vertical line?

**MATCHING** Match the description of the slope of a line with its graph.

3. \( m \) is positive.
4. \( m \) is negative.
5. \( m \) is zero.
6. \( m \) is undefined.

**FINDING SLOPE** Find the slope of the line that passes through the points.

7. \((3, 5), (5, 6)\)
8. \((-2, 2), (2, -6)\)
9. \((-5, -1), (3, -1)\)
10. \((2, 1), (0, 6)\)

**ERROR ANALYSIS** Describe and correct the error in finding the slope of the line.

11. \( \frac{5}{3} \) is not the correct slope.

12. Slope of the line through \((2, 7)\) and \((4, 5)\):
\[
m = \frac{y_2 - y_1}{x_2 - x_1} = \frac{7 - 5}{4 - 2} = \frac{2}{2} = 1
\]

**TYPES OF LINES** Tell whether the lines through the given points are parallel, perpendicular, or neither. Justify your answer.

13. Line 1: \((1, 0), (7, 4)\)
   Line 2: \((7, 0), (3, 6)\)
14. Line 1: \((-3, 1), (-7, -2)\)
   Line 2: \((2, -1), (8, 4)\)
15. Line 1: \((-9, 3), (-5, 7)\)
   Line 2: \((-11, 6), (-7, 2)\)

**GRAPHING** Graph the line through the given point with the given slope.

16. \(P(3, -2)\), slope \(-\frac{1}{6}\)
17. \(P(-4, 0)\), slope \(\frac{5}{2}\)
18. \(P(0, 5)\), slope \(\frac{2}{3}\)

**STEEPNESS OF A LINE** Tell which line through the given points is steeper.

19. Line 1: \((-2, 3), (3, 5)\)
   Line 2: \((3, 1), (6, 5)\)
20. Line 1: \((-2, -1), (1, -2)\)
   Line 2: \((-5, -3), (-1, -4)\)
21. Line 1: \((-4, 2), (-3, 6)\)
   Line 2: \((1, 6), (3, 8)\)

22. **REASONING** Use your results from Exercises 19–21. Describe a way to determine which of two lines is steeper without graphing them.
PERPENDICULAR LINES  Find the slope of line \( n \) perpendicular to line \( h \) and passing through point \( P \). Then copy the graph and graph line \( n \).

23. \( h \):  \( (-3, 2) \) \( \rightarrow \) \( (3, 1) \) \( \rightarrow \) \( P(3, -3) \)

24. \( h \):  \( (3, 4) \) \( \rightarrow \) \( (5, -2) \) \( \rightarrow \) \( P(6, 1) \)

25. \( h \):  \( (-5, -3) \) \( \rightarrow \) \( (2, -4) \) \( \rightarrow \) \( P(-4, -6) \)

26. REASONING  Use the concept of slope to decide whether the points \((-3, 3), (1, -2), \) and \((4, 0)\) lie on the same line. Explain your reasoning and include a diagram.

GRAPHING  Graph a line with the given description.

27. Through \((0, 2)\) and parallel to the line through \((-2, 4)\) and \((-5, 1)\)

28. Through \((1, 3)\) and perpendicular to the line through \((-1, -1)\) and \((2, 0)\)

29. Through \((-2, 1)\) and parallel to the line through \((3, 1)\) and \((4, -\frac{1}{2})\)

CHALLENGE  Find the unknown coordinate so the line through the points has the given slope.

30. \((-3, 2), (0, y);\) slope \(-2\)

31. \((-7, -4), (x, 0);\) slope \(\frac{1}{3}\)

32. \((4, -3), (x, 1);\) slope \(-4\)

PROBLEM SOLVING

33. WATER SLIDE  The water slide is 6 feet tall, and the end of the slide is 9 feet from the base of the ladder. About what slope does the slide have?

34. ★ MULTIPLE CHOICE  Which car has better gas mileage?

\[\begin{array}{cc}
A & A \\
B & B \\
C & \text{Same rate} \\
D & \text{Cannot be determined}
\end{array}\]

35. ★ SHORT RESPONSE  Compare the graphs of the three lines described below. Which is most steep? Which is the least steep? Include a sketch in your answer.

Line \( a \): through the point \((3, 0)\) with a \( y \)-intercept of 4
Line \( b \): through the point \((3, 0)\) with a \( y \)-intercept greater than 4
Line \( c \): through the point \((3, 0)\) with a \( y \)-intercept between 0 and 4
36. **MULTI-STEP PROBLEM** Ladder safety guidelines include the following recommendation about ladder placement. The horizontal distance \( h \) between the base of the ladder and the object the ladder is resting against should be about one quarter of the vertical distance \( v \) between the ground and where the ladder rests against the object.

![Ladder Diagram]

a. Find the recommended slope for a ladder.

b. Suppose the base of a ladder is 6 feet away from a building. The ladder has the recommended slope. Find \( v \).

c. Suppose a ladder is 34 feet from the ground where it touches a building. The ladder has the recommended slope. Find \( h \).

37. **MULTIPLE REPRESENTATIONS** The Duquesne (pronounced “du-KAYN”) Incline was built in 1888 in Pittsburgh, Pennsylvania, to move people up and down a mountain there. On the incline, you move about 29 feet vertically for every 50 feet you move horizontally. When you reach the top of the hill, you have moved a horizontal distance of about 700 feet.

a. **Making a Table** Make a table showing the vertical distance that the incline moves for each 50 feet of horizontal distance during its climb. How high is the incline at the top?

b. **Drawing a Graph** Write a fraction that represents the slope of the incline’s climb path. Draw a graph to show the climb path.

c. **Comparing Slopes** The Burgenstock Incline in Switzerland moves about 144 vertical feet for every 271 horizontal feet. Write a fraction to represent the slope of this incline’s path. Which incline is steeper, the Burgenstock or the Duquesne?

38. **PROVING THEOREM 3.7** Use slopes of lines to write a paragraph proof of the Transitive Property of Parallel Lines on page 164.

**AVERAGE RATE OF CHANGE** In Exercises 39 and 40, slope can be used to describe an average rate of change. To write an average rate of change, rewrite the slope fraction so the denominator is one.

39. **BUSINESS** In 2000, a business made a profit of $8500. In 2006, the business made a profit of $15,400. Find the average rate of change in dollars per year from 2000 to 2006.

40. **ROCK CLIMBING** A rock climber begins climbing at a point 400 feet above sea level. It takes the climber 45 minutes to climb to the destination, which is 706 feet above sea level. Find the average rate of change in feet per minute for the climber from start to finish.
41. **EXTENDED RESPONSE** The line graph shows the regular season attendance (in millions) for three professional sports organizations from 1985 to 2000.

   a. During which five-year period did the NBA attendance increase the most? Estimate the rate of change for this five-year period in people per year.

   b. During which five-year period did the NHL attendance increase the most? Estimate the rate of change for this five-year period in people per year.

   c. **Interpret** The line graph for the NFL seems to be almost linear between 1985 and 2000. Write a sentence about what this means in terms of the real-world situation.

42. **CHALLENGE** Find two values of $k$ such that the points $(-3, 1), (0, k),$ and $(k, 5)$ are collinear. Explain your reasoning.

### Mixed Review

43. Is the point $(-1, -7)$ on the line $y = 2x - 5$? Explain. *(p. 878)*

44. Find the intercepts of the graph of $y = -3x + 9$. *(p. 879)*

Use the diagram to write two examples of each postulate. *(p. 96)*

45. Through any two points there exists exactly one line.

46. Through any three noncollinear points there exists exactly one plane.

Solve the equation for $y$. Write a reason for each step. *(p. 105)*

47. $6x + 4y = 40$

48. $\frac{1}{2}x - \frac{5}{4}y = -10$

49. $16 - 3y = 24x$

### Quiz for Lessons 3.3–3.4

Find the value of $x$ that makes $m \parallel n$. *(p. 161)*

1. \[
\begin{align*}
2x^\circ + 54^\circ & \quad m \parallel h \\
\end{align*}
\]

2. \[
\begin{align*}
(3x - 5)^\circ + 145^\circ & \quad m \parallel h \\
\end{align*}
\]

3. \[
\begin{align*}
88^\circ + (4x - 12)^\circ & \quad m \parallel h \\
\end{align*}
\]

Find the slope of the line that passes through the given points. *(p. 171)*

4. $(1, -1), (3, 3)$

5. $(1, 2), (4, 5)$

6. $(-3, -2), (-7, -6)$
3.4 Investigate Slopes

**MATERIALS** • graphing calculator or computer

**QUESTION** How can you verify the Slopes of Parallel Lines Postulate?

You can verify the postulates you learned in Lesson 3.4 using geometry drawing software.

### Example: Verify the Slopes of Parallel Lines Postulate

1. **Show axes** Show the x-axis and the y-axis by choosing Hide/Show Axes from the F5 menu.
2. **Draw line** Draw a line by choosing Line from the F2 menu. Do not use one of the axes as your line. Choose a point on the line and label it A.
3. **Graph point** Graph a point not on the line by choosing Point from the F2 menu.
4. **Draw parallel line** Choose Parallel from the F3 menu and select the line. Then select the point not on the line.
5. **Measure slopes** Select one line and choose Measure Slope from the F5 menu. Repeat this step for the second line.
6. **Move line** Drag point A to move the line. What do you expect to happen?

### Practice

1. Use geometry drawing software to verify the Slopes of Perpendicular Lines Postulate.
   a. Construct a line and a point not on that line. Use Steps 1–3 from the Example above.
   b. Construct a line that is perpendicular to your original line and passes through the given point.
   c. Measure the slopes of the two lines. Multiply the slopes. What do you expect the product of the slopes to be?

2. **WRITING** Use the arrow keys to move your line from Exercise 1. Describe what happens to the product of the slopes when one of the lines is vertical. Explain why this happens.
3.5 Write and Graph Equations of Lines

**Key Vocabulary**
- slope-intercept form
- standard form
- x-intercept, p. 879
- y-intercept, p. 879

Linear equations may be written in different forms. The general form of a linear equation in slope-intercept form is \( y = mx + b \), where \( m \) is the slope and \( b \) is the y-intercept.

**Example 1** Write an equation of a line from a graph

Write an equation of the line in slope-intercept form.

**Solution**

**STEP 1** Find the slope. Choose two points on the graph of the line, \((0, 4)\) and \((3, -2)\).

\[
m = \frac{4 - (-2)}{0 - 3} = \frac{6}{-3} = -2
\]

**STEP 2** Find the y-intercept. The line intersects the y-axis at the point \((0, 4)\), so the y-intercept is 4.

**STEP 3** Write the equation.

\[
y = mx + b
\]

Use slope-intercept form.

\[
y = -2x + 4
\]

Substitute -2 for \( m \) and 4 for \( b \).

**Example 2** Write an equation of a parallel line

Write an equation of the line passing through the point \((-1, 1)\) that is parallel to the line with the equation \( y = 2x - 3 \).

**Solution**

**STEP 1** Find the slope \( m \). The slope of a line parallel to \( y = 2x - 3 \) is the same as the given line, so the slope is 2.

**STEP 2** Find the y-intercept \( b \) by using \( m = 2 \) and \((x, y) = (-1, 1)\).

\[
y = mx + b
\]

Use slope-intercept form.

\[
1 = 2(-1) + b
\]

Substitute for \( x, y, \) and \( m \).

\[
b = 3
\]

Solve for \( b \).

\[
Because \ m = 2 \text{ and } b = 3, \text{ an equation of the line is } y = 2x + 3.\]
**Example 3** Write an equation of a perpendicular line

Write an equation of the line \( j \) passing through the point \( (2, 3) \) that is perpendicular to the line \( k \) with the equation \( y = -2x + 2 \).

**Solution**

**Step 1** Find the slope \( m \) of line \( j \). Line \( k \) has a slope of \(-2\).

\[
-2 \cdot m = -1 \quad \text{The product of the slopes of \( \perp \) lines is \(-1\).}
\]

\[
m = \frac{1}{2} \quad \text{Divide each side by \(-2\).}
\]

**Step 2** Find the \( y \)-intercept \( b \) by using \( m = \frac{1}{2} \) and \( (x, y) = (2, 3) \).

\[
y = mx + b \quad \text{Use slope-intercept form.}
\]

\[
3 = \frac{1}{2}(2) + b \quad \text{Substitute for \( x, y, \) and \( m \).}
\]

\[
2 = b \quad \text{Solve for \( b \).}
\]

Because \( m = \frac{1}{2} \) and \( b = 2 \), an equation of line \( j \) is \( y = \frac{1}{2}x + 2 \). You can check that the lines \( j \) and \( k \) are perpendicular by graphing, then using a protractor to measure one of the angles formed by the lines.

**Guided Practice** for Examples 1, 2, and 3

1. Write an equation of the line in the graph at the right.

2. Write an equation of the line that passes through \((-2, 5)\) and \((1, 2)\).

3. Write an equation of the line that passes through the point \((1, 5)\) and is parallel to the line with the equation \( y = 3x - 5 \). Graph the lines to check that they are parallel.

4. How do you know the lines \( x = 4 \) and \( y = 2 \) are perpendicular?
EXAMPLE 4 Write an equation of a line from a graph

GYM MEMBERSHIP The graph models the total cost of joining a gym. Write an equation of the line. Explain the meaning of the slope and the y-intercept of the line.

Solution

**STEP 1** Find the slope.

\[ m = \frac{363 - 231}{5 - 2} = \frac{132}{3} = 44 \]

**STEP 2** Find the y-intercept. Use the slope and one of the points on the graph.

\[ y = mx + b \quad \text{Use slope-intercept form.} \]

\[ 231 = 44 \cdot 2 + b \quad \text{Substitute for } x, y, \text{ and } m. \]

\[ 143 = b \quad \text{Simplify.} \]

**STEP 3** Write the equation. Because \( m = 44 \) and \( b = 143 \), an equation of the line is \( y = 44x + 143 \).

The equation \( y = 44x + 143 \) models the cost. The slope is the monthly fee, $44, and the y-intercept is the initial cost to join the gym, $143.

**STANDARD FORM** Another form of a linear equation is *standard form*. In standard form, the equation is written as \( Ax + By = C \), where \( A \) and \( B \) are not both zero.

EXAMPLE 5 Graph a line with equation in standard form

Graph \( 3x + 4y = 12 \).

Solution

The equation is in standard form, so you can use the intercepts.

**STEP 1** Find the intercepts.

To find the x-intercept, let \( y = 0 \). To find the y-intercept, let \( x = 0 \).

\[ 3x + 4y = 12 \]

\[ 3x + 4(0) = 12 \]

\[ x = 4 \]

\[ \]

\[ y = 3 \]

**STEP 2** Graph the line.

The intercepts are (4, 0) and (0, 3). Graph these points, then draw a line through the points.
Write and Graph Equations of Lines

DVD RENTAL You can rent DVDs at a local store for $4.00 each. An Internet company offers a flat fee of $15.00 per month for as many rentals as you want. How many DVDs do you need to rent to make the online rental a better buy?

Solution

STEP 1 Model each rental with an equation.

Cost of one month’s rental online: \( y = 15 \)

Cost of one month’s rental locally: \( y = 4x \), where \( x \) represents the number of DVDs rented

STEP 2 Graph each equation.

The point of intersection is (3.75, 15). Using the graph, you can see that it is cheaper to rent locally if you rent 3 or fewer DVDs per month. If you rent 4 or more DVDs per month, it is cheaper to rent online.

WRITING EQUATIONS You can write linear equations to model real-world situations, such as comparing costs to find a better buy.

Guided Practice for Examples 4 and 5

5. The equation \( y = 50x + 125 \) models the total cost of joining a climbing gym. What are the meaning of the slope and the \( y \)-intercept of the line?

Graph the equation.

6. \( 2x - 3y = 6 \)  
7. \( y = 4 \)  
8. \( x = -3 \)

Guided Practice for Example 6

9. WHAT IF? In Example 6, suppose the online rental is $16.50 per month and the local rental is $4 each. How many DVDs do you need to rent to make the online rental a better buy?

10. How would your answer to Exercise 9 change if you had a 2-for-1 coupon that you could use once at the local store?
1. **VOCABULARY** What does intercept mean in the expression slope-intercept form?

2. **★ WRITING** Explain how you can use the standard form of a linear equation to find the intercepts of a line.

**WRITING EQUATIONS** Write an equation of the line shown.

3. \((3, 0)\) \((0, -4)\)
4. \((-5, -3)\) \((0, -2)\)
5. \((-3, 4)\) \((1, -2)\)
6. \((-3, 3)\) \((2, -2)\)
7. \((5, 6)\) \((1, 0)\)
8. \((-5, -1)\) \((1, -3)\)

9. **★ MULTIPLE CHOICE** Which equation is an equation of the line in the graph?
   - **A** \(y = \frac{1}{2}x\)
   - **B** \(y = -\frac{1}{2}x + 1\)
   - **C** \(y = -2x\)
   - **D** \(y = -2x + 1\)

**WRITING EQUATIONS** Write an equation of the line with the given slope \(m\) and \(y\)-intercept \(b\).

10. \(m = -5, b = -12\)
11. \(m = 3, b = 2\)
12. \(m = 4, b = -6\)
13. \(m = -\frac{5}{2}, b = 0\)
14. \(m = \frac{4}{9}, b = -\frac{2}{9}\)
15. \(m = -\frac{11}{5}, b = -12\)

**WRITING EQUATIONS** Write an equation of the line that passes through the given point \(P\) and has the given slope \(m\).

16. \(P(-1, 0), m = -1\)
17. \(P(5, 4), m = 4\)
18. \(P(6, -2), m = 3\)
19. \(P(-8, -2), m = -\frac{2}{3}\)
20. \(P(0, -3), m = -\frac{1}{6}\)
21. \(P(-13, 7), m = 0\)
22. **WRITING EQUATIONS** Write an equation of a line with undefined slope that passes through the point \((3, -2)\).
**PARALLEL LINES** Write an equation of the line that passes through point \( P \) and is parallel to the line with the given equation.

23. \( P(0, -1), y = -2x + 3 \)  
24. \( P(-7, -4), y = 16 \)  
25. \( P(3, 8), y - 1 = \frac{1}{5}(x + 4) \)  
26. \( P(-2, 6), x = -5 \)  
27. \( P(-2, 1), 10x + 4y = -8 \)  
28. \( P(4, 0), -x + 2y = 12 \)

29. ★ **MULTIPLE CHOICE** Line \( a \) passes through points \((-2, 1)\) and \((2, 9)\).
Which equation is an equation of a line parallel to line \( a \)?

- \( A \) \( y = -2x + 5 \)
- \( B \) \( y = -\frac{1}{2}x + 5 \)
- \( C \) \( y = \frac{1}{2}x - 5 \)
- \( D \) \( y = 2x - 5 \)

**PERPENDICULAR LINES** Write an equation of the line that passes through point \( P \) and is perpendicular to the line with the given equation.

30. \( P(0, 0), y = -9x - 1 \)  
31. \( P(-1, 1), y = \frac{7}{3}x + 10 \)  
32. \( P(4, -6), y = -3 \)  
33. \( P(2, 3), y - 4 = -2(x + 3) \)  
34. \( P(0, -5), x = 20 \)  
35. \( P(-8, 0), 3x - 5y = 6 \)

**GRAPHING EQUATIONS** Graph the equation.

36. \( 8x + 2y = -10 \)  
37. \( x + y = 1 \)  
38. \( 4x - y = -8 \)  
39. \( -x + 3y = -9 \)  
40. \( y - 2 = -1 \)  
41. \( y + 2 = x - 1 \)  
42. \( x + 3 = -4 \)  
43. \( 2y - 4 = -x + 1 \)  
44. \( 3(x - 2) = -y - 4 \)

**ERROR ANALYSIS** Describe and correct the error in finding the \( x \)- and \( y \)-intercepts of the graph of \( 5x - 3y = -15 \).

To find the \( x \)-intercept, let \( y = 0 \):

\[
5x - 3(0) = -15
\]

\[
x = -3
\]

To find the \( y \)-intercept, let \( x = 0 \):

\[
5(0) - 3y = -15
\]

\[
y = 5
\]

**IDENTIFYING PARALLEL LINES** Which lines are parallel, if any?

46. \( y = 3x - 4 \)  
47. \( x + 2y = 9 \)  
48. \( x - 6y = 10 \)  
\( x + 3y = 6 \)  
\( y = 0.5x + 7 \)  
\( 6x - y = 11 \)  
\( 3(x + 1) = y - 2 \)  
\( -x + 2y = -5 \)  
\( x + 6y = 12 \)

**USING INTERCEPTS** Identify the \( x \)- and \( y \)-intercepts of the line. Use the intercepts to write an equation of the line.

49.  
50.  
51.  

**INTERCEPTS** A line passes through the points \((-10, -3)\) and \((6, 1)\). Where does the line intersect the \( x \)-axis? Where does the line intersect the \( y \)-axis?
**SOLUTIONS TO EQUATIONS** Graph the linear equations. Then use the graph to estimate how many solutions the equations share.

53. \( y = 4x + 9 \) \\
54. \( 3y + 4x = 16 \) \\
55. \( y = -5x + 6 \) \\
\( 4x - y = 1 \) \\
\( 2x - y = 18 \) \\
\( 10x + 2y = 12 \)

56. **ALGEBRA** Solve Exercises 53–55 algebraically. (For help, see Skills Review Handbook, p. 880.) Make a conjecture about how the solution(s) can tell you whether the lines intersect, are parallel, or are the same line.

57. **ALGEBRA** Find a value for \( k \) so that the line through \((-1, k)\) and \((-7, -2)\) is parallel to the line with equation \( y = x + 1 \).

58. **ALGEBRA** Find a value for \( k \) so that the line through \((k, 2)\) and \((7, 0)\) is perpendicular to the line with equation \( y = x - \frac{28}{5} \).

59. **CHALLENGE** Graph the points \( R(-7, -3)\), \( S(-2, 3) \), and \( T(10, -7) \). Connect them to make \( \triangle RST \). Write an equation of the line containing each side. Explain how you can use slopes to show that \( \triangle RST \) has one right angle.

---

**PROBLEM SOLVING**

**EXAMPLE 4** on p. 182 for Exs. 60–61

60. **WEB HOSTING** The graph models the total cost of using a web hosting service for several months. Write an equation of the line. Tell what the slope and \( y \)-intercept mean in this situation. Then find the total cost of using the web hosting service for one year.

![Web Hosting Chart]

61. **SCIENCE** Scientists believe that a Tyrannosaurus Rex weighed about 2000 kilograms by age 14. It then had a growth spurt for four years, gaining 2.1 kilograms per day. Write an equation to model this situation. What are the slope and \( y \)-intercept? Tell what the slope and \( y \)-intercept mean in this situation.

![Field Museum, Chicago, Illinois]

**EXAMPLE 6** on p. 183 for Exs. 62–65

62. **MULTI-STEP PROBLEM** A national park has two options: a $50 pass for all admissions during the year, or a $4 entrance fee each time you enter.

a. **Model** Write an equation to model the cost of going to the park for a year using a pass and another equation for paying a fee each time.

b. **Graph** Graph both equations you wrote in part (a).

c. **Interpret** How many visits do you need to make for the pass to be cheaper? Explain.
63. **PIZZA COSTS** You are buying slices of pizza for you and your friends. A small slice costs $2 and a large slice costs $3. You have $24 to spend. Write an equation in standard form $Ax + By = C$ that models this situation. What do the values of $A$, $B$, and $C$ mean in this situation?

64. ★ **SHORT RESPONSE** You run at a rate of 4 miles per hour and your friend runs at a rate of 3.5 miles per hour. Your friend starts running 10 minutes before you, and you run for a half hour on the same path. Will you catch up to your friend? Use a graph to support your answer.

65. ★ **EXTENDED RESPONSE** Audrey and Sara are making jewelry. Audrey buys 2 bags of beads and 1 package of clasps for a total of $13. Sara buys 5 bags of beads and 2 packages of clasps for a total of $27.50.

a. Let $b$ be the price of one bag of beads and let $c$ be the price of one package of clasps. Write equations to represent the total cost for Audrey and the total cost for Sara.

b. Graph the equations from part (a).

c. Explain the meaning of the intersection of the two lines in terms of the real-world situation.

66. **CHALLENGE** Michael is deciding which gym membership to buy. Points (2, 112) and (4, 174) give the cost of gym membership at one gym after two and four months. Points (1, 62) and (3, 102) give the cost of gym membership at a second gym after one and three months. Write equations to model the cost of each gym membership. At what point do the graphs intersect, if they intersect? Which gym is cheaper? Explain.
Another Way to Solve Example 6, page 183

MULTIPLE REPRESENTATIONS In Example 6 on page 183, you saw how to graph equations to solve a problem about renting DVDs. Another way you can solve the problem is using a table. Alternatively, you can use the equations to solve the problem algebraically.

DVD RENTAL You can rent DVDs at a local store for $4.00 each. An Internet company offers a flat fee of $15.00 per month for as many rentals as you want. How many DVDs do you need to rent to make the online rental a better buy?

METHOD 1 Using a Table You can make a table to answer the question.

STEP 1 Make a table representing each rental option.

<table>
<thead>
<tr>
<th>DVDs rented</th>
<th>Renting locally</th>
<th>Renting online</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>$4</td>
<td>$15</td>
</tr>
<tr>
<td>2</td>
<td>$8</td>
<td>$15</td>
</tr>
</tbody>
</table>

STEP 2 Add rows to your table until you see a pattern.

<table>
<thead>
<tr>
<th>DVDs rented</th>
<th>Renting locally</th>
<th>Renting online</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>$4</td>
<td>$15</td>
</tr>
<tr>
<td>2</td>
<td>$8</td>
<td>$15</td>
</tr>
<tr>
<td>3</td>
<td>$12</td>
<td>$15</td>
</tr>
<tr>
<td>4</td>
<td>$16</td>
<td>$15</td>
</tr>
<tr>
<td>5</td>
<td>$20</td>
<td>$15</td>
</tr>
<tr>
<td>6</td>
<td>$24</td>
<td>$15</td>
</tr>
</tbody>
</table>

STEP 3 Analyze the table. Notice that the values in the second column (the cost of renting locally) are less than the values in the third column (the cost of renting online) for three or fewer DVDs. However, the values in the second column are greater than those in the third column for four or more DVDs.

- It is cheaper to rent locally if you rent 3 or fewer DVDs per month.
  If you rent 4 or more DVDs per month, it is cheaper to rent online.
Method 2

Using Algebra You can solve one of the equations for one of its variables. Then substitute that expression for the variable in the other equation.

**STEP 1** Write an equation for each rental option.
- Cost of one month’s rental online: \( y = 15 \)
- Cost of one month’s rental locally: \( y = 4x \), where \( x \) represents the number of DVDs rented

**STEP 2** Substitute the value of \( y \) from one equation into the other equation.

\[
y = 4x \\
15 = 4x \quad \text{Substitute 15 for } y. \\
3.75 = x \quad \text{Divide each side by 4.}
\]

**STEP 3** Analyze the solution of the equation. If you could rent 3.75 DVDs, your cost for local and online rentals would be the same. However, you can only rent a whole number of DVDs. Look at what happens when you rent 3 DVDs and when you rent 4 DVDs, the whole numbers just less than and just greater than 3.75.

- It is cheaper to rent locally if you rent 3 or fewer DVDs per month. If you rent 4 or more DVDs per month, it is cheaper to rent online.

Practice

1. **IN-LINE SKATES** You can rent in-line skates for $5 per hour, or buy a pair of skates for $130. How many hours do you need to skate for the cost of buying skates to be cheaper than renting them?

2. **WHAT IF?** Suppose the in-line skates in Exercise 1 also rent for $12 per day. How many days do you need to skate for the cost of buying skates to be cheaper than renting them?

3. **BUTTONS** You buy a button machine for $200 and supplies to make one hundred fifty buttons for $30. Suppose you charge $2 for a button. How many buttons do you need to sell to earn back what you spent?

4. **MANUFACTURING** A company buys a new widget machine for $1200. It costs $5 to make each widget. The company sells each widget for $15. How many widgets do they need to sell to earn back the money they spent on the machine?

5. **WRITING** Which method(s) did you use to solve Exercises 1–4? Explain your choice(s).

6. **MONEY** You saved $1000. If you put this money in a savings account, it will earn 1.5% annual interest. If you put the $1000 in a certificate of deposit (CD), it will earn 3% annual interest. To earn the most money, does it ever make sense to put your money in the savings account? Explain.
3.6 Prove Theorems About Perpendicular Lines

Key Vocabulary
- distance from a point to a line

ACTIVITY FOLD PERPENDICULAR LINES

Materials: paper, protractor

STEP 1
Fold a piece of paper.

STEP 2
Fold the paper again, so that the original fold lines up on itself.

STEP 3
Unfold the paper.

DRAW CONCLUSIONS
1. What type of angles appear to be formed where the fold lines intersect?
2. Measure the angles with a protractor. Which angles are congruent? Which angles are right angles?

The activity above suggests several properties of perpendicular lines.

THEOREMS

THEOREM 3.8
If two lines intersect to form a linear pair of congruent angles, then the lines are perpendicular.

If \( \angle 1 \cong \angle 2 \), then \( g \perp h \).

Proof: Ex. 31, p. 196

THEOREM 3.9
If two lines are perpendicular, then they intersect to form four right angles.

If \( a \perp b \), then \( \angle 1, \angle 2, \angle 3, \angle 4 \) are right angles.

Proof: Ex. 32, p. 196
EXAMPLE 1 \textbf{Draw conclusions}

In the diagram at the right, $\overrightarrow{AB} \perp \overrightarrow{BC}$. What can you conclude about $\angle 1$ and $\angle 2$?

\textbf{Solution}

$\overrightarrow{AB}$ and $\overrightarrow{BC}$ are perpendicular, so by Theorem 3.9, they form four right angles. You can conclude that $\angle 1$ and $\angle 2$ are right angles, so $\angle 1 \equiv \angle 2$.

\textbf{THEOREM}

\textbf{THEOREM 3.10}

If two sides of two adjacent acute angles are perpendicular, then the angles are complementary.

If $\overrightarrow{BA} \perp \overrightarrow{BC}$, then $\angle 1$ and $\angle 2$ are complementary.

\textit{Proof:} Example 2, below

EXAMPLE 2 \textbf{Prove Theorem 3.10}

Prove that if two sides of two adjacent acute angles are perpendicular, then the angles are complementary.

\textbf{GIVEN} $\overrightarrow{ED} \perp \overrightarrow{EF}$

\textbf{PROVE} $\angle 7$ and $\angle 8$ are complementary.

\begin{tabular}{|l|l|}
\hline
\textbf{STATEMENTS} & \textbf{REASONS} \\
\hline
1. $\overrightarrow{ED} \perp \overrightarrow{EF}$ & 1. Given \\
2. $\angle DEF$ is a right angle. & 2. $\perp$ lines intersect to form 4 rt. $\triangle$.
(Theorem 3.9) \\
3. $m \angle DEF = 90^\circ$ & 3. Definition of a right angle \\
4. $m \angle 7 + m \angle 8 = m \angle DEF$ & 4. Angle Addition Postulate \\
5. $m \angle 7 + m \angle 8 = 90^\circ$ & 5. Substitution Property of Equality \\
6. $\angle 7$ and $\angle 8$ are complementary. & 6. Definition of complementary angles \\
\hline
\end{tabular}

\textbf{GUIDED PRACTICE} \textbf{for Examples 1 and 2}

1. Given that $\angle ABC \equiv \angle ABD$, what can you conclude about $\angle 3$ and $\angle 4$? Explain how you know.

2. Write a plan for proof for Theorem 3.9, that if two lines are perpendicular, then they intersect to form four right angles.
THEOREMS

**Theorem 3.11** Perpendicular Transversal Theorem

If a transversal is perpendicular to one of two parallel lines, then it is perpendicular to the other.

If \( h \parallel k \) and \( j \perp h \), then \( j \perp k \).

*Proof:* Ex. 42, p. 160; Ex. 33, p. 196

**Theorem 3.12** Lines Perpendicular to a Transversal Theorem

In a plane, if two lines are perpendicular to the same line, then they are parallel to each other.

If \( m \perp p \) and \( n \perp p \), then \( m \parallel n \).

*Proof:* Ex. 34, p. 196

---

**Example 3** Draw Conclusions

Determine which lines, if any, must be parallel in the diagram. Explain your reasoning.

**Solution**

Lines \( p \) and \( q \) are both perpendicular to \( s \), so by Theorem 3.12, \( p \parallel q \). Also, lines \( s \) and \( t \) are both perpendicular to \( q \), so by Theorem 3.12, \( s \parallel t \).

---

**Guided Practice for Example 3**

Use the diagram at the right.

3. Is \( b \parallel a \)? Explain your reasoning.
4. Is \( b \perp c \)? Explain your reasoning.

---

**Distance from a Line**

The **distance from a point to a line** is the length of the perpendicular segment from the point to the line. This perpendicular segment is the shortest distance between the point and the line. For example, the distance between point \( A \) and line \( k \) is \( AB \). You will prove this in Chapter 5.

The **distance between two parallel lines** is the length of any perpendicular segment joining the two lines. For example, the distance between line \( p \) and line \( m \) above is \( CD \) or \( EF \).
EXAMPLE 4  Find the distance between two parallel lines

SCULPTURE  The sculpture below is drawn on a graph where units are measured in inches. What is the approximate length of \( \overline{SR} \), the depth of a seat?

\[ \text{Solution} \]

You need to find the length of a perpendicular segment from a back leg to a front leg on one side of the chair.

Using the points \( P(30, 80) \) and \( R(50, 110) \), the slope of each leg is

\[
\frac{110 - 80}{50 - 30} = \frac{30}{20} = \frac{3}{2}.
\]

The segment \( SR \) has a slope of

\[
\frac{120 - 110}{35 - 50} = \frac{10}{15} = \frac{2}{3}.
\]

The segment \( \overline{SR} \) is perpendicular to the leg so the distance \( SR \) is

\[
d = \sqrt{(35 - 50)^2 + (120 - 110)^2} = 18.0 \text{ inches.}
\]

The length of \( \overline{SR} \) is about 18.0 inches.

GUIDED PRACTICE for Example 4

Use the graph at the right for Exercises 5 and 6.

5. What is the distance from point \( A \) to line \( c \)?
6. What is the distance from line \( c \) to line \( d \)?

7. Graph the line \( y = x + 1 \). What point on the line is the shortest distance from the point \( (4, 1) \)? What is the distance? Round to the nearest tenth.
1. **VOCABULARY** The length of which segment shown is called the distance between the two parallel lines? Explain.

2. **JUSTIFYING STATEMENTS** Write the theorem that justifies the statement.
   2. \( j \perp k \)
   3. \( \angle 4 \) and \( \angle 5 \) are complementary.
   4. \( \angle 1 \) and \( \angle 2 \) are right angles.

3. **APPLYING THEOREMS** Find \( m \angle 1 \).
   5.
   6.
   7.

4. **SHOWING LINES PARALLEL** Explain how you would show that \( m \) \( \parallel n \).
   8.
   9.
   10.

5. **SHORT RESPONSE** Explain how to draw two parallel lines using only a straightedge and a protractor.

6. **SHORT RESPONSE** Describe how you can fold a sheet of paper to create two parallel lines that are perpendicular to the same line.

7. **ERROR ANALYSIS** Explain why the statement about the figure is incorrect.
   13. Lines \( y \) and \( z \) are parallel.
   14. The distance from \( \overrightarrow{AB} \) to point \( C \) is 12 cm.
FINDING ANGLE MEASURES  In the diagram, $FG \perp GH$. Find the value of $x$.

15. $\angle FG \perp \angle GH$. Find the value of $x$.

16. $\angle 20\degree \perp \angle F\perp \angle 25\degree$. Find the value of $x$.

17. $\angle (2x - 9\degree) \perp \angle x$. Find the value of $x$.

DRAWING CONCLUSIONS  Determine which lines, if any, must be parallel. Explain your reasoning.

18. 19. 20.

21. ★ MULTIPLE CHOICE  Which statement must be true if $c \perp d$?
   - $m \angle 1 + m \angle 2 = 90\degree$  
   - $m \angle 1 + m \angle 2 < 90\degree$
   - $m \angle 1 + m \angle 2 > 90\degree$
   - Cannot be determined

22. ★ WRITING  Explain why the distance between two lines is only defined for parallel lines.

FINDING DISTANCES  Use the Distance Formula to find the distance between the two parallel lines. Round to the nearest tenth, if necessary.

23. 24.

25. CONSTRUCTION  You are given a line $n$ and a point $P$ not on $n$. Use a compass to find two points on $n$ equidistant from $P$. Then use the steps for the construction of a segment bisector (page 33) to construct a line perpendicular to $n$ through $P$.

26. FINDING ANGLES  Find all the unknown angle measures in the diagram at the right. Justify your reasoning for each angle measure.

27. FINDING DISTANCES  Find the distance between the lines with the equations $y = \frac{3}{2}x + 4$ and $-3x + 2y = -1$.

28. CHALLENGE  Describe how you would find the distance from a point to a plane. Can you find the distance from a line to a plane? Explain.
29. **STREAMS** You are trying to cross a stream from point A. Which point should you jump to in order to jump the shortest distance? Explain.

![Image of a stream with points A, B, C, D, and E]

30. ★ **SHORT RESPONSE** The segments that form the path of a crosswalk are usually perpendicular to the crosswalk. Sketch what the segments would look like if they were perpendicular to the crosswalk. Which method requires less paint? Explain.

![Image of a crosswalk]

31. **PROVING THEOREM 3.8** Copy and complete the proof that if two lines intersect to form a linear pair of congruent angles, then the lines are perpendicular.

**GIVEN** \( \angle 1 \) and \( \angle 2 \) are a linear pair.
\( \angle 1 = \angle 2 \)

**PROVE** \( g \perp h \)

### Quiz for Lessons 3.5–3.6

Write an equation of the line that passes through point $P$ and is parallel to the line with the given equation. (p. 180)

1. $P(0, 0), y = -3x + 1$
2. $P(-5, -6), y = 2x + 10$
3. $P(1, -2), x = 15$

Write an equation of the line that passes through point $P$ and is perpendicular to the line with the given equation. (p. 180)

4. $P(3, 4), y = 2x - 1$
5. $P(2, 5), y = -6$
6. $P(4, 0), 12x + 3y = 9$

Determine which lines, if any, must be parallel. Explain. (p. 190)

7. 

$$\begin{array}{ccc}
v & w & x \\
y & & \\
\end{array}$$

8. 

$$\begin{array}{ccc}
a & b & \ \\
y & & c \\
\end{array}$$

9.

**Extension**  
Use after Lesson 3.6

**Taxicab Geometry**

**GOAL** Find distances in a non-Euclidean geometry.

You have learned that the shortest distance between two points is the length of the straight line segment between them. This is true in the *Euclidean* geometry that you are studying. But think about what happens when you are in a city and want to get from point $A$ to point $B$. You cannot walk through the buildings, so you have to go along the streets.

**Taxicab geometry** is the non-Euclidean geometry that a taxicab or a pedestrian must obey.

In taxicab geometry, you can travel either horizontally or vertically parallel to the axes. In this geometry, the distance between two points is the shortest number of *blocks* between them.

**KEY CONCEPT**

**Taxicab Distance**

The distance between two points is the sum of the differences in their coordinates.

$$AB = |x_2 - x_1| + |y_2 - y_1|$$

**EXAMPLE 1** Find a taxicab distance

Find the taxicab distance from $A(-1, 5)$ to $B(4, 2)$. Draw two different shortest paths from $A$ to $B$.

**Solution**

$$AB = |x_2 - x_1| + |y_2 - y_1|$$

$$= |4 - (-1)| + |2 - 5|$$

$$= 5 + 3$$

$$= 8$$

The shortest path is 8 blocks. Two possible paths are shown.

**HISTORY NOTE**

Euclidean geometry is named after a Greek mathematician. Euclid (circa third century B.C.) used postulates and deductive reasoning to prove the theorems you are studying in this book.

Non-Euclidean geometries start by assuming different postulates, so they result in different theorems.

**REVIEW**

**Absolute Value**  
For help with absolute value, see p. 870.
**CIRCLES** In Euclidean geometry, a *circle* is all points that are the same distance from a fixed point, called the *center*. That distance is the *radius*. Taxicab geometry uses the same definition for a circle, but taxicab circles are not round.

---

**EXAMPLE 2** Draw a taxicab circle

Draw the taxicab circle with the given radius $r$ and center $C$.

- **a.** $r = 2, C(1,3)$
- **b.** $r = 1, C(-2,-4)$

---

**PRACTICE**

**EXAMPLE 1** on p. 198 for Exs. 1–6

**EXAMPLE 2** on p. 199 for Exs. 7–9

**FINDING DISTANCE** Find the taxicab distance between the points.

1. $(4,2), (0,0)$  
2. $(3,5), (6,2)$  
3. $(-6,3), (8,5)$  
4. $(-1,-3), (5,-2)$  
5. $(-3,5), (-1,5)$  
6. $(-7,3), (-7,-4)$

**DRAWING CIRCLES** Draw the taxicab circle with radius $r$ and center $C$.

7. $r = 2, C(3,4)$  
8. $r = 4, C(0,0)$  
9. $r = 5, C(-1,3)$

**FINDING MIDPOINTS** A *midpoint* in taxicab geometry is a point where the distance to the endpoints are equal. Find all the midpoints of $AB$.

10. $A(2,4), B(-2,-2)$  
11. $A(1,-3), B(1,3)$  
12. $A(2,2), B(-3,0)$

13. **TRAVEL PLANNING** A hotel’s website claims that the hotel is an easy walk to a number of sites of interest. What are the coordinates of the hotel?

14. **REASONING** The taxicab distance between two points is always greater than or equal to the Euclidean distance between the two points. *Explain* what must be true about the points for both distances to be equal.
1. **MULTI-STEP PROBLEM** You are planning a party. You would like to have the party at a roller skating rink or bowling alley. The table shows the total cost to rent the facilities by number of hours.

<table>
<thead>
<tr>
<th>Hours</th>
<th>Roller skating rink cost ($)</th>
<th>Bowling alley cost ($)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>35</td>
<td>20</td>
</tr>
<tr>
<td>2</td>
<td>70</td>
<td>40</td>
</tr>
<tr>
<td>3</td>
<td>105</td>
<td>60</td>
</tr>
<tr>
<td>4</td>
<td>140</td>
<td>80</td>
</tr>
<tr>
<td>5</td>
<td>175</td>
<td>100</td>
</tr>
</tbody>
</table>

   a. Use the data in the table. Write and graph two equations to represent the total cost $y$ to rent the facilities, where $x$ is the number of hours you rent the facility.

   b. Are the lines from part (a) parallel? Explain why or why not.

   c. What is the meaning of the slope in each equation from part (a)?

   d. Suppose the bowling alley charges an extra $25 set-up fee. Write and graph an equation to represent this situation. Is this line parallel to either of the lines from part (a)? Explain why or why not.

2. **GRIDDED ANSWER** The graph models the accumulated cost of buying a used guitar and taking lessons over the first several months. Find the slope of the line.

   a. How high is the car at the top of its climb compared to its starting height?

   b. Find the slope of the climb.

   c. Another cable car incline in Pennsylvania, the Monongahela Incline, climbs at a slope of about 0.7 for a horizontal distance of about 517 feet. Compare this climb to that of the Johnstown Inclined Plane. Which is steeper? Justify your answer.

3. **OPEN-ENDED** Write an equation of a line parallel to $2x + 3y = 6$. Then write an equation of a line perpendicular to your line.

4. **SHORT RESPONSE** You are walking across a field to get to a hiking path. Use the graph below to find the shortest distance you can walk to reach the path. Explain how you know you have the shortest distance.

5. **EXTENDED RESPONSE** The Johnstown Inclined Plane in Johnstown, Pennsylvania, is a cable car that transports people up and down the side of a hill. During the cable car’s climb, you move about 17 feet upward for every 25 feet you move forward. At the top of the incline, the horizontal distance from where you started is about 500 feet.

   a. How high is the car at the top of its climb compared to its starting height?

   b. Find the slope of the climb.

   c. Another cable car incline in Pennsylvania, the Monongahela Incline, climbs at a slope of about 0.7 for a horizontal distance of about 517 feet. Compare this climb to that of the Johnstown Inclined Plane. Which is steeper? Justify your answer.
**Big Idea 1: Using Properties of Parallel and Perpendicular Lines**

When parallel lines are cut by a transversal, angle pairs are formed. Perpendicular lines form congruent right angles.

- $\angle 2$ and $\angle 6$ are corresponding angles, and they are congruent.
- $\angle 3$ and $\angle 6$ are alternate interior angles, and they are congruent.
- $\angle 1$ and $\angle 8$ are alternate exterior angles, and they are congruent.
- $\angle 3$ and $\angle 5$ are consecutive interior angles, and they are supplementary.

If $a \perp b$, then $\angle 1, \angle 2, \angle 3,$ and $\angle 4$ are all right angles.

**Big Idea 2: Proving Relationships Using Angle Measures**

You can use the angle pairs formed by lines and a transversal to show that the lines are parallel. Also, if lines intersect to form a right angle, you know that the lines are perpendicular.

Through point $A$ not on line $q$, there is only one line $r$ parallel to $q$ and one line $s$ perpendicular to $q$.

**Big Idea 3: Making Connections to Lines in Algebra**

In Algebra 1, you studied slope as a rate of change and linear equations as a way of modeling situations.

Slope and equations of lines are also a useful way to represent the lines and segments that you study in Geometry. For example, the slopes of parallel lines are the same $(a \parallel b)$, and the product of the slopes of perpendicular lines is $-1$ $(a \perp c, \text{ and } b \perp c)$. 
VOCABULARY EXERCISES

1. Copy and complete: Two lines that do not intersect and are not coplanar are called ___.

2. WRITING Compare alternate interior angle pairs and consecutive interior angle pairs.

Copy and complete the statement using the figure at the right.

3. \( \angle 1 \) and ___ are corresponding angles.

4. \( \angle 3 \) and ___ are alternate interior angles.

5. \( \angle 4 \) and ___ are consecutive interior angles.

6. \( \angle 7 \) and ___ are alternate exterior angles.

Identify the form of the equation as slope-intercept form or standard form.

7. \( 14x - 2y = 26 \)  

8. \( y = 7x - 13 \)

REVIEW EXAMPLES AND EXERCISES

Use the review examples and exercises below to check your understanding of the concepts you have learned in each lesson of Chapter 3.

3.1 Identify Pairs of Lines and Angles

Think of each segment in the rectangular box at the right as part of a line.

a. \( \overline{BD}, \overline{AC}, \overline{BH}, \) and \( \overline{AG} \) appear perpendicular to \( \overline{AB} \).

b. \( \overrightarrow{CD}, \overrightarrow{GH}, \) and \( \overrightarrow{EF} \) appear parallel to \( \overrightarrow{AB} \).

c. \( \overrightarrow{CF} \) and \( \overrightarrow{EG} \) appear skew to \( \overrightarrow{AB} \).

d. Plane \( EFG \) appear parallel to plane \( ABC \).
EXERCISES

Think of each segment in the diagram of a rectangular box as part of a line. Which line(s) or plane(s) contain point \( N \) and appear to fit the description?

9. Line(s) perpendicular to \( \overrightarrow{QR} \)
10. Line(s) parallel to \( \overrightarrow{QR} \)
11. Line(s) skew to \( \overrightarrow{QR} \)
12. Plane(s) parallel to plane \( LMQ \)

3.2 Use Parallel Lines and Transversals

**EXAMPLE**

Use properties of parallel lines to find the value of \( x \).

By the Vertical Angles Congruence Theorem, \( m \angle 6 = 50^\circ \).

\[
(x - 5)^\circ + m \angle 6 = 180^\circ \quad \text{Consecutive Interior Angles Theorem}
\]

\[
(x - 5)^\circ + 50^\circ = 180^\circ \quad \text{Substitute 50° for } m \angle 6.
\]

\[
x = 135 \quad \text{Solve for } x.
\]

**EXERCISES**

Find \( m \angle 1 \) and \( m \angle 2 \). Explain your reasoning.

Find the values of \( x \) and \( y \).

16. 17. 18.

19. **FLAG OF PUERTO RICO** Sketch the rectangular flag of Puerto Rico as shown at the right. Find the measure of \( \angle 1 \) if \( m \angle 3 = 55^\circ \). Justify each step in your argument.
### 3.3 Prove Lines are Parallel

**Example**

Find the value of $x$ that makes $m \parallel n$.

Lines $m$ and $n$ are parallel when the marked corresponding angles are congruent.

\[
(5x + 8)^\circ = 53^\circ \\
5x = 45 \\
x = 9
\]

The lines $m$ and $n$ are parallel when $x = 9$.

**Exercises**

Find the value of $x$ that makes $m \parallel n$.

20. 21. 22.

![Diagram showing angles and lines](image)

### 3.4 Find and Use Slopes of Lines

**Example**

Find the slope of each line. Which lines are parallel?

Slope of $l = \frac{-1 - 5}{-3 - (-5)} = \frac{-6}{2} = -3$

Slope of $m = \frac{1 - 5}{0 - (-1)} = \frac{-4}{1} = -4$

Slope of $n = \frac{0 - 4}{4 - 3} = -4$

Because $m$ and $n$ have the same slope, they are parallel. The slope of $l$ is different, so $l$ is not parallel to the other lines.

**Exercises**

Tell whether the lines through the given points are parallel, perpendicular, or neither.

23. Line 1: $(8, 12), (7, -5)$  
   Line 2: $(-9, 3), (8, 2)$

24. Line 1: $(3, -4), (-1, 4)$  
   Line 2: $(2, 7), (5, 1)$
3.5 Write and Graph Equations of Lines

**Example**

Write an equation of the line \( k \) passing through the point \((-4, 1)\) that is perpendicular to the line \( n \) with the equation \( y = 2x - 3 \).

First, find the slope of line \( k \). Line \( n \) has a slope of 2. Then, use the given point and the slope in the slope-intercept form to find the \( y \)-intercept.

\[
2 \cdot m = -1 \\
m = -\frac{1}{2}
\]

\[
y = mx + b \\
1 = -\frac{1}{2}(-4) + b \\
-1 = b
\]

An equation of line \( k \) is \( y = -\frac{1}{2}x - 1 \).

**Exercises**

Write equations of the lines that pass through point \( P \) and are (a) parallel and (b) perpendicular to the line with the given equation.

25. \( P(3, -1), y = 6x - 4 \)
26. \( P(-6, 5), 7y + 4x = 2 \)

3.6 Prove Theorems About Perpendicular Lines

**Example**

Find the distance between \( y = 2x + 3 \) and \( y = 2x + 8 \).

Find the length of a perpendicular segment from one line to the other. Both lines have a slope of 2, so the slope of a perpendicular segment to each line is \(-\frac{1}{2}\).

The segment from \((0, 3)\) to \((-2, 4)\) has a slope of \(\frac{4 - 3}{-2 - 0} = -\frac{1}{2}\). So, the distance between the lines is

\[
d = \sqrt{(-2 - 0)^2 + (4 - 3)^2} = \sqrt{5} \approx 2.2 \text{ units.}
\]

**Exercises**

Use the Distance Formula to find the distance between the two parallel lines. Round to the nearest tenth, if necessary.

27. \( P(-1, 3), y = 2x + 2 \)
28. \( P(0, 1), y = 2x + 2 \)
CHAPTER TEST

Classify the pairs of angles as corresponding, alternate interior, alternate exterior, or consecutive interior.
1. \( \angle 1 \) and \( \angle 8 \)  
2. \( \angle 2 \) and \( \angle 6 \)  
3. \( \angle 3 \) and \( \angle 5 \)  
4. \( \angle 4 \) and \( \angle 5 \)  
5. \( \angle 3 \) and \( \angle 7 \)  
6. \( \angle 3 \) and \( \angle 6 \)

Find the value of \( x \).
7. \( \angle 1 \) and \( \angle 8 \)  
8. \( \angle 2 \) and \( \angle 6 \)  
9. \( \angle 3 \) and \( \angle 7 \)

Find the value of \( x \) that makes \( m \parallel n \).
10. \( (18x - 22)^\circ \)  
11. \( (4x + 11)^\circ \)  
12. \( (x + 17)^\circ \)

Find the slope of the line that passes through the points.
13. \( (3, -1), (3, 4) \)  
14. \( (2, 7), (-1, -3) \)  
15. \( (0, 5), (-6, 12) \)

Write an equation of the line that passes through the given point \( P \) and has the given slope \( m \).
16. \( P(-2, 4), m = 3 \)  
17. \( P(7, 12), m = -0.2 \)  
18. \( P(3, 5), m = -8 \)

Write an equation of the line that passes through point \( P \) and is perpendicular to the line with the given equation.
19. \( P(1, 3), y = 2x - 1 \)  
20. \( P(0, 2), y = -x + 3 \)  
21. \( P(2, -3), x - y = 4 \)

In Exercises 22–24, \( \overline{AB} \perp \overline{BC} \). Find the value of \( x \).
22. \( \angle 1 \) and \( \angle 8 \)  
23. \( \angle 2 \) and \( \angle 6 \)  
24. \( \angle 3 \) and \( \angle 7 \)

25. RENTAL COSTS  The graph at the right models the cost of renting a moving van. Write an equation of the line. Then find the cost of renting the van for a 100 mile trip.
Graph and Solve Linear Inequalities

**Example 1**  Graph a linear inequality in two variables

Graph the inequality \( 0 > 2x - 3 - y \).

**Solution**

Rewrite the inequality in slope-intercept form, \( y > 2x - 3 \).

The boundary line \( y = 2x - 3 \) is not part of the solution, so use a dashed line.

To decide where to shade, use a point not on the line, such as \((0, 0)\), as a test point. Because \(0 > 2 \cdot 0 - 3\), \((0, 0)\) is a solution. Shade the half-plane that includes \((0, 0)\).

**Example 2**  Use an inequality to solve a real-world problem

**Savings** Lily has saved $49. She plans to save $12 per week to buy a camera that costs $124. In how many weeks will she be able to buy the camera?

**Solution**

Let \( w \) represent the number of weeks needed.

\[
\begin{align*}
49 + 12w & \geq 124 \\
12w & \geq 75 \\
w & \geq 6.25
\end{align*}
\]

She must save for 7 weeks to be able to buy the camera.

**Exercises**

Graph the linear inequality.

1. \( y > -2x + 3 \)  
2. \( y \leq 0.5x - 4 \)  
3. \(-2.5x + y \geq 1.5\)  
4. \( x < 3 \)

5. \( y < -2 \)  
6. \( 5x - y > -5 \)  
7. \( 2x + 3y \geq -18 \)  
8. \( 3x - 4y \leq 6 \)

Solve.

9. **Loans** Eric borrowed $46 from his mother. He will pay her back at least $8 each month. At most, how many months will it take him?

10. **Grades** Manuel’s quiz scores in history are 76, 81, and 77. What score must he get on his fourth quiz to have an average of at least 80?

11. **Phone Calls** Company A charges a monthly fee of $5 and $.07 per minute for phone calls. Company B charges no monthly fee, but charges $.12 per minute. After how many minutes of calls is the cost of using Company A less than the cost of using Company B?
MULTIPLE CHOICE QUESTIONS

If you have difficulty solving a multiple choice problem directly, you may be able to use another approach to eliminate incorrect answer choices and obtain the correct answer.

**Problem 1**

Which ordered pair is a solution of the equations $y = 2x - 5$ and $4x + 3y = 45$?

- A (3, 11)
- B (5, 5)
- C (6, 7)
- D (7, 6)

**Method 1**

**SOLVE DIRECTLY** Find the ordered pair that is the solution by using substitution.

Because the first equation is solved for $y$, substitute $y = 2x - 5$ into $4x + 3y = 45$.

- $4x + 3y = 45$
- $4x + 3(2x - 5) = 45$
- $4x + 6x - 15 = 45$
- $10x - 15 = 45$
- $10x = 60$
- $x = 6$

Solve for $y$ by substituting 6 for $x$ in the first equation.

- $y = 2x - 5$
- $y = 2(6) - 5$
- $y = 12 - 5$
- $y = 7$

So, the solution of the linear system is (6, 7), which is choice C. **A** **B** **C** **D**

**Method 2**

**ELIMINATE CHOICES** Another method is to eliminate incorrect answer choices.

Substitute choice A into the equations.

- $y = 2x - 5$
- $11 \neq 2(3) - 5$
- $11 \neq 6 - 5$
- $11 \neq 1 \times$

The point is not a solution of $y = 2x - 5$, so there is no need to check the other equation. You can eliminate choice A.

Substitute choice B into the equations.

- $y = 2x - 5$
- $4x + 3y = 45$
- $5 \neq 2(5) - 5$
- $4(5) + 3(5) \neq 45$
- $5 \neq 10 - 5$
- $20 + 15 \neq 45$
- $5 = 5 \checkmark$
- $35 \neq 45 \times$

You can eliminate choice B.

Substitute choice C into the equations.

- $y = 2x - 5$
- $4x + 3y = 45$
- $7 \neq 2(6) - 5$
- $4(6) + 3(7) \neq 45$
- $7 \neq 12 - 5$
- $24 + 21 \neq 45$
- $7 = 7 \checkmark$
- $45 = 45 \checkmark$

Choice C makes both equations true, so, the answer is choice C. **A** **B** **C** **D**
**Problem 2**

Which equation is an equation of the line through the point \((-1, 1)\) and perpendicular to the line through the points \((2, 4)\) and \((-4, 6)\)?

- **A** \(y = -\frac{1}{3}x + \frac{2}{3}\)
- **B** \(y = 3x + 4\)
- **C** \(y = \frac{1}{3}x + \frac{4}{3}\)
- **D** \(y = 3x - 2\)

**Method 1**

**Solve Directly** Find the slope of the line through the points \((2, 4)\) and \((-4, 6)\).

\[
m = \frac{6 - 4}{-4 - 2} = \frac{2}{-6} = -\frac{1}{3}
\]

The slope of the line perpendicular to this line is \(3\), because \(3 \cdot \left(-\frac{1}{3}\right) = -1\). Use \(y = 3x + b\) and the point \((-1, 1)\) to find \(b\).

\[1 = 3(-1) + b, \text{ so } b = 4.\]

The equation of the line is \(y = 3x + 4\). The correct answer is **B**. \(\text{A B C D}\)

**Method 2**

**Eliminate Choices** Another method to consider is to eliminate choices based on the slope, then substitute the point to find the correct equation.

\[
m = \frac{6 - 4}{-4 - 2} = -\frac{1}{3}
\]

The slope of the line perpendicular to this line is \(3\). Choices **A** and **C** do not have a slope of \(3\), so you can eliminate these choices. Next, try substituting the point \((-1, 1)\) into answer choice **B**.

\[1 \neq 3(-1) + 4\]

This is a true statement.

The correct answer is **B**. \(\text{A B C D}\)

**Practice**

*Explain why you can eliminate the highlighted answer choice.*

1. Use the diagram below. Which pair of angles are alternate exterior angles?
   - **A** 4 and 5
   - **B** 2 and 6
   - **C** 1 and 8
   - **D** 1 and 10

2. Which equation is an equation of the line parallel to the line through the points \((-1, 4)\) and \((1, 1)\)?
   - **A** \(y = -\frac{3}{2}x - 3\)
   - **B** \(y = \frac{3}{2}x - 3\)
   - **C** \(y = \frac{2}{3}x - \frac{3}{3}\)
   - **D** \(y = 3x - 3\)

Standardized Test Preparation 209
1. A line is to be drawn through point \( P \) in the graph so that it never crosses the \( y \)-axis. Through which point does it pass?

\[ \begin{align*}
\text{A} & : (-2, 3) \\
\text{B} & : (-3, -2) \\
\text{C} & : (3, 2) \\
\text{D} & : (-3, 2)
\end{align*} \]

2. Which equation is an equation of a line parallel to \(-2x + 3y = 15\)?

\[ \begin{align*}
\text{A} & : \ y = \frac{2}{3}x + 7 \\
\text{B} & : \ y = \frac{2}{3}x + 7 \\
\text{C} & : \ y = -\frac{3}{2}x + 7 \\
\text{D} & : \ y = -6x + 7
\end{align*} \]

3. Two trains, \( E \) and \( F \), travel along parallel tracks. Each track is 110 miles long. They begin their trips at the same time. Train \( E \) travels at a rate of 55 miles per hour and train \( F \) travels at a rate of 22 miles per hour. How many miles will train \( F \) have left to travel after train \( E \) completes its trip?

\[ \begin{align*}
\text{A} & : 5 \text{ miles} \\
\text{B} & : 33 \text{ miles} \\
\text{C} & : 60 \text{ miles} \\
\text{D} & : 66 \text{ miles}
\end{align*} \]

4. A line segment is parallel to the \( y \)-axis and is 9 units long. The two endpoints are \((3, 6)\) and \((a, b)\). What is a value of \( b \)?

\[ \begin{align*}
\text{A} & : -6 \\
\text{B} & : -3 \\
\text{C} & : 3 \\
\text{D} & : 6
\end{align*} \]

5. Which equation is an equation of a line perpendicular to \( y = 5x + 7 \)?

\[ \begin{align*}
\text{A} & : \ y = -5x + 9 \\
\text{B} & : \ y = 5x + 16 \\
\text{C} & : \ y = \frac{1}{5}x + 7 \\
\text{D} & : \ y = -\frac{1}{5}x + 7
\end{align*} \]

6. According to the graph, which is the closest approximation of the decrease in sales between week 4 and week 5?

\[ \begin{align*}
\text{A} & : 24 \text{ DVD players} \\
\text{B} & : 20 \text{ DVD players} \\
\text{C} & : 18 \text{ DVD players} \\
\text{D} & : 15 \text{ DVD players}
\end{align*} \]

7. In the diagram, \( m \parallel n \). Which pair of angles have equal measures?

\[ \begin{align*}
\text{A} & : \angle 3 \text{ and } \angle 5 \\
\text{B} & : \angle 4 \text{ and } \angle 7 \\
\text{C} & : \angle 1 \text{ and } \angle 9 \\
\text{D} & : \angle 2 \text{ and } \angle 6
\end{align*} \]

8. Five lines intersect as shown in the diagram. Lines \( a \), \( b \), and \( c \) are parallel. What is the value of \( x + y \)?

\[ \begin{align*}
\text{A} & : 125 \\
\text{B} & : 165 \\
\text{C} & : 195 \\
\text{D} & : 235
\end{align*} \]
9. What is the slope of a line perpendicular to \(5x - 3y = 9\)?

10. What is the slope of the line passing through the points (1, 1) and (−2, −2)?

11. What is the \(y\)-intercept of the line that is parallel to the line \(2x - y = 3\) and passes through the point (−3, 4)?

12. What is the value of \(a\) if line \(j\) is parallel to line \(k\)?

13. Explain how you know that lines \(m\) and \(n\) are parallel to each other.

14. What is one possible value for the slope of a line passing through the point (1, 1) and passing between the points (−2, −2) and (−2, −3) but not containing either one of them?

15. Mrs. Smith needs a babysitter. Lauren who lives next door charges $5 per hour for her services. Zachary who lives across town charges $4 per hour plus $3 for bus fare.

   a. Using this information, write equations to represent Lauren and Zachary’s babysitting fees. Let \(F\) represent their fees and \(h\) represent the number of hours.

   b. Graph the equations you wrote in part (a).

   c. Based on their fees, which babysitter would be a better choice for Mrs. Smith if she is going out for two hours? Explain your answer.

   d. Mrs. Smith needs to go out for four hours. Which babysitter would be the less expensive option for her? Justify your response.

16. In a game of pool, a cue ball is hit from point \(A\) and follows the path of arrows as shown on the pool table at the right. In the diagram, \(AB \parallel DC\) and \(BC \parallel ED\).

   a. Compare the slopes of \(AB\) and \(BC\). What can you conclude about \(\angle ABC\)?

   b. If \(m \angle BCG = 45^\circ\), what is \(m \angle DCH\)? Explain your reasoning.

   c. If the cue ball is hit harder, will it fall into Pocket \(F\)? Justify your answer.
Line \( l \) bisects the segment. Find the indicated lengths. (p. 15)
1. \( GH \) and \( FH \)
2. \( XY \) and \( XZ \)

Classify the angle with the given measure as \textit{acute}, \textit{obtuse}, \textit{right}, or \textit{straight}. (p. 24)
3. \( m\angle A = 28^\circ \)
4. \( m\angle A = 113^\circ \)
5. \( m\angle A = 79^\circ \)
6. \( m\angle A = 90^\circ \)

Find the perimeter and area of the figure. (p. 49)
7.
8.
9.

Describe the pattern in the numbers. Write the next number in the pattern. (p. 72)
10. 1, 8, 27, 64, \ldots
11. 128, 32, 8, 2, \ldots
12. 2, -6, 18, -54, \ldots

Use the Law of Detachment to make a valid conclusion. (p. 87)
13. If \( 6x < 42 \), then \( x < 7 \). The value of \( 6x \) is 24.
14. If an angle measure is greater than \( 90^\circ \), then it is an obtuse angle.
   The measure of \( \angle A \) is \( 103^\circ \).
15. If a musician plays a violin, then the musician plays a stringed instrument. The musician is playing a violin.

Solve the equation. Write a reason for each step. (p. 105)
16. \( 3x - 14 = 34 \)
17. \(-4(x + 3) = -28 \)
18. \( 43 - 9(x - 7) = -x - 6 \)

Find the value of the variable(s). (pp. 124, 154)
19.
20.
21.
22.
23.
24.
Find the slope of the line through the given points. \(p. 171\)

25. \((5, -2), (7, -2)\)  
26. \((8, 3), (3, 14)\)  
27. \((-1, 2), (0, 4)\)

Write equations of the lines that pass through point \(P\) and are (a) parallel and (b) perpendicular to the line with the given equation. \(p. 180\)

28. \(P(3, -2), y = 6x + 7\)  
29. \(P(-2, 12), y = -x - 3\)  
30. \(P(7, -1), 6y + 2x = 18\)

31. Use the diagram at the right. If \(\angle AEB \equiv \angle AED\), is \(\overrightarrow{AC} \perp \overrightarrow{DB}\)? \(p. 190\)

EVERYDAY INTERSECTIONS  In Exercises 32–34, what kind of geometric intersection does the photograph suggest? \(p. 2\)

32.  
33.  
34.  

35. MAPS The distance between Westville and Easton is 37 miles. The distance between Reading and Easton is 52 miles. How far is Westville from Reading? \(p. 9\)

36. GARDENING A rectangular garden is 40 feet long and 25 feet wide. What is the area of the garden? \(p. 49\)

ADVERTISING In Exercises 37 and 38, use the following advertising slogan: “Do you want the lowest prices on new televisions? Then come and see Matt’s TV Warehouse.” \(p. 79\)

37. Write the slogan in if-then form. What are the hypothesis and conclusion of the conditional statement?

38. Write the converse, inverse, and contrapositive of the conditional statement you wrote in Exercise 37.

39. CARPENTRY You need to cut eight wood planks that are the same size. You measure and cut the first plank. You cut the second piece using the first plank as a guide, as shown at the right. You use the second plank to cut the third plank. You continue this pattern. Is the last plank you cut the same length as the first? \(p. 112\)
In previous chapters, you learned the following skills, which you’ll use in Chapter 4: classifying angles, solving linear equations, finding midpoints, and using angle relationships.

**Prerequisite Skills**

**VOCABULARY CHECK**
Classify the angle as **acute, obtuse, right, or straight**.
1. $m\angle A = 115^\circ$  
2. $m\angle B = 90^\circ$  
3. $m\angle C = 35^\circ$  
4. $m\angle D = 95^\circ$

**SKILLS AND ALGEBRA CHECK**
 Solve the equation. *(Review p. 65 for 4.1, 4.2.)*
5. $70 + 2y = 180$  
6. $2x = 5x - 54$  
7. $40 + x + 65 = 180$

Find the coordinates of the midpoint of $PQ$. *(Review p. 15 for 4.3.)*
8. $P(2, -5), Q(-1, -2)$  
9. $P(-4, 7), Q(1, -5)$  
10. $P(h, k), Q(h, 0)$

Name the theorem or postulate that justifies the statement about the diagram. *(Review p. 154 for 4.3–4.5.)*
11. $\angle 2 \equiv \angle 3$  
12. $\angle 1 \equiv \angle 4$  
13. $\angle 2 \equiv \angle 6$  
14. $\angle 3 \equiv \angle 5$
In Chapter 4, you will apply the big ideas listed below and reviewed in the Chapter Summary on page 281. You will also use the key vocabulary listed below.

**Big Ideas**

1. **Classifying triangles by sides and angles**
2. **Proving that triangles are congruent**
3. **Using coordinate geometry to investigate triangle relationships**

**Key Vocabulary**

- triangle, p. 217
- scalene, isosceles, equilateral, acute, right, obtuse, equiangular
- interior angles, p. 218
- exterior angles, p. 218
- corollary, p. 220
- congruent figures, p. 225
- corresponding parts, p. 225
- right triangle, p. 241
- legs, hypotenuse
- flow proof, p. 250
- isosceles triangle, p. 264
- legs, vertex angle, base, base angles
- transformation, p. 272
- translation, reflection, rotation

Triangles are used to add strength to structures in real-world situations. For example, the frame of a hang glider involves several triangles.

The animation illustrated below for Example 1 on page 256 helps you answer this question: What must be true about $QT$ and $ST$ for the hang glider to fly straight?

You will use congruent segments and angles in the hang glider to write a proof.

**Why?**

**Animated Geometry**

Scroll down to see the information needed to prove that $QT = ST$.

**Other animations for Chapter 4:** pages 234, 242, 250, 257, and 274
4.1 Angle Sums in Triangles

**MATERIALS**  • paper  • pencil  • scissors  • ruler

**QUESTION**  What are some relationships among the interior angles of a triangle and exterior angles of a triangle?

**EXPLORE 1** Find the sum of the measures of interior angles

**STEP 1** Draw triangles  Draw and cut out several different triangles.

**STEP 2** Tear off corners  For each triangle, tear off the three corners and place them next to each other, as shown in the diagram.

**STEP 3** Make a conjecture  Make a conjecture about the sum of the measures of the interior angles of a triangle.

**EXPLORE 2** Find the measure of an exterior angle of a triangle

**STEP 1** Draw exterior angle  Draw and cut out several different triangles. Place each triangle on a piece of paper and extend one side to form an exterior angle, as shown in the diagram.

**STEP 2** Tear off corners  For each triangle, tear off the corners that are not next to the exterior angle. Use them to fill the exterior angle, as shown.

**STEP 3** Make a conjecture  Make a conjecture about the relationship between the measure of an exterior angle of a triangle and the measures of the nonadjacent interior angles.

**DRAW CONCLUSIONS** Use your observations to complete these exercises

1. Given the measures of two interior angles of a triangle, how can you find the measure of the third angle?

2. Draw several different triangles that each have one right angle. Show that the two acute angles of a right triangle are complementary.
4.1 Apply Triangle Sum Properties

You classified angles and found their measures.
You will classify triangles and find measures of their angles.
So you can place actors on stage, as in Ex. 40.

Key Vocabulary
- triangle
  - scalene, isosceles, equilateral, acute, right, obtuse, equiangular
- interior angles
- exterior angles
- corollary to a theorem

A triangle is a polygon with three sides. A triangle with vertices \( A, B, \) and \( C \) is called “triangle \( ABC \)” or “\( \triangle ABC \).”

**KEY CONCEPT**

READ VOCABULARY

Notice that an equilateral triangle is also isosceles. An equiangular triangle is also acute.

**Example 1** Classify triangles by sides and by angles

**SUPPORT BEAMS** Classify the triangular shape of the support beams in the diagram by its sides and by measuring its angles.

**Solution**

The triangle has a pair of congruent sides, so it is isosceles. By measuring, the angles are 55°, 55°, and 70°. It is an acute isosceles triangle.
Example 2  Classify a triangle in a coordinate plane

Classify \(\triangle PQO\) by its sides. Then determine if the triangle is a right triangle.

Solution

**STEP 1**  Use the distance formula to find the side lengths.

\[
OP = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} = \sqrt{((-1) - 0)^2 + (2 - 0)^2} = \sqrt{5} \approx 2.2
\]

\[
OQ = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} = \sqrt{(6 - 0)^2 + (3 - 0)^2} = \sqrt{45} \approx 6.7
\]

\[
PQ = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} = \sqrt{(6 - (-1))^2 + (3 - 2)^2} = \sqrt{50} \approx 7.1
\]

**STEP 2**  Check for right angles. The slope of \(\overline{OP}\) is \(\frac{2 - 0}{-1 - 0} = -2\). The slope of \(\overline{OQ}\) is \(\frac{3 - 0}{6 - 0} = \frac{1}{2}\). The product of the slopes is \(-2 \cdot \frac{1}{2} = -1\), so \(\overline{OP} \perp \overline{OQ}\) and \(\angle POQ\) is a right angle.

Therefore, \(\triangle PQO\) is a right scalene triangle.

Guided Practice for Examples 1 and 2

1. Draw an obtuse isosceles triangle and an acute scalene triangle.
2. Triangle \(\triangle ABC\) has the vertices \(A(0, 0), B(3, 3),\) and \(C(-3, 3)\). Classify it by its sides. Then determine if it is a right triangle.

Angles  When the sides of a polygon are extended, other angles are formed. The original angles are the interior angles. The angles that form linear pairs with the interior angles are the exterior angles.

Read Diagrams  Each vertex has a pair of congruent exterior angles. However, it is common to show only one exterior angle at each vertex.

Theorem 4.1  Triangle Sum Theorem

The sum of the measures of the interior angles of a triangle is \(180^\circ\).

\[
m\angle A + m\angle B + m\angle C = 180^\circ
\]

Proof: p. 219; Ex. 53, p. 224
**Auxiliary Lines** To prove certain theorems, you may need to add a line, a segment, or a ray to a given diagram. An auxiliary line is used in the proof of the Triangle Sum Theorem.

**Proof** Triangle Sum Theorem

- **Given** △ABC
- **Prove** m∠1 + m∠2 + m∠3 = 180°

**Plan for Proof**

a. Draw an auxiliary line through B and parallel to AC.
b. Show that m∠4 + m∠2 + m∠5 = 180°, ∠1 ≡ ∠4, and ∠3 ≡ ∠5.
c. By substitution, m∠1 + m∠2 + m∠3 = 180°.

**Theorem 4.2 Exterior Angle Theorem**

The measure of an exterior angle of a triangle is equal to the sum of the measures of the two nonadjacent interior angles.

*Proof:* Ex. 50, p. 223

**Example 3** Find an angle measure

**Algebra** Find m∠JKM.

**Solution**

**Step 1** Write and solve an equation to find the value of x.

(2x - 5)° = 70° + x°

x = 75

Apply the Exterior Angle Theorem.

**Step 2** Substitute 75 for x in 2x - 5 to find m∠JKM.

2x - 5 = 2(75) - 5 = 145

The measure of ∠JKM is 145°.
A corollary to a theorem is a statement that can be proved easily using the theorem. The corollary below follows from the Triangle Sum Theorem.

**COROLLARY**

**Corollary to the Triangle Sum Theorem**

The acute angles of a right triangle are complementary.

*Proof: Ex. 48, p. 223*

---

**EXAMPLE 4** Find angle measures from a verbal description

**ARCHITECTURE** The tiled staircase shown forms a right triangle. The measure of one acute angle in the triangle is twice the measure of the other. Find the measure of each acute angle.

**Solution**

First, sketch a diagram of the situation. Let the measure of the smaller acute angle be $x^\circ$. Then the measure of the larger acute angle is $2x^\circ$. The Corollary to the Triangle Sum Theorem states that the acute angles of a right triangle are complementary.

Use the corollary to set up and solve an equation.

$$x^\circ + 2x^\circ = 90^\circ$$

**Corollary to the Triangle Sum Theorem**

$$x = 30$$

**Solve for $x$.**

So, the measures of the acute angles are $30^\circ$ and $2(30^\circ) = 60^\circ$.

---

**GUIDED PRACTICE** for Examples 3 and 4

3. Find the measure of $\angle 1$ in the diagram shown.

4. Find the measure of each interior angle of $\triangle ABC$, where $m\angle A = x^\circ$, $m\angle B = 2x^\circ$, and $m\angle C = 3x^\circ$.

5. Find the measures of the acute angles of the right triangle in the diagram shown.

6. In Example 4, what is the measure of the obtuse angle formed between the staircase and a segment extending from the horizontal leg?
**4.1 EXERCISES**

**VOCABULARY** Match the triangle description with the most specific name.

1. Angle measures: $30^\circ, 60^\circ, 90^\circ$  
   A. Isosceles
2. Side lengths: 2 cm, 2 cm, 2 cm  
   B. Scalene
3. Angle measures: $60^\circ, 60^\circ, 60^\circ$  
   C. Right
4. Side lengths: 6 m, 3 m, 6 m  
   D. Obtuse
5. Side lengths: 5 ft, 7 ft, 9 ft  
   E. Equilateral
6. Angle measures: $20^\circ, 125^\circ, 35^\circ$  
   F. Equiangular

7. ★ **WRITING** Can a right triangle also be obtuse? *Explain* why or why not.

**CLASSIFYING TRIANGLES** Copy the triangle and measure its angles. Classify the triangle by its sides and by its angles.

8. 

9. 

10. 

**COORDINATE PLANE** A triangle has the given vertices. Graph the triangle and classify it by its sides. Then determine if it is a right triangle.

11. $A(2, 3), B(6, 3), C(2, 7)$
12. $A(3, 3), B(6, 9), C(6, -3)$
13. $A(1, 9), B(4, 8), C(2, 5)$

**FINDING ANGLE MEASURES** Find the value of $x$. Then classify the triangle by its angles.

14. 

15. 

16. 

**ALGEBRA** Find the measure of the exterior angle shown.

17. 

18. 

19. 

20. ★ **SHORT RESPONSE** *Explain* how to use the Corollary to the Triangle Sum Theorem to find the measure of each angle.
ANGL E RELATIONSHIPS Find the measure of the numbered angle.

21. $\angle 1$  
22. $\angle 2$  
23. $\angle 3$  
24. $\angle 4$  
25. $\angle 5$  
26. $\angle 6$

27. ★ ALGEBRA In $\triangle PQR$, $\angle P \equiv \angle R$ and the measure of $\angle Q$ is twice the measure of $\angle R$. Find the measure of each angle.

28. ★ ALGEBRA In $\triangle EFG$, $m\angle F = 3(m\angle G)$, and $m\angle E = m\angle F - 30^\circ$. Find the measure of each angle.

ERROR ANALYSIS In Exercises 29 and 30, describe and correct the error.

29. All equilateral triangles are also isosceles. So, if $\triangle ABC$ is isosceles, then it is equilateral as well.

30. $m\angle 1 + 80^\circ + 50^\circ = 180^\circ$

31. ★ MULTIPLE CHOICE Which of the following is not possible?

A) An acute scalene triangle  
B) A triangle with two acute exterior angles  
C) An obtuse isosceles triangle  
D) An equiangular acute triangle

32. ★ ALGEBRA In Exercises 32–37, find the values of $x$ and $y$.

33.

34.

35.

36.

37.

38. VISUALIZATION Is there an angle measure that is so small that any triangle with that angle measure will be an obtuse triangle? Explain.

39. CHALLENGE Suppose you have the equations $y = ax + b$, $y = cx + d$, and $y = ex + f$.

a. When will these three lines form a triangle?

b. Let $c = 1$, $d = 2$, $e = 4$, and $f = -7$. Find values of $a$ and $b$ so that no triangle is formed by the three equations.

c. Draw the triangle formed when $a = \frac{4}{3}$, $b = \frac{1}{3}$, $c = -\frac{4}{3}$, $d = \frac{41}{3}$, $e = 0$, and $f = -1$. Then classify the triangle by its sides.
40. **THEATER** Three people are standing on a stage. The distances between the three people are shown in the diagram. Classify the triangle formed by its sides. Then copy the triangle, measure the angles, and classify the triangle by its angles.

41. **KALEIDOSCOPES** You are making a kaleidoscope. The directions state that you are to arrange three pieces of reflective mylar in an equilateral and equiangular triangle. You must cut three strips from a piece of mylar 6 inches wide. What are the side lengths of the triangle used to form the kaleidoscope? What are the measures of the angles? *Explain.*

42. **SCULPTURE** You are bending a strip of metal into an isosceles triangle for a sculpture. The strip of metal is 20 inches long. The first bend is made 6 inches from one end. *Describe* two ways you could complete the triangle.

43. ★ **MULTIPLE CHOICE** Which inequality describes the possible measures of an angle of a triangle?

   A. \(0^\circ \leq x^\circ \leq 180^\circ\)

   B. \(0^\circ \leq x^\circ < 180^\circ\)

   C. \(0^\circ < x^\circ < 180^\circ\)

   D. \(0^\circ < x^\circ \leq 180^\circ\)

44. Find \(m\angle 6\).
45. Find \(m\angle 5\).
46. Find \(m\angle 1\).
47. Find \(m\angle 4\).

48. **PROOF** Prove the Corollary to the Triangle Sum Theorem on page 220.

49. **MULTI-STEP PROBLEM** The measures of the angles of a triangle are \(2\sqrt{2x^\circ}\), \(5\sqrt{2x^\circ}\), and \(2\sqrt{2x^\circ}\).
   a. Write an equation to show the relationship of the angles.
   b. Find the measure of each angle.
   c. Classify the triangle by its angles.

50. **PROVING THEOREM 4.2** Prove the Exterior Angle Theorem. (*Hint: Find two equations involving \(m\angle ACB\).*)
51. ★ EXTENDED RESPONSE The figure below shows an initial plan for a triangular flower bed that Mary and Tom plan to build along a fence. They are discussing what the measure of \( \angle 1 \) should be.

Mary's conclusion:
Use the Triangle Sum Theorem.
\[ 50^\circ + 100^\circ + m\angle 1 = 180^\circ \]
\[ m\angle 1 = 30^\circ \]

Tom's conclusion:
Use the definition of a linear pair.
\[ 145^\circ + m\angle 1 = 180^\circ \]
\[ m\angle 1 = 35^\circ \]

Did Mary and Tom both reason correctly? If not, who made a mistake and what mistake was made? If they did both reason correctly, what can you conclude about their initial plan? Explain.

52. ★ ALGEBRA \( \triangle ABC \) is isosceles. \( AB = x \) and \( BC = 2x - 4 \).
   a. Find two possible values for \( x \) if the perimeter of \( \triangle ABC \) is 32.
   b. How many possible values are there for \( x \) if the perimeter of \( \triangle ABC \) is 12?

53. CHALLENGE Use the diagram to write a proof of the Triangle Sum Theorem. Your proof should be different than the proof of the Triangle Sum Theorem on page 219.

54. \( m\angle A = (3x + 16)^\circ \)
55. \( m\angle A = (4x - 2)^\circ \)
56. \( m\angle A = (3x + 4)^\circ \)

57. Each figure is a regular polygon. Find the value of \( x \). (p. 42)
58. \[ 3x + 1 \]
59. \[ x + 2 \]
60. Use the Symmetric Property of Congruence to complete the statement:
   If \( ? \equiv ? \), then \( \angle DEF \equiv \angle PQR \). (p. 112)

61. If \( m\angle 1 = 127^\circ \), find \( m\angle 2 \), \( m\angle 3 \), and \( m\angle 4 \).
62. If \( m\angle 4 = 170^\circ \), find \( m\angle 1 \), \( m\angle 2 \), and \( m\angle 3 \).
63. If \( m\angle 3 = 54^\circ \), find \( m\angle 1 \), \( m\angle 2 \), and \( m\angle 4 \).
4.2 Apply Congruence and Triangles

**Key Vocabulary**
- congruent figures
- corresponding parts

Two geometric figures are **congruent** if they have exactly the same size and shape. Imagine cutting out one of the congruent figures. You could then position the cut-out figure so that it fits perfectly onto the other figure.

<table>
<thead>
<tr>
<th>Congruent</th>
<th>Not congruent</th>
</tr>
</thead>
<tbody>
<tr>
<td>Same size and shape</td>
<td>Different sizes or shapes</td>
</tr>
</tbody>
</table>

In two **congruent figures**, all the parts of one figure are congruent to the **corresponding parts** of the other figure. In congruent polygons, this means that the **corresponding sides** and the **corresponding angles** are congruent.

**CONGRUENCE STATEMENTS** When you write a congruence statement for two polygons, always list the corresponding vertices in the same order. You can write congruence statements in more than one way. Two possible congruence statements for the triangles at the right are \( \triangle ABC \cong \triangle FED \) or \( \triangle BCA \cong \triangle EDF \).

- **Corresponding angles** \( \angle A \cong \angle F \), \( \angle B \cong \angle E \), \( \angle C \cong \angle D \)
- **Corresponding sides** \( AB \cong FE \), \( BC \cong ED \), \( AC \cong FD \)

**Example 1** Identify congruent parts

Write a congruence statement for the triangles. Identify all pairs of congruent corresponding parts.

**Solution**

The diagram indicates that \( \triangle JKL \cong \triangle TSR \).

- **Corresponding angles** \( \angle J \cong \angle T \), \( \angle K \cong \angle S \), \( \angle L \cong \angle R \)
- **Corresponding sides** \( JK \cong TS \), \( KL \cong SR \), \( LJ \cong RT \)
GUIDED PRACTICE for Examples 1, 2, and 3

In the diagram at the right, $ABGH \cong CDEF$.

1. Identify all pairs of congruent corresponding parts.
2. Find the value of $x$ and find $m\angle H$.
3. Show that $\triangle PTS \cong \triangle RTQ$. 

EXAMPLE 2

Use properties of congruent figures

In the diagram, $DEFG \cong SPQR$.

a. Find the value of $x$.
b. Find the value of $y$.

Solution

a. You know that $FG \cong QR$.

\[
FG = QR \\
12 = 2x - 4 \\
16 = 2x \\
8 = x
\]

b. You know that $\angle F \cong \angle Q$.

\[
m\angle F = m\angle Q \\
68^\circ = (6y + x)^\circ \\
68 = 6y + 8 \\
10 = y
\]

EXAMPLE 3

Show that figures are congruent

PAINTING If you divide the wall into orange and blue sections along $JK$, will the sections of the wall be the same size and shape? Explain.

Solution

From the diagram, $\angle A \cong \angle C$ and $\angle D \cong \angle B$ because all right angles are congruent. Also, by the Lines Perpendicular to a Transversal Theorem, $AB \parallel DC$. Then, $\angle 1 \cong \angle 4$ and $\angle 2 \cong \angle 3$ by the Alternate Interior Angles Theorem. So, all pairs of corresponding angles are congruent.

The diagram shows $\overline{AJ} \cong \overline{CK}$, $\overline{KD} \cong \overline{JB}$, and $\overline{DA} \cong \overline{BC}$. By the Reflexive Property, $\overline{JK} \cong \overline{KJ}$. All corresponding parts are congruent, so $\triangle AJKD \cong \triangle CKJB$.

Yes, the two sections will be the same size and shape.
### THEOREM

**THEOREM 4.3 Third Angles Theorem**

If two angles of one triangle are congruent to two angles of another triangle, then the third angles are also congruent.

*Proof: Ex. 28, p. 230*

### EXAMPLE 4 Use the Third Angles Theorem

Find \( \angle BDC \).

#### Solution

\( \angle A \cong \angle B \) and \( \angle ADC \cong \angle BCD \), so by the Third Angles Theorem, \( \angle ACD \cong \angle BDC \).

By the Triangle Sum Theorem, \( m\angle ACD = 180^\circ - 45^\circ - 30^\circ = 105^\circ \).

So, \( m\angle ACD = m\angle BDC = 105^\circ \) by the definition of congruent angles.

### EXAMPLE 5 Prove that triangles are congruent

Write a proof.

**GIVEN**

\( \overline{AD} \cong \overline{CB}, \overline{DC} \cong \overline{BA}, \angle ACD \cong \angle CAB \),

\( \angle CAD \cong \angle ACB \)

**PROVE**

\( \triangle ACD \cong \triangle CAB \)

#### Plan for Proof

- a. Use the Reflexive Property to show that \( \overline{AC} \cong \overline{AC} \).
- b. Use the Third Angles Theorem to show that \( \angle B \cong \angle D \).

<table>
<thead>
<tr>
<th>Statements</th>
<th>Reasons</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. ( \overline{AD} \cong \overline{CB}, \overline{DC} \cong \overline{BA} )</td>
<td>1. Given</td>
</tr>
<tr>
<td>2. ( \overline{AC} \cong \overline{AC} )</td>
<td>2. Reflexive Property of Congruence</td>
</tr>
<tr>
<td>3. ( \angle ACD \cong \angle CAB ), ( \angle CAD \cong \angle ACB )</td>
<td>3. Given</td>
</tr>
<tr>
<td>4. ( \angle B \cong \angle D )</td>
<td>4. Third Angles Theorem</td>
</tr>
<tr>
<td>5. ( \triangle ACD \cong \triangle CAB )</td>
<td>5. Definition of ( \cong \triangle )</td>
</tr>
</tbody>
</table>

### GUIDED PRACTICE for Examples 4 and 5

4. In the diagram, what is \( m\angle DCN \)?

5. By the definition of congruence, what additional information is needed to know that \( \triangle NDC \cong \triangle NSR \)?
**PROPERTIES OF CONGRUENT TRIANGLES** The properties of congruence that are true for segments and angles are also true for triangles.

**THEOREM**

<table>
<thead>
<tr>
<th>For Your Notebook</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>THEOREM 4.4</strong> Properties of Congruent Triangles</td>
</tr>
<tr>
<td>Reflexive Property of Congruent Triangles</td>
</tr>
<tr>
<td>For any triangle ( \triangle ABC ), ( \triangle ABC \cong \triangle ABC ).</td>
</tr>
<tr>
<td>Symmetric Property of Congruent Triangles</td>
</tr>
<tr>
<td>If ( \triangle ABC \cong \triangle DEF ), then ( \triangle DEF \cong \triangle ABC ).</td>
</tr>
<tr>
<td>Transitive Property of Congruent Triangles</td>
</tr>
<tr>
<td>If ( \triangle ABC \cong \triangle DEF ) and ( \triangle DEF \cong \triangle JKL ), then ( \triangle ABC \cong \triangle JKL ).</td>
</tr>
</tbody>
</table>

### 4.2 EXERCISES

**VOCABULARY** Copy the congruent triangles shown. Then label the vertices of the triangles so that \( \triangle JKL \cong \triangle RST \). Identify all pairs of congruent corresponding angles and corresponding sides.

**WRITING** Based on this lesson, what information do you need to prove that two triangles are congruent? Explain.

**USING CONGRUENCE** Identify all pairs of congruent corresponding parts. Then write another congruence statement for the figures.

3. \( \triangle ABC \cong \triangle DEF \)
4. \( \triangle GHJK \cong \triangle QRST \)

**READING A DIAGRAM** In the diagram, \( \triangle XYZ \cong \triangle MNL \). Copy and complete the statement.

5. \( m\angle Y = \_ \_ \_ \_ \_ \)  
6. \( m\angle M = \_ \_ \_ \_ \_ \)  
7. \( YX = \_ \_ \_ \_ \)  
8. \( YZ = \_ \_ \_ \_ \)  
9. \( \triangle LNM \cong \_ \_ \_ \_ \_ \)
10. \( \triangle YXZ \cong \_ \_ \_ \_ \_ \)
EXAMPLE 3
on p. 226
for Exs. 11–14

NAMING CONGRUENT FIGURES Write a congruence statement for any figures that can be proved congruent. Explain your reasoning.

11. \( \triangle XYZ \)

12. \( \triangle ABC \)

13. \( \triangle BCD \)

14. \( \triangle WXY \)

EXAMPLE 4
on p. 227
for Exs. 15–16

THIRD ANGLES THEOREM Find the value of \( x \).

15. \( \triangle LMN \)

16. \( \triangle BCD \)

17. ERROR ANALYSIS A student says that \( \triangle MNP \cong \triangle RSP \) because the corresponding angles of the triangles are congruent. Describe the error in this statement.

18. ★ OPEN-ENDED MATH Graph the triangle with vertices \( L(3, 1) \), \( M(8, 1) \), and \( N(8, 8) \). Then graph a triangle congruent to \( \triangle LMN \).

19. ★ ALGEBRA Find the values of \( x \) and \( y \).

20. ★ MULTIPLE CHOICE Suppose \( \triangle ABC \cong \triangle EFD \), \( \triangle EFD \cong \triangle GIH \), \( m\angle A = 90^\circ \), and \( m\angle F = 20^\circ \). What is \( m\angle H \)?

21. ★ CHALLENGE A hexagon is contained in a cube, as shown. Each vertex of the hexagon lies on the midpoint of an edge of the cube. This hexagon is equiangular. Explain why it is also regular.
23. **RUG DESIGNS** The rug design is made of congruent triangles. One triangular shape is used to make all of the triangles in the design. Which property guarantees that all the triangles are congruent?

24. **OPEN-ENDED MATH** Create a design for a rug made with congruent triangles that is different from the one in the photo above.

25. **CAR STEREO** A car stereo fits into a space in your dashboard. You want to buy a new car stereo, and it must fit in the existing space. What measurements need to be the same in order for the new stereo to be congruent to the old one?

26. **PROOF** Copy and complete the proof.

   **GIVEN** \( AB \cong ED, \ BC \cong DC, \ CA \cong CE, \ \angle BAC \cong \angle DEC \)

   **PROVE** \( \triangle ABC \cong \triangle EDC \)

   **STATEMENTS**
   
   1. \( AB \cong ED, \ BC \cong DC, \ CA \cong CE, \ \angle BAC \cong \angle DEC \)
   
   2. \( \angle BCA \cong \angle DCE \)
   
   3. \( \ ? \)
   
   4. \( \triangle ABC \cong \triangle EDC \)

   **REASONS**
   
   1. Given
   
   2. ?
   
   3. Third Angles Theorem
   
   4. ?

27. **SHORT RESPONSE** Suppose \( \triangle ABC \cong \triangle DCB \), and the triangles share vertices at points \( B \) and \( C \). Draw a figure that illustrates this situation. Is \( AC \parallel BD \)? Explain.

28. **PROVING THEOREM 4.3** Use the plan to prove the Third Angles Theorem.

   **GIVEN** \( \angle A \cong \angle D, \ \angle B \cong \angle E \)

   **PROVE** \( \angle C \cong \angle F \)

   **Plan for Proof** Use the Triangle Sum Theorem to show that the sums of the angle measures are equal. Then use substitution to show \( \angle C \equiv \angle F \).
29. REASONING  Given that \( \triangle AFC \cong \triangle DFE \), must \( F \) be the midpoint of \( AD \) and \( EC \)? Include a drawing with your answer.

30. ★ SHORT RESPONSE  You have a set of tiles that come in two different shapes, as shown. You can put two of the triangular tiles together to make a quadrilateral that is the same size and shape as the quadrilateral tile.

\[ \text{Explain how you can find all of the angle measures of each tile by measuring only two angles.} \]

31. MULTI-STEP PROBLEM  In the diagram, quadrilateral \( ABEF \equiv \) quadrilateral \( CDEF \).

a. \( \text{Explain how you know that } BE \equiv DE \text{ and } \angle ABE \equiv \angle CDE. \)

b. \( \text{Explain how you know that } \angle GBE \equiv \angle GDE. \)

c. \( \text{Explain how you know that } \angle GEB \equiv \angle GED. \)

d. Do you have enough information to prove that \( \triangle BEG \equiv \triangle DEG \)? Explain.

32. CHALLENGE  Use the diagram to write a proof.

**GIVEN** \( WX \perp YZ \text{ at } Y, \text{ } Y \text{ is the midpoint of } WX, \text{ } VW \equiv VX, \text{ and } VZ \text{ bisects } \angle WVX. \)

**PROVE** \( \triangle VWY \equiv \triangle VXY \)

---

**EXTRA PRACTICE** for Lesson 4.2, p. 902  
**ONLINE QUIZ** at classzone.com

33. Use the Distance Formula to find the length of the segment. Round your answer to the nearest tenth of a unit. (p. 15)

\[ \text{33.} \]

34. \[ (-3, 3) \quad 2 \]

35. \[ (2, -2) \quad (1, 3) \]

Line \( \ell \) bisects the segment. Write a congruence statement. (p. 15)

36. \[ \ell \]

37. \[ \ell \]

38. \[ \ell \]

Write the converse of the statement. (p. 79)

39. If three points are coplanar, then they lie in the same plane.

40. If the sky is cloudy, then it is raining outside.
Another Way to Solve Example 4, page 227

**MULTIPLE REPRESENTATIONS** In Example 4 on page 227, you used congruencies in triangles that overlapped. When you solve problems like this, it may be helpful to redraw the art so that the triangles do not overlap.

**Problem**

Find $m\angle BDC$.

**Method**

Drawing A Diagram

**STEP 1** Identify the triangles that overlap. Then redraw them so that they are separate. Copy all labels and markings.

**STEP 2** Analyze the situation. By the Triangle Sum Theorem, $m\angle ACD = 180^\circ - 45^\circ - 30^\circ = 105^\circ$.

Also, because $\angle A \cong \angle B$ and $\angle ADC \cong \angle BCD$, by the Third Angles Theorem, $\angle ACD \cong \angle BDC$, and $m\angle ACD = m\angle BDC = 105^\circ$.

**Practice**

1. **DRAWING FIGURES** Draw $\triangle HLM$ and $\triangle GJM$ so they do not overlap. Copy all labels and mark any known congruences.

   a. 

   ![Diagram](image)

   b. 

   ![Diagram](image)

2. **ENVELOPE** Draw $\triangle PQS$ and $\triangle QPT$ so that they do not overlap. Find $m\angle PTS$.

   ![Diagram](image)
4.3 Investigate Congruent Figures

**MATERIALS** • straws • string • ruler • protractor

**QUESTION** How much information is needed to tell whether two figures are congruent?

**EXPLORE 1** Compare triangles with congruent sides

**Make a triangle** Cut straws to make side lengths of 8 cm, 10 cm, and 12 cm. Thread the string through the straws. Make a triangle by connecting the ends of the string.

**Make another triangle** Use the same length straws to make another triangle. If possible, make it different from the first. Compare the triangles. What do you notice?

**EXPLORE 2** Compare quadrilaterals with congruent sides

**Make a quadrilateral** Cut straws to make side lengths of 5 cm, 7 cm, 9 cm, and 11 cm. Thread the string through the straws. Make a quadrilateral by connecting the string.

**Make another quadrilateral** Make a second quadrilateral using the same length straws. If possible, make it different from the first. Compare the quadrilaterals. What do you notice?

**DRAW CONCLUSIONS** Use your observations to complete these exercises

1. Can you make two triangles with the same side lengths that are different shapes? *Justify* your answer.

2. If you know that three sides of a triangle are congruent to three sides of another triangle, can you say the triangles are congruent? *Explain*.

3. Can you make two quadrilaterals with the same side lengths that are different shapes? *Justify* your answer.

4. If four sides of a quadrilateral are congruent to four sides of another quadrilateral, can you say the quadrilaterals are congruent? *Explain*.
**Key Vocabulary**
- congruent figures, p. 225
- corresponding parts, p. 225

In the Activity on page 233, you saw that there is only one way to form a triangle given three side lengths. In general, any two triangles with the same three side lengths must be congruent.

**POSTULATE**

**Postulate 19 Side-Side-Side (SSS) Congruence Postulate**

If three sides of one triangle are congruent to three sides of a second triangle, then the two triangles are congruent.

If \( AB \cong RS, \)
\( BC \cong ST, \)
\( CA \cong TR, \)

then \( \triangle ABC \cong \triangle RST. \)

**Example 1 Use the SSS Congruence Postulate**

**Write a proof.**

**Given** \( \overline{KL} \cong \overline{NL}, \overline{KM} \cong \overline{NM} \)

**Prove** \( \triangle KLM \cong \triangle NLM \)

**Proof** It is given that \( \overline{KL} \cong \overline{NL} \) and \( \overline{KM} \cong \overline{NM} \). By the Reflexive Property, \( \overline{LM} \cong \overline{LM} \). So, by the SSS Congruence Postulate, \( \triangle KLM \cong \triangle NLM \).

**Guided Practice for Example 1**

Decide whether the congruence statement is true. **Explain** your reasoning.

1. \( \triangle DFG \cong \triangle HJK \)
2. \( \triangle ACB \cong \triangle CAD \)
3. \( \triangle QPT \cong \triangle RST \)
4.3 Prove Triangles Congruent by SSS

**Example 2**

**Standardized Test Practice**

Which are the coordinates of the vertices of a triangle congruent to ΔPQR?

- **A** (−1, 1), (−1, 5), (−4, 5)
- **B** (−2, 4), (−7, 4), (−4, 6)
- **C** (−3, 2), (−1, 3), (−3, 1)
- **D** (−7, 7), (−7, 9), (−3, 7)

**Solution**

By counting, \( PQ = 4 \) and \( QR = 3 \). Use the Distance Formula to find \( PR \).

\[
d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}
\]

\[
PR = \sqrt{(-1 - (-5))^2 + (1 - 4)^2} = \sqrt{4^2 + (-3)^2} = \sqrt{25} = 5
\]

By the SSS Congruence Postulate, any triangle with side lengths 3, 4, and 5 will be congruent to ΔPQR. The distance from (−1, 1) to (−1, 5) is 4. The distance from (−1, 5) to (−4, 5) is 3. The distance from (−1, 1) to (−4, 5) is \( \sqrt{(5 - 1)^2 + ((-4) - (-1))^2} = \sqrt{4^2 + (-3)^2} = \sqrt{25} = 5 \).

The correct answer is **A**.  **A**  **B**  **C**  **D**

**Guided Practice** for Example 2

4. ΔJKL has vertices \( J(-3, -2), K(0, -2) \), and \( L(-3, -8) \). ΔRST has vertices \( R(10, 0), S(10, -3) \), and \( T(4, 0) \). Graph the triangles in the same coordinate plane and show that they are congruent.

**Activity** Copy A Triangle

Follow the steps below to construct a triangle that is congruent to ΔABC.

**Step 1**

Construct \( DE \) so that it is congruent to \( AB \).

**Step 2**

Open your compass to the length \( AC \). Use this length to draw an arc with the compass point at \( D \).

**Step 3**

Draw an arc with radius \( BC \) and center \( E \) that intersects the arc from Step 2. Label the intersection point \( F \).

**Step 4**

Draw ΔDEF. By the SSS Congruence Postulate, ΔABC ≅ ΔDEF.
**Example 3**  Solve a real-world problem

**Structural Support** Explain why the bench with the diagonal support is stable, while the one without the support can collapse.

**Solution**
The bench with a diagonal support forms triangles with fixed side lengths. By the SSS Congruence Postulate, these triangles cannot change shape, so the bench is stable. The bench without a diagonal support is not stable because there are many possible quadrilaterals with the given side lengths.

**Guided Practice** for Example 3

Determine whether the figure is stable. Explain your reasoning.

5. 

6. 

7. 

4.3 Exercises

**Vocabulary** Tell whether the angles or sides are corresponding angles, corresponding sides, or neither.

1. \( \angle C \) and \( \angle L \)
2. \( \overline{AC} \) and \( \overline{JK} \)
3. \( \overline{BC} \) and \( \overline{KL} \)
4. \( \angle B \) and \( \angle L \)

**Determining Congruence** Decide whether the congruence statement is true. Explain your reasoning.

5. \( \triangle RST \cong \triangle TQP \)
6. \( \triangle ABD \cong \triangle CDB \)
7. \( \triangle DEF \cong \triangle DGF \)
8. **ERROR ANALYSIS** Describe and correct the error in writing a congruence statement for the triangles in the coordinate plane.

**ALGEBRA** Use the given coordinates to determine if \( \triangle ABC \cong \triangle DEF \).

9. \((-2, -2), B(4, -2), C(4, 6), D(5, 7), E(5, 1), F(13, 1)\)

10. \((-2, 1), B(3, -3), C(7, 5), D(3, 6), E(8, 2), F(10, 11)\)

11. \((0, 0), B(6, 5), C(9, 0), D(0, -1), E(6, -6), F(9, -1)\)

12. \((-5, 7), B(-5, 2), C(0, 2), D(0, 6), E(0, 1), F(4, 1)\)

**USING DIAGRAMS** Decide whether the figure is stable. Explain.

13. ![Diagram]

14. ![Diagram]

15. ![Diagram]

16. ★ **MULTIPLE CHOICE** Let \( \triangle FGH \) be an equilateral triangle with point \( J \) as the midpoint of \( FG \). Which of the statements below is *not* true?
   - \( FJ \equiv FH \)
   - \( FJ \equiv GJ \)
   - \( FJ \equiv GH \)
   - \( \triangle FHJ \equiv \triangle GHJ \)

17. ★ **MULTIPLE CHOICE** Let \( ABCD \) be a rectangle separated into two triangles by \( DB \). Which of the statements below is *not* true?
   - \( AD \equiv CB \)
   - \( AB \equiv AD \)
   - \( AB \equiv CD \)
   - \( \triangle DAB \equiv \triangle BCD \)

**APPLYING SEGMENT ADDITION** Determine whether \( \triangle ABC \cong \triangle DEF \). If they are congruent, write a congruence statement. Explain your reasoning.

18. ![Diagram]

19. ![Diagram]

20. **3-D FIGURES** In the diagram, \( PK \equiv PL \) and \( JK \equiv JL \). Show that \( \triangle JP K \equiv \triangle JPL \).

21. **CHALLENGE** Find all values of \( x \) that make the triangles congruent. Explain.
22. TILE FLOORS You notice two triangles in the tile floor of a hotel lobby. You want to determine if the triangles are congruent, but you only have a piece of string. Can you determine if the triangles are congruent? Explain.

23. GATES Which gate is stable? Explain your reasoning.

PROOF Write a proof.

24. GIVEN $\overline{GH} \equiv \overline{JK}$, $\overline{HJ} \equiv \overline{KG}$
   PROVE $\triangle GHJ \equiv \triangle JKG$

25. GIVEN $\overline{WX} \equiv \overline{VZ}$, $\overline{WY} \equiv \overline{VY}$, $\overline{YZ} \equiv \overline{YX}$
   PROVE $\triangle VWX \equiv \triangle WVZ$

26. GIVEN $\overline{AE} \equiv \overline{CE}$, $\overline{AB} \equiv \overline{CD}$, $E$ is the midpoint of $BD$
   PROVE $\triangle EAB \equiv \triangle ECD$

27. GIVEN $\overline{FM} \equiv \overline{FN}$, $\overline{DM} \equiv \overline{HN}$, $\overline{EF} \equiv \overline{GF}$, $\overline{DE} \equiv \overline{HG}$
   PROVE $\triangle DEN \equiv \triangle HGM$

28. ★ EXTENDED RESPONSE When rescuers enter a partially collapsed building they often have to reinforce damaged doors for safety.
   a. Diagonal braces are added to Door 1 as shown below. Explain why the door is more stable with the braces.
   b. Would these braces be a good choice for rescuers needing to enter and exit the building through this doorway?
   c. In the diagram, Door 2 has only a corner brace. Does this solve the problem from part (b)?
   d. Explain why the corner brace makes the door more stable.
29. **BASEBALL FIELD** To create a baseball field, start by placing home plate. Then, place second base 127 feet 3 3/8 inches from home plate. Then, you can find first base using two tape measures. Stretch one from second base toward first base and the other from home plate toward first base. The point where the two tape measures cross at the 90 foot mark is first base. You can find third base in a similar manner. **Explain** how and why this process will always work.

30. **CHALLENGE** Draw and label the figure described below. Then, identify what is given and write a two-column proof.

In an isosceles triangle, if a segment is added from the vertex between the congruent sides to the midpoint of the third side, then two congruent triangles are formed.

---

**Mixed Review**

Find the slope of the line that passes through the points. *(p. 171)*

31. \(A(3, 0), B(7, 4)\)  
32. \(F(1, 8), G(-9, 2)\)  
33. \(M(-4, -10), N(6, 2)\)

Use the \(x\)- and \(y\)-intercepts to write an equation of the line. *(p. 180)*

34.  
35.  
36.  

37. Write an equation of a line that passes through \((-3, -1)\) and is parallel to \(y = 3x + 2\). *(p. 180)*

**Quiz for Lessons 4.1–4.3**

A triangle has the given vertices. Graph the triangle and classify it by its sides. Then determine if it is a right triangle. *(p. 217)*

1. \(A(-3, 0), B(0, 4), C(3, 0)\)  
2. \(A(2, -4), B(5, -1), C(2, -1)\)  
3. \(A(-7, 0), B(1, 6), C(-3, 4)\)

In the diagram, \(HJKL \cong NPQM\). *(p. 225)*

4. Find the value of \(x\).
5. Find the value of \(y\).

6. Write a proof. *(p. 234)*

**GIVEN** \(\overline{AB} \cong \overline{AC}, \overline{AD}\) bisects \(\overline{BC}\).  
**PROVE** \(\triangle ABD \cong \triangle ACD\)

---

**Extra Practice** for Lesson 4.3, p. 902  
**Online Quiz** at classzone.com
Consider a relationship involving two sides and the angle they form, their included angle. To picture the relationship, form an angle using two pencils.

Any time you form an angle of the same measure with the pencils, the side formed by connecting the pencil points will have the same length. In fact, any two triangles formed in this way are congruent.

**POSTULATE 20** Side-Angle-Side (SAS) Congruence Postulate

If two sides and the included angle of one triangle are congruent to two sides and the included angle of a second triangle, then the two triangles are congruent.

If

- **Side** \(RS \cong UV\),
- **Angle** \(\angle R \cong \angle U\), and
- **Side** \(RT \cong UW\),

then \(\triangle RST \cong \triangle UVW\).

**EXAMPLE 1** Use the SAS Congruence Postulate

Write a proof.

**GIVEN** \(BC \cong DA, BC \parallel AD\)

**PROVE** \(\triangle ABC \cong \triangle CDA\)

**STATEMENTS**

1. \(BC \cong DA\)
2. \(BC \parallel AD\)
3. \(\angle BCA \cong \angle DAC\)
4. \(AC \cong CA\)
5. \(\triangle ABC \cong \triangle CDA\)

**REASONS**

1. Given
2. Given
3. Alternate Interior Angles Theorem
4. Reflexive Property of Congruence
5. SAS Congruence Postulate
**Example 2** Use SAS and properties of shapes

In the diagram, \( QS \) and \( RP \) pass through the center \( M \) of the circle. What can you conclude about \( \triangle MRS \) and \( \triangle MPQ \)?

**Solution**

Because they are vertical angles, \( \angle PMQ \equiv \angle RMS \). All points on a circle are the same distance from the center, so \( MP, MQ, MR, \) and \( MS \) are all equal.

\( \triangle MRS \) and \( \triangle MPQ \) are congruent by the SAS Congruence Postulate.

**Guided Practice**

In the diagram, \( ABCD \) is a square with four congruent sides and four right angles. \( R, S, T, \) and \( U \) are the midpoints of the sides of \( ABCD \). Also, \( RT \perp SU \) and \( SV \equiv VU \).

1. Prove that \( \triangle SVR \equiv \triangle UVR \).
2. Prove that \( \triangle BSR \equiv \triangle DUT \).

In general, if you know the lengths of two sides and the measure of an angle that is *not included* between them, you can create two different triangles.

**Read Vocabulary**

The two sides of a triangle that form an angle are adjacent to the angle. The side not adjacent to the angle is opposite the angle.

- Side opposite \( \angle A \)
- Sides adjacent to \( \angle A \)

Therefore, SSA is *not* a valid method for proving that triangles are congruent, although there is a special case for right triangles.

**Right Triangles** In a right triangle, the sides adjacent to the right angle are called the *legs*. The side opposite the right angle is called the *hypotenuse* of the right triangle.

**Theorem**

**Theorem 4.5** Hypotenuse-Leg (HL) Congruence Theorem

If the hypotenuse and a leg of a right triangle are congruent to the hypotenuse and a leg of a second right triangle, then the two triangles are congruent.

*Proofs:* Ex. 37, p. 439; p. 932
**Example 3**  Use the Hypotenuse-Leg Congruence Theorem

**Write a proof.**

**GIVEN** \( \overline{WY} \cong \overline{XZ}, \overline{WZ} \perp \overline{ZY}, \overline{XY} \perp \overline{ZY} \)

**PROVE** \( \triangle WYZ \cong \triangle XZY \)

**Solution**

Redraw the triangles so they are side by side with corresponding parts in the same position. Mark the given information in the diagram.

<table>
<thead>
<tr>
<th>STATEMENTS</th>
<th>REASONS</th>
</tr>

**Example 4**  Choose a postulate or theorem

**SIGN MAKING** You are making a canvas sign to hang on the triangular wall over the door to the barn shown in the picture. You think you can use two identical triangular sheets of canvas. You know that \( \overline{RP} \perp \overline{QS} \) and \( \overline{PQ} \cong \overline{PS} \). What postulate or theorem can you use to conclude that \( \triangle PQR \cong \triangle PSR \)?

**Solution**

You are given that \( \overline{PQ} \cong \overline{PS} \). By the Reflexive Property, \( \overline{RP} \cong \overline{RP} \). By the definition of perpendicular lines, both \( \angle RPQ \) and \( \angle RPS \) are right angles, so they are congruent. So, two sides and their included angle are congruent.

You can use the SAS Congruence Postulate to conclude that \( \triangle PQR \cong \triangle PSR \).

**Guided Practice** for Examples 3 and 4

Use the diagram at the right.

3. Redraw \( \triangle ACB \) and \( \triangle DBC \) side by side with corresponding parts in the same position.

4. Use the information in the diagram to prove that \( \triangle ACB \cong \triangle DBC \).
1. **VOCABULARY** Copy and complete: The angle between two sides of a triangle is called the □ angle.

2. ★ **WRITING** Explain the difference between proving triangles congruent using the SAS and SSS Congruence Postulates.

**NAMING INCLUDED ANGLES** Use the diagram to name the included angle between the given pair of sides.

3. \( \overline{XY} \) and \( \overline{YW} \)
4. \( \overline{WZ} \) and \( \overline{ZY} \)
5. \( \overline{ZW} \) and \( \overline{YW} \)
6. \( \overline{WX} \) and \( \overline{YX} \)
7. \( \overline{XY} \) and \( \overline{YZ} \)
8. \( \overline{WX} \) and \( \overline{WZ} \)

**REASONING** Decide whether enough information is given to prove that the triangles are congruent using the SAS Congruence Postulate.

9. \( \triangle ABD, \triangle CDB \)
10. \( \triangle LMN, \triangle NQP \)
11. \( \triangle YXZ, \triangle WXZ \)

12. \( \triangle QRV, \triangle TSU \)
13. \( \triangle EFH, \triangle GHF \)
14. \( \triangle KLM, \triangle MNK \)

15. ★ **MULTIPLE CHOICE** Which of the following sets of information does not allow you to conclude that \( \triangle ABC \cong \triangle DEF \)?

   - A. \( AB \cong DE, BC \cong EF, \angle B \cong \angle E \)
   - B. \( AB \cong DF, AC \cong DE, \angle C \cong \angle E \)
   - C. \( AC \cong DF, BC \cong EF, BA \cong DE \)
   - D. \( AB \cong DE, AC \cong DF, \angle A \cong \angle D \)

**APPLYING SAS** In Exercises 16–18, use the given information to name two triangles that are congruent. Explain your reasoning.

16. \( ABCD \) is a square with four congruent sides and four congruent angles.
17. \( RSTUV \) is a regular pentagon.
18. \( MK \perp MN \) and \( KL \perp NL \).
19. **OVERLAPPING TRIANGLES** Redraw $\triangle ACF$ and $\triangle EGB$ so they are side by side with corresponding parts in the same position. Explain how you know that $\triangle ACF \cong \triangle EGB$.

**REASONING** Decide whether enough information is given to prove that the triangles are congruent. If there is enough information, state the congruence postulate or theorem you would use.

20.

21. $Z$ is the midpoint of $\overline{PQ}$ and $\overline{XQ}$.

22.

23. ★ **WRITING** Suppose both pairs of corresponding legs of two right triangles are congruent. Are the triangles congruent? Explain.

24. **ERROR ANALYSIS** Describe and correct the error in finding the value of $x$.

25. **USING DIAGRAMS** In Exercises 25–27, state the third congruence that must be given to prove that $\triangle ABC \cong \triangle DEF$ using the indicated postulate.

26. **USING ISOSCELES TRIANGLES** Suppose $\triangle KLN$ and $\triangle MLN$ are isosceles triangles with bases $\overline{KN}$ and $\overline{MN}$ respectively, and $\overline{NL}$ bisects $\angle KLM$. Is there enough information to prove that $\triangle KLN \cong \triangle MLN$? Explain.

29. **REASONING** Suppose $M$ is the midpoint of $\overline{PQ}$ in $\triangle PQR$. If $\overline{RM} \perp \overline{PQ}$, explain why $\triangle RMP \cong \triangle RMQ$.

30. **CHALLENGE** Suppose $\overline{AB} \cong \overline{AC}$, $\overline{AD} \cong \overline{AF}$, $\overline{AD} \perp \overline{AB}$, and $\overline{AF} \perp \overline{AC}$. Explain why you can conclude that $\triangle ACD \cong \triangle ABF$. 

★ = STANDARDIZED TEST PRACTICE

〇 = WORKED-OUT SOLUTIONS on p. WS1
CONGRUENT TRIANGLES  In Exercises 31 and 32, identify the theorem or postulate you would use to prove the triangles congruent.

   PROVE $\triangle JKM \cong \triangle LKM$

38. GIVEN $D$ is the midpoint of $\overline{AC}$.
   PROVE $\triangle ABD \cong \triangle CBD$

39. ★ MULTIPLE CHOICE Which triangle congruence can you prove, then use to prove that $\angle FED \cong \angle ABF$?
   - (A) $\triangle ABE \cong \triangle ABF$
   - (B) $\triangle ACD \cong \triangle ADF$
   - (C) $\triangle AED \cong \triangle ABD$
   - (D) $\triangle AEC \cong \triangle ABD$

40. PROOF Write a two-column proof.
   GIVEN $\overline{CR} \cong \overline{CS}$, $\overline{QC} \perp \overline{CR}$, $\overline{QC} \perp \overline{CS}$
   PROVE $\triangle QCR \cong \triangle QCS$

41. CHALLENGE Describe how to show that $\triangle PMO \cong \triangle PMN$ using the SSS Congruence Postulate. Then show that the triangles are congruent using the SAS Congruence Postulate without measuring any angles. Compare the two methods.

MIXED REVIEW

Draw a figure that fits the description. (p. 42)

42. A pentagon that is not regular.
43. A quadrilateral that is equilateral but not equiangular.

Write an equation of the line that passes through point $P$ and is perpendicular to the line with the given equation. (p. 180)

44. $P(3, -1), y = -x + 2$
45. $P(3, 3), y = \frac{1}{3}x + 2$
46. $P(-4, -7), y = -5$

Find the value of $x$. (p. 225)

47. $R$ and $T$
48. $L$ and $P$
4.4 Investigate Triangles and Congruence

**MATERIALS** • graphing calculator or computer

**QUESTION** Can you prove triangles are congruent by SSA?

You can use geometry drawing software to show that if two sides and a nonincluded angle of one triangle are congruent to two sides and a nonincluded angle of another triangle, the triangles are not necessarily congruent.

**Example** Draw two triangles

**Step 1**
- Draw line \( \overrightarrow{AC} \). Then choose point \( B \) so that \( \angle BAC \) is acute. Draw \( \overrightarrow{AB} \).

**Step 2**
- Draw a circle with center at \( B \) so that the circle intersects \( \overrightarrow{AC} \) at two points. Label the points \( D \) and \( E \).
- Draw \( \overrightarrow{BD} \) and \( \overrightarrow{BE} \). Save as “EXAMPLE”.

**Step 3** Use your drawing

*Explain* why \( BD \equiv BE \). In \( \triangle ABD \) and \( \triangle ABE \), what other sides are congruent? What angles are congruent?

**Practice**

1. *Explain* how your drawing shows that \( \triangle ABD \not\cong \triangle ABE \).
2. Change the diameter of your circle so that it intersects \( \overrightarrow{AC} \) in only one point. Measure \( \angle BDA \). *Explain* why there is exactly one triangle you can draw with the measures \( AB, BD \), and a 90° angle at \( \angle BDA \).
3. *Explain* why your results show that SSA cannot be used to show that two triangles are congruent but that HL can.
1. **MULTI-STEP PROBLEM** In the diagram, \( AC \cong CD, BC \cong CG, EC \cong CF, \) and \( \angle ACE \cong \angle DCF. \)

   a. Classify each triangle in the figure by angles.
   b. Classify each triangle in the figure by sides.

2. **OPEN-ENDED** *Explain* how you know that \( \triangle PQR \cong \triangle STR \) in the keyboard stand shown.

3. **GRIDDED ANSWER** In the diagram below, find the measure of \( \angle 1 \) in degrees.

4. **SHORT RESPONSE** A rectangular “diver down” flag is used to indicate that scuba divers are in the water. On the flag, \( AB \equiv FE, AH \equiv DE, CE \equiv AG, \) and \( EG \equiv AC. \) Also, \( \angle A, \angle C, \angle E, \) and \( \angle G \) are right angles. Is \( \triangle BCD \cong \triangle FGH? \) *Explain.*

5. **EXTENDED RESPONSE** A roof truss is a network of pieces of wood that forms a stable structure to support a roof, as shown below.

   a. Prove that \( \triangle FGB \cong \triangle HGB. \)
   b. Is \( \triangle BDF \cong \triangle BEH? \) If so, prove it.

6. **GRIDDED ANSWER** In the diagram below, \( BAFC \cong DEFC. \) Find the value of \( x. \)
Suppose you tear two angles out of a piece of paper and place them at a fixed distance on a ruler. Can you form more than one triangle with a given length and two given angle measures as shown below?

In a polygon, the side connecting the vertices of two angles is the included side. Given two angle measures and the length of the included side, you can make only one triangle. So, all triangles with those measurements are congruent.

**THEOREMS**

**POSTULATE 21 Angle-Side-Angle (ASA) Congruence Postulate**

If two angles and the included side of one triangle are congruent to two angles and the included side of a second triangle, then the two triangles are congruent.

If \( \angle A \cong \angle D, \)
\( \overline{AC} \cong \overline{DF}, \) and
\( \angle C \cong \angle F, \)
then \( \triangle ABC \cong \triangle DEF. \)

**THEOREM 4.6 Angle-Angle-Side (AAS) Congruence Theorem**

If two angles and a non-included side of one triangle are congruent to two angles and the corresponding non-included side of a second triangle, then the two triangles are congruent.

If \( \angle A \cong \angle D, \)
\( \angle C \cong \angle F, \) and
\( \overline{BC} \cong \overline{EF}, \)
then \( \triangle ABC \cong \triangle DEF. \)

*Proof: Example 2, p. 250*
**Example 1** Identify congruent triangles

Can the triangles be proven congruent with the information given in the diagram? If so, state the postulate or theorem you would use.

a. b. c.

**Solution**

a. The vertical angles are congruent, so two pairs of angles and a pair of non-included sides are congruent. The triangles are congruent by the AAS Congruence Theorem.

b. There is not enough information to prove the triangles are congruent, because no sides are known to be congruent.

c. Two pairs of angles and their included sides are congruent. The triangles are congruent by the ASA Congruence Postulate.

**Flow Proofs**

You have written two-column proofs and paragraph proofs. A flow proof uses arrows to show the flow of a logical argument. Each reason is written below the statement it justifies.

**Example 2** Prove the AAS Congruence Theorem

Prove the Angle-Angle-Side Congruence Theorem.

**Given** \( \angle A \cong \angle D, \angle C \cong \angle F, \quad BC \equiv EF \)

**Prove** \( \triangle ABC \cong \triangle DEF \)

- \( \angle A \equiv \angle D \quad \text{Given} \)
- \( \angle B \equiv \angle E \quad \text{Third \( \triangle \) Thm.} \)
- \( \angle C \equiv \angle F \quad \text{Given} \)
- \( BC \equiv EF \quad \text{Given} \)
- \( \triangle ABC \equiv \triangle DEF \quad \text{ASA Congruence Post.} \)

**Guided Practice** for Examples 1 and 2

1. In the diagram at the right, what postulate or theorem can you use to prove that \( \triangle RST \equiv \triangle VUT \)? Explain.

2. Rewrite the proof of the Triangle Sum Theorem on page 219 as a flow proof.
**Example 3** Write a flow proof

In the diagram, $\overline{CE} \perp \overline{BD}$ and $\angle CAB \equiv \angle CAD$. Write a flow proof to show $\triangle ABE \equiv \triangle ADE$.

**Solution**

**GIVEN** $\overline{CE} \perp \overline{BD}$, $\angle CAB \equiv \angle CAD$

**PROVE** $\triangle ABE \equiv \triangle ADE$

\[
\angle CAB \equiv \angle CAD \quad \text{Given}
\]

\[
\angle BAE \equiv \angle DAE \quad \text{Congruent Supps. Thm.}
\]

\[
AE \equiv AE \quad \text{Reflexive Prop.}
\]

\[
m\angle AEB = m\angle AED = 90^\circ \quad \text{Def. of \hspace{1em} \perp \hspace{1em} lines}
\]

\[
\triangle ABE \equiv \triangle ADE \quad \text{ASA Congruence Post.}
\]

\[
\angle AEB \equiv \angle ADE \quad \text{All right \hspace{1em} \angle \hspace{1em} are \hspace{1em} \equiv.}
\]

**Example 4** Standardized Test Practice

**FIRE TOWERS** The forestry service uses fire tower lookouts to watch for forest fires. When the lookouts spot a fire, they measure the angle of their view and radio a dispatcher. The dispatcher then uses the angles to locate the fire. How many lookouts are needed to locate a fire?

- **A** 1
- **B** 2
- **C** 3
- **D** Not enough information

The locations of tower $A$, tower $B$, and the fire form a triangle. The dispatcher knows the distance from tower $A$ to tower $B$ and the measures of $\angle A$ and $\angle B$. So, he knows the measures of two angles and an included side of the triangle.

By the ASA Congruence Postulate, all triangles with these measures are congruent. So, the triangle formed is unique and the fire location is given by the third vertex. Two lookouts are needed to locate the fire.

- The correct answer is B. **A** **B** **C** **D**

**Guided Practice** for Examples 3 and 4

3. In Example 3, suppose $\angle ABE \equiv \angle ADE$ is also given. What theorem or postulate besides ASA can you use to prove that $\triangle ABE \equiv \triangle ADE$?

4. **WHAT IF?** In Example 4, suppose a fire occurs directly between tower $B$ and tower $C$. Could towers $B$ and $C$ be used to locate the fire? **Explain.**
**CONCEPT SUMMARY**

**Triangle Congruence Postulates and Theorems**

You have learned five methods for proving that triangles are congruent.

<table>
<thead>
<tr>
<th>SSS</th>
<th>SAS</th>
<th>HL (right △ only)</th>
<th>ASA</th>
<th>AAS</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="SSS triangle" /></td>
<td><img src="image" alt="SAS triangle" /></td>
<td><img src="image" alt="HL triangle" /></td>
<td><img src="image" alt="ASA triangle" /></td>
<td><img src="image" alt="AAS triangle" /></td>
</tr>
</tbody>
</table>

- **SSS**: All three sides are congruent.
- **SAS**: Two sides and the included angle are congruent.
- **HL**: The hypotenuse and one of the legs are congruent.
- **ASA**: Two angles and the included side are congruent.
- **AAS**: Two angles and a (non-included) side are congruent.

In the Exercises, you will prove three additional theorems about the congruence of right triangles: Angle-Leg, Leg-Leg, and Hypotenuse-Angle.

---

**4.5 EXERCISES**

**SKILL PRACTICE**

1. **VOCABULARY** Name one advantage of using a flow proof rather than a two-column proof.

2. **★ WRITING** You know that a pair of triangles has two pairs of congruent corresponding angles. What other information do you need to show that the triangles are congruent?

3. **IDENTIFY CONGRUENT TRIANGLES** Is it possible to prove that the triangles are congruent? If so, state the postulate or theorem you would use.

   3. △ABC, △QRS
   4. △XYZ, △JKL
   5. △PQR, △RSP

6. **ERROR ANALYSIS** Describe the error in concluding that △ABC ≡ △XYZ.

   ![By AAA, △ABC ≡ △XYZ.](image)
7. ★ MULTIPLE CHOICE Which postulate or theorem can you use to prove that \( \triangle ABC \cong \triangle HJK \)?
   
   \[ \begin{array}{ll}
   (A) & \text{ASA} \\
   (B) & \text{AAS} \\
   (C) & \text{SAS} \\
   (D) & \text{Not enough information}
   \end{array} \]

8. DEVELOPING PROOF State the third congruence that is needed to prove that \( \triangle GHI \cong \triangle LMN \) using the given postulate or theorem.

9. OVERLAPPING TRIANGLES Explain how you can prove that the indicated triangles are congruent using the given postulate or theorem.

10. DETERMINING CONGRUENCE Tell whether you can use the given information to determine whether \( \triangle ABC \cong \triangle DEF \). Explain your reasoning.

11. IDENTIFY CONGRUENT TRIANGLES Is it possible to prove that the triangles are congruent? If so, state the postulate(s) or theorem(s) you would use.

21. ★ EXTENDED RESPONSE Use the graph at the right.
   a. Show that \( \angle CAD \cong \angle ACB \). Explain your reasoning.
   b. Show that \( \angle ACD \cong \angle CAB \). Explain your reasoning.
   c. Show that \( \triangle ABC \cong \triangle CDA \). Explain your reasoning.

22. CHALLENGE Use a coordinate plane.
   a. Graph the lines \( y = 2x + 5 \), \( y = 2x - 3 \), and \( x = 0 \) in the same coordinate plane.
   b. Consider the equation \( y = mx + 1 \). For what values of \( m \) will the graph of the equation form two triangles if added to your graph? For what values of \( m \) will those triangles be congruent? Explain.
CONGRUENCE IN BICYCLES  Explain why the triangles are congruent.

23.  

24.  

EXAMPLE 3  on p. 251  for Ex. 25

25. FLOW PROOF  Copy and complete the flow proof.

GIVEN  \( AD \parallel CE, BD \cong BC \)

PROVE  \( \triangle ABD \cong \triangle EBC \)

\[
\begin{align*}
\text{Given} & \quad \angle A \cong \angle E \\
\angle C \cong \angle D & \quad \triangle ABD \cong \triangle EBC
\end{align*}
\]

EXAMPLE 4  on p. 251  for Ex. 26

26. ★ SHORT RESPONSE  You are making a map for an orienteering race. Participants start at a large oak tree, find a boulder 250 yards due east of the oak tree, and then find a maple tree that is 50° west of north of the boulder and 35° east of north of the oak tree. Sketch a map. Can you locate the maple tree? Explain.

27. AIRPLANE  In the airplane at the right, \( \angle C \) and \( \angle F \) are right angles, \( BC \cong EF \), and \( \angle A \cong \angle D \). What postulate or theorem allows you to conclude that \( \triangle ABC \cong \triangle DEF \)?

RIGHT TRIANGLES  In Lesson 4.4, you learned the Hypotenuse-Leg Theorem for right triangles. In Exercises 28–30, write a paragraph proof for these other theorems about right triangles.

28. Leg-Leg (LL) Theorem  If the legs of two right triangles are congruent, then the triangles are congruent.

29. Angle-Leg (AL) Theorem  If an angle and a leg of a right triangle are congruent to an angle and a leg of a second right triangle, then the triangles are congruent.

30. Hypotenuse-Angle (HA) Theorem  If an angle and the hypotenuse of a right triangle are congruent to an angle and the hypotenuse of a second right triangle, then the triangles are congruent.
31. **PROOF** Write a two-column proof.
   **GIVEN** ▶ \( \overline{AK} \cong \overline{CJ}, \angle BJK \cong \angle BKJ, \angle A \cong \angle C \)
   **PROVE** ▶ \( \triangle ABK \cong \triangle CBK \)

32. **PROOF** Write a flow proof.
   **GIVEN** ▶ \( \overline{WW} \cong \overline{UU}, \angle X \cong \angle Z \)
   **PROVE** ▶ \( \triangle XWV \cong \triangle ZWU \)

33. **PROOF** Write a proof.
   **GIVEN** ▶ \( \angle NKM \cong \angle LMK, \angle L \cong \angle N \)
   **PROVE** ▶ \( \triangle NKM \cong \triangle LKM \)

34. **PROOF** Write a proof.
   **GIVEN** ▶ \( X \) is the midpoint of \( \overline{YY} \) and \( \overline{WZ} \).
   **PROVE** ▶ \( \triangle VWX \cong \triangle YZX \)

35. **CHALLENGE** Write a proof.
   **GIVEN** ▶ \( \triangle ABF \cong \triangle DFB, F \) is the midpoint of \( \overline{AE} \), \( B \) is the midpoint of \( \overline{AC} \).
   **PROVE** ▶ \( \triangle FDE \cong \triangle BCD \cong \triangle ABF \)

---

**MIXED REVIEW**

Find the value of \( x \) that makes \( m \parallel n \). (p. 161)

36. \[ 51^\circ \]
37. \[ 42^\circ \]
38. \[ 101^\circ \]

Write an equation of the line that passes through point \( P \) and is parallel to the line with the given equation. (p. 180)

39. \( P(0, 3), y = x - 8 \)
40. \( P(-2, 4), y = -2x + 3 \)

Decide which method, SSS, SAS, or HL, can be used to prove that the triangles are congruent. (pp. 234, 240)

41. \( \triangle HJK \cong \triangle LKJ \)
42. \( \triangle UTV \cong \triangle WVT \)
43. \( \triangle XYZ \cong \triangle RQZ \)
### Example 1 Use congruent triangles

Explain how you can use the given information to prove that the hanglider parts are congruent.

**Given**
- $\angle 1 \cong \angle 2$, $\angle RTQ \cong \angle RTS$

**Prove**
- $\overline{QT} \cong \overline{ST}$

**Solution**

If you can show that $\triangle QRT \cong \triangle SRT$, you will know that $\overline{QT} \cong \overline{ST}$. First, copy the diagram and mark the given information. Then add the information that you can deduce. In this case, $\angle RQT$ and $\angle RST$ are supplementary to congruent angles, so $\angle RQT \cong \angle RST$. Also, $\overline{RT} \cong \overline{RT}$.

Mark given information. Add deduced information.

Two angle pairs and a non-included side are congruent, so by the AAS Congruence Theorem, $\triangle QRT \cong \triangle SRT$. Because corresponding parts of congruent triangles are congruent, $\overline{QT} \cong \overline{ST}$.

**Guided Practice** for Example 1

1. Explain how you can prove that $\angle A \cong \angle C$. 

---

**Key Vocabulary**
- **corresponding parts**, p. 225

By definition, congruent triangles have congruent corresponding parts. So, if you can prove that two triangles are congruent, you know that their corresponding parts must be congruent as well.
**Example 2** Use congruent triangles for measurement

**SURVEYING** Use the following method to find the distance across a river, from point $N$ to point $P$.

- Place a stake at $K$ on the near side so that $NK \perp NP$.
- Find $M$, the midpoint of $NK$.
- Locate the point $L$ so that $NK \perp KL$ and $L$, $P$, and $M$ are collinear.
- Explain how this plan allows you to find the distance.

**Solution**

Because $NK \perp NP$ and $NK \perp KL$, $\angle N$ and $\angle K$ are congruent right angles. Because $M$ is the midpoint of $NK$, $NM \equiv KM$. The vertical angles $\angle KML$ and $\angle NMP$ are congruent. So, $\triangle MLK \equiv \triangle MPN$ by the ASA Congruence Postulate. Then, because corresponding parts of congruent triangles are congruent, $KL \equiv NP$. So, you can find the distance $NP$ across the river by measuring $KL$.

**Example 3** Plan a proof involving pairs of triangles

Use the given information to write a plan for proof.

**Given** $\angle 1 \equiv \angle 2$, $\angle 3 \equiv \angle 4$

**Prove** $\triangle BCE \equiv \triangle DCE$

**Solution**

In $\triangle BCE$ and $\triangle DCE$, you know $\angle 1 \equiv \angle 2$ and $CE \equiv CE$. If you can show that $CB \equiv CD$, you can use the SAS Congruence Postulate.

To prove that $CB \equiv CD$, you can first prove that $\triangle CBA \equiv \triangle CDA$. You are given $\angle 1 \equiv \angle 2$ and $\angle 3 \equiv \angle 4$. $CA \equiv CA$ by the Reflexive Property. You can use the ASA Congruence Postulate to prove that $\triangle CBA \equiv \triangle CDA$.

**Plan for Proof** Use the ASA Congruence Postulate to prove that $\triangle CBA \equiv \triangle CDA$. Then state that $CB \equiv CD$. Use the SAS Congruence Postulate to prove that $\triangle BCE \equiv \triangle DCE$.

**Guided Practice** for Examples 2 and 3

2. In Example 2, does it matter how far from point $N$ you place a stake at point $K$? Explain.

3. Using the information in the diagram at the right, write a plan to prove that $\triangle PTU \equiv \triangle UQP$. 

---

**Indirect Measurement**

When you cannot easily measure a length directly, you can make conclusions about the length indirectly, usually by calculations based on known lengths.
**EXAMPLE 4**  Prove a construction

Write a proof to verify that the construction for copying an angle is valid.

**Solution**

Add $\overline{BC}$ and $\overline{EF}$ to the diagram. In the construction, $\overline{AB}$, $\overline{DE}$, $\overline{AC}$, and $\overline{DF}$ are all determined by the same compass setting, as are $\overline{BC}$ and $\overline{EF}$. So, you can assume the following as given statements.

**GIVEN**

- $\overline{AB} \cong \overline{DE}$, $\overline{AC} \cong \overline{DF}$, $\overline{BC} \cong \overline{EF}$

**PROVE**

- $\angle D \cong \angle A$

**Plan for Proof**

Show that $\triangle CAB \cong \triangle FDE$, so you can conclude that the corresponding parts $\angle A$ and $\angle D$ are congruent.

<table>
<thead>
<tr>
<th>STATEMENTS</th>
<th>REASONS</th>

<td>3. Corresp. parts of $\cong \triangle$ are $\cong$.</td>
</tr>
</tbody>
</table>

**GUIDED PRACTICE** for Example 4

4. Look back at the construction of an angle bisector in Explore 4 on page 34. What segments can you assume are congruent?
4.6 **EXERCISES**

**SKILL PRACTICE**

1. **VOCABULARY** Copy and complete: Corresponding parts of congruent triangles are ___.

2. **WRITING** Explain why you might choose to use congruent triangles to measure the distance across a river. Give another example where it may be easier to measure with congruent triangles rather than directly.

**CONGRUENT TRIANGLES** Tell which triangles you can show are congruent in order to prove the statement. What postulate or theorem would you use?

3. \(\angle A \cong \angle D\)

4. \(\angle Q \cong \angle T\)

5. \(\overline{JM} \cong \overline{LM}\)

6. \(\overline{AC} \cong \overline{BD}\)

7. \(\overline{GK} \cong \overline{HJ}\)

8. \(\overline{QW} \cong \overline{TV}\)

9. **ERROR ANALYSIS** Describe the error in the statement.

10. **PLANNING FOR PROOF** Use the diagram to write a plan for proof.

11. **PROVE** \(\angle S \cong \angle U\)

12. **PROVE** \(\overline{LM} \cong \overline{LQ}\)

13. **PENTAGONS** Explain why segments connecting any pair of corresponding vertices of congruent pentagons are congruent. Make a sketch to support your answer.

14. **ALGEBRA** Given that \(\triangle ABC \cong \triangle DEF\), \(m\angle A = 70^\circ\), \(m\angle B = 60^\circ\), \(m\angle C = 50^\circ\), \(m\angle D = (3x + 10)^\circ\), \(m\angle E = \left(\frac{y}{3} + 20\right)^\circ\), and \(m\angle F = (z^2 + 14)^\circ\), find the values of \(x\), \(y\), and \(z\).
14. ★ MULTIPLE CHOICE  Which set of given information does not allow you to conclude that $AD \cong CD$?
   - A) $AE \cong CE$, $\angle BEA = 90^\circ$
   - B) $BA \cong BC$, $\angle BDC \cong \angle BDA$
   - C) $AB \cong CB$, $\angle ABE \cong \angle CBE$
   - D) $AE \cong CE$, $AB \cong CB$

PLANNING FOR PROOF  Use the information given in the diagram to write a plan for proving that $\angle 1 \cong \angle 2$.

USING COORDINATES  Use the vertices of $\triangle ABC$ and $\triangle DEF$ to show that $\angle A \cong \angle D$. Explain your reasoning.

PROOF  Use the information given in the diagram to write a proof.

27. CHALLENGE  Which of the triangles below are congruent?
28. **CANYON** *Explain* how you can find the distance across the canyon.

29. **PROOF** Use the given information and the diagram to write a two-column proof.

   **GIVEN** \( \overrightarrow{PQ} \parallel \overrightarrow{VS}, \overrightarrow{QU} \parallel \overrightarrow{ST}, \overrightarrow{PQ} \equiv \overrightarrow{VS} \)

   **PROVE** \( \angle Q \equiv \angle S \)

30. **SNOWBOARDING** In the diagram of the half pipe below, \( C \) is the midpoint of \( \overline{BD} \). If \( EC \approx 11.5 \text{ m} \), and \( CD \approx 2.5 \text{ m} \), find the approximate distance across the half pipe. *Explain* your reasoning.

31. ★ **MULTIPLE CHOICE** Using the information in the diagram, you can prove that \( \overrightarrow{WY} \equiv \overrightarrow{ZX} \). Which reason would not appear in the proof?
   
   A. SAS Congruence Postulate
   
   B. AAS Congruence Theorem
   
   C. Alternate Interior Angles Theorem
   
   D. Right Angle Congruence Theorem

32. **PROVING A CONSTRUCTION** The diagrams below show the construction on page 34 used to bisect \( \angle A \). By construction, you can assume that \( \overrightarrow{AB} \equiv \overrightarrow{AC} \) and \( \overrightarrow{BG} \equiv \overrightarrow{CG} \). Write a proof to verify that \( \overrightarrow{AG} \) bisects \( \angle A \).

   **STEP 1**
   
   First draw an arc with center \( A \). Label the points where the arc intersects the sides of the angle points \( B \) and \( C \).

   **STEP 2**
   
   Draw an arc with center \( C \). Using the same radius, draw an arc with center \( B \). Label the intersection point \( G \).

   **STEP 3**
   
   Draw \( \overrightarrow{AG} \). It follows that \( \angle BAG \equiv \angle CAG \).
ARCHITECTURE Can you use the given information to determine that $AB \cong BC$? Justify your answer.

33. $\angle ABD \cong \angle CBD$, 
   $AD = CD$
34. $\overline{AC} \perp \overline{BD}$, 
   $\triangle ADE \cong \triangle CDE$
35. $\overline{BD}$ bisects $\overline{AC}$, 
   $\overline{AD} \perp \overline{BD}$

36. ★ EXTENDED RESPONSE You can use the method described below to find the distance across a river. You will need a cap with a visor.
   - Stand on one side of the river and look straight across to a point on the other side. Align the visor of your cap with that point.
   - Without changing the inclination of your neck and head, turn sideways until the visor is in line with a point on your side of the stream.
   - Measure the distance $BD$ between your feet and that point.

   a. What corresponding parts of the two triangles can you assume are congruent? What postulate or theorem can you use to show that the two triangles are congruent?

   b. Explain why $BD$ is also the distance across the stream.

PROOF Use the given information and the diagram to prove that $\angle 1 \cong \angle 2$.

37. GIVEN $\overline{MN} \cong \overline{KN}$, $\angle PMN \cong \angle NKL$
38. GIVEN $\overline{TS} \cong \overline{TV}$, $\overline{SR} \cong \overline{VW}$

39. PROOF Write a proof.
   GIVEN $\overline{BA} \cong \overline{BC}$, $D$ and $E$ are midpoints, 
   $\angle A \cong \angle C$, $\overline{DF} \cong \overline{EF}$
   PROVE $\overline{FG} \cong \overline{FH}$
40. **CHALLENGE** In the diagram of pentagon $ABCD$, $AB \parallel EC$, $AC \parallel ED$, $AB \equiv ED$, and $AC \equiv EC$. Write a proof that shows $AD \equiv EB$.

![Diagram of pentagon](image)

**MIXED REVIEW**

How many lines can be drawn that fit each description?
Copy the diagram and sketch all the lines. (p. 147)

41. Line(s) through $B$ and parallel to $\overrightarrow{AC}$
42. Line(s) through $A$ and perpendicular to $\overrightarrow{BC}$
43. Line(s) through $D$ and $C$

The variable expressions represent the angle measures of a triangle. Find the measure of each angle. Then classify the triangle by its angles. (p. 217)

44. $m\angle A = x^\circ$
   
   $m\angle B = (4x)^\circ$
   
   $m\angle C = (5x)^\circ$  
45. $m\angle A = x^\circ$
   
   $m\angle B = (5x)^\circ$
   
   $m\angle C = (x + 19)^\circ$  
46. $m\angle A = (x - 22)^\circ$
   
   $m\angle B = (x + 16)^\circ$
   
   $m\angle C = (2x - 14)^\circ$

**QUIZ for Lessons 4.4–4.6**

Decide which method, SAS, ASA, AAS, or HL, can be used to prove that the triangles are congruent. (pp. 240, 249)

1. ![Triangle](image)
2. ![Triangle](image)
3. ![Triangle](image)

Use the given information to write a proof.

4. **GIVEN** $\angle BAC \equiv \angle DCA$, $AB \equiv CD$
   
   **PROVE** $\triangle ABC \equiv \triangle CDA$ (p. 240)

5. **GIVEN** $\angle W \equiv \angle Z$, $\overline{WW} \equiv \overline{YZ}$
   
   **PROVE** $\triangle VWX \equiv \triangle YZX$ (p. 249)

6. Write a plan for a proof. (p. 256)
   
   **GIVEN** $\overline{PQ} \equiv \overline{MN}$, $m\angle P = m\angle M = 90^\circ$
   
   **PROVE** $\overline{QL} \equiv \overline{NL}$

**EXTRA PRACTICE** for Lesson 4.6, p. 903  
**ONLINE QUIZ** at classzone.com
4.7 Use Isosceles and Equilateral Triangles

**Key Vocabulary**
- **legs**
- **vertex angle**
- **base**
- **base angles**

In Lesson 4.1, you learned that a triangle is isosceles if it has at least two congruent sides. When an isosceles triangle has exactly two congruent sides, these two sides are the legs. The angle formed by the legs is the vertex angle. The third side is the base of the isosceles triangle. The two angles adjacent to the base are called base angles.

**THEOREMS**

**THEOREM 4.7** Base Angles Theorem
If two sides of a triangle are congruent, then the angles opposite them are congruent.
If \( \overline{AB} \cong \overline{AC} \), then \( \angle B \cong \angle C \).
Proof: p. 265

**THEOREM 4.8** Converse of Base Angles Theorem
If two angles of a triangle are congruent, then the sides opposite them are congruent.
If \( \angle B \cong \angle C \), then \( \overline{AB} \cong \overline{AC} \).
Proof: Ex. 45, p. 269

**EXAMPLE 1** Apply the Base Angles Theorem

In \( \triangle DEF \), \( \overline{DE} \cong \overline{DF} \). Name two congruent angles.

**Solution**
\( \overline{DE} \cong \overline{DF} \), so by the Base Angles Theorem, \( \angle E \cong \angle F \).

**GUIDED PRACTICE**

Copy and complete the statement.
1. If \( \overline{HG} \cong \overline{HK} \), then \( \angle ? \cong \angle ? \).
2. If \( \angle KHI \cong \angle KJH \), then \( ? \cong ? \).
EXAMPLE 2 Find measures in a triangle

Find the measures of $\angle P$, $\angle Q$, and $\angle R$.

The diagram shows that $\triangle PQR$ is equilateral. Therefore, by the Corollary to the Base Angles Theorem, $\triangle PQR$ is equiangular. So, $m\angle P = m\angle Q = m\angle R$.

$3(m\angle P) = 180^\circ$ \quad Triangle Sum Theorem

$m\angle P = 60^\circ$ \quad Divide each side by 3.

The measures of $\angle P$, $\angle Q$, and $\angle R$ are all $60^\circ$.

GUIDED PRACTICE for Example 2

3. Find $ST$ in the triangle at the right.

4. Is it possible for an equilateral triangle to have an angle measure other than $60^\circ$? Explain.
**EXAMPLE 3**  Use isosceles and equilateral triangles

**ALGEBRA**  Find the values of \(x\) and \(y\) in the diagram.

**Solution**

**STEP 1**  Find the value of \(y\). Because \(\triangle KLN\) is equiangular, it is also equilateral and \(KN \equiv KL\). Therefore, \(y = 4\).

**STEP 2**  Find the value of \(x\). Because \(\angle LNM \equiv \angle LMN\), \(LN \equiv LM\) and \(\triangle LMN\) is isosceles. You also know that \(LN = 4\) because \(\triangle KLN\) is equilateral.

\[
LN = LM \quad \text{Definition of congruent segments}
\]
\[
4 = x + 1 \quad \text{Substitute 4 for } LN \text{ and } x + 1 \text{ for } LM.
\]
\[
3 = x \quad \text{Subtract 1 from each side.}
\]

---

**EXAMPLE 4**  Solve a multi-step problem

**LIFEGUARD TOWER**  In the lifeguard tower, \(\overline{PS} \equiv \overline{QR}\) and \(\angle QPS \equiv \angle PQR\).

a. What congruence postulate can you use to prove that \(\triangle QPS \equiv \triangle PQR\)?

b. Explain why \(\triangle PQT\) is isosceles.

c. Show that \(\triangle PTS \equiv \triangle QTR\).

**Solution**

a. Draw and label \(\triangle QPS\) and \(\triangle PQR\) so that they do not overlap. You can see that \(PQ \equiv QP\), \(PS \equiv QR\), and \(\angle QPS \equiv \angle PQR\). So, by the SAS Congruence Postulate, \(\triangle QPS \equiv \triangle PQR\).

b. From part (a), you know that \(\angle 1 \equiv \angle 2\) because corresp. parts of \(\equiv \triangle\) are \(\equiv\). By the Converse of the Base Angles Theorem, \(PT \equiv QT\), and \(\triangle PQT\) is isosceles.

c. You know that \(\overline{PS} \equiv \overline{QR}\), and \(\angle 3 \equiv \angle 4\) because corresp. parts of \(\equiv \triangle\) are \(\equiv\). Also, \(\angle PTS \equiv \angle QTR\) by the Vertical Angles Congruence Theorem. So, \(\triangle PTS \equiv \triangle QTR\) by the AAS Congruence Theorem.

---

**GUIDED PRACTICE**  for Examples 3 and 4

5. Find the values of \(x\) and \(y\) in the diagram.

6. **REASONING**  Use parts (b) and (c) in Example 4 and the SSS Congruence Postulate to give a different proof that \(\triangle QPS \equiv \triangle PQR\).
1. **VOCABULARY** Define the *vertex angle* of an isosceles triangle.

2. **★ WRITING** What is the relationship between the base angles of an isosceles triangle? Explain.

**USING DIAGRAMS** In Exercises 3–6, use the diagram. Copy and complete the statement. Tell what theorem you used.

3. If $\overline{AE} \cong \overline{DE}$, then $\angle ? = \angle ?$.
4. If $\overline{AB} \cong \overline{EB}$, then $\angle ? = \angle ?$.
5. If $\angle D \cong \angle CED$, then $\angle ? = \angle ?$.
6. If $\angle EBC \cong \angle ECB$, then $\angle ? = \angle ?$.

**REASONING** Find the unknown measure.

7.  

8.  

9.  

**DRAWING DIAGRAMS** A base angle in an isosceles triangle measures $37^\circ$. Draw and label the triangle. What is the measure of the vertex angle?

**ALGEBRA** Find the value of $x$.

11.  

12.  

13.  

14. **ERROR ANALYSIS** Describe and correct the error made in finding $BC$ in the diagram shown.

**ALGEBRA** Find the values of $x$ and $y$.

15.  

16.  

17.  

18. **★ SHORT RESPONSE** Are isosceles triangles always acute triangles? Explain your reasoning.
19. ★ MULTIPLE CHOICE What is the value of $x$ in the diagram?

- A. 5
- B. 6
- C. 7
- D. 9

**ALGEBRA** Find the values of $x$ and $y$, if possible. **Explain** your reasoning.

20. 21. 22.

**ALGEBRA** Find the perimeter of the triangle.

23. 24. 25.

**REASONING** In Exercises 26–29, use the diagram. State whether the given values for $x$, $y$, and $z$ are possible or not. If not, **explain**.

26. $x = 90$, $y = 68$, $z = 42$
27. $x = 40$, $y = 72$, $z = 36$
28. $x = 25$, $y = 25$, $z = 15$
29. $x = 42$, $y = 72$, $z = 33$

30. ★ SHORT RESPONSE In $\triangle DEF$, $m \angle D = (4x + 2)^\circ$, $m \angle E = (6x - 30)^\circ$, and $m \angle F = 3x^\circ$. What type of triangle is $\triangle DEF$? **Explain** your reasoning.

31. ★ SHORT RESPONSE In $\triangle ABC$, $D$ is the midpoint of $\overline{AC}$, and $\overline{BD}$ is perpendicular to $\overline{AC}$. **Explain** why $\triangle ABC$ is isosceles.

**ALGEBRA** Find the value(s) of the variable(s). **Explain** your reasoning.

32. 33. 34.

35. **REASONING** The measure of an exterior angle of an isosceles triangle is $130^\circ$. What are the possible angle measures of the triangle? **Explain**.

36. **PROOF** Let $\triangle ABC$ be isosceles with vertex angle $\angle A$. Suppose $\angle A$, $\angle B$, and $\angle C$ have integer measures. Prove that $m \angle A$ must be even.

37. **CHALLENGE** The measure of an exterior angle of an isosceles triangle is $x^\circ$. What are the possible angle measures of the triangle in terms of $x$? **Describe** all the possible values of $x$. 

○ = WORKED-OUT SOLUTIONS on p. WS1  ★ = STANDARDIZED TEST PRACTICE

   a. **Reasoning** Explain how you know that any triangle made out of equilateral triangles will be an equilateral triangle.
   b. **Area** Find the areas of the first four triangles in the pattern.
   c. **Make a Conjecture** Describe any patterns in the areas. Predict the area of the seventh triangle in the pattern. Explain your reasoning.

43. **REASONING** Let $\triangle PQR$ be an isosceles right triangle with hypotenuse $QR$. Find $m\angle P$, $m\angle Q$, and $m\angle R$.

44. **REASONING** Explain how the Corollary to the Base Angles Theorem follows from the Base Angles Theorem.

45. **PROVING THEOREM 4.8** Write a proof of the Converse of the Base Angles Theorem.
46. **EXENDED RESPONSE** Sue is designing fabric purses that she will sell at the school fair. Use the diagram of one of her purses.
   a. Prove that \(\triangle ABE \cong \triangle DCE\).
   b. Name the isosceles triangles in the purse.
   c. Name three angles that are congruent to \(\angle EAD\).
   d. **What If?** If the measure of \(\angle BEC\) changes, does your answer to part (c) change? Explain.

**REASONING FROM DIAGRAMS** Use the information in the diagram to answer the question. Explain your reasoning.

47. Is \(p \parallel q\)?

48. Is \(\triangle ABC\) isosceles?

49. **PROOF** Write a proof.
   
   **GIVEN** \(\triangle ABC\) is equilateral, 
   \(\angle CAD \cong \angle ABE \cong \angle BCF\).
   
   **PROVE** \(\triangle DEF\) is equilateral.

50. **COORDINATE GEOMETRY** The coordinates of two vertices of \(\triangle TUV\) are \(T(0, 4)\) and \(U(4, 0)\). Explain why the triangle will always be an isosceles triangle if \(V\) is any point on the line \(y = x\) except (2, 2).

51. **CHALLENGE** The lengths of the sides of a triangle are \(3t, 5t - 12\), and \(t + 20\). Find the values of \(t\) that make the triangle isosceles. Explain.

## MIXED REVIEW

### What quadrant contains the point? (p. 878)

52. \((-1, -3)\)  
53. \((-2, 4)\)  
54. \((5, -2)\)

### Copy and complete the given function table. (p. 884)

55. 

<table>
<thead>
<tr>
<th>(x)</th>
<th>-7</th>
<th>0</th>
<th>5</th>
</tr>

### Use the Distance Formula to decide whether \(\overline{AB} \cong \overline{AC}\). (p. 15)

57. \((0, 0), B(-5, -6), C(6, 5)\)

58. \((3, -3), B(0, 1), C(-1, 0)\)

59. \((0, 1), B(4, 7), C(-6, 3)\)

60. \((-3, 0), B(2, 2), C(2, -2)\)
4.8 Investigate Slides and Flips

**MATERIALS** • graph paper • pencil

**QUESTION** What happens when you slide or flip a triangle?

**EXPLORE 1** Slide a triangle

**STEP 1** **Draw a triangle** Draw a scalene right triangle with legs of length 3 units and 4 units on a piece of graph paper. Cut out the triangle.

**STEP 2** **Draw coordinate plane** Draw axes on the graph paper. Place the cut-out triangle so that the coordinates of the vertices are integers. Trace around the triangle and label the vertices.

**STEP 3** **Slide triangle** Slide the cut-out triangle so it moves left and down. Write a description of the *transformation* and record ordered pairs in a table like the one shown. Repeat this step three times, sliding the triangle left or right *and* up or down to various places in the coordinate plane.

<table>
<thead>
<tr>
<th>Slide 2 units left and 3 units down.</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Vertex</strong></td>
<td><strong>Original position</strong></td>
</tr>
<tr>
<td>A</td>
<td>(0, 0)</td>
</tr>
<tr>
<td>B</td>
<td>(3, 0)</td>
</tr>
<tr>
<td>C</td>
<td>(3, 4)</td>
</tr>
</tbody>
</table>

**EXPLORE 2** Flip a triangle

**STEP 1** **Draw a coordinate plane** Draw and label a second coordinate plane. Place the cut-out triangle so that one vertex is at the origin and one side is along the *y*-axis, as shown.

**STEP 2** **Flip triangle** Flip the cut-out triangle over the *y*-axis. Record a description of the *transformation* and record the ordered pairs in a table. Repeat this step, flipping the triangle over the *x*-axis.

**DRAW CONCLUSIONS** Use your observations to complete these exercises

1. How are the coordinates of the original position of the triangle related to the new position in a slide? in a flip?
2. Is the original triangle congruent to the new triangle in a slide? in a flip? *Explain* your reasoning.
Before
You determined whether two triangles are congruent.

Now
You will create an image congruent to a given triangle.

Why
So you can describe chess moves, as in Ex. 41.

Key Vocabulary
• transformation
• image
• translation
• reflection
• rotation
• congruence transformation

A transformation is an operation that moves or changes a geometric figure in some way to produce a new figure. The new figure is called the image. A transformation can be shown using an arrow.

The order of the vertices in the transformation statement tells you that $P$ is the image of $A$, $Q$ is the image of $B$, and $R$ is the image of $C$.

There are three main types of transformations. A translation moves every point of a figure the same distance in the same direction. A reflection uses a line of reflection to create a mirror image of the original figure. A rotation turns a figure about a fixed point, called the center of rotation.

Example 1: Identify transformations

Name the type of transformation demonstrated in each picture.

a. Reflection in a horizontal line
b. Rotation about a point
c. Translation in a straight path

Guided Practice for Example 1

1. Name the type of transformation shown.

Congruence
Translations, reflections, and rotations are three types of congruence transformations. A congruence transformation changes the position of the figure without changing its size or shape.
**TRANSLATIONS** In a coordinate plane, a translation moves an object a given distance right or left and up or down. You can use coordinate notation to describe a translation.

**KEY CONCEPT**

**Coordinate Notation for a Translation**

You can describe a translation by the notation

$$(x, y) \rightarrow (x + a, y + b)$$

which shows that each point $(x, y)$ of the blue figure is translated horizontally $a$ units and vertically $b$ units.

---

**EXAMPLE 2** Translate a figure in the coordinate plane

Figure $ABCD$ has the vertices $A(-4, 3), B(-2, 4), C(-1, 1),$ and $D(-3, 1)$. Sketch $ABCD$ and its image after the translation $(x, y) \rightarrow (x + 5, y - 2)$.

**Solution**

First draw $ABCD$. Find the translation of each vertex by adding 5 to its $x$-coordinate and subtracting 2 from its $y$-coordinate. Then draw $ABCD$ and its image.

$$(x, y) \rightarrow (x + 5, y - 2)$$

$A(-4, 3) \rightarrow (1, 1)$

$B(-2, 4) \rightarrow (3, 2)$

$C(-1, 1) \rightarrow (4, -1)$

$D(-3, 1) \rightarrow (2, -1)$

---

**REFLECTIONS** In this lesson, when a reflection is shown in a coordinate plane, the line of reflection is always the $x$-axis or the $y$-axis.

---

**KEY CONCEPT**

**Coordinate Notation for a Reflection**

- **Reflection in the $x$-axis**
  
  Multiply the $y$-coordinate by $-1$.
  
  $$(x, y) \rightarrow (x, -y)$$

- **Reflection in the $y$-axis**
  
  Multiply the $x$-coordinate by $-1$.
  
  $$(x, y) \rightarrow (-x, y)$$
Example 3  Reflect a figure in the y-axis

WOODWORK  You are drawing a pattern for a wooden sign. Use a reflection in the x-axis to draw the other half of the pattern.

Solution

Multiply the y-coordinate of each vertex by −1 to find the corresponding vertex in the image.

\[(x, y) \rightarrow (x, -y)\]

\[(-1, 0) \rightarrow (-1, 0) \quad (-1, 2) \rightarrow (-1, -2)\]

\[(1, 2) \rightarrow (1, -2) \quad (1, 4) \rightarrow (1, -4)\]

\[(5, 0) \rightarrow (5, 0)\]

Use the vertices to draw the image. You can check your results by looking to see if each original point and its image are the same distance from the x-axis.

Guided Practice for Examples 2 and 3

2. The vertices of \(\triangle ABC\) are \(A(1, 2), B(0, 0),\) and \(C(4, 0)\). A translation of \(\triangle ABC\) results in the image \(\triangle DEF\) with vertices \(D(2, 1), E(1, -1)\), and \(F(5, -1)\). Describe the translation in words and in coordinate notation.

3. The endpoints of \(\overline{RS}\) are \(R(4, 5)\) and \(S(1, -3)\). A reflection of \(\overline{RS}\) results in the image \(\overline{TU}\), with coordinates \(T(4, -5)\) and \(U(1, 3)\). Tell which axis \(\overline{RS}\) was reflected in and write the coordinate rule for the reflection.

Rotations  In this lesson, if a rotation is shown in a coordinate plane, the center of rotation is the origin.

The direction of rotation can be either clockwise or counterclockwise. The angle of rotation is formed by rays drawn from the center of rotation through corresponding points on the original figure and its image.

90° clockwise rotation  60° counterclockwise rotation

Notice that rotations preserve distances from the center of rotation. So, segments drawn from the center of rotation to corresponding points on the figures are congruent.
**Example 4**  Identify a rotation

Graph \( \overline{AB} \) and \( \overline{CD} \). Tell whether \( \overline{CD} \) is a rotation of \( \overline{AB} \) about the origin. If so, give the angle and direction of rotation.

a. \( A(-3, 1), B(-1, 3), C(1, 3), D(3, 1) \)

b. \( A(0, 1), B(1, 3), C(-1, 1), D(-3, 2) \)

**Solution**

![Graph showing rotation](image)

- \( m\angle AOC = m\angle BOD = 90^\circ \)
- This is a 90° clockwise rotation.

**Example 5**  Verify congruence

The vertices of \( \triangle ABC \) are \( A(4, 4), B(6, 6), \) and \( C(7, 4) \). The notation \( (x, y) \to (x + 1, y - 3) \) describes the translation of \( \triangle ABC \) to \( \triangle DEF \). Show that \( \triangle ABC \cong \triangle DEF \) to verify that the translation is a congruence transformation.

**Solution**

S  You can see that \( AC = DF = 3 \), so \( \overline{AC} \parallel \overline{DF} \).

A  Using the slopes, \( \overline{AB} \parallel \overline{DE} \) and \( \overline{AC} \parallel \overline{DF} \).
- If you extend \( AB \) and \( DF \) to form \( \angle G \), the Corresponding Angles Postulate gives you \( \angle BAC \equiv \angle G \) and \( \angle G \equiv \angle EDF \). Then, \( \angle BAC \equiv \angle EDF \) by the Transitive Property of Congruence.

S  Using the Distance Formula, \( AB = DE = 2\sqrt{2} \) so \( \overline{AB} \equiv \overline{DE} \).
- So, \( \triangle ABC \equiv \triangle DEF \) by the SAS Congruence Postulate.

Because \( \triangle ABC \equiv \triangle DEF \), the translation is a congruence transformation.

**Guided Practice**

4. Tell whether \( \triangle PQR \) is a rotation of \( \triangle STR \). If so, give the angle and direction of rotation.

5. Show that \( \triangle PQR \equiv \triangle STR \) to verify that the transformation is a congruence transformation.
1. **VOCABULARY**  Describe the translation \((x, y) \rightarrow (x - 1, y + 4)\) in words.

2. **★ WRITING**  Explain why the term *congruence transformation* is used in describing translations, reflections, and rotations.

3. **IDENTIFYING TRANSFORMATIONS**  Name the type of transformation shown.

4. **WINDOWS**  Decide whether the moving part of the window is a translation.

5. **DRAWING A TRANSLATION**  Copy figure \(ABCD\) and draw its image after the translation.

6. **COORDINATE NOTATION**  Use coordinate notation to *describe* the translation.

7. **DRAWING**  Use a reflection in the \(x\)-axis to draw the other half of the figure.
**ROTATIONS** Use the coordinates to graph $\overline{AB}$ and $\overline{CD}$. Tell whether $\overline{CD}$ is a rotation of $\overline{AB}$ about the origin. If so, give the angle and direction of rotation.

20. $A(1, 2), B(3, 4), C(2, -1), D(4, -3)$  
21. $A(-2, -4), B(-1, -2), C(4, 3), D(2, 1)$  
22. $A(-4, 0), B(4, -4), C(4, 4), D(0, 4)$  
23. $A(1, 2), B(3, 0), C(2, -1), D(2, -3)$

24. **ERROR ANALYSIS** A student says that the red triangle is a $120^\circ$ clockwise rotation of the blue triangle about the origin. Describe and correct the error.

25. ★ **WRITING** Can a point or a line segment be its own image under a transformation? Explain and illustrate your answer.

**APPLYING TRANSLATIONS** Complete the statement using the description of the translation. In the description, points $(0, 3)$ and $(2, 5)$ are two vertices of a hexagon.

26. If $(0, 3)$ translates to $(0, 0)$, then $(2, 5)$ translates to $?$.  
27. If $(0, 3)$ translates to $(1, 2)$, then $(2, 5)$ translates to $?$.  
28. If $(0, 3)$ translates to $(-3, -2)$, then $(2, 5)$ translates to $?$.  

29. **ALGEBRA** A point on an image and the translation are given. Find the corresponding point on the original figure.

29. Point on image: $(4, 0)$; translation: $(x, y) \rightarrow (x + 2, y - 3)$  
30. Point on image: $(-3, 5)$; translation: $(x, y) \rightarrow (-x, y)$  
31. Point on image: $(6, -9)$; translation: $(x, y) \rightarrow (x - 7, y - 4)$

32. **CONGRUENCE** Show that the transformation in Exercise 3 is a congruence transformation.

**DESCRIBING AN IMAGE** State the segment or triangle that represents the image. You can use tracing paper to help you see the rotation.

33. $90^\circ$ clockwise rotation of $\overline{ST}$ about $E$  
34. $90^\circ$ counterclockwise rotation of $\overline{BX}$ about $E$  
35. $180^\circ$ rotation of $\triangle BWX$ about $E$  
36. $180^\circ$ rotation of $\triangle TUA$ about $E$

37. **CHALLENGE** Solve for the variables in the transformation of $\overline{AB}$ to $\overline{CD}$ and then to $\overline{EF}$.

$A(2, 3), B(4, 2a)$  
Translation: $(x, y) \rightarrow (x - 2, y + 1)$  
$C(m - 3, 4), D(n - 9, 5)$  
Reflection: in $x$-axis  
$E(0, g - 6), F(8h, -5)$
38. **KITES** The design for a kite shows the layout and dimensions for only half of the kite.
   a. What type of transformation can a designer use to create plans for the entire kite?
   b. What is the maximum width of the entire kite?

39. **STENCILING** You are stenciling a room in your home. You want to use the stencil pattern below on the left to create the design shown. Give the angles and directions of rotation you will use to move the stencil from A to B and from A to C.

40. ★ **OPEN-ENDED MATH** Some words reflect onto themselves through a vertical line of reflection. An example is shown.
   a. Find two other words with vertical lines of reflection. Draw the line of reflection for each word.
   b. Find two words with horizontal lines of reflection. Draw the line of reflection for each word.

41. ★ **SHORT RESPONSE** In chess, six different kinds of pieces are moved according to individual rules. The Knight (shaped like a horse) moves in an “L” shape. It moves two squares horizontally or vertically and then one additional square perpendicular to its original direction. When a knight lands on a square with another piece, it captures that piece.
   a. Describe the translation used by the Black Knight to capture the White Pawn.
   b. Describe the translation used by the White Knight to capture the Black Pawn.
   c. After both pawns are captured, can the Black Knight capture the White Knight? Explain.

42. **VERIFYING CONGRUENCE** Show that ΔABC and ΔDEF are right triangles and use the HL Congruence Theorem to verify that ΔDEF is a congruence transformation of ΔABC.
43. ★ MULTIPLE CHOICE  A piece of paper is folded in half and some cuts are made, as shown. Which figure represents the unfolded piece of paper?

- [A] [B] [C] [D]

44. CHALLENGE  A triangle is rotated 90° counterclockwise and then translated three units up. The vertices of the final image are \(A(-4, 4), B(-1, 6),\) and \(C(-1, 4)\). Find the vertices of the original triangle. Would the final image be the same if the original triangle was translated 3 units up and then rotated 90° counterclockwise? Explain your reasoning.

---

**MIXED REVIEW**

PREVIEW
Prepare for Lesson 5.1 in Exs. 45–50.

Simplify the expression. Variables \(a\) and \(b\) are positive.

45. \(-a - 0\) \(\frac{0}{(b)}\) (p. 870)
46. \(|(a + b) - a|\) (p. 870)
47. \(\frac{2a + 2b}{2}\) (p. 139)

Simplify the expression. Variables \(a\) and \(b\) are positive. (p. 139)

48. \(\sqrt{(-b)^2}\)
49. \(\sqrt{(2a)^2}\)
50. \(\sqrt{(2a - a)^2 + (0 - b)^2}\)

51. Use the SSS Congruence Postulate to show \(\triangle RST \cong \triangle UVW\). (p. 234)
\(R(1, -4), S(1, -1), T(6, -1)\) \(U(1, 4), V(1, 1), W(6, 1)\)

---

**QUIZ for Lessons 4.7–4.8**

Find the value of \(x\). (p. 264)

1. \(24\) in \(6x + 12\) in.
2. \((3x + 48)°\)
3. \((4x + 30)\) m \(50\) m

Copy \(\triangle EFG\) and draw its image after the transformation. Identify the type of transformation. (p. 272)

4. \((x, y) \rightarrow (x + 4, y - 1)\)
5. \((x, y) \rightarrow (-x, y)\)
6. \((x, y) \rightarrow (x, -y)\)
7. \((x, y) \rightarrow (x - 3, y + 2)\)

8. Is Figure B a rotation of Figure A about the origin? If so, give the angle and direction of rotation. (p. 272)
**MIXED REVIEW of Problem Solving**

**Lessons 4.5–4.8**

1. **MULTI-STEP PROBLEM** Use the quilt pattern shown below.

   ![Quilt Pattern](image)

   a. Figure B is the image of Figure A. Name and describe the transformation.
   b. Figure C is the image of Figure A. Name and describe the transformation.
   c. Figure D is the image of Figure A. Name and describe the transformation.
   d. Explain how you could complete the quilt pattern using transformations of Figure A.

2. **SHORT RESPONSE** You are told that a triangle has sides that are 5 centimeters and 3 centimeters long. You are also told that the side that is 5 centimeters long forms an angle with the third side that measures $28^\circ$. Is there only one triangle that has these given dimensions? Explain why or why not.

3. **OPEN-ENDED** A friend has drawn a triangle on a piece of paper and she is describing the triangle so that you can draw one that is congruent to hers. So far, she has told you that the length of one side is 8 centimeters and one of the angles formed with this side is $34^\circ$. Describe three pieces of additional information you could use to construct the triangle.

4. **SHORT RESPONSE** Can the triangles $ACD$ and $BCE$ be proven congruent using the information given in the diagram? Can you show that $AD \cong BE$? Explain.

5. **EXTENDED RESPONSE** Use the information given in the diagram to prove the statements below.

   ![Diagram](image)

   a. Prove that $\angle BCE \cong \angle BAE$.
   b. Prove that $AF \cong CD$.

6. **GRIDDED ANSWER** Find the value of $x$ in the diagram.

   $$(4x + 17) \text{ in.}$$

   45 in.
Classifying Triangles by Sides and Angles

</tbody>
</table>

Proving That Triangles Are Congruent

**SSS** All three sides are congruent.

\[ \triangle ABC \cong \triangle DEF \]

**SAS** Two sides and the included angle are congruent.

\[ \triangle ABC \cong \triangle DEF \]

**HL** The hypotenuse and one of the legs are congruent. (Right triangles only)

\[ \triangle ABC \cong \triangle DEF \]

**ASA** Two angles and the included side are congruent.

\[ \triangle ABC \cong \triangle DEF \]

**AAS** Two angles and a (non-included) side are congruent.

\[ \triangle ABC \cong \triangle DEF \]

Using Coordinate Geometry to Investigate Triangle Relationships

You can use the Distance and Midpoint Formulas to apply postulates and theorems to triangles in the coordinate plane.
4 CHAPTER REVIEW

REVIEW KEY VOCABULARY

- triangle, p. 217
- scalene, isosceles, equilateral, acute, right, obtuse, equiangular
- interior angles, p. 218
- exterior angles, p. 218
- corollary to a theorem, p. 220
- congruent figures, p. 225
- corresponding parts, p. 225
- right triangle, p. 241
- legs, hypotenuse
- flow proof, p. 250
- isosceles triangle, p. 264
- legs, vertex angle, base, base angles
- transformation, p. 272
- image, p. 272
- congruence transformation, p. 272
- translation, reflection, rotation

VOCABULARY EXERCISES

1. Copy and complete: A triangle with three congruent angles is called ___\_\_\_\_.

2. WRITING Compare vertex angles and base angles.

3. WRITING Describe the difference between isosceles and scalene triangles.

4. Sketch an acute scalene triangle. Label its interior angles 1, 2, and 3. Then draw and shade its exterior angles.

5. If \( \triangle PQR \cong \triangle LMN \), which angles are corresponding angles? Which sides are corresponding sides?

REVIEW EXAMPLES AND EXERCISES

Use the review examples and exercises below to check your understanding of the concepts you have learned in each lesson of Chapter 4.

Apply Triangle Sum Properties

**Example 4.1**

**EXERCISES**

6. Find the measure of the exterior angle shown.

7. Find the measure of the exterior angle shown.

8. Find the measure of the exterior angle shown.
Apply Congruence and Triangles

**Example**

Use the Third Angles Theorem to find $m\angle X$.

In the diagram, $\angle A \cong \angle Z$ and $\angle C \cong \angle Y$. By the Third Angles Theorem, $\angle B \cong \angle X$. Then by the Triangle Sum Theorem, $m\angle B = 180^\circ - 65^\circ - 51^\circ = 64^\circ$.

So, $m\angle X = m\angle B = 64^\circ$ by the definition of congruent angles.

**Exercises**

In the diagram, $\triangle ABC \cong \triangle VTU$.

Find the indicated measure.

9. $m\angle B$
10. $AB$
11. $m\angle T$
12. $m\angle V$

Find the value of $x$.

13. $120^\circ$
14. $20^\circ$

Prove Triangles Congruent by SSS

**Example**

Prove that $\triangle LMN \cong \triangle PMN$.

The marks on the diagram show that $LM \cong PM$ and $LN \cong PN$. By the Reflexive Property, $MN \cong MN$.

So, by the SSS Congruence Postulate, $\triangle LMN \cong \triangle PMN$.

**Exercises**

Decide whether the congruence statement is true. Explain your reasoning.

15. $\triangle XYZ \cong \triangle RST$
16. $\triangle ABC \cong \triangle DCB$
**4.4 Prove Triangles Congruent by SAS and HL**

**Example**

Prove that \( \triangle DEF \equiv \triangle GHF \).

From the diagram, \( DE \equiv GH \), \( \angle D \equiv \angle H \), and \( EF \equiv HF \).

By the SAS Congruence Postulate, \( \triangle DEF \equiv \triangle GHF \).

**Exercises**

**17.** \( \triangle QRS \equiv \triangle TUS \)

**18.** \( \triangle DEF \equiv \triangle GHF \)

**4.5 Prove Triangles Congruent by ASA and AAS**

**Example**

Prove that \( \triangle DAC \equiv \triangle BCA \).

By the Reflexive Property, \( AC \equiv AC \).

Because \( AD \parallel BC \) and \( AB \parallel DC \), \( \angle DAC \equiv \angle BCA \) and \( \angle DCA \equiv \angle BAC \) by the Alternate Interior Angles Theorem. So, by the ASA Congruence Postulate, \( \triangle ADC \equiv \triangle ABC \).

**Exercises**

State the third congruence that is needed to prove that \( \triangle DEF \equiv \triangle GHJ \) using the given postulate or theorem.

**19.** **Given** \( DE \equiv GH \), \( \angle D \equiv \angle G \), \( ? \equiv ? \)

Use the AAS Congruence Theorem.

**20.** **Given** \( DF \equiv GI \), \( \angle F \equiv \angle I \), \( ? \equiv ? \)

Use the ASA Congruence Postulate.

**4.6 Use Congruent Triangles**

**Example**

**Given** \( FG \equiv JG \), \( EG \equiv HG \)

**Prove** \( EF \equiv HJ \)

You are given that \( FG \equiv JG \) and \( EG \equiv HG \). By the Vertical Angles Theorem, \( \angle FGE \equiv \angle JGH \). So, \( \triangle FGE \equiv \triangle JGH \) by the SAS Congruence Postulate. Corres. parts of \( \equiv \triangle \) are \( \equiv \), so \( EF \equiv HJ \).
**EXERCISES**

Write a plan for proving that $\angle 1 \equiv \angle 2$.

21. $\triangle ABC$ has vertices $A(-5, 1), B(-4, 4)$, and $C(-2, 3)$. Sketch $\triangle ABC$ and its image after the translation $(x, y) \rightarrow (x + 5, y + 1)$.

22. $\triangle ABC$ has vertices $A(-5, 1), B(-4, 4)$, and $C(-2, 3)$. Sketch $\triangle ABC$ and its image after the translation $(x, y) \rightarrow (x + 5, y + 1)$.

23. $\triangle QRS$ has vertices $Q(2, -1), R(5, -2)$, and $S(2, -3)$. Sketch $\triangle QRS$ and its image after the transformation.

**Example 3**

Use Isosceles and Equilateral Triangles pp. 264–270

$\triangle QRS$ is isosceles. Name two congruent angles.

$QR \equiv QS$, so by the Base Angles Theorem, $\angle R \equiv \angle S$.

**EXERCISES**

Find the value of $x$.

24. $\triangle ABC$ has vertices $A(-5, 1), B(-4, 4)$, and $C(-2, 3)$. Sketch $\triangle ABC$ and its image after the translation $(x, y) \rightarrow (x + 5, y + 1)$.

25. $\triangle ABC$ has vertices $A(-5, 1), B(-4, 4)$, and $C(-2, 3)$. Sketch $\triangle ABC$ and its image after the translation $(x, y) \rightarrow (x + 5, y + 1)$.

26. $\triangle ABC$ has vertices $A(-5, 1), B(-4, 4)$, and $C(-2, 3)$. Sketch $\triangle ABC$ and its image after the translation $(x, y) \rightarrow (x + 5, y + 1)$.

**Example 3**

Perform Congruence Transformations pp. 272–279

Triangle $ABC$ has vertices $A(-5, 1), B(-4, 4)$, and $C(-2, 3)$. Sketch $\triangle ABC$ and its image after the translation $(x, y) \rightarrow (x + 5, y + 1)$.

- $A(-5, 1) \rightarrow (0, 2)$
- $B(-4, 4) \rightarrow (1, 5)$
- $C(-2, 3) \rightarrow (3, 4)$

**Examples 2 and 3**

Triangle $QRS$ has vertices $Q(2, -1), R(5, -2)$, and $S(2, -3)$. Sketch $\triangle QRS$ and its image after the transformation.

- $Q(2, -1) \rightarrow (x - 1, y + 5)$
- $R(5, -2) \rightarrow (x - y)$
- $S(2, -3) \rightarrow (-x, -y)$
Classify the triangle by its sides and by its angles.

1.  

2.  

3.  

In Exercises 4–6, find the value of \( x \).

4.  

5.  

6.  

7.  In the diagram, \( \triangle DEF \cong \triangle WXFG \).

Find the values of \( x \) and \( y \).

In Exercises 8–10, decide whether the triangles can be proven congruent by the given postulate.

8.  \( \triangle ABC \cong \triangle EDC \) by SAS

9.  \( \triangle FGH \cong \triangle JKL \) by ASA

10.  \( \triangle MNP \cong \triangle PQM \) by SSS

11.  Write a proof.

**GIVEN**  \( \triangle ABC \) is isosceles, \( \overline{BD} \) bisects \( \angle B \).

**PROVE**  \( \triangle ABD \cong \triangle CBD \)

12.  What is the third congruence needed to prove that \( \triangle PQR \cong \triangle STU \) using the indicated theorem?

   a.  HL  
   b.  AAS

Decide whether the transformation is a translation, reflection, or rotation.

13.  

14.  

15.  

EXAMPLE 1 Solve inequalities

Solve \(-3x + 7 \leq 28\). Then graph the solution.

When you multiply or divide each side of an inequality by a negative number, you must reverse the inequality symbol to obtain an equivalent inequality.

\[-3x + 7 \leq 28\] Write original inequality.
\[-3x \leq 21\] Subtract 7 from both sides.
\[x \geq -7\] Divide each side by \(-3\). Reverse the inequality symbol.

The solutions are all real numbers greater than or equal to \(-7\). The graph is shown at the right.

EXAMPLE 2 Solve absolute value equations

Solve \(|2x + 1| = 5\).

The expression inside the absolute value bars can represent 5 or \(-5\).

**STEP 1** Assume \(2x + 1\) represents 5.
\[2x + 1 = 5\]
\[2x = 4\]
\[x = 2\]

**STEP 2** Assume \(2x + 1\) represents \(-5\).
\[2x + 1 = -5\]
\[2x = -6\]
\[x = -3\]

The solutions are 2 and \(-3\).

EXERCISES

Solve the inequality. Then graph the solution.

1. \(x - 6 > -4\)
2. \(7 - c \leq -1\)
3. \(-54 \geq 6x\)
4. \(\frac{5}{2}x + 8 \leq 33\)
5. \(3(y + 2) < 3\)
6. \(\frac{1}{4}z < 2\)
7. \(5k + 1 \geq -11\)
8. \(13.6 > -0.8 - 7.2r\)
9. \(6x + 7 < 2x - 3\)
10. \(-v + 12 \leq 9 - 2v\)
11. \(4(n + 5) \geq 5 - n\)
12. \(5y + 3 \geq 2(y - 9)\)

Solve the equation.

13. \(|x - 5| = 3\)
14. \(|x + 6| = 2\)
15. \(|4 - x| = 4\)
16. \(|2 - x| = 0.5\)
17. \(|3x - 1| = 8\)
18. \(|4x + 5| = 7\)
19. \(|x - 1.3| = 2.1\)
20. \(|3x - 15| = 0\)
21. \(|6x - 2| = 4\)
22. \(|8x + 1| = 17\)
23. \(|9 - 2x| = 19\)
24. \(|0.5x - 4| = 2\)
25. \(|5x - 2| = 8\)
26. \(|7x + 4| = 11\)
27. \(|3x - 11| = 4\)
CONTEXT-BASED MULTIPLE CHOICE QUESTIONS

Some of the information you need to solve a context-based multiple choice question may appear in a table, a diagram, or a graph.

Problem 1

Five of six players on a lacrosse team are set up in a 2-3-1 formation. In this formation, the players form two congruent triangles. Three attackmen form one triangle. Three midfielders form the second triangle. In the diagram, where should player L stand so that \( \triangle ABC \cong \triangle JKL \)?

\[ (8, 8) \quad (20, 60) \quad (40, 40) \quad (30, 15) \]

Plan

**INTERPRET THE GRAPH** Use the graph to determine the coordinates of each player. Use the Distance Formula to check the coordinates in the choices.

Solution

For \( \triangle ABC \), the coordinates are \( A(20, 20), B(30, 10), \) and \( C(40, 20) \). For \( \triangle JKL \), the coordinates are \( J(20, 40), K(30, 30), \) and \( L(?, ?) \).

Because \( \triangle ABC \cong \triangle JKL \), \( BC = KL \) and \( CA = LJ \). Find \( BC \) and \( CA \).

By the Distance Formula, \( BC = \sqrt{(40 - 30)^2 + (20 - 10)^2} = \sqrt{200} = 10\sqrt{2} \) yards.

Also, \( CA = \sqrt{(20 - 40)^2 + (20 - 20)^2} = \sqrt{400} = 20 \) yards.

Check the coordinates given in the choices to see whether \( LJ = CA = 20 \) yards and \( KL = BC = 10\sqrt{2} \) yards. As soon as one set of coordinates does not work for the first side length, you can move to the next set.

Choice A: \( L(8, 8) \), so \( LJ = \sqrt{(20 - 8)^2 + (40 - 8)^2} = 4\sqrt{73} \neq 20 \times \)

Choice B: \( L(20, 60) \), so \( LJ = \sqrt{(20 - 20)^2 + (40 - 60)^2} = \sqrt{400} = 20 \checkmark \)

and \( KL = \sqrt{(20 - 30)^2 + (60 - 30)^2} = \sqrt{1000} \neq 10\sqrt{2} \checkmark \)

Choice C: \( L(40, 40) \), so \( LJ = \sqrt{(20 - 40)^2 + (40 - 40)^2} = \sqrt{400} = 20 \checkmark \)

and \( KL = \sqrt{(40 - 30)^2 + (40 - 30)^2} = \sqrt{200} = 10\sqrt{2} \checkmark \)

Player L should stand at \( (40, 40) \). The correct answer is C. **A B C D**
Plan

**INTERPRET THE DIAGRAM** All of the angle measures in the diagram are labeled with algebraic expressions. Use what you know about the angles in a triangle to find the value of $y$.

**Solution**

**STEP 1** Find the value of $x$.

Use the Exterior Angle Theorem to find the value of $x$.

$$ (4x - 47)^\circ = (2x - 4)^\circ + x^\circ \quad \text{Exterior Angle Theorem} $$

$$ 4x - 47 = 3x - 4 $$

$$ x = 43 \quad \text{Combine like terms.} $$

$$ \text{Solve for } x. $$

**STEP 2** Find the value of $y$.

Use the Linear Pair Postulate to find the value of $y$.

$$ (4x - 47)^\circ + 2y^\circ = 180^\circ \quad \text{Linear Pair Postulate} $$

$$ [4(43) - 47] + 2y = 180 $$

$$ 125 + 2y = 180 \quad \text{Substitute 43 for } x. $$

$$ 2y = 55 \quad \text{Simplify.} $$

$$ y = 27.5 \quad \text{Solve for } y. $$

The correct answer is B.  \(\text{A B C D}\)

**PRACTICE**

1. In Problem 2, what are the measures of the interior angles of the triangle?

   \(\text{A} \; 27.5^\circ, 43^\circ, 109.5^\circ\quad \text{B} \; 27.5^\circ, 51^\circ, 86^\circ\)

   \(\text{C} \; 40^\circ, 60^\circ, 80^\circ\quad \text{D} \; 43^\circ, 55^\circ, 82^\circ\)

2. What are the coordinates of the vertices of the image of \(\triangle FGH\) after the translation \((x, y) \rightarrow (x - 2, y + 3)\)?

   \(\text{A} \; (3, 4), (-4, 4), (-1, 6)\quad \text{B} \; (-2, -1), (1, 3), (5, 1)\)

   \(\text{C} \; (4, 1), (7, -1), (1, -3)\quad \text{D} \; (-4, 2), (-1, 6), (3, 4)\)
1. A teacher has the pennants shown below. Which pennants can you prove are congruent?

   ![Pennants Image]

   - **A** All of the pennants can be proven congruent.
   - **B** The Hawks, Cyclones, and Bobcats pennants can be proven congruent.
   - **C** The Bobcats and Bears pennants can be proven congruent.
   - **D** None of the pennants can be proven congruent.

In Exercises 2 and 3, use the graph below.

![Graph Image]

2. What type of triangle is \( \triangle MNP \)?

   - **A** Scalene
   - **B** Isosceles
   - **C** Right
   - **D** Not enough information

3. Which are the coordinates of point \( Q \) such that \( \triangle MNP \cong \triangle QPN \)?

   - **A** \((-5, 0), (-5, 6), (-1, 6)\)
   - **B** \((-1, -5), (-1, -1), (1, -5)\)
   - **C** \((2, 1), (2, 3), (5, 1)\)
   - **D** \((4, 6), (6, 6), (6, 4)\)

4. The diagram shows the final step in folding an origami butterfly. Use the congruent quadrilaterals, outlined in red, to find the value of \( x + y \).

   ![Diagram Image]

   - **A** 25
   - **B** 56
   - **C** 81
   - **D** 106

5. Which reason cannot be used to prove that \( \angle A \equiv \angle D \)?

   - **A** Base Angles Theorem
   - **B** Segment Addition Postulate
   - **C** SSS Congruence Postulate
   - **D** Corresponding parts of congruent triangles are congruent.

6. Which coordinates are the vertices of a triangle congruent to \( \triangle JKL \)?

   - **A** \((-5, 0), (-5, 6), (-1, 6)\)
   - **B** \((-1, -5), (-1, -1), (1, -5)\)
   - **C** \((2, 1), (2, 3), (5, 1)\)
   - **D** \((4, 6), (6, 6), (6, 4)\)
13. Use the diagram at the right.
   a. Copy the diagram onto a piece of graph paper. Reflect \( \triangle ABC \) in the \( x \)-axis.
   b. Copy and complete the table. Describe what you notice about the coordinates of the image compared to the coordinates of \( \triangle ABC \).

<table>
<thead>
<tr>
<th></th>
<th>A</th>
<th>B</th>
<th>C</th>
</tr>
</thead>
<tbody>
<tr>
<td>Coordinates of ( \triangle ABC )</td>
<td>?</td>
<td>?</td>
<td>?</td>
</tr>
<tr>
<td>Coordinates of image</td>
<td>?</td>
<td>?</td>
<td>?</td>
</tr>
</tbody>
</table>

14. Kylie is designing a quilting pattern using two different fabrics. The diagram shows her progress so far.
   a. Use the markings on the diagram to prove that all of the white triangles are congruent.
   b. Prove that all of the blue triangles are congruent.
   c. Can you prove that the blue triangles are right triangles? Explain.
5 Relationships within Triangles

5.1 Midsegment Theorem and Coordinate Proof
5.2 Use Perpendicular Bisectors
5.3 Use Angle Bisectors of Triangles
5.4 Use Medians and Altitudes
5.5 Use Inequalities in a Triangle
5.6 Inequalities in Two Triangles and Indirect Proof

Before

In previous courses and in Chapters 1–4, you learned the following skills, which you’ll use in Chapter 5: simplifying expressions, finding distances and slopes, using properties of triangles, and solving equations and inequalities.

Prerequisite Skills

VOCABULARY CHECK
1. Is the distance from point P to line AB equal to the length of \( \overline{PQ} \)? Explain why or why not.

SKILLS AND ALGEBRA CHECK
Simplify the expression. All variables are positive. (Review pp. 139, 870 for 5.1.)

2. \( \sqrt{(0 - h)^2} \)
3. \( \frac{2m + 2n}{2} \)
4. \( |x + a| - a \)
5. \( \sqrt{r^2 + r^2} \)

\( \triangle PQR \) has the given vertices. Graph the triangle and classify it by its sides. Then determine if it is a right triangle. (Review p. 217 for 5.1, 5.4.)

6. \( P(2, 0), Q(6, 6), \) and \( R(12, 2) \)
7. \( P(2, 3), Q(4, 7), \) and \( R(11, 3) \)

Ray \( AD \) bisects \( \angle BAC \) and point \( E \) bisects \( \overline{CB} \). Find the measurement. (Review pp. 15, 24, 217 for 5.2, 5.3, 5.5.)

8. \( CE \)
9. \( m\angle BAC \)
10. \( m\angle ACB \)

Solve. (Review pp. 287, 882 for 5.3, 5.5.)

11. \( x^2 + 24^2 = 26^2 \)
12. \( 48 + x^2 = 60 \)
13. \( 43 > x + 35 \)
In Chapter 5, you will apply the big ideas listed below and reviewed in the Chapter Summary on page 343. You will also use the key vocabulary listed below.

**Big Ideas**

1. Using properties of special segments in triangles
2. Using triangle inequalities to determine what triangles are possible
3. Extending methods for justifying and proving relationships

**Key Vocabulary**
- midsegment of a triangle, p. 295
- coordinate proof, p. 296
- perpendicular bisector, p. 303
- equidistant, p. 303
- point of concurrency, p. 305
- circumcenter, p. 306
- incenter, p. 312
- median of a triangle, p. 319
- centroid, p. 319
- altitude of a triangle, p. 320
- orthocenter, p. 321
- indirect proof, p. 337

You can use triangle relationships to find and compare angle measures and distances. For example, if two sides of a triangle represent travel along two roads, then the third side represents the distance back to the starting point.

**Animated Geometry**

The animation illustrated below for Example 2 on page 336 helps you answer this question: After taking different routes, which group of bikers is farther from the camp?

Two groups of bikers head out from the same point and use different routes.

Enter values for x and y. Predict which bikers are farther from the start.

Additional animations for Chapter 5: pages 296, 304, 312, 321, and 330
5.1 Investigate Segments in Triangles

**MATERIALS** • graph paper • ruler • pencil

**QUESTION** How are the midsegments of a triangle related to the sides of the triangle?

A midsegment of a triangle connects the midpoints of two sides of a triangle.

**EXPLORE** Draw and find a midsegment

**STEP 1** Draw a right triangle

Draw a right triangle with legs on the x-axis and the y-axis. Use vertices A(0, 8), B(6, 0), and O(0, 0) as Case 1.

**STEP 2** Draw the midsegment

Find the midpoints of OA and OB. Plot the midpoints and label them D and E. Connect them to create the midsegment DE.

**STEP 3** Make a table

Draw the Case 2 triangle below. Copy and complete the table.

<table>
<thead>
<tr>
<th></th>
<th>Case 1</th>
<th>Case 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>O</td>
<td>(0, 0)</td>
<td>(0, 0)</td>
</tr>
<tr>
<td>A</td>
<td>(0, 8)</td>
<td>(0, 11)</td>
</tr>
<tr>
<td>B</td>
<td>(6, 0)</td>
<td>(5, 0)</td>
</tr>
<tr>
<td>D</td>
<td>?</td>
<td>?</td>
</tr>
<tr>
<td>E</td>
<td>?</td>
<td>?</td>
</tr>
<tr>
<td>Slope of AB</td>
<td>?</td>
<td>?</td>
</tr>
<tr>
<td>Slope of DE</td>
<td>?</td>
<td>?</td>
</tr>
<tr>
<td>Length of AB</td>
<td>?</td>
<td>?</td>
</tr>
<tr>
<td>Length of DE</td>
<td>?</td>
<td>?</td>
</tr>
</tbody>
</table>

**DRAW CONCLUSIONS** Use your observations to complete these exercises

1. Choose two other right triangles with legs on the axes. Add these triangles as Cases 3 and 4 to your table.
2. Expand your table in Step 3 for Case 5 with A(0, n), B(k, 0), and O(0, 0).
3. Expand your table in Step 3 for Case 6 with A(0, 2n), B(2k, 0), and O(0, 0).
4. What do you notice about the slopes of AB and DE? What do you notice about the lengths of AB and DE?
5. In each case, is the midsegment DE parallel to AB? Explain.
6. Are your observations true for the midsegment created by connecting the midpoints of OA and AB? What about the midsegment connecting the midpoints of AB and OB?
7. Make a conjecture about the relationship between a midsegment and a side of the triangle. Test your conjecture using an acute triangle.
5.1 Midsegment Theorem and Coordinate Proof

**Before**
You used coordinates to show properties of figures.

**Now**
You will use properties of midsegments and write coordinate proofs.

**Why?**
So you can use indirect measure to find a height, as in Ex. 35.

**Key Vocabulary**
- midsegment of a triangle
- coordinate proof

**Theorem 5.1 Midsegment Theorem**
The segment connecting the midpoints of two sides of a triangle is parallel to the third side and is half as long as that side.

**Proof:** Example 5, p. 297; Ex. 41, p. 300

**Example 1 Use the Midsegment Theorem to find lengths**

**Construction** Triangles are used for strength in roof trusses. In the diagram, $\overline{UV}$ and $\overline{VW}$ are midsegments of $\triangle RST$. Find $UV$ and $RS$.

**Solution**
\[
UV = \frac{1}{2} \cdot RT = \frac{1}{2} \cdot (90 \text{ in.}) = 45 \text{ in.}
\]
\[
RS = 2 \cdot VW = 2(57 \text{ in.}) = 114 \text{ in.}
\]

**Guided Practice for Example 1**

1. Copy the diagram in Example 1. Draw and name the third midsegment.
2. In Example 1, suppose the distance $UW$ is 81 inches. Find $VS$. 
**Example 2**  Use the Midsegment Theorem

In the kaleidoscope image, \( \overline{AE} \equiv \overline{BE} \) and \( \overline{AD} \equiv \overline{CD} \). Show that \( \overline{CB} \parallel \overline{DE} \).

**Solution**

Because \( \overline{AE} \equiv \overline{BE} \) and \( \overline{AD} \equiv \overline{CD} \), \( E \) is the midpoint of \( \overline{AB} \) and \( D \) is the midpoint of \( \overline{AC} \) by definition. Then \( \overline{DE} \) is a midsegment of \( \triangle ABC \) by definition and \( \overline{CB} \parallel \overline{DE} \) by the Midsegment Theorem.

**Coordinate Proof** A coordinate proof involves placing geometric figures in a coordinate plane. When you use variables to represent the coordinates of a figure in a coordinate proof, the results are true for all figures of that type.

**Example 3**  Place a figure in a coordinate plane

Place each figure in a coordinate plane in a way that is convenient for finding side lengths. Assign coordinates to each vertex.

a. A rectangle  
   b. A scalene triangle

**Solution**

It is easy to find lengths of horizontal and vertical segments and distances from \((0, 0)\), so place one vertex at the origin and one or more sides on an axis.

a. Let \( h \) represent the length and \( k \) represent the width.  
b. Notice that you need to use three different variables.

**Guided Practice** for Examples 2 and 3

3. In Example 2, if \( F \) is the midpoint of \( \overline{CB} \), what do you know about \( \overline{DF} \)?

4. Show another way to place the rectangle in part (a) of Example 3 that is convenient for finding side lengths. Assign new coordinates.

5. Is it possible to find any of the side lengths in part (b) of Example 3 without using the Distance Formula? Explain.

6. A square has vertices \((0, 0)\), \((m, 0)\), and \((0, m)\). Find the fourth vertex.
EXAMPLE 5  Prove the Midsegment Theorem

Write a coordinate proof of the Midsegment Theorem for one midsegment.

**GIVEN**

\(DE\) is a midsegment of \(\triangle OBC\).

**PROVE**

\(DE\parallel OC\) and \(DE = \frac{1}{2}OC\)

**Solution**

**STEP 1**

Place \(\triangle OBC\) and assign coordinates. Because you are finding midpoints, use 2\(p\), 2\(q\), and 2\(r\). Then find the coordinates of \(D\) and \(E\).

\[
D\left(\frac{2q+0}{2},\frac{2r+0}{2}\right) = (q, r) \quad E\left(\frac{2q+2p}{2},\frac{2r+0}{2}\right) = (q+p, r)
\]

**STEP 2**

Prove \(DE\parallel OC\). The \(y\)-coordinates of \(D\) and \(E\) are the same, so \(DE\) has a slope of 0. \(OC\) is on the \(x\)-axis, so its slope is 0.

Because their slopes are the same, \(DE\parallel OC\).

**STEP 3**

Prove \(DE = \frac{1}{2}OC\). Use the Ruler Postulate to find \(DE\) and \(OC\).

\(DE = |(q+p) - q| = p\)

\(OC = |2p - 0| = 2p\)

So, the length of \(DE\) is half the length of \(OC\).

**GUIDED PRACTICE**

For Examples 4 and 5

7. In Example 5, find the coordinates of \(F\), the midpoint of \(OC\). Then show that \(EF\parallel OB\).

8. Graph the points \((0, 0), (m, n),\) and \((m, 0)\). Is \(\triangle OHJ\) a right triangle? Find the side lengths and the coordinates of the midpoint of each side.
1. **VOCABULARY** Copy and complete: In \( \triangle ABC \), \( D \) is the midpoint of \( \overline{AB} \) and \( E \) is the midpoint of \( \overline{AC} \). \( \overline{DE} \) is a ? of \( \triangle ABC \).

2. **WRITING** Explain why it is convenient to place a right triangle on the grid as shown when writing a coordinate proof. How might you want to relabel the coordinates of the vertices if the proof involves midpoints?

**FINDING LENGTHS** \( \overline{DE} \) is a midsegment of \( \triangle ABC \). Find the value of \( x \).

3. \( x \)

4. \( 5 \)

5. \( x \)

**USING THE MIDSEGMENT THEOREM** In \( \triangle XYZ \), \( \overline{XJ} \equiv \overline{YJ} \), \( \overline{YL} \equiv \overline{LZ} \), and \( \overline{XK} \equiv \overline{KZ} \). Copy and complete the statement.

6. \( \overline{JK} \parallel ? \)

7. \( \overline{JL} \parallel ? \)

8. \( \overline{XY} \parallel ? \)

9. \( \overline{VJ} \equiv ? \equiv ? \)

10. \( \overline{JL} \equiv ? \equiv ? \)

11. \( \overline{JK} \equiv ? \equiv ? \)

**PLACING FIGURES** Place the figure in a coordinate plane in a convenient way. Assign coordinates to each vertex.

12. Right triangle: leg lengths are 3 units and 2 units

13. Isosceles right triangle: leg length is 7 units

14. Square: side length is 3 units

15. Scalene triangle: one side length is \( 2m \)

16. Rectangle: length is \( a \) and width is \( b \)

17. Square: side length is \( s \)

18. Isosceles right triangle: leg length is \( p \)

19. Right triangle: leg lengths are \( r \) and \( s \)

**COMPARING METHODS** Find the length of the hypotenuse in Exercise 19. Then place the triangle another way and use the new coordinates to find the length of the hypotenuse. Do you get the same result?

**APPLYING VARIABLE COORDINATES** Sketch \( \triangle ABC \). Find the length and the slope of each side. Then find the coordinates of each midpoint. Is \( \triangle ABC \) a right triangle? Is it isosceles? Explain. (Assume all variables are positive, \( p \neq q \), and \( m \neq n \).)

21. \( A(0, 0), B(p, q), C(2p, 0) \)

22. \( A(0, 0), B(h, h), C(2h, 0) \)

23. \( A(0, n), B(m, n), C(m, 0) \)
ALGEBRA Use \( \triangle GHJ \), where \( A, B, \) and \( C \) are midpoints of the sides.

24. If \( AB = 3x + 8 \) and \( GJ = 2x + 24 \), what is \( AB \)?
25. If \( AC = 3y - 5 \) and \( HJ = 4y + 2 \), what is \( HB \)?
26. If \( GH = 7z - 1 \) and \( BC = 4z - 3 \), what is \( GH \)?

27. ERROR ANALYSIS Explain why the conclusion is incorrect.

28. FINDING PERIMETER The midpoints of the three sides of a triangle are \( P(2, 0), Q(7, 12), \) and \( R(16, 0) \). Find the length of each midsegment and the perimeter of \( \triangle PQR \). Then find the perimeter of the original triangle.

APPLYING VARIABLE COORDINATES Find the coordinates of the red point(s) in the figure. Then show that the given statement is true.

29. \( \triangle OPQ \cong \triangle RSQ \)

30. slope of \( \overline{HE} = -\) (slope of \( \overline{DG} \))

31. ★ MULTIPLE CHOICE A rectangle with side lengths \( 3h \) and \( k \) has a vertex at \((-h, k)\). Which point cannot be a vertex of the rectangle?
   - A \((h, k)\)
   - B \((-h, 0)\)
   - C \((2h, 0)\)
   - D \((2h, k)\)

32. RECONSTRUCTING A TRIANGLE The points \( T(2, 1), U(4, 5), \) and \( V(7, 4) \) are the midpoints of the sides of a triangle. Graph the three midsegments. Then show how to use your graph and the properties of midsegments to draw the original triangle. Give the coordinates of each vertex.

33. 3-D FIGURES Points \( A, B, C, \) and \( D \) are the vertices of a tetrahedron (a solid bounded by four triangles). \( E \) is a midsegment of \( \triangle ABC, G \) is a midsegment of \( \triangle ABD, \) and \( F \) is a midsegment of \( \triangle ACD. \)
   Show that Area of \( \triangle EFG = \frac{1}{4} \) Area of \( \triangle BCD. \)

34. CHALLENGE In \( \triangle PQR, \) the midpoint of \( \overline{PQ} \) is \( K(4, 12), \) the midpoint of \( \overline{QR} \) is \( L(5, 15), \) and the midpoint of \( \overline{PR} \) is \( M(6.4, 10.8) \). Show how to find the vertices of \( \triangle PQR. \) Compare your work for this exercise with your work for Exercise 32. How were your methods different?
35. **FLOODLIGHTS** A floodlight on the edge of the stage shines upward onto the curtain as shown. Constance is 5 feet tall. She stands halfway between the light and the curtain, and the top of her head is at the midpoint of $\overline{AC}$. The edge of the light just reaches the top of her head. How tall is her shadow?

36. **COORDINATE PROOF** Write a coordinate proof.

**GIVEN**  
$P(h, 0), Q(h, 0), R(h, 0)$

**PROVE**  
$\triangle PQR$ is isosceles.

37. **GIVEN**  
$O(0, 0), G(6, 6), H(8, 0)$, $WV$ is a midsegment.

**PROVE**  
$WV \parallel \overline{OH}$ and $WV = \frac{1}{2} OH$

38. **CARPENTRY** In the set of shelves shown, the third shelf, labeled $\overline{CD}$, is closer to the bottom shelf, $\overline{EF}$, than midsegment $\overline{AB}$ is. If $\overline{EF}$ is 8 feet long, is it possible for $\overline{CD}$ to be 3 feet long? 4 feet long? 6 feet long? 8 feet long? Explain.

39. **SHORT RESPONSE** Use the information in the diagram at the right. What is the length of side $\overline{AC}$ of $\triangle ABC$? Explain your reasoning.

40. **PLANNING FOR PROOF** Copy and complete the plan for proof.

**GIVEN**  
$\overline{ST}, \overline{TU}, \text{ and } \overline{SU}$ are midsegments of $\triangle PQR$.

**PROVE**  
$\triangle PST \cong \triangle SQU$

Use ? to show that $\overline{PS} \cong \overline{SQ}$. Use ? to show that $\angle QSU \cong \angle SPT$. Use ? to show that $\angle ? \cong \angle ?$. Use ? to show that $\triangle PST \cong \triangle SQU$.

41. **PROVING THEOREM 5.1** Use the figure in Example 5. Draw the midpoint $F$ of $\overline{OC}$. Prove that $\overline{DF}$ is parallel to $\overline{BC}$ and $DF = \frac{1}{2} BC$. 

\[\text{EXAMPLE 5 on p. 297 for Exs. 36–37}\]
42. **COORDINATE PROOF** Write a coordinate proof.

**GIVEN** △ABD is a right triangle, with the right angle at vertex A. Point C is the midpoint of hypotenuse BD.

**PROVE** Point C is the same distance from each vertex of △ABD.

43. **MULTI-STEP PROBLEM** To create the design below, shade the triangle formed by the three midsegments of a triangle. Then repeat the process for each unshaded triangle. Let the perimeter of the original triangle be 1.

![Stage 0](image1) ![Stage 1](image2) ![Stage 2](image3) ![Stage 3](image4)

a. What is the perimeter of the triangle that is shaded in Stage 1?
b. What is the total perimeter of all the shaded triangles in Stage 2?
c. What is the total perimeter of all the shaded triangles in Stage 3?

44. **RIGHT ISOSCELES TRIANGLES** In Exercises 44 and 45, write a coordinate proof.

44. Any right isosceles triangle can be subdivided into a pair of congruent right isosceles triangles. (Hint: Draw the segment from the right angle to the midpoint of the hypotenuse.)

45. Any two congruent right isosceles triangles can be combined to form a single right isosceles triangle.

46. **CHALLENGE** XY is a midsegment of △LMN. Suppose DE is called a “quarter-segment” of △LMN. What do you think an “eighth-segment” would be? Make a conjecture about the properties of a quarter-segment and of an eighth-segment. Use variable coordinates to verify your conjectures.

47. Line l bisects the segment. Find LN. (p. 15)

48. State which postulate or theorem you can use to prove that the triangles are congruent. Then write a congruence statement. (pp. 225, 249)
LESSON 5.1 Another Way to Solve Example 4, page 297

MULTIPLE REPRESENTATIONS When you write a coordinate proof, you often have several options for how to place the figure in the coordinate plane and how to assign variables.

PROBLEM
Place an isosceles right triangle in a coordinate plane. Then find the length of the hypotenuse and the coordinates of its midpoint \( M \).

METHOD
Placing Hypotenuse on an Axis
Place the triangle with point \( C \) at \((0, h)\) on the \( y \)-axis and the hypotenuse \( AB \) on the \( x \)-axis. To make \( \angle ACB \) be a right angle, position \( A \) and \( B \) so that legs \( CA \) and \( CB \) have slopes of 1 and \(-1\).

Slope is 1. \( \quad \) Slope is \(-1\). 

Length of hypotenuse = \( 2h \)  
\[
M = \left( \frac{-h + h}{2}, \frac{0 + 0}{2} \right) = (0, 0)
\]

PRACTICE
1. VERIFYING TRIANGLE PROPERTIES Verify that \( \angle C \) above is a right angle. Verify that \( \triangle ABC \) is isosceles by showing \( AC = BC \).

2. MULTIPLES OF 2 Find the midpoint and length of each side using the placement below. What is the advantage of using \( 2h \) instead of \( h \) for the leg lengths?

3. OTHER ALTERNATIVES Graph \( \triangle JKL \) and verify that it is an isosceles right triangle. Then find the length and midpoint of \( JK \).
   a. \( J(0, 0), K(h, h), L(h, 0) \)
   b. \( J(-2h, 0), K(2h, 0), L(0, 2h) \)

4. CHOOSE Suppose you need to place a right isosceles triangle on a coordinate grid and assign variable coordinates. You know you will need to find all three side lengths and all three midpoints. How would you place the triangle? Explain your reasoning.

5. RECTANGLES Place rectangle \( PQRS \) with length \( m \) and width \( n \) in the coordinate plane. Draw \( PR \) and \( QS \) connecting opposite corners of the rectangle. Then use coordinates to show that \( PR \equiv QS \).

6. PARK A square park has paths as shown. Use coordinates to determine whether a snack cart at point \( N \) is the same distance from each corner.
5.2 Use Perpendicular Bisectors

**Key Vocabulary**
- perpendicular bisector
- equidistant
- concurrent
- point of concurrency
- circumcenter

In Lesson 1.3, you learned that a segment bisector intersects a segment at its midpoint. A segment, ray, line, or plane that is perpendicular to a segment at its midpoint is called a **perpendicular bisector**.

A point is **equidistant** from two figures if the point is the *same distance* from each figure. Points on the perpendicular bisector of a segment are equidistant from the segment’s endpoints.

**Theorems**

**Theorem 5.2** Perpendicular Bisector Theorem

In a plane, if a point is on the perpendicular bisector of a segment, then it is equidistant from the endpoints of the segment.

If \( \overrightarrow{CP} \) is the \( \perp \) bisector of \( \overline{AB} \), then \( CA = CB \).

*Proof:* Ex. 26, p. 308

**Theorem 5.3** Converse of the Perpendicular Bisector Theorem

In a plane, if a point is equidistant from the endpoints of a segment, then it is on the perpendicular bisector of the segment.

If \( DA = DB \), then \( D \) lies on the \( \perp \) bisector of \( \overline{AB} \).

*Proof:* Ex. 27, p. 308

**Example 1** Use the Perpendicular Bisector Theorem

**Steps**

**Algebra** \( \overrightarrow{BD} \) is the perpendicular bisector of \( \overline{AC} \). Find \( AD \).

\[
AD = CD \quad \text{Perpendicular Bisector Theorem}
\]

\[
5x = 3x + 14 \quad \text{Substitute.}
\]

\[
x = 7 \quad \text{Solve for } x.
\]

\[
AD = 5x = 5(7) = 35.
\]
**Example 2**  Use perpendicular bisectors

In the diagram, \( \overline{WX} \) is the perpendicular bisector of \( \overline{YZ} \).

a. What segment lengths in the diagram are equal?

b. Is \( V \) on \( \overline{WX} \)?

**Solution**

a. \( \overline{WX} \) bisects \( \overline{YZ} \), so \( XY = XZ \). Because \( W \) is on the perpendicular bisector of \( \overline{YZ} \), \( WY = WZ \) by Theorem 5.2. The diagram shows that \( VY = VZ = 25 \).

b. Because \( VY = VZ \), \( V \) is equidistant from \( Y \) and \( Z \). So, by the Converse of the Perpendicular Bisector Theorem, \( V \) is on the perpendicular bisector of \( \overline{YZ} \), which is \( \overline{WX} \).

**Guided Practice** for Examples 1 and 2

In the diagram, \( \overline{JK} \) is the perpendicular bisector of \( \overline{NL} \).

1. What segment lengths are equal? *Explain* your reasoning.
2. Find \( NK \).
3. *Explain* why \( M \) is on \( \overline{JK} \).

**Activity**  Fold the Perpendicular Bisectors of a Triangle

**Question**  Where do the perpendicular bisectors of a triangle meet?

Follow the steps below and answer the questions about perpendicular bisectors of triangles.

**Step 1**  Cut four large acute scalene triangles out of paper. Make each one different.

**Step 2**  Choose one triangle. Fold it to form the perpendicular bisectors of the sides. Do the three bisectors intersect at the same point?

**Step 3**  Repeat the process for the other three triangles. Make a conjecture about the perpendicular bisectors of a triangle.

**Step 4**  Choose one triangle. Label the vertices \( A \), \( B \), and \( C \). Label the point of intersection of the perpendicular bisectors as \( P \). Measure \( AP \), \( BP \), and \( CP \). What do you observe?
CONCURRENCY When three or more lines, rays, or segments intersect in the same point, they are called **concurrent** lines, rays, or segments. The point of intersection of the lines, rays, or segments is called the **point of concurrency**.

As you saw in the Activity on page 304, the three perpendicular bisectors of a triangle are concurrent and the point of concurrency has a special property.

---

**Theorem 5.4** Concurrency of Perpendicular Bisectors of a Triangle

The perpendicular bisectors of a triangle intersect at a point that is equidistant from the vertices of the triangle.

If $PD$, $PE$, and $PF$ are perpendicular bisectors, then $PA = PB = PC$.

*Proof: p. 933*

---

**Example 3** Use the concurrency of perpendicular bisectors

**FROZEN YOGURT** Three snack carts sell frozen yogurt from points $A$, $B$, and $C$ outside a city. Each of the three carts is the same distance from the frozen yogurt distributor.

Find a location for the distributor that is equidistant from the three carts.

**Solution**

Theorem 5.4 shows you that you can find a point equidistant from three points by using the perpendicular bisectors of the triangle formed by those points.

Copy the positions of points $A$, $B$, and $C$ and connect those points to draw $\triangle ABC$. Then use a ruler and protractor to draw the three perpendicular bisectors of $\triangle ABC$. The point of concurrency $D$ is the location of the distributor.

---

**Guided Practice** for Example 3

4. **What if?** Hot pretzels are sold from points $A$ and $B$ and also from a cart at point $E$. Where could the pretzel distributor be located if it is equidistant from those three points? Sketch the triangle and show the location.

---

**READ VOCABULARY**

The perpendicular bisector of a side of a triangle can be referred to as a **perpendicular bisector of the triangle**.
The point of concurrency of the three perpendicular bisectors of a triangle is called the **circumcenter** of the triangle. The circumcenter \( P \) is equidistant from the three vertices, so \( P \) is the center of a circle that passes through all three vertices.

As shown above, the location of \( P \) depends on the type of triangle. The circle with the center \( P \) is said to be *circumscribed* about the triangle.

**5.2 EXERCISES**

1. **VOCABULARY** Suppose you draw a circle with a compass. You choose three points on the circle to use as the vertices of a triangle. Copy and complete: The center of the circle is also the __ of the triangle.

2. **★ WRITING** Consider \( \overline{AB} \). How can you describe the set of all points in a plane that are equidistant from \( A \) and \( B \)?

**ALGEBRA** Find the length of \( \overline{AB} \).

3.  

4.  

5.  

**REASONING** Tell whether the information in the diagram allows you to conclude that \( C \) is on the perpendicular bisector of \( \overline{AB} \).
9. ★ MULTIPLE CHOICE  Point P is inside \( \triangle ABC \) and is equidistant from points \( A \) and \( B \). On which of the following segments must \( P \) be located?

- A. \( AB \)
- B. The perpendicular bisector of \( AB \)
- C. The midsegment opposite \( AB \)
- D. The perpendicular bisector of \( AC \)

10. ERROR ANALYSIS Explain why the conclusion is not correct given the information in the diagram.

**PERPENDICULAR BISECTORS** In Exercises 11–15, use the diagram. \( \overline{JN} \) is the perpendicular bisector of \( MK \).

11. Find NM.
12. Find JK.
13. Find KL.
14. Find ML.
15. Is \( L \) on \( \overline{JP} \)? Explain your reasoning.

**USING CONCURRENCE** In the diagram, the perpendicular bisectors of \( \triangle ABC \) meet at point \( G \) and are shown in blue. Find the indicated measure.

16. Find BG.
17. Find GA.

18. **CONSTRUCTING PERPENDICULAR BISECTORS** Use the construction shown on page 33 to construct the bisector of a segment. Explain why the bisector you constructed is actually the perpendicular bisector.

19. **CONSTRUCTION** Draw a right triangle. Use a compass and straightedge to find its circumcenter. Use a compass to draw the circumscribed circle.

**ANALYZING STATEMENTS** Copy and complete the statement with **always**, **sometimes**, or **never**. Justify your answer.

20. The circumcenter of a scalene triangle is ____ inside the triangle.
21. If the perpendicular bisector of one side of a triangle goes through the opposite vertex, then the triangle is ____ isosceles.
22. The perpendicular bisectors of a triangle intersect at a point that is ____ equidistant from the midpoints of the sides of the triangle.

23. **CHALLENGE** Prove the statements in parts (a) – (c).

**GIVEN** \( \) Plane \( P \) is a perpendicular bisector of \( \overline{XZ} \) at \( Y \).

**PROVE** \( \)

- a. \( \overline{XW} \equiv \overline{ZW} \)
- b. \( \overline{XY} \equiv \overline{ZY} \)
- c. \( \angle VXW \equiv \angle VZW \)
24. **BRIDGE** A cable-stayed bridge is shown below. Two cable lengths are given. Find the lengths of the blue cables. *Justify* your answer.

![Cable-stayed bridge diagram]

25. **★ SHORT RESPONSE** You and two friends plan to walk your dogs together. You want your meeting place to be the same distance from each person’s house. *Explain* how you can use the diagram to locate the meeting place.

26. **PROVING THEOREM 5.2** Prove the Perpendicular Bisector Theorem.

   **GIVEN** \( \overrightarrow{CP} \) is the perpendicular bisector of \( \overline{AB} \).

   **PROVE** \( CA = CB \)

   **Plan for Proof** Show that right triangles \( \triangle APC \) and \( \triangle BPC \) are congruent. Then show that \( CA \equiv CB \).

27. **PROVING THEOREM 5.3** Prove the converse of Theorem 5.2.  
   *(Hint: Construct a line through \( C \) perpendicular to \( \overline{AB} \).)*

   **GIVEN** \( CA = CB \)

   **PROVE** \( C \) is on the perpendicular bisector of \( \overline{AB} \).

28. **★ EXTENDED RESPONSE** Archaeologists find three stones. They believe that the stones were once part of a circle of stones with a community firepit at its center. They mark the locations of Stones \( A \), \( B \), and \( C \) on a graph where distances are measured in feet.

   **a.** *Explain* how the archaeologists can use a sketch to estimate the center of the circle of stones.

   **b.** Copy the diagram and find the approximate coordinates of the point at which the archaeologists should look for the firepit.

29. **TECHNOLOGY** Use geometry drawing software to construct \( \overline{AB} \). Find the midpoint \( C \). Draw the perpendicular bisector of \( \overline{AB} \) through \( C \). Construct a point \( D \) along the perpendicular bisector and measure \( DA \) and \( DB \). Move \( D \) along the perpendicular bisector. What theorem does this construction demonstrate?
30. **COORDINATE PROOF** Where is the circumcenter located in any right triangle? Write a coordinate proof of this result.

**PROOF** Use the information in the diagram to prove the given statement.

31. \( \overline{AB} \cong \overline{BC} \) if and only if \( D, E, \) and \( B \) are collinear.

32. \( PV \) is the perpendicular bisector of \( TQ \) for regular polygon \( PQRST \).

33. **CHALLENGE** The four towns on the map are building a common high school. They have agreed that the school should be an equal distance from each of the four towns. Is there a single point where they could agree to build the school? If so, find it. If not, explain why not. Use a diagram to explain your answer.

**MIXED REVIEW**

Solve the equation. Write your answer in simplest radical form. (p. 882)

34. \( 5^2 + x^2 = 13^2 \)
35. \( x^2 + 15^2 = 17^2 \)
36. \( x^2 + 10 = 38 \)

Ray \( \overrightarrow{BD} \) bisects \( \angle ABC \). Find the value of \( x \). Then find \( m \angle ABC \). (p. 24)

37. \( (4x + 7)° \)
38. \( (3x + 18)° \)

39. 21, 16, 11, 6, . . .
40. 2, 6, 18, 54, . . .
41. 3, 3, 4, 6, . . .

**QUIZ for Lessons 5.1–5.2**

Find the value of \( x \). Identify the theorem used to find the answer. (pp. 295, 303)

1. \[ \text{Diagram with } x = 24 \]
2. \[ \text{Diagram with } 2x = 4x - 14, x = 10, \text{and } 12 \]

4. Graph the triangle \( R(2a, 0), S(0, 2b), T(2a, 2b) \), where \( a \) and \( b \) are positive. Find \( RT \) and \( ST \). Then find the slope of \( SR \) and the coordinates of the midpoint of \( SR \). (p. 295)
5.3 Use Angle Bisectors of Triangles

You used angle bisectors to find angle relationships. Now, you will use angle bisectors to find distance relationships. So you can apply geometry in sports, as in Example 2.

Key Vocabulary
- incenter
- angle bisector, p. 28
- distance from a point to a line, p. 192

Remember that an angle bisector is a ray that divides an angle into two congruent adjacent angles. Remember also that the distance from a point to a line is the length of the perpendicular segment from the point to the line.

So, in the diagram, \( PS \) is the bisector of \( \angle QPR \) and the distance from \( S \) to \( PQ \) is \( SQ \), where \( SQ \perp PQ \).

**THEOREMS**

**THEOREM 5.5 Angle Bisector Theorem**

If a point is on the bisector of an angle, then it is equidistant from the two sides of the angle.

If \( \overline{AD} \) bisects \( \angle BAC \) and \( \overline{DB} \perp \overline{AB} \) and \( \overline{DC} \perp \overline{AC} \), then \( DB = DC \).

Proof: Ex. 34, p. 315

**THEOREM 5.6 Converse of the Angle Bisector Theorem**

If a point is in the interior of an angle and is equidistant from the sides of the angle, then it lies on the bisector of the angle.

If \( \overline{DB} \perp \overline{AB} \) and \( \overline{DC} \perp \overline{AC} \) and \( DB = DC \), then \( \overline{AD} \) bisects \( \angle BAC \).

Proof: Ex. 35, p. 315

**EXAMPLE 1 Use the Angle Bisector Theorems**

Find the measure of \( \angle GFJ \).

Solution

Because \( \overline{JG} \perp \overline{FG} \) and \( \overline{JH} \perp \overline{FH} \) and \( JG = JH = 7 \), \( FJ \)

bisects \( \angle GFH \) by the Converse of the Angle Bisector Theorem. So, \( m \angle GFJ = m \angle HFJ = 42^\circ \).
### Example 2 Solve a real-world problem

**SOCCER** A soccer goalie’s position relative to the ball and goalposts forms congruent angles, as shown. Will the goalie have to move farther to block a shot toward the right goalpost $R$ or the left goalpost $L$?

**Solution**

The congruent angles tell you that the goalie is on the bisector of $\angle LBR$. By the Angle Bisector Theorem, the goalie is equidistant from $\overline{BR}$ and $\overline{BL}$.

So, the goalie must move the same distance to block either shot.

### Example 3 Use algebra to solve a problem

**ALGEBRA** For what value of $x$ does $P$ lie on the bisector of $\angle A$?

**Solution**

From the Converse of the Angle Bisector Theorem, you know that $P$ lies on the bisector of $\angle A$ if $P$ is equidistant from the sides of $\angle A$, so when $BP = CP$.

$$BP = CP \quad \text{Set segment lengths equal.}$$

$$x + 3 = 2x - 1 \quad \text{Substitute expressions for segment lengths.}$$

$$4 = x \quad \text{Solve for } x.$$

Point $P$ lies on the bisector of $\angle A$ when $x = 4$.

### Guided Practice for Examples 1, 2, and 3

In Exercises 1–3, find the value of $x$.

1. 

2. 

3. 

4. Do you have enough information to conclude that $QS$ bisects $\angle PQR$? Explain.
Theorem 5.7  Concurrency of Angle Bisectors of a Triangle

If \( \overline{AP}, \overline{BP}, \text{ and } \overline{CP} \) are angle bisectors of \( \triangle ABC \), then \( PD = PE = PF \).

Proof: Ex. 36, p. 316

The point of concurrency of the three angle bisectors of a triangle is called the **incenter** of the triangle. The incenter always lies inside the triangle.

Because the incenter \( P \) is equidistant from the three sides of the triangle, a circle drawn using \( P \) as the center and the distance to one side as the radius will just touch the other two sides. The circle is said to be **inscribed** within the triangle.

**Example 4**  Use the concurrency of angle bisectors

In the diagram, \( N \) is the incenter of \( \triangle ABC \). Find \( ND \).

**Solution**

By the Concurrency of Angle Bisectors of a Triangle Theorem, the incenter \( N \) is equidistant from the sides of \( \triangle ABC \). So, to find \( ND \), you can find \( NF \) in \( \triangle NAF \).

Use the Pythagorean Theorem stated on page 18.

\[
\begin{align*}
\text{Pythagorean Theorem} \\
20^2 &= NF^2 + 16^2 \\
400 &= NF^2 + 256 \\
144 &= NF^2 \\
12 &= NF
\end{align*}
\]

Because \( NF = ND \), \( ND = 12 \).
1. **VOCABULARY** Copy and complete: Point C is in the interior of $\angle ABD$. If $\angle ABC$ and $\angle DBC$ are congruent, then $BC$ is the ___ of $\angle ABD$.

2. **WRITING** How are perpendicular bisectors and angle bisectors of a triangle different? How are they alike?

**FINDING MEASURES** Use the information in the diagram to find the measure.

3. Find $m\angle ABD$.
4. Find $PS$.
5. $m\angle YXW = 60^\circ$. Find $WZ$.

**ANGLE BISECTOR THEOREM** Is $DB = DC$? Explain.

6.

**REASONING** Can you conclude that $\overline{EH}$ bisects $\angle FEG$? Explain.

7.  
8.

**ALGEBRA** Find the value of $x$.

9. 
10. 
11.

**RECOGNIZING MISSING INFORMATION** Can you find the value of $x$? Explain.

12. 
13. 
14. 
15. 
16. 
17.
18. ★ MULTIPLE CHOICE  What is the value of $x$ in the diagram?

- A. 13
- B. 18
- C. 33
- D. Not enough information

19. USING INCENTERS  Find the indicated measure.

- 19. Point $D$ is the incenter of $\triangle XYZ$. Find $DB$.

- 20. Point $L$ is the incenter of $\triangle EGJ$. Find $HL$.

21. ERROR ANALYSIS  Describe the error in reasoning. Then state a correct conclusion about distances that can be deduced from the diagram.

23. ★ MULTIPLE CHOICE  In the diagram, $N$ is the incenter of $\triangle GHJ$. Which statement cannot be deduced from the given information?

- A. $NM \cong NK$
- B. $NL \cong NM$
- C. $NG \cong NJ$
- D. $HK \cong HM$

24. ALGEBRA  Find the value of $x$ that makes $N$ the incenter of the triangle.

26. CONSTRUCTION  Use a compass and a straightedge to draw $\triangle ABC$ with incenter $D$. Label the angle bisectors and the perpendicular segments from $D$ to each of the sides of $\triangle ABC$. Measure each segment. What do you notice? What theorem have you verified for your $\triangle ABC$?

27. CHALLENGE  Point $D$ is the incenter of $\triangle ABC$. Write an expression for the length $x$ in terms of the three side lengths $AB$, $AC$, and $BC$. 

WORKED-OUT SOLUTIONS  on p. WS1

STANDARDIZED TEST PRACTICE
28. **FIELD HOCKEY** In a field hockey game, the goalkeeper is at point G and a player from the opposing team hits the ball from point B. The goal extends from left goalpost L to right goalpost R. Will the goalkeeper have to move farther to keep the ball from hitting L or R? Explain.

29. **KOI POND** You are constructing a fountain in a triangular koi pond. You want the fountain to be the same distance from each edge of the pond. Where should you build the fountain? Explain your reasoning. Use a sketch to support your answer.

30. **SHORT RESPONSE** What congruence postulate or theorem would you use to prove the Angle Bisector Theorem? to prove the Converse of the Angle Bisector Theorem? Use diagrams to show your reasoning.

31. **EXTENDED RESPONSE** Suppose you are given a triangle and are asked to draw all of its perpendicular bisectors and angle bisectors.
   a. For what type of triangle would you need the fewest segments? What is the minimum number of segments you would need? Explain.
   b. For what type of triangle would you need the most segments? What is the maximum number of segments you would need? Explain.

**CHOOSING A METHOD** In Exercises 32 and 33, tell whether you would use *perpendicular bisectors* or *angle bisectors*. Then solve the problem.

32. **BANNER** To make a banner, you will cut a triangle from an 8 1/2 inch by 11 inch sheet of white paper and paste a red circle onto it as shown. The circle should just touch each side of the triangle. Use a model to decide whether the circle’s radius should be more or less than 2 1/2 inches. Can you cut the circle from a 5 inch by 5 inch red square? Explain.

33. **CAMP** A map of a camp shows a pool at (10, 20), a nature center at (16, 2), and a tennis court at (2, 4). A new circular walking path will connect the three locations. Graph the points and find the approximate center of the circle. Estimate the radius of the circle if each unit on the grid represents 10 yards. Then use the formula \( C = 2\pi r \) to estimate the length of the path.

**PROVING THEOREMS 5.5 AND 5.6** Use Exercise 30 to prove the theorem.

34. Angle Bisector Theorem
35. Converse of the Angle Bisector Theorem
PROVING THEOREM 5.7 Write a proof of the Concurrency of Angle Bisectors of a Triangle Theorem.

**GIVEN** \( \triangle ABC, AD \) bisects \( \angle CAB \), \( BD \) bisects \( \angle CBA \), \( DE \perp AB \), \( DF \perp BC \), \( DG \perp CA \)

**PROVE** The angle bisectors intersect at \( D \), which is equidistant from \( AB \), \( BC \), and \( CA \).

### CELEBRATION
You are planning a graduation party in the triangular courtyard shown. You want to fit as large a circular tent as possible on the site without extending into the walkway.

a. Copy the triangle and show how to place the tent so that it just touches each edge. Then explain how you can be sure that there is no place you could fit a larger tent on the site. Use sketches to support your answer.

b. Suppose you want to fit as large a tent as possible while leaving at least one foot of space around the tent. Would you put the center of the tent in the same place as you did in part (a)? Justify your answer.

### CHALLENGE
You have seen that there is a point inside any triangle that is equidistant from the three sides of the triangle. Prove that if you extend the sides of the triangle to form lines, you can find three points outside the triangle, each of which is equidistant from those three lines.

### MIXED REVIEW

**PREVIEW** Prepare for Lesson 5.4 in Exs. 39–41.

Find the length of \( \overline{AB} \) and the coordinates of the midpoint of \( \overline{AB} \). *(p. 15)*

39. \( A(-2, 2), B(-10, 2) \)
40. \( A(0, 6), B(5, 8) \)
41. \( A(-1, -3), B(7, -5) \)

**Explain how to prove the given statement.** *(p. 256)*

42. \( \angle QNP \equiv \angle LNM \)
43. \( \overline{JG} \) bisects \( \angle FGH \).
44. \( \triangle ZWX \equiv \triangle ZYX \)

Find the coordinates of the red points in the figure if necessary. Then find \( OR \) and the coordinates of the midpoint \( M \) of \( RT \). *(p. 295)*

45. \( R(?, ?) \)
46. \( T(2m, 2n) \)
47. \( T(?, ?) \)
1. **SHORT RESPONSE** A committee has decided to build a park in Deer County. The committee agreed that the park should be equidistant from the three largest cities in the county, which are labeled X, Y, and Z in the diagram. *Explain* why this may not be the best place to build the park. Use a sketch to support your answer.

![Deer County diagram](image)

2. **EXTENDED RESPONSE** A woodworker is trying to cut as large a wheel as possible from a triangular scrap of wood. The wheel just touches each side of the triangle as shown below.

![Woodworking diagram](image)

   a. Which point of concurrency is the woodworker using for the center of the circle? What type of special segment are \(BG, CG,\) and \(AG\)?

   b. Which postulate or theorem can you use to prove that \(\triangle BGF \cong \triangle BGE\)?

   c. Find the radius of the wheel to the nearest tenth of a centimeter. *Explain* your reasoning.

3. **SHORT RESPONSE** Graph \(\triangle GHJ\) with vertices \((2, 2), (6, 8),\) and \((10, 4)\) and draw its midsegments. Each midsegment is contained in a line. Which of those lines has the greatest \(y\)-intercept? Write the equation of that line. *Justify* your answer.

![Triangle GHI](image)

4. **GRIDDED ANSWER** Three friends are practicing disc golf, in which a flying disk is thrown into a set of targets. Each player is 15 feet from the target. Two players are 24 feet from each other along one edge of the nearby football field. How far is the target from that edge of the football field?

![Disc golf diagram](image)

5. **MULTI-STEP PROBLEM** An artist created a large floor mosaic consisting of eight triangular sections. The grey segments are the midsegments of the two black triangles.

![Mosaic diagram](image)

   a. The gray and black edging was created using special narrow tiles. What is the total length of all the edging used?

   b. What is the total area of the mosaic?

6. **OPEN-ENDED** If possible, draw a triangle whose incenter and circumcenter are the same point. *Describe* this triangle as specifically as possible.

7. **SHORT RESPONSE** Points \(S, T,\) and \(U\) are the midpoints of the sides of \(\triangle PQR\). Which angles are congruent to \(\angle QST\)? *Justify* your answer.

![Triangle PQR](image)
5.4 Intersecting Medians

**MATERIALS**
- cardboard
- straightedge
- scissors
- metric ruler

**QUESTION**
What is the relationship between segments formed by the medians of a triangle?

**EXPLORE 1** Find the balance point of a triangle

**STEP 1** Cut out triangle
Draw a triangle on a piece of cardboard. Then cut it out.

**STEP 2** Balance the triangle
Balance the triangle on the eraser end of a pencil.

**STEP 3** Mark the balance point
Mark the point on the triangle where it balanced on the pencil.

**EXPLORE 2** Construct the medians of a triangle

**STEP 1** Find the midpoint
Use a ruler to find the midpoint of each side of the triangle.

**STEP 2** Draw medians
Draw a segment, or median, from each midpoint to the vertex of the opposite angle.

**STEP 3** Label points
Label your triangle as shown. What do you notice about point P and the balance point in Explore 1?

**DRAW CONCLUSIONS**
Use your observations to complete these exercises

1. Copy and complete the table. Measure in millimeters.

<table>
<thead>
<tr>
<th>Length of segment from vertex to midpoint of opposite side</th>
<th>AD = ?</th>
<th>BF = ?</th>
<th>CE = ?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Length of segment from vertex to P</td>
<td>AP = ?</td>
<td>BP = ?</td>
<td>CP = ?</td>
</tr>
<tr>
<td>Length of segment from P to midpoint</td>
<td>PD = ?</td>
<td>PF = ?</td>
<td>PE = ?</td>
</tr>
</tbody>
</table>

2. How does the length of the segment from a vertex to P compare with the length of the segment from P to the midpoint of the opposite side?

3. How does the length of the segment from a vertex to P compare with the length of the segment from the vertex to the midpoint of the opposite side?
5.4 Use Medians and Altitudes

Before
You used perpendicular bisectors and angle bisectors of triangles.

Now
You will use medians and altitudes of triangles.

Why?
So you can find the balancing point of a triangle, as in Ex. 37.

Key Vocabulary
• median of a triangle
• centroid
• altitude of a triangle
• orthocenter

As shown by the Activity on page 318, a triangle will balance at a particular point. This point is the intersection of the medians of the triangle.

A median of a triangle is a segment from a vertex to the midpoint of the opposite side. The three medians of a triangle are concurrent. The point of concurrency, called the centroid, is inside the triangle.

THEOREM

THEOREM 5.8 Concurrency of Medians of a Triangle

The medians of a triangle intersect at a point that is two thirds of the distance from each vertex to the midpoint of the opposite side.

The medians of \( \triangle ABC \) meet at \( P \) and \( AP = \frac{2}{3}AE, BP = \frac{2}{3}BF, \) and \( CP = \frac{2}{3}CD. \)

Proof: Ex. 32, p. 323; p. 934

EXAMPLE 1 Use the centroid of a triangle

In \( \triangle RST \), \( Q \) is the centroid and \( SQ = 8. \) Find \( QW \) and \( SW. \)

Solution

\[
SQ = \frac{2}{3}SW \quad \text{Concurrency of Medians of a Triangle Theorem}
\]

\[
8 = \frac{2}{3}SW \quad \text{Substitute 8 for } SQ.
\]

\[
12 = SW \quad \text{Multiply each side by the reciprocal, } \frac{3}{2}.
\]

Then \( QW = SW - SQ = 12 - 8 = 4. \)

\( \therefore \) So, \( QW = 4 \) and \( SW = 12. \)
**Example 2** Standardized Test Practice

The vertices of \( \triangle FGH \) are \( F(2, 5) \), \( G(4, 9) \), and \( H(6, 1) \). Which ordered pair gives the coordinates of the centroid \( P \) of \( \triangle FGH \)?

\[ \text{A} \ (3, 5) \quad \text{B} \ (4, 5) \quad \text{C} \ (4, 7) \quad \text{D} \ (5, 3) \]

**Solution**

Sketch \( \triangle FGH \). Then use the Midpoint Formula to find the midpoint \( K \) of \( \overline{FH} \) and sketch median \( \overline{GK} \).

\[
K \left( \frac{2 + 6}{2}, \frac{5 + 1}{2} \right) = K(4, 3).
\]

The centroid is two thirds of the distance from each vertex to the midpoint of the opposite side. The distance from vertex \( G(4, 9) \) to \( K(4, 3) \) is \( 9 - 3 = 6 \) units. So, the centroid is \( \frac{2}{3} (6) = 4 \) units down from \( G \) on \( \overline{GK} \).

The coordinates of the centroid \( P \) are \( (4, 9 - 4) \), or \( (4, 5) \).

The correct answer is **B**. \( \text{B} \ (4, 5) \)

**Guided Practice** for Examples 1 and 2

There are three paths through a triangular park. Each path goes from the midpoint of one edge to the opposite corner. The paths meet at point \( P \).

1. If \( SC = 2100 \) feet, find \( PS \) and \( PC \).
2. If \( BT = 1000 \) feet, find \( TC \) and \( BC \).
3. If \( PT = 800 \) feet, find \( PA \) and \( TA \).

**Guides for Triangles**

In the area formula for a triangle, \( A = \frac{1}{2}bh \), you can use the length of any side for the base \( b \). The height \( h \) is the length of the altitude to that side from the opposite vertex.

**Altitudes** An altitude of a triangle is the perpendicular segment from a vertex to the opposite side or to the line that contains the opposite side.

**Theorem**

**Theorem 5.9** Concurrency of Altitudes of a Triangle

The lines containing the altitudes of a triangle are concurrent.

The lines containing \( \overline{AF} \), \( \overline{BE} \), and \( \overline{CD} \) meet at \( G \).

**Proof:** Exs. 29–31, p. 323; p. 936
CONCURRENCY OF ALTITUDES The point at which the lines containing the three altitudes of a triangle intersect is called the orthocenter of the triangle.

**Example 3** Find the orthocenter

Find the orthocenter $P$ in an acute, a right, and an obtuse triangle.

**Solution**

![Diagrams showing acute, right, and obtuse triangles with orthocenters marked]

**Example 4** Prove a property of isosceles triangles

Prove that the median to the base of an isosceles triangle is an altitude.

**Solution**

**Given** △ABC is isosceles, with base $\overline{AC}$.

$\overline{BD}$ is the median to base $\overline{AC}$.

**Prove** $\overline{BD}$ is an altitude of △ABC.

**Proof** Legs $\overline{AB}$ and $\overline{BC}$ of isosceles △ABC are congruent.

$\overline{CD} \cong \overline{AD}$ because $\overline{BD}$ is the median to $\overline{AC}$. Also, $\overline{BD} \cong \overline{BD}$. Therefore, △ABD ∼ △CBD by the SSS Congruence Postulate.

$\angle ADB \cong \angle CDB$ because corresponding parts of ∼ △s are ∼. Also, $\angle ADB$ and $\angle CDB$ are a linear pair. $\overline{BD}$ and $\overline{AC}$ intersect to form a linear pair of congruent angles, so $\overline{BD} \perp \overline{AC}$ and $\overline{BD}$ is an altitude of △ABC.

**Guided Practice** for Examples 3 and 4

4. Copy the triangle in Example 4 and find its orthocenter.

5. **What if?** In Example 4, suppose you wanted to show that median $\overline{BD}$ is also an angle bisector. How would your proof be different?

6. Triangle $PQR$ is an isosceles triangle and segment $\overline{OQ}$ is an altitude. What else do you know about $\overline{OQ}$? What are the coordinates of $P$?
1. **VOCABULARY** Name the four types of points of concurrency introduced in Lessons 5.2–5.4. When is each type inside the triangle? on the triangle? outside the triangle?

2. ★ **WRITING** Compare a perpendicular bisector and an altitude of a triangle. Compare a perpendicular bisector and a median of a triangle.

**FINDING LENGTHS** G is the centroid of \( \triangle ABC \), \( BG = 6 \), \( AF = 12 \), and \( AE = 15 \). Find the length of the segment.

3. \( FC \)
4. \( BF \)
5. \( AG \)
6. \( GE \)

7. ★ **MULTIPLE CHOICE** In the diagram, \( M \) is the centroid of \( \triangle ACT \), \( CM = 36 \), \( MQ = 30 \), and \( TS = 56 \). What is \( AM \)?
   - (A) 15
   - (B) 30
   - (C) 36
   - (D) 60

**EXAMPLE 1**
- on p. 319
- for Exs. 3–7

**EXAMPLE 2**
- on p. 320
- for Exs. 8–11

**FINDING A CENTROID** Use the graph shown.

a. Find the coordinates of \( P \), the midpoint of \( ST \). Use the median \( UP \) to find the coordinates of the centroid \( Q \).

b. Find the coordinates of \( R \), the midpoint of \( TU \).
   - Verify that \( SQ = \frac{2}{3} SR \).

**GRAPHING CENTROIDS** Find the coordinates of the centroid \( P \) of \( \triangle ABC \).

9. \( A(-1, 2), B(5, 6), C(5, -2) \)
10. \( A(0, 4), B(3, 10), C(6, -2) \)

**EXAMPLE 3**
- on p. 321
- for Exs. 12–16

**OPEN-ENDED MATH**
- Draw a large right triangle and find its centroid.
- Draw a large obtuse, scalene triangle and find its orthocenter.

**IDENTIFYING SEGMENTS** Is \( BD \) a perpendicular bisector of \( \triangle ABC \)? Is \( BD \) a median? an altitude?

16. **ERROR ANALYSIS** A student uses the fact that \( T \) is a point of concurrency to conclude that \( NT = \frac{2}{3} NQ \). Explain what is wrong with this reasoning.

**EXAMPLE 4** on p. 321 for Exs. 17–22

**REASONING** Use the diagram shown and the given information to decide whether \( YW \) is a perpendicular bisector, an angle bisector, a median, or an altitude of \( \triangle XYZ \). There may be more than one right answer.

17. \( YW \perp XZ \)  
18. \( \angle XYW \equiv \angle ZYW \)  
19. \( XW \equiv ZW \)  
20. \( YW \perp XZ \) and \( XW \equiv ZW \)  
21. \( \triangle XYW \equiv \triangle ZYW \)  
22. \( YW \perp XZ \) and \( XY \equiv ZY \)

**ISOSCELES TRIANGLES** Find the measurements. Explain your reasoning.

23. Given that \( DB \perp AC \), find \( DC \) and \( m\angle ABD \).
24. Given that \( AD = DC \), find \( m\angle ADB \) and \( m\angle ABD \).

**RELATING LENGTHS** Copy and complete the statement for \( \triangle DEF \) with medians \( DH, EJ, \) and \( FG \), and centroid \( K \).

25. \( EJ = \_ \_ \_ \) \( KJ \)  
26. \( DK = \_ \_ \_ \) \( KH \)  
27. \( FG = \_ \_ \_ \) \(KF \)

28. **★ SHORT RESPONSE** Any isosceles triangle can be placed in the coordinate plane with its base on the \( x \)-axis and the opposite vertex on the \( y \)-axis as in Guided Practice Exercise 6 on page 321. Explain why.

**CONSTRUCTION** Verify the Concurrency of Altitudes of a Triangle by drawing a triangle of the given type and constructing its altitudes. (Hint: To construct an altitude, use the construction in Exercise 25 on page 195.)

29. Equilateral triangle  
30. Right scalene triangle  
31. Obtuse isosceles triangle

32. **VERIFYING THEOREM 5.8** Use Example 2 on page 320. Verify that Theorem 5.8, the Concurrency of Medians of a Triangle, holds for the median from vertex \( F \) and for the median from vertex \( H \).

**ALGEBRA** Point \( D \) is the centroid of \( \triangle ABC \). Use the given information to find the value of \( x \).

33. \( BD = 4x + 5 \) and \( BF = 9x \)
34. \( GD = 2x - 8 \) and \( GC = 3x + 3 \)
35. \( AD = 5x \) and \( DE = 3x - 2 \)

36. **CHALLENGE** \( KM \) is a median of \( \triangle JKL \). Find the areas of \( \triangle JKM \) and \( \triangle LKM \). Compare the areas. Do you think that the two areas will always compare in this way, regardless of the shape of the triangle? Explain.
37. **MOBILES** To complete the mobile, you need to balance the red triangle on the tip of a metal rod. Copy the triangle and decide if you should place the rod at A or B. Explain.

38. **DEVELOPING PROOF** Show two different ways that you can place an isosceles triangle with base $2n$ and height $h$ on the coordinate plane. Label the coordinates for each vertex.

39. **PAPER AIRPLANE** Find the area of the triangular part of the paper airplane wing that is outlined in red. Which special segment of the triangle did you use?

40. ★ **SHORT RESPONSE** In what type(s) of triangle can a vertex of the triangle be one of the points of concurrency of the triangle? Explain.

41. **COORDINATE GEOMETRY** Graph the lines on the same coordinate plane and find the centroid of the triangle formed by their intersections.

$$y_1 = 3x - 4 \quad \quad y_2 = \frac{3}{4}x + 5 \quad \quad y_3 = -\frac{3}{2}x - 4$$

42. **PROOF** Write proofs using different methods.

**GIVEN** $\triangle ABC$ is equilateral.

$BD$ is an altitude of $\triangle ABC$.

**PROVE** $BD$ is also a perpendicular bisector of $AC$.

a. Write a proof using congruent triangles.

b. Write a proof using the Perpendicular Postulate on page 148.

43. **TECHNOLOGY** Use geometry drawing software.

a. Construct a triangle and its medians. Measure the areas of the blue, green, and red triangles.

b. What do you notice about the triangles?

c. If a triangle is of uniform thickness, what can you conclude about the weight of the three interior triangles? How does this support the idea that a triangle will balance on its centroid?

44. ★ **EXTENDED RESPONSE** Use $P(0, 0)$, $Q(8, 12)$, and $R(14, 0)$.

a. What is the slope of the altitude from $R$ to $\overline{PQ}$?

b. Write an equation for each altitude of $\triangle PQR$. Find the orthocenter by finding the ordered pair that is a solution of the three equations.

c. How would your steps change if you were finding the circumcenter?
45. **CHALLENGE** Prove the results in parts (a) – (c).

**GIVEN** $LP$ and $MQ$ are medians of scalene $\triangle LMN$. Point $R$ is on $LP$ such that $LP = PR$. Point $S$ is on $MQ$ such that $MQ = QS$.

**PROVE**

a. $NS = NR$

b. $NS$ and $NR$ are both parallel to $LM$.

c. $R$, $N$, and $S$ are collinear.

---

**MIXED REVIEW**

In Exercises 46–48, write an equation of the line that passes through points $A$ and $B$. (p. 180)

46. $A(0, 7), B(1, 10)$ 
47. $A(4, -8), B(-2, -5)$ 
48. $A(5, -21), B(0, 4)$

49. In the diagram, $\triangle JKL \cong \triangle RST$. Find the value of $x$. (p. 225)

Solve the inequality. (p. 287)

50. $2x + 13 < 35$ 
51. $12 > -3x - 6$ 
52. $6x < x + 20$

In the diagram, $LM$ is the perpendicular bisector of $PN$. (p. 303)

53. What segment lengths are equal?

54. What is the value of $x$?

55. Find $MN$.

---

**QUIZ for Lessons 5.3–5.4**

Find the value of $x$. Identify the theorem used to find the answer. (p. 310)

1. 

2. 

In the figure, $P$ is the centroid of $\triangle XYZ$, $YP = 12$, $LX = 15$, and $LZ = 18$. (p. 319)

3. Find the length of $LY$.

4. Find the length of $YN$.

5. Find the length of $LP$.
5.4 Investigate Points of Concurrency

**MATERIALS**
- graphing calculator or computer

**QUESTION** How are the points of concurrency in a triangle related?

You can use geometry drawing software to investigate concurrency.

**EXAMPLE 1** Draw the perpendicular bisectors of a triangle

**STEP 1**
Draw perpendicular bisectors

- Draw a line perpendicular to each side of \(\triangle ABC\) at the midpoint. Label the point of concurrency \(D\).

**STEP 2**
Hide the lines

- Use the HIDE feature to hide the perpendicular bisectors. Save as “EXAMPLE1.”

**EXAMPLE 2** Draw the medians of the triangle

**STEP 1**
Draw medians

- Start with the figure you saved as “EXAMPLE1.” Draw the medians of \(\triangle ABC\). Label the point of concurrency \(E\).

**STEP 2**
Hide the lines

- Use the HIDE feature to hide the medians. Save as “EXAMPLE2.”
**Example 3** Draw the altitudes of the triangle

**Step 1**

**Draw altitudes** Start with the figure you saved as “EXAMPLE2.” Draw the altitudes of \( \triangle ABC \). Label the point of concurrency \( F \).

**Step 2**

**Hide the lines** Use the HIDE feature to hide the altitudes. Save as “EXAMPLE3.”

**Practice**

1. Try to draw a line through points \( D, E, \) and \( F \). Are the points collinear?
2. Try dragging point \( A \). Do points \( D, E, \) and \( F \) remain collinear?

In Exercises 3–5, use the triangle you saved as “EXAMPLE3.”

3. Draw the angle bisectors. Label the point of concurrency as point \( G \).
4. How does point \( G \) relate to points \( D, E, \) and \( F? \)
5. Try dragging point \( A \). What do you notice about points \( D, E, F, \) and \( G? \)

**Draw Conclusions**

In 1765, Leonhard Euler (pronounced “oi’-ler”) proved that the circumcenter, the centroid, and the orthocenter are all collinear. The line containing these three points is called Euler's line. Save the triangle from Exercise 5 as “EULER” and use that for Exercises 6–8.

6. Try moving the triangle’s vertices. Can you verify that the same three points lie on Euler’s line whatever the shape of the triangle? Explain.
7. Notice that some of the four points can be outside of the triangle. Which points lie outside the triangle? Why? What happens when you change the shape of the triangle? Are there any points that never lie outside the triangle? Why?
8. Draw the three midsegments of the triangle. Which, if any, of the points seem contained in the triangle formed by the midsegments? Do those points stay there when the shape of the large triangle is changed?
5.5 Use Inequalities in a Triangle

Before
You found what combinations of angles are possible in a triangle.

Now
You will find possible side lengths of a triangle.

Why?
So you can find possible distances, as in Ex. 39.

Key Vocabulary
- side opposite, p. 241
- inequality, p. 876

**EXAMPLE 1**
Relate side length and angle measure

Draw an obtuse scalene triangle. Find the largest angle and longest side and mark them in red. Find the smallest angle and shortest side and mark them in blue. What do you notice?

**Solution**

The longest side and largest angle are opposite each other.

The shortest side and smallest angle are opposite each other.

The relationships in Example 1 are true for all triangles as stated in the two theorems below. These relationships can help you to decide whether a particular arrangement of side lengths and angle measures in a triangle may be possible.

**THEOREMS**

**THEOREM 5.10**
If one side of a triangle is longer than another side, then the angle opposite the longer side is larger than the angle opposite the shorter side.

*Proof:* p. 329

**THEOREM 5.11**
If one angle of a triangle is larger than another angle, then the side opposite the larger angle is longer than the side opposite the smaller angle.

*Proof:* Ex. 24, p. 340
PROOF  Theorem 5.10

GIVEN  \( BC > AB \)

PROVE  \( m\angle BAC > m\angle C \)

Locate a point \( D \) on \( BC \) such that \( DB = BA \). Then draw \( AD \). In the isosceles triangle \( \triangle ABD \), \( \angle 1 \equiv \angle 2 \).

Because \( m\angle BAC = m\angle 1 + m\angle 3 \), it follows that \( m\angle BAC > m\angle 1 \). Substituting \( m\angle 2 \) for \( m\angle 1 \) produces \( m\angle BAC > m\angle 2 \).

By the Exterior Angle Theorem, \( m\angle 2 = m\angle 3 + m\angle C \), so it follows that \( m\angle 2 > m\angle C \) (see Exercise 27, page 332). Finally, because \( m\angle BAC > m\angle 2 \) and \( m\angle 2 > m\angle C \), you can conclude that \( m\angle BAC > m\angle C \).

GUIDED PRACTICE for Examples 1 and 2

1. List the sides of \( \triangle RST \) in order from shortest to longest.

2. Another stage prop is a right triangle with sides that are 6, 8, and 10 feet long and angles of 90\(^\circ\), about 37\(^\circ\), and about 53\(^\circ\). Sketch and label a diagram with the shortest side on the bottom and the right angle at the left.

STAGE PROP  You are constructing a stage prop that shows a large triangular mountain. The bottom edge of the mountain is about 27 feet long, the left slope is about 24 feet long, and the right slope is about 20 feet long. You are told that one of the angles is about 46\(^\circ\) and one is about 59\(^\circ\). What is the angle measure of the peak of the mountain?

| A | 46\(^\circ\) | B | 59\(^\circ\) | C | 75\(^\circ\) | D | 85\(^\circ\) |

Solution

Draw a diagram and label the side lengths. The peak angle is opposite the longest side so, by Theorem 5.10, the peak angle is the largest angle.

The angle measures sum to 180\(^\circ\), so the third angle measure is 180\(^\circ\) - (46\(^\circ\) + 59\(^\circ\)) = 75\(^\circ\). You can now label the angle measures in your diagram.

The greatest angle measure is 75\(^\circ\), so the correct answer is C.  

ELIMINATE CHOICES

You can eliminate choice D because a triangle with a 46\(^\circ\) angle and a 59\(^\circ\) angle cannot have an 85\(^\circ\) angle. The sum of the three angles in a triangle must be 180\(^\circ\), but the sum of 46, 59, and 85 is 190, not 180.
THE TRIANGLE INEQUALITY  Not every group of three segments can be used to form a triangle. The lengths of the segments must fit a certain relationship.

For example, three attempted triangle constructions for sides with given lengths are shown below. Only the first set of side lengths forms a triangle.

If you start with the longest side and attach the other two sides at its endpoints, you can see that the other two sides are not long enough to form a triangle in the second and third figures. This leads to the Triangle Inequality Theorem.

**THEOREM**

**THEOREM 5.12 Triangle Inequality Theorem**

The sum of the lengths of any two sides of a triangle is greater than the length of the third side.

\[ AB + BC > AC \quad AC + BC > AB \quad AB + AC > BC \]

**Proof:** Ex. 47, p. 334

**EXAMPLE 3** Find possible side lengths

**ALGEBRA** A triangle has one side of length 12 and another of length 8. Describe the possible lengths of the third side.

**Solution**

Let \( x \) represent the length of the third side. Draw diagrams to help visualize the small and large values of \( x \). Then use the Triangle Inequality Theorem to write and solve inequalities.

**USE SYMBOLS**

You can combine the two inequalities, \( x > 4 \) and \( x < 20 \), to write the compound inequality \( 4 < x < 20 \). This can be read as \( x \) is between 4 and 20.

- The length of the third side must be greater than 4 and less than 20.

**GUIDED PRACTICE** for Example 3

3. A triangle has one side of 11 inches and another of 15 inches. Describe the possible lengths of the third side.
1. **VOCABULARY** Use the diagram at the right. For each angle, name the side that is *opposite* that angle.

2. ★ **WRITING** How can you tell from the angle measures of a triangle which side of the triangle is the longest? the shortest?

**MEASURING** Use a ruler and protractor to draw the given type of triangle. Mark the largest angle and longest side in red and the smallest angle and shortest side in blue. What do you notice?

3. Acute scalene
4. Right scalene
5. Obtuse isosceles

**WRITING MEASUREMENTS IN ORDER** List the sides and the angles in order from smallest to largest.

6. 62° 8 67° 8 51°
7. 112° 32° 8 36°
8. 10 9 6
9. 28 13 25
10. 127° 8 29°
11. 33°

12. ★ **MULTIPLE CHOICE** In \( \triangle RST \), which is a possible side length for \( ST \)?
   
<table>

**DRAWING TRIANGLES** Sketch and label the triangle described.

13. Side lengths: about 3 m, 7 m, and 9 m, with longest side on the bottom
   Angle measures: 16°, 41°, and 123°, with smallest angle at the left

14. Side lengths: 37 ft, 35 ft, and 12 ft, with shortest side at the right
   Angle measures: about 71°, about 19°, and 90°, with right angle at the top

15. Side lengths: 11 in., 13 in., and 14 in., with middle-length side at the left
   Two angle measures: about 48° and 71°, with largest angle at the top

**IDENTIFYING POSSIBLE TRIANGLES** Is it possible to construct a triangle with the given side lengths? If not, *explain* why not.

16. 6, 7, 11
17. 3, 6, 9
18. 28, 34, 39
19. 35, 120, 125
20. ★ MULTIPLE CHOICE Which group of side lengths can be used to construct a triangle?

A  3 yd, 4 ft, 5 yd  B  3 yd, 5 ft, 8 ft

POSSIBLE SIDE LENGTHS Describe the possible lengths of the third side of the triangle given the lengths of the other two sides.

21. 5 inches, 12 inches  22. 3 meters, 4 meters  23. 12 feet, 18 feet
24. 10 yards, 23 yards  25. 2 feet, 40 inches  26. 25 meters, 25 meters

27. EXTERIOR ANGLE INEQUALITY Another triangle inequality relationship is given by the Exterior Inequality Theorem. It states:

The measure of an exterior angle of a triangle is greater than the measure of either of the nonadjacent interior angles.

Use a relationship from Chapter 4 to explain how you know that \( m\angle 1 > m\angle A \) and \( m\angle 1 > m\angle B \) in \( \triangle ABC \) with exterior angle \( \angle 1 \).

ERROR ANALYSIS Use Theorems 5.10–5.12 and the theorem in Exercise 27 to explain why the diagram must be incorrect.

28. 29.

30. ★ SHORT RESPONSE Explain why the hypotenuse of a right triangle must always be longer than either leg.

ORDERING MEASURES Is it possible to build a triangle using the given side lengths? If so, order the angles measures of the triangle from least to greatest.

31. \( PQ = \sqrt{58}, QR = 2\sqrt{13}, PR = 5\sqrt{2} \)  32. \( ST = \sqrt{29}, TU = 2\sqrt{17}, SU = 13.9 \)

★ ALGEBRA Describe the possible values of \( x \).

33. 34.

35. USING SIDE LENGTHS Use the diagram at the right. Suppose \( \overline{XY} \) bisects \( \angle WYZ \). List all six angles of \( \triangle XYZ \) and \( \triangle WXY \) in order from smallest to largest. Explain your reasoning.

36. CHALLENGE The perimeter of \( \triangle HGF \) must be between what two integers? Explain your reasoning.
37. **TRAY TABLE** In the tray table shown, $PQ \cong PR$ and $QR < PQ$. Write two inequalities about the angles in $\triangle PQR$. What other angle relationship do you know?

38. **INDIRECT MEASUREMENT** You can estimate the width of the river at point $A$ by taking several sightings to the tree across the river at point $B$. The diagram shows the results for locations $C$ and $D$ along the riverbank. Using $\triangle BCA$ and $\triangle BDA$, what can you conclude about $AB$, the width of the river at point $A$? What could you do if you wanted a closer estimate?

39. **EXTENDED RESPONSE** You are planning a vacation to Montana. You want to visit the destinations shown in the map.
   a. A brochure states that the distance between Granite Peak and Fort Peck Lake is 1080 kilometers. *Explain* how you know that this distance is a misprint.
   b. Could the distance from Granite Peak to Fort Peck Lake be 40 kilometers? *Explain*.
   c. Write two inequalities to represent the range of possible distances from Granite Peak to Fort Peck Lake.
   d. What can you say about the distance between Granite Peak and Fort Peck Lake if you know that $m\angle 2 < m\angle 1$ and $m\angle 2 < m\angle 3$?

**FORMING TRIANGLES** In Exercises 40–43, you are given a 24 centimeter piece of string. You want to form a triangle out of the string so that the length of each side is a whole number. Draw figures accurately.

40. Can you decide if three side lengths form a triangle without checking all three inequalities shown for Theorem 5.12? If so, describe your shortcut.
41. Draw four possible isosceles triangles and label each side length. Tell whether each of the triangles you formed is *acute*, *right*, or *obtuse*.
42. Draw three possible scalene triangles and label each side length. Try to form at least one scalene acute triangle and one scalene obtuse triangle.
43. List three combinations of side lengths that will not produce triangles.
44. **SIGHTSEEING** You get off the Washington, D.C., subway system at the Smithsonian Metro station. First you visit the Museum of Natural History. Then you go to the Air and Space Museum. You record the distances you walk on your map as shown. *Describe* the range of possible distances you might have to walk to get back to the Smithsonian Metro station.

![Map of Smithsonian Area](image)

45. ★ **SHORT RESPONSE** Your house is 2 miles from the library. The library is $\frac{3}{4}$ mile from the grocery store. What do you know about the distance from your house to the grocery store? *Explain*. Include the special case when the three locations are all in a straight line.

46. **ISOSCELES TRIANGLES** For what combinations of angle measures in an isosceles triangle are the congruent sides shorter than the base of the triangle? longer than the base of the triangle?

47. **PROVING THEOREM 5.12** Prove the Triangle Inequality Theorem.

   **GIVEN** \(\triangle ABC\)
   
   **PROVE**
   
   (1) \(AB + BC > AC\)
   (2) \(AC + BC > AB\)
   (3) \(AB + AC > BC\)

   **Plan for Proof** One side, say \(BC\), is longer than or at least as long as each of the other sides. Then (1) and (2) are true. To prove (3), extend \(AC\) to \(D\) so that \(AB \equiv AD\) and use Theorem 5.11 to show that \(DC > BC\).

48. **CHALLENGE** Prove the following statements.
   
   a. The length of any one median of a triangle is less than half the perimeter of the triangle.
   b. The sum of the lengths of the three medians of a triangle is greater than half the perimeter of the triangle.

---

**Mixed Review**

In Exercises 49 and 50, write the if-then form, the converse, the inverse, and the contrapositive of the given statement. *(p. 79)*

49. A redwood is a large tree.
50. \(5x - 2 = 18\), because \(x = 4\).

51. A triangle has vertices \(A(22, 21), B(0, 0),\) and \(C(22, 2)\). Graph \(\triangle ABC\) and classify it by its sides. Then determine if it is a right triangle. *(p. 217)*

Graph figure \(LMNP\) with vertices \(L(-4, 6), M(4, 8), N(2, 2),\) and \(P(-4, 0)\). Then draw its image after the transformation. *(p. 272)*

52. \((x, y) \rightarrow (x + 3, y - 4)\)
53. \((x, y) \rightarrow (x, -y)\)
54. \((x, y) \rightarrow (-x, y)\)
5.6 Inequalities in Two Triangles and Indirect Proof

*Before*
You used inequalities to make comparisons in one triangle.

*Now*
You will use inequalities to make comparisons in two triangles.

*Why?*
So you can compare the distances hikers traveled, as in Ex. 22.

**Key Vocabulary**
- indirect proof
- included angle, p. 240

Imagine a gate between fence posts $A$ and $B$ that has hinges at $A$ and swings open at $B$.

As the gate swings open, you can think of $\triangle ABC$, with side $AC$ formed by the gate itself, side $AB$ representing the distance between the fence posts, and side $BC$ representing the opening between post $B$ and the outer edge of the gate.

Notice that as the gate opens wider, both the measure of $\angle A$ and the distance $CB$ increase. This suggests the Hinge Theorem.

**Theorems**

**Theorem 5.13 Hinge Theorem**
If two sides of one triangle are congruent to two sides of another triangle, and the included angle of the first is larger than the included angle of the second, then the third side of the first is longer than the third side of the second.

*Proof:* Ex. 28, p. 341

**Theorem 5.14 Converse of the Hinge Theorem**
If two sides of one triangle are congruent to two sides of another triangle, and the third side of the first is longer than the third side of the second, then the included angle of the first is larger than the included angle of the second.

*Proof:* Example 4, p. 338
EXAMPLE 1  Use the Converse of the Hinge Theorem

Given that \( ST \equiv PR \), how does \( \angle PST \) compare to \( \angle SPR \)?

Solution

You are given that \( ST \equiv PR \) and you know that \( PS \equiv PS \) by the Reflexive Property. Because 24 inches > 23 inches, \( PT > RS \). So, two sides of \( \triangle STP \) are congruent to two sides of \( \triangle PRS \) and the third side in \( \triangle STP \) is longer.

\[ \text{By the Converse of the Hinge Theorem, } m\angle PST > m\angle SPR. \]

EXAMPLE 2  Solve a multi-step problem

BIKING  Two groups of bikers leave the same camp heading in opposite directions. Each group goes 2 miles, then changes direction and goes 1.2 miles. Group A starts due east and then turns 45° toward north as shown. Group B starts due west and then turns 30° toward south.

Which group is farther from camp? Explain your reasoning.

Solution

Draw a diagram and mark the given measures. The distances biked and the distances back to camp form two triangles, with congruent 2 mile sides and congruent 1.2 mile sides. Add the third sides of the triangles to your diagram.

Next use linear pairs to find and mark the included angles of 150° and 135°.

\[ \text{Because } 150° > 135°, \text{ Group B is farther from camp by the Hinge Theorem.} \]

GUIDED PRACTICE  for Examples 1 and 2

Use the diagram at the right.

1. If \( PR = PS \) and \( m\angle QPR > m\angle QPS \), which is longer, \( SQ \) or \( RQ \)?
2. If \( PR = PS \) and \( RQ < SQ \), which is larger, \( \angle RPQ \) or \( \angle SPQ \)?
3. WHAT IF? In Example 2, suppose Group C leaves camp and goes 2 miles due north. Then they turn 40° toward east and continue 1.2 miles. Compare the distances from camp for all three groups.
**INDIRECT REASONING** Suppose a student looks around the cafeteria, concludes that hamburgers are not being served, and explains as follows.

At first I assumed that we are having hamburgers because today is Tuesday and Tuesday is usually hamburger day. There is always ketchup on the table when we have hamburgers, so I looked for the ketchup, but I didn’t see any. So, my assumption that we are having hamburgers must be false.

The student used *indirect* reasoning. So far in this book, you have reasoned *directly* from given information to prove desired conclusions.

In an *indirect proof*, you start by making the temporary assumption that the desired conclusion is false. By then showing that this assumption leads to a logical impossibility, you prove the original statement true *by contradiction*.

**KEY CONCEPT**

**For Your Notebook**

**How to Write an Indirect Proof**

1. **STEP 1** Identify the statement you want to prove. **Assume** temporarily that this statement is false by assuming that its opposite is true.
2. **STEP 2** Reason logically until you reach a contradiction.
3. **STEP 3** Point out that the desired conclusion must be true because the contradiction proves the temporary assumption false.

**EXAMPLE 3** Write an indirect proof

Write an indirect proof that an odd number is not divisible by 4.

**GIVEN** \( x \) is an odd number.

**PROVE** \( x \) is not divisible by 4.

**Solution**

1. **STEP 1** Assume temporarily that \( x \) is divisible by 4. This means that \( \frac{x}{4} = n \) for some whole number \( n \). So, multiplying both sides by 4 gives \( x = 4n \).
2. **STEP 2** If \( x \) is odd, then, by definition, \( x \) cannot be divided evenly by 2. However, \( x = 4n \) so \( \frac{x}{2} = \frac{4n}{2} = 2n \). We know that \( 2n \) is a whole number because \( n \) is a whole number, so \( x \) can be divided evenly by 2. This contradicts the given statement that \( x \) is odd.
3. **STEP 3** Therefore, the assumption that \( x \) is divisible by 4 must be false, which proves that \( x \) is not divisible by 4.

**GUIDED PRACTICE** for Example 3

4. Suppose you wanted to prove the statement “If \( x + y \neq 14 \) and \( y = 5 \), then \( x \neq 9 \)” What temporary assumption could you make to prove the conclusion indirectly? How does that assumption lead to a contradiction?
EXAMPLE 4  Prove the Converse of the Hinge Theorem

Write an indirect proof of Theorem 5.14.

**GIVEN**  \( AB \cong DE \)
\( BC \cong EF \)
\( AC > DF \)

**PROVE**  \( m\angle B > m\angle E \)

**Proof**  Assume temporarily that \( m\angle B > m\angle E \). Then, it follows that either \( m\angle B = m\angle E \) or \( m\angle B < m\angle E \).

**Case 1**  If \( m\angle B = m\angle E \), then \( \angle B \cong \angle E \). So, \( \triangle ABC \cong \triangle DEF \) by the SAS Congruence Postulate and \( AC = DF \).

**Case 2**  If \( m\angle B < m\angle E \), then \( AC < DF \) by the Hinge Theorem.

Both conclusions contradict the given statement that \( AC > DF \). So, the temporary assumption that \( m\angle B > m\angle E \) cannot be true. This proves that \( m\angle B > m\angle E \).

**GUIDED PRACTICE** for Example 4

5. Write a temporary assumption you could make to prove the Hinge Theorem indirectly. What two cases does that assumption lead to?

5.6 EXERCISES
9. ★ MULTIPLE CHOICE Which is a possible measure for \( \angle JKM \)?

- A 20°
- B 25°
- C 30°
- D Cannot be determined

10. USING A DIAGRAM The path from \( E \) to \( F \) is longer than the path from \( E \) to \( D \). The path from \( G \) to \( D \) is the same length as the path from \( G \) to \( F \). What can you conclude about the angles of the paths? Explain your reasoning.

11. If \( x \) and \( y \) are odd integers, then \( xy \) is odd.

12. In \( \triangle ABC \), if \( m \angle A = 100^\circ \), then \( \angle B \) is not a right angle.

13. REASONING Your study partner is planning to write an indirect proof to show that \( \angle A \) is an obtuse angle. She states “Assume temporarily that \( \angle A \) is an acute angle.” What has your study partner overlooked?

14. By the Hinge Theorem, \( PQ < SR \).

15. By the Hinge Theorem, \( XW < XY \).

16. Algebra Use the Hinge Theorem or its converse and properties of triangles to write and solve an inequality to describe a restriction on the value of \( x \).

17. 3x + 2

18. 4x - 3

19. ★ SHORT RESPONSE If \( NR \) is a median of \( \triangle NPQ \) and \( NQ > NP \), explain why \( \angle NRQ \) is obtuse.

20. ANGLE BISECTORS In \( \triangle EFG \), the bisector of \( \angle F \) intersects the bisector of \( \angle G \) at point \( H \). Explain why \( FG \) must be longer than \( FH \) or \( HG \).

21. CHALLENGE In \( \triangle ABC \), the altitudes from \( B \) and \( C \) meet at \( D \). What is true about \( \triangle ABC \) if \( m \angle BAC > m \angle BDC \) Justify your answer.
22. **Hiking** Two hikers start at the visitor center. The first hikes 4 miles due west, then turns 40° toward south and hikes 1.8 miles. The second hikes 4 miles due east, then turns 52° toward north and and hikes 1.8 miles. Which hiker is farther from camp? Explain how you know.

23. **Indirect Proof** Arrange statements A–E in order to write an indirect proof of the corollary: If \( \triangle ABC \) is equilateral, then it is equiangular.

**Given** \( \triangle PQR \) is equilateral.

A. That means that for some pair of vertices, say \( P \) and \( Q \), \( m \angle P > m \angle Q \).

B. But this contradicts the given statement that \( \triangle PQR \) is equilateral.

C. The contradiction shows that the temporary assumption that \( \triangle PQR \) is not equiangular is false. This proves that \( \triangle PQR \) is equiangular.

D. Then, by Theorem 5.11, you can conclude that \( QR > PR \).

E. Temporarily assume that \( \triangle PQR \) is not equiangular.

24. **Proving Theorem 5.11** Write an indirect proof of Theorem 5.11, page 328.

**Given** \( m \angle D > m \angle E \)

**Prove** \( EF > DF \)

**Plan for Proof** In Case 1, assume that \( EF < DF \). In Case 2, assume that \( EF = DF \).

25. **Extended Response** A scissors lift can be used to adjust the height of a platform.

a. **Interpret** As the mechanism expands, \( \overline{KL} \) gets longer. As \( KL \) increases, what happens to \( m \angle LNK \) to \( m \angle KNM \)?

b. **Apply** Name a distance that decreases as \( KL \) gets longer.

c. **Writing** Explain how the adjustable mechanism illustrates the Hinge Theorem.

26. **Proof** Write a proof that the shortest distance from a point to a line is the length of the perpendicular segment from the point to the line.

**Given** Line \( k \); point \( A \) not on \( k \); point \( B \) on \( k \) such that \( \overline{AB} \perp k \)

**Prove** \( \overline{AB} \) is the shortest segment from \( A \) to \( k \).

**Plan for Proof** Assume that there is a shorter segment from \( A \) to \( k \) and use Theorem 5.10 to show that this leads to a contradiction.
27. **Using a Contrapositive** Because the contrapositive of a conditional is equivalent to the original statement, you can prove the statement by proving its contrapositive. Look back at the conditional in Example 3 on page 337. Write a proof of the contrapositive that uses direct reasoning. How is your proof similar to the indirect proof of the original statement?

28. **Challenge** Write a proof of Theorem 5.13, the Hinge Theorem.

**GIVEN**

\[ AB \cong DE, \ BC \cong EF, \]

\[ m\angle ABC > m\angle DEF \]

**PROVE**

\[ AC > DF \]

**Plan for Proof**

1. Because \( m\angle ABC > m\angle DEF \), you can locate a point \( P \) in the interior of \( \angle ABC \) so that \( \angle CBP > \angle FED \) and \( BP \cong ED \). Draw \( BP \) and show that \( \triangle PBC \cong \triangle DEF \).

2. Locate a point \( H \) on \( AC \) so that \( BH \) bisects \( PBA \) and show that \( \triangle ABH \cong \triangle PBH \).

3. Give reasons for each statement below to show that \( AC > DF \).

\[ AC = AH + HC = PH + HC > PC = DF \]

---

**Mixed Review**

**PREVIEW** Prepare for Lesson 6.1 in Exs. 29–31.

**Write the conversion factor you would multiply by to change units as specified. (p. 886)**

29. inches to feet
30. liters to kiloliters
31. pounds to ounces

**Solve the equation. Write a reason for each step. (p. 105)**

32. \( 1.5(x + 4) = 5(2.4) \)
33. \( -3(-2x + 5) = 12 \)
34. \( 2(5x) = 3(4x + 6) \)
35. Simplify the expression \( \frac{-6xy^2}{21x^2y} \) if possible. (p. 139)

**Quiz for Lessons 5.5–5.6**

1. Is it possible to construct a triangle with side lengths 5, 6, and 12? If not, explain why not. (p. 328)

2. The lengths of two sides of a triangle are 15 yards and 27 yards. Describe the possible lengths of the third side of the triangle. (p. 328)

3. In \( \triangle PQR \), \( m\angle P = 48^\circ \) and \( m\angle Q = 79^\circ \). List the sides of \( \triangle PQR \) in order from shortest to longest. (p. 328)

**Copy and complete with <, >, or =. (p. 335)**

4. \( BA \quad ? \quad DA \)
5. \( m\angle 1 \quad ? \quad m\angle 2 \)

---

**Extra Practice** for Lesson 5.6, p. 905.6  **Online Quiz** at classzone.com
**Lessons 5.4–5.6**

1. **MULTI-STEP PROBLEM** In the diagram below, the entrance to the path is halfway between your house and your friend’s house.

   ![Diagram of Oak St., Maple St., Birch St., path, school, your house, friend’s house]

   a. Can you conclude that you and your friend live the same distance from the school if the path bisects the angle formed by Oak and Maple Streets?

   b. Can you conclude that you and your friend live the same distance from the school if the path is perpendicular to Birch Street?

   c. Your answers to parts (a) and (b) show that a triangle must be isosceles if which two special segments are equal in length?

2. **SHORT RESPONSE** The map shows your driving route from Allentown to Bakersville and from Allentown to Dawson. Which city, Bakersville or Dawson, is located closer to Allentown? Explain your reasoning.

![Map showing driving routes from Allentown to Bakersville and Allentown to Dawson]

3. **GRIDDED RESPONSE** Find the length of $\overline{AF}$.

![Diagram of triangle with sides labeled A, B, C, D, E, and G]

4. **SHORT RESPONSE** In the instructions for creating the terrarium shown, you are given a pattern for the pieces that form the roof. Does the diagram for the red triangle appear to be correct? Explain why or why not.

![Diagram of a terrarium with dimensions 13.55 cm, 15.2 cm, 8.9 cm]

5. **EXTENDED RESPONSE** You want to create a triangular fenced pen for your dog. You have the two pieces of fencing shown, so you plan to move those to create two sides of the pen.

   ![Diagram of a fence]

   a. Describe the possible lengths for the third side of the pen.

   b. The fencing is sold in 8 foot sections. If you use whole sections, what lengths of fencing are possible for the third side?

   c. You want your dog to have a run within the pen that is at least 25 feet long. Which pen(s) could you use? Explain.

6. **OPEN-ENDED** In the gem shown, give a possible side length of $\overline{DE}$ if $\angle EFD > 90^\circ$, $DF = 0.4$ mm, and $EF = 0.63$ mm.

![Diagram of a gem with sides labeled A, B, C, D, E, and F]
**BIG IDEAS**

**For Your Notebook**

### Using Properties of Special Segments in Triangles

<table>
<thead>
<tr>
<th>Special segment</th>
<th>Properties to remember</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Midsegment</strong></td>
<td>Parallel to side opposite it and half the length of side opposite it</td>
</tr>
</tbody>
</table>
| **Perpendicular bisector** | Concurrent at the circumcenter, which is:  
  • equidistant from 3 vertices of △  
  • center of *circumscribed* circle that passes through 3 vertices of △ |
| **Angle bisector** | Concurrent at the incenter, which is:  
  • equidistant from 3 sides of △  
  • center of *inscribed* circle that just touches each side of △ |
| **Median (connects vertex to midpoint of opposite side)** | Concurrent at the centroid, which is:  
  • located two thirds of the way from vertex to midpoint of opposite side  
  • balancing point of △ |
| **Altitude (perpendicular to side of △ through opposite vertex)** | Concurrent at the orthocenter  
  Used in finding area: If \( b \) is length of any side and \( h \) is length of altitude to that side, then \( A = \frac{1}{2}bh \). |

### Using Triangle Inequalities to Determine What Triangles are Possible

Sum of lengths of any two sides of a △ is greater than length of third side.

\[
AB + BC > AC \quad AB + AC > BC \quad BC + AC > AB
\]

In a △, longest side is opposite largest angle and shortest side is opposite smallest angle.

If \( AC > AB > BC \), then \( m\angle B > m\angle C > m\angle A \).

If \( m\angle B > m\angle C > m\angle A \), then \( AC > AB > BC \).

If two sides of a △ are \( \equiv \) to two sides of another △, then the △ with longer third side also has larger included angle.

If \( BC > EF \), then \( m\angle A > m\angle D \).

If \( m\angle A > m\angle D \), then \( BC > EF \).

### Extending Methods for Justifying and Proving Relationships

*Coordinate proof* uses the coordinate plane and variable coordinates. *Indirect proof* involves assuming the conclusion is false and then showing that the assumption leads to a contradiction.
5 CHAPTER REVIEW

REVIEW KEY VOCABULARY

- midsegment of a triangle, p. 295
- coordinate proof, p. 296
- perpendicular bisector, p. 303
- equidistant, p. 303
- concurrent, p. 305
- point of concurrency, p. 305
- circumcenter, p. 306
- incenter, p. 312
- median of a triangle, p. 319
- centroid, p. 319
- altitude of a triangle, p. 320
- orthocenter, p. 321
- indirect proof, p. 337

VOCABULARY EXERCISES

1. Copy and complete: A perpendicular bisector is a segment, ray, line, or plane that is perpendicular to a segment at its ___.

2. WRITING Explain how to draw a circle that is circumscribed about a triangle. What is the center of the circle called? Describe its radius.

In Exercises 3–5, match the term with the correct definition.

3. Incenter  A. The point of concurrency of the medians of a triangle
4. Centroid  B. The point of concurrency of the angle bisectors of a triangle
5. Orthocenter  C. The point of concurrency of the altitudes of a triangle

REVIEW EXAMPLES AND EXERCISES

Use the review examples and exercises below to check your understanding of the concepts you have learned in each lesson of Chapter 5.

5.1 Midsegment Theorem and Coordinate Proof  pp. 295–301

**EXAMPLE**

In the diagram, \( \overline{DE} \) is a midsegment of \( \triangle ABC \). Find \( AC \).

By the Midsegment Theorem, \( DE = \frac{1}{2} AC \).

So, \( AC = 2DE = 2(51) = 102 \).

**EXERCISES**

Use the diagram above where \( \overline{DF} \) and \( \overline{EF} \) are midsegments of \( \triangle ABC \).

6. If \( AB = 72 \), find \( EF \).
7. If \( DF = 45 \), find \( EC \).
8. Graph \( \triangle PQR \), with vertices \( P(2a, 2b) \), \( Q(2a, 0) \), and \( O(0, 0) \). Find the coordinates of midpoint \( S \) of \( PQ \) and midpoint \( T \) of \( QO \). Show \( ST \parallel PO \).
5.2 Use Perpendicular Bisectors

**Example**

Use the diagram at the right to find $XZ$.

$WZ$ is the perpendicular bisector of $XY$.

\[ 5x - 5 = 3x + 3 \quad \text{By the Perpendicular Bisector Theorem, } ZX = ZY. \]

\[ x = 4 \quad \text{Solve for } x. \]

So, $XZ = 5x - 5 = 5(4) - 5 = 15$.

**Exercises**

In the diagram, $BD$ is the perpendicular bisector of $AC$.

9. What segment lengths are equal?

10. What is the value of $x$?

11. Find $AB$.

---

5.3 Use Angle Bisectors of Triangles

**Example**

In the diagram, $N$ is the incenter of $\triangle XYZ$. Find $NL$.

Use the Pythagorean Theorem to find $NM$ in $\triangle NMY$.

\[ c^2 = a^2 + b^2 \quad \text{Pythagorean Theorem} \]

\[ 30^2 = NM^2 + 24^2 \]

\[ 900 = NM^2 + 576 \]

\[ 324 = NM^2 \]

\[ 18 = NM \quad \text{Take positive square root of each side.} \]

By the Concurrency of Angle Bisectors of a Triangle, the incenter $N$ of $\triangle XYZ$ is equidistant from all three sides of $\triangle XYZ$. So, because $NM = NL$, $NL = 18$.

**Exercises**

Point $D$ is the incenter of the triangle. Find the value of $x$.

12.

13. 1
5.4 Use Medians and Altitudes

**Example**

The vertices of \(\triangle ABC\) are \(A(-6, 8), B(0, -4),\) and \(C(-12, 2)\). Find the coordinates of its centroid \(P\).

Sketch \(\triangle ABC\). Then find the midpoint \(M\) of \(BC\) and sketch median \(\overline{AM}\).

\[
M\left(\frac{-12 + 0}{2}, \frac{2 + (-4)}{2}\right) = M(-6, -1)
\]

The centroid is two thirds of the distance from a vertex to the midpoint of the opposite side.

The distance from vertex \(A(-6, 8)\) to midpoint \(M(-6, -1)\) is \(8 - (-1) = 9\) units.

So, the centroid \(P\) is \(\frac{2}{3}(9) = 6\) units down from \(A\) on \(\overline{AM}\).

- The coordinates of the centroid \(P\) are \((-6, 8 - 6)\), or \((-6, 2)\).

**Exercises**

Find the coordinates of the centroid \(D\) of \(\triangle RST\).

14. \(R(-4, 0), S(2, 2), T(2, -2)\)

15. \(R(-6, 2), S(-2, 6), T(2, 4)\)

Point \(Q\) is the centroid of \(\triangle XYZ\).

16. Find \(XQ\).

17. Find \(XM\).

18. Draw an obtuse \(\triangle ABC\). Draw its three altitudes. Then label its orthocenter \(D\).

5.5 Use Inequalities in a Triangle

**Example**

A triangle has one side of length 9 and another of length 14. Describe the possible lengths of the third side.

Let \(x\) represent the length of the third side. Draw diagrams and use the Triangle Inequality Theorem to write inequalities involving \(x\).

\[
x + 9 > 14
\]

\[
x > 5
\]

\[
9 + 14 > x
\]

\[
23 > x, \text{ or } x < 23
\]

- The length of the third side must be greater than 5 and less than 23.
**Inequalities in Two Triangles and Indirect Proof**  
*pp. 335–341*

**Example**

How does the length of $DG$ compare to the length of $FG$?

- Because $27^\circ > 23^\circ$, $m\angle GEF > m\angle GED$. You are given that $\overline{DE} \cong \overline{FE}$ and you know that $\overline{EG} \cong \overline{EG}$. Two sides of $\triangle GEF$ are congruent to two sides of $\triangle GED$ and the included angle is larger so, by the Hinge Theorem, $FG > DG$.

**Exercises**

Copy and complete with $<$, $>$, or $\equiv$.

25. $m\angle BAC \ ? \ m\angle DAC$  
26. $LM \ ? \ KN$

27. Arrange statements A–D in correct order to write an indirect proof of the statement: *If two lines intersect, then their intersection is exactly one point.*

**Given** ▶ Intersecting lines $m$ and $n$

**Prove** ▶ The intersection of lines $m$ and $n$ is exactly one point.

- A. But this contradicts Postulate 5, which states that through any two points there is exactly one line.
- B. Then there are two lines ($m$ and $n$) through points $P$ and $Q$.
- C. Assume that there are two points, $P$ and $Q$, where $m$ and $n$ intersect.
- D. It is false that $m$ and $n$ can intersect in two points, so they must intersect in exactly one point.
Two midsegments of \( \triangle ABC \) are \( \overline{DE} \) and \( \overline{DF} \).

1. Find \( DB \).
2. Find \( DF \).
3. What can you conclude about \( EF \)?

Find the value of \( x \). Explain your reasoning.
4. \[
\begin{align*}
S & \quad 2x + 11 \\
T & \quad U \\
W & \quad 8x - 1 \\
\end{align*}
\]
5. \[
\begin{align*}
Q & \quad 6x \\
P & \quad 3x + 9 \\
S & \quad R \\
\end{align*}
\]
6. \[
\begin{align*}
G & \quad 5x - 4 \\
J & \quad K \\
H & \quad L \\
\end{align*}
\]

7. In Exercise 4, is point \( T \) on the perpendicular bisector of \( \overline{SU} \)? Explain.
8. In the diagram at the right, the angle bisectors of \( \triangle XYZ \) meet at point \( D \). Find \( DB \).

In the diagram at the right, \( P \) is the centroid of \( \triangle RST \).
9. If \( LS = 36 \), find \( PL \) and \( PS \).
10. If \( TP = 20 \), find \( TJ \) and \( PJ \).
11. If \( JR = 25 \), find \( JS \) and \( RS \).
12. Is it possible to construct a triangle with side lengths 9, 12, and 22? If not, explain why not.
13. In \( \triangle ABC \), \( AB = 36 \), \( BC = 18 \), and \( AC = 22 \). Sketch and label the triangle. List the angles in order from smallest to largest.

In the diagram for Exercises 14 and 15, \( JL = MK \).
14. If \( m\angle JKM > m\angle LJK \), which is longer, \( \overline{LK} \) or \( \overline{MJ} \)? Explain.
15. If \( MJ < LK \), which is larger, \( \angle LJK \) or \( \angle JKM \)? Explain.
16. Write a temporary assumption you could make to prove the conclusion indirectly: If \( RS + ST \neq 12 \) and \( ST = 5 \), then \( RS \neq 7 \).

Use the diagram in Exercises 17 and 18.
17. Describe the range of possible distances from the beach to the movie theater.
18. A market is the same distance from your house, the movie theater, and the beach. Copy the diagram and locate the market.
USE RATIOS AND PERCENT OF CHANGE

**Example 1** Write a ratio in simplest form

A team won 18 of its 30 games and lost the rest. Find its win-loss ratio.

The ratio of \( a \) to \( b \), \( b \neq 0 \), can be written as \( a \) to \( b \), \( a:b \), and \( \frac{a}{b} \).

\[
\begin{align*}
\text{wins} & = \frac{18}{30} - 18 \\
\text{losses} & = \frac{18}{30 - 18} \\
\frac{18}{12} & = \frac{3}{2} \\
\end{align*}
\]

To find losses, subtract wins from total. Simplify.

- The team’s win-loss ratio is 3:2.

**Example 2** Find and interpret a percent of change

A $50 sweater went on sale for $28. What is the percent of change in price? The new price is what percent of the old price?

Percent of change = \( \frac{\text{Amount of increase or decrease}}{\text{Original amount}} \) = \( \frac{50 - 28}{50} = \frac{22}{50} = 0.44 \)

- The price went down, so the change is a decrease. The percent of decrease is 44%. So, the new price is 100% – 44% = 56% of the original price.

**Exercises**

1. A team won 12 games and lost 4 games. Write each ratio in simplest form.
   a. wins to losses
   b. losses out of total games

2. A scale drawing that is 2.5 feet long by 1 foot high was used to plan a mural that is 15 feet long by 6 feet high. Write each ratio in simplest form.
   a. length to height of mural
   b. length of scale drawing to length of mural

3. There are 8 males out of 18 members in the school choir. Write the ratio of females to males in simplest form.

   **Find the percent of change.**

4. From 75 campsites to 120 campsites
5. From 150 pounds to 136.5 pounds

6. From $480 to $408
7. From 16 employees to 18 employees

8. From 24 houses to 60 houses
9. From 4000 ft\(^2\) to 3990 ft\(^2\)

   **Write the percent comparing the new amount to the original amount. Then find the new amount.**

10. 75 feet increased by 4%
11. 45 hours decreased by 16%

12. $16,500 decreased by 85%
13. 80 people increased by 7.5%
SHORT RESPONSE QUESTIONS

**Problem**

The coordinates of the vertices of a triangle are \(O(0, 0), M(k, k\sqrt{3}),\) and \(N(2k, 0)\). Classify \(\triangle OMN\) by its side lengths. *Justify* your answer.

Below are sample solutions to the problem. Read each solution and the comments in blue to see why the sample represents full credit, partial credit, or no credit.

**Sample 1: Full credit solution**

Begin by graphing \(\triangle OMN\) for a given value of \(k\). I chose a value of \(k\) that makes \(\triangle OMN\) easy to graph. In the diagram, \(k = 4\), so the coordinates are \(O(0, 0), M(4, 4\sqrt{3}),\) and \(N(8, 0)\).

From the graph, it appears that \(\triangle OMN\) is equilateral.

To verify that \(\triangle OMN\) is equilateral, use the Distance Formula. Show that \(OM = MN = ON\) for all values of \(k\).

\[
OM = \sqrt{(k - 0)^2 + (k\sqrt{3} - 0)^2} = \sqrt{k^2 + 3k^2} = \sqrt{4k^2} = 2|k|
\]

\[
MN = \sqrt{(2k - k)^2 + (0 - k\sqrt{3})^2} = \sqrt{k^2 + 3k^2} = \sqrt{4k^2} = 2|k|
\]

\[
ON = \sqrt{(2k - 0)^2 + (0 - 0)^2} = \sqrt{4k^2} = 2|k|
\]

Because all of its side lengths are equal, \(\triangle OMN\) is an equilateral triangle.

**Sample 2: Partial credit solution**

Use the Distance Formula to find the side lengths.

\[
OM = \sqrt{(k - 0)^2 + (k\sqrt{3} - 0)^2} = \sqrt{k^2 + 3k^2} = \sqrt{4k^2} = k\sqrt{10}
\]

\[
MN = \sqrt{(2k - k)^2 + (0 - k\sqrt{3})^2} = \sqrt{k^2 + 3k^2} = \sqrt{4k^2} = k\sqrt{10}
\]

\[
ON = \sqrt{(2k - 0)^2 + (0 - 0)^2} = \sqrt{4k^2} = 2k
\]

Two of the side lengths are equal, so \(\triangle OMN\) is an isosceles triangle.
SAMPLE 3: Partial credit solution

Graph $\triangle OMN$ and compare the side lengths.
From $O(0, 0)$, move right $k$ units and up $k\sqrt{3}$ units to $M(k, k\sqrt{3})$. Draw $OM$. To draw $MN$, move $k$ units right and $k\sqrt{3}$ units down from $M$ to $N(2k, 0)$. Then draw $ON$, which is $2k$ units long. All side lengths appear to be equal, so $\triangle OMN$ is equilateral.

SAMPLE 4: No credit solution

You are not given enough information to classify $\triangle OMN$ because you need to know the value of $k$.

PRACTICE  Apply the Scoring Rubric

Use the rubric on page 350 to score the solution to the problem below as full credit, partial credit, or no credit. Explain your reasoning.

PROBLEM  You are a goalie guarding the goal $NQ$. To make a goal, Player $P$ must send the ball across $NQ$. Is the distance you may need to move to block the shot greater if you stand at Position $A$ or at Position $B$? Explain.

1. At either position, you are on the angle bisector of $\angle NPQ$. So, in both cases you are equidistant from the angle's sides. Therefore, the distance you need to move to block the shot from the two positions is the same.

2. Both positions lie on the angle bisector of $\angle NPQ$. So, each is equidistant from $PN$ and $PQ$.
   The sides of an angle are farther from the angle bisector as you move away from the vertex. So, $A$ is farther from $PN$ and from $PQ$ than $B$ is.
   The distance may be greater if you stand at Position $A$ than if you stand at Position $B$.

3. Because Position $B$ is farther from the goal, you may need to move a greater distance to block the shot if you stand at Position $B$. 
1. The coordinates of \( \triangle OPQ \) are \( O(0, 0) \), \( P(a, a) \), and \( Q(2a, 0) \). Classify \( \triangle OPQ \) by its side lengths. Is \( \triangle OPQ \) a right triangle? Justify your answer.

2. The local gardening club is planting flowers on a traffic triangle. They divide the triangle into four sections, as shown. The perimeter of the middle triangle is 10 feet. What is the perimeter of the traffic triangle? Explain your reasoning.

3. A wooden stepladder with a metal support is shown. The legs of the stepladder form a triangle. The support is parallel to the floor, and positioned about five inches above where the midsegment of the triangle would be. Is the length of the support from one side of the triangle to the other side of the triangle greater than, less than, or equal to 8 inches? Explain your reasoning.

4. You are given instructions for making a triangular earring from silver wire. According to the instructions, you must first bend a wire into a triangle with side lengths of \( \frac{3}{4} \) inch, \( \frac{5}{8} \) inch, and \( 1 \frac{1}{2} \) inches. Explain what is wrong with the first part of the instructions.

5. The centroid of \( \triangle ABC \) is located at \( P(-1, 2) \). The coordinates of \( A \) and \( B \) are \( A(0, 6) \) and \( B(-2, 4) \). What are the coordinates of vertex \( C \)? Explain your reasoning.

6. A college club wants to set up a booth to attract more members. They want to put the booth at a spot that is equidistant from three important buildings on campus. Without measuring, decide which spot, \( A \) or \( B \), is the correct location for the booth. Explain your reasoning.

7. Contestants on a television game show must run to a well (point \( W \)), fill a bucket with water, empty it at either point \( A \) or \( B \), and then run back to the starting point (point \( P \)). To run the shortest distance possible, which point should contestants choose, \( A \) or \( B \)? Explain your reasoning.

8. How is the area of the triangle formed by the midsegments of a triangle related to the area of the original triangle? Use an example to justify your answer.

9. You are bending an 18 inch wire to form an isosceles triangle. Describe the possible lengths of the base if the vertex angle is larger than 60°. Explain your reasoning.
MULTIPLE CHOICE

10. If \(\triangle ABC\) is obtuse, which statement is always true about its circumcenter \(P\)?
   \(\textbf{A}\) \(P\) is equidistant from \(AB, BC,\) and \(AC\).
   \(\textbf{B}\) \(P\) is inside \(\triangle ABC\).
   \(\textbf{C}\) \(P\) is on \(\triangle ABC\).
   \(\textbf{D}\) \(P\) is outside \(\triangle ABC\).

11. Which conclusion about the value of \(x\) can be made from the diagram?
   \(\textbf{A}\) \(x < 8\)
   \(\textbf{B}\) \(x = 8\)
   \(\textbf{C}\) \(x > 8\)
   \(\textbf{D}\) No conclusion can be made.

EXTENDED RESPONSE

14. A new sport is to be played on the triangular playing field shown with a basket located at a point that is equidistant from each side line.
   a. Copy the diagram and show how to find the location of the basket. Describe your method.
   b. What theorem can you use to verify that the location you chose in part (a) is correct? Explain.

15. A segment has endpoints \(A(8, -1)\) and \(B(6, 3)\).
   a. Graph \(AB\). Then find the midpoint \(C\) of \(AB\) and the slope of \(AB\).
   b. Use what you know about slopes of perpendicular lines to find the slope of the perpendicular bisector of \(AB\). Then sketch the perpendicular bisector of \(AB\) and write an equation of the line. Explain your steps.
   c. Find a point \(D\) that is a solution to the equation you wrote in part (b). Find \(AD\) and \(BD\). What do you notice? What theorem does this illustrate?

16. The coordinates of \(\triangle JKL\) are \(J(-2, 2), K(4, 8),\) and \(L(10, -4)\).
   a. Find the coordinates of the centroid \(M\). Show your steps.
   b. Find the mean of the \(x\)-coordinates of the three vertices and the mean of the \(y\)-coordinates of the three vertices. Compare these results with the coordinates of the centroid. What do you notice?
   c. Is the relationship in part (b) true for \(\triangle JKP\) with \(P(1, -1)\)? Explain.
In previous courses and in Chapters 1–5, you learned the following skills, which you’ll use in Chapter 6: using properties of parallel lines, using properties of triangles, simplifying expressions, and finding perimeter.

**Prerequisite Skills**

**VOCABULARY CHECK**

1. The alternate interior angles formed when a transversal intersects two __?__ lines are congruent.

2. Two triangles are congruent if and only if their corresponding parts are __?__.

**SKILLS AND ALGEBRA CHECK**

Simplify the expression. *(Review pp. 870, 874 for 6.1.)*

3. \( \frac{9 \cdot 20}{15} \)  
4. \( \frac{15}{25} \)  
5. \( \frac{3 + 4 + 5}{6 + 8 + 10} \)  
6. \( \sqrt{5 \cdot 7} \)

Find the perimeter of the rectangle with the given dimensions. *(Review p. 49 for 6.1, 6.2.)*

7. \( l = 5 \text{ in.}, w = 12 \text{ in.} \)  
8. \( l = 30 \text{ ft}, w = 10 \text{ ft} \)  
9. \( A = 56 \text{ m}^2, l = 8 \text{ m} \)

10. Find the slope of a line parallel to the line whose equation is \( y - 4 = 7(x + 2) \). *(Review p. 171 for 6.5.)*
In Chapter 6, you will apply the big ideas listed below and reviewed in the Chapter Summary on page 417. You will also use the key vocabulary listed below.

**Big Ideas**

1. Using ratios and proportions to solve geometry problems
2. Showing that triangles are similar
3. Using indirect measurement and similarity

**Key Vocabulary**

- ratio, p. 356
- proportion, p. 358
- means, extremes
- geometric mean, p. 359
- scale drawing, p. 365
- scale, p. 365
- similar polygons, p. 372
- scale factor of two similar polygons, p. 373
- dilation, p. 409
- center of dilation, p. 409
- scale factor of a dilation, p. 409
- reduction, p. 409
- enlargement, p. 409

You can use similarity to measure lengths indirectly. For example, you can use similar triangles to find the height of a tree.

**Animated Geometry**

The animation illustrated below for Exercise 33 on page 394 helps you answer this question: What is the height of the tree?

Other animations for Chapter 6: pages 365, 375, 391, 407, and 414

Other animations for Chapter 1 appear on pages 7, 9, 14, 21, 37, and 50.
6.1 Ratios, Proportions, and the Geometric Mean

**Key Vocabulary**
- **ratio**
- **proportion**
- **means, extremes**
- **geometric mean**

If \(a\) and \(b\) are two numbers or quantities and \(b \neq 0\), then the ratio of \(a\) to \(b\) is \(\frac{a}{b}\). The ratio of \(a\) to \(b\) can also be written as \(a:b\).

For example, the ratio of a side length in \(\triangle ABC\) to a side length in \(\triangle DEF\) can be written as \(\frac{2}{1}\) or \(2:1\).

Ratios are usually expressed in simplest form. Two ratios that have the same simplified form are called equivalent ratios. The ratios \(7:14\) and \(1:2\) in the example below are equivalent.

**EXAMPLE 1** Simplify ratios

**Simplify the ratio.**

a. \(64 \text{ m} : 6 \text{ m}\)

b. \(\frac{5 \text{ ft}}{20 \text{ in.}}\)

**Solution**

a. Write \(64 \text{ m} : 6 \text{ m}\) as \(\frac{64 \text{ m}}{6 \text{ m}}\). Then divide out the units and simplify.

\[
\frac{64 \text{ m}}{6 \text{ m}} = \frac{32}{3} = 32 : 3
\]

b. To simplify a ratio with unlike units, multiply by a conversion factor.

\[
\frac{5 \text{ ft}}{20 \text{ in.}} = \frac{5 \text{ ft}}{20 \text{ in.}} \cdot \frac{12 \text{ in.}}{1 \text{ ft}} = \frac{60}{20} = 3
\]

**GUIDED PRACTICE** for Example 1

Simplify the ratio.

1. 24 yards to 3 yards
2. 150 cm : 6 m
**Example 2**  Use a ratio to find a dimension

**Painting** You are planning to paint a mural on a rectangular wall. You know that the perimeter of the wall is 484 feet and that the ratio of its length to its width is 9:2. Find the area of the wall.

**Solution**

**Step 1** Write expressions for the length and width. Because the ratio of length to width is 9:2, you can represent the length by 9x and the width by 2x.

**Step 2** Solve an equation to find x.

\[2l + 2w = P\]  \[2(9x) + 2(2x) = 484\]  \[22x = 484\]  \[x = 22\]

**Step 3** Evaluate the expressions for the length and width. Substitute the value of x into each expression.

Length = 9x = 9(22) = 198  Width = 2x = 2(22) = 44

The wall is 198 feet long and 44 feet wide, so its area is 198 ft \(\times\) 44 ft = 8712 ft\(^2\).

**Example 3**  Use extended ratios

**Algebra** The measures of the angles in \(\triangle CDE\) are in the extended ratio of 1:2:3. Find the measures of the angles.

**Solution**

Begin by sketching the triangle. Then use the extended ratio of 1:2:3 to label the measures as \(x^\circ\), 2\(x^\circ\), and 3\(x^\circ\).

\[x^\circ + 2x^\circ + 3x^\circ = 180^\circ\]  \[\text{Triangle Sum Theorem}\]

\[6x = 180\]  \[\text{Combine like terms.}\]

\[x = 30\]  \[\text{Divide each side by 6.}\]

The angle measures are 30\(^\circ\), 2(30\(^\circ\)) = 60\(^\circ\), and 3(30\(^\circ\)) = 90\(^\circ\).

**Guided Practice** for Examples 2 and 3

3. The perimeter of a room is 48 feet and the ratio of its length to its width is 7:5. Find the length and width of the room.

4. A triangle’s angle measures are in the extended ratio of 1:3:5. Find the measures of the angles.
**Example 4** Solve proportions

**ALGEBRA** Solve the proportion.

- **a.** \( \frac{5}{10} = \frac{x}{16} \)
- **b.** \( \frac{1}{y + 1} = \frac{2}{3y} \)

**Solution**

- **a.** \( \frac{5}{10} = \frac{x}{16} \)
  - Write original proportion.
  - \( 5 \cdot 16 = 10 \cdot x \)
  - Cross Products Property
  - \( 80 = 10x \)
  - Multiply.
  - \( 8 = x \)
  - Divide each side by 10.

- **b.** \( \frac{1}{y + 1} = \frac{2}{3y} \)
  - Write original proportion.
  - \( 1 \cdot 3y = 2(y + 1) \)
  - Cross Products Property
  - \( 3y = 2y + 2 \)
  - Distributive Property
  - \( y = 2 \)
  - Subtract 2y from each side.

**GUIDED PRACTICE** for Example 4

Solve the proportion.

- **5.** \( \frac{2}{x} = \frac{5}{8} \)
- **6.** \( \frac{1}{x - 3} = \frac{4}{3x} \)
- **7.** \( \frac{y - 3}{7} = \frac{y}{14} \)
EXAMPLE 5  Solve a real-world problem

SCIENCE  As part of an environmental study, you need to estimate the number of trees in a 150 acre area. You count 270 trees in a 2 acre area and you notice that the trees seem to be evenly distributed. Estimate the total number of trees.

Solution

Write and solve a proportion involving two ratios that compare the number of trees with the area of the land.

\[
\frac{270}{2} = \frac{n}{150} \quad \text{number of trees} \quad \text{area in acres}
\]

Write proportion.

\[
270 \cdot 150 = 2 \cdot n
\]

Cross Products Property

\[
20,250 = n
\]

Simplify.

There are about 20,250 trees in the 150 acre area.

EXAMPLE 6  Find a geometric mean

Find the geometric mean of 24 and 48.

Solution

\[
x = \sqrt{ab}
\]

Definition of geometric mean

\[
x = \sqrt{24 \cdot 48}
\]

Substitute 24 for \(a\) and 48 for \(b\).

\[
x = \sqrt{24 \cdot 24 \cdot 2}
\]

Factor.

\[
x = 24\sqrt{2}
\]

Simplify.

The geometric mean of 24 and 48 is \(24\sqrt{2} \approx 33.9\).

KEY CONCEPT

Geometric Mean

The geometric mean of two positive numbers \(a\) and \(b\) is the positive number \(x\) that satisfies \(\frac{a}{x} = \frac{x}{b}\). So, \(x^2 = ab\) and \(x = \sqrt{ab}\).

GUIDED PRACTICE  for Examples 5 and 6

8. **WHAT IF?** In Example 5, suppose you count 390 trees in a 3 acre area of the 150 acre area. Make a new estimate of the total number of trees.

Find the geometric mean of the two numbers.

9. 12 and 27  
10. 18 and 54  
11. 16 and 18
**1. VOCABULARY** Copy the proportion \( \frac{m}{n} = \frac{p}{q} \). Identify the means of the proportion and the extremes of the proportion.

**2. ★ WRITING** Write three ratios that are equivalent to the ratio 3 : 4. Explain how you found the ratios.

**SIMPLIFYING RATIOS** Simplify the ratio.

3. \( \frac{20}{5} \)
4. \( \frac{15 \text{ cm}^2}{12 \text{ cm}^2} \)
5. \( \frac{1 \text{ L}}{10 \text{ mL}} \)
6. \( \frac{1 \text{ mi}}{20 \text{ ft}} \)
7. \( \frac{7 \text{ ft}}{12 \text{ in.}} \)
8. \( \frac{80 \text{ cm}}{2 \text{ m}} \)
9. \( \frac{3 \text{ lb}}{10 \text{ oz}} \)
10. \( \frac{2 \text{ gallons}}{18 \text{ quarts}} \)

**WRITING RATIOS** Find the ratio of the width to the length of the rectangle. Then simplify the ratio.

11. \( \frac{5 \text{ in.}}{15 \text{ in.}} \)
12. \( \frac{18 \text{ cm}}{16 \text{ cm}} \)
13. \( \frac{10 \text{ m}}{320 \text{ cm}} \)

**FINDING RATIOS** Use the number line to find the ratio of the distances.

14. \( \frac{AD}{CF} \)
15. \( \frac{BD}{AB} \)
16. \( \frac{CE}{EF} \)
17. \( \frac{BE}{CE} \)

18. **PERIMETER** The perimeter of a rectangle is 154 feet. The ratio of the length to the width is 10 : 1. Find the length and the width.

19. **SEGMENT LENGTHS** In the diagram, \( AB:BC \) is 2 : 7 and \( AC = 36 \). Find \( AB \) and \( BC \).

20. 3 : 5 : 10
21. 2 : 7 : 9
22. 11 : 12 : 13

**USING EXTENDED RATIOS** The measures of the angles of a triangle are in the extended ratio given. Find the measures of the angles of the triangle.

23. 3 : 5 : 10
24. \( \frac{y}{20} = \frac{3}{10} \)
25. \( \frac{2}{7} = \frac{12}{z} \)
26. \( \frac{j + 1}{5} = \frac{4}{10} \)
27. \( \frac{1}{c + 5} = \frac{3}{24} \)
28. \( \frac{4}{a - 3} = \frac{2}{5} \)
29. \( \frac{1 + 3b}{4} = \frac{5}{2} \)
30. \( \frac{3}{2p + 5} = \frac{1}{9p} \)

**ALGEBRA** Solve the proportion.
GEOMETRIC MEAN  Find the geometric mean of the two numbers.

31. 2 and 18  
32. 4 and 25  
33. 32 and 8  
34. 4 and 16  
35. 2 and 25  
36. 6 and 20

37. ERROR ANALYSIS  A student incorrectly simplified the ratio. Describe and correct the student’s error.

WRITING RATIOS  Let \( x = 10, y = 3, \) and \( z = 8. \) Write the ratio in simplest form.

38. \( x:z \)  
39. \( \frac{8y}{y} \)  
40. \( \frac{4}{2x + 2z} \)  
41. \( \frac{2x - z}{3y} \)

ALGEBRA  Solve the proportion.

42. \( \frac{2x + 5}{3} = \frac{x - 5}{4} \)  
43. \( \frac{2 - s}{3} = \frac{2s + 1}{5} \)  
44. \( \frac{15}{m} = \frac{m}{5} \)  
45. \( \frac{7}{q + 1} = \frac{q - 1}{5} \)

46. ANGLE MEASURES  The ratio of the measures of two supplementary angles is 5:3. Find the measures of the angles.

47. ★ SHORT RESPONSE  The ratio of the measure of an exterior angle of a triangle to the measure of the adjacent interior angle is 1:4. Is the triangle acute or obtuse? Explain how you found your answer.

48. ★ SHORT RESPONSE  Without knowing its side lengths, can you determine the ratio of the perimeter of a square to the length of one of its sides? Explain.

ALGEBRA  In Exercises 49–51, the ratio of two side lengths for the triangle is given. Solve for the variable.

49. \( AB:BC \) is 3:8.  
50. \( AB:BC \) is 3:4.  
51. \( AB:BC \) is 5:9.

52. ★ MULTIPLE CHOICE  What is a value of \( x \) that makes \( \frac{x}{3} = \frac{4x}{x + 3} \) true?

   A 3  
   B 4  
   C 9  
   D 12

53. AREA  The area of a rectangle is 4320 square inches. The ratio of the width to the length is 5:6. Find the length and the width.

54. COORDINATE GEOMETRY  The points \((-3, 2), (1, 1), \) and \((x, 0)\) are collinear. Use slopes to write a proportion to find the value of \( x \).

55. ✪ ALGEBRA  Use the proportions \( \frac{a + b}{2a - b} = \frac{5}{4} \) and \( \frac{b}{a + 9} = \frac{5}{9} \) to find \( a \) and \( b \).

56. CHALLENGE  Find the ratio of \( x \) to \( y \) given that \( \frac{5}{y} + \frac{7}{x} = 24 \) and \( \frac{12}{y} + \frac{2}{x} = 24 \).
57. **TILING** The perimeter of a room is 66 feet. The ratio of its length to its width is 6 : 5. You want to tile the floor with 12 inch square tiles. Find the length and width of the room, and the area of the floor. How many tiles will you need? The tiles cost $1.98 each. What is the total cost to tile the floor?

58. **GEARS** The gear ratio of two gears is the ratio of the number of teeth of the larger gear to the number of teeth of the smaller gear. In a set of three gears, the ratio of Gear A to Gear B is equal to the ratio of Gear B to Gear C. Gear A has 36 teeth and Gear C has 16 teeth. How many teeth does Gear B have?

59. **TRAIL MIX** You need to make 36 one-half cup bags of trail mix for a class trip. The recipe calls for peanuts, chocolate chips, and raisins in the extended ratio 5 : 1 : 4. How many cups of each item do you need?

60. **PAPER SIZES** International standard paper sizes are commonly used all over the world. The various sizes all have the same width-to-length ratios. Two sizes of paper are shown, called A3 and A2. The distance labeled $x$ is the geometric mean of 297 mm and 594 mm. Find the value of $x$.

61. **BATTING AVERAGE** The batting average of a baseball player is the ratio of the number of hits to the number of official at-bats. In 2004, Johnny Damon of the Boston Red Sox had 621 official at-bats and a batting average of 0.304. Use the proportion to find the number of hits made by Johnny Damon.

$$\frac{\text{Number of hits}}{\text{Number of at-bats}} = \frac{\text{Batting average}}{1.000}$$

62. **MULTI-STEP PROBLEM** The population of Red-tailed hawks is increasing in many areas of the United States. One long-term survey of bird populations suggests that the Red-tailed hawk population is increasing nationally by 2.7% each year.

**a.** Write 2.7% as a ratio of hawks in year $n$ to hawks in year $(n - 1)$.

**b.** In 2004, observers in Corpus Christi, TX, spotted 180 migrating Red-tailed hawks. Assuming this population follows the national trend, about how many Red-tailed hawks can they expect to see in 2005?

**c.** Observers in Lipan Point, AZ, spotted 951 migrating Red-tailed hawks in 2004. Assuming this population follows the national trend, about how many Red-tailed hawks can they expect to see in 2006?
63. ★ SHORT RESPONSE  Some common computer screen resolutions are 1024:768, 800:600, and 640:480. Explain why these ratios are equivalent.

64. BIOLOGY  The larvae of the Mother-of-Pearl moth is the fastest moving caterpillar. It can run at a speed of 15 inches per second. When threatened, it can curl itself up and roll away 40 times faster than it can run. How fast can it run in miles per hour? How fast can it roll?

65. CURRENCY EXCHANGE  Emily took 500 U.S. dollars to the bank to exchange for Canadian dollars. The exchange rate on that day was 1.2 Canadian dollars per U.S. dollar. How many Canadian dollars did she get in exchange for the 500 U.S. dollars?

66. MULTIPLE REPRESENTATIONS  Let \( x \) and \( y \) be two positive numbers whose geometric mean is 6.
   a. Making a Table  Make a table of ordered pairs \((x, y)\) such that \(\sqrt{xy} = 6\).
   b. Drawing a Graph  Use the ordered pairs to make a scatter plot.
      Connect the points with a smooth curve.
   c. Analyzing Data  Is the data linear? Why or why not?

67. ALGEBRA  Use algebra to verify Property 1, the Cross Products Property.

68. ALGEBRA  Show that the geometric mean of two numbers is equal to the arithmetic mean (or average) of the two numbers only when the numbers are equal. (Hint: Solve \(\sqrt{xy} = \frac{x + y}{2}\) with \(x, y \geq 0\).)

CHALLENGE  In Exercises 69–71, use the given information to find the value(s) of \(x\). Assume that the given quantities are nonnegative.

69. The geometric mean of the quantities \(\sqrt{x}\) and \(3\sqrt{x}\) is \((x - 6)\).
70. The geometric mean of the quantities \((x + 1)\) and \((2x + 3)\) is \((x + 3)\).
71. The geometric mean of the quantities \((2x + 1)\) and \((6x + 1)\) is \((4x - 1)\).

---

**Mixed Review**

**Find the reciprocal.** (p. 869)

72. \(-6\)  
73. \(\frac{1}{13}\)  
74. \(-\frac{36}{3}\)  
75. \(-0.2\)

**Solve the quadratic equation.** (p. 882)

76. \(5x^2 = 35\)  
77. \(x^2 - 20 = 29\)  
78. \((x - 3)(x + 3) = 27\)

**Write the equation of the line with the given description.** (p. 180)

79. Parallel to \(y = 3x - 7\), passing through \((1, 2)\)
80. Perpendicular to \(y = \frac{1}{4}x + 5\), passing through \((0, 24)\)
6.2 Use Proportions to Solve Geometry Problems

**Before**
You wrote and solved proportions.

**Now**
You will use proportions to solve geometry problems.

**Why?**
So you can calculate building dimensions, as in Ex. 22.

**Key Vocabulary**
- scale drawing
- scale

In Lesson 6.1, you learned to use the Cross Products Property to write equations that are equivalent to a given proportion. Three more ways to do this are given by the properties below.

**KEY CONCEPT**

<table>
<thead>
<tr>
<th>Additional Properties of Proportions</th>
<th>For Your Notebook</th>
</tr>
</thead>
<tbody>
<tr>
<td>2. Reciprocal Property</td>
<td>If ( \frac{a}{b} = \frac{c}{d} ), then ( \frac{b}{a} = \frac{d}{c} ).</td>
</tr>
<tr>
<td>3. If you interchange the means of a proportion, then you form another true proportion.</td>
<td>If ( \frac{a}{b} = \frac{c}{d} ), then ( \frac{a}{c} = \frac{b}{d} ).</td>
</tr>
<tr>
<td>4. In a proportion, if you add the value of each ratio’s denominator to its numerator, then you form another true proportion.</td>
<td>If ( \frac{a}{b} ), then ( \frac{a + b}{b} = \frac{c + d}{d} ).</td>
</tr>
</tbody>
</table>

**EXAMPLE 1** Use properties of proportions

In the diagram, \( \frac{MN}{RS} = \frac{NP}{ST} \).

Write four true proportions.

**Solution**

Because \( \frac{MN}{RS} = \frac{NP}{ST} \), then \( \frac{8}{10} = \frac{4}{x} \).

By the Reciprocal Property, the reciprocals are equal, so \( \frac{8}{10} = \frac{x}{4} \).

By Property 3, you can interchange the means, so \( \frac{8}{4} = \frac{10}{x} \).

By Property 4, you can add the denominators to the numerators, so \( \frac{8 + 10}{10} = \frac{4 + x}{x} \), or \( \frac{18}{10} = \frac{4 + x}{x} \).
6.2 Use Proportions to Solve Geometry Problems

**Example 3** Find the scale of a drawing

**BLUEPRINTS** The blueprint shows a scale drawing of a cell phone. The length of the antenna on the blueprint is 5 centimeters. The actual length of the antenna is 2 centimeters. What is the scale of the blueprint?

**Solution**

To find the scale, write the ratio of a length in the drawing to an actual length, then rewrite the ratio so that the denominator is 1.

\[
\frac{\text{length on blueprint}}{\text{length of antenna}} = \frac{5 \text{ cm}}{2 \text{ cm}} = \frac{5}{2} = 2.5
\]

\[
\text{The scale of the blueprint is } 2.5 \text{ cm} : 1 \text{ cm}.
\]

**Example 2** Use proportions with geometric figures

**ALGEBRA** In the diagram, \( \frac{BD}{DA} = \frac{BE}{EC} \).

Find \( BA \) and \( BD \).

**Solution**

\[
\frac{BD}{DA} = \frac{BE}{EC} \quad \text{Given}
\]

\[
\frac{BD + DA}{DA} = \frac{BE + EC}{EC} \quad \text{Property of Proportions (Property 4)}
\]

\[
\frac{x}{3} = \frac{18 + 6}{6} \quad \text{Substitution Property of Equality}
\]

\[
6x = 3(18 + 6) \quad \text{Cross Products Property}
\]

\[
x = 12 \quad \text{Solve for } x.
\]

So, \( BA = 12 \) and \( BD = 12 - 3 = 9 \).

**GUIDED PRACTICE** for Examples 1, 2, and 3

1. In Example 1, find the value of \( x \).

2. In Example 2, \( \frac{DE}{AC} = \frac{BE}{BC} \). Find \( AC \).

3. **WHAT IF?** In Example 3, suppose the length of the antenna on the blueprint is 10 centimeters. Find the new scale of the blueprint.
**Example 4**  
**Use a scale drawing**

**MAPS**  The scale of the map at the right is 1 inch : 26 miles. Find the actual distance from Pocahontas to Algona.

**Solution**

Use a ruler. The distance from Pocahontas to Algona on the map is about 1.25 inches.

Let \( x \) be the actual distance in miles.

\[
\frac{1.25 \text{ in.}}{x \text{ mi}} = \frac{1 \text{ in.}}{26 \text{ mi}}
\]

\[
x = \frac{1.25(26)}{1} \quad \text{Cross Products Property}
\]

\[
x = 32.5 \quad \text{Simplify.}
\]

The actual distance from Pocahontas to Algona is about 32.5 miles.

**Example 5**  
**Solve a multi-step problem**

**SCALE MODEL**  You buy a 3-D scale model of the Reunion Tower in Dallas, TX. The actual building is 560 feet tall. Your model is 10 inches tall, and the diameter of the dome on your scale model is about 2.1 inches.

a. What is the diameter of the actual dome?

b. About how many times as tall as your model is the actual building?

**Solution**

a. \[
\frac{10 \text{ in.}}{560 \text{ ft}} = \frac{2.1 \text{ in.}}{x \text{ ft}} \quad \text{measurement on model} \quad \text{measurement on actual building}
\]

\[
10x = 1176 \quad \text{Cross Products Property}
\]

\[
x = 117.6 \quad \text{Solve for } x.
\]

The diameter of the actual dome is about 118 feet.

b. To simplify a ratio with unlike units, multiply by a conversion factor.

\[
\frac{560 \text{ ft}}{10 \text{ in.}} = \frac{560 \text{ ft}}{10 \text{ in.}} \cdot \frac{12 \text{ in.}}{1 \text{ ft}} = 672
\]

The actual building is 672 times as tall as the model.

**Guided Practice** for Examples 4 and 5

4. Two cities are 96 miles from each other. The cities are 4 inches apart on a map. Find the scale of the map.

5. **What If?** Your friend has a model of the Reunion Tower that is 14 inches tall. What is the diameter of the dome on your friend’s model?
6.2 EXERCISES

1. **VOCABULARY** Copy and complete: A _?_ is a drawing that has the same shape as the object it represents.

2. ★ **WRITING** Suppose the scale of a model of the Eiffel Tower is 1 inch: 20 feet. _Explain_ how to determine how many times taller the actual tower is than the model.

**REASONING** Copy and complete the statement.

3. If \( \frac{8}{x} = \frac{3}{y} \), then \( \frac{8}{3} = ? \).

4. If \( \frac{x}{9} = \frac{y}{20} \), then \( \frac{x}{y} = ? \).

5. If \( \frac{x}{6} = \frac{y}{15} \), then \( \frac{x}{6} = ? \).

6. If \( \frac{14}{3} = \frac{x}{y} \), then \( \frac{17}{3} = ? \).

**REASONING** Decide whether the statement is _true_ or _false_.

7. If \( \frac{8}{m} = \frac{n}{9} \), then \( \frac{8 + m}{m} = \frac{n + 9}{9} \).

8. If \( \frac{5}{7} = \frac{a}{b} \), then \( \frac{7}{5} = \frac{a}{b} \).

9. If \( \frac{d}{2} = \frac{g + 10}{11} \), then \( \frac{d}{g + 10} = \frac{2}{11} \).

10. If \( \frac{4 + x}{4} = \frac{3 + y}{y} \), then \( \frac{x}{4} = \frac{3}{y} \).

**PROPERTIES OF PROPORTIONS** Use the diagram and the given information to find the unknown length.

11. Given \( \frac{CB}{BA} = \frac{DE}{EF} \) find BA.

12. Given \( \frac{XW}{XV} = \frac{YW}{ZV} \) find ZV.

**SCALE DIAGRAMS** In Exercises 13 and 14, use the diagram of the field hockey field in which 1 inch = 50 yards. Use a ruler to approximate the dimension.

13. Find the actual length of the field.

14. Find the actual width of the field.

15. **ERROR ANALYSIS** _Describe_ and correct the error made in the reasoning.

If \( \frac{a}{3} = \frac{c}{4} \), then \( \frac{a + 3}{3} = \frac{c + 3}{4} \).
PROPERTIES OF PROPORTIONS Use the diagram and the given information to find the unknown length.

16. Given $\frac{CA}{CB} = \frac{AE}{BD}$, find $BD$.

17. Given $\frac{SQ}{SR} = \frac{TV}{TU}$, find $RQ$.

18. ★ MULTIPLE CHOICE If $x$, $y$, $z$, and $q$ are four different numbers, and the proportion $\frac{x}{y} = \frac{z}{q}$ is true, which of the following is false?

A $\frac{y}{x} = \frac{q}{z}$  B $\frac{x}{z} = \frac{y}{q}$  C $\frac{y}{x} = \frac{z}{q}$  D $\frac{x+y}{y} = \frac{z+q}{q}$

CHALLENGE Two number patterns are proportional if there is a nonzero number $k$ such that $(a_1, b_1, c_1, \ldots) = k(a_2, b_2, c_2, \ldots) = ka_2, kb_2, kc_2, \ldots$.

19. Given the relationship $(8, 16, 20) = k(2, 4, 5)$, find $k$.

20. Given that $a_1 = ka_2$, $b_1 = kb_2$, and $c_1 = kc_2$, show that $\frac{a_1}{a_2} = \frac{b_1}{b_2} = \frac{c_1}{c_2}$.

21. Given that $a_1 = ka_2$, $b_1 = kb_2$, and $c_1 = kc_2$, show that $\frac{a_1+b_1+c_1}{a_2+b_2+c_2} = k$.

PROBLEM SOLVING

22. ARCHITECTURE A basket manufacturer has headquarters in an office building that has the same shape as a basket they sell.

a. The bottom of the basket is a rectangle with length 15 inches and width 10 inches. The base of the building is a rectangle with length 192 feet. What is the width of the base of the building?

b. About how many times as long as the bottom of the basket is the base of the building?

23. MAP SCALE A street on a map is 3 inches long. The actual street is 1 mile long. Find the scale of the map.

24. ★ MULTIPLE CHOICE A model train engine is 12 centimeters long. The actual engine is 18 meters long. What is the scale of the model?

A 3 cm:2 m  B 1 cm:1.5 m  C 1 cm:3 m  D 200 cm:3 m
MAP READING  The map of a hiking trail has a scale of 1 inch : 3.2 miles. Use a ruler to approximate the actual distance between the two shelters.

25. Meadow View and Whispering Pines  
26. Whispering Pines and Blueberry Hill

27. **POLLEN**  The photograph shows a particle of goldenrod pollen that has been magnified under a microscope. The scale of the photograph is 900 : 1. Use a ruler to estimate the width in millimeters of the particle.

RAMP DESIGN  Assume that the wheelchair ramps described each have a slope of \( \frac{1}{12} \), which is the maximum slope recommended for a wheelchair ramp.

28. A wheelchair ramp has a 21 foot run. What is its rise?
29. A wheelchair ramp rises 4 feet. What is its run?

30. **STATISTICS**  Researchers asked 4887 people to pick a number between 1 and 10. The results are shown in the table below.

<table>
<thead>
<tr>
<th>Answer</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>Percent</td>
<td>4.2%</td>
<td>5.1%</td>
<td>11.4%</td>
<td>10.5%</td>
<td>10.7%</td>
</tr>
<tr>
<td>Answer</td>
<td>6</td>
<td>7</td>
<td>8</td>
<td>9</td>
<td>10</td>
</tr>
<tr>
<td>Percent</td>
<td>10.0%</td>
<td>27.2%</td>
<td>8.8%</td>
<td>6.0%</td>
<td>6.1%</td>
</tr>
</tbody>
</table>

a. Estimate the number of people who picked the number 3.
b. You ask a participant what number she picked. Is the participant more likely to answer 6 or 7? **Explain**.
c. Conduct this experiment with your classmates. Make a table in which you compare the new percentages with the ones given in the original survey. Why might they be different?

31. **ALGEBRA**  Use algebra to verify the property of proportions.

**PROPERTY**
- Property 2
- Property 3
- Property 4
**REASONING** Use algebra to explain why the property of proportions is true.

34. If \( \frac{a - b}{a + b} = \frac{c - d}{c + d} \), then \( \frac{a}{b} = \frac{c}{d} \)

35. If \( \frac{a + c}{b + d} = \frac{a - c}{b - d} \), then \( \frac{a}{b} = \frac{c}{d} \)

36. If \( \frac{a}{b} = \frac{c}{d} \), then \( \frac{a + c}{b + d} = \frac{a}{b} \) (Hint: Let \( \frac{a}{b} = r \)).

37. **CHALLENGE** When fruit is dehydrated, water is removed from the fruit. The water content in fresh apricots is about 86%. In dehydrated apricots, the water content is about 75%. Suppose 5 kilograms of raw apricots are dehydrated. How many kilograms of water are removed from the fruit? What is the approximate weight of the dehydrated apricots?

**Mixed Review**

38. Over the weekend, Claudia drove a total of 405 miles, driving twice as far on Saturday as on Sunday. How far did Claudia travel each day? (p. 65)

Identify all pairs of congruent corresponding parts. Then write another congruence statement for the figures. (p. 225)

39. \( \triangle XYZ \cong \triangle LMN \)

40. \( \triangle DEFG \cong \triangle QRST \)

**QUIZ for Lessons 6.1–6.2**

Solve the proportion. (p. 356)

1. \( \frac{10}{y} = \frac{5}{2} \)

2. \( \frac{x}{6} = \frac{9}{3} \)

3. \( \frac{1}{a + 3} = \frac{4}{16} \)

4. \( \frac{6}{d - 6} = \frac{4}{8} \)

Copy and complete the statement. (p. 364)

5. If \( \frac{9}{x} = \frac{5}{2} \), then \( \frac{9}{5} = \frac{?}{2} \).

6. If \( \frac{x}{15} = \frac{y}{21} \), then \( \frac{x}{y} = \frac{?}{?} \).

7. If \( \frac{x}{8} = \frac{y}{12} \), then \( \frac{x + 8}{y} = \frac{?}{?} \).

8. If \( \frac{32}{5} = \frac{x}{y} \), then \( \frac{37}{5} = \frac{?}{?} \).

9. In the diagram, \( AD = 10 \), \( B \) is the midpoint of \( AD \), and \( AC \) is the geometric mean of \( AB \) and \( AD \). Find \( AC \). (p. 364)
6.3 Similar Polygons

**MATERIALS**
- metric ruler
- protractor

**QUESTION**
When a figure is reduced, how are the corresponding angles related? How are the corresponding lengths related?

**EXPLORE**
Compare measures of lengths and angles in two photos

**STEP 1** **Measure segments**
Photo 2 is a reduction of Photo 1. In each photo, find \( AB \) to the nearest millimeter. Write the ratio of the length of \( AB \) in Photo 1 to the length of \( AB \) in Photo 2.

**STEP 2** **Measure angles**
Use a protractor to find the measure of \( \angle 1 \) in each photo. Write the ratio of \( m\angle 1 \) in Photo 1 to \( m\angle 1 \) in Photo 2.

**STEP 3** **Find measurements**
Copy and complete the table. Use the same units for each measurement. Record your results in a table.

<table>
<thead>
<tr>

</tbody>
</table>

**DRAW CONCLUSIONS**
Use your observations to complete these exercises

1. Make a conjecture about the relationship between corresponding lengths when a figure is reduced.
2. Make a conjecture about the relationship between corresponding angles when a figure is reduced.
3. Suppose the measure of an angle in Photo 2 is 35°. What is the measure of the corresponding angle in Photo 1?
4. Suppose a segment in Photo 2 is 1 centimeters long. What is the measure of the corresponding segment in Photo 1?
5. Suppose a segment in Photo 1 is 5 centimeters long. What is the measure of the corresponding segment in Photo 2?
6.3 Use Similar Polygons

**Key Vocabulary**
- similar polygons
- scale factor

Two polygons are **similar polygons** if corresponding angles are congruent and corresponding side lengths are proportional.

In the diagram below, $ABCD$ is similar to $EFGH$. You can write “$ABCD$ is similar to $EFGH$” as $ABCD \sim EFGH$. Notice in the similarity statement that the corresponding vertices are listed in the same order.

**Corresponding angles**

$\angle A \cong \angle E$, $\angle B \cong \angle F$, $\angle C \cong \angle G$, and $\angle D \cong \angle H$

**Ratios of corresponding sides**

$$\frac{AB}{EF} = \frac{BC}{FG} = \frac{CD}{GH} = \frac{DA}{HE}$$

**Example 1 Use similarity statements**

In the diagram, $\triangle RST \sim \triangle XYZ$.

a. List all pairs of congruent angles.

b. Check that the ratios of corresponding side lengths are equal.

c. Write the ratios of the corresponding side lengths in a statement of proportionality.

**Solution**

a. $\angle R \cong \angle X$, $\angle S \cong \angle Y$, and $\angle T \cong \angle Z$.

b. $\frac{RS}{XY} = \frac{20}{12} = \frac{5}{3}$, $\frac{ST}{YZ} = \frac{30}{18} = \frac{5}{3}$, $\frac{TR}{ZX} = \frac{25}{15} = \frac{5}{3}$

c. Because the ratios in part (b) are equal, $\frac{RS}{XY} = \frac{ST}{YZ} = \frac{TR}{ZX}$

**Guided Practice** for Example 1

1. Given $\triangle JKL \sim \triangle PQR$, list all pairs of congruent angles. Write the ratios of the corresponding side lengths in a statement of proportionality.
**Scale Factor** If two polygons are similar, then the ratio of the lengths of two corresponding sides is called the **scale factor**. In Example 1, the common ratio of $\frac{5}{3}$ is the scale factor of $\triangle RST$ to $\triangle XYZ$.

**Example 2** Find the scale factor

Determine whether the polygons are similar. If they are, write a similarity statement and find the scale factor of $\triangle XYZ$ to $\triangle WZT$.

**Solution**

**Step 1** Identify pairs of congruent angles. From the diagram, you can see that $\angle Z \cong \angle F$, $\angle Y \cong \angle G$, and $\angle X \cong \angle H$. Angles $W$ and $J$ are right angles, so $\angle W \cong \angle J$. So, the corresponding angles are congruent.

**Step 2** Show that corresponding side lengths are proportional.

\[
\begin{align*}
\frac{ZY}{FG} &= \frac{25}{20} = \frac{5}{4} \\
\frac{YX}{GH} &= \frac{30}{24} = \frac{5}{4} \\
\frac{XW}{HJ} &= \frac{15}{12} = \frac{5}{4} \\
\frac{WZ}{JF} &= \frac{20}{16} = \frac{5}{4}
\end{align*}
\]

The ratios are equal, so the corresponding side lengths are proportional.

So $\triangle XYZ \sim \triangle WZT$. The scale factor of $\triangle XYZ$ to $\triangle WZT$ is $\frac{5}{4}$.

**Example 3** Use similar polygons

**Algebra** In the diagram, $\triangle DEF \sim \triangle MNP$. Find the value of $x$.

**Solution**

The triangles are similar, so the corresponding side lengths are proportional.

\[
\frac{MN}{DE} = \frac{NP}{EF}
\]

Write proportion.

\[
\frac{12}{9} = \frac{20}{x}
\]

Substitute.

\[
12x = 180
\]

Cross Products Property

\[
x = 15
\]

Solve for $x$.

**Guided Practice** for Examples 2 and 3

In the diagram, $\triangle ABCD \sim \triangle QRS$.

2. What is the scale factor of $\triangle QRS$ to $\triangle ABCD$?

3. Find the value of $x$. 
PERIMETERS  The ratios of lengths in similar polygons is the same as the scale factor. Theorem 6.1 shows this is true for the perimeters of the polygons.

**THEOREM**

**THEOREM 6.1 Perimeters of Similar Polygons**

If two polygons are similar, then the ratio of their perimeters is equal to the ratios of their corresponding side lengths.

If $KLMN \sim PQRS$, then

\[
\frac{KL}{PQ} = \frac{LM}{QR} = \frac{MN}{RS} = \frac{NK}{SP}.
\]

Proof: Ex. 38, p. 379

**EXAMPLE 4** Find perimeters of similar figures

**SWIMMING** A town is building a new swimming pool. An Olympic pool is rectangular with length 50 meters and width 25 meters. The new pool will be similar in shape, but only 40 meters long.

a. Find the scale factor of the new pool to an Olympic pool.

b. Find the perimeter of an Olympic pool and the new pool.

**Solution**

a. Because the new pool will be similar to an Olympic pool, the scale factor is the ratio of the lengths, \( \frac{40}{50} = \frac{4}{5} \).

b. The perimeter of an Olympic pool is \( 2(50) + 2(25) = 150 \) meters.

You can use Theorem 6.1 to find the perimeter \( x \) of the new pool.

\[
\frac{x}{150} = \frac{4}{5} \quad \text{Use Theorem 6.1 to write a proportion.}
\]

\[
x = 120 \quad \text{Multiply each side by 150 and simplify.}
\]

The perimeter of the new pool is 120 meters.

**ANOTHER WAY**

Another way to solve Example 4 is to write the scale factor as the decimal 0.8. Then, multiply the perimeter of the Olympic pool by the scale factor to get the perimeter of the new pool: 

\[
0.8(150) = 120.
\]

**GUIDED PRACTICE** for Example 4

In the diagram, $ABCDE \sim FGHJK$.

4. Find the scale factor of $FGHK$ to $ABCDE$.

5. Find the value of $x$.

6. Find the perimeter of $ABCDE$. 
**6.3 Use Similar Polygons**

**EXAMPLE 5** Use a scale factor

In the diagram, \( \triangle TPR \sim \triangle XPZ \).
Find the length of the altitude \( PS \).

**Solution**

First, find the scale factor of \( \triangle TPR \) to \( \triangle XPZ \).

\[
\frac{TR}{XZ} = \frac{6 + 6}{8 + 8} = \frac{12}{16} = \frac{3}{4}
\]

Because the ratio of the lengths of the altitudes in similar triangles is equal to the scale factor, you can write the following proportion.

\[
\frac{PS}{PY} = \frac{3}{4}
\]

Write proportion.

\[
PS = \frac{3}{4} \cdot 20 = \frac{3}{4} \cdot 20
\]

Substitute 20 for \( PY \).

\[
PS = 15
\]

Multiply each side by 20 and simplify.

\( \text{The length of the altitude } PS \text{ is } 15. \)

---

**GUIDED PRACTICE**

7. In the diagram, \( \triangle JKL \sim \triangle EFG \). Find the length of the median \( KM \).
1. **VOCABULARY** Copy and complete: Two polygons are similar if corresponding angles are \( ? \) and corresponding side lengths are \( ? \).

2. **★ WRITING** If two polygons are congruent, must they be similar? If two polygons are similar, must they be congruent? *Explain.*

**USING SIMILARITY** List all pairs of congruent angles for the figures. Then write the ratios of the corresponding sides in a statement of proportionality.

3. \( \triangle ABC \sim \triangle LMN \)
4. \( \triangle DEFG \sim \triangle PQRS \)
5. \( \triangle HJKL \sim \triangle WXYZ \)

6. **★ MULTIPLE CHOICE** Triangles \( \triangle ABC \) and \( \triangle DEF \) are similar. Which statement is *not* correct?

   A. \( \frac{BC}{EF} = \frac{BC}{EF} \)

   B. \( \frac{AB}{DE} = \frac{CA}{FD} \)

   C. \( \frac{CA}{FD} = \frac{BC}{EF} \)

   D. \( \frac{AB}{EF} = \frac{BC}{DE} \)

**DETERMINING SIMILARITY** Determine whether the polygons are similar. If they are, write a similarity statement and find the scale factor.

7. \( \triangle RST \sim \triangle UVW \)
8. \( \triangle CDE \sim \triangle XYZ \)

**USING SIMILAR POLYGONS** In the diagram, \( \triangle JKL \sim \triangle EFG \).

9. Find the scale factor of \( \triangle JKL \) to \( \triangle EFG \).
10. Find the values of \( x \), \( y \), and \( z \).
11. Find the perimeter of each polygon.

**EXAMPLE 4** on p. 374 for Exs. 11–13

**EXAMPLE 1** on p. 372 for Exs. 3–6

**EXAMPLES 2 and 3** on p. 373 for Exs. 7–10

12. **PERIMETER** Two similar FOR SALE signs have a scale factor of 5 : 3. The large sign's perimeter is 60 inches. Find the small sign's perimeter.

13. **ERROR ANALYSIS** The triangles are similar. *Describe* and correct the error in finding the perimeter of Triangle B.
Are the polygons always, sometimes, or never similar?

14. Two isosceles triangles
15. Two equilateral triangles
16. A right triangle and an isosceles triangle
17. A scalene triangle and an isosceles triangle

**SHORT RESPONSE** The scale factor of Figure A to Figure B is \(1:x\). What is the scale factor of Figure B to Figure A? Explain your reasoning.

**SIMILAR TRIANGLES** Identify the type of special segment shown in blue, and find the value of the variable.

19.

20.

**USING SCALE FACTOR** Triangles \(NPQ\) and \(RST\) are similar. The side lengths of \(\triangle NPQ\) are 6 inches, 8 inches, and 10 inches, and the length of an altitude is 4.8 inches. The shortest side of \(\triangle RST\) is 8 inches long.

21. Find the lengths of the other two sides of \(\triangle RST\).
22. Find the length of the corresponding altitude in \(\triangle RST\).

**USING SIMILAR TRIANGLES** In the diagram, \(\triangle ABC \sim \triangle DEF\).

23. Find the scale factor of \(\triangle ABC\) to \(\triangle DEF\).
24. Find the unknown side lengths in both triangles.
25. Find the length of the altitude shown in \(\triangle ABC\).
26. Find and compare the areas of both triangles.

27. **SHORT RESPONSE** Suppose you are told that \(\triangle PQR \sim \triangle XYZ\) and that the extended ratio of the angle measures in \(\triangle PQR\) is \(x:x + 30:3x\). Do you need to know anything about \(\triangle XYZ\) to be able to write its extended ratio of angle measures? Explain your reasoning.

28. **MULTIPLE CHOICE** The lengths of the legs of right triangle \(ABC\) are 3 feet and 4 feet. The shortest side of \(\triangle UVW\) is 4.5 feet and \(\triangle UVW \sim \triangle ABC\). How long is the hypotenuse of \(\triangle UVW\)?
   - A 1.5 ft
   - B 5 ft
   - C 6 ft
   - D 7.5 ft

29. **CHALLENGE** Copy the figure at the right and divide it into two similar figures.

31. **Tennis** In table tennis, the table is a rectangle 9 feet long and 5 feet wide. A tennis court is a rectangle 78 feet long and 36 feet wide. Are the two surfaces similar? Explain. If so, find the scale factor of the tennis court to the table.

32. **Digital Projector** You are preparing a computer presentation to be digitally projected onto the wall of your classroom. Your computer screen is 13.25 inches wide and 10.6 inches high. The projected image on the wall is 53 inches wide and 42.4 inches high. Are the two shapes similar? If so, find the scale factor of the computer screen to the projected image.

33. **Multiple Representations** Use the similar figures shown.

   The scale factor of Figure 1 to Figure 2 is 7:10.

   a. **Making a Table** Copy and complete the table.

<table>
<thead>
<tr>
<th></th>
<th>AB</th>
<th>BC</th>
<th>CD</th>
<th>DE</th>
<th>EA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Figure 1</td>
<td>3.5</td>
<td>?</td>
<td>?</td>
<td>?</td>
<td>?</td>
</tr>
<tr>
<td>Figure 2</td>
<td>5.0</td>
<td>4.0</td>
<td>6.0</td>
<td>8.0</td>
<td>3.0</td>
</tr>
</tbody>
</table>

   b. **Drawing a Graph** Graph the data in the table. Let $x$ represent the length of a side in Figure 1 and let $y$ represent the length of the corresponding side in Figure 2. Is the relationship linear?

   c. **Writing an Equation** Write an equation that relates $x$ and $y$. What is its slope? How is the slope related to the scale factor?

34. **Multi-Step Problem** During a total eclipse of the sun, the moon is directly in line with the sun and blocks the sun’s rays. The distance $ED$ between Earth and the moon is 240,000 miles, the distance $DA$ between Earth and the sun is 93,000,000 miles, and the radius $AB$ of the sun is 432,500 miles.

   a. Copy the diagram and label the known distances.

   b. In the diagram, $\triangle BDA \sim \triangle CDE$. Use this fact to explain a total eclipse of the sun.

   c. Estimate the radius $CE$ of the moon.
35. ★ SHORT RESPONSE A rectangular image is enlarged on each side by the same amount. The angles remain unchanged. Can the larger image be similar to the original? Explain your reasoning, and give an example to support your answer.

36. ★ SHORT RESPONSE How are the areas of similar rectangles related to the scale factor? Use examples to justify your reasoning.

37. ★ EXTENDED RESPONSE The equations of two lines in the coordinate plane are \( y = \frac{4}{3}x + 4 \) and \( y = \frac{4}{3}x - 8 \).
   a. Explain why the two lines are parallel.
   b. Show that \( \angle BOA \equiv \angle DOC \), \( \angle OBA \equiv \angle ODC \), and \( \angle BAO \equiv \angle DCO \).
   c. Find the coordinates of points \( A \), \( B \), \( C \), and \( D \). Find the lengths of the sides of \( \triangle AOB \) and \( \triangle COD \).
   d. Show that \( \triangle AOB \sim \triangle COD \).

38. PROVING THEOREM 6.1 Prove the Perimeters of Similar Polygons Theorem for similar rectangles. Include a diagram in your proof.

39. CHALLENGE In the diagram, \( PQRS \) is a square, and \( PLMS \sim LMRQ \). Find the exact value of \( x \). This value is called the golden ratio. Golden rectangles have their length and width in this ratio. Show that the similar rectangles in the diagram are golden rectangles.

MIXED REVIEW

PREVIEW
Prepare for Lesson 6.4 in Exs. 40–42.

Given \( A(1, 1) \), \( B(3, 2) \), \( C(2, 4) \), and \( D \left( 1, \frac{7}{2} \right) \), determine whether the following lines are parallel, perpendicular, or neither. (p. 171)

- 40. \( \overline{AB} \) and \( \overline{BC} \)
- 41. \( \overline{CD} \) and \( \overline{AD} \)
- 42. \( \overline{AB} \) and \( \overline{CD} \)

Find the measure of the exterior angle shown. (p. 217)

- 43. \( x^\circ \)
- 44. \( (2x + 20)^\circ \)
- 45. \( (3x + 8)^\circ \)

Copy and complete the statement with \( <, >, \) or \( = \). (p. 335)

- 46. \( RS \ ? \ TU \)
- 47. \( FG \ ? \ HD \)
- 48. \( WX \ ? \ YX \)

EXTRA PRACTICE for Lesson 6.3, p. 906  ONLINE QUIZ at classzone.com
Lessons 6.1–6.3

1. **MULTI-STEP PROBLEM** In the diagram, \( \triangle LMN \sim \triangle QRS \).

   ![Diagram of triangles LMN and QRS]

   a. Find the scale factor of \( \triangle LMN \) to \( \triangle QRS \). Then find the values of \( x \) and \( y \).
   b. Find the perimeters of \( \triangle LMN \) and \( \triangle QRS \).
   c. Find the areas of \( \triangle LMN \) and \( \triangle QRS \).
   d. Compare the ratio of the perimeters to the ratio of the areas of \( \triangle LMN \) to \( \triangle QRS \). What do you notice?

2. **GRIDDED ANSWER** In the diagram, \( AB : BC = 3 : 8 \). Find \( AC \).

   ![Diagram with points A, B, and C]

3. **OPEN-ENDED** \( \triangle UVW \) is a right triangle with side lengths of 3 cm, 4 cm, and 5 cm. Draw and label \( \triangle UVW \). Then draw a triangle similar to \( \triangle UVW \) and label its side lengths. What scale factor did you use?

4. **MULTI-STEP PROBLEM** Kelly is going on a trip to England. She takes 600 U.S. dollars with her.

   **One U.S. Dollar Buys**
   - **EURO** 8.81
   - **GREAT BRITAIN** 0.54
   - **CANADA** 1.24

   a. In England, she exchanges her U.S. dollars for British pounds. During her stay, Kelly spends 150 pounds. How many British pounds does she have left?
   b. When she returns home, she exchanges her money back to U.S. dollars. How many U.S. dollars does she have at the end of her trip?

5. **SHORT RESPONSE** Kelly bought a 3-D scale model of the Tower Bridge in London, England. The towers of the model are 9 inches tall. The towers of the actual bridge are 206 feet tall, and there are two walkways that are 140 feet high.

   ![Image of the Tower Bridge]

   a. Approximate the height of the walkways on the model.
   b. About how many times as tall as the model is the actual structure?

6. **GRIDDED ANSWER** In the diagram, \( \triangle ABC \sim \triangle DEF \). The scale factor of \( \triangle ABC \) to \( \triangle DEF \) is 3 : 5. Find \( AC \).

   ![Diagram of triangles ABC and DEF]

7. **EXTENDED RESPONSE** In the United States, 4634 million pounds of apples were consumed in 2002. The population of the United States in that year was 290 million.

   a. Divide the total number of apples consumed by the population to find the per capita consumption.
   b. About how many pounds of apples would a family of four have consumed in one year? in one month?
   c. A medium apple weighs about 5 ounces. Estimate how many apples a family of four would have consumed in one month.
   d. Is it reasonable to assume that a family of four would have eaten that many apples? What other factors could affect the per capita consumption? *Explain.*
6.4 Prove Triangles Similar by AA

**Key Vocabulary**
- similar polygons, p. 372

**Activity**

**Question** What can you conclude about two triangles if you know two pairs of corresponding angles are congruent?

**Step 1** Draw \( \triangle EFG \) so that \( m \angle E = 40^\circ \) and \( m \angle G = 50^\circ \).

**Step 2** Draw \( \triangle RST \) so that \( m \angle R = 40^\circ \) and \( m \angle T = 50^\circ \), and \( \triangle RST \) is not congruent to \( \triangle EFG \).

**Step 3** Calculate \( m \angle F \) and \( m \angle S \) using the Triangle Sum Theorem. Use a protractor to check that your results are true.

**Step 4** Measure and record the side lengths of both triangles. Use a metric ruler.

**Draw Conclusions**
1. Are the triangles similar? Explain your reasoning.
2. Repeat the steps above using different angle measures. Make a conjecture about two triangles with two pairs of congruent corresponding angles.

**Triangle Similarity**

The Activity suggests that two triangles are similar if two pairs of corresponding angles are congruent. In other words, you do not need to know the measures of the sides or the third pair of angles.

**Postulate**

**Postulate 22** Angle-Angle (AA) Similarity Postulate

If two angles of one triangle are congruent to two angles of another triangle, then the two triangles are similar.
**Example 1**  
**Use the AA Similarity Postulate**

Determine whether the triangles are similar. If they are, write a similarity statement. Explain your reasoning.

**Solution**
Because they are both right angles, \( \angle D \) and \( \angle G \) are congruent.

By the Triangle Sum Theorem, \( 26^\circ + 90^\circ + m \angle E = 180^\circ \), so \( m \angle E = 64^\circ \).

Therefore, \( \angle E \) and \( \angle H \) are congruent.

So, \( \triangle CDE \sim \triangle KGH \) by the AA Similarity Postulate.

**Example 2**  
**Show that triangles are similar**

Show that the two triangles are similar.

a. \( \triangle ABE \) and \( \triangle ACD \)

b. \( \triangle SVR \) and \( \triangle UVT \)

**Solution**

a. You may find it helpful to redraw the triangles separately.

Because \( m \angle ABE \) and \( m \angle C \) both equal \( 52^\circ \), \( \angle ABE \equiv \angle C \). By the Reflexive Property, \( \angle A \equiv \angle A \).

So, \( \triangle ABE \sim \triangle ACD \) by the AA Similarity Postulate.

b. You know \( \angle SVR \equiv \angle UVT \) by the Vertical Angles Congruence Theorem. The diagram shows \( RS \parallel UT \) so \( \angle S \equiv \angle U \) by the Alternate Interior Angles Theorem.

So, \( \triangle SVR \sim \triangle UVT \) by the AA Similarity Postulate.

**Guided Practice** for Examples 1 and 2

Show that the triangles are similar. Write a similarity statement.

1. \( \triangle FGH \) and \( \triangle RQS \)
2. \( \triangle CDF \) and \( \triangle DEF \)

3. **Reasoning** Suppose in Example 2, part (b), \( SR \parallel TU \). Could the triangles still be similar? **Explain.**
INDIRECT MEASUREMENT In Lesson 4.6, you learned a way to use congruent triangles to find measurements indirectly. Another useful way to find measurements indirectly is by using similar triangles.

EXAMPLE 3 Standardized Test Practice

A flagpole casts a shadow that is 50 feet long. At the same time, a woman standing nearby who is five feet four inches tall casts a shadow that is 40 inches long. How tall is the flagpole to the nearest foot?

<table>
<thead>
<tr>
<th></th>
<th>12 feet</th>
<th>40 feet</th>
<th>80 feet</th>
<th>140 feet</th>
</tr>
</thead>
</table>

Solution

The flagpole and the woman form sides of two right triangles with the ground, as shown below. The sun’s rays hit the flagpole and the woman at the same angle. You have two pairs of congruent angles, so the triangles are similar by the AA Similarity Postulate.

You can use a proportion to find the height $x$. Write 5 feet 4 inches as 64 inches so that you can form two ratios of feet to inches.

\[
\frac{x}{\text{ft}} = \frac{50}{\text{ft}} \quad \frac{64}{\text{in}} = \frac{40}{\text{in}}
\]

Write proportion of side lengths.

\[
40x = 64(50)
\]

Cross Products Property

\[
x = 80
\]

Solve for $x$.

The flagpole is 80 feet tall. The correct answer is C.

GUIDED PRACTICE

4. WHAT IF? A child who is 58 inches tall is standing next to the woman in Example 3. How long is the child’s shadow?

5. You are standing in your backyard, and you measure the lengths of the shadows cast by both you and a tree. Write a proportion showing how you could find the height of the tree.
1. **VOCABULARY** Copy and complete: If two angles of one triangle are congruent to two angles of another triangle, then the triangles are **?**.

2. ★ **WRITING** Can you assume that corresponding sides and corresponding angles of any two similar triangles are congruent? Explain.

**REASONING** Use the diagram to complete the statement.

3. \( \triangle ABC \sim ? \)
4. \( \frac{BA}{?} = \frac{AC}{?} = \frac{CB}{?} \)
5. \( \frac{25}{?} = \frac{?}{12} \)
6. \( \frac{?}{25} = \frac{18}{?} \)
7. \( y = ? \)
8. \( x = ? \)

**AA SIMILARITY POSTULATE** In Exercises 9–14, determine whether the triangles are similar. If they are, write a similarity statement.

9. 

10. 

11. 

12. 

13. 

14. 

15. **ERROR ANALYSIS** Explain why the student’s similarity statement is incorrect.

16. ★ **MULTIPLE CHOICE** What is the value of \( p \)?
   - (A) 5
   - (B) 20
   - (C) 28.8
   - (D) Cannot be determined
17. **ERROR ANALYSIS** A student uses the proportion \( \frac{4}{6} = \frac{x}{x} \) to find the value of \( x \) in the figure. *Explain* why this proportion is incorrect and write a correct proportion.

★ **OPEN-ENDED MATH** In Exercises 18 and 19, make a sketch that can be used to show that the statement is false.

18. If two pairs of sides of two triangles are congruent, then the triangles are similar.

19. If the ratios of two pairs of sides of two triangles are proportional, then the triangles are similar.

20. ★ **MULTIPLE CHOICE** In the figure at the right, find the length of \( BD \).

- A \( \frac{35}{3} \)
- B \( \frac{37}{5} \)
- C \( \frac{20}{3} \)
- D \( \frac{12}{5} \)

★ **ALGEBRA** Find coordinates for point \( E \) so that \( \triangle ABC \sim \triangle ADE \).

21. \( A(0, 0), B(0, 4), C(8, 0), D(0, 5), E(x, y) \)

22. \( A(0, 0), B(0, 3), C(4, 0), D(0, 7), E(x, y) \)

23. \( A(0, 0), B(0, 1), C(6, 0), D(0, 4), E(x, y) \)

24. \( A(0, 0), B(0, 6), C(3, 0), D(0, 9), E(x, y) \)

25. **MULTI-STEP PROBLEM** In the diagram, \( \overline{AB} \parallel \overline{DC}, AE = 6, AB = 8, CE = 15, \) and \( DE = 10 \).

a. Copy the diagram and mark all given information.

b. List two pairs of congruent angles in the diagram.

c. Name a pair of similar triangles and write a similarity statement.

d. Find \( BE \) and \( DC \).

REASONING In Exercises 26–29, is it possible for \( \triangle JKL \) and \( \triangle XYZ \) to be similar? *Explain* why or why not.

26. \( m\angle J = 71^\circ, m\angle K = 52^\circ, m\angle X = 71^\circ, \) and \( m\angle Z = 57^\circ \)

27. \( \triangle JKL \) is a right triangle and \( m\angle X + m\angle Y = 150^\circ \).

28. \( m\angle J = 87^\circ \) and \( m\angle Y = 94^\circ \)

29. \( m\angle J + m\angle K = 85^\circ \) and \( m\angle Y + m\angle Z = 80^\circ \)

30. **CHALLENGE** If \( PT = x, PQ = 3x, \) and \( SR = \frac{8}{3}x \), find \( PS \) in terms of \( x \). *Explain* your reasoning.
31. **AIR HOCKEY** An air hockey player returns the puck to his opponent by bouncing the puck off the wall of the table as shown. From physics, the angles that the path of the puck makes with the wall are congruent. What is the distance \( d \) between the puck and the wall when the opponent returns it?

32. **LAKES** You can measure the width of the lake using a surveying technique, as shown in the diagram.
   a. What postulate or theorem can you use to show that the triangles are similar?
   b. Find the width of the lake, \( WX \).
   c. If \( XY = 10 \) meters, find \( VX \).

33. ★ **SHORT RESPONSE** Explain why all equilateral triangles are similar. Include sketches in your answer.

34. **AERIAL PHOTOGRAPHY** Low-level aerial photos can be taken using a remote-controlled camera suspended from a blimp. You want to take an aerial photo that covers a ground distance \( g \) of 50 meters. Use the proportion \( \frac{f}{h} = \frac{n}{g} \) to estimate the altitude \( h \) that the blimp should fly at to take the photo. In the proportion, use \( f = 8 \) centimeters and \( n = 3 \) centimeters. These two variables are determined by the type of camera used.

35. **PROOF** Use the given information to draw a sketch. Then write a proof.
   **GIVEN** \( \triangle STU \sim \triangle PQR \)
   - Point \( V \) lies on \( TU \) so that \( SV \) bisects \( \angle TSU \).
   - Point \( N \) lies on \( QR \) so that \( PN \) bisects \( \angle QPR \).
   **PROVE** \( \frac{SV}{PN} = \frac{ST}{PQ} \)

36. **PROOF** Prove that if an acute angle in one right triangle is congruent to an acute angle in another right triangle, then the triangles are similar.
37. **TECHNOLOGY** Use a graphing calculator or computer.
   a. Draw $\triangle ABC$. Draw $DE$ through two sides of the triangle, parallel to the third side.
   b. Measure $\angle ADE$ and $\angle ACB$. Measure $\angle AED$ and $\angle ABC$. What do you notice?
   c. What does a postulate in this lesson tell you about $\triangle ADE$ and $\triangle ACB$?
   d. Measure all the sides. Show that corresponding side lengths are proportional.
   e. Move vertex $A$ to form new triangles. How do your measurements in parts (b) and (d) change? Are the new triangles still similar? Explain.

38. **★ EXTENDED RESPONSE** Explain how you could use similar triangles to show that any two points on a line can be used to calculate its slope.

39. **CORRESPONDING LENGTHS** Without using the Corresponding Lengths Property on page 375, prove that the ratio of two corresponding angle bisectors in similar triangles is equal to the scale factor.

40. **CHALLENGE** Prove that if the lengths of two sides of a triangle are $a$ and $b$ respectively, then the lengths of the corresponding altitudes to those sides are in the ratio $\frac{b}{a}$.

---

**MIXED REVIEW**

**PREVIEW** Prepare for Lesson 6.5 in Exs. 41–44.

**In Exercises 41–44, use the diagram.**

41. Name three pairs of corresponding angles. *(p. 147)*
42. Name two pairs of alternate interior angles. *(p. 147)*
43. Name two pairs of alternate exterior angles. *(p. 147)*
44. Find $m\angle 1 + m\angle 7$. *(p. 154)*

45. **CONGRUENCE** Explain why $\triangle ABE \cong \triangle CDE$. *(p. 240)*

**Simplify the ratio. (p. 356)**

46. $\frac{4}{20}$
47. $\frac{36}{18}$
48. $21 : 63$
49. $42 : 28$
In addition to using congruent corresponding angles to show that two triangles are similar, you can use proportional corresponding side lengths.

**THEOREM**

**THEOREM 6.2 Side-Side-Side (SSS) Similarity Theorem**

If the corresponding side lengths of two triangles are proportional, then the triangles are similar.

If \( \frac{AB}{RS} = \frac{BC}{ST} = \frac{CA}{TR} \), then \( \triangle ABC \sim \triangle RST \).

**Proof:** p. 389

---

**EXAMPLE 1 Use the SSS Similarity Theorem**

Is either \( \triangle DEF \) or \( \triangle GHJ \) similar to \( \triangle ABC \)?

**Solution**

Compare \( \triangle ABC \) and \( \triangle DEF \) by finding ratios of corresponding side lengths.

- **Shortest sides**
  - \( \frac{AB}{DE} = \frac{8}{6} = \frac{4}{3} \)
  - \( \frac{CA}{FD} = \frac{16}{12} = \frac{4}{3} \)
  - \( \frac{BC}{EF} = \frac{12}{9} = \frac{4}{3} \)

  ▶ All of the ratios are equal, so \( \triangle ABC \sim \triangle DEF \).

Compare \( \triangle ABC \) and \( \triangle GHJ \) by finding ratios of corresponding side lengths.

- **Shortest sides**
  - \( \frac{AB}{GH} = \frac{8}{8} = 1 \)
  - \( \frac{CA}{JG} = \frac{16}{16} = 1 \)
  - \( \frac{BC}{HJ} = \frac{12}{10} = \frac{6}{5} \)

  ▶ The ratios are not all equal, so \( \triangle ABC \) and \( \triangle GHJ \) are not similar.
**PROOF**

**SSS Similarity Theorem**

**GIVEN** \( \frac{RS}{JK} = \frac{ST}{KL} = \frac{TR}{LJ} \)

**PROVE** \( \triangle RST \sim \triangle JKL \)

Locate \( P \) on \( RS \) so that \( PS = JK \). Draw \( PQ \) so that \( PQ \parallel RT \). Then \( \triangle RST \sim \triangle PSQ \) by the AA Similarity Postulate, and \( \frac{RS}{PS} = \frac{ST}{SQ} = \frac{TR}{QP} \).

You can use the given proportion and the fact that \( PS = JK \) to deduce that \( SQ = KL \) and \( QP = LJ \). By the SSS Congruence Postulate, it follows that \( \triangle PSQ \equiv \triangle JKL \). Finally, use the definition of congruent triangles and the AA Similarity Postulate to conclude that \( \triangle RST \sim \triangle JKL \).

**USE AN AUXILIARY LINE**

The Parallel Postulate allows you to draw an auxiliary line \( PQ \) in \( \triangle RST \). There is only one line through point \( P \) parallel to \( RT \), so you are able to draw it.

**EXAMPLE 2**

**Use the SSS Similarity Theorem**

**ALGEBRA** Find the value of \( x \) that makes \( \triangle ABC \sim \triangle DEF \).

**Solution**

**STEP 1** Find the value of \( x \) that makes corresponding side lengths proportional.

\[
\frac{4}{12} = \frac{x - 1}{18}
\]

Write proportion.

\[4 \cdot 18 = 12(x - 1)\]

Cross Products Property

\[72 = 12x - 12\]

Simplify.

\[7 = x\]

Solve for \( x \).

**STEP 2** Check that the side lengths are proportional when \( x = 7 \).

\[BC = x - 1 = 6\]

\[DF = 3(x + 1) = 24\]

\[\frac{AB}{DE} = \frac{BC}{EF} \rightarrow \frac{4}{12} = \frac{6}{18} \checkmark\]

\[\frac{AB}{DE} = \frac{AC}{DF} \rightarrow \frac{4}{12} = \frac{8}{24} \checkmark\]

When \( x = 7 \), the triangles are similar by the SSS Similarity Theorem.

**GUIDED PRACTICE** for Examples 1 and 2

1. Which of the three triangles are similar? Write a similarity statement.

2. The shortest side of a triangle similar to \( \triangle RST \) is 12 units long. Find the other side lengths of the triangle.
**THEOREM**

**THEOREM 6.3 Side-Angle-Side (SAS) Similarity Theorem**

If an angle of one triangle is congruent to an angle of a second triangle and the lengths of the sides including these angles are proportional, then the triangles are similar.

If \( \angle X \equiv \angle M \) and \( \frac{ZX}{PM} = \frac{XY}{MN} \) then \( \triangle XYZ \sim \triangle MNP \).

*Proof:* Ex. 37, p. 395

---

**EXAMPLE 3 Use the SAS Similarity Theorem**

**LEAN-TO SHELTER** You are building a lean-to shelter starting from a tree branch, as shown. Can you construct the right end so it is similar to the left end using the angle measure and lengths shown?

![Diagram of a lean-to shelter]

**Solution**

Both \( m\angle A \) and \( m\angle F \) equal 53°, so \( \angle A \equiv \angle F \). Next, compare the ratios of the lengths of the sides that include \( \angle A \) and \( \angle F \).

- **Shorter sides**
  \[ \frac{AB}{FG} = \frac{9}{6} = \frac{3}{2} \]
  - **Longer sides**
  \[ \frac{AC}{FH} = \frac{15}{10} = \frac{3}{2} \]

The lengths of the sides that include \( \angle A \) and \( \angle F \) are proportional.

So, by the SAS Similarity Theorem, \( \triangle ABC \sim \triangle FGH \). Yes, you can make the right end similar to the left end of the shelter.

---

**CONCEPT SUMMARY**

**Triangle Similarity Postulate and Theorems**

**AA Similarity Postulate**

If \( \angle A \equiv \angle D \) and \( \angle B \equiv \angle E \), then \( \triangle ABC \sim \triangle DEF \).

**SSS Similarity Theorem**

If \( \frac{AB}{DE} = \frac{BC}{EF} = \frac{AC}{DF} \) then \( \triangle ABC \sim \triangle DEF \).

**SAS Similarity Theorem**

If \( \angle A \equiv \angle D \) and \( \frac{AB}{DE} = \frac{AC}{DF} \) then \( \triangle ABC \sim \triangle DEF \).
6.5 Prove Triangles Similar by SSS and SAS

**GUIDED PRACTICE** for Examples 3 and 4

Explain how to show that the indicated triangles are similar.

3. \( \triangle SRT \sim \triangle PNQ \)
4. \( \triangle XZW \sim \triangle YZX \)

**EXAMPLE 4** Choose a method

Tell what method you would use to show that the triangles are similar.

**Solution**

Find the ratios of the lengths of the corresponding sides.

Shorter sides \( \frac{BC}{EC} = \frac{9}{15} = \frac{3}{5} \)

Longer sides \( \frac{CA}{CD} = \frac{18}{30} = \frac{3}{5} \)

The corresponding side lengths are proportional. The included angles \( \angle ACB \) and \( \angle DCE \) are congruent because they are vertical angles. So, \( \triangle ACB \sim \triangle DCE \) by the SAS Similarity Theorem.

**VISUAL REASONING**

To identify corresponding parts, redraw the triangles so that the corresponding parts have the same orientation.

**6.5 EXERCISES**

**HOMEWORK KEY**

○ = WORKED-OUT SOLUTIONS on p. WS1 for Exs. 3, 7, and 31
★ = STANDARDIZED TEST PRACTICE Exs. 2, 14, 32, 34, and 36

**SKILL PRACTICE**

1. **VOCABULARY** You plan to prove that \( \triangle ACB \) is similar to \( \triangle PXQ \) by the SSS Similarity Theorem. Copy and complete the proportion that is needed to use this theorem: \( \frac{AC}{?} = \frac{?}{XQ} = \frac{AB}{?} \).

2. ★ **WRITING** If you know two triangles are similar by the SAS Similarity Theorem, what additional piece(s) of information would you need to know to show that the triangles are congruent?

**SSS SIMILARITY THEOREM**

Verify that \( \triangle ABC \sim \triangle DEF \). Find the scale factor of \( \triangle ABC \) to \( \triangle DEF \).

3. \( \triangle ABC: BC = 18, AB = 15, AC = 12 \) 
\( \triangle DEF: EF = 12, DE = 10, DF = 8 \)
4. \( \triangle ABC: AB = 10, BC = 16, CA = 20 \) 
\( \triangle DEF: DE = 25, EF = 40, FD = 50 \)
5. **SSS SIMILARITY THEOREM** Is either \( \triangle KJL \) or \( \triangle RST \) similar to \( \triangle ABC \)?

6. **SSS SIMILARITY THEOREM** Is either \( \triangle KJL \) or \( \triangle RST \) similar to \( \triangle ABC \)?

**EXAMPLE 3**

\[ \begin{align*}
\text{SAS SIMILARITY THEOREM} & \quad \text{Determine whether the two triangles are similar. If they are similar, write a similarity statement and find the scale factor of Triangle B to Triangle A.} \\
\end{align*} \]

7. \[ \begin{align*}
\text{EX 7} & \quad \begin{pmatrix} D & A & F \\ 9 & 15 & 10 \end{pmatrix} \\
\text{EX 8} & \quad \begin{pmatrix} A & S & J \\ 10 & 18 & 24 \end{pmatrix}
\end{align*} \]

9. **ALGEBRA** Find the value of \( n \) that makes \( \triangle PQR \sim \triangle XYZ \) when \( PQ = 4 \), \( QR = 5 \), \( XY = 4(n + 1) \), \( YZ = 7n - 1 \), and \( \angle Q \equiv \angle Y \). Include a sketch.

**EXAMPLE 4**

\[ \begin{align*}
\text{SHOWING SIMILARITY} & \quad \text{Show that the triangles are similar and write a similarity statement. Explain your reasoning.} \\
\end{align*} \]

10. \[ \begin{align*}
\text{EX 10} & \quad \begin{pmatrix} F & H & G \\ 5 & 18 & 15 \end{pmatrix} \\
\text{EX 11} & \quad \begin{pmatrix} A & D & E \\ 27 & 14 & 18 \end{pmatrix} \\
\text{EX 12} & \quad \begin{pmatrix} X & D & G \\ 30 & 35 & 21 \end{pmatrix}
\end{align*} \]

13. **ERROR ANALYSIS** Describe and correct the student’s error in writing the similarity statement.

14. **MULTIPLE CHOICE** In the diagram, \( \frac{MN}{MR} = \frac{MP}{MQ} \).

Which of the statements must be true?

A. \( \angle 1 \equiv \angle 2 \)
B. \( QR \parallel NP \)
C. \( \angle 1 \equiv \angle 4 \)
D. \( \triangle MNP \sim \triangle MRQ \)
**DRAWING TRIANGLES** Sketch the triangles using the given description. Explain whether the two triangles can be similar.

15. In \( \triangle XYZ \), \( m \angle X = 66^\circ \) and \( m \angle Y = 34^\circ \). In \( \triangle LMN \), \( m \angle M = 34^\circ \) and \( m \angle N = 80^\circ \).

16. In \( \triangle RST \), \( RS = 20 \), \( ST = 32 \), and \( m \angle S = 16^\circ \). In \( \triangle GHI \), \( GH = 30 \), \( HF = 48 \), and \( m \angle H = 24^\circ \).

17. The side lengths of \( \triangle ABC \) are 24, 8x, and 54, and the side lengths of \( \triangle DEF \) are 15, 25, and 7x.

**FINDING MEASURES** In Exercises 18–23, use the diagram to copy and complete the statements.

18. \( m \angle NQP = ? \)  
19. \( m \angle QPN = ? \)

20. \( m \angle PNQ = ? \)  
21. \( RN = ? \)

22. \( PQ = ? \)  
23. \( NM = ? \)

24. **SIMILAR TRIANGLES** In the diagram at the right, name the three pairs of triangles that are similar.

**CHALLENGE** In the figure at the right, \( \triangle ABC \sim \triangle VWX \).

25. Find the scale factor of \( \triangle VWX \) to \( \triangle ABC \).

26. Find the ratio of the area of \( \triangle VWX \) to the area of \( \triangle ABC \).

**PROBLEM SOLVING**

28. **RACECAR NET** Which postulate or theorem could you use to show that the three triangles that make up the racecar window net are similar? Explain.

29. **STAINED GLASS** Certain sections of stained glass are sold in triangular beveled pieces. Which of the three beveled pieces, if any, are similar?
**SHUFFLEBOARD** In the portion of the shuffleboard court shown, \[ \frac{BC}{AC} = \frac{BD}{AE} \]

30. What additional piece of information do you need in order to show that \( \triangle BCD \sim \triangle ACE \) using the SSS Similarity Theorem?

31. What additional piece of information do you need in order to show that \( \triangle BCD \sim \triangle ACE \) using the SAS Similarity Theorem?

32. ★ OPEN-ENDED MATH Use a diagram to show why there is no Side-Side-Angle Similarity Postulate.

33. MULTI-STEP PROBLEM Ruby is standing in her back yard and she decides to estimate the height of a tree. She stands so that the tip of her shadow coincides with the tip of the tree’s shadow, as shown. Ruby is 66 inches tall. The distance from the tree to Ruby is 95 feet and the distance between the tip of the shadows and Ruby is 7 feet.

   a. What postulate or theorem can you use to show that the triangles in the diagram are similar?
   
   b. About how tall is the tree, to the nearest foot?
   
   c. What If? Curtis is 75 inches tall. At a different time of day, he stands so that the tip of his shadow and the tip of the tree’s shadow coincide, as described above. His shadow is 6 feet long. How far is Curtis from the tree?

34. ★ EXTENDED RESPONSE Suppose you are given two right triangles with one pair of corresponding legs and the pair of corresponding hypotenuses having the same length ratios.

   a. The lengths of the given pair of corresponding legs are 6 and 18, and the lengths of the hypotenuses are 10 and 30. Use the Pythagorean Theorem to solve for the lengths of the other pair of corresponding legs. Draw a diagram.
   
   b. Write the ratio of the lengths of the second pair of corresponding legs.
   
   c. Are these triangles similar? Does this suggest a Hypotenuse-Leg Similarity Theorem for right triangles?

35. PROOF Given that \( \triangle ABC \) is a right triangle and \( D, E, \) and \( F \) are midpoints, prove that \( m \angle DEF = 90^\circ \).

36. ★ WRITING Can two triangles have all pairs of corresponding angles in proportion? Explain.
37. **PROVING THEOREM 6.3** Write a paragraph proof of the SAS Similarity Theorem.

**GIVEN** \( \angle A \cong \angle D, \frac{AB}{DE} = \frac{AC}{DF} \)

**PROVE** \( \triangle ABC \sim \triangle DEF \)

38. **CHALLENGE** A portion of a water slide in an amusement park is shown. Find the length of \( EF \). (Note: The posts form right angles with the ground.)

### MIXED REVIEW

Find the slope of the line that passes through the given points. (p. 171)

39. \((0, -8), (4, 16)\)  
40. \((-2, -9), (1, -3)\)  
41. \((-3, 9), (7, 2)\)

42. State the postulate or theorem you would use to prove the triangles congruent. Then write a congruence statement. (p. 249)

Find the value of \( x \).

43. \( DE \) is a midsegment of \( \triangle ABC \). (p. 295)

44. \( \frac{GK}{GH} = \frac{JK}{FH} \) (p. 364)

### QUIZ for Lessons 6.3–6.5

In the diagram, \( ABCD \sim KLMN \). (p. 372)

1. Find the scale factor of \( ABCD \) to \( KLMN \).
2. Find the values of \( x, y, \) and \( z \).
3. Find the perimeter of each polygon.

Determine whether the triangles are similar. If they are similar, write a similarity statement. (pp. 381, 388)

4. \( \triangle WPZ \)
5. \( \triangle FSR \)
6. \( \triangle LHM \)
6.6 Investigate Proportionality

**MATERIALS** - graphing calculator or computer

**QUESTION** How can you use geometry drawing software to compare segment lengths in triangles?

**EXPLORE 1** Construct a line parallel to a triangle’s third side

**STEP 1** Draw a triangle  Draw a triangle. Label the vertices A, B, and C. Draw a point on AB. Label the point D.

**STEP 2** Draw a parallel line  Draw a line through D that is parallel to AC. Label the intersection of the line and BC as point E.

**STEP 3** Measure segments  Measure BD, DA, BE, and EC. Calculate the ratios \( \frac{BD}{DA} \) and \( \frac{BE}{EC} \).

**STEP 4** Compare ratios  Move one or more of the triangle’s vertices to change its shape. Compare the ratios from Step 3 as the shape changes. Save as “EXPLORE1.”

**EXPLORE 2** Construct an angle bisector of a triangle

**STEP 1** Draw a triangle  Draw a triangle. Label the vertices P, Q, and R. Draw the angle bisector of \( \angle QPR \). Label the intersection of the angle bisector and QR as point B.

**STEP 2** Measure segments  Measure BR, RP, BQ, and QP. Calculate the ratios \( \frac{BR}{BQ} \) and \( \frac{RP}{QP} \).

**STEP 3** Compare ratios  Move one or more of the triangle’s vertices to change its shape. Compare the ratios from Step 3. Save as “EXPLORE2.”

**DRAW CONCLUSIONS** Use your observations to complete these exercises

1. Make a conjecture about the ratios of the lengths of the segments formed when two sides of a triangle are cut by a line parallel to the triangle’s third side.

2. Make a conjecture about how the ratio of the lengths of two sides of a triangle is related to the ratio of the lengths of the segments formed when an angle bisector is drawn to the third side.
6.6 Use Proportionality Theorems

**Before**
You used proportions with similar triangles.

**Now**
You will use proportions with a triangle or parallel lines.

**Why?**
So you can use perspective drawings, as in Ex. 28.

**Key Vocabulary**
- corresponding angles, p. 147
- ratio, p. 356
- proportion, p. 358

The Midsegment Theorem, which you learned on page 295, is a special case of the Triangle Proportionality Theorem and its converse.

**THEOREMS**

**THEOREM 6.4** Triangle Proportionality Theorem
If a line parallel to one side of a triangle intersects the other two sides, then it divides the two sides proportionally.

*Proof:* Ex. 22, p. 402

**THEOREM 6.5** Converse of the Triangle Proportionality Theorem
If a line divides two sides of a triangle proportionally, then it is parallel to the third side.

*Proof:* Ex. 26, p. 402

**Example 1** Find the length of a segment
In the diagram, $QS \parallel UT$, $RS = 4$, $ST = 6$, and $QU = 9$. What is the length of $RQ$?

**Solution**

\[
\frac{RQ}{QU} = \frac{RS}{ST}
\]

Triangle Proportionality Theorem

\[
\frac{RQ}{9} = \frac{4}{6}
\]

Substitute.

\[
RQ = 6
\]

Multiply each side by 9 and simplify.
**EXAMPLE 2**  Solve a real-world problem

**SHOERACK**  On the shoerack shown, $AB = 33\text{ cm}$, $BC = 27\text{ cm}$, $CD = 44\text{ cm}$, and $DE = 25\text{ cm}$. *Explain* why the gray shelf is not parallel to the floor.

**Solution**

Find and simplify the ratios of lengths determined by the shoerack.

$$\frac{CD}{DE} = \frac{44}{25} \quad \frac{CB}{BA} = \frac{27}{33} = \frac{9}{11}$$

Because $\frac{44}{25} \neq \frac{9}{11}$, $BD$ is not parallel to $AE$. So, the shelf is not parallel to the floor.

**REASONING**  Theorems 6.4 and 6.5 also tell you that if the lines are *not* parallel, then the proportion is *not* true, and vice-versa.

So if $TU \parallel QS$, then $\frac{RT}{TQ} \neq \frac{RU}{US}$. Also, if $\frac{RT}{TQ} \neq \frac{RU}{US}$, then $\overline{TU} \parallel \overline{QS}$.

**GUIDED PRACTICE**  for Examples 1 and 2

1. Find the length of $YZ$.

2. Determine whether $PS \parallel QR$.

---

**THEOREMS**  
**For Your Notebook**

**THEOREM 6.6**

If three parallel lines intersect two transversals, then they divide the transversals proportionally.

*Proof:* Ex. 23, p. 402

**THEOREM 6.7**

If a ray bisects an angle of a triangle, then it divides the opposite side into segments whose lengths are proportional to the lengths of the other two sides.

*Proof:* Ex. 27, p. 403
**Example 3** Use Theorem 6.6

**CITY TRAVEL** In the diagram, \(\angle 1, \angle 2, \) and \(\angle 3\) are all congruent and \(GF = 120\) yards, \(DE = 150\) yards, and \(CD = 300\) yards. Find the distance \(HF\) between Main Street and South Main Street.

**Solution**

Corresponding angles are congruent, so \(\overrightarrow{FE}, \overrightarrow{GD}, \) and \(\overrightarrow{HC}\) are parallel. Use Theorem 6.6.

\[
\frac{HG}{GF} = \frac{CD}{DE}
\]

Parallel lines divide transversals proportionally.

\[
\frac{HG + GF}{GF} = \frac{CD + DE}{DE}
\]

Property of proportions (Property 4)

\[
\frac{HF}{120} = \frac{300 + 150}{150}
\]

Substitute.

\[
\frac{HF}{120} = \frac{450}{150}
\]

Simplify.

\[
HF = 360
\]

Multiply each side by 120 and simplify.

\(\times\) The distance between Main Street and South Main Street is 360 yards.

**Example 4** Use Theorem 6.7

In the diagram, \(\angle QPR \cong \angle RPS\). Use the given side lengths to find the length of \(RS\).

**Solution**

Because \(\overrightarrow{PR}\) is an angle bisector of \(\angle QPS\), you can apply Theorem 6.7. Let \(RS = x\). Then \(RQ = 15 - x\).

\[
\frac{RQ}{RS} = \frac{PQ}{PS}
\]

Angle bisector divides opposite side proportionally.

\[
\frac{15 - x}{x} = \frac{7}{13}
\]

Substitute.

\[
7x = 195 - 13x
\]

Cross Products Property

\[
x = 9.75
\]

Solve for \(x\).

**Guided Practice** for Examples 3 and 4

Find the length of \(\overline{AB}\).

3. 

4.
1. **VOCABULARY** State the Triangle Proportionality Theorem. Draw a diagram.

2. **WRITING** Compare the Midsegment Theorem (see page 295) and the Triangle Proportionality Theorem. How are they related?

**FINDING THE LENGTH OF A SEGMENT** Find the length of $AB$.

3. $A \quad B \quad C \quad D \quad E$

4. $A \quad B \quad C \quad D \quad E$

**REASONING** Use the given information to determine whether $KM \parallel JN$. Explain your reasoning.

5. $L \quad M \quad N \quad K \quad J \quad M \quad N \quad K$

6. $L \quad M \quad N \quad K \quad J \quad M \quad N \quad K$

7. $L \quad M \quad N \quad K \quad J \quad M \quad N \quad K$

8. **MULTIPLE CHOICE** For the figure at the right, which statement is not necessarily true?

   - A $\frac{PQ}{QR} = \frac{UT}{TS}$
   - B $\frac{TS}{UT} = \frac{QR}{PQ}$
   - C $\frac{QR}{RS} = \frac{TS}{RS}$
   - D $\frac{PQ}{PR} = \frac{UT}{US}$

9. **ALGEBRA** Find the value of the variable.

10. **ERROR ANALYSIS** A student begins to solve for the length of $AD$ as shown. Describe and correct the student’s error.
13. ★ MULTIPLE CHOICE Find the value of $x$.

[A] $\frac{1}{2}$  [B] 1  [C] 2  [D] 3

14. ALGEBRA Find the value of the variable.

15. Find the value of the variable.

FINDING SEGMENT LENGTHS Use the diagram to find the value of each variable.

16.

17.

18. ERROR ANALYSIS A student claims that $AB = AC$ using the method shown. Describe and correct the student's error.

By Theorem 6.7, $\frac{BD}{CD} = \frac{AB}{AC}$. Because $BD = CD$, it follows that $AB = AC$.

19. CONSTRUCTION Follow the instructions for constructing a line segment that is divided into four equal parts.

a. Draw a line segment that is about 3 inches long, and label its endpoints $A$ and $B$. Choose any point $C$ not on $\overrightarrow{AB}$. Draw $\overrightarrow{AC}$.

b. Using any length, place the compass point at $A$ and make an arc intersecting $\overrightarrow{AC}$ at $D$. Using the same compass setting, make additional arcs on $\overrightarrow{AC}$. Label the points $E$, $F$, and $G$ so that $AD = DE = EF = FG$.

c. Draw $\overrightarrow{GB}$. Construct a line parallel to $\overrightarrow{GB}$ through $D$. Continue constructing parallel lines and label the points as shown. Explain why $AJ = JK = KL = LB$.

20. CHALLENGE Given segments with lengths $r$, $s$, and $t$, construct a segment of length $x$, such that $\frac{r}{s} = \frac{t}{x}$. 

6.6 Use Proportionality Theorems 401
21. **CITY MAP** On the map below, Idaho Avenue bisects the angle between University Avenue and Walter Street. To the nearest yard, what is the distance along University Avenue from 12th Street to Washington Street?

![City Map Diagram]

22. **PROVING THEOREM 6.4** Prove the Triangle Proportionality Theorem.

**GIVEN** \( QS \parallel TR \)

**PROVE** \( \frac{QT}{TR} = \frac{SU}{UR} \)

23. **PROVING THEOREM 6.6** Use the diagram with the auxiliary line drawn to write a paragraph proof of Theorem 6.6.

**GIVEN** \( k_1 \parallel k_2 \parallel k_3 \)

**PROVE** \( \frac{CB}{BA} = \frac{DE}{EF} \)

24. **MULTI-STEP PROBLEM** The real estate term *lake frontage* refers to the distance along the edge of a piece of property that touches a lake.

a. Find the lake frontage (to the nearest tenth of a yard) for each lot shown.

b. In general, the more lake frontage a lot has, the higher its selling price. Which of the lots should be listed for the highest price?

c. Suppose that lot prices are in the same ratio as lake frontages. If the least expensive lot is $100,000, what are the prices of the other lots? *Explain* your reasoning.

25. **SHORT RESPONSE** Sketch an isosceles triangle. Draw a ray that bisects the angle opposite the base. This ray divides the base into two segments. By Theorem 6.7, the ratio of the legs is proportional to the ratio of these two segments. *Explain* why this ratio is 1:1 for an isosceles triangle.

26. **PLAN FOR PROOF** Use the diagram given for the proof of Theorem 6.4 in Exercise 22 to write a plan for proving Theorem 6.5, the Triangle Proportionality Converse.
27. **PROVING THEOREM 6.7** Use the diagram with the auxiliary lines drawn to write a paragraph proof of Theorem 6.7.

GIVEN: \(\angle YXW \equiv \angle WXZ\)

PROVE: \(\frac{YW}{WZ} = \frac{XY}{XZ}\)

28. ★ **EXTENDED RESPONSE** In *perspective drawing*, lines that are parallel in real life must meet at a vanishing point on the horizon. To make the train cars in the drawing appear equal in length, they are drawn so that the lines connecting the opposite corners of each car are parallel.

![Perspective Drawing Diagram](image)

a. Use the dimensions given and the red parallel lines to find the length of the bottom edge of the drawing of Car 2.

b. What other set of parallel lines exist in the figure? Explain how these can be used to form a set of similar triangles.

c. Find the length of the top edge of the drawing of Car 2.

29. **CHALLENGE** Prove *Ceva’s Theorem*: If \(P\) is any point inside \(\triangle ABC\), then \(\frac{AY}{YC} \cdot \frac{CX}{XB} \cdot \frac{BZ}{ZA} = 1\). (Hint: Draw lines parallel to \(BY\) through \(A\) and \(C\). Apply Theorem 6.4 to \(\triangle ACM\). Show that \(\triangle APN \sim \triangle MPC\), \(\triangle CXM \sim \triangle BXP\), and \(\triangle BZP \sim \triangle AZN\).)

![Ceva’s Theorem Diagram](image)

30. **Mixed Review** Perform the following operations. Then simplify.

<table>
<thead>
<tr>
<th>Expression</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>((-3) \cdot \frac{7}{2})</td>
<td>869</td>

<tr>
<td>(\left(\frac{5}{4}\right)^3)</td>
<td>871</td>
</tr>
</tbody>
</table>

Describe the translation in words and write the coordinate rule for the translation. (p. 272)

31. Translate down 3 units and to the right 2 units.

32. Translate up 1 unit and to the right 1 unit.

33. Translate up 2 units and to the left 1 unit.

**EXTRA PRACTICE** for Lesson 6.6, p. 907  **ONLINE QUIZ** at classzone.com
Another Way to Solve Example 3, page 399

MULTIPLE REPRESENTATIONS In Lesson 6.6, you used proportionality theorems to find lengths of segments formed when transversals intersect two or more parallel lines. Now, you will learn two different ways to solve Example 3 on page 399.

CITY TRAVEL In the diagram, ∠1, ∠2, and ∠3 are all congruent and GF = 120 yards, DE = 150 yards, and CD = 300 yards. Find the distance HF between Main Street and South Main Street.

METHOD 1 Applying a Ratio One alternative approach is to look for ratios in the diagram.

STEP 1 Read the problem. Because Main Street, Second Street, and South Main Street are all parallel, the lengths of the segments of the cross streets will be in proportion, so they have the same ratio.

STEP 2 Apply a ratio. Notice that on $\overrightarrow{CE}$, the distance $CD$ between South Main Street and Second Street is twice the distance $DE$ between Second Street and Main Street. So the same will be true for the distances $HG$ and $GF$.

$$HG = 2 \cdot GF \quad \text{Write equation.}$$

$$= 2 \cdot 120 \quad \text{Substitute.}$$

$$= 240 \quad \text{Simplify.}$$

STEP 3 Calculate the distance. Line $HF$ is perpendicular to both Main Street and South Main Street, so the distance between Main Street and South Main Street is this perpendicular distance, $HF$.

$$HF = HG + GF \quad \text{Segment Addition Postulate}$$

$$= 120 + 240 \quad \text{Substitute.}$$

$$= 360 \quad \text{Simplify.}$$

STEP 4 Check page 399 to verify your answer, and confirm that it is the same.
**Method 2**  Writing a Proportion  Another alternative approach is to use a graphic organizer to set up a proportion.

**Step 1**  Make a table to compare the distances.

<table>
<thead>
<tr>
<th></th>
<th>(CE)</th>
<th>(HF)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total distance</td>
<td>(300 + 150), or 450</td>
<td>(x)</td>
</tr>
<tr>
<td>Partial distance</td>
<td>150</td>
<td>120</td>
</tr>
</tbody>
</table>

**Step 2**  Write and solve a proportion.

\[
\frac{450}{150} = \frac{x}{120} \quad \text{Write proportion.}
\]

\[
360 = x \quad \text{Multiply each side by 12 and simplify.}
\]

The distance is 360 yards.

**Practice**

1. **Maps**  Use the information on the map.

   ![Map Diagram]

   a. Find \(DE\).

   b. **What If?**  Suppose there is an alley one fourth of the way from \(BE\) to \(CD\) and parallel to \(BE\). What is the distance from \(E\) to the alley along \(FD\)?

2. **Reasoning**  Given the diagram below, explain why the three given proportions are true.

   \[
   \frac{a}{a+b} = \frac{d}{e}
   \]

   \[
   \frac{a}{a+b+c} = \frac{d}{f}
   \]

   \[
   \frac{a+b}{a+b+c} = \frac{d}{f}
   \]

3. **Walking**  Two people leave points \(A\) and \(B\) at the same time. They intend to meet at point \(C\) at the same time. The person who leaves point \(A\) walks at a speed of 3 miles per hour. How fast must the person who leaves point \(B\) walk?

4. **Error Analysis**  A student who attempted to solve the problem in Exercise 3 claims that you need to know the length of \(AC\) to solve the problem. Describe and correct the error that the student made.

5. **Algebra**  Use the diagram to find the values of \(x\) and \(y\).
Fractals

**GOAL** Explore the properties of fractals.

A **fractal** is an object that is **self-similar**. An object is **self-similar** if one part of the object can be enlarged to look like the whole object. In nature, fractals can be found in ferns and branches of a river. Scientists use fractals to map out clouds in order to predict rain.

Many fractals are formed by a repetition of a sequence of the steps called **iteration**. The first stage of drawing a fractal is considered Stage 0. Helge von Koch (1870–1924) described a fractal known as the **Koch snowflake**, shown in Example 1.

**EXAMPLE 1** Draw a fractal

Use the directions below to draw a Koch snowflake.

Starting with an equilateral triangle, at each stage each side is divided into thirds and a new equilateral triangle is formed using the middle third as the triangle side length.

**Solution**

**STAGE 0** Draw an equilateral triangle with a side length of one unit.

**STAGE 1** Replace the middle third of each side with an equilateral triangle.

**STAGE 2** Repeat Stage 1 with the six smaller equilateral triangles.

**STAGE 3** Repeat Stage 1 with the eighteen smaller equilateral triangles.
MEASUREMENT  Benoit Mandelbrot (b. 1924) was the first mathematician to formalize the idea of fractals when he observed methods used to measure the lengths of coastlines. Coastlines cannot be measured as straight lines because of the inlets and rocks. Mandelbrot used fractals to model coastlines.

**EXAMPLE 2  Find lengths in a fractal**

Make a table to study the lengths of the sides of a Koch snowflake at different stages.

<table>
<thead>
<tr>
<th>Stage number</th>
<th>Edge length</th>
<th>Number of edges</th>
<th>Perimeter</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>1</td>
<td>3</td>
<td>3</td>
</tr>
<tr>
<td>1</td>
<td>1/3</td>
<td>3 • 4 = 12</td>
<td>4</td>
</tr>
<tr>
<td>2</td>
<td>1/9</td>
<td>12 • 4 = 48</td>
<td>48/9 = 51/3</td>
</tr>
<tr>
<td>3</td>
<td>1/27</td>
<td>48 • 4 = 192</td>
<td>192/27 = 71/9</td>
</tr>
<tr>
<td>n</td>
<td>1/3^n</td>
<td>3 • 4^n</td>
<td>4^n/3^n − 1</td>
</tr>
</tbody>
</table>

**PRACTICE**

1. **PERIMETER**  Find the ratio of the edge length of the triangle in Stage 0 of a Koch snowflake to the edge length of the triangle in Stage 1. How is the perimeter of the triangle in Stage 0 related to the perimeter of the triangle in Stage 1? **Explain.**

2. **MULTI-STEP PROBLEM**  Use the Cantor set, which is a fractal whose iteration consists of dividing a segment into thirds and erasing the middle third.
   a. Draw Stage 0 through Stage 5 of the Cantor set. Stage 0 has a length of one unit.
   b. Make a table showing the stage number, number of segments, segment length, and total length of the Cantor set.
   c. What is the total length of the Cantor set at Stage 10? Stage 20? Stage n?

3. **EXTENDED RESPONSE**  A Sierpinski carpet starts with a square with side length one unit. At each stage, divide the square into nine equal squares with the middle square shaded a different color.
   a. Draw Stage 0 through Stage 3 of a Sierpinski Carpet.
   b. **Explain** why the carpet is said to be **self-similar** by comparing the upper left hand square to the whole square.
   c. Make a table to find the total area of the colored squares at Stage 3.
6.7 Dilations

**MATERIALS** • graph paper • straightedge • compass • ruler

**QUESTION** How can you construct a similar figure?

**EXPLORE** Construct a similar triangle

**STEP 1**

*Draw a triangle* Plot the points $A(1, 3)$, $B(5, 3)$, and $C(5, 1)$ in a coordinate plane. Draw $\triangle ABC$.

**STEP 2**

*Draw rays* Using the origin as an endpoint $O$, draw $\overrightarrow{OA}$, $\overrightarrow{OB}$, and $\overrightarrow{OC}$.

**STEP 3**

*Draw equal segments* Use a compass to mark a point $D$ on $\overrightarrow{OA}$ so $OA = AD$. Mark a point $E$ on $\overrightarrow{OB}$ so $OB = BE$. Mark a point $F$ on $\overrightarrow{OC}$ so $OC = CF$.

**STEP 4**

*Draw the image* Connect points $D$, $E$, and $F$ to form a right triangle.

**DRAW CONCLUSIONS** Use your observations to complete these exercises

1. Measure $\overline{AB}$, $\overline{BC}$, $\overline{DE}$, and $\overline{EF}$. Calculate the ratios $\frac{DE}{AB}$ and $\frac{EF}{BC}$. Using this information, show that the two triangles are similar.

2. Repeat the steps in the Explore to construct $\triangle GHJ$ so that $3 \cdot OA = AG$, $3 \cdot OB = BH$, and $3 \cdot OC = CJ$. 

408  Chapter 6  Similarity
A dilation is a transformation that stretches or shrinks a figure to create a similar figure. A dilation is a type of similarity transformation.

In a dilation, a figure is enlarged or reduced with respect to a fixed point called the center of dilation. The scale factor of a dilation is the ratio of a side length of the image to the corresponding side length of the original figure. In the figure shown, \( \triangle XYZ \) is the image of \( \triangle ABC \). The center of dilation is \((0, 0)\) and the scale factor is \( \frac{XY}{AB} \).

### Example 1
**Draw a dilation with a scale factor greater than 1**

Draw a dilation of quadrilateral \(ABCD\) with vertices \(A(2, 1)\), \(B(4, 1)\), \(C(4, -1)\), and \(D(1, -1)\). Use a scale factor of 2.

**Solution**

First draw \(ABCD\). Find the dilation of each vertex by multiplying its coordinates by 2. Then draw the dilation:

- \((x, y) \to (2x, 2y)\)
- \(A(2, 1) \to L(4, 2)\)
- \(B(4, 1) \to M(8, 2)\)
- \(C(4, -1) \to N(8, -2)\)
- \(D(1, -1) \to P(2, -2)\)
**EXAMPLE 2** Verify that a figure is similar to its dilation

A triangle has the vertices \( A(4, -4), B(8, 2), \) and \( C(8, -4) \). The image of \( \triangle ABC \) after a dilation with a scale factor of \( \frac{1}{2} \) is \( \triangle DEF \).

a. Sketch \( \triangle ABC \) and \( \triangle DEF \).

b. Verify that \( \triangle ABC \) and \( \triangle DEF \) are similar.

**Solution**

a. The scale factor is less than one, so the dilation is a reduction.

\[
(x, y) \rightarrow \left( \frac{1}{2}x, \frac{1}{2}y \right)
\]

\( A(4, -4) \rightarrow D(2, -2) \)

\( B(8, 2) \rightarrow E(4, 1) \)

\( C(8, -4) \rightarrow F(4, -2) \)

b. Because \( \angle C \) and \( \angle F \) are both right angles, \( \angle C \cong \angle F \). Show that the lengths of the sides that include \( \angle C \) and \( \angle F \) are proportional. Find the horizontal and vertical lengths from the coordinate plane.

\[
\frac{AC}{DF} = \frac{BC}{EF} \Rightarrow \frac{4}{2} = \frac{6}{3} \checkmark
\]

So, the lengths of the sides that include \( \angle C \) and \( \angle F \) are proportional.

Therefore, \( \triangle ABC \sim \triangle DEF \) by the SAS Similarity Theorem.

**GUIDED PRACTICE**

for Examples 1 and 2

Find the coordinates of \( L, M, \) and \( N \) so that \( \triangle LMN \) is a dilation of \( \triangle PQR \) with a scale factor of \( k \). Sketch \( \triangle PQR \) and \( \triangle LMN \).

1. \( P(-2, -1), Q(-1, 0), R(0, -1); k = 4 \)  
2. \( P(5, -5), Q(10, -5), R(10, 5); k = 0.4 \)

**EXAMPLE 3** Find a scale factor

**PHOTO STICKERS** You are making your own photo stickers. Your photo is 4 inches by 4 inches. The image on the stickers is 1.1 inches by 1.1 inches. What is the scale factor of the reduction?

**Solution**

The scale factor is the ratio of a side length of the sticker image to a side length of the original photo, or \( \frac{1.1}{4} \text{ in.} \). In simplest form, the scale factor is \( \frac{11}{40} \).
**READING DIAGRAMS** Generally, for a center of dilation at the origin, a point of the figure and its image lie on the same ray from the origin. However, if a point of the figure is the origin, its image is also the origin.

**Example 4** Standardized Test Practice

**You want to create a quadrilateral EFGH that is similar to quadrilateral PQRS. What are the coordinates of H?**

- **A** (12, −15)
- **B** (7, 8)
- **C** (12, 15)
- **D** (15, 18)

**Solution**

Determine if EFGH is a dilation of PQRS by checking whether the same scale factor can be used to obtain E, F, and G from P, Q, and R.

\[(x, y) \rightarrow (kx, ky)\]

- **P**(3, 0) → **E** (9, 0) \[k = 3\]
- **Q** (1, 1) → **F** (3, 3) \[k = 3\]
- **R** (0, 2) → **G** (0, 6) \[k = 3\]

Because \(k\) is the same in each case, the image is a dilation with a scale factor of 3. So, you can use the scale factor to find the image **H** of point **S**.

**S**(4, 5) → **H** (3 • 4, 3 • 5) = **H** (12, 15)

- The correct answer is C.  

**CHECK** Draw rays from the origin through each point and its image.

**Guided Practice** for Examples 3 and 4

3. **WHAT IF?** In Example 3, what is the scale factor of the reduction if your photo is 5.5 inches by 5.5 inches?

4. Suppose a figure containing the origin is dilated. *Explain* why the corresponding point in the image of the figure is also the origin.
1. **VOCABULARY** Copy and complete: In a dilation, the image is ? to the original figure.

2. ★ **WRITING** Explain how to find the scale factor of a dilation. How do you know whether a dilation is an enlargement or a reduction?

**DRAWING DILATIONS** Draw a dilation of the polygon with the given vertices using the given scale factor \( k \).

3. \( A(-2, 1), B(-4, 1), C(-2, 4); k = 2 \)
4. \( A(-5, 5), B(-5, -10), C(10, 0); k = \frac{3}{5} \)
5. \( A(1, 1), B(6, 1), C(6, 3); k = 1.5 \)
6. \( A(2, 8), B(8, 8), C(16, 4); k = 0.25 \)
7. \( A(-8, 0), B(0, 8), C(4, 0), D(0, -4); k = \frac{3}{8} \)
8. \( A(0, 0), B(0, 3), C(2, 4), D(2, -1); k = \frac{13}{2} \)

**IDENTIFYING DILATIONS** Determine whether the dilation from Figure A to Figure B is a reduction or an enlargement. Then find its scale factor.

9. (Diagram)
10. (Diagram)
11. (Diagram)
12. (Diagram)

13. ★ **MULTIPLE CHOICE** You want to create a quadrilateral \( PQRS \) that is similar to quadrilateral \( JKLM \). What are the coordinates of \( S \)?

   - A \((2, 4)\)
   - B \((4, -2)\)
   - C \((-2, -4)\)
   - D \((-4, -2)\)

14. **ERROR ANALYSIS** A student found the scale factor of the dilation from \( AB \) to \( CD \) to be \( \frac{2}{5} \). Describe and correct the student’s error.
15. **ERROR ANALYSIS** A student says that the figure shown represents a dilation. What is wrong with this statement?

**IDENTIFYING TRANSFORMATIONS** Determine whether the transformation shown is a translation, reflection, rotation, or dilation.

16. 

17. 

18. 

**FINDING SCALE FACTORS** Find the scale factor of the dilation of Figure A to Figure B. Then give the unknown lengths of Figure A.

19. 

20. 

21. ★ **MULTIPLE CHOICE** In the diagram shown, \(\triangle ABO\) is a dilation of \(\triangle DEO\). The length of a median of \(\triangle ABO\) is what percent of the length of the corresponding median of \(\triangle DEO\)?

A 50%  
B 75%  
C 133 \(\frac{1}{3}\)%  
D 200%

22. ★ **SHORT RESPONSE** Suppose you dilate a figure using a scale factor of 2. Then, you dilate the image using a scale factor of \(\frac{1}{2}\). Describe the size and shape of this new image.

**CHALLENGE** Describe the two transformations, the first followed by the second, that combined will transform \(\triangle ABC\) into \(\triangle DEF\).

23. \(A(-3, 3), B(-3, 1), C(0, 1)\)  
   \(D(6, 6), E(6, 2), F(0, 2)\)

24. \(A(6, 0), B(9, 6), C(12, 6)\)  
   \(D(0, 3), E(1, 5), F(2, 5)\)
25. **BILLBOARD ADVERTISEMENT**  A billboard advertising agency requires each advertisement to be drawn so that it fits in a 12-inch by 6-inch rectangle. The agency uses a scale factor of 24 to enlarge the advertisement to create the billboard. What are the dimensions of a billboard, in feet?

26. **POTTERY**  Your pottery is used on a poster for a student art show. You want to make postcards using the same image. On the poster, the image is 8 inches in width and 6 inches in height. If the image on the postcard can be 5 inches wide, what scale should you use for the image on the postcard?

27. **SHADOWS**  You and your friend are walking at night. You point a flashlight at your friend, and your friend’s shadow is cast on the building behind him. The shadow is an enlargement, and is 15 feet tall. Your friend is 6 feet tall. What is the scale factor of the enlargement?

28. **OPEN-ENDED MATH**  Describe how you can use dilations to create the figure shown below.

29. **MULTI-STEP PROBLEM**  \( \triangle ABC \) has vertices \( A(3, -3), B(3, 6), \) and \( C(15, 6). \)
   a. Draw a dilation of \( \triangle ABC \) using a scale factor of \( \frac{2}{3}. \)
   b. Find the ratio of the perimeter of the image to the perimeter of the original figure. How does this ratio compare to the scale factor?
   c. Find the ratio of the area of the image to the area of the original figure. How does this ratio compare to the scale factor?

30. **EXTENDED RESPONSE**  Look at the coordinate notation for a dilation on page 409. Suppose the definition of dilation allowed \( k < 0. \)
   a. Describe the dilation if \( -1 < k < 0. \)
   b. Describe the dilation if \( k < -1. \)
   c. Use a rotation to describe a dilation with \( k = -1. \)
31. ★ **SHORT RESPONSE** Explain how you can use dilations to make a perspective drawing with the center of dilation as a vanishing point. Draw a diagram.

32. **MIDPOINTS** Let \( \overline{XY} \) be a dilation of \( \overline{PQ} \) with scale factor \( k \). Show that the image of the midpoint of \( \overline{PQ} \) is the midpoint of \( \overline{XY} \).

33. **REASONING** In Exercise 32, show that \( \overline{XY} \parallel \overline{PQ} \).

34. **CHALLENGE** A rectangle has vertices \( A(0, 0), B(0, 6), C(9, 6), \) and \( D(9, 0) \). Explain how to dilate the rectangle to produce an image whose area is twice the area of the original rectangle. Make a conjecture about how to dilate any polygon to produce an image whose area is \( n \) times the area of the original polygon.

---

**MIXED REVIEW**

Simplify the expression. (p. 873)

35. \((3x + 2)^2 + (x - 5)^2\)

36. \(4\left(\frac{1}{2}ab\right) + (b - a)^2\)

37. \((a + b)^2 - (a - b)^2\)

Find the distance between each pair of points. (p. 15)

38. \((0, 5) \text{ and } (4, 3)\)

39. \((-3, 0) \text{ and } (2, 4)\)

40. \((-2, -4) \text{ and } (3, -2)\)

Find the value(s) of the variable(s).

41. Area = 6 in.\(^2\) (p. 49)

42. \(\triangle ABC \equiv \triangle DCB\) (p. 256)

43. \(\triangle PQR\) is isosceles. (p. 303)

---

**QUIZ for Lessons 6.6–6.7**

Find the value of \( x \). (p. 397)

1. [Diagram of triangle with labeled sides]

2. [Diagram of triangle with labeled sides]

3. [Diagram of triangle with labeled sides]

Draw a dilation of \( \triangle ABC \) with the given vertices and scale factor \( k \). (p. 409)

4. \( A(-5, 5), B(-5, -10), C(10, 0); k = 0.4\)

5. \( A(-2, 1), B(-4, 1), C(-2, 4); k = 2.5\)

---

**EXTRA PRACTICE** for Lesson 6.7, p. 907  
**ONLINE QUIZ** at classzone.com
Lessons 6.4–6.7

1. **OPEN-ENDED** The diagram shows the front of a house. What information would you need in order to show that \( \triangle WXY \sim \triangle VXZ \) using the SAS Similarity Theorem?

2. **EXTENDED RESPONSE** You leave your house to go to the mall. You drive due north 8 miles, due east 7.5 miles, and due north again 2 miles.
   a. Explain how to prove that \( \triangle ABC \sim \triangle EDC \).
   b. Find \( CD \).
   c. Find \( AE \), the distance between your house and the mall.

3. **SHORT RESPONSE** The Cardon cactus found in the Sonoran Desert in Mexico is the tallest type of cactus in the world. Marco stands 76 feet from the cactus so that his shadow coincides with the cactus’ shadow. Marco is 6 feet tall and his shadow is 8 feet long. How tall is the Cardon cactus? Explain.

4. **SHORT RESPONSE** In the diagram, is it always, sometimes, or never true that \( l_1 \parallel l_2 \parallel l_3 \)? Explain.

5. **GRIDDED ANSWER** In the diagram of the roof truss, \( HK = 7 \) meters, \( KM = 8 \) meters, \( JL = 4.7 \) meters, and \( \angle 1 \equiv \angle 2 \). Find \( LM \) to the nearest tenth of a meter.

6. **GRIDDED ANSWER** You are designing a catalog for a greeting card company.
   The catalog features a 2 4 \( \frac{4}{5} \) inch by 2 inch photograph of each card. The actual dimensions of a greeting card are 7 inches by 5 inches. What is the scale factor of the reduction?

7. **MULTI-STEP PROBLEM** Rectangle \( ABCD \) has vertices \( A(2, 2), B(4, 2), C(4, -4), \) and \( D(2, -4) \).
   a. Draw rectangle \( ABCD \). Then draw a dilation of rectangle \( ABCD \) using a scale factor of \( \frac{5}{4} \). Label the image \( PQRS \).
   b. Find the ratio of the perimeter of the image to the perimeter of the original figure. How does this ratio compare to the scale factor?
   c. Find the ratio of the area of the image to the area of the original figure. How does this ratio compare to the scale factor?
**Big Idea 1**

**Using Ratios and Proportions to Solve Geometry Problems**

You can use properties of proportions to solve a variety of algebraic and geometric problems.

\[ \frac{AB}{BC} = \frac{ED}{DC} \]

For example, in the diagram above, suppose you know that \( \frac{AB}{BC} = \frac{5}{6} \).

Then you can write any of the following relationships.

\[ \frac{5}{x} = \frac{6}{18} \quad 5 \cdot 18 = 6x \quad \frac{x}{5} = \frac{18}{6} \quad \frac{5}{6} = \frac{x}{18} \quad \frac{5 + x}{x} = \frac{6 + 18}{18} \]

**Big Idea 2**

**Showing that Triangles are Similar**

You learned three ways to prove two triangles are similar.

<table>
<thead>
<tr>
<th>AA Similarity Postulate</th>
<th>SSS Similarity Theorem</th>
<th>SAS Similarity Theorem</th>
</tr>
</thead>
<tbody>
<tr>
<td>( \angle A \cong \angle D ) and ( \angle B \cong \angle E ), then ( \triangle ABC \sim \triangle DEF ).</td>
<td>( \frac{AB}{DE} = \frac{BC}{EF} = \frac{AC}{DF} ) then ( \triangle ABC \sim \triangle DEF ).</td>
<td>( \angle A \cong \angle D ) and ( \frac{AB}{DE} = \frac{AC}{DF} ), then ( \triangle ABC \sim \triangle DEF ).</td>
</tr>
</tbody>
</table>

**Big Idea 3**

**Using Indirect Measurement and Similarity**

You can use triangle similarity theorems to apply indirect measurement in order to find lengths that would be inconvenient or impossible to measure directly.

Consider the diagram shown. Because the two triangles formed by the person and the tree are similar by the AA Similarity Postulate, you can write the following proportion to find the height of the tree.

\[ \frac{\text{height of person}}{\text{length of person's shadow}} = \frac{\text{height of tree}}{\text{length of tree's shadow}} \]

You also learned about dilations, a type of similarity transformation. In a dilation, a figure is either enlarged or reduced in size.
**VOCABULARY EXERCISES**

Copy and complete the statement.

1. A ____ is a transformation in which the original figure and its image are similar.

2. If \(\triangle PQR \sim \triangle XYZ\), then \(\frac{PQ}{XY} = \frac{?}{?} = \frac{?}{?}\).

3. **WRITING** Describe the relationship between a ratio and a proportion. Give an example of each.

**REVIEW EXAMPLES AND EXERCISES**

Use the review examples and exercises below to check your understanding of the concepts you have learned in each lesson of Chapter 6.

**EXERCISES**

4. The length of a rectangle is 20 meters and the width is 15 meters. Find the ratio of the width to the length of the rectangle. Then simplify the ratio.

5. The measures of the angles in \(\triangle UVW\) are in the extended ratio of 1:1:2. Find the measures of the angles.

6. Find the geometric mean of 8 and 12.
6.2 Use Proportions to Solve Geometry Problems

**Example**

In the diagram, \( \frac{BA}{DA} = \frac{BC}{EC} \). Find \( BD \).

\[
\begin{align*}
\frac{x + 3}{3} &= \frac{8 + 2}{2} \\
2x + 6 &= 30 \\
x &= 12
\end{align*}
\]

**Exercises**

Use the diagram and the given information to find the unknown length.

7. Given \( \frac{RN}{RP} = \frac{QM}{QL} \), find \( RP \).

8. Given \( \frac{CD}{DB} = \frac{CE}{EA} \), find \( CD \).

---

6.3 Use Similar Polygons

**Example**

In the diagram, \( EHGF \sim KLMN \). Find the scale factor.

From the diagram, you can see that \( EH \) and \( KL \) correspond. So, the scale factor of \( EHGF \) to \( KLMN \) is \( \frac{EH}{KL} = \frac{12}{18} = \frac{2}{3} \).

**Exercises**

In Exercises 9 and 10, determine whether the polygons are similar. If they are, write a similarity statement and find the scale factor.

9.

10.

11. **Posters** Two similar posters have a scale factor of 4 : 5. The large poster’s perimeter is 85 inches. Find the small poster’s perimeter.
6.4 Prove Triangles Similar by AA

**Example**

Determine whether the triangles are similar. If they are, write a similarity statement. Explain your reasoning.

Because they are right angles, \( \angle F \cong \angle B \). By the Triangle Sum Theorem, \( 61^\circ + 90^\circ + m\angle E = 180^\circ \), so \( m\angle E = 29^\circ \) and \( \angle E \cong \angle A \). Then, two angles of \( \triangle DFE \) are congruent to two angles of \( \triangle CBA \). So, \( \triangle DFE \sim \triangle CBA \).

**Exercises**

Use the AA Similarity Postulate to show that the triangles are similar.

12.

13.

14. **Cell Tower** A cellular telephone tower casts a shadow that is 72 feet long, while a tree nearby that is 27 feet tall casts a shadow that is 6 feet long. How tall is the tower?

6.5 Prove Triangles Similar by SSS and SAS

**Example**

Show that the triangles are similar.

Notice that the lengths of two pairs of corresponding sides are proportional.

\[
\frac{WZ}{YZ} = \frac{14}{21} = \frac{2}{3} \quad \frac{VZ}{XZ} = \frac{20}{30} = \frac{2}{3}
\]

The included angles for these sides, \( \angle XZY \) and \( \angle VZW \), are vertical angles, so \( \angle XZY \cong \angle VZW \). Then \( \triangle XZY \sim \triangle VWZ \) by the SAS Similarity Theorem.

**Exercises**

Use the SSS Similarity Theorem or SAS Similarity Theorem to show that the triangles are similar.

15.

16.
6.6 Use Proportionality Theorems  

**Example**

Determine whether \( MP \parallel LQ \).

Begin by finding and simplifying ratios of lengths determined by \( MP \).

\[
\frac{NM}{ML} = \frac{8}{4} = \frac{2}{1} \quad \frac{NP}{PQ} = \frac{24}{12} = \frac{2}{1}
\]

Because \( \frac{NM}{ML} = \frac{NP}{PQ} \), \( MP \) is parallel to \( LQ \) by Theorem 6.5, the Triangle Proportionality Converse.

**Exercises**

Use the given information to determine whether \( AB \parallel CD \).

17. \[ \begin{array}{c}
\begin{array}{c}
C \\
20
\end{array}
\begin{array}{c}
A \\
10
\end{array}
\begin{array}{c}
B \\
16
\end{array}
\begin{array}{c}
D \\
28
\end{array}
\end{array} \]

18. \[ \begin{array}{c}
\begin{array}{c}
C \\
13.5
\end{array}
\begin{array}{c}
E \\
22.5
\end{array}
\begin{array}{c}
D \\
12
\end{array}
\begin{array}{c}
B \\
20
\end{array}
\end{array} \]

6.7 Perform Similarity Transformations

**Example**

Draw a dilation of quadrilateral \( FGHJ \) with vertices \( F(1, 1) \), \( G(2, 2) \), \( H(4, 1) \), and \( J(2, -1) \). Use a scale factor of 2.

First draw \( FGHJ \). Find the dilation of each vertex by multiplying its coordinates by 2. Then draw the dilation.

\[
(\text{x}, \text{y}) \rightarrow (2\text{x}, 2\text{y})
\]

\[
\begin{array}{l}
F(1, 1) \rightarrow (2, 2) \\
G(2, 2) \rightarrow (4, 4) \\
H(4, 1) \rightarrow (8, 2) \\
J(2, -1) \rightarrow (4, -2)
\end{array}
\]

**Exercises**

Draw a dilation of the polygon with the given vertices using the given scale factor \( k \).

19. \( T(0, 8), U(6, 0), V(0, 0); k = \frac{3}{2} \)

20. \( A(6, 0), B(3, 9), C(0, 0), D(3, 1); k = 4 \)

21. \( P(8, 2), Q(4, 0), R(3, 1), S(6, 4); k = 0.5 \)
Solve the proportion.

1. $\frac{6}{x} = \frac{9}{24}$
2. $\frac{5}{4} = \frac{y - 5}{12}$
3. $\frac{3 - 2b}{4} = \frac{3}{2}$
4. $\frac{7}{2a + 8} = \frac{1}{a - 1}$

In Exercises 5–7, use the diagram where $\triangle PQR \sim \triangle ABC$.

5. List all pairs of congruent angles.
6. Write the ratios of the corresponding sides in a statement of proportionality.
7. Find the value of $x$.

Determine whether the triangles are similar. If so, write a similarity statement and the postulate or theorem that justifies your answer.

8.

9.

10.

In Exercises 11–13, find the length of $AB$.

11.

12.

13.

Determine whether the dilation from Figure A to Figure B is a reduction or an enlargement. Then find its scale factor.

14.

15.

16. **SCALE MODEL** You are making a scale model of your school’s baseball diamond as part of an art project. The distance between two consecutive bases is 90 feet. If you use a scale factor of $\frac{1}{180}$ to build your model, what will be the distance around the bases on your model?
A radical expression is simplified when the radicand has no perfect square factor except 1, there is no fraction in the radicand, and there is no radical in a denominator.

**Example 1: Solve quadratic equations by finding square roots**

Solve the equation $4x^2 - 3 = 109$.

1. Write original equation.
2. $4x^2 = 112$ Add 3 to each side.
3. $x^2 = 28$ Divide each side by 4.
4. $x = \pm \sqrt{28}$, or $x = \pm \sqrt{4 \cdot 7}$.
5. $x = \pm 2\sqrt{7}$ Simplify.

**Example 2: Simplify quotients with radicals**

Simplify the expression.

a. \( \frac{\sqrt{10}}{\sqrt{8}} \)

b. \( \frac{\sqrt{1}}{\sqrt{5}} \)

Solution

a. \( \frac{\sqrt{10}}{\sqrt{8}} = \frac{\sqrt{5}}{\sqrt{4}} \)

      = \( \frac{\sqrt{5}}{2} \) Simplify.

b. \( \frac{\sqrt{1}}{\sqrt{5}} = \frac{1}{\sqrt{5}} \cdot \frac{\sqrt{5}}{\sqrt{5}} \)

      = \( \frac{\sqrt{5}}{5} \) Multiply numerator and denominator by \( \sqrt{5} \).

      Multiply fractions. \( \sqrt{a} \cdot \sqrt{b} = \sqrt{ab} \).

**Exercises**

**Example 1** for Exs. 1–9

Solve the equation or write no solution.

1. \( x^2 + 8 = 108 \)
2. \( 2x^2 - 1 = 49 \)
3. \( x^2 - 9 = 8 \)
4. \( 5x^2 + 11 = 1 \)
5. \( 2(x^2 - 7) = 6 \)
6. \( 9 = 21 + 3x^2 \)
7. \( 3x^2 - 17 = 43 \)
8. \( 56 - x^2 = 20 \)
9. \( -3(-x^2 + 5) = 39 \)

**Example 2** for Exs. 10–17

Simplify the expression.

10. \( \frac{\sqrt{7}}{\sqrt{81}} \)
11. \( \frac{\sqrt{3}}{\sqrt{5}} \)
12. \( \frac{\sqrt{24}}{\sqrt{27}} \)
13. \( \frac{3\sqrt{7}}{\sqrt{12}} \)
14. \( \frac{\sqrt{75}}{\sqrt{64}} \)
15. \( \frac{\sqrt{2}}{\sqrt{200}} \)
16. \( \frac{9}{\sqrt{27}} \)
17. \( \frac{21}{\sqrt{42}} \)
To find the height of a tree, a student 63 inches in height measures the length of the tree's shadow and the length of his own shadow, as shown. The student casts a shadow 81 inches in length and the tree casts a shadow 477 inches in length.

a. Explain why $\triangle PQR \sim \triangle TQS$.

b. Find the height of the tree.

c. Suppose the sun is a little lower in the sky. Can you still use this method to measure the height of the tree? Explain.

Below are sample solutions to the problem. Read each solution and the comments in blue to see why the sample represents full credit, partial credit, or no credit.

**SAMPLE 1: Full credit solution**

- a. Because they are both right angles, $\angle QPR \cong \angle QTS$. Also, $\angle Q \cong \angle Q$ by the Reflexive Property. So, $\triangle PQR \sim \triangle TQS$ by the AA Similarity Postulate.

- b. $\frac{PR}{PQ} = \frac{TS}{TQ}$

  $\frac{63}{81} = \frac{TS}{477}$

  $63(477) = 81 \cdot TS$

  $371 = TS$

  The height of the tree is 371 inches.

- c. As long as the sun creates two shadows, I can use this method. Angles $P$ and $T$ will always be right angles. The measure of $\angle Q$ will change as the sun's position changes, but the angle will still be congruent to itself. So, $\triangle PQR$ and $\triangle TQS$ will still be similar, and I can write a proportion.
In part (b), the proportion is incorrect, which leads to an incorrect solution.

In part (c), a partial explanation is given.

The height of the tree is 308 inches.

As long as the sun creates two shadows, I can use this method because the triangles will always be similar.

**SAMPLE 2: Partial credit solution**

a. \( \triangle PQR \sim \triangle TQS \) by the Angle-Angle Similarity Postulate.

b. \[
\frac{PR}{PQ} = \frac{TS}{TP}
\]
\[
\frac{63}{81} = \frac{TS}{396}
\]
\[
308 = TS
\]

The height of the tree is 308 inches.

c. As long as the sun creates two shadows, I can use this method because the triangles will always be similar.

**SAMPLE 3: No credit solution**

a. The triangles are similar because the lines are parallel and the angles are congruent.

b. \( TS = 371 \) inches

c. No. The angles in the triangle will change, so you can't write a proportion.

**PRACTICE**  
**Apply the Scoring Rubric**

1. A student's solution to the problem on the previous page is given below. Score the solution as full credit, partial credit, or no credit. Explain your reasoning. If you choose partial credit or no credit, explain how you would change the solution so that it earns a score of full credit.

   a. \( \angle QPR \equiv \angle PTS \), and \( \angle Q \) is in both triangles. So, \( \triangle PQR \sim \triangle TQS \).

   b. \[
   \frac{PR}{PQ} = \frac{QT}{ST}
   \]
   \[
   \frac{63}{81} = \frac{477}{x}
   \]
   \[
   63x = 81(477)
   \]
   \[
   x = 613.3
   \]

   The tree is about 613.3 inches tall.

   c. The method will still work because the triangles will still be similar if the sun changes position. The right angles will stay right angles, and \( \angle Q \) is in both triangles, so it does not matter if its measure changes.
EXTENDED RESPONSE

1. Use the diagram.
   a. Explain how you know that \( \triangle ABC \sim \triangle EDC \).
   b. Find the value of \( n \).
   c. The perimeter of \( \triangle ABC \) is 22. What is the perimeter of \( \triangle EDC \)? Justify your answer.

2. On the easel shown at the right, \( \overline{AB} \parallel \overline{HC} \parallel \overline{GD} \), and \( \overline{AG} \cong \overline{BD} \).
   a. Find \( \overline{BD} \), \( \overline{BC} \), and \( \overline{CD} \). Justify your answer.
   b. On the easel, \( \overline{MP} \) is a support bar attached to \( \overline{AB} \), \( \overline{HC} \), and \( \overline{GD} \). On this support bar, \( NP = 10 \) inches. Find the length of \( MP \) to the nearest inch. Justify your answer.
   c. The support bar \( \overline{MP} \) bisects \( \overline{AB} \), \( \overline{HC} \), and \( \overline{GD} \). Does this mean that polygons \( AMNH \) and \( AMPG \) are similar? Explain.

3. A handmade rectangular rug is available in two sizes at a rug store. A small rug is 24 inches long and 16 inches wide. A large rug is 36 inches long and 24 inches wide.
   a. Are the rugs similar? If so, what is the ratio of their corresponding sides? Explain.
   b. Find the perimeter and area of each rug. Then find the ratio of the perimeters (large rug to small rug) and the ratio of the areas (large rug to small rug).
   c. It takes 250 feet of wool yarn to make 1 square foot of either rug. How many inches of yarn are used for each rug? Explain.
   d. The price of a large rug is 1.5 times the price of a small rug. The store owner wants to change the prices for the rugs, so that the price for each rug is based on the amount of yarn used to make the rug. If the owner changes the prices, about how many times as much will the price of a large rug be than the price of a small rug? Explain.

4. In the diagram shown at the right, \( \overline{OQ} \) passes through the origin.
   a. Explain how you know that \( \triangle OPS \sim \triangle OQR \).
   b. Find the coordinates of point \( Q \). Justify your answer.
   c. The \( x \)-coordinate of a point on \( \overline{OQ} \) is \( a \). Write the \( y \)-coordinate of this point in terms of \( a \). Justify your answer.
MULTIPLE CHOICE

5. If \( \triangle PQR \sim \triangle STU \), which proportion is not necessarily true?

A \( \frac{PQ}{QR} = \frac{ST}{TU} \)  
B \( \frac{PQ}{SU} = \frac{PR}{TU} \)  
C \( \frac{PR}{SU} = \frac{QR}{ST} \)  
D \( \frac{PQ}{PR} = \frac{ST}{SU} \)

6. On a map, the distance between two cities is \( 2\frac{3}{4} \) inches. The scale on the map is 1 in.:80 mi. What is the actual distance between the two cities?

A 160 mi  
B 180 mi  
C 200 mi  
D 220 mi

7. In the diagram, what is the scale factor of the dilation from \( \triangle PQR \) to \( \triangle TUV \)?

A \( \frac{1}{2} \)  
B \( \frac{1}{3} \)  
C 2  
D 3

GRIDDED ANSWER

8. Find the value of \( x \).

9. In the diagram below, \( \triangle PQM \sim \triangle NMR \), and \( \overline{MR} \equiv \overline{QR} \). If \( NR = 12 \), find \( PM \).

10. Given \( GE = 10 \), find \( HE \).

11. In an acute isosceles triangle, the measures of two of the angles are in the ratio \( 4 : 1 \). Find the measure of a base angle in the triangle.

SHORT RESPONSE

12. On a school campus, the gym is 400 feet from the art studio.
   a. Suppose you draw a map of the school campus using a scale of \( \frac{1}{4} \) inch: 100 feet. How far will the gym be from the art studio on your map?
   b. Suppose you draw a map of the school campus using a scale of \( \frac{1}{2} \) inch: 100 feet. Will the distance from the gym to the art studio on this map be greater than or less than the distance on the map in part (a)? Explain.

13. Rectangles \( ABCD \) and \( EFGH \) are similar, and the ratio of \( AB \) to \( EF \) is \( 1 : 3 \). In each rectangle, the length is twice the width. The area of \( ABCD \) is 32 square inches. Find the length, width, and area of \( EFGH \). Explain.
Find \( m \angle 2 \) if \( \angle 1 \) and \( \angle 2 \) are (a) complementary angles and (b) supplementary angles. \( \text{(p. 24)} \)

1. \( m \angle 1 = 57^\circ \)
2. \( m \angle 1 = 23^\circ \)
3. \( m \angle 1 = 88^\circ \)
4. \( m \angle 1 = 46^\circ \)

Solve the equation and write a reason for each step. \( \text{(p. 105)} \)

5. \( 3x - 19 = 47 \)
6. \( 30 - 4(x - 3) = -x + 18 \)
7. \( -5(x + 2) = 25 \)

State the postulate or theorem that justifies the statement. \( \text{(pp. 147, 154)} \)

8. \( \angle 1 \equiv \angle 8 \)
9. \( \angle 3 \equiv \angle 6 \)
10. \( m \angle 3 + m \angle 5 = 180^\circ \)
11. \( \angle 3 \equiv \angle 7 \)
12. \( \angle 2 \equiv \angle 3 \)
13. \( m \angle 7 + m \angle 8 = 180^\circ \)

The variable expressions represent the angle measures of a triangle. Find the measure of each angle. Then classify the triangle by its angles. \( \text{(p. 217)} \)

14. \( m \angle A = x^\circ \)
   \( m \angle B = 3x^\circ \)
   \( m \angle C = 4x^\circ \)
15. \( m \angle A = 2x^\circ \)
   \( m \angle B = 2x^\circ \)
   \( m \angle C = (x - 15)^\circ \)
16. \( m \angle A = (3x - 15)^\circ \)
   \( m \angle B = (x + 5)^\circ \)
   \( m \angle C = (x - 20)^\circ \)

Determine whether the triangles are congruent. If so, write a congruence statement and state the postulate or theorem you used. \( \text{(pp. 234, 240, 249)} \)

17. 18. 19.

Find the value of \( x \). \( \text{(pp. 295, 303, 310)} \)

20. 21. 22.

Determine whether the triangles are similar. If they are, write a similarity statement and state the postulate or theorem you used. \( \text{(pp. 381, 388)} \)

23. 24. 25.
26. **PROFITS** A company’s profits for two years are shown in the table. Plot and connect the points \((x, y)\). Use the Midpoint Formula to estimate the company’s profits in 2003. (Assume that profits followed a linear pattern.) \((p. 15)\)

<table>
<thead>
<tr>
<th>Years since 2000, (x)</th>
<th>1</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>Profit, (y) (in dollars)</td>
<td>21,000</td>
<td>36,250</td>
</tr>
</tbody>
</table>

27. **TENNIS MEMBERSHIP** The graph at the right models the accumulated cost for an individual adult tennis club membership for several months. \((p. 180)\)
   a. Write an equation of the line.
   b. Tell what the slope and \(y\)-intercept mean in this situation.
   c. Find the accumulated cost for one year.

**PROOF** Write a two-column proof or a paragraph proof. \((pp. 234, 240, 249)\)

28. **GIVEN** \(\overline{FG} \equiv \overline{HJ}, \overline{MH} \equiv \overline{KG},\)
    \(\overline{MF} \perp \overline{HJ}, \overline{KJ} \perp \overline{FJ}\)

**PROVE** \(\triangle FHM \equiv \triangle JGK\)

29. **GIVEN** \(\overline{BC} \parallel \overline{AD}\)
    \(\frac{BC}{AD}\)

**PROVE** \(\triangle BCD \equiv \triangle DAB\)

30. **COMMUNITY CENTER** A building committee needs to choose a site for a new community center. The committee decides that the new center should be located so that it is the same distance from each of the three local schools. Use the diagram to make a sketch of the triangle formed by the three schools. Explain how you can use this triangle to locate the site for the new community center. \((p. 303)\)

31. **GEOGRAPHY** The map shows the distances between three cities in North Dakota. Describe the range of possible distances from Bowman to Ellendale. \((p. 328)\)

32. **CALENDAR** You send 12 photos to a company that makes personalized wall calendars. The company enlarges the photos and inserts one for each month on the calendar. Each photo is 4 inches by 6 inches. The image for each photo on the calendar is 10 inches by 15 inches. What is the scale factor of the enlargement? \((p. 409)\)
7
Right Triangles and Trigonometry

7.1 Apply the Pythagorean Theorem
7.2 Use the Converse of the Pythagorean Theorem
7.3 Use Similar Right Triangles
7.4 Special Right Triangles
7.5 Apply the Tangent Ratio
7.6 Apply the Sine and Cosine Ratios
7.7 Solve Right Triangles

In previous courses and in Chapters 1–6, you learned the following skills, which you’ll use in Chapter 7: classifying triangles, simplifying radicals, and solving proportions.

Prerequisite Skills

**VOCABULARY CHECK**
Name the triangle shown.

1.

2.

3. 80° 75° 25°

4. 135°

**SKILLS AND ALGEBRA CHECK**
Simplify the radical. *(Review p. 874 for 7.1, 7.2, 7.4.)*

5. \( \sqrt{45} \)

6. \( (3\sqrt{7})^2 \)

7. \( \sqrt{3} \cdot \sqrt{5} \)

8. \( \frac{7}{\sqrt{2}} \)

Solve the proportion. *(Review p. 356 for 7.3, 7.5–7.7.)*

9. \( \frac{3}{x} = \frac{12}{16} \)

10. \( \frac{2}{3} = \frac{x}{18} \)

11. \( \frac{x + 5}{4} = \frac{1}{2} \)

12. \( \frac{x + 4}{x - 4} = \frac{6}{5} \)

@HomeTutor Prerequisite skills practice at classzone.com
In Chapter 7, you will apply the big ideas listed below and reviewed in the Chapter Summary on page 493. You will also use the key vocabulary listed below.

**Big Ideas**

1. Using the Pythagorean Theorem and its converse
2. Using special relationships in right triangles
3. Using trigonometric ratios to solve right triangles

**Key Vocabulary**

- Pythagorean triple, p. 435
- trigonometric ratio, p. 466
- tangent, p. 466
- sine, p. 473
- cosine, p. 473
- angle of elevation, p. 475
- angle of depression, p. 475
- solve a right triangle, p. 483
- inverse tangent, p. 483
- inverse sine, p. 483
- inverse cosine, p. 483

**Why?**

You can use trigonometric ratios to find unknown side lengths and angle measures in right triangles. For example, you can find the length of a ski slope.

**Animated Geometry**

The animation illustrated below for Example 4 on page 475 helps you answer this question: How far will you ski down the mountain?

You can use right triangles to find the distance you ski down a mountain.

Click on the “Spin” button to generate values for y and z. Find the value of x.

**Other animations for Chapter 7:** pages 434, 442, 450, 460, and 462
7.1 Pythagorean Theorem

**MATERIALS**  - graph paper  - ruler  - pencil  - scissors

**QUESTION**  What relationship exists among the sides of a right triangle?

Recall that a square is a four sided figure with four right angles and four congruent sides.

**EXPLORE**  Make and use a tangram set

**STEP 1**  Make a tangram set  On your graph paper, copy the tangram set as shown. Label each piece with the given letters. Cut along the solid black lines to make seven pieces.

**STEP 2**  Trace a triangle  On another piece of paper, trace one of the large triangles \(\text{T} \) of the tangram set.

**STEP 3**  Assemble pieces along the legs  Use all of the tangram pieces to form two squares along the legs of your triangle so that the length of each leg is equal to the side length of the square. Trace all of the pieces.

**STEP 4**  Assemble pieces along the hypotenuse  Use all of the tangram pieces to form a square along the hypotenuse so that the side length of the square is equal to the length of the hypotenuse. Trace all of the pieces.

**DRAW CONCLUSIONS**  Use your observations to complete these exercises

1. Find the sum of the areas of the two squares formed in Step 3. Let the letters labeling the figures represent the area of the figure. How are the side lengths of the squares related to Triangle \(\text{T} \)?

2. Find the area of the square formed in Step 4. How is the side length of the square related to Triangle \(\text{T} \)?

3. Compare your answers from Exercises 1 and 2. Make a conjecture about the relationship between the legs and hypotenuse of a right triangle.

4. The triangle you traced in Step 2 is an isosceles right triangle. Why? Do you think that your conjecture is true for all isosceles triangles? Do you think that your conjecture is true for all right triangles? *Justify* your answers.
One of the most famous theorems in mathematics is the Pythagorean Theorem, named for the ancient Greek mathematician Pythagoras (around 500 B.C.). This theorem can be used to find information about the lengths of the sides of a right triangle.

**Key Vocabulary**
- Pythagorean triple
- right triangle, p. 217
- leg of a right triangle, p. 241
- hypotenuse, p. 241

**THEOREM**

**Theorem 7.1 Pythagorean Theorem**

In a right triangle, the square of the length of the hypotenuse is equal to the sum of the squares of the lengths of the legs.

\[ c^2 = a^2 + b^2 \]

**Proof:** p. 434; Ex. 32, p. 455

**Example 1** Find the length of a hypotenuse

Find the length of the hypotenuse of the right triangle.

**Solution**

\[(\text{hypotenuse})^2 = (\text{leg})^2 + (\text{leg})^2\]

\[ x^2 = 6^2 + 8^2 \]

\[ x^2 = 36 + 64 \]

\[ x^2 = 100 \]

\[ x = 10 \]

Find the positive square root.

**Guided Practice** for Example 1

Identify the unknown side as a leg or hypotenuse. Then, find the unknown side length of the right triangle. Write your answer in simplest radical form.

1. 

2. 

7.1 Apply the Pythagorean Theorem
**Example 2** Standardized Test Practice

A 16 foot ladder rests against the side of the house, and the base of the ladder is 4 feet away. Approximately how high above the ground is the top of the ladder?

- A 240 feet
- B 20 feet
- C 16.5 feet
- D 15.5 feet

**Solution**

\[
\text{Length of ladder}^2 = \text{Distance from house}^2 + \text{Height of ladder}^2
\]

\[
16^2 = 4^2 + x^2 \quad \text{Substitute.}
\]

\[
256 = 16 + x^2 \quad \text{Multiply.}
\]

\[
240 = x^2 \quad \text{Subtract 16 from each side.}
\]

\[
\sqrt{240} = x \quad \text{Find positive square root.}
\]

\[
15.491 \approx x \quad \text{Approximate with a calculator.}
\]

The ladder is resting against the house at about 15.5 feet above the ground.

The correct answer is D.  \( \text{D} \)

**Guided Practice** for Example 2

3. The top of a ladder rests against a wall, 23 feet above the ground. The base of the ladder is 6 feet away from the wall. What is the length of the ladder?

4. The Pythagorean Theorem is only true for what type of triangle?

**Proving the Pythagorean Theorem**

There are many proofs of the Pythagorean Theorem. An informal proof is shown below. You will write another proof in Exercise 32 on page 455.

In the figure at the right, the four right triangles are congruent, and they form a small square in the middle. The area of the large square is equal to the area of the four triangles plus the area of the smaller square.

**Review Area**

Recall that the area of a square with side length \( s \) is \( A = s^2 \).

The area of a triangle with base \( b \) and height \( h \) is \( A = \frac{1}{2}bh \).
EXAMPLE 3  Find the area of an isosceles triangle

Find the area of the isosceles triangle with side lengths 10 meters, 13 meters, and 13 meters.

Solution

STEP 1  Draw a sketch. By definition, the length of an altitude is the height of a triangle. In an isosceles triangle, the altitude to the base is also a perpendicular bisector. So, the altitude divides the triangle into two right triangles with the dimensions shown.

STEP 2  Use the Pythagorean Theorem to find the height of the triangle.

\[ c^2 = a^2 + b^2 \]

Pythagorean Theorem

\[ 13^2 = 5^2 + h^2 \]

Substitute.

\[ 169 = 25 + h^2 \]

Multiply.

\[ 144 = h^2 \]

Subtract 25 from each side.

\[ 12 = h \]

Find the positive square root.

STEP 3  Find the area.

\[
\text{Area} = \frac{1}{2}(\text{base})(\text{height}) = \frac{1}{2}(10)(12) = 60 \text{ m}^2
\]

The area of the triangle is 60 square meters.

GUIDED PRACTICE for Example 3

Find the area of the triangle.

5. 30 ft

6. 20 m 26 m

PYTHAGOREAN TRIPLES  A Pythagorean triple is a set of three positive integers \( a, b, \) and \( c \) that satisfy the equation \( c^2 = a^2 + b^2 \).

KEY CONCEPT For Your Notebook

Common Pythagorean Triples and Some of Their Multiples

<table>

</tbody>
</table>

The most common Pythagorean triples are in bold. The other triples are the result of multiplying each integer in a bold face triple by the same factor.
**Example 4** Find the length of a hypotenuse using two methods

Find the length of the hypotenuse of the right triangle.

**Solution**

Method 1: Use a Pythagorean triple.

A common Pythagorean triple is 5, 12, 13. Notice that if you multiply the lengths of the legs of the Pythagorean triple by 2, you get the lengths of the legs of this triangle: 5 \( \cdot \) 2 = 10 and 12 \( \cdot \) 2 = 24. So, the length of the hypotenuse is 13 \( \cdot \) 2 = 26.

Method 2: Use the Pythagorean Theorem.

\[ x^2 = 10^2 + 24^2 \]  
Pythagorean Theorem

\[ x^2 = 100 + 576 \]  
Multiply.

\[ x^2 = 676 \]  
Add.

\[ x = 26 \]  
Find the positive square root.

**Guided Practice** for Example 4

Find the unknown side length of the right triangle using the Pythagorean Theorem. Then use a Pythagorean triple.

7. \( x \) in.

8. \( x \) cm

**Exercises**

1. **Vocabulary** Copy and complete: A set of three positive integers \( a, b, \) and \( c \) that satisfy the equation \( c^2 = a^2 + b^2 \) is called a ____. 

2. **Writing** Describe the information you need to have in order to use the Pythagorean Theorem to find the length of a side of a triangle.

3. **Algebra** Find the length of the hypotenuse of the right triangle.

PROBLEM SOLVING

31. BASEBALL DIAMOND  In baseball, the distance of the paths between each pair of consecutive bases is 90 feet and the paths form right angles. How far does the ball need to travel if it is thrown from home plate directly to second base?  

32. APPLE BALLOON  You tie an apple balloon to a stake in the ground. The rope is 10 feet long. As the wind picks up, you observe that the balloon is now 6 feet away from the stake. How far above the ground is the balloon now?

33. ★ SHORT RESPONSE  Three side lengths of a right triangle are 25, 65, and 60. Explain how you know which side is the hypotenuse.

34. MULTI-STEP PROBLEM  In your town, there is a field that is in the shape of a right triangle with the dimensions shown.

a. Find the perimeter of the field.

b. You are going to plant dogwood seedlings about every ten feet around the field's edge. How many trees do you need?

c. If each dogwood seedling sells for $12, how much will the trees cost?
As you are gathering leaves for a science project, you look back at your campsite and see that the campfire is not completely out. You want to get water from a nearby river to put out the flames with the bucket you are using to collect leaves. Use the diagram and the steps below to determine the shortest distance you must travel.

a. **Making a Table**  
   Make a table with columns labeled **BC**, **AC**, **CE**, and **AC + CE**. Enter values of **BC** from 10 to 120 in increments of 10.

b. **Calculating Values**  
   Calculate **AC**, **CE**, and **AC + CE** for each value of **BC**, and record the results in the table. Then, use your table of values to determine the shortest distance you must travel.

c. **Drawing a Picture**  
   Draw an accurate picture to scale of the shortest distance.

★ **SHORT RESPONSE**  
Justify the Distance Formula using the Pythagorean Theorem.

**PROVING THEOREM 4.5**  
Find the Hypotenuse-Leg (HL) Congruence Theorem on page 241. Assign variables for the side lengths in the diagram. Use your variables to write GIVEN and PROVE statements. Use the Pythagorean Theorem and congruent triangles to prove Theorem 4.5.

**CHALLENGE**  
Trees grown for sale at nurseries should stand at least five feet from one another while growing. If the trees are grown in parallel rows, what is the smallest allowable distance between rows?
7.2 Converse of the Pythagorean Theorem

**MATERIALS** - graphing calculator or computer

**QUESTION** How can you use the side lengths in a triangle to classify the triangle by its angle measures?

You can use geometry drawing software to construct and measure triangles.

**EXPLORE** Construct a triangle

**STEP 1** Draw a triangle

Draw any \( \triangle ABC \) with the largest angle at \( C \). Measure \( \angle C, AB, AC, \) and \( CB \).

**STEP 2** Calculate

Use your measurements to calculate \( AB^2, AC^2, CB^2, \)

and \( (AC^2 + CB^2) \).

**STEP 3** Complete a table

Copy the table below and record your results in the first row. Then move point \( A \) to different locations and record the values for each triangle in your table. Make sure \( AB \) is always the longest side of the triangle. Include triangles that are acute, right, and obtuse.

<table>
<thead>
<tr>
<th>( m\angle C )</th>
<th>( AB )</th>

</table>

**DRAW CONCLUSIONS** Use your observations to complete these exercises

1. The Pythagorean Theorem states that “In a right triangle, the square of the length of the hypotenuse is equal to the sum of the squares of the lengths of the legs.” Write the Pythagorean Theorem in if-then form. Then write its converse.

2. Is the converse of the Pythagorean Theorem true? *Explain.*

3. Make a conjecture about the relationship between the measure of the largest angle in a triangle and the squares of the side lengths.

**Copy and complete the statement.**

4. If \( AB^2 > AC^2 + CB^2 \), then the triangle is a(n) ___ triangle.

5. If \( AB^2 < AC^2 + CB^2 \), then the triangle is a(n) ___ triangle.

6. If \( AB^2 = AC^2 + CB^2 \), then the triangle is a(n) ___ triangle.
7.2 Use the Converse of the Pythagorean Theorem

**Before**
You used the Pythagorean Theorem to find missing side lengths.

**Now**
You will use its converse to determine if a triangle is a right triangle.

**Why?**
So you can determine if a volleyball net is set up correctly, as in Ex. 38.

**Key Vocabulary**
- acute triangle, p. 217
- obtuse triangle, p. 217

The converse of the Pythagorean Theorem is also true. You can use it to verify that a triangle with given side lengths is a right triangle.

**THEOREM 7.2 Converse of the Pythagorean Theorem**

If the square of the length of the longest side of a triangle is equal to the sum of the squares of the lengths of the other two sides, then the triangle is a right triangle.

If $c^2 = a^2 + b^2$, then $\triangle ABC$ is a right triangle.

**Proof:** Ex. 42, p. 446

---

**EXAMPLE 1 Verify right triangles**

Tell whether the given triangle is a right triangle.

**a.**

\[ 9 \quad 3\sqrt{34} \quad 15 \]

Let $c$ represent the length of the longest side of the triangle. Check to see whether the side lengths satisfy the equation $c^2 = a^2 + b^2$.

\[ (3\sqrt{34})^2 = 9^2 + 15^2 \]
\[ 9 \cdot 34 \neq 81 + 225 \]
\[ 306 = 306 \checkmark \]

The triangle is a right triangle.

**b.**

\[ 22 \quad 26 \quad 14 \]

\[ 26^2 \neq 22^2 + 14^2 \]
\[ 676 \neq 484 + 196 \]
\[ 676 \neq 680 \]

The triangle is not a right triangle.

---

**GUIDED PRACTICE for Example 1**

Tell whether a triangle with the given side lengths is a right triangle.

1. $4, 4\sqrt{3}, 8$
2. $10, 11, 14$
3. $5, 6, \sqrt{61}$
**Example 2** Classify triangles

Can segments with lengths of 4.3 feet, 5.2 feet, and 6.1 feet form a triangle? If so, would the triangle be acute, right, or obtuse?

**Solution**

**Step 1** Use the Triangle Inequality Theorem to check that the segments can make a triangle.

\[ 4.3 + 5.2 = 9.5 \quad 4.3 + 6.1 = 10.4 \quad 5.2 + 6.1 = 11.3 \]

\[ 9.5 > 6.1 \quad 10.4 > 5.2 \quad 11.3 > 4.3 \]

\[ \triangleright \text{ The side lengths 4.3 feet, 5.2 feet, and 6.1 feet can form a triangle.} \]

**Step 2** Classify the triangle by comparing the square of the length of the longest side with the sum of squares of the lengths of the shorter sides.

\[ c^2 \ ? \ a^2 + b^2 \quad \text{Compare } c^2 \text{ with } a^2 + b^2. \]

\[ 6.1^2 \ ? \ 4.3^2 + 5.2^2 \quad \text{Substitute.} \]

\[ 37.21 \ ? \ 18.49 + 27.04 \quad \text{Simplify.} \]

\[ 37.21 < 45.53 \quad c^2 \text{ is less than } a^2 + b^2. \]

\[ \triangleright \text{ The side lengths 4.3 feet, 5.2 feet, and 6.1 feet form an acute triangle.} \]
**Example 3** Use the Converse of the Pythagorean Theorem

**Catamaran** You are part of a crew that is installing the mast on a catamaran. When the mast is fastened properly, it is perpendicular to the trampoline deck. How can you check that the mast is perpendicular using a tape measure?

**Solution**

To show a line is perpendicular to a plane you must show that the line is perpendicular to two lines in the plane.

Think of the mast as a line and the deck as a plane. Use a 3-4-5 right triangle and the Converse of the Pythagorean Theorem to show that the mast is perpendicular to different lines on the deck.

First place a mark 3 feet up the mast and a mark on the deck 4 feet from the mast. Use the tape measure to check that the distance between the two marks is 5 feet. The mast makes a right angle with the line on the deck. Finally, repeat the procedure to show that the mast is perpendicular to another line on the deck.

**Guided Practice** for Example 2 and 3

4. Show that segments with lengths 3, 4, and 6 can form a triangle and classify the triangle as **acute, right, or obtuse**.

5. **What If?** In Example 3, could you use triangles with side lengths 2, 3, and 4 to verify that you have perpendicular lines? **Explain**.

**Classifying Triangles** You can use the theorems from this lesson to classify a triangle as acute, right, or obtuse based on its side lengths.

**Concept Summary**

**Methods for Classifying a Triangle by Angles Using its Side Lengths**

**Theorem 7.2**

If \( c^2 = a^2 + b^2 \), then \( \angle C = 90^\circ \) and \( \triangle ABC \) is a right triangle.

**Theorem 7.3**

If \( c^2 < a^2 + b^2 \), then \( \angle C < 90^\circ \) and \( \triangle ABC \) is an acute triangle.

**Theorem 7.4**

If \( c^2 > a^2 + b^2 \), then \( \angle C > 90^\circ \) and \( \triangle ABC \) is an obtuse triangle.
1. **VOCABULARY** What is the longest side of a right triangle called?

2. ★ **WRITING** Explain how the side lengths of a triangle can be used to classify it as acute, right, or obtuse.

**VERIFYING RIGHT TRIANGLES** Tell whether the triangle is a right triangle.

3. \(\sqrt{34} \) \(\sqrt{2} \) \(\sqrt{16} \)

4. \(\sqrt{12} \) \(\sqrt{18} \) \(\sqrt{3} \)

5. \(\sqrt{2} \) \(\sqrt{6} \) \(\sqrt{2} \)

6. \(\sqrt{10} \) \(\sqrt{15} \) \(\sqrt{2} \)

**VERIFYING RIGHT TRIANGLES** Tell whether the given side lengths of a triangle can represent a right triangle.

9. 9, 12, and 15

10. 9, 10, and 15

11. 36, 48, and 60

12. 6, 10, and 2\(\sqrt{34} \)

13. 7, 14, and 7\(\sqrt{5} \)

14. 10, 12, and 20

**CLASSIFYING TRIANGLES** In Exercises 15–23, decide if the segment lengths form a triangle. If so, would the triangle be acute, right, or obtuse?

15. 10, 11, and 14

16. 10, 15, and 5\(\sqrt{13} \)

17. 24, 30, and 6\(\sqrt{43} \)

18. 5, 6, and 7

19. 12, 16, and 20

20. 8, 10, and 12

21. 15, 20, and 36

22. 6, 8, and 10

23. 8.2, 4.1, and 12.2

24. ★ **MULTIPLE CHOICE** Which side lengths do not form a right triangle?

   A) 5, 12, 13   B) 10, 24, 28   C) 15, 36, 39   D) 50, 120, 130

25. ★ **MULTIPLE CHOICE** What type of triangle has side lengths of 4, 7, and 9?

   A) Acute scalene   B) Right scalene   C) Obtuse scalene   D) None of the above

26. **ERROR ANALYSIS** A student tells you that if you double all the sides of a right triangle, the new triangle is obtuse. **Explain** why this statement is incorrect.

**GRAPHING TRIANGLES** Graph points \(A, B,\) and \(C\). Connect the points to form \(\triangle ABC\). Decide whether \(\triangle ABC\) is acute, right, or obtuse.

27. \(A(-2, 4), B(6, 0), C(-5, -2)\)

28. \(A(0, 2), B(5, 1), C(1, -1)\)
29. **ALGEBRA** Tell whether a triangle with side lengths 5x, 12x, and 13x (where x > 0) is acute, right, or obtuse.

**USING DIAGRAMS** In Exercises 30 and 31, copy and complete the statement with <, >, or =, if possible. If it is not possible, explain why.

30. \( m\angle A \ ? m\angle D \)
31. \( m\angle B + m\angle C \ ? m\angle E + m\angle F \)

32. **OPEN-ENDED MATH** The side lengths of a triangle are 6, 8, and \( x \) (where \( x > 0 \)). What are the values of \( x \) that make the triangle a right triangle? an acute triangle? an obtuse triangle?

33. **ALGEBRA** The sides of a triangle have lengths \( x \), \( x + 4 \), and 20. If the length of the longest side is 20, what values of \( x \) make the triangle acute?

34. **CHALLENGE** The sides of a triangle have lengths \( 4x + 6 \), \( 2x + 1 \), and \( 6x - 1 \). If the length of the longest side is \( 6x - 1 \), what values of \( x \) make the triangle obtuse?

**EXAMPLE 3** on p. 443 for Ex. 35

**PROBLEM SOLVING**

35. **PAINTING** You are making a canvas frame for a painting using stretcher bars. The rectangular painting will be 10 inches long and 8 inches wide. Using a ruler, how can you be certain that the corners of the frame are 90°?

**WALKING** You walk 749 feet due east to the gym from your home. From the gym you walk 800 feet southwest to the library. Finally, you walk 305 feet from the library back home. Do you live directly north of the library? Explain.

37. **MULTI-STEP PROBLEM** Use the diagram shown.
   a. Find \( BC \).
   b. Use the Converse of the Pythagorean Theorem to show that \( \triangle ABC \) is a right triangle.
   c. Draw and label a similar diagram where \( \triangle DBC \) remains a right triangle, but \( \triangle ABC \) is not.
38. ★ SHORT RESPONSE You are setting up a volleyball net. To stabilize the pole, you tie one end of a rope to the pole 7 feet from the ground. You tie the other end of the rope to a stake that is 4 feet from the pole. The rope between the pole and stake is about 8 feet 4 inches long. Is the pole perpendicular to the ground? Explain. If it is not, how can you fix it?

39. ★ EXTENDED RESPONSE You are considering buying a used car. You would like to know whether the frame is sound. A sound frame of the car should be rectangular, so it has four right angles. You plan to measure the shadow of the car on the ground as the sun shines directly on the car.

a. You make a triangle with three tape measures on one corner. It has side lengths 12 inches, 16 inches, and 20 inches. Is this a right triangle? Explain.

b. You make a triangle on a second corner with side lengths 9 inches, 12 inches, and 18 inches. Is this a right triangle? Explain.

c. The car owner says the car was never in an accident. Do you believe this claim? Explain.

40. PROVING THEOREM 7.3 Copy and complete the proof of Theorem 7.3.

GIVEN \( c \) in \( \triangle ABC \), \( c^2 < a^2 + b^2 \) where \( c \) is the length of the longest side.

PROVE \( \triangle ABC \) is an acute triangle.

Plan for Proof Draw right \( \triangle PQR \) with side lengths \( a, b, \) and \( x \), where \( \angle R \) is a right angle and \( x \) is the length of the longest side. Compare lengths \( c \) and \( x \).

41. PROVING THEOREM 7.4 Prove Theorem 7.4. Include a diagram and GIVEN and PROVE statements. (Hint: Look back at Exercise 40.)

42. PROVING THEOREM 7.2 Prove the Converse of the Pythagorean Theorem.

GIVEN \( \triangle LMN \), \( \overline{LM} \) is the longest side, and \( c^2 = a^2 + b^2 \).

PROVE \( \triangle LMN \) is a right triangle.

Plan for Proof Draw right \( \triangle PQR \) with side lengths \( a, b, \) and \( x \). Compare lengths \( c \) and \( x \).
43. ★ **SHORT RESPONSE** Explain why \( \angle D \) must be a right angle.

44. **COORDINATE PLANE** Use graph paper.
   a. Graph \( \triangle ABC \) with \( A(-7, 2), B(0, 1) \) and \( C(-4, 4) \).
   b. Use the slopes of the sides of \( \triangle ABC \) to determine whether it is a right triangle. Explain.
   c. Use the lengths of the sides of \( \triangle ABC \) to determine whether it is a right triangle. Explain.
   d. Did you get the same answer in parts (b) and (c)? If not, explain why.

45. **CHALLENGE** Find the values of \( x \) and \( y \).

---

**MIXED REVIEW**

In Exercises 46–48, copy the triangle and draw one of its altitudes. *(p. 319)*

46. 

47. 

48. 

Copy and complete the statement. *(p. 364)*

49. If \( \frac{10}{x} = \frac{7}{y'} \) then \( \frac{10}{7} = \frac{?}{?} \).

50. If \( \frac{x}{15} = \frac{y}{2} \) then \( \frac{x}{y} = \frac{?}{?} \).

51. If \( \frac{x}{8} = \frac{y}{9} \) then \( \frac{x + 8}{8} = \frac{?}{?} \).

52. The perimeter of a rectangle is 135 feet. The ratio of the length to the width is 8 : 1. Find the length and the width. *(p. 372)*

**QUIZ for Lessons 7.1–7.2**

Find the unknown side length. Write your answer in simplest radical form. *(p. 433)*

1. 

2. 

3. 

Classify the triangle formed by the side lengths as acute, right, or obtuse. *(p. 441)*

4. 6, 7, and 9

5. 10, 12, and 16

6. 8, 16, and 8\( \sqrt{6} \)

7. 20, 21, and 29

8. 8, 3, \( \sqrt{73} \)

9. 8, 10, and 12

**ONLINE QUIZ** at classzone.com
7.3 Similar Right Triangles

**Materials**
- rectangular piece of paper
- ruler
- scissors
- colored pencils

**Question**
How are geometric means related to the altitude of a right triangle?

**Explore**
Compare right triangles

**Step 1**
Draw a diagonal
Draw a diagonal on your rectangular piece of paper to form two congruent right triangles.

**Step 2**
Draw an altitude
Fold the paper to make an altitude to the hypotenuse of one of the triangles.

**Step 3**
Cut and label triangles
Cut the rectangle into the three right triangles that you drew. Label the angles and color the triangles as shown.

**Step 4**
Arrange the triangles
Arrange the triangles so $\angle 1$, $\angle 4$, and $\angle 7$ are on top of each other as shown.

**Draw Conclusions**
Use your observations to complete these exercises

1. How are the two smaller right triangles related to the large triangle?
2. Explain how you would show that the green triangle is similar to the red triangle.
3. Explain how you would show that the red triangle is similar to the blue triangle.
4. The geometric mean of $a$ and $b$ is $x$ if $a : x = x : b$. Write a proportion involving the side lengths of two of your triangles so that one side length is the geometric mean of the other two lengths in the proportion.
7.3 Use Similar Right Triangles

Before
You identified the altitudes of a triangle.

Now
You will use properties of the altitude of a right triangle.

Why?
So you can determine the height of a wall, as in Example 4.

Key Vocabulary
• altitude of a triangle, p. 320
• geometric mean, p. 359
• similar polygons, p. 372

When the altitude is drawn to the hypotenuse of a right triangle, the two smaller triangles are similar to the original triangle and to each other.

THEOREM

THEOREM 7.5
If the altitude is drawn to the hypotenuse of a right triangle, then the two triangles formed are similar to the original triangle and to each other.

\[ \triangle CBD \sim \triangle ABC, \ \triangle ACD \sim \triangle ABC, \ \text{and} \ \triangle CBD \sim \triangle ACD. \]

Proof: below; Ex. 35, p. 456

Plan for Proof of Theorem 7.5 First prove that \( \triangle CBD \sim \triangle ABC \). Each triangle has a right angle and each triangle includes \( \angle B \). The triangles are similar by the AA Similarity Postulate. Use similar reasoning to show that \( \triangle ACD \sim \triangle ABC \).

To show \( \angle CBD \sim \angle ACD \), begin by showing \( \angle ACD \equiv \angle B \) because they are both complementary to \( \angle DCB \). Each triangle also has a right angle, so you can use the AA Similarity Postulate.

Example 1 Identify similar triangles

Identify the similar triangles in the diagram.

Solution
Sketch the three similar right triangles so that the corresponding angles and sides have the same orientation.

\[ \triangle TSU \sim \triangle RTU \sim \triangle RST \]
Example 2  Find the length of the altitude to the hypotenuse

Swimming Pool The diagram below shows a cross-section of a swimming pool. What is the maximum depth of the pool?

Solution

Step 1 Identify the similar triangles and sketch them.

\[ \triangle RST \sim \triangle RTM \sim \triangle TSM \]

Step 2 Find the value of \( h \). Use the fact that \( \triangle RST \sim \triangle RTM \) to write a proportion.

\[
\frac{TM}{ST} = \frac{TR}{SR}
\]

Corresponding side lengths of similar triangles are in proportion.

\[
\frac{h}{64} = \frac{152}{165}
\]

Substitute.

\[
165h = 64(152)
\]

Cross Products Property

\[
h \approx 59
\]

Solve for \( h \).

Step 3 Read the diagram above. You can see that the maximum depth of the pool is \( h + 48 \), which is about \( 59 + 48 = 107 \) inches.

- The maximum depth of the pool is about 107 inches.

Avoid Errors Notice that if you tried to write a proportion using \( \triangle RTM \) and \( \triangle TSM \), there would be two unknowns, so you would not be able to solve for \( h \).

Guided Practice for Examples 1 and 2

Identify the similar triangles. Then find the value of \( x \).

1. Identify the similar triangles. Then find the value of \( x \).
In Lesson 6.1, you learned that the geometric mean of two numbers $a$ and $b$ is the positive number $x$ such that $\frac{a}{x} = \frac{x}{b}$. Consider right $\triangle ABC$. From Theorem 7.5, you know that altitude $CD$ forms two smaller triangles so that $\triangle CBD \sim \triangle ACD \sim \triangle ABC$.

Notice that $CD$ is the longer leg of $\triangle CBD$ and the shorter leg of $\triangle ACD$. When you write a proportion comparing the leg lengths of $\triangle CBD$ and $\triangle ACD$, you can see that $CD$ is the geometric mean of $BD$ and $AD$. As you see below, $CB$ and $AC$ are also geometric means of segment lengths in the diagram.

**Example 3** Use a geometric mean

**Find the value of $y$.** Write your answer in simplest radical form.

**Solution**

**STEP 1** Draw the three similar triangles.

**STEP 2** Write a proportion.

$$\frac{9}{y} = \frac{y}{3}$$

Substitute.

$$27 = y^2$$

Cross Products Property

$$\sqrt{27} = y$$

Take the positive square root of each side.

$$3\sqrt{3} = y$$

Simplify.
THEOREMS

For Your Notebook

THEOREM 7.6 Geometric Mean (Altitude) Theorem

In a right triangle, the altitude from the right angle to the hypotenuse divides the hypotenuse into two segments.

The length of the altitude is the geometric mean of the lengths of the two segments.

Proof: Ex. 36, p. 456

THEOREM 7.7 Geometric Mean (Leg) Theorem

In a right triangle, the altitude from the right angle to the hypotenuse divides the hypotenuse into two segments.

The length of each leg of the right triangle is the geometric mean of the lengths of the hypotenuse and the segment of the hypotenuse that is adjacent to the leg.

Proof: Ex. 37, p. 456

EXAMPLE 4 Find a height using indirect measurement

ROCK CLIMBING WALL To find the cost of installing a rock wall in your school gymnasium, you need to find the height of the gym wall.

You use a cardboard square to line up the top and bottom of the gym wall. Your friend measures the vertical distance from the ground to your eye and the distance from you to the gym wall. Approximate the height of the gym wall.

Solution

By Theorem 7.6, you know that 8.5 is the geometric mean of \( w \) and 5.

\[
\frac{w}{8.5} = \frac{8.5}{5}
\]

Write a proportion.

\[
w \approx 14.5
\]

Solve for \( w \).

\( \text{So, the height of the wall is } 5 + w = 5 + 14.5 = 19.5 \text{ feet.} \)

GUIDED PRACTICE for Examples 3 and 4

3. In Example 3, which theorem did you use to solve for \( y \)? Explain.

4. Mary is 5.5 feet tall. How far from the wall in Example 4 would she have to stand in order to measure its height?
1. **VOCABULARY** Copy and complete: Two triangles are ___ if their corresponding angles are congruent and their corresponding side lengths are proportional.

2. ★ **WRITING** In your own words, explain geometric mean.

### IDENTIFYING SIMILAR TRIANGLES
Identify the three similar right triangles in the given diagram.

3. \( \triangle FEG \)
4. \( \triangle LMN \)

### FINDING ALTITUDES
Find the length of the altitude to the hypotenuse.
Round decimal answers to the nearest tenth.

5. \( \text{Altitude} = 107.5 \text{ ft} \)
6. \( \text{Altitude} = 26.6 \text{ ft} \)
7. \( \text{Altitude} = 12.6 \text{ ft} \)

### COMPLETING PROPORTIONS
Write a similarity statement for the three similar triangles in the diagram. Then complete the proportion.

8. \( \frac{XW}{ZW} = \frac{YW}{WZ} \)
9. \( \frac{SQ}{TQ} \)
10. \( \frac{EF}{EG} = \frac{?}{?} \)

### ERROR ANALYSIS
Describe and correct the error in writing a proportion for the given diagram.

11. \( \frac{w}{z} = \frac{z}{w+v} \)
12. \( \frac{e}{d} = \frac{d}{f} \)
FINDING LENGTHS  Find the value of the variable. Round decimal answers to the nearest tenth.

13. \[ \begin{align*} x &= 4 \\ 5 &= 13 \end{align*} \]

14. \[ \begin{align*} 18 &= y \\ 12 &= 14 \end{align*} \]

15. \[ \begin{align*} z &= 16 \\ 27 &= 15 \end{align*} \]

16. \[ \begin{align*} x &= 4 \\ 9 &= 16 \end{align*} \]

17. \[ \begin{align*} 5 &= y \\ 8 &= 12 \end{align*} \]

18. \[ \begin{align*} 8 &= 8 \\ 2 &= 2 \end{align*} \]

19. ★ MULTIPLE CHOICE  Use the diagram at the right. Decide which proportion is false.

A \[ \frac{DB}{DA} = \frac{AB}{AD} \]
B \[ \frac{CA}{AB} = \frac{AB}{AD} \]
C \[ \frac{CA}{BA} = \frac{BA}{CA} \]
D \[ \frac{DC}{BC} = \frac{BC}{CA} \]

20. ★ MULTIPLE CHOICE  In the diagram in Exercise 19 above, \( AC = 36 \) and \( BC = 18 \). Find \( AD \). If necessary, round to the nearest tenth.

A 9  B 15.6  C 27  D 31.2

ALGEBRA  Find the value(s) of the variable(s).

21. \[ \begin{align*} a + 5 &= 12 \\ 18 &= 20 \end{align*} \]

22. \[ \begin{align*} 6 &= b + 3 \\ 8 &= 10 \end{align*} \]

23. \[ \begin{align*} y &= x \\ 12 &= 16 \end{align*} \]

USING THEOREMS  Tell whether the triangle is a right triangle. If so, find the length of the altitude to the hypotenuse. Round decimal answers to the nearest tenth.

24. \[ \begin{align*} 10 &= 10 \\ 16 &= 16 \end{align*} \]

25. \[ \begin{align*} 4\sqrt{13} &= 8 \\ 12 &= 12 \end{align*} \]

26. \[ \begin{align*} 4\sqrt{33} &= 14 \\ 18 &= 18 \end{align*} \]

27. FINDING LENGTHS  Use the Geometric Mean Theorems to find \( AC \) and \( BD \).

28. CHALLENGE  Draw a right isosceles triangle and label the two leg lengths \( x \). Then draw the altitude to the hypotenuse and label its length \( y \). Now draw the three similar triangles and label any side length that is equal to either \( x \) or \( y \). What can you conclude about the relationship between the two smaller triangles? Explain.
29. **DOGHOUSE** The peak of the doghouse shown forms a right angle. Use the given dimensions to find the height of the roof.

30. **MONUMENT** You want to determine the height of a monument at a local park. You use a cardboard square to line up the top and bottom of the monument. Mary measures the vertical distance from the ground to your eye and the distance from you to the monument. Approximate the height of the monument (as shown at the left below).

31. **SHORT RESPONSE** Paul is standing on the other side of the monument in Exercise 30 (as shown at the right above). He has a piece of rope staked at the base of the monument. He extends the rope to the cardboard square he is holding lined up to the top and bottom of the monument. Use the information in the diagram above to approximate the height of the monument. Do you get the same answer as in Exercise 30? Explain.

32. **PROVING THEOREM 7.1** Use the diagram of \( \triangle ABC \). Copy and complete the proof of the Pythagorean Theorem.

**GIVEN** \( \triangle ABC, \angle BCA \) is a right angle.

**PROVE** \( c^2 = a^2 + b^2 \)

33. **MULTI-STEP PROBLEM** Use the diagram.
   a. Name all the altitudes in \(\triangle EGF\). Explain.
   b. Find \(FH\).
   c. Find the area of the triangle.

34. **EXTENDED RESPONSE** Use the diagram.
   a. Sketch the three similar triangles in the diagram.
      Label the vertices. Explain how you know which vertices correspond.
   b. Write similarity statements for the three triangles.
   c. Which segment’s length is the geometric mean of \(RT\) and \(RQ\)? Explain your reasoning.

**PROVING THEOREMS** In Exercises 35–37, use the diagram and **GIVEN** statements below.

**GIVEN** \(\triangle ABC\) is a right triangle.
Altitude \(CD\) is drawn to hypotenuse \(AB\).

35. Prove Theorem 7.5 by using the Plan for Proof on page 449.
36. Prove Theorem 7.6 by showing \(\frac{BD}{CD} = \frac{CD}{AD}\).
37. Prove Theorem 7.7 by showing \(\frac{AB}{CB} = \frac{CB}{DB}\) and \(\frac{AB}{AC} = \frac{AC}{AD}\).

38. **CHALLENGE** The harmonic mean of \(a\) and \(b\) is \(\frac{2ab}{a + b}\). The Greek mathematician Pythagoras found that three equally taut strings on stringed instruments will sound harmonious if the length of the middle string is equal to the harmonic mean of the lengths of the shortest and longest string.
   a. Find the harmonic mean of 10 and 15.
   b. Find the harmonic mean of 6 and 14.
   c. Will equally taut strings whose lengths have the ratio 4:6:12 sound harmonious? Explain your reasoning.

**MIXED REVIEW**

**EXTRA PRACTICE** for Lesson 7.3, p. 908  **ONLINE QUIZ** at classzone.com
7.4 Special Right Triangles

You found side lengths using the Pythagorean Theorem. You will use the relationships among the sides in special right triangles. So you can find the height of a drawbridge, as in Ex. 28.

**Key Vocabulary**

- isosceles triangle, p. 217

A 45°-45°-90° triangle is an isosceles right triangle that can be formed by cutting a square in half as shown.

**THEOREM**

**THEOREM 7.8 45°-45°-90° Triangle Theorem**

In a 45°-45°-90° triangle, the hypotenuse is \( \sqrt{2} \) times as long as each leg.

\[ \text{hypotenuse} = \text{leg} \cdot \sqrt{2} \]

*Proof:* Ex. 30, p. 463

**EXAMPLE 1** Find hypotenuse length in a 45°-45°-90° triangle

Find the length of the hypotenuse.

a. \[ \triangle \text{h} \]

b. \[ \triangle \text{h} \]

**Solution**

a. By the Triangle Sum Theorem, the measure of the third angle must be 45°. Then the triangle is a 45°-45°-90° triangle, so by Theorem 7.8, the hypotenuse is \( \sqrt{2} \) times as long as each leg.

\[ \text{hypotenuse} = \text{leg} \cdot \sqrt{2} \quad \text{45°-45°-90° Triangle Theorem} \]
\[ = 8\sqrt{2} \quad \text{Substitute.} \]

b. By the Base Angles Theorem and the Corollary to the Triangle Sum Theorem, the triangle is a 45°-45°-90° triangle.

\[ \text{hypotenuse} = \text{leg} \cdot \sqrt{2} \quad \text{45°-45°-90° Triangle Theorem} \]
\[ = 3\sqrt{2} \cdot \sqrt{2} \quad \text{Substitute.} \]
\[ = 3 \cdot 2 \quad \text{Product of square roots} \]
\[ = 6 \quad \text{Simplify.} \]
EXAMPLE 2  Find leg lengths in a $45^\circ$-$45^\circ$-$90^\circ$ triangle

Find the lengths of the legs in the triangle.

Solution

By the Base Angles Theorem and the Corollary to the Triangle Sum Theorem, the triangle is a $45^\circ$-$45^\circ$-$90^\circ$ triangle.

\[
\text{hypotenuse} = \text{leg} \cdot \sqrt{2}  \\
5\sqrt{2} = x \cdot \sqrt{2} \quad \text{45°-45°-90° Triangle Theorem} \\
\frac{5\sqrt{2}}{\sqrt{2}} = \frac{x\sqrt{2}}{\sqrt{2}} \quad \text{Substitute.} \\
5 = x \quad \text{Divide each side by } \sqrt{2}. \\
\]

Simplify.

EXAMPLE 3  Standardized Test Practice

Triangle $WXYZ$ is a right triangle. Find the length of $WX$.

\[
\text{A} \quad 50 \text{ cm} \quad \text{B} \quad 25\sqrt{2} \text{ cm} \quad \text{C} \quad 25 \text{ cm} \quad \text{D} \quad \frac{25\sqrt{2}}{2} \text{ cm}
\]

Solution

By the Corollary to the Triangle Sum Theorem, the triangle is a $45^\circ$-$45^\circ$-$90^\circ$ triangle.

\[
\text{hypotenuse} = \text{leg} \cdot \sqrt{2}  \\
WX = 25\sqrt{2} \quad \text{45°-45°-90° Triangle Theorem} \\
\]

Substitute.

\[
\frac{25\sqrt{2}}{2} \text{ cm} 
\]

The correct answer is B.  A B C D

GUIDED PRACTICE for Examples 1, 2, and 3

Find the value of the variable.

1.

2.

3.

4. Find the leg length of a $45^\circ$-$45^\circ$-$90^\circ$ triangle with a hypotenuse length of 6.
A 30°-60°-90° triangle can be formed by dividing an equilateral triangle in half.

**THEOREM**

**THEOREM 7.9** 30°-60°-90° Triangle Theorem

In a 30°-60°-90° triangle, the hypotenuse is twice as long as the shorter leg, and the longer leg is \( \sqrt{3} \) times as long as the shorter leg.

- hypotenuse = 2 \cdot \text{shorter leg}
- longer leg = shorter leg \cdot \sqrt{3}

*Proof:* Ex. 32, p. 463

**EXAMPLE 4** Find the height of an equilateral triangle

**LOGO** The logo on the recycling bin at the right resembles an equilateral triangle with side lengths of 6 centimeters. What is the approximate height of the logo?

**Solution**

Draw the equilateral triangle described. Its altitude forms the longer leg of two 30°-60°-90° triangles. The length \( h \) of the altitude is approximately the height of the logo.

longer leg = shorter leg \cdot \sqrt{3}

\[ h = 3 \cdot \sqrt{3} \approx 5.2 \text{ cm} \]

**EXAMPLE 5** Find lengths in a 30°-60°-90° triangle

**STEP 1** Find the value of \( x \).

- longer leg = shorter leg \cdot \sqrt{3}
- \[ 9 = x\sqrt{3} \]
- \[ \frac{9}{\sqrt{3}} = x \]
- \[ \frac{9\sqrt{3}}{3} = x \]
- \[ 3\sqrt{3} = x \]

**STEP 2** Find the value of \( y \).

- hypotenuse = 2 \cdot \text{shorter leg}
- \[ y = 2 \cdot 3\sqrt{3} = 6\sqrt{3} \]
**Example 6** Find a height

**DUMP TRUCK** The body of a dump truck is raised to empty a load of sand. How high is the 14 foot body from the frame when it is tipped upward at the given angle?

a. 45° angle  
   b. 60° angle

**Solution**

a. When the body is raised 45° above the frame, the height \( h \) is the length of a leg of a 45°-45°-90° triangle. The length of the hypotenuse is 14 feet.

\[
14 = h \cdot \sqrt{2} \quad \text{45°-45°-90° Triangle Theorem}
\]

\[
\frac{14}{\sqrt{2}} = h \quad \text{Divide each side by } \sqrt{2}.
\]

\[
h \approx 9.9 \quad \text{Use a calculator to approximate.}
\]

When the angle of elevation is 45°, the body is about 9 feet 11 inches above the frame.

b. When the body is raised 60°, the height \( h \) is the length of the longer leg of a 30°-60°-90° triangle. The length of the hypotenuse is 14 feet.

\[
\begin{align*}
\text{hypotenuse} & = 2 \cdot \text{shorter leg} \quad 30°-60°-90° \text{ Triangle Theorem} \\
14 & = 2 \cdot s \quad \text{Substitute.} \\
7 & = s \quad \text{Divide each side by } 2.
\end{align*}
\]

\[
\begin{align*}
\text{longer leg} & = \text{shorter leg} \cdot \sqrt{3} \\
& = 7\sqrt{3} \quad 30°-60°-90° \text{ Triangle Theorem} \\
h & = 7\sqrt{3} \quad \text{Substitute.} \\
& \approx 12.1 \quad \text{Use a calculator to approximate.}
\end{align*}
\]

When the angle of elevation is 60°, the body is about 12 feet 1 inch above the frame.

**Guided Practice** for Examples 4, 5, and 6

Find the value of the variable.

5. 

6. 

7. **WHAT IF?** In Example 6, what is the height of the body of the dump truck if it is raised 30° above the frame?

8. In a 30°-60°-90° triangle, describe the location of the shorter side. Describe the location of the longer side?
1. **VOCABULARY** Copy and complete: A triangle with two congruent sides and a right angle is called __________.

2. ★ **WRITING** Explain why the acute angles in an isosceles right triangle always measure 45°.

**ALGEBRA** Find the value of each variable. Write your answers in simplest radical form.

13. \( \frac{x}{y} = \frac{15}{60} \)

14. \( \frac{\sqrt{5}}{\sqrt{3}} = \frac{\sqrt{15}}{\sqrt{9}} \)

15. \( \frac{24}{30} \)

16. \( \frac{r}{s} = \frac{60}{60} \)

17. \( \frac{t}{u} = \frac{\sqrt{45}}{\sqrt{9}} \)

18. \( \frac{e}{f} = \frac{21}{21} \)

19. ★ **MULTIPLE CHOICE** Which side lengths do not represent a \(30^\circ-60^\circ-90^\circ\) triangle?

- A \( \frac{1}{2} \sqrt{3}, \frac{1}{2} \)
- B \( \sqrt{2}, \sqrt{6}, 2\sqrt{2} \)
- C \( \frac{5}{2} \sqrt{\frac{3}{2}}, 10 \)
- D \( 3, 3\sqrt{3}, 6 \)

20. **ERROR ANALYSIS** Describe and correct the error in finding the length of the hypotenuse.

21. **WRITING** Abigail solved Example 5 on page 459 in a different way. Instead of dividing each side by \(\sqrt{3}\), she multiplied each side by \(\sqrt{3}\). Does her method work? Explain why or why not.

22. ★ **ALGEBRA** Find the value of each variable. Write your answers in simplest radical form.

23. \( \frac{g}{f} = \frac{10}{\sqrt{30}} \)

24. \( \frac{x}{y} = \frac{\sqrt{150}}{\sqrt{2}} \)

25. \( \frac{8}{x} = \frac{\sqrt{60}}{\sqrt{30}} \)

26. ★ **CHALLENGE** \( \triangle ABC \) is a \(30^\circ-60^\circ-90^\circ\) triangle. Find the coordinates of \( A \).
EXAMPLE 6 on p. 460 for Ex. 27

EXAMPLE 6

27. KAYAK RAMP A ramp is used to launch a kayak. What is the height of an 11 foot ramp when its angle is 30° as shown?

![Image of a kayak ramp]

28. DRAWBRIDGE Each half of the drawbridge is about 284 feet long, as shown. How high does a seagull rise who is on the end of the drawbridge when the angle with measure $x^\circ$ is 30°? 45°? 60°?

29. ★ SHORT RESPONSE Describe two ways to show that all isosceles right triangles are similar to each other.

30. PROVING THEOREM 7.8 Write a paragraph proof of the 45°-45°-90° Triangle Theorem.

**GIVEN** △DEF is a 45°-45°-90° triangle.

**PROVE** △ The hypotenuse is $\sqrt{2}$ times as long as each leg.

31. EQUILATERAL TRIANGLE If an equilateral triangle has a side length of 20 inches, find the height of the triangle.

32. PROVING THEOREM 7.9 Write a paragraph proof of the 30°-60°-90° Triangle Theorem.

**GIVEN** △JKL is a 30°-60°-90° triangle.

**PROVE** △ The hypotenuse is twice as long as the shorter leg and the longer leg is $\sqrt{3}$ times as long as the shorter leg.

**Plan for Proof** Construct △JML congruent to △JKL. Then prove that △JKM is equilateral. Express the lengths of JK and JL in terms of $x$.

33. MULTI-STEP PROBLEM You are creating a quilt that will have a traditional “flying geese” border, as shown below.

a. Find all the angle measures of the small blue triangles and the large orange triangles.

b. The width of the border is to be 3 inches. To create the large triangle, you cut a square of fabric in half. Not counting any extra fabric needed for seams, what size square do you need?

c. What size square do you need to create each small triangle?
34. ★ EXTENDED RESPONSE  Use the figure at the right. You can use the fact that the converses of the 45°-45°-90° Triangle Theorem and the 30°-60°-90° Triangle Theorem are true.
   a. Find the values of r, s, t, u, v, and w. Explain the procedure you used to find the values.
   b. Which of the triangles, if any, is a 45°-45°-90° triangle? Explain.
   c. Which of the triangles, if any, is a 30°-60°-90° triangle? Explain.

35. CHALLENGE  In quadrilateral QRST, \( m\angle R = 60^\circ \), \( m\angle T = 90^\circ \), QR = RS, ST = 8, TQ = 8, and \( \overline{RT} \) and QS intersect at point Z.
   a. Draw a diagram.
   b. Explain why \( \triangle RQT \cong \triangle RST \).
   c. Which is longer, QS or RT? Explain.

**Mixed Review**

In the diagram, \( \overline{BD} \) is the perpendicular bisector of \( \overline{AC} \). (p. 303)

36. Which pairs of segment lengths are equal?

37. What is the value of \( x \)?

38. Find \( CD \).

Is it possible to build a triangle using the given side lengths? (p. 328)

39. 4, 4, and 7
40. 3, 3, and \( 9\sqrt{2} \)
41. 7, 15, and 21

Tell whether the given side lengths form a right triangle. (p. 441)

42. 21, 22, and \( 5\sqrt{37} \)
43. \( \frac{3}{2}, \frac{2}{2}, \) and \( \frac{5}{2} \)
44. 8, 10, and 14

**Quiz for Lessons 7.3–7.4**

In Exercises 1 and 2, use the diagram. (p. 449)

1. Which segment’s length is the geometric mean of \( AC \) and \( CD \)?
2. Find \( BD, AD, \) and \( AB \).

Find the values of the variable(s). Write your answer(s) in simplest radical form. (p. 457)

3.
4. 10
5. \( 3\sqrt{2} \)
Lessons 7.1–7.4

1. **GRIDDED ANSWER** Find the direct distance, in paces, from the treasure to the stump.

   From the old stump, take 30 paces east, then 20 paces north, 6 paces west, and then another 25 paces north to find the hidden treasure.

2. **MULTI-STEP PROBLEM** On a map of the United States, you put a pushpin on three state capitols you want to visit: Jefferson City, Missouri; Little Rock, Arkansas; and Atlanta, Georgia.

   a. Draw a diagram to model the triangle.
   b. Do the pushpins form a right triangle? If not, what type of triangle do they form?

3. **SHORT RESPONSE** Bob and John started running at 10 A.M. Bob ran east at 4 miles per hour while John ran south at 5 miles per hour. How far apart were they at 11:30 A.M.? Describe how you calculated the answer.

4. **EXTENDED RESPONSE** Give all values of \( x \) that make the statement true for the given diagram.

   a. \( \angle 1 \) is a right angle. *Explain.*
   b. \( \angle 1 \) is an obtuse angle. *Explain.*
   c. \( \angle 1 \) is an acute angle. *Explain.*
   d. The triangle is isosceles. *Explain.*
   e. No triangle is possible. *Explain.*

5. **EXTENDED RESPONSE** A Chinese checker board is made of triangles. Use the picture below to answer the questions.

   a. Count the marble holes in the purple triangle. What kind of triangle is it?
   b. If a side of the purple triangle measures 8 centimeters, find the area of the purple triangle.
   c. How many marble holes are in the center hexagon? Assuming each marble hole takes up the same amount of space, what is the relationship between the purple triangle and center hexagon?
   d. Find the area of the center hexagon. *Explain* your reasoning.

6. **MULTI-STEP PROBLEM** You build a beanbag toss game. The game is constructed from a sheet of plywood supported by two boards. The two boards form a right angle and their lengths are 3 feet and 2 feet.

   a. Find the length \( x \) of the plywood.
   b. You put in a support that is the altitude \( y \) to the hypotenuse of the right triangle. What is the length of the support?
   c. Where does the support attach to the plywood? *Explain.*
7.5 Apply the Tangent Ratio

**Before**
You used congruent or similar triangles for indirect measurement.

**Now**
You will use the tangent ratio for indirect measurement.

**Why?**
So you can find the height of a roller coaster, as in Ex. 32.

**Key Vocabulary**
- trigonometric ratio
- tangent

**Activity Right Triangle Ratio**

**Materials:** metric ruler, protractor, calculator

**STEP 1** Draw a 30° angle and mark a point every 5 centimeters on a side as shown. Draw perpendicular segments through the 3 points.

**STEP 2** Measure the legs of each right triangle. Copy and complete the table.

<table>
<thead>
<tr>
<th>Triangle</th>
<th>Adjacent leg</th>
<th>Opposite leg</th>
<th>Opposite leg Adjacent leg</th>
</tr>
</thead>
<tbody>
<tr>
<td>ΔABC</td>
<td>5 cm</td>
<td>?</td>
<td>?</td>
</tr>
<tr>
<td>ΔADE</td>
<td>10 cm</td>
<td>?</td>
<td>?</td>
</tr>
<tr>
<td>ΔAFG</td>
<td>15 cm</td>
<td>?</td>
<td>?</td>
</tr>
</tbody>
</table>

**STEP 3** Explain why the proportions \( \frac{BC}{AC} = \frac{AE}{AE} \) and \( \frac{BC}{AC} = \frac{DE}{AE} \) are true.

**STEP 4** Make a conjecture about the ratio of the lengths of the legs in a right triangle. Test your conjecture by using different acute angle measures.

A trigonometric ratio is a ratio of the lengths of two sides in a right triangle. You will use trigonometric ratios to find the measure of a side or an acute angle in a right triangle.

The ratio of the lengths of the legs in a right triangle is constant for a given angle measure. This ratio is called the tangent of the angle.

**Abbreviate**
Remember these abbreviations:
- tangent → tan
- opposite → opp.
- adjacent → adj.

**Key Concept**

**Tangent Ratio**

Let ΔABC be a right triangle with acute \( \angle A \).

The tangent of \( \angle A \) (written as tan \( \angle A \)) is defined as follows:

\[
\tan \angle A = \frac{\text{length of leg opposite } \angle A}{\text{length of leg adjacent to } \angle A} = \frac{BC}{AC}
\]

**For Your Notebook**
**COMPLEMENTARY ANGLES** In the right triangle, $\angle A$ and $\angle B$ are complementary so you can use the same diagram to find the tangent of $\angle A$ and the tangent of $\angle B$. Notice that the leg adjacent to $\angle A$ is the leg opposite $\angle B$ and the leg opposite $\angle A$ is the leg adjacent to $\angle B$.

**EXAMPLE 1** Find tangent ratios

Find $\tan S$ and $\tan R$. Write each answer as a fraction and as a decimal rounded to four places.

**Solution**

\[
\tan S = \frac{\text{opp. } \angle S}{\text{adj. to } \angle S} = \frac{RT}{ST} = \frac{80}{18} = \frac{40}{9} \approx 4.4444
\]

\[
\tan R = \frac{\text{opp. } \angle R}{\text{adj. to } \angle R} = \frac{ST}{RT} = \frac{18}{80} = \frac{9}{40} = 0.2250
\]

**GUIDED PRACTICE** for Example 1

Find $\tan J$ and $\tan K$. Round to four decimal places.

1. \hspace{1cm} 2. \hspace{1cm}

**EXAMPLE 2** Find a leg length

**ALGEBRA** Find the value of $x$.

**Solution**

Use the tangent of an acute angle to find a leg length.

\[
\tan 32^\circ = \frac{\text{opp.}}{\text{adj.}} \hspace{1cm} \text{Write ratio for tangent of } 32^\circ.
\]

\[
\tan 32^\circ = \frac{11}{x} \hspace{1cm} \text{Substitute.}
\]

\[
x \cdot \tan 32^\circ = 11 \hspace{1cm} \text{Multiply each side by } x.
\]

\[
x = \frac{11}{\tan 32^\circ} \hspace{1cm} \text{Divide each side by } \tan 32^\circ.
\]

\[
x \approx \frac{11}{0.6249} \hspace{1cm} \text{Use a calculator to find } \tan 32^\circ.
\]

\[
x \approx 17.6 \hspace{1cm} \text{Simplify.}
\]
**Example 3** Estimate height using tangent

**Lamppost** Find the height \( h \) of the lamppost to the nearest inch.

\[
\tan 70^\circ = \frac{\text{opp.}}{\text{adj.}} \\
\tan 70^\circ = \frac{h}{40} \\
40 \cdot \tan 70^\circ = h \\
109.9 \approx h
\]

The lamppost is about 110 inches tall.

**Special Right Triangles** You can find the tangent of an acute angle measuring 30°, 45°, or 60° by applying what you know about special right triangles.

**Example 4** Use a special right triangle to find a tangent

Use a special right triangle to find the tangent of a 60° angle.

**Step 1** Because all 30°-60°-90° triangles are similar, you can simplify your calculations by choosing 1 as the length of the shorter leg. Use the 30°-60°-90° Triangle Theorem to find the length of the longer leg.

\[
\text{longer leg} = \text{shorter leg} \cdot \sqrt{3} \\
x = 1 \cdot \sqrt{3} \\
x = \sqrt{3}
\]

**Step 2** Find \( \tan 60^\circ \).

\[
\tan 60^\circ = \frac{\text{opp.}}{\text{adj.}} \\
\tan 60^\circ = \frac{\sqrt{3}}{1} \\
\tan 60^\circ = \sqrt{3}
\]

The tangent of any 60° angle is \( \sqrt{3} \approx 1.7321 \).

**Guided Practice** for Examples 2, 3, and 4

Find the value of \( x \). Round to the nearest tenth.

3. \( x \)

4. \( x \)

5. **What If?** In Example 4, suppose the side length of the shorter leg is 5 instead of 1. Show that the tangent of 60° is still equal to \( \sqrt{3} \).
7.5 EXERCISES

1. **VOCABULARY** Copy and complete: The tangent ratio compares the length of ? to the length of ?.

2. ★ **WRITING** Explain how you know that all right triangles with an acute angle measuring \( n^\circ \) are similar to each other.

**FINDING TANGENT RATIOS** Find \( \tan A \) and \( \tan B \). Write each answer as a fraction and as a decimal rounded to four places.

3. \[
\text{BC} = 24, \quad \text{AC} = 25
\]

4. \[
\text{BC} = 37, \quad \text{AC} = 12
\]

5. \[
\text{BC} = 48, \quad \text{AC} = 20
\]

**FINDING LEG LENGTHS** Find the value of \( x \) to the nearest tenth.

6. \[
\text{AC} = 41, \quad \angle 81 = \text{?}
\]

7. \[
\text{AC} = 27, \quad \angle 27 = \text{?}
\]

8. \[
\text{AC} = 58, \quad \angle 58 = \text{?}
\]

**FINDING LEG LENGTHS** Find the value of \( x \) using the definition of tangent. Then find the value of \( x \) using the 45°-45°-90° Theorem or the 30°-60°-90° Theorem. Compare the results.

9. \[
\text{AC} = 6, \quad \angle 45 = \text{?}
\]

10. \[
\text{AC} = 10, \quad \angle 30 = \text{?}
\]

11. \[
\text{AC} = 4, \quad \angle 60 = \text{?}
\]

12. **SPECIAL RIGHT TRIANGLES** Find \( \tan 30^\circ \) and \( \tan 45^\circ \) using the 45°-45°-90° Triangle Theorem and the 30°-60°-90° Triangle Theorem.

**ERROR ANALYSIS** Describe the error in the statement of the tangent ratio. Correct the statement, if possible. Otherwise, write not possible.

13. \[
\tan D = \frac{18}{82}
\]

14. \[
\tan 55^\circ = \frac{18}{BC}
\]

15. ★ **WRITING** Describe what you must know about a triangle in order to use the tangent ratio.
16. ★ MULTIPLE CHOICE Which expression can be used to find the value of $x$ in the triangle shown?

- **A** \( x = 20 \cdot \tan 40^\circ \)
- **B** \( x = \frac{\tan 40^\circ}{20} \)
- **C** \( x = \frac{20}{\tan 40^\circ} \)
- **D** \( x = \frac{20}{\tan 50^\circ} \)

17. ★ MULTIPLE CHOICE What is the approximate value of $x$ in the triangle shown?

- **A** 0.4
- **B** 2.7
- **C** 7.5
- **D** 19.2

FINDING LEG LENGTHS Use a tangent ratio to find the value of $x$. Round to the nearest tenth. Check your solution using the tangent of the other acute angle.

18. 

19. 

20. 

FINDING AREA Find the area of the triangle. Round to the nearest tenth.

21. 

22. 

23. 

FINDING PERIMETER Find the perimeter of the triangle. Round to the nearest tenth.

24. 

25. 

26. 

FINDING LENGTHS Find $y$. Then find $z$. Round to the nearest tenth.

27. 

28. 

29. 

30. CHALLENGE Find the perimeter of the figure at the right, where $AC = 26$, $AD = BF$, and $D$ is the midpoint of $AC$. 

\[ \bigcirc \text{ = WORKED-OUT SOLUTIONS on p. WS1} \]  
\[ \star \text{ = STANDARDIZED TEST PRACTICE} \]
31. **WASHINGTON MONUMENT** A surveyor is standing 118 feet from the base of the Washington Monument. The surveyor measures the angle between the ground and the top of the monument to be 78°. Find the height $h$ of the Washington Monument to the nearest foot.

32. **ROLLER COASTERS** A roller coaster makes an angle of 52° with the ground. The horizontal distance from the crest of the hill to the bottom of the hill is about 121 feet, as shown. Find the height $h$ of the roller coaster to the nearest foot.

**CLASS PICTURE** Use this information and diagram for Exercises 33 and 34.

Your class is having a class picture taken on the lawn. The photographer is positioned 14 feet away from the center of the class. If she looks toward either end of the class, she turns 50°.

33. **ISOSCELES TRIANGLE** What is the distance between the ends of the class?

34. **MULTI-STEP PROBLEM** The photographer wants to estimate how many more students can fit at the end of the first row. The photographer turns 50° to see the last student and another 10° to see the end of the camera range.
   
   a. Find the distance from the center to the last student in the row.
   
   b. Find the distance from the center to the end of the camera range.
   
   c. Use the results of parts (a) and (b) to estimate the length of the empty space.
   
   d. If each student needs 2 feet of space, about how many more students can fit at the end of the first row? Explain your reasoning.

35. **SHORT RESPONSE** Write expressions for the tangent of each acute angle in the triangle. Explain how the tangent of one acute angle is related to the tangent of the other acute angle. What kind of angle pair are $\angle A$ and $\angle B$?
36. **EYE CHART**  You are looking at an eye chart that is 20 feet away. Your eyes are level with the bottom of the “E” on the chart. To see the top of the “E,” you look up 1°. How tall is the “E”?

37. ★ **EXTENDED RESPONSE**  According to the Americans with Disabilities Act, a ramp cannot have an incline that is greater than 5°. The regulations also state that the maximum rise of a ramp is 30 inches. When a ramp needs to reach a height greater than 30 inches, a series of ramps connected by 60 inch landings can be used, as shown below.

   ![Diagram of ramps and landings]

   a. What is the maximum horizontal length of the base of one ramp, in feet? Round to the nearest foot.
   
   b. If a doorway is 7.5 feet above the ground, what is the least number of ramps and landings you will need to lead to the doorway? Draw and label a diagram to justify your answer.
   
   c. To the nearest foot, what is the total length of the base of the system of ramps and landings in part (b)?

38. **CHALLENGE**  The road salt shown is stored in a cone-shaped pile. The base of the cone has a circumference of 80 feet. The cone rises at an angle of 32°. Find the height $h$ of the cone. Then find the length $s$ of the cone-shaped pile.

---

### Mixed Review

The expressions given represent the angle measures of a triangle. Find the measure of each angle. Then classify the triangle by its angles. (p. 217)

39. $m\angle A = x^\circ$
   $m\angle B = 4x^\circ$
   $m\angle C = 4x^\circ$

40. $m\angle A = x^\circ$
   $m\angle B = x^\circ$
   $m\angle C = (5x - 60)^\circ$

41. $m\angle A = (x + 20)^\circ$
   $m\angle B = (3x + 15)^\circ$
   $m\angle C = (x - 30)^\circ$

Copy and complete the statement with $<$, $>$, or $=$. *Explain.* (p. 335)

42. $m\angle 1 \ ? m\angle 2$
43. $m\angle 1 \ ? m\angle 2$
44. $m\angle 1 \ ? m\angle 2$

Find the unknown side length of the right triangle. (p. 433)

45. 
46. 
47.
7.6 Apply the Sine and Cosine Ratios

**Key Vocabulary**
- **sine**
- **cosine**
- **angle of elevation**
- **angle of depression**

**KEY CONCEPT**
For Your Notebook

Sine and Cosine Ratios

Let \( \triangle ABC \) be a right triangle with acute \( \angle A \).

The **sine** and **cosine** ratios are trigonometric ratios for acute angles that involve the lengths of a leg and the hypotenuse of a right triangle.

\[
\sin A = \frac{\text{length of leg opposite } \angle A}{\text{length of hypotenuse}} \quad \frac{BC}{AB}
\]

\[
\cos A = \frac{\text{length of leg adjacent to } \angle A}{\text{length of hypotenuse}} \quad \frac{AC}{AB}
\]

**Example 1** Find sine ratios

Find \( \sin S \) and \( \sin R \). Write each answer as a fraction and as a decimal rounded to four places.

**Solution**

\[
\sin S = \frac{\text{opp. } \angle S}{\text{hyp.}} = \frac{RT}{SR} = \frac{63}{65} = 0.9692
\]

\[
\sin R = \frac{\text{opp. } \angle R}{\text{hyp.}} = \frac{ST}{SR} = \frac{16}{65} = 0.2462
\]

**Guided Practice** for Example 1

Find \( \sin X \) and \( \sin Y \). Write each answer as a fraction and as a decimal.

Round to four decimal places, if necessary.

1. \( \triangle XYZ \)

2. \( \triangle XYZ \)
EXAMPLE 2  Find cosine ratios

Find \( \cos U \) and \( \cos W \). Write each answer as a fraction and as a decimal.

Solution

\[
\cos U = \frac{\text{adj. to } \angle U}{\text{hyp.}} = \frac{UV}{UW} = \frac{18}{30} = \frac{3}{5} = 0.6000
\]

\[
\cos W = \frac{\text{adj. to } \angle W}{\text{hyp.}} = \frac{WV}{UW} = \frac{24}{30} = \frac{4}{5} = 0.8000
\]

EXAMPLE 3  Use a trigonometric ratio to find a hypotenuse

**DOG RUN** You want to string cable to make a dog run from two corners of a building, as shown in the diagram. Write and solve a proportion using a trigonometric ratio to approximate the length of cable you will need.

Solution

\[
\sin 35^\circ = \frac{\text{opp.}}{\text{hyp.}} \quad \text{Write ratio for sine of } 35^\circ.
\]

\[
\sin 35^\circ = \frac{11}{x} \quad \text{Substitute.}
\]

\[
x \cdot \sin 35^\circ = 11 \quad \text{Multiply each side by } x.
\]

\[
x = \frac{11}{\sin 35^\circ} \quad \text{Divide each side by } \sin 35^\circ.
\]

\[
x = \frac{11}{0.5736} \quad \text{Use a calculator to find } \sin 35^\circ.
\]

\[
x = 19.2 \quad \text{Simplify.}
\]

\( \square \) You will need a little more than 19 feet of cable.

GUIDED PRACTICE for Examples 2 and 3

In Exercises 3 and 4, find \( \cos R \) and \( \cos S \). Write each answer as a decimal. Round to four decimal places, if necessary.

3. \( T \quad 12 \quad S \)

4. \( S \quad 16 \quad R \)

5. In Example 3, use the cosine ratio to find the length of the other leg of the triangle formed.
**ANGLES** If you look up at an object, the angle your line of sight makes with a horizontal line is called the **angle of elevation**. If you look down at an object, the angle your line of sight makes with a horizontal line is called the **angle of depression**.

**EXAMPLE 4**  **Find a hypotenuse using an angle of depression**

**SKIING** You are skiing on a mountain with an altitude of 1200 meters. The angle of depression is 21°. About how far do you ski down the mountain?

**Solution**

\[
\sin 21° = \frac{\text{opp.}}{\text{hyp.}}
\]

\[
\sin 21° = \frac{1200}{x}
\]

Multiply each side by \(x\).

\[
x \cdot \sin 21° = 1200 \quad \text{Multiply each side by } x.
\]

Divide each side by \(\sin 21°\).

\[
x = \frac{1200}{\sin 21°}
\]

Use a calculator to find \(\sin 21°\).

\[
x \approx \frac{1200}{0.3584} 
\]

Simplify.

\[
x \approx 3348.2
\]

You ski about 3348 meters down the mountain.

**GUIDED PRACTICE**  **for Example 4**

6. **WHAT IF?** Suppose the angle of depression in Example 4 is 28°. About how far would you ski?
**EXAMPLE 5**  Find leg lengths using an angle of elevation

**SKATEBOARD RAMP** You want to build a skateboard ramp with a length of 14 feet and an angle of elevation of 26°. You need to find the height and length of the base of the ramp.

**Solution**

**STEP 1** Find the height.

\[ \sin 26° = \frac{\text{opp.}}{\text{hyp.}} \]

\[ \sin 26° = \frac{x}{14} \]

Substitute.

\[ 14 \cdot \sin 26° = x \]

Multiply each side by 14.

\[ 6.1 \approx x \]

Use a calculator to simplify.

The height is about 6.1 feet.

**STEP 2** Find the length of the base.

\[ \cos 26° = \frac{\text{adj.}}{\text{hyp.}} \]

\[ \cos 26° = \frac{y}{14} \]

Substitute.

\[ 14 \cdot \cos 26° = y \]

Multiply each side by 14.

\[ 12.6 \approx y \]

Use a calculator to simplify.

The length of the base is about 12.6 feet.

**EXAMPLE 6**  Use a special right triangle to find a sine and cosine

Use a special right triangle to find the sine and cosine of a 60° angle.

**Solution**

Use the 30°-60°-90° Triangle Theorem to draw a right triangle with side lengths of 1, \( \sqrt{3} \), and 2. Then set up sine and cosine ratios for the 60° angle.

\[ \sin 60° = \frac{\text{opp.}}{\text{hyp.}} = \frac{\sqrt{3}}{2} \approx 0.8660 \]

\[ \cos 60° = \frac{\text{adj.}}{\text{hyp.}} = \frac{1}{2} = 0.5000 \]

**GUIDED PRACTICE** for Examples 5 and 6

7. **WHAT IF?** In Example 5, suppose the angle of elevation is 35°. What is the new height and base length of the ramp?

8. Use a special right triangle to find the sine and cosine of a 30° angle.
1. **VOCABULARY** Copy and complete: The sine ratio compares the length of _?_ to the length of _?_.

2. **WRITING** Explain how to tell which side of a right triangle is adjacent to an angle and which side is the hypotenuse.

**FINDING SINE RATIOS** Find \( \sin D \) and \( \sin E \). Write each answer as a fraction and as a decimal. Round to four decimal places, if necessary.

3. \[
\begin{align*}
D & = 15 \\
E & = 12 \\
F & = 9
\end{align*}
\]

4. \[
\begin{align*}
D & = 35 \\
E & = 129 \\
F & = 15
\end{align*}
\]

5. \[
\begin{align*}
D & = 53 \\
E & = 28 \\
F & = 45
\end{align*}
\]

6. **ERROR ANALYSIS** Explain why the student’s statement is incorrect. Write a correct statement for the sine of the angle.

**FINDING COSINE RATIOS** Find \( \cos X \) and \( \cos Y \). Write each answer as a fraction and as a decimal. Round to four decimal places, if necessary.

7. \[
\begin{align*}
X & = 36 \\
Y & = 27 \\
Z & = 45
\end{align*}
\]

8. \[
\begin{align*}
X & = 15 \\
Y & = 17 \\
Z & = 8
\end{align*}
\]

9. \[
\begin{align*}
X & = 26 \\
Y & = 13 \\
Z & = 13 \sqrt{3}
\end{align*}
\]

**USING SINE AND COSINE RATIOS** Use a sine or cosine ratio to find the value of each variable. Round decimals to the nearest tenth.

10. \[
\begin{align*}
x & = 18 \\
y & = 32
\end{align*}
\]

11. \[
\begin{align*}
b & = 10 \\
a & = 48
\end{align*}
\]

12. \[
\begin{align*}
w & = 71 \\
y & = 5
\end{align*}
\]

13. \[
\begin{align*}
r & = 26 \\
s & = \sqrt{3}
\end{align*}
\]

14. \[
\begin{align*}
p & = 34 \\
q & = 64 \sqrt{3}
\end{align*}
\]

15. \[
\begin{align*}
m & = 50 \\
n & = 8
\end{align*}
\]

16. **SPECIAL RIGHT TRIANGLES** Use the 45°-45°-90° Triangle Theorem to find the sine and cosine of a 45° angle.
17. ★ WRITING Describe what you must know about a triangle in order to use the sine ratio and the cosine ratio.

18. ★ MULTIPLE CHOICE In \( \triangle PQR \), which expression can be used to find \( PQ \)?
   - A \( 10 \cdot \cos 29^\circ \)
   - B \( 10 \cdot \sin 29^\circ \)
   - C \( \frac{10}{\sin 29^\circ} \)
   - D \( \frac{10}{\cos 29^\circ} \)

ALGEBRA Find the value of \( x \). Round decimals to the nearest tenth.

19. \[ \begin{array}{c} 2 \\ 42^\circ \end{array} \]

20. \[ \begin{array}{c} 53^\circ \\ 11 \end{array} \]

21. \[ \begin{array}{c} 39^\circ \\ x \end{array} \]

FINDING SINE AND COSINE RATIOS Find the unknown side length. Then find \( \sin X \) and \( \cos X \). Write each answer as a fraction in simplest form and as a decimal. Round to four decimal places, if necessary.

22. \[ \begin{array}{c} 7\sqrt{3} \\ 14 \end{array} \]

23. \[ \begin{array}{c} 4 \\ 8\sqrt{2} \end{array} \]

24. \[ \begin{array}{c} x \\ 35 \end{array} \]

25. \[ \begin{array}{c} 3\sqrt{5} \\ 6 \end{array} \]

26. \[ \begin{array}{c} x \\ 30 \end{array} \]

27. \[ \begin{array}{c} x \\ 65 \end{array} \]

28. ANGLE MEASURE Make a prediction about how you could use trigonometric ratios to find angle measures in a triangle.

29. ★ MULTIPLE CHOICE In \( \triangle JKL \), \( m \angle L = 90^\circ \). Which statement about \( \triangle JKL \) cannot be true?
   - A \( \sin J = 0.5 \)
   - B \( \sin J = 0.1071 \)
   - C \( \sin J = 0.8660 \)
   - D \( \sin J = 1.1 \)

PERIMETER Find the approximate perimeter of the figure.

30. \[ \begin{array}{c} 1.5 \text{ cm} \\ 55^\circ \end{array} \]

31. \[ \begin{array}{c} 1.2 \text{ cm} \\ 70^\circ \end{array} \]

32. CHALLENGE Let \( A \) be any acute angle of a right triangle. Show that 
   (a) \( \tan A = \frac{\sin A}{\cos A} \) and (b) \( \sin^2 A + (\cos A)^2 = 1 \).
33. **AIRPLANE RAMP** The airplane door is 19 feet off the ground and the ramp has a 31° angle of elevation. What is the length $y$ of the ramp?

34. **BLEACHERS** Find the horizontal distance $h$ the bleachers cover. Round to the nearest foot.

35. ★ **SHORT RESPONSE** You are flying a kite with 20 feet of string extended. The angle of elevation from the spool of string to the kite is 41°.
   a. Draw and label a diagram to represent the situation.
   b. How far off the ground is the kite if you hold the spool 5 feet off the ground? Describe how the height where you hold the spool affects the height of the kite.

36. **MULTI-STEP PROBLEM** You want to hang a banner that is 29 feet tall from the third floor of your school. You need to know how tall the wall is, but there is a large bush in your way.
   a. You throw a 38 foot rope out of the window to your friend. She extends it to the end and measures the angle of elevation to be 70°. How high is the window?
   b. The bush is 6 feet tall. Will your banner fit above the bush?
   c. What If? Suppose you need to find how far from the school your friend needs to stand. Which trigonometric ratio should you use?

37. ★ **SHORT RESPONSE** Nick uses the equation $\sin 49° = \frac{x}{16}$ to find $BC$ in $\triangle ABC$. Tim uses the equation $\cos 41° = \frac{x}{16}$. Which equation produces the correct answer? Explain.

38. **TECHNOLOGY** Use geometry drawing software to construct an angle. Mark three points on one side of the angle and construct segments perpendicular to that side at the points. Measure the legs of each triangle and calculate the sine of the angle. Is the sine the same for each triangle?
39. **MULTIPLE REPRESENTATIONS** You are standing on a cliff 30 feet above an ocean. You see a sailboat on the ocean.

   a. **Drawing a Diagram** Draw and label a diagram of the situation.
   
   b. **Making a Table** Make a table showing the angle of depression and the length of your line of sight. Use the angles 40°, 50°, 60°, 70°, and 80°.
   
   c. **Drawing a Graph** Graph the values you found in part (b), with the angle measures on the x-axis.
   
   d. **Making a Prediction** Predict the length of the line of sight when the angle of depression is 30°.

40. **ALGEBRA** If \( \triangle EQU \) is equilateral and \( \triangle RGT \) is a right triangle with \( RG = 2, RT = 1 \), and \( \angle T = 90° \), show that \( \sin E = \cos G \).

41. **CHALLENGE** Make a conjecture about the relationship between sine and cosine values.

   a. Make a table that gives the sine and cosine values for the acute angles of a 45°-45°-90° triangle, a 30°-60°-90° triangle, a 34°-56°-90° triangle, and a 17°-73°-90° triangle.
   
   b. Compare the sine and cosine values. What pattern(s) do you notice?
   
   c. Make a conjecture about the sine and cosine values in part (b).
   
   d. Is the conjecture in part (c) true for right triangles that are not special right triangles? *Explain.*

---

## Mixed Review

Rewrite the equation so that \( x \) is a function of \( y \). *(p. 877)*

42. \( y = \sqrt{x} \)  
43. \( y = 3x - 10 \)  
44. \( y = \frac{x}{9} \)

### Copy and complete the table. *(p. 884)*

46. Find the values of \( x \) and \( y \) in the triangle at the right. *(p. 449)*

---

**EXTRA PRACTICE** for Lesson 7.6, p. 909  
**ONLINE QUIZ** at classzone.com
Another Way to Solve Example 5, page 476

**MULTIPLE REPRESENTATIONS** You can use the Pythagorean Theorem, tangent ratio, sine ratio, or cosine ratio to find the length of an unknown side of a right triangle. The decision of which method to use depends upon what information you have. In some cases, you can use more than one method to find the unknown length.

**Problem**

**SKATEBOARD RAMP** You want to build a skateboard ramp with a length of 14 feet and an angle of elevation of 26°. You need to find the height and base of the ramp.

**Method 1**

**Using a Cosine Ratio and the Pythagorean Theorem**

**STEP 1** Find the measure of the third angle.

\[ 26° + 90° + m\angle 3 = 180° \]

\[ 116° + m\angle 3 = 180° \]

\[ m\angle 3 = 64° \]

**Triangle Sum Theorem**

**Combine like terms.**

**Subtract 116° from each side.**

**STEP 2** Use the cosine ratio to find the height of the ramp.

\[ \cos 64° = \frac{\text{adj.}}{\text{hyp.}} \]

\[ \cos 64° = \frac{x}{14} \]

Write ratio for cosine of 64°.

Substitute.

Multiply each side by 14.

Use a calculator to simplify.

\[ 14 \cdot \cos 64° = x \]

\[ 14 \cdot \cos 64° = x \]

\[ 14 \cdot 0.4493 = x \]

\[ 6.1 \approx x \]

The height is about 6.1 feet.

**STEP 3** Use the Pythagorean Theorem to find the length of the base of the ramp.

\[ (\text{hypotenuse})^2 = (\text{leg})^2 + (\text{leg})^2 \]

\[ 14^2 = 6.1^2 + y^2 \]

\[ 196 = 37.21 + y^2 \]

\[ 158.79 = y^2 \]

\[ 12.6 \approx y \]

Find the positive square root.

The length of the base is about 12.6 feet.
**Method 2**

**Using a Tangent Ratio**

Use the tangent ratio and \( h = 6.1 \) feet to find the length of the base of the ramp.

\[
\tan 26^\circ = \frac{\text{opp.}}{\text{adj.}}
\]

Write ratio for tangent of 26°.

\[
\tan 26^\circ = \frac{6.1}{y}
\]

Substitute.

\[ y \cdot \tan 26^\circ = 61 \]

Multiply each side by \( y \).

\[ y = \frac{6.1}{\tan 26^\circ} \]

Divide each side by \( \tan 26^\circ \).

\[ y \approx 12.5 \]

Use a calculator to simplify.

The length of the base is about 12.5 feet.

Notice that when using the Pythagorean Theorem, the length of the base is 12.6 feet, but when using the tangent ratio, the length of the base is 12.5 feet. The tenth of a foot difference is due to the rounding error introduced when finding the height of the ramp and using that rounded value to calculate the length of the base.

**Practice**

1. **What If?** Suppose the length of the skateboard ramp is 20 feet. Find the height and base of the ramp.

2. **Swimmer** The angle of elevation from the swimmer to the lifeguard is 35°. Find the distance \( x \) from the swimmer to the base of the lifeguard chair. Find the distance \( y \) from the swimmer to the lifeguard.

3. **Algebra** Use the triangle below to write three different equations you can use to find the unknown leg length.

4. **Short Response** Describe how you would decide whether to use the Pythagorean Theorem or trigonometric ratios to find the lengths of unknown sides of a right triangle.

5. **Error Analysis** Explain why the student’s statement is incorrect. Write a correct statement for the cosine of the angle.

6. **Extended Response** You want to find the height of a tree in your yard. The tree’s shadow is 15 feet long and you measure the angle of elevation from the end of the shadow to the top of tree to be 75°.
   a. Find the height of the tree. Explain the method you chose to solve the problem.
   b. What else would you need to know to solve this problem using similar triangles.
   c. Explain why you cannot use the sine ratio to find the height of the tree.
7.7 Solve Right Triangles

**Key Vocabulary**
- solve a right triangle
- inverse tangent
- inverse sine
- inverse cosine

To **solve a right triangle** means to find the measures of all of its sides and angles. You can solve a right triangle if you know either of the following:
- Two side lengths
- One side length and the measure of one acute angle

In Lessons 7.5 and 7.6, you learned how to use the side lengths of a right triangle to find trigonometric ratios for the acute angles of the triangle. Once you know the tangent, the sine, or the cosine of an acute angle, you can use a calculator to find the measure of the angle.

**Inverse Trigonometric Ratios**

Let $\angle A$ be an acute angle.

**Inverse Tangent** If $\tan A = x$, then $\tan^{-1} x = m \angle A$.

**Inverse Sine** If $\sin A = y$, then $\sin^{-1} y = m \angle A$.

**Inverse Cosine** If $\cos A = z$, then $\cos^{-1} z = m \angle A$.

**Example 1** Use an inverse tangent to find the measure of $\angle A$ to the nearest tenth of a degree.

**Solution**

Because $\tan A = \frac{15}{20} = \frac{3}{4} = 0.75$, $\tan^{-1} 0.75 = m \angle A$. Use a calculator.

$\tan^{-1} 0.75 \approx 36.86989765 \ldots$

So, the measure of $\angle A$ is approximately $36.9^\circ$. 

---

**Before** You used tangent, sine, and cosine ratios.

**Now** You will use inverse tangent, sine, and cosine ratios.

**Why?** So you can build a saddlerack, as in Ex. 39.
EXAMPLE 2  Use an inverse sine and an inverse cosine

Let $\angle A$ and $\angle B$ be acute angles in a right triangle. Use a calculator to approximate the measures of $\angle A$ and $\angle B$ to the nearest tenth of a degree.

a. $\sin A = 0.87$

b. $\cos B = 0.15$

Solution

a. $m \angle A = \sin^{-1} 0.87 \approx 60.5^\circ$

b. $m \angle B = \cos^{-1} 0.15 \approx 81.4^\circ$

EXAMPLE 3  Solve a right triangle

Solve the right triangle. Round decimal answers to the nearest tenth.

Solution

STEP 1  Find $m \angle B$ by using the Triangle Sum Theorem.

$180^\circ = 90^\circ + 42^\circ + m \angle B$

$48^\circ = m \angle B$

STEP 2  Approximate $BC$ by using a tangent ratio.

$\tan 42^\circ = \frac{BC}{70}$  Write ratio for tangent of $42^\circ$.

$70 \cdot \tan 42^\circ = BC$  Multiply each side by 70.

$70 \cdot 0.9004 \approx BC$  Approximate $\tan 42^\circ$.

$63 \approx BC$  Simplify and round answer.

STEP 3  Approximate $AB$ using a cosine ratio.

$\cos 42^\circ = \frac{70}{AB}$  Write ratio for cosine of $42^\circ$.

$AB \cdot \cos 42^\circ = 70$  Multiply each side by $AB$.

$AB = \frac{70}{\cos 42^\circ}$  Divide each side by $\cos 42^\circ$.

$AB \approx \frac{70}{0.7431}$  Use a calculator to find $\cos 42^\circ$.

$AB \approx 94.2$  Simplify.

The angle measures are $42^\circ$, $48^\circ$, and $90^\circ$. The side lengths are 70 feet, about 63 feet, and about 94 feet.
To solve a right triangle means to find the measures of all of its \( ? \) and \( ? \).

Explain when to use a trigonometric ratio to find a side length of a right triangle and when to use the Pythagorean Theorem.

The rake is about 3.8°, so it is within the suggested range of 5° or less.

3. Solve a right triangle that has a 40° angle and a 20 inch hypotenuse.

4. WHAT IF? In Example 4, suppose another raked stage is 20 feet long from front to back with a total rise of 2 feet. Is this raked stage safe? Explain.

1. VOCABULARY Copy and complete: To solve a right triangle means to find the measures of all of its \( ? \) and \( ? \).

2. ★ WRITING Explain when to use a trigonometric ratio to find a side length of a right triangle and when to use the Pythagorean Theorem.

USING INVERSE TANGENTS Use a calculator to approximate the measure of \( \angle A \) to the nearest tenth of a degree.

3. 4. 5.
USING INVERSE SINES AND COSINES  Use a calculator to approximate the measure of \( \angle A \) to the nearest tenth of a degree.

6. \( \angle A \)

7. \( \angle A \)

8. \( \angle A \)

9. ★ MULTIPLE CHOICE  Which expression is correct?

- A) \( \sin^{-1} \frac{JL}{JK} = m \angle J \)
- B) \( \tan^{-1} \frac{KL}{JK} = m \angle J \)
- C) \( \cos^{-1} \frac{JL}{JK} = m \angle K \)
- D) \( \sin^{-1} \frac{JL}{KL} = m \angle K \)

SOLVING RIGHT TRIANGLES  Solve the right triangle. Round decimal answers to the nearest tenth.

10. \( \angle A \)

11. \( \angle A \)

12. \( \angle A \)

13. \( \angle A \)

14. \( \angle A \)

15. \( \angle A \)

16. \( \angle A \)

17. \( \angle A \)

18. \( \angle A \)

ERROR ANALYSIS  Describe and correct the student’s error in using an inverse trigonometric ratio.

19. \( \sin^{-1} \frac{JL}{WY} = 36^\circ \)  \( \times \)

20. \( \cos^{-1} \frac{15}{17} = m \angle T \)  \( \times \)

CALCULATOR  Let \( \angle A \) be an acute angle in a right triangle. Approximate the measure of \( \angle A \) to the nearest tenth of a degree.

21. \( \sin A = 0.5 \)  
22. \( \sin A = 0.75 \)  
23. \( \cos A = 0.33 \)  
24. \( \cos A = 0.64 \)  
25. \( \tan A = 1.0 \)  
26. \( \tan A = 0.28 \)  
27. \( \sin A = 0.19 \)  
28. \( \cos A = 0.81 \)
29. ★ MULTIPLE CHOICE Which additional information would not be enough to solve \( \triangle PRQ \)?

A. \( m\angle P \) and \( PR \)  
B. \( m\angle P \) and \( m\angle R \)  
C. \( PQ \) and \( PR \)  
D. \( m\angle P \) and \( PQ \)

30. ★ WRITING Explain why it is incorrect to say that \( \tan^{-1} x = \frac{1}{\tan x} \).

31. SPECIAL RIGHT TRIANGLES If \( \sin A = \frac{1}{2} \sqrt{2} \), what is \( m\angle A \)? If \( \sin B = \frac{1}{2} \sqrt{3} \), what is \( m\angle B \)?

32. TRIGONOMETRIC VALUES Use the Table of Trigonometric Ratios on page 925 to answer the questions.
   a. What angles have nearly the same sine and tangent values?  
   b. What angle has the greatest difference in its sine and tangent value?  
   c. What angle has a tangent value that is double its sine value?  
   d. Is \( \sin 2x \) equal to \( 2 \cdot \sin x \)?

33. CHALLENGE The perimeter of rectangle \( ABCD \) is 16 centimeters, and the ratio of its width to its length is 1 : 3. Segment \( BD \) divides the rectangle into two congruent triangles. Find the side lengths and angle measures of one of these triangles.

**Problem Solving**

34. SOCCER A soccer ball is placed 10 feet away from the goal, which is 8 feet high. You kick the ball and it hits the crossbar along the top of the goal. What is the angle of elevation of your kick?

35. ★ SHORT RESPONSE You are standing on a footbridge in a city park that is 12 feet high above a pond. You look down and see a duck in the water 7 feet away from the footbridge. What is the angle of depression? Explain your reasoning.

36. CLAY In order to unload clay easily, the body of a dump truck must be elevated to at least 55°. If the body of the dump truck is 14 feet long and has been raised 10 feet, will the clay pour out easily?

37. REASONING For \( \triangle ABC \) shown, each of the expressions \( \sin^{-1} \frac{BC}{AB} \), \( \cos^{-1} \frac{AC}{AB} \), and \( \tan^{-1} \frac{BC}{AC} \) can be used to approximate the measure of \( \angle A \). Which expression would you choose? Explain your choice.
38. **MULTI-STEP PROBLEM** You are standing on a plateau that is 800 feet above a basin where you can see two hikers.

![Diagram showing the plateau and hikers]

**a.** If the angle of depression from your line of sight to the hiker at B is 25°, how far is the hiker from the base of the plateau?

**b.** If the angle of depression from your line of sight to the hiker at C is 15°, how far is the hiker from the base of the plateau?

**c.** How far apart are the two hikers? *Explain.*

39. **MULTIPLE REPRESENTATIONS** A local ranch offers trail rides to the public. It has a variety of different sized saddles to meet the needs of horse and rider. You are going to build saddle racks that are 11 inches high. To save wood, you decide to make each rack fit each saddle.

**a.** **Making a Table** The lengths of the saddles range from 20 inches to 27 inches. Make a table showing the saddle rack length \(x\) and the measure of the adjacent angle \(y\).

**b.** **Drawing a Graph** Use your table to draw a scatterplot.

**c.** **Making a Conjecture** Make a conjecture about the relationship between the length of the rack and the angle needed.

40. **★ OPEN-ENDED MATH** Describe a real-world problem you could solve using a trigonometric ratio.

41. **★ EXTENDED RESPONSE** Your town is building a wind generator to create electricity for your school. The builder wants your geometry class to make sure that the guy wires are placed so that the tower is secure. By safety guidelines, the distance along the ground from the tower to the guy wire’s connection with the ground should be between 50% to 75% of the height of the guy wire’s connection with the tower.

**a.** The tower is 64 feet tall. The builders plan to have the distance along the ground from the tower to the guy wire’s connection with the ground be 60% of the height of the tower. How far apart are the tower and the ground connection of the wire?

**b.** How long will a guy wire need to be that is attached 60 feet above the ground?

**c.** How long will a guy wire need to be that is attached 30 feet above the ground?

**d.** Find the angle of elevation of each wire. Are the right triangles formed by the ground, tower, and wires congruent, similar, or neither? *Explain.*

**e.** *Explain* which trigonometric ratios you used to solve the problem.
42. **CHALLENGE** Use the diagram of \( \triangle ABC \).

**GIVEN** \( \triangle ABC \) with altitude \( CD \).

**PROVE** \( \frac{\sin A}{a} = \frac{\sin B}{b} \)

---

**MIXED REVIEW**

PREVIEW Prepare for Lesson 8.1 in Ex. 43.

**Law of Sines and Law of Cosines**

**GOAL** Use trigonometry with acute and obtuse triangles.

The trigonometric ratios you have seen so far in this chapter can be used to find angle and side measures in right triangles. You can use the Law of Sines to find angle and side measures in *any* triangle.

---

**KEY CONCEPT**

**Law of Sines**

If \( \triangle ABC \) has sides of length \( a, b, \) and \( c \) as shown, then

\[
\frac{\sin A}{a} = \frac{\sin B}{b} = \frac{\sin C}{c}.
\]

---

**EXAMPLE 1** Find a distance using Law of Sines

**DISTANCE** Use the information in the diagram to determine how much closer you live to the music store than your friend does.

**Solution**

**STEP 1** Use the Law of Sines to find the distance \( a \) from your friend’s home to the music store.

\[
\frac{\sin A}{a} = \frac{\sin C}{c} \quad \text{Write Law of Sines.}
\]

\[
\sin 81^\circ = \sin 34^\circ \quad \text{Substitute.}
\]

\[
a = \frac{1.5}{\cos 81^\circ} \approx 2.6 \quad \text{Solve for } a.
\]

**STEP 2** Use the Law of Sines to find the distance \( b \) from your home to the music store.

\[
\frac{\sin B}{b} = \frac{\sin C}{c} \quad \text{Write Law of Sines.}
\]

\[
\sin 65^\circ = \sin 34^\circ \quad \text{Substitute.}
\]

\[
b = \frac{1.5}{\cos 65^\circ} \approx 2.4 \quad \text{Solve for } b.
\]

**STEP 3** Subtract the distances.

\[
a - b \approx 2.6 - 2.4 = 0.2
\]

You live about 0.2 miles closer to the music store.
**LAW OF COSINES** You can also use the Law of Cosines to solve any triangle.

### KEY CONCEPT

**Law of Cosines**

If \( \triangle ABC \) has sides of length \( a, b, \) and \( c \), then:

\[
\begin{align*}
    a^2 &= b^2 + c^2 - 2bc \cos A \\
    b^2 &= a^2 + c^2 - 2ac \cos B \\
    c^2 &= a^2 + b^2 - 2ab \cos C
\end{align*}
\]

### EXAMPLE 2

**Find an angle measure using Law of Cosines**

In \( \triangle ABC \) at the right, \( a = 11 \text{ cm}, b = 17 \text{ cm}, \) and \( c = 19 \text{ cm}. \) Find \( m\angle C. \)

**Solution**

\[
\begin{align*}
    c^2 &= a^2 + b^2 - 2ab \cos C \\
    19^2 &= 11^2 + 17^2 - 2(11)(17) \cos C \\
    0.1310 &= \cos C \\
    m\angle C &\approx 82^\circ
\end{align*}
\]

### PRACTICE

**EXAMPLE 1**

**LAW OF SINES** Use the Law of Sines to solve the triangle. Round decimal answers to the nearest tenth.

1. \( \begin{align*}
    a &= 29 \text{ cm} \\
    \angle A &= 85^\circ \\
    \angle C &= 9 \text{ degrees}
\end{align*} \)

2. \( \begin{align*}
    c &= 10 \text{ cm} \\
    \angle B &= 70^\circ \\
    \angle C &= 81^\circ
\end{align*} \)

3. \( \begin{align*}
    a &= 17 \text{ cm} \\
    \angle B &= 81^\circ \\
    \angle C &= 51^\circ
\end{align*} \)

**EXAMPLE 2**

**LAW OF COSINES** Use the Law of Cosines to solve the triangle. Round decimal answers to the nearest tenth.

4. \( \begin{align*}
    a &= 4 \text{ cm} \\
    \angle B &= 65^\circ \\
    \angle C &= 45^\circ
\end{align*} \)

5. \( \begin{align*}
    b &= 23 \text{ cm} \\
    \angle A &= 16^\circ \\
    \angle C &= 27^\circ
\end{align*} \)

6. \( \begin{align*}
    c &= 43 \text{ cm} \\
    \angle A &= 88^\circ \\
    \angle B &= 86^\circ
\end{align*} \)

7. **DISTANCE** Use the diagram at the right. Find the straight distance between the zoo and movie theater.

---

Extension: Law of Sines and Law of Cosines 491
1. **MULTI-STEP PROBLEM** A reach stacker is a vehicle used to lift objects and move them between ships and land.

   a. The vehicle’s arm is 10.9 meters long. The maximum measure of $\angle A$ is $60^\circ$. What is the greatest height $h$ the arm can reach if the vehicle is 3.6 meters tall?

   b. The vehicle’s arm can extend to be 16.4 meters long. What is the greatest height its extended arm can reach?

   c. What is the difference between the two heights the arm can reach above the ground?

2. **EXTENDED RESPONSE** You and a friend are standing the same distance from the edge of a canyon. Your friend looks directly across the canyon at a rock. You stand 10 meters from your friend and estimate the angle between your friend and the rock to be $85^\circ$.

   a. Sketch the situation.

   b. Explain how to find the distance across the canyon.

   c. Suppose the actual angle measure is $87^\circ$. How far off is your estimate of the distance?

3. **SHORT RESPONSE** The international rules of basketball state the rim of the net should be 3.05 meters above the ground. If your line of sight to the rim is $34^\circ$ and you are 1.7 meters tall, what is the distance from you to the rim? Explain your reasoning.

4. **GRIDDED ANSWER** The specifications for a yield ahead pavement marking are shown. Find the height $h$ in feet of this isosceles triangle.

5. **EXTENDED RESPONSE** Use the diagram to answer the questions.

   a. Solve for $x$. Explain the method you chose.

   b. Find $m\angle ABC$. Explain the method you chose.

   c. Explain a different method for finding each of your answers in parts (a) and (b).

6. **SHORT RESPONSE** The triangle on the staircase below has a $52^\circ$ angle and the distance along the stairs is 14 feet. What is the height $h$ of the staircase? What is the length $b$ of the base of the staircase?

7. **GRIDDED ANSWER** The base of an isosceles triangle is 70 centimeters long. The altitude to the base is 75 centimeters long. Find the measure of a base angle to the nearest degree.
Using the Pythagorean Theorem and Its Converse

The Pythagorean Theorem states that in a right triangle the length of the hypotenuse $c$ is equal to the sum of the squares of the lengths of the legs $a$ and $b$, so that $c^2 = a^2 + b^2$.

The Converse of the Pythagorean Theorem can be used to determine if a triangle is a right triangle.

If $c^2 = a^2 + b^2$, then $\triangle ABC$ is a right triangle.

If $c^2 < a^2 + b^2$, then $m \angle C > 90^\circ$ and $\triangle ABC$ is an obtuse triangle.

If $c^2 > a^2 + b^2$, then $m \angle C < 90^\circ$ and $\triangle ABC$ is an acute triangle.

Using Special Relationships in Right Triangles

GEOMETRIC MEAN

In right $\triangle ABC$, altitude $CD$ forms two smaller triangles so that $\triangle CBD \sim \triangle ACD \sim \triangle ABC$.

Also, $\frac{BD}{CD} = \frac{CD}{AD}$, $\frac{AB}{BC} = \frac{CB}{DB}$, and $\frac{AB}{AC} = \frac{AC}{AD}$.

SPECIAL RIGHT TRIANGLES

45°-45°-90° Triangle

- hypotenuse = leg $\cdot \sqrt{2}$

30°-60°-90° Triangle

- hypotenuse = 2 $\cdot$ shorter leg
- longer leg = shorter leg $\cdot \sqrt{3}$

Using Trigonometric Ratios to Solve Right Triangles

The tangent, sine, and cosine ratios can be used to find unknown side lengths and angle measures of right triangles. The values of $\tan x^\circ$, $\sin x^\circ$, and $\cos x^\circ$ depend only on the angle measure and not on the side length.

- $\tan A = \frac{\text{opp.}}{\text{adj.}} = \frac{BC}{AC}$
- $\tan^{-1} \frac{BC}{AC} = m \angle A$
- $\sin A = \frac{\text{opp.}}{\text{hyp.}} = \frac{BC}{AB}$
- $\sin^{-1} \frac{BC}{AB} = m \angle A$
- $\cos A = \frac{\text{adj.}}{\text{hyp.}} = \frac{AC}{AB}$
- $\cos^{-1} \frac{AC}{AB} = m \angle A$
**REVIEW KEY VOCABULARY**

- Pythagorean triple, p. 435
- trigonometric ratio, p. 466
- tangent, p. 466
- sine, p. 473
- cosine, p. 473
- angle of elevation, p. 475
- angle of depression, p. 475
- solve a right triangle, p. 483
- inverse tangent, p. 483
- inverse sine, p. 483
- inverse cosine, p. 483

**VOCABULARY EXERCISES**

1. Copy and complete: A Pythagorean triple is a set of three positive integers $a, b,$ and $c$ that satisfy the equation __?.

2. **WRITING** What does it mean to solve a right triangle? What do you need to know to solve a right triangle?

3. **WRITING** Describe the difference between an angle of depression and an angle of elevation.

**REVIEW EXAMPLES AND EXERCISES**

Use the review examples and exercises below to check your understanding of the concepts you have learned in each lesson of Chapter 7.

### 7.1 Apply the Pythagorean Theorem

**Example**

Find the value of $x$.

Because $x$ is the length of the hypotenuse of a right triangle, you can use the Pythagorean Theorem to find its value.

\[
(hypotenuse)^2 = (leg)^2 + (leg)^2
\]

\[
x^2 = 15^2 + 20^2
\]

\[
x^2 = 225 + 400
\]

\[
x^2 = 625
\]

\[
x = 25
\]

**EXERCISES**

Find the unknown side length $x$.

4. 

5.

6. 

![Diagram](image-url)
Use the Converse of the Pythagorean Theorem

Tell whether the given triangle is a right triangle.

Check to see whether the side lengths satisfy the equation \( c^2 = a^2 + b^2 \).

\[
12^2 \neq (\sqrt{65})^2 + 9^2
\]

144 \neq 65 + 81

144 < 146

The triangle is not a right triangle. It is an acute triangle.

Classify the triangle formed by the side lengths as acute, right, or obtuse.

7. 6, 8, 9
8. 4, 2, 5
9. 10, 2\sqrt{2}, 6\sqrt{3}
10. 15, 20, 15
11. 3, 3, 3\sqrt{2}
12. 13, 18, 3\sqrt{55}

Use Similar Right Triangles

Find the value of \( x \).

By Theorem 7.6, you know that 4 is the geometric mean of \( x \) and 2.

\[
\frac{x}{4} = \frac{2}{4}
\]

Write a proportion.

\( 2x = 16 \)

Cross Products Property

\( x = 8 \)

Divide.

Find the value of \( x \).

16. 17. 18.
**7.4 Special Right Triangles**  
*pp. 457–464*

**Example**

Find the length of the hypotenuse.

By the Triangle Sum Theorem, the measure of the third angle must be 45°. Then the triangle is a 45°-45°-90° triangle.

\[
\text{hypotenuse} = \text{leg} \cdot \sqrt{2} \quad \text{45°-45°-90° Triangle Theorem}
\]

\[
x = 10\sqrt{2} \quad \text{Substitute.}
\]

**EXERCISES**

Find the value of \(x\). Write your answer in simplest radical form.

19.  

20.  

21.

**7.5 Apply the Tangent Ratio**  
*pp. 466–472*

**Example**

Find the value of \(x\).

\[
\tan 37° = \frac{\text{opp.}}{\text{adj.}}
\]

\[
\tan 37° = \frac{x}{8}
\]

\[
8 \cdot \tan 37° = x
\]

\[
6 = x \quad \text{Use a calculator to simplify.}
\]

**EXERCISES**

In Exercises 22 and 23, use the diagram.

22. The angle between the bottom of a fence and the top of a tree is 75°. The tree is 4 feet from the fence. How tall is the tree? Round your answer to the nearest foot.

23. In Exercise 22, how tall is the tree if the angle is 55°?

Find the value of \(x\) to the nearest tenth.

24.  

25.  

26.
7.6 Apply the Sine and Cosine Ratios pp. 473–480

**Example**

Find sin $A$ and sin $B$.

- $\sin A = \frac{\text{opp.}}{\text{hyp.}} = \frac{BC}{BA} = \frac{15}{17} \approx 0.8824$
- $\sin B = \frac{\text{opp.}}{\text{hyp.}} = \frac{AC}{AB} = \frac{8}{17} \approx 0.4706$

**Exercises**

Find $\sin X$ and $\cos X$. Write each answer as a fraction, and as a decimal. Round to four decimals places, if necessary.

27. \[ \sin X = \frac{3}{5}, \ \cos X = \frac{4}{5} \] 28. \[ \sin X = \frac{\sqrt{149}}{14}, \ \cos X = \frac{7}{14} \] 29. \[ \sin Y = \frac{48}{55}, \ \cos Y = \frac{55}{73} \]

7.7 Solve Right Triangles pp. 483–489

**Example**

Use a calculator to approximate the measure of $\angle A$ to the nearest tenth of a degree.

Because $\tan A = \frac{18}{12} = \frac{3}{2} = 1.5$, $\tan^{-1} 1.5 = m \angle A$.

Use a calculator to evaluate this expression.

$\tan^{-1} 1.5 \approx 56.3099324 \ldots$

So, the measure of $\angle A$ is approximately $56.3^\circ$.

**Exercises**

Solve the right triangle. Round decimal answers to the nearest tenth.

30. \[ \angle B = 15^\circ, \ \angle C = 10^\circ \] 31. \[ \angle N = 37^\circ, \ \angle M = 6^\circ \] 32. \[ \angle Z = 18^\circ, \ \angle X = 25^\circ \]

33. Find the measures of $\angle GED$, $\angle GEF$, and $\angle EFG$. Find the lengths of $\overline{EG}$, $\overline{DF}$, $\overline{EF}$. 
Find the value of \( x \). Write your answer in simplest radical form.

1. \[
\begin{array}{c}
12 \\
\hline
20 \\
x
\end{array}
\]
2. \[
\begin{array}{c}
x \\

\]

16. \textbf{FLAGPOLE} Julie is 6 feet tall. If she stands 15 feet from the flagpole and holds a cardboard square, the edges of the square line up with the top and bottom of the flagpole. Approximate the height of the flagpole.

17. \textbf{HILLS} The length of a hill in your neighborhood is 2000 feet. The height of the hill is 750 feet. What is the angle of elevation of the hill?
GRAPH AND SOLVE QUADRATIC EQUATIONS

The graph of $y = ax^2 + bx + c$ is a parabola that opens upward if $a > 0$ and opens downward if $a < 0$. The $x$-coordinate of the vertex is $-\frac{b}{2a}$. The axis of symmetry is the vertical line $x = -\frac{b}{2a}$.

**EXAMPLE 1  Graph a quadratic function**

Graph the equation $y = -x^2 + 4x - 3$.

Because $a = -1$ and $-1 < 0$, the graph opens downward.

The vertex has $x$-coordinate $-\frac{b}{2a} = -\frac{4}{2(-1)} = 2$.

The $y$-coordinate of the vertex is $-(2)^2 + 4(2) - 3 = 1$.

So, the vertex is $(2, 1)$ and the axis of symmetry is $x = 2$.

Use a table of values to draw a parabola through the plotted points.

**EXAMPLE 2  Solve a quadratic equation by graphing**

Solve the equation $x^2 - 2x = 3$.

Write the equation in the standard form $ax^2 + bx + c = 0$:

$x^2 - 2x - 3 = 0$.

Graph the related quadratic function $y = x^2 - 2x - 3$, as shown.

The $x$-intercepts of the graph are $-1$ and $3$.

So, the solutions of $x^2 - 2x = 3$ are $-1$ and $3$.

Check the solution algebraically.

$(-1)^2 - 2(-1) \frac{3}{2} \rightarrow 1 + 2 = 3 
(3)^2 - 2(3) \frac{3}{2} \rightarrow 9 - 6 = 3 \checkmark$

**EXERCISES**

Graph the quadratic function. Label the vertex and axis of symmetry.

1. $y = x^2 - 6x + 8$
2. $y = -x^2 - 4x + 2$
3. $y = 2x^2 - x - 1$
4. $y = 3x^2 - 9x + 2$
5. $y = \frac{1}{2}x^2 - x + 3$
6. $y = -4x^2 + 6x - 5$

Solve the quadratic equation by graphing. Check solutions algebraically.

7. $x^2 = x + 6$
8. $4x + 4 = -x^2$
9. $2x^2 = -8$
10. $3x^2 + 2 = 14$
11. $-x^2 + 4x - 5 = 0$
12. $2x - x^2 = -15$
13. $\frac{1}{4}x^2 = 2x$
14. $x^2 + 3x = 4$
15. $x^2 + 8 = 6x$
16. $x^2 = 9x - 1$
17. $-25 = x^2 + 10x$
18. $x^2 + 6x = 0$
MULTIPLE CHOICE QUESTIONS

If you have difficulty solving a multiple choice question directly, you may be able to use another approach to eliminate incorrect answer choices and obtain the correct answer.

**Problem 1**

You ride your bike at an average speed of 10 miles per hour. How long does it take you to ride one time around the triangular park shown in the diagram?

A 0.1 h  
B 0.2 h  
C 0.3 h  
D 0.4 h

**Method 1**

**Solve Directly** The park is a right triangle. Use the Pythagorean Theorem to find $KL$. Find the perimeter of $\triangle JKL$. Then find how long it takes to ride around the park.

**Step 1** Find $KL$. Use the Pythagorean Theorem.

\[
JK^2 + KL^2 = JL^2 \\
1.5^2 + KL^2 = 1.7^2 \\
2.25 + KL^2 = 2.89 \\
KL^2 = 0.64 \\
KL = 0.8
\]

**Step 2** Find the perimeter of $\triangle JKL$.

\[
P = JK + JL + KL \\
= 1.5 + 1.7 + 0.8 \\
= 4 \text{ mi}
\]

**Step 3** Find the time $t$ (in hours) it takes you to go around the park.

Rate $\times$ Time = Distance

\[
(10 \text{ mi/h}) \times t = 4 \text{ mi} \\
t = 0.4 \text{ h}
\]

The correct answer is D. (A) (B) (C) (D)

**Method 2**

**Eliminate Choices** Another method is to find how far you can travel in the given times to eliminate choices that are not reasonable.

**Step 1** Find how far you will travel in each of the given times. Use the formula $rt = d$.

**Choice A:** $0.1(10) = 1 \text{ mi}$

**Choice B:** $0.2(10) = 2 \text{ mi}$

**Choice C:** $0.3(10) = 3 \text{ mi}$

**Choice D:** $0.4(10) = 4 \text{ mi}$

The distance around two sides of the park is $1.5 + 1.7 = 3.2 \text{ mi}$. But you need to travel around all three sides, which is longer.

Since $1 < 3.2$, $2 < 3.2$, and $3 < 3.2$, you can eliminate choices A, B, and C.

**Step 2** Check that D is the correct answer. If the distance around the park is 4 miles, then

\[
KL = 4 - JK - JL \\
= 4 - 1.5 - 1.7 = 0.8 \text{ mi}
\]

Apply the Converse of the Pythagorean Theorem.

\[
0.8^2 + 1.5^2 \geq 1.7^2 \\
0.64 + 2.25 \geq 2.89 \\
2.89 = 2.89 \checkmark
\]

The correct answer is D. (A) (B) (C) (D)
**Problem 2**

What is the height of \( \triangle WXY \)?

\[ \begin{array}{cccc}
A & 4 & B & 4\sqrt{3} \\
C & 8 & D & 8\sqrt{3} \\
\end{array} \]

**Method 1**

Solve directly

Draw altitude \( \overline{XZ} \) to form two congruent \( 30^\circ-60^\circ-90^\circ \) triangles.

![Diagram](https://via.placeholder.com/150)

Let \( h \) be the length of the longer leg of \( \triangle XZY \).

The length of the shorter leg is 4.

\[
\text{longer leg} = \sqrt{3} \cdot \text{shorter leg} \\
h = 4\sqrt{3}
\]

The correct answer is B.  \( A \)  \( B \)  \( C \)  \( D \)

**Method 2**

Eliminate Choices

Another method is to use theorems about triangles to eliminate incorrect choices. Draw altitude \( \overline{XZ} \) to form two congruent right triangles.

![Diagram](https://via.placeholder.com/150)

Consider \( \triangle XZW \). By the Triangle Inequality, \( XW < WZ + XZ \). So, \( 8 < 4 + XZ \) and \( XZ > 4 \). You can eliminate choice A. Also, \( XZ \) must be less than the hypotenuse of \( \triangle XWZ \). You can eliminate choices C and D.

The correct answer is B.  \( A \)  \( B \)  \( C \)  \( D \)

**Practice**

Explain why you can eliminate the highlighted answer choice.

1. In the figure shown, what is the length of \( \overline{EF} \)?

   \[ \begin{array}{cccc}
   A & 9 & B & \times 9\sqrt{2} \\
   C & 18 & D & 9\sqrt{5} \\
   \end{array} \]

2. Which of the following lengths are side lengths of a right triangle?

   \[ \begin{array}{cccc}
   A & \times 2, 21, 23 & B & 3, 4, 5 \\
   C & 9, 16, 18 & D & 11, 16, 61 \\
   \end{array} \]

3. In \( \triangle PQR \), \( PQ = QR = 13 \) and \( PR = 10 \). What is the length of the altitude drawn from vertex \( Q \)?

   \[ \begin{array}{cccc}
   A & 10 & B & 11 \\
   C & 12 & D & \times \\
   \end{array} \]
1. Which expression gives the correct length for $XW$ in the diagram below?

- **A** $5 + 5\sqrt{2}$
- **B** $5 + 5\sqrt{3}$
- **C** $5\sqrt{3} + 5\sqrt{2}$
- **D** $5 + 10$

2. The area of $\triangle EFG$ is 400 square meters. To the nearest tenth of a meter, what is the length of side $EG$?

- **A** 10.0 meters
- **B** 20.0 meters
- **C** 44.7 meters
- **D** 56.7 meters

3. Which expression can be used to find the value of $x$ in the diagram below?

- **A** $\tan 29^\circ = \frac{x}{17}$
- **B** $\cos 29^\circ = \frac{x}{17}$
- **C** $\tan 61^\circ = \frac{x}{17}$
- **D** $\cos 61^\circ = \frac{x}{17}$

4. A fire station, a police station, and a hospital are not positioned in a straight line. The distance from the police station to the fire station is 4 miles. The distance from the fire station to the hospital is 3 miles. Which of the following could not be the distance from the police station to the hospital?

- **A** 1 mile
- **B** 2 miles
- **C** 5 miles
- **D** 6 miles

5. It takes 14 minutes to walk from your house to your friend’s house on the path shown in red. If you walk at the same speed, about how many minutes will it take on the path shown in blue?

- **A** 6 minutes
- **B** 8 minutes
- **C** 10 minutes
- **D** 13 minutes

6. Which equation can be used to find $QR$ in the diagram below?

- **A** $\frac{QR}{15} = \frac{15}{7}$
- **B** $\frac{15}{QR} = \frac{QR}{8}$
- **C** $QR = \sqrt{15^2 + 27^2}$
- **D** $\frac{QR}{7} = \frac{7}{15}$

7. Stitches are sewn along the black line segments in the potholder shown below. There are 10 stitches per inch. Which is the closest estimate of the number of stitches used?

- **A** 480
- **B** 550
- **C** 656
- **D** 700
8. A design on a T-shirt is made of a square and four equilateral triangles. The side length of the square is 4 inches. Find the distance (in inches) from point $A$ to point $B$. Round to the nearest tenth.

![Diagram of a T-shirt design]

9. Use the diagram below. Find $KM$ to the nearest tenth of a unit.

![Diagram with points K, M, L, and N]

10. The diagram shows the side of a set of stairs. In the diagram, the smaller right triangles are congruent. Explain how to find the lengths $x$, $y$, and $z$.

![Diagram of stairs]

11. You drive due north from Dalton to Bristol. Next, you drive from Bristol to Hilldale. Finally, you drive from Hilldale to Dalton. Is Hilldale due west of Bristol? Explain.

![Map showing routes from Dalton to Hilldale to Bristol]

12. The design for part of a water ride at an amusement park is shown. The ride carries people up a track along ramp $AB$. Then riders travel down a water chute along ramp $BC$.

a. How high is the ride above point $D$? Explain.

b. What is the total distance from point $A$ to point $B$ to point $C$? Explain.

![Diagram of water ride]

13. A formula for the area $A$ of a triangle is Heron's Formula. For a triangle with side lengths $EF$, $FG$, and $EG$, the formula is

$$A = \sqrt{s(s - EF)(s - FG)(s - EG)}, \text{ where } s = \frac{1}{2}(EF + FG + EG).$$

a. In $\triangle EFG$ shown, $EF = FG = 15$, and $EG = 18$. Use Heron's formula to find the area of $\triangle EFG$. Round to the nearest tenth.

b. Use the formula $A = \frac{1}{2}bh$ to find the area of $\triangle EFG$. Round to the nearest tenth.

c. Use Heron's formula to justify that the area of an equilateral triangle with side length $x$ is $A = \frac{x^2\sqrt{3}}{4}$.
In previous chapters, you learned the following skills, which you’ll use in Chapter 8: identifying angle pairs, using the Triangle Sum Theorem, and using parallel lines.

**Prerequisite Skills**

**VOCABULARY CHECK**

Copy and complete the statement.

1. \(\angle 1\) and \(\_\_\_\_\_\_\) are vertical angles.
2. \(\angle 3\) and \(\_\_\_\_\_\_\) are consecutive interior angles.
3. \(\angle 7\) and \(\_\_\_\_\_\) are corresponding angles.
4. \(\angle 5\) and \(\_\_\_\_\_\) are alternate interior angles.

**SKILLS AND ALGEBRA CHECK**

5. In \(\triangle ABC\), \(m\angle A = x^\circ\), \(m\angle B = 3x^\circ\), and \(m\angle C = (4x - 12)^\circ\). Find the measures of the three angles. *(Review p. 217 for 8.1)*

Find the measure of the indicated angle. *(Review p. 154 for 8.2–8.5)*

6. If \(m\angle 3 = 105^\circ\), then \(m\angle 2 = ?\).
7. If \(m\angle 1 = 98^\circ\), then \(m\angle 3 = ?\).
8. If \(m\angle 4 = 82^\circ\), then \(m\angle 1 = ?\).
9. If \(m\angle 2 = 102^\circ\), then \(m\angle 4 = ?\).
In Chapter 8, you will apply the big ideas listed below and reviewed in the Chapter Summary on page 559. You will also use the key vocabulary listed below.

**Big Ideas**

1. Using angle relationships in polygons
2. Using properties of parallelograms
3. Classifying quadrilaterals by their properties

**Key Vocabulary**

- diagonal, p. 507
- parallelogram, p. 515
- rhombus, p. 533
- rectangle, p. 533
- square, p. 533
- trapezoid, p. 542
- bases, base angles, legs
- isosceles trapezoid, p. 543
- midsegment of a trapezoid, p. 544
- kite, p. 545

**Why?**

You can use properties of quadrilaterals and other polygons to find side lengths and angle measures.

**Animated Geometry**

The animation illustrated below for Example 4 on page 545 helps you answer this question: How can classifying a quadrilateral help you draw conclusions about its sides and angles?

**Animated Geometry** at classzone.com

Other animations for Chapter 8: pages 509, 519, 527, 535, 551, and 553
8.1 Investigate Angle Sums in Polygons

**MATERIALS** • straightedge • ruler

**QUESTION** What is the sum of the measures of the interior angles of a convex \( n \)-gon?

Recall from page 43 that an \( n \)-gon is a polygon with \( n \) sides and \( n \) vertices.

**EXPLORE** Find sums of interior angle measures

**STEP 1** Draw polygons

Use a straightedge to draw convex polygons with three sides, four sides, five sides, and six sides. An example is shown.

**STEP 2** Draw diagonals

In each polygon, draw all the diagonals from one vertex. A diagonal is a segment that joins two nonconsecutive vertices. Notice that the diagonals divide the polygon into triangles.

**STEP 3** Make a table

Copy the table below. By the Triangle Sum Theorem, the sum of the measures of the interior angles of a triangle is 180°. Use this theorem to complete the table.

<table>
<thead>
<tr>
<th>Polygon</th>
<th>Number of sides</th>
<th>Number of triangles</th>
<th>Sum of measures of interior angles</th>
</tr>
</thead>
<tbody>
<tr>
<td>Triangle</td>
<td>3</td>
<td>1</td>
<td>(1 \cdot 180° = 180°)</td>
</tr>
<tr>
<td>Quadrilateral</td>
<td>?</td>
<td>?</td>
<td>(2 \cdot 180° = 360°)</td>
</tr>
<tr>
<td>Pentagon</td>
<td>?</td>
<td>?</td>
<td>?</td>
</tr>
<tr>
<td>Hexagon</td>
<td>?</td>
<td>?</td>
<td>?</td>
</tr>
</tbody>
</table>

**DRAW CONCLUSIONS** Use your observations to complete these exercises

1. Look for a pattern in the last column of the table. What is the sum of the measures of the interior angles of a convex heptagon? a convex octagon? Explain your reasoning.

2. Write an expression for the sum of the measures of the interior angles of a convex \( n \)-gon.

3. Measure the side lengths in the hexagon you drew. Compare the lengths with those in hexagons drawn by other students. Do the side lengths affect the sum of the interior angle measures of a hexagon? Explain.
8.1 Find Angle Measures in Polygons

Key Vocabulary
- diagonal
- interior angle, $p. 218$
- exterior angle, $p. 218$

In a polygon, two vertices that are endpoints of the same side are called consecutive vertices. A diagonal of a polygon is a segment that joins two nonconsecutive vertices. Polygon ABCDE has two diagonals from vertex B, BD and BE.

As you can see, the diagonals from one vertex form triangles. In the Activity on page 506, you used these triangles to find the sum of the interior angle measures of a polygon. Your results support the following theorem and corollary.

**THEOREMS**

**THEOREM 8.1 Polygon Interior Angles Theorem**

The sum of the measures of the interior angles of a convex $n$-gon is $(n - 2) \cdot 180^\circ$.

$m\angle 1 + m\angle 2 + \cdots + m\angle n = (n - 2) \cdot 180^\circ$

*Proof:* Ex. 33, p. 512 (for pentagons)

**COROLLARY TO THEOREM 8.1 Interior Angles of a Quadrilateral**

The sum of the measures of the interior angles of a quadrilateral is $360^\circ$.

*Proof:* Ex. 34, p. 512

**EXAMPLE 1** Find the sum of angle measures in a polygon

Find the sum of the measures of the interior angles of a convex octagon.

**Solution**

An octagon has 8 sides. Use the Polygon Interior Angles Theorem.

$$(n - 2) \cdot 180^\circ = (8 - 2) \cdot 180^\circ$$

Substitute 8 for $n$.  

$= 6 \cdot 180^\circ$

Subtract.  

$= 1080^\circ$

Multiply.  

The sum of the measures of the interior angles of an octagon is $1080^\circ$.  

---

Before

You classified polygons.

Now

You will find angle measures in polygons.

Why?

So you can describe a baseball park, as in Exs. 28–29.
**Example 2** Find the number of sides of a polygon

The sum of the measures of the interior angles of a convex polygon is 900°. Classify the polygon by the number of sides.

**Solution**

Use the Polygon Interior Angles Theorem to write an equation involving the number of sides \( n \). Then solve the equation to find the number of sides.

\[
(n - 2) \cdot 180 = 900^\circ \quad \text{Polygon Interior Angles Theorem}
\]

\[
n - 2 = 5 \quad \text{Divide each side by 180°.}
\]

\[
n = 7 \quad \text{Add 2 to each side.}
\]

\n
\[\text{The polygon has 7 sides. It is a heptagon.}\]

**Guided Practice** for Examples 1 and 2

1. The coin shown is in the shape of a regular 11-gon. Find the sum of the measures of the interior angles.

2. The sum of the measures of the interior angles of a convex polygon is 1440°. Classify the polygon by the number of sides.

**Example 3** Find an unknown interior angle measure

**Algebra** Find the value of \( x \) in the diagram shown.

\[108^\circ \quad 121^\circ \quad x^\circ \quad 59^\circ\]

**Solution**

The polygon is a quadrilateral. Use the Corollary to the Polygon Interior Angles Theorem to write an equation involving \( x \). Then solve the equation.

\[
x + 108^\circ + 121^\circ + 59^\circ = 360^\circ \quad \text{Corollary to Theorem 8.1}
\]

\[
x + 288 = 360 \quad \text{Combine like terms.}
\]

\[
x = 72 \quad \text{Subtract 288 from each side.}
\]

\[\text{The value of } x \text{ is 72.}\]

**Guided Practice** for Example 3

3. Use the diagram at the right. Find \( m \angle S \) and \( m \angle T \).

4. The measures of three of the interior angles of a quadrilateral are 89°, 110°, and 46°. Find the measure of the fourth interior angle.
EXTERIOR ANGLES  Unlike the sum of the interior angle measures of a convex polygon, the sum of the exterior angle measures does *not* depend on the number of sides of the polygon. The diagrams below suggest that the sum of the measures of the exterior angles, one at each vertex, of a pentagon is 360°. In general, this sum is 360° for any convex polygon.

**VISUALIZE IT**
A circle contains two straight angles. So, there are 180° + 180°, or 360°, in a circle.

**THEOREM**

**Theorem 8.2  Polygon Exterior Angles Theorem**

The sum of the measures of the exterior angles of a convex polygon, one angle at each vertex, is 360°.

\[ m\angle 1 + m\angle 2 + \ldots + m\angle n = 360° \]

*Proof:* Ex. 35, p. 512

**Example 4  Standardized Test Practice**

What is the value of x in the diagram shown?

(A) 67  (B) 68  (C) 91  (D) 136

**Solution**

Use the Polygon Exterior Angles Theorem to write and solve an equation.

\[ x° + 2x° + 89° + 67° = 360° \]  **Polygon Exterior Angles Theorem**

\[ 3x + 156 = 360 \]  **Combine like terms.**

\[ x = 68 \]  **Solve for x.**

The correct answer is B. (A) (B) (C) (D)

**Guided Practice  for Example 4**

5. A convex hexagon has exterior angles with measures 34°, 49°, 58°, 67°, and 75°. What is the measure of an exterior angle at the sixth vertex?
EXAMPLE 5  Find angle measures in regular polygons

TRAMPOLINE  The trampoline shown is shaped like a regular dodecagon. Find (a) the measure of each interior angle and (b) the measure of each exterior angle.

Solution
a. Use the Polygon Interior Angles Theorem to find the sum of the measures of the interior angles.

\[(n - 2) \cdot 180^\circ = (12 - 2) \cdot 180^\circ = 1800^\circ\]

Then find the measure of one interior angle. A regular dodecagon has 12 congruent interior angles. Divide 1800 by 12:

\[1800^\circ \div 12 = 150^\circ\]

The measure of each interior angle in the dodecagon is 150\(^\circ\).

b. By the Polygon Exterior Angles Theorem, the sum of the measures of the exterior angles, one angle at each vertex, is 360\(^\circ\). Divide 360 by 12 to find the measure of one of the 12 congruent exterior angles:

\[360^\circ \div 12 = 30^\circ\]

The measure of each exterior angle in the dodecagon is 30\(^\circ\).

GUIDED PRACTICE for Example 5

6. An interior angle and an adjacent exterior angle of a polygon form a linear pair. How can you use this fact as another method to find the exterior angle measure in Example 5?

8.1 EXERCISES

1. VOCABULARY  Sketch a convex hexagon. Draw all of its diagonals.

2. ★ WRITING  How many exterior angles are there in an \(n\)-gon? Are all the exterior angles considered when you use the Polygon Exterior Angles Theorem? Explain.

INTERIOR ANGLE SUMS  Find the sum of the measures of the interior angles of the indicated convex polygon.

FINDING NUMBER OF SIDES  The sum of the measures of the interior angles of a convex polygon is given. Classify the polygon by the number of sides.

7. \(360^\circ\)  8. \(720^\circ\)  9. \(1980^\circ\)  10. \(2340^\circ\)
**ALGEBRA** Find the value of $x$.

11. $x \quad 8 \quad 59 \quad 8 \quad 86 \quad 8 \quad 140 \quad 8
12. $x \quad 8 \quad 40 \quad x \quad 77 \quad 8 \quad 121 \quad 8 \quad 96 \quad 8 \quad 101 \quad 8 \quad 138 \quad 8
13. $x \quad 8 \quad 2x \quad 8 \quad 143 \quad 8 \quad 139 \quad 8 \quad 152 \quad 8 \quad 116 \quad 8 \quad 125 \quad 8 \quad 140 \quad 8
14. $x \quad 8 \quad 78 \quad 8 \quad 65 \quad 8 \quad 106 \quad 8
15. $2x \quad 8 \quad 45 \quad 8 \quad 40 \quad 8 \quad 77 \quad 8
16. $x \quad 8 \quad 50 \quad 8 \quad 39 \quad 8 \quad 58 \quad 8 \quad 48 \quad 8 \quad 59 \quad 8
17. **ERROR ANALYSIS** A student claims that the sum of the measures of the exterior angles of an octagon is greater than the sum of the measures of the exterior angles of a hexagon. The student justifies this claim by saying that an octagon has two more sides than a hexagon. Describe and correct the error the student is making.

18. **MULTIPLE CHOICE** The measures of the interior angles of a quadrilateral are $x\degree$, $2x\degree$, $3x\degree$, and $4x\degree$. What is the measure of the largest interior angle?
   A. $120\degree$  
   B. $144\degree$  
   C. $160\degree$  
   D. $360\degree$

19. Regular pentagon  
20. Regular 18-gon  
21. Regular 90-gon

**REGULAR POLYGONS** Find the measures of an interior angle and an exterior angle of the indicated regular polygon.

19. Regular pentagon  
20. Regular 18-gon  
21. Regular 90-gon

22. **DIAGONALS OF SIMILAR FIGURES** Hexagons $RSTUVW$ and $JKLMNP$ are similar. $RU$ and $JM$ are diagonals. Given $ST = 6$, $KL = 10$, and $RU = 12$, find $JM$.

23. **SHORT RESPONSE** Explain why any two regular pentagons are similar.

24. Each interior angle of the regular $n$-gon has a measure of $156\degree$.
25. Each exterior angle of the regular $n$-gon has a measure of $9\degree$.

26. **POSSIBLE POLYGONS** Determine if it is possible for a regular polygon to have an interior angle with the given angle measure. Explain your reasoning.
   a. $165\degree$  
   b. $171\degree$  
   c. $75\degree$  
   d. $40\degree$

27. **CHALLENGE** Sides are added to a convex polygon so that the sum of its interior angle measures is increased by $540\degree$. How many sides are added to the polygon? Explain your reasoning.
**BASEBALL** The outline of the playing field at a baseball park is a polygon, as shown. Find the sum of the measures of the interior angles of the polygon.

28.

30. **JEWELRY BOX** The base of a jewelry box is shaped like a regular hexagon. What is the measure of each interior angle of the hexagon?

31. **GREENHOUSE** The floor of the greenhouse shown is a shaped like a regular decagon. Find the measure of an interior angle of the regular decagon. Then find the measure of an exterior angle.

32. **MULTI-STEP PROBLEM** In pentagon PQRST, \( \angle P, \angle Q, \text{ and } \angle S \) are right angles, and \( \angle R \equiv \angle T \).
   
   a. **Draw a Diagram** Sketch pentagon PQRST. Mark the right angles and the congruent angles.
   
   b. **Calculate** Find the sum of the interior angle measures of PQRST.
   
   c. **Calculate** Find \( m \angle R \) and \( m \angle T \).

33. **PROVING THEOREM 8.1 FOR PENTAGONS** The Polygon Interior Angles Theorem states that the sum of the measures of the interior angles of an \( n \)-gon is \((n - 2) \cdot 180^\circ\). Write a paragraph proof of this theorem for the case when \( n = 5 \).

34. **PROVING A COROLLARY** Write a paragraph proof of the Corollary to the Polygon Interior Angles Theorem.

35. **PROVING THEOREM 8.2** Use the plan below to write a paragraph proof of the Polygon Exterior Angles Theorem.

**Plan for Proof** In a convex \( n \)-gon, the sum of the measures of an interior angle and an adjacent exterior angle at any vertex is \( 180^\circ \). Multiply by \( n \) to get the sum of all such sums at each vertex. Then subtract the sum of the interior angles derived by using the Polygon Interior Angles Theorem.
36. **MULTIPLE REPRESENTATIONS** The formula for the measure of each interior angle in a regular polygon can be written in function notation.

   a. **Writing a Function** Write a function \( h(n) \), where \( n \) is the number of sides in a regular polygon and \( h(n) \) is the measure of any interior angle in the regular polygon.

   b. **Using a Function** Use the function from part (a) to find \( h(9) \). Then use the function to find \( n \) if \( h(n) = 150^\circ \).

   c. **Graphing a Function** Graph the function from part (a) for \( n = 3, 4, 5, 6, 7, \) and \( 8 \). Based on your graph, describe what happens to the value of \( h(n) \) as \( n \) increases. Explain your reasoning.

37. **EXTENDED RESPONSE** In a concave polygon, at least one interior angle measure is greater than \( 180^\circ \). For example, the measure of the shaded angle in the concave quadrilateral below is \( 210^\circ \).

   a. In the diagrams above, the interiors of a concave quadrilateral, pentagon, hexagon, and heptagon are divided into triangles. Make a table like the one in the Activity on page 506. For each of the polygons shown above, record the number of sides, the number of triangles, and the sum of the measures of the interior angles.

   b. Write an algebraic expression that you can use to find the sum of the measures of the interior angles of a concave polygon. Explain.

38. **CHALLENGE** Polygon \( ABCDEFGH \) is a regular octagon. Suppose sides \( AB \) and \( CD \) are extended to meet at a point \( P \). Find \( m \angle BPC \). Explain your reasoning. Include a diagram with your answer.

---

**MIXED REVIEW**

Find \( m \angle 1 \) and \( m \angle 2 \). Explain your reasoning. (p. 154)

39.  

40.  

41.  

42. Quadrilaterals \( JKL \) and \( PQRS \) are similar. If \( JK = 3.6 \) centimeters and \( PQ = 1.2 \) centimeters, find the scale factor of \( JKL \) to \( PQRS \). (p. 372)

43. Quadrilaterals \( ABCD \) and \( EFGH \) are similar. The scale factor of \( ABCD \) to \( EFGH \) is \( 8 : 5 \), and the perimeter of \( ABCD \) is 90 feet. Find the perimeter of \( EFGH \). (p. 372)

Let \( \angle A \) be an acute angle in a right triangle. Approximate the measure of \( \angle A \) to the nearest tenth of a degree. (p. 483)

44. \( \sin A = 0.77 \)  
45. \( \sin A = 0.35 \)  
46. \( \cos A = 0.81 \)  
47. \( \cos A = 0.23 \)
8.2 Investigate Parallelograms

MATERIALS • graphing calculator or computer

What are some of the properties of a parallelogram?

You can use geometry drawing software to investigate relationships in special quadrilaterals.

**Explore** Draw a quadrilateral

**STEP 1** Draw parallel lines Construct \( \overrightarrow{AB} \) and a line parallel to \( \overrightarrow{AB} \) through point \( C \). Then construct \( \overrightarrow{BC} \) and a line parallel to \( \overrightarrow{BC} \) through point \( A \). Finally, construct a point \( D \) at the intersection of the line drawn parallel to \( \overrightarrow{AB} \) and the line drawn parallel to \( \overrightarrow{BC} \).

**STEP 2** Draw quadrilateral Construct segments to form the sides of quadrilateral \( ABCD \). After you construct \( AB \), \( BC \), \( CD \), and \( DA \), hide the parallel lines that you drew in Step 1.

**STEP 3** Measure side lengths Measure the side lengths \( AB \), \( BC \), \( CD \), and \( DA \). Drag point \( A \) or point \( B \) to change the side lengths of \( ABCD \). What do you notice about the side lengths?

**STEP 4** Measure angles Find the measures of \( \angle A \), \( \angle B \), \( \angle C \), and \( \angle D \). Drag point \( A \) or point \( B \) to change the angle measures of \( ABCD \). What do you notice about the angle measures?

**Draw Conclusions** Use your observations to complete these exercises

1. The quadrilateral you drew in the Explore is called a parallelogram. Why do you think this type of quadrilateral has this name?

2. Based on your observations, make a conjecture about the side lengths of a parallelogram and a conjecture about the angle measures of a parallelogram.

3. **Reasoning** Draw a parallelogram and its diagonals. Measure the distance from the intersection of the diagonals to each vertex of the parallelogram. Make and test a conjecture about the diagonals of a parallelogram.
8.2 Use Properties of Parallelograms

**Key Vocabulary**
- parallelogram

A parallelogram is a quadrilateral with both pairs of opposite sides parallel. The term “parallelogram $PQRS$” can be written as $\square PQRS$. In $\square PQRS, PQ \parallel RS$ and $QR \parallel PS$ by definition. The theorems below describe other properties of parallelograms.

### THEOREMS

**Theorem 8.3**

If a quadrilateral is a parallelogram, then its opposite sides are congruent.

If $PQRS$ is a parallelogram, then $PQ \equiv RS$ and $QR \equiv PS$.

*Proof:* p. 516

**Theorem 8.4**

If a quadrilateral is a parallelogram, then its opposite angles are congruent.

If $PQRS$ is a parallelogram, then $\angle P \equiv \angle R$ and $\angle Q \equiv \angle S$.

*Proof:* Ex. 42, p. 520

### Example 1 Use properties of parallelograms

**ALGEBRA** Find the values of $x$ and $y$.

$ABCD$ is a parallelogram by the definition of a parallelogram. Use Theorem 8.3 to find the value of $x$.

- $AB = CD$ Opposite sides of a $\square$ are $\equiv$.
- $x + 4 = 12$ Substitute $x + 4$ for $AB$ and 12 for $CD$.
- $x = 8$ Subtract 4 from each side.

By Theorem 8.4, $\angle A \equiv \angle C$, or $m\angle A = m\angle C$. So, $y^\circ = 65^\circ$.

In $\square ABCD, x = 8$ and $y = 65$. 
**THEOREM 8.5**

If a quadrilateral is a parallelogram, then its consecutive angles are supplementary.

If \(PQRS\) is a parallelogram, then \(x^\circ + y^\circ = 180^\circ\).

*Proof:* Ex. 43, p. 520
EXAMPLE 2 Use properties of a parallelogram

DESK LAMP As shown, part of the extending arm of a desk lamp is a parallelogram. The angles of the parallelogram change as the lamp is raised and lowered. Find \( m \angle BCD \) when \( m \angle ADC = 110^\circ \).

Solution
By Theorem 8.5, the consecutive angle pairs in \( \triangle ABCD \) are supplementary. So, \( m \angle ADC + m \angle BCD = 180^\circ \). Because \( m \angle ADC = 110^\circ \), \( m \angle BCD = 180^\circ - 110^\circ = 70^\circ \).

THEOREM

THEOREM 8.6
If a quadrilateral is a parallelogram, then its diagonals bisect each other.

Proof: Ex. 44, p. 521

EXAMPLE 3 Standardized Test Practice

The diagonals of \( \square LMNO \) intersect at point \( P \). What are the coordinates of \( P \)?

A \( \left( \frac{7}{2}, 2 \right) \) B \( \left( 2, \frac{7}{2} \right) \)
C \( \left( \frac{5}{2}, 2 \right) \) D \( \left( 2, \frac{5}{2} \right) \)

Solution
By Theorem 8.6, the diagonals of a parallelogram bisect each other. So, \( P \) is the midpoint of diagonals \( LN \) and \( OM \). Use the Midpoint Formula.

Coordinates of midpoint \( P \) of \( OM = \left( \frac{7 + 0}{2}, \frac{4 + 0}{2} \right) = \left( \frac{7}{2}, \frac{2}{2} \right) \)

The correct answer is A. A, B, C, D

GUIDED PRACTICE for Examples 2 and 3
Find the indicated measure in \( \square JKLM \).
3. \( NM \) 4. \( KM \)
5. \( m \angle JML \) 6. \( m \angle KML \)
1. **VOCABULARY** What property of a parallelogram is included in the definition of a parallelogram? What properties are described by the theorems in this lesson?

2. ★ **WRITING** In parallelogram \(ABCD\), \(m \angle A = 65^\circ\). Explain how you would find the other angle measures of \(\square ABCD\).

**ALGEBRA** Find the value of each variable in the parallelogram.

3. \(x\) \(\quad 15\) \(\quad y\) \(\quad 9\)

4. \(n\) \(\quad 6\) \(\quad m + 1\)

5. \(a^\circ\)

6. \(120^\circ\) \(\quad 120^\circ\)

7. \(20\) \(\quad 105^\circ\) \(\quad (d - 21)^\circ\) \(\quad z - 8\)

8. \((g + 4)^\circ\) \(\quad 65^\circ\) \(\quad 16 - h\)

**FINDING ANGLE MEASURES** Find the measure of the indicated angle in the parallelogram.

9. Find \(m \angle B\).

10. Find \(m \angle L\).

11. Find \(m \angle Y\).

12. **SKETCHING** In \(\square PQRS\), \(m \angle R\) is 24 degrees more than \(m \angle S\). Sketch \(\square PQRS\). Find the measure of each interior angle. Then label each angle with its measure.

13. **ALGEBRA** Find the value of each variable in the parallelogram.

14. \(16\) \(\quad 2n\) \(\quad 9 - n\) \(\quad 4m\)

15. \(5y\) \(\quad 12\) \(\quad 3x\) \(\quad 4y + 4\)

16. ★ **MULTIPLE CHOICE** The diagonals of parallelogram \(OPQR\) intersect at point \(M\). What are the coordinates of point \(M\)?

- **A** \(\left(1, \frac{5}{2}\right)\)
- **B** \(\left(2, \frac{5}{2}\right)\)
- **C** \(\left(1, \frac{3}{2}\right)\)
- **D** \(\left(2, \frac{3}{2}\right)\)
REASONING Use the photo to copy and complete the statement. Explain.

17. \( AD \equiv \ ? \)  
18. \( \angle DAB \equiv \ ? \)
19. \( \angle BCA \equiv \ ? \)  
20. \( m\angle ABC = \ ? \)
21. \( m\angle CAB = \ ? \)  
22. \( m\angle CAD = \ ? \)

USING A DIAGRAM Find the indicated measure in \( \Box EFGH. \) Explain.

23. \( m\angle EJF \)  
24. \( m\angle EGF \)
25. \( m\angle HFG \)  
26. \( m\angle GEF \)
27. \( m\angle HGF \)  
28. \( m\angle EHG \)

29. ★ MULTIPLE CHOICE In parallelogram \( ABCD, \) \( AB = 14 \) inches and \( BC = 20 \) inches. What is the perimeter (in inches) of \( \Box ABCD? \)
   - A 28  
   - B 40  
   - C 68  
   - D 280

30. ★ ALGEBRA The measure of one interior angle of a parallelogram is \( 0.25 \) times the measure of another angle. Find the measure of each angle.

31. ★ ALGEBRA The measure of one interior angle of a parallelogram is \( 50 \) degrees more than \( 4 \) times the measure of another angle. Find the measure of each angle.

32. ERROR ANALYSIS In \( \Box ABCD, m\angle B = 50^\circ. \) A student says that \( m\angle A = 50^\circ. \) Explain why this statement is incorrect.

33. USING A DIAGRAM In the diagram, \( QRST \) and \( STUV \) are parallelograms. Find the values of \( x \) and \( y. \) Explain your reasoning.

34. FINDING A PERIMETER The sides of \( \Box MNPQ \) are represented by the expressions below. Sketch \( \Box MNPQ \) and find its perimeter.
   \[ MQ = -2x + 37 \quad QP = y + 14 \quad NP = x - 5 \quad MN = 4y + 5 \]

35. ★ SHORT RESPONSE In \( ABCD, m\angle B = 124^\circ, m\angle A = 66^\circ, \) and \( m\angle C = 124^\circ. \) Explain why \( ABCD \) cannot be a parallelogram.

36. FINDING ANGLE MEASURES In \( \Box LMNP \) shown at the right, \( m\angle MLN = 32^\circ, m\angle NLP = (x^2)^\circ, \) \( m\angle MNP = 12x^\circ, \) and \( \angle MNP \) is an acute angle. Find \( m\angle NLP. \)

37. CHALLENGE Points \( A(1, 2), B(3, 6), \) and \( C(6, 4) \) are three vertices of \( \Box ABCD. \) Find the coordinates of each point that could be vertex \( D. \) Sketch each possible parallelogram in a separate coordinate plane. Justify your answers.
38. **AIRPLANE** The diagram shows the mechanism for opening the canopy on a small airplane. Two pivot arms attach at four pivot points A, B, C, and D. These points form the vertices of a parallelogram. Find \( \angle D \) when \( \angle C = 40^\circ \). Explain your reasoning.

39. **MIRROR** The mirror shown is attached to the wall by an arm that can extend away from the wall. In the figure, points P, Q, R, and S are the vertices of a parallelogram. This parallelogram is one of several that change shape as the mirror is extended.
   a. If \( PQ = 3 \) inches, find \( RS \).
   b. If \( \angle Q = 70^\circ \), what is \( \angle S \)?
   c. What happens to \( \angle P \) as \( \angle Q \) increases? What happens to QS as \( \angle Q \) decreases? Explain.

40. **USING RATIOS** In \( \square LMNO \), the ratio of \( LM \) to \( MN \) is 4 : 3. Find \( LM \) if the perimeter of \( LMNO \) is 28.

41. ★ **OPEN-ENDED MATH** Draw a triangle. Copy the triangle and combine the two triangles to form a quadrilateral. Show that the quadrilateral is a parallelogram. Then show how you can make additional copies of the triangle to form a larger parallelogram that is similar to the first parallelogram. Justify your method.

42. **PROVING THEOREM 8.4** Use the diagram of quadrilateral \( ABCD \) with the auxiliary line segment drawn to write a two-column proof of Theorem 8.4.
   
   **GIVEN** \( ABCD \) is a parallelogram.
   
   **PROVE** \( \angle A \cong \angle C, \angle B \cong \angle D \)

43. **PROVING THEOREM 8.5** Use properties of parallel lines to prove Theorem 8.5.
   
   **GIVEN** \( PQRS \) is a parallelogram.
   
   **PROVE** \( x^\circ + y^\circ = 180^\circ \)
44. **PROVING THEOREM 8.6** Theorem 8.6 states that if a quadrilateral is a parallelogram, then its diagonals bisect each other. Write a two-column proof of Theorem 8.6.

45. **CHALLENGE** Suppose you choose a point on the base of an isosceles triangle. You draw segments from that point perpendicular to the legs of the triangle. Prove that the sum of the lengths of those segments is equal to the length of the altitude drawn to one leg.

**GIVEN** △ABC is isosceles with base AC, AF is the altitude drawn to BC, DE ⊥ AB, DG ⊥ BC

**PROVE** For D anywhere on AC, DE + DG = AF.

---

**MIXED REVIEW**

Tell whether the lines through the given points are parallel, perpendicular, or neither. Justify your answer. (p. 171)

46. Line 1: (2, 4), (4, 1) 47. Line 1: (−6, 7), (−2, 3) 48. Line 1: (−3, 0), (−6, 5)

46. Line 2: (5, 7), (9, 0) 47. Line 2: (9, −1), (2, 6) 48. Line 2: (3, −5), (5, −10)

Decide if the side lengths form a triangle. If so, would the triangle be acute, right, or obtuse? (p. 441)

49. 9, 13, and 6 50. 10, 12, and 7 51. 5, 9, and √106

52. 8, 12, and 4 53. 24, 10, and 26 54. 9, 10, and 11

Find the value of x. Write your answer in simplest radical form. (p. 457)

55. [Diagram of a triangle with a 60° angle and side lengths labeled]

56. [Diagram of a triangle with a 30° angle and side lengths labeled]

57. [Diagram of a triangle with a 45° angle and side lengths labeled]

---

**QUIZ for Lessons 8.1–8.2**

Find the value of x. (p. 507)

1. [Diagram of a quadrilateral with angles labeled]

2. [Diagram of a pentagon with angles labeled]

3. [Diagram of a triangle with angles labeled]

Find the value of each variable in the parallelogram. (p. 515)

4. [Diagram of a parallelogram with side lengths labeled]

5. [Diagram of a parallelogram with segment lengths labeled]

6. [Diagram of a parallelogram with angles labeled]
Show that a Quadrilateral is a Parallelogram

**Key Vocabulary**
- parallelogram, p. 515

Given a parallelogram, you can use Theorem 8.3 and Theorem 8.4 to prove statements about the angles and sides of the parallelogram. The converses of Theorem 8.3 and Theorem 8.4 are stated below. You can use these and other theorems in this lesson to prove that a quadrilateral with certain properties is a parallelogram.

**THEOREMS**

**Theorem 8.7**
If both pairs of opposite sides of a quadrilateral are congruent, then the quadrilateral is a parallelogram.

If $\overline{AB} \cong \overline{CD}$ and $\overline{BC} \cong \overline{AD}$, then $ABCD$ is a parallelogram.

*Proof:* below

**Theorem 8.8**
If both pairs of opposite angles of a quadrilateral are congruent, then the quadrilateral is a parallelogram.

If $\angle A \cong \angle C$ and $\angle B \cong \angle D$, then $ABCD$ is a parallelogram.

*Proof:* Ex. 38, p. 529

**Proof**  Theorem 8.7

**GIVEN** $AB \cong CD$, $BC \cong AD$

**PROVE** $ABCD$ is a parallelogram.

*Proof*  Draw $\overline{AC}$, forming $\triangle ABC$ and $\triangle CDA$. You are given that $\overline{AB} \cong \overline{CD}$ and $\overline{BC} \cong \overline{AD}$. Also, $\overline{AC} \cong \overline{AC}$ by the Reflexive Property of Congruence. So, $\triangle ABC \cong \triangle CDA$ by the SSS Congruence Postulate. Because corresponding parts of congruent triangles are congruent, $\angle BAC \cong \angle DCA$ and $\angle BCA \cong \angle DAC$. Then, by the Alternate Interior Angles Converse, $AB \parallel CD$ and $BC \parallel AD$. By definition, $ABCD$ is a parallelogram.
**Example 1** Solve a real-world problem

**RIDE** An amusement park ride has a moving platform attached to four swinging arms. The platform swings back and forth, higher and higher, until it goes over the top and around in a circular motion. In the diagram below, $\overline{AD}$ and $\overline{BC}$ represent two of the swinging arms, and $\overline{DC}$ is parallel to the ground (line $l$). Explain why the moving platform $\overline{AB}$ is always parallel to the ground.

**Solution**

The shape of quadrilateral $ABCD$ changes as the moving platform swings around, but its side lengths do not change. Both pairs of opposite sides are congruent, so $ABCD$ is a parallelogram by Theorem 8.7.

By the definition of a parallelogram, $\overline{AB} \parallel \overline{DC}$. Because $\overline{DC}$ is parallel to line $l$, $\overline{AB}$ is also parallel to line $l$ by the Transitive Property of Parallel Lines. So, the moving platform is parallel to the ground.

**Guided Practice** for Example 1

1. In quadrilateral $WXYZ$, $m\angle W = 42^\circ$, $m\angle X = 138^\circ$, $m\angle Y = 42^\circ$. Find $m\angle Z$. Is $WXYZ$ a parallelogram? Explain your reasoning.

**Theorems**

**Theorem 8.9**

If one pair of opposite sides of a quadrilateral are congruent and parallel, then the quadrilateral is a parallelogram.

If $\overline{BC} \parallel \overline{AD}$ and $\overline{BC} \cong \overline{AD}$, then $ABCD$ is a parallelogram.

*Proof:* Ex. 33, p. 528

**Theorem 8.10**

If the diagonals of a quadrilateral bisect each other, then the quadrilateral is a parallelogram.

If $\overline{BD}$ and $\overline{AC}$ bisect each other, then $ABCD$ is a parallelogram.

*Proof:* Ex. 39, p. 529
**EXAMPLE 2** Identify a parallelogram

**ARCHITECTURE** The doorway shown is part of a building in England. Over time, the building has leaned sideways. *Explain* how you know that $SV = TU$.

**Solution**

In the photograph, $ST \parallel UV$ and $ST \cong UV$. By Theorem 8.9, quadrilateral $STUV$ is a parallelogram. By Theorem 8.3, you know that opposite sides of a parallelogram are congruent. So, $SV = TU$.

**EXAMPLE 3** Use algebra with parallelograms

**ALGEBRA** For what value of $x$ is quadrilateral $CDEF$ a parallelogram?

**Solution**

By Theorem 8.10, if the diagonals of $CDEF$ bisect each other, then it is a parallelogram. You are given that $CN = EN$. Find $x$ so that $FN = DN$.

1. $FN = DN$ \hspace{0.5cm} Set the segment lengths equal.
2. $5x - 8 = 3x$ \hspace{0.5cm} Substitute $5x - 8$ for $FN$ and $3x$ for $DN$.
3. $2x - 8 = 0$ \hspace{0.5cm} Subtract $3x$ from each side.
4. $2x = 8$ \hspace{0.5cm} Add 8 to each side.
5. $x = 4$ \hspace{0.5cm} Divide each side by 2.

When $x = 4$, $FN = 5(4) - 8 = 12$ and $DN = 3(4) = 12$.

$\checkmark$ Quadrilateral $CDEF$ is a parallelogram when $x = 4$.

**GUIDED PRACTICE** for Examples 2 and 3

What theorem can you use to show that the quadrilateral is a parallelogram?

2. 

3. 

4. 

5. For what value of $x$ is quadrilateral $MNPQ$ a parallelogram? *Explain* your reasoning.
EXAMPLE 4  Use coordinate geometry

Show that quadrilateral $ABCD$ is a parallelogram.

Solution

One way is to show that a pair of sides are congruent and parallel. Then apply Theorem 8.9.

First use the Distance Formula to show that $AB$ and $CD$ are congruent.

$$AB = \sqrt{(2 - (-3))^2 + (5 - 3)^2} = \sqrt{29}$$
$$CD = \sqrt{(5 - 0)^2 + (2 - 0)^2} = \sqrt{29}$$

Because $AB = CD = \sqrt{29}$, $AB \cong CD$.

Then use the slope formula to show that $AB \parallel CD$.

Slope of $AB = \frac{5 - (3)}{2 - (-3)} = \frac{2}{5}$  
Slope of $CD = \frac{2 - 0}{5 - 0} = \frac{2}{5}$

Because $AB$ and $CD$ have the same slope, they are parallel.

$AB$ and $CD$ are congruent and parallel. So, $ABCD$ is a parallelogram by Theorem 8.9.

GUIDED PRACTICE for Example 4

6. Refer to the Concept Summary above. Explain how other methods can be used to show that quadrilateral $ABCD$ in Example 4 is a parallelogram.
1. **VOCABULARY** Explain how knowing that \( AB \parallel CD \) and \( AD \parallel BC \) allows you to show that quadrilateral \( ABCD \) is a parallelogram.

2. ★ **WRITING** A quadrilateral has four congruent sides. Is the quadrilateral a parallelogram? Justify your answer.

3. **ERROR ANALYSIS** A student claims that because two pairs of sides are congruent, quadrilateral \( DEFG \) shown at the right is a parallelogram. Describe the error that the student is making.

4. **REASONING** What theorem can you use to show that the quadrilateral is a parallelogram?

5. ★ **SHORT RESPONSE** When you shift gears on a bicycle, a mechanism called a derailleur moves the chain to a new gear. For the derailleur shown below, \( JK = 5.5 \text{ cm}, KL = 2 \text{ cm}, ML = 5.5 \text{ cm}, \) and \( MJ = 2 \text{ cm} \). Explain why \( JK \) and \( ML \) are always parallel as the derailleur moves.

6. **ALGEBRA** For what value of \( x \) is the quadrilateral a parallelogram?

7. **COORDINATE GEOMETRY** The vertices of quadrilateral \( ABCD \) are given. Draw \( ABCD \) in a coordinate plane and show that it is a parallelogram.

\[
\begin{align*}
11. & \quad A(0, 1), B(4, 4), C(12, 4), D(8, 1) \\
12. & \quad A(-3, 0), B(-3, 4), C(3, -1), D(3, -5) \\
13. & \quad A(-2, 3), B(-5, 7), C(3, 6), D(6, 2) \\
14. & \quad A(-5, 0), B(0, 4), C(3, 0), D(-2, -4)
\end{align*}
\]
**REASONING** Describe how to prove that \(ABCD\) is a parallelogram.

15. [Diagram of \(ABCD\) with parallel lines labeled]

16. [Diagram of \(ABCD\) with parallel lines labeled]

17. [Diagram of \(ABCD\) with parallel lines labeled]

18. ★ MULTIPLE CHOICE In quadrilateral \(WXYZ\), \(WZ\) and \(XY\) are congruent and parallel. Which statement below is not necessarily true?
   - \(A\) \(m\angle Y + m\angle W = 180^\circ\)
   - \(B\) \(\angle X \equiv \angle Z\)
   - \(C\) \(WX \equiv ZY\)
   - \(D\) \(WX \parallel ZY\)

19. ALGEBRA For what value of \(x\) is the quadrilateral a parallelogram?

20. [Diagram of \(ABCD\) with \(x^\circ\) and \(3x^\circ\)]

21. [Diagram of \(ABCD\) with \((x + 10)^\circ\) and \((2x + 20)^\circ\)]

**BICONDITIONALS** Write the indicated theorems as a biconditional statement.

22. Theorem 8.3, page 515 and Theorem 8.7, page 522

23. Theorem 8.4, page 515 and Theorem 8.8, page 522

24. REASONING Follow the steps below to draw a parallelogram. Explain why this method works. State a theorem to support your answer.

   **STEP 1** Use a ruler to draw two segments that intersect at their midpoints.
   **STEP 2** Connect the endpoints of the segments to form a quadrilateral.

   [Diagram of steps: draw segments, connect endpoints]

25. \(A(-2, -3), B(4, -3), C(3, 2), D(x, y)\)

26. \(A(-4, 1), B(-1, 5), C(6, 5), D(x, y)\)

27. \(A(-4, 4), B(4, 6), C(3, -1), D(x, y)\)

28. \(A(-1, 0), B(0, -4), C(8, -6), D(x, y)\)

29. CONSTRUCTION There is more than one way to use a compass and a straightedge to construct a parallelogram. Describe a method that uses Theorem 8.7 or Theorem 8.9. Then use your method to construct a parallelogram.

30. CHALLENGE In the diagram, \(ABCD\) is a parallelogram, \(BF = DE = 12\), and \(CF = 8\). Find \(AE\). Explain your reasoning.
### 31. AUTOMOBILE REPAIR

The diagram shows an automobile lift. A bus drives on to the ramp \((\overline{EG})\). Levers \((\overline{EK}, \overline{FJ}, \text{and } \overline{GH})\) raise the bus. In the diagram, \(\overline{EG} \parallel \overline{KH}\) and \(\overline{EK} = \overline{FJ} = \overline{GH}\). Also, \(F\) is the midpoint of \(\overline{EG}\), and \(J\) is the midpoint of \(\overline{KH}\).

**a.** Identify all the quadrilaterals in the automobile lift. Explain how you know that each one is a parallelogram.

**b.** Explain why \(\overline{EG}\) is always parallel to \(\overline{KH}\).

### 32. MUSIC STAND

A music stand can be folded up, as shown below. In the diagrams, \(\angle A \equiv \angle EFD\), \(\angle D \equiv \angle AEF\), \(\angle C \equiv \angle BEF\), and \(\angle B \equiv \angle CFE\). Explain why \(\overline{AD}\) and \(\overline{BC}\) remain parallel as the stand is folded up. Which other labeled segments remain parallel?

### 33. PROVING THEOREM 8.9

Use the diagram of \(PQRS\) with the auxiliary line segment drawn. Copy and complete the flow proof of Theorem 8.9.

**GIVEN**

\(QR \parallel PS\), \(QR \equiv PS\)

**PROVE**

\(PQRS\) is a parallelogram.

**REASONING**

A student claims incorrectly that the marked information can be used to show that the figure is a parallelogram. Draw a quadrilateral with the marked properties that is clearly not a parallelogram. Explain.

### 34. 35. 36.
37. **EXTENDED RESPONSE** Theorem 8.5 states that if a quadrilateral is a parallelogram, then its consecutive angles are supplementary. Write the converse of Theorem 8.5. Then write a plan for proving the converse of Theorem 8.5. Include a diagram.

38. **PROVING THEOREM 8.8** Prove Theorem 8.8.

**GIVEN** $\angle A \cong \angle C$, $\angle B \cong \angle D$

**PROVE** $ABCD$ is a parallelogram.

*Hint:* Let $x$ represent $m\angle A$ and $m\angle C$, and let $y$ represent $m\angle B$ and $m\angle D$. Write and simplify an equation involving $x$ and $y$.

39. **PROVING THEOREM 8.10** Prove Theorem 8.10.

**GIVEN** Diagonals $\overline{JL}$ and $\overline{KM}$ bisect each other.

**PROVE** $JKLM$ is a parallelogram.

40. **PROOF** Use the diagram at the right.

**GIVEN** $DEBF$ is a parallelogram, $AE = CF$

**PROVE** $ABCD$ is a parallelogram.

41. **REASONING** In the diagram, the midpoints of the sides of a quadrilateral have been joined to form what appears to be a parallelogram. Show that a quadrilateral formed by connecting the midpoints of the sides of any quadrilateral is always a parallelogram. (*Hint:* Draw a diagram. Include a diagonal of the larger quadrilateral. Show how two sides of the smaller quadrilateral are related to the diagonal.)

42. **CHALLENGE** Show that if $ABCD$ is a parallelogram with its diagonals intersecting at $E$, then you can connect the midpoints $F$, $G$, $H$, and $J$ of $AE$, $BE$, $CE$, and $DE$, respectively, to form another parallelogram, $FGHJ$.

---

**EXTRA PRACTICE** for Lesson 8.3, p. 910

**ONLINE QUIZ** at classzone.com

In Exercises 43–45, draw a figure that fits the description. (p. 42)

43. A quadrilateral that is equilateral but not equiangular

44. A quadrilateral that is equiangular but not equilateral

45. A quadrilateral that is concave

46. The width of a rectangle is 4 centimeters less than its length. The perimeter of the rectangle is 42 centimeters. Find its area. (p. 49)

47. Find the values of $x$ and $y$ in the triangle shown at the right. Write your answers in simplest radical form. (p. 457)
Another Way to Solve Example 4, page 525

MULTIPLE REPRESENTATIONS  In Example 4 on page 525, the problem is solved by showing that one pair of opposite sides are congruent and parallel using the Distance Formula and the slope formula. There are other ways to show that a quadrilateral is a parallelogram.

**Problem**

Show that quadrilateral $ABCD$ is a parallelogram.

**Method 1**

**Use Opposite Sides**  You can show that both pairs of opposite sides are congruent.

**Step 1**  Draw two right triangles. Use $AB$ as the hypotenuse of $\triangle AEB$ and $CD$ as the hypotenuse of $\triangle CFD$.

**Step 2**  Show that $\triangle AEB \cong \triangle CFD$. From the graph, $AE = 2$, $BE = 5$, and $\angle E$ is a right angle. Similarly, $CF = 2$, $DF = 5$, and $\angle F$ is a right angle. So, $\triangle AEB \cong \triangle CFD$ by the SAS Congruence Postulate.

**Step 3**  Use the fact that corresponding parts of congruent triangles are congruent to show that $AB \cong CD$.

**Step 4**  Repeat Steps 1–3 for sides $AD$ and $BC$. You can prove that $\triangle AHD \cong \triangle CGB$. So, $AD \cong CB$.

- The pairs of opposite sides, $AB$ and $CD$ and $AD$ and $CB$, are congruent. So, $ABCD$ is a parallelogram by Theorem 8.7.
**Use Diagonals** You can show that the diagonals bisect each other.

**STEP 1** Use the Midpoint Formula to find the midpoint of diagonal \(AC\).

The coordinates of the endpoints of \(AC\) are \(A(-3, 3)\) and \(C(5, 2)\).

\[
\left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2}\right) = \left(\frac{-3 + 5}{2}, \frac{3 + 2}{2}\right) = \left(\frac{2}{2}, \frac{5}{2}\right) = \left(1, \frac{5}{2}\right)
\]

**STEP 2** Use the Midpoint Formula to find the midpoint of diagonal \(BD\).

The coordinates of the endpoints of \(BD\) are \(B(2, 5)\) and \(D(0, 0)\).

\[
\left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2}\right) = \left(\frac{2 + 0}{2}, \frac{5 + 0}{2}\right) = \left(\frac{2}{2}, \frac{5}{2}\right) = M\left(1, \frac{5}{2}\right)
\]

Because the midpoints of both diagonals are the same point, the diagonals bisect each other. So, \(ABCD\) is a parallelogram by Theorem 8.10.

**Practice**

1. **SLOPE** Show that quadrilateral \(ABCD\) in the problem on page 530 is a parallelogram by showing that both pairs of opposite sides are parallel.

2. **PARALLELOGRAMS** Use two methods to show that \(EFGH\) is a parallelogram.

3. **MAP** Do the four towns on the map form the vertices of a parallelogram? Explain.

4. **QUADRILATERALS** Is the quadrilateral a parallelogram? Justify your answer.
   a. \(A(1, 0), B(5, 0), C(7, 2), D(3, 2)\)
   b. \(E(3, 4), F(9, 5), G(6, 8), H(6, 0)\)
   c. \(J(-1, 0), K(2, -2), L(2, 2), M(-1, 4)\)

5. **ERROR ANALYSIS** Quadrilateral \(PQRS\) has vertices \(P(2, 2), Q(3, 4), R(6, 5)\), and \(S(5, 3)\). A student makes the conclusion below. Describe and correct the error(s) made by the student.

   \(PQ\) and \(QR\) are opposite sides, so they should be congruent.

   \[
PQ = \sqrt{(3 - 2)^2 + (4 - 2)^2} = \sqrt{5}
\]

   \[
QR = \sqrt{(6 - 3)^2 + (5 - 4)^2} = \sqrt{10}
\]

   But \(PQ \neq QR\). So, \(PQRS\) is not a parallelogram.

6. **WRITING** Points \(O(0, 0), P(3, 5),\) and \(Q(4, 0)\) are vertices of \(\triangle OPQ\), and are also vertices of a parallelogram. Find all points \(R\) that could be the other vertex of the parallelogram. Explain your reasoning.
1. **MULTI-STEP PROBLEM** The shape of Iowa can be approximated by a polygon, as shown.

![Iowa Polygon](image)

a. How many sides does the polygon have? Classify the polygon.

b. What is the sum of the measures of the interior angles of the polygon?

c. What is the sum of the measures of the exterior angles of the polygon?

2. **SHORT RESPONSE** A graphic designer is creating an electronic image of a house. In the drawing, $\angle B$, $\angle D$, and $\angle E$ are right angles, and $\angle A > \angle C$. Explain how to find $m\angle A$ and $m\angle C$.

3. **SHORT RESPONSE** Quadrilateral $STUV$ shown below is a parallelogram. Find the values of $x$ and $y$. Explain your reasoning.

![Parallelogram](image)

4. **GRIDDED ANSWER** A convex decagon has interior angles with measures $157^\circ$, $128^\circ$, $115^\circ$, $162^\circ$, $169^\circ$, $131^\circ$, $155^\circ$, $168^\circ$, $x^\circ$, and $2x^\circ$. Find the value of $x$.

5. **SHORT RESPONSE** The measure of an angle of a parallelogram is 12 degrees less than 3 times the measure of an adjacent angle. Explain how to find the measures of all the interior angles of the parallelogram.

6. **EXTENDED RESPONSE** A stand to hold binoculars in place uses a quadrilateral in its design. Quadrilateral $EFGH$ shown below changes shape as the binoculars are moved. In the photograph, $EF$ and $GH$ are congruent and parallel.

![Binoculars](image)

a. Explain why $EF$ and $GH$ remain parallel as the shape of $EFGH$ changes. Explain why $EH$ and $FG$ remain parallel.

b. As $EFGH$ changes shape, $m\angle E$ changes from $55^\circ$ to $50^\circ$. Describe how $m\angle F$, $m\angle G$, and $m\angle H$ will change. Explain.

7. **EXTENDED RESPONSE** The vertices of quadrilateral $MNPQ$ are $M(−8, 1)$, $N(3, 4)$, $P(7, −1)$, and $Q(−4, −4)$.

a. Use what you know about slopes of lines to prove that $MNPQ$ is a parallelogram. Explain your reasoning.

b. Use the Distance Formula to show that $MNPQ$ is a parallelogram. Explain.

8. **EXTENDED RESPONSE** In $\square ABCD$, $BX \perp AC$, $DY \perp AC$. Show that $XBYD$ is a parallelogram.
8.4 Properties of Rhombuses, Rectangles, and Squares

You used properties of parallelograms.

Now you will use properties of rhombuses, rectangles, and squares.

So you can solve a carpentry problem, as in Example 4.

Key Vocabulary

• rhombus
• rectangle
• square

In this lesson, you will learn about three special types of parallelograms: rhombuses, rectangles, and squares.

A rhombus is a parallelogram with four congruent sides.

A rectangle is a parallelogram with four right angles.

A square is a parallelogram with four congruent sides and four right angles.

You can use the corollaries below to prove that a quadrilateral is a rhombus, rectangle, or square, without first proving that the quadrilateral is a parallelogram.

COROLLARIES

RHOMBUS COROLLARY

A quadrilateral is a rhombus if and only if it has four congruent sides.

\(ABCD\) is a rhombus if and only if \(AB \cong BC \cong CD \cong AD\).

Proof: Ex. 57, p. 539

RECTANGLE COROLLARY

A quadrilateral is a rectangle if and only if it has four right angles.

\(ABCD\) is a rectangle if and only if \(\angle A, \angle B, \angle C,\) and \(\angle D\) are right angles.

Proof: Ex. 58, p. 539

SQUARE COROLLARY

A quadrilateral is a square if and only if it is a rhombus and a rectangle.

\(ABCD\) is a square if and only if \(AB \cong BC \cong CD \cong AD\) and \(\angle A, \angle B, \angle C,\) and \(\angle D\) are right angles.

Proof: Ex. 59, p. 539
EXAMPLE 1 Use properties of special quadrilaterals

For any rhombus $QRST$, decide whether the statement is *always* or *sometimes* true. Draw a sketch and explain your reasoning.

a. $\angle Q > \angle S$
b. $\angle Q > \angle R$

**Solution**

a. By definition, a rhombus is a parallelogram with four congruent sides. By Theorem 8.4, opposite angles of a parallelogram are congruent. So, $\angle Q \equiv \angle S$. The statement is *always* true.

b. If rhombus $QRST$ is a square, then all four angles are congruent right angles. So, $\angle Q \equiv \angle R$ if $QRST$ is a square. Because not all rhombuses are also squares, the statement is *sometimes* true.

EXAMPLE 2 Classify special quadrilaterals

Classify the special quadrilateral. Explain your reasoning.

**Solution**

The quadrilateral has four congruent sides. One of the angles is not a right angle, so the rhombus is not also a square. By the Rhombus Corollary, the quadrilateral is a rhombus.

GUIDED PRACTICE for Examples 1 and 2

1. For any rectangle $EFGH$, is it *always* or *sometimes* true that $\overline{FG} \equiv \overline{GH}$? Explain your reasoning.

2. A quadrilateral has four congruent sides and four congruent angles. Sketch the quadrilateral and classify it.
**DIAGONALS** The theorems below describe some properties of the diagonals of rhombuses and rectangles.

### THEOREMS

#### THEOREM 8.11
A parallelogram is a rhombus if and only if its diagonals are perpendicular.

\[ \square ABCD \text{ is a rhombus if and only if } \overline{AC} \perp \overline{BD}. \]

*Proof:* p. 536; Ex. 56, p. 539

#### THEOREM 8.12
A parallelogram is a rhombus if and only if each diagonal bisects a pair of opposite angles.

\[ \square ABCD \text{ is a rhombus if and only if } \overline{AC} \text{ bisects } \angle BCD \text{ and } \angle BAD \text{ and } \overline{BD} \text{ bisects } \angle ABC \text{ and } \angle ADC. \]

*Proof:* Exs. 60–61, p. 539

#### THEOREM 8.13
A parallelogram is a rectangle if and only if its diagonals are congruent.

\[ \square ABCD \text{ is a rectangle if and only if } \overline{AC} \cong \overline{BD}. \]

*Proof:* Exs. 63–64, p. 540

---

**EXAMPLE 3** List properties of special parallelograms

Sketch rectangle \(ABCD\). List everything that you know about it.

**Solution**

By definition, you need to draw a figure with the following properties:

- The figure is a parallelogram.
- The figure has four right angles.

Because \(ABCD\) is a parallelogram, it also has these properties:

- Opposite sides are parallel and congruent.
- Opposite angles are congruent. Consecutive angles are supplementary.
- Diagonals bisect each other.

By Theorem 8.13, the diagonals of \(ABCD\) are congruent.

---

**GUIDED PRACTICE** for Example 3

3. Sketch square \(PQRS\). List everything you know about the square.
**BICONDITIONALS** Recall that biconditionals such as Theorem 8.11 can be rewritten as two parts. To prove a biconditional, you must prove both parts.

- **Conditional statement** If the diagonals of a parallelogram are perpendicular, then the parallelogram is a rhombus.
- **Converse** If a parallelogram is a rhombus, then its diagonals are perpendicular.

**EXAMPLE 4** Solve a real-world problem

**CARPENTRY** You are building a frame for a window. The window will be installed in the opening shown in the diagram.

a. The opening must be a rectangle. Given the measurements in the diagram, can you assume that it is? Explain.

b. You measure the diagonals of the opening. The diagonals are 54.8 inches and 55.3 inches. What can you conclude about the shape of the opening?

**Solution**

a. No, you cannot. The boards on opposite sides are the same length, so they form a parallelogram. But you do not know whether the angles are right angles.

b. By Theorem 8.13, the diagonals of a rectangle are congruent. The diagonals of the quadrilateral formed by the boards are not congruent, so the boards do not form a rectangle.

**PROOF** Part of Theorem 8.11

If the diagonals of a parallelogram are perpendicular, then the parallelogram is a rhombus.

**GIVEN** ▶ $ABCD$ is a parallelogram; $\overline{AC} \perp \overline{BD}$

**PROVE** ▶ $ABCD$ is a rhombus.

**Proof** $ABCD$ is a parallelogram, so $\overline{AC}$ and $\overline{BD}$ bisect each other, and $BX \equiv DX$. Also, $\angle BXC$ and $\angle CXD$ are congruent right angles, and $\overline{CX} \equiv \overline{CX}$. So, $\triangle BXC \equiv \triangle DXC$ by the SAS Congruence Postulate. Corresponding parts of congruent triangles are congruent, so $\overline{BC} \equiv \overline{DC}$. Opposite sides of a $\square ABCD$ are congruent, so $\overline{AD} \equiv \overline{BC} \equiv \overline{DC} \equiv \overline{AB}$. By definition, $ABCD$ is a rhombus.

**GUIDED PRACTICE** for Example 4

4. Suppose you measure only the diagonals of a window opening. If the diagonals have the same measure, can you conclude that the opening is a rectangle? Explain.
8.4 EXERCISES

1. **VOCABULARY** What is another name for an equilateral rectangle?

2. **WRITING** Do you have enough information to identify the figure at the right as a rhombus? Explain.

**RHOMBUSES** For any rhombus $JKLM$, decide whether the statement is always or sometimes true. Draw a diagram and explain your reasoning.

3. $\angle L \equiv \angle M$
4. $\angle K \equiv \angle M$
5. $\overline{JK} \equiv \overline{KL}$
6. $\overline{JM} \equiv \overline{KL}$
7. $\overline{JL} \equiv \overline{KM}$
8. $\angle JKM \equiv \angle LKM$

**RECTANGLES** For any rectangle $WXYZ$, decide whether the statement is always or sometimes true. Draw a diagram and explain your reasoning.

9. $\angle W \equiv \angle X$
10. $\overline{WX} \equiv \overline{YZ}$
11. $\overline{WX} \equiv \overline{XY}$
12. $\overline{WY} \equiv \overline{XZ}$
13. $\overline{WY} \perp \overline{XZ}$
14. $\angle WXZ \equiv \angle YXZ$

**CLASSIFYING** Classify the quadrilateral. Explain your reasoning.

18. **USING PROPERTIES** Sketch rhombus $STUV$. Describe everything you know about the rhombus.

**USING PROPERTIES** Name each quadrilateral—parallelogram, rectangle, rhombus, and square—for which the statement is true.

19. It is equiangular.
20. It is equiangular and equilateral.
21. Its diagonals are perpendicular.
22. Opposite sides are congruent.
23. The diagonals bisect each other.
24. The diagonals bisect opposite angles.

25. **ERROR ANALYSIS** Quadrilateral $PQRS$ is a rectangle. Describe and correct the error made in finding the value of $x$. 

![Diagram of a quadrilateral with labeled angles and equations involving $x$.]
ALGEBRA Classify the special quadrilateral. Explain your reasoning. Then find the values of \( x \) and \( y \).

26. Classify the special quadrilateral. Explain your reasoning.
   \[ y + 8 \quad 3y \]
   \[ A \quad C \quad B \]
   \[ x \]

27. Find the values of \( x \) and \( y \).
   \[ x + 31 \quad 5x - 9 \]
   \[ J \quad M \quad K \quad L \]

28. Classify the special quadrilateral. Explain your reasoning.
   \[ 5x^2 \quad 10 \]
   \[ Q \quad R \quad P \quad S \]

29. Find the values of \( x \) and \( y \).
   \[ y + 3 \quad (4x + 7)^\circ \]
   \[ F \quad E \quad D \quad G \quad H \]

30. ★ SHORT RESPONSE The diagonals of a rhombus are 6 inches and 8 inches. What is the perimeter of the rhombus? Explain.

31. ★ MULTIPLE CHOICE Rectangle \( ABCD \) is similar to rectangle \( FGHI \). If \( AC = 5 \), \( CD = 4 \), and \( FM = 5 \), what is \( HJ \)?
   \[ \text{A} \quad 4 \quad \text{B} \quad 5 \quad \text{C} \quad 8 \quad \text{D} \quad 10 \]

RHOMBUS The diagonals of rhombus \( ABCD \) intersect at \( E \). Given that \( m \angle BAC = 53^\circ \) and \( DE = 8 \), find the indicated measure.

32. \( m \angle DAC \)
33. \( m \angle AED \)
34. \( m \angle ADC \)
35. \( DB \)
36. \( AE \)
37. \( AC \)

RECTANGLE The diagonals of rectangle \( QRST \) intersect at \( P \). Given that \( m \angle QTS = 34^\circ \) and \( QS = 10 \), find the indicated measure.

38. \( m \angle SRT \)
39. \( m \angle QPR \)
40. \( QP \)
41. \( RP \)
42. \( QR \)
43. \( RS \)

SQUARE The diagonals of square \( LMNP \) intersect at \( K \). Given that \( LK = 1 \), find the indicated measure.

44. \( m \angle MKN \)
45. \( m \angle LMK \)
46. \( m \angle LPK \)
47. \( KN \)
48. \( MP \)
49. \( LP \)

COORDINATE GEOMETRY Use the given vertices to graph \( \square JKLM \). Classify \( \square JKLM \) and explain your reasoning. Then find the perimeter of \( \square JKLM \).

50. \( J(-4, 2), K(0, 3), L(1, -1), M(-3, -2) \)
51. \( J(-2, 7), K(7, 2), L(-2, -3), M(-11, 2) \)
52. **REASONING** Are all rhombuses similar? Are all squares similar? Explain your reasoning.

53. **CHALLENGE** Quadrilateral $ABCD$ shown at the right is a rhombus. Given that $AC = 10$ and $BD = 16$, find all side lengths and angle measures. Explain your reasoning.

---

**PROBLEM SOLVING**

**EXAMPLE 2**

for Ex. 54

**EXAMPLE 4**

on p. 536

for Ex. 55

---

54. **MULTI-STEP PROBLEM** In the window shown at the right, $BD \cong DF \cong BH \cong HF$. Also, $\angle HAB$, $\angle BCD$, $\angle DEF$, and $\angle FGH$ are right angles.

   a. Classify $HBDF$ and $ACEG$. Explain your reasoning.

   b. What can you conclude about the lengths of the diagonals $AE$ and $GC$? Given that these diagonals intersect at $J$, what can you conclude about the lengths of $AJ$, $JE$, $CJ$, and $JG$? Explain.

---

55. **PATIO** You want to mark off a square region in your yard for a patio. You use a tape measure to mark off a quadrilateral on the ground. Each side of the quadrilateral is $2.5$ meters long. Explain how you can use the tape measure to make sure that the quadrilateral you drew is a square.

---

56. **PROVING THEOREM 8.11** Use the plan for proof below to write a paragraph proof for the converse statement of Theorem 8.11.

   **GIVEN** $ABCD$ is a rhombus.

   **PROVE** $AC \perp BD$

   **Plan for Proof** Because $ABCD$ is a parallelogram, its diagonals bisect each other at $X$. Show that $\triangle AXB \cong \triangle CXB$. Then show that $AC$ and $BD$ intersect to form congruent adjacent angles, $\angle AXB$ and $\angle CXB$.

   **PROVING COROLLARIES** Write the corollary as a conditional statement and its converse. Then explain why each statement is true.

   57. Rhombus Corollary  58. Rectangle Corollary  59. Square Corollary

---

56. **PROVING THEOREM 8.12** In Exercises 60 and 61, prove both parts of Theorem 8.12.

   60. **GIVEN** $PQRS$ is a parallelogram.

   $\overline{PR}$ bisects $\angle SPQ$ and $\angle QRS$.

   $\overline{SQ}$ bisects $\angle PSR$ and $\angle RQP$.

   **PROVE** $PQRS$ is a rhombus.

   61. **GIVEN** $WXYZ$ is a rhombus.

   $\overline{WX}$ bisects $\angle ZWX$ and $\angle XYZ$.

   $\overline{XY}$ bisects $\angle WZY$ and $\angle XYW$.

---

8.4 Properties of Rhombuses, Rectangles, and Squares  539
62. ★ EXTENDED RESPONSE  In $ABCD$, $\overline{AB} \parallel \overline{CD}$, and $\overline{DB}$ bisects $\angle ADC$.
   a. Show that $\angle ABD \equiv \angle CDB$. What can you conclude about $\angle ADB$ and $\angle ABD$? What can you conclude about $AB$ and $AD$? Explain.
   b. Suppose you also know that $\overline{AD} \equiv \overline{BC}$. Classify $ABCD$. Explain.

63. PROVING THEOREM 8.13  Write a coordinate proof of the following statement, which is part of Theorem 8.13.
   If a quadrilateral is a rectangle, then its diagonals are congruent.

64. CHALLENGE  Write a coordinate proof of part of Theorem 8.13.
   GIVEN $DFGH$ is a parallelogram, $\overline{DG} \equiv \overline{HF}$
   PROVE $DFGH$ is a rectangle.
   Plan for Proof  Write the coordinates of the vertices in terms of $a$ and $b$. Find and compare the slopes of the sides.

MIXED REVIEW

65. In $\triangle JKL$, $KL = 54.2$ centimeters. Point $M$ is the midpoint of $\overline{JK}$ and $N$ is the midpoint of $\overline{JL}$. Find $MN$. (p. 295)

Find the sine and cosine of the indicated angle. Write each answer as a fraction and a decimal. (p. 473)

66. $\angle R$  67. $\angle T$

Find the value of $x$. (p. 507)

68. 69. 70.

QUIZ for Lessons 8.3–8.4

For what value of $x$ is the quadrilateral a parallelogram? (p. 522)

1. 2. 3.

Classify the quadrilateral. Explain your reasoning. (p. 533)

4. 5. 6.
8.5 Midsegment of a Trapezoid

**MATERIALS** • graphing calculator or computer

**QUESTION** What are the properties of the midsegment of a trapezoid?

You can use geometry drawing software to investigate properties of trapezoids.

**EXPLORE** Draw a trapezoid and its midsegment

**STEP 1** Draw parallel lines
Draw \( \overrightarrow{AB} \). Draw a point \( C \) not on \( \overrightarrow{AB} \) and construct a line parallel to \( \overrightarrow{AB} \) through point \( C \).

**STEP 2** Draw trapezoid
Construct a point \( D \) on the same line as point \( C \). Then draw \( \overrightarrow{AD} \) and \( \overrightarrow{BC} \) so that the segments are not parallel. Draw \( \overrightarrow{AB} \) and \( \overrightarrow{DC} \). Quadrilateral \( ABCD \) is called a trapezoid. A trapezoid is a quadrilateral with exactly one pair of parallel sides.

**STEP 3** Draw midsegment
Construct the midpoints of \( \overrightarrow{AD} \) and \( \overrightarrow{BC} \). Label the points \( E \) and \( F \). Draw \( EF \). \( EF \) is called a midsegment of trapezoid \( ABCD \). The midsegment of a trapezoid connects the midpoints of its nonparallel sides.

**STEP 4** Measure lengths
Measure \( AB \), \( DC \), and \( EF \).

**STEP 5** Compare lengths
The average of \( AB \) and \( DC \) is \( \frac{AB + DC}{2} \).
Calculate and compare this average to \( EF \). What do you notice? Drag point \( A \) or point \( B \) to change the shape of trapezoid \( ABCD \). Do not allow \( \overrightarrow{AD} \) to intersect \( \overrightarrow{BC} \). What do you notice about \( EF \) and \( \frac{AB + DC}{2} \)?

**DRAW CONCLUSIONS** Use your observations to complete these exercises

1. Make a conjecture about the length of the midsegment of a trapezoid.
2. The midsegment of a trapezoid is parallel to the two parallel sides of the trapezoid. What measurements could you make to show that the midsegment in the Explore is parallel to \( AB \) and \( CD \)? Explain.
3. In Lesson 5.1 (page 295), you learned a theorem about the midsegment of a triangle. How is the midsegment of a trapezoid similar to the midsegment of a triangle? How is it different?
A trapezoid is a quadrilateral with exactly one pair of parallel sides. The parallel sides are the bases.

A trapezoid has two pairs of base angles. For example, in trapezoid $ABCD$, $\angle A$ and $\angle D$ are one pair of base angles, and $\angle B$ and $\angle C$ are the second pair. The nonparallel sides are the legs of the trapezoid.

**Example 1** Use a coordinate plane

Show that $ORST$ is a trapezoid.

**Solution**

Compare the slopes of opposite sides.

Slope of $RS = \frac{4 - 3}{2 - 0} = \frac{1}{2}$

Slope of $OT = \frac{2 - 0}{4 - 0} = \frac{1}{2}$

The slopes of $RS$ and $OT$ are the same, so $RS \parallel OT$.

Slope of $ST = \frac{2 - 4}{4 - 2} = -\frac{2}{2} = -1$

Slope of $OR = \frac{3 - 0}{0 - 0}$, which is undefined.

The slopes of $ST$ and $OR$ are not the same, so $ST$ is not parallel to $OR$.

Because quadrilateral $ORST$ has exactly one pair of parallel sides, it is a trapezoid.

**Guided Practice** for Example 1

1. **What If?** In Example 1, suppose the coordinates of point $S$ are $(4, 5)$. What type of quadrilateral is $ORST$? Explain.

2. In Example 1, which of the interior angles of quadrilateral $ORST$ are supplementary angles? Explain your reasoning.
ISOSCELES TRAPEZIODS  If the legs of a trapezoid are congruent, then the trapezoid is an isosceles trapezoid.

THEOREMS

THEOREM 8.14
If a trapezoid is isosceles, then each pair of base angles is congruent.

If trapezoid $ABCD$ is isosceles, then $\angle A \cong \angle D$ and $\angle B \cong \angle C$.

Proof: Ex. 37, p. 548

THEOREM 8.15
If a trapezoid has a pair of congruent base angles, then it is an isosceles trapezoid.

If $\angle A \cong \angle D$ (or if $\angle B \cong \angle C$), then trapezoid $ABCD$ is isosceles.

Proof: Ex. 38, p. 548

THEOREM 8.16
A trapezoid is isosceles if and only if its diagonals are congruent.

Trapezoid $ABCD$ is isosceles if and only if $AC = BD$.

Proof: Exs. 39 and 43, p. 549

EXAMPLE 2  Use properties of isosceles trapezoids

ARCH  The stone above the arch in the diagram is an isosceles trapezoid. Find $m\angle K$, $m\angle M$, and $m\angle J$.

Solution

STEP 1  Find $m\angle K$. $JKLM$ is an isosceles trapezoid, so $\angle K$ and $\angle L$ are congruent base angles, and $m\angle K = m\angle L = 85^\circ$.

STEP 2  Find $m\angle M$. Because $\angle L$ and $\angle M$ are consecutive interior angles formed by $\overline{LM}$ intersecting two parallel lines, they are supplementary. So, $m\angle M = 180^\circ - 85^\circ = 95^\circ$.

STEP 3  Find $m\angle J$. Because $\angle J$ and $\angle M$ are a pair of base angles, they are congruent, and $m\angle J = m\angle M = 95^\circ$.

So, $m\angle J = 95^\circ$, $m\angle K = 85^\circ$, and $m\angle M = 95^\circ$. 
MIDSEGMENTS  Recall that a midsegment of a triangle is a segment that connects the midpoints of two sides of the triangle. The midsegment of a trapezoid is the segment that connects the midpoints of its legs.

The theorem below is similar to the Midsegment Theorem for Triangles.

**THEOREM**

**THEOREM 8.17 Midsegment Theorem for Trapezoids**

The midsegment of a trapezoid is parallel to each base and its length is one half the sum of the lengths of the bases.

If \( MN \) is the midsegment of trapezoid \( ABCD \), then \( MN \parallel AB, MN \parallel DC, \) and \( MN = \frac{1}{2}(AB + CD) \).

*Justification:* Ex. 40, p. 549

*Proof:* p. 937

**EXAMPLE 3** Use the midsegment of a trapezoid

In the diagram, \( MN \) is the midsegment of trapezoid \( PQRS \). Find \( MN \).

**Solution**

Use Theorem 8.17 to find \( MN \).

\[
MN = \frac{1}{2}(PQ + SR) \quad \text{Apply Theorem 8.17.}
\]

\[
= \frac{1}{2}(12 + 28) \quad \text{Substitute 12 for } PQ \text{ and } 28 \text{ for } XU.
\]

\[
= 20 \quad \text{Simplify.}
\]

\( \triangleright \) The length \( MN \) is 20 inches.

**GUIDED PRACTICE** for Examples 2 and 3

In Exercises 3 and 4, use the diagram of trapezoid \( EFGH \).

3. If \( EG = FH \), is trapezoid \( EFGH \) isosceles? Explain.

4. If \( m \angle HEF = 70^\circ \) and \( m \angle FGH = 110^\circ \), is trapezoid \( EFGH \) isosceles? Explain.

5. In trapezoid \( JKLM \), \( \angle J \) and \( \angle M \) are right angles, and \( JK = 9 \text{ cm} \). The length of the midsegment \( NP \) of trapezoid \( JKLM \) is 12 cm. Sketch trapezoid \( JKLM \) and its midsegment. Find \( ML \). Explain your reasoning.
**KITES** A kite is a quadrilateral that has two pairs of consecutive congruent sides, but opposite sides are not congruent.

**THEOREMS**

**THEOREM 8.18**
If a quadrilateral is a kite, then its diagonals are perpendicular.
If quadrilateral $ABCD$ is a kite, then $AC \perp BD$.
*Proof:* Ex. 41, p. 549

**THEOREM 8.19**
If a quadrilateral is a kite, then exactly one pair of opposite angles are congruent.
If quadrilateral $ABCD$ is a kite and $BC \neq BA$, then $\angle A \equiv \angle C$ and $\angle B \equiv \angle D$.
*Proof:* Ex. 42, p. 549

**EXAMPLE 4** Apply Theorem 8.19

Find $m\angle D$ in the kite shown at the right.

Solution
By Theorem 8.19, $DEFG$ has exactly one pair of congruent opposite angles. Because $\angle E \equiv \angle G$, $\angle D$ and $\angle F$ must be congruent. So, $m\angle D = m\angle F$.

Write and solve an equation to find $m\angle D$.

$$m\angle D + m\angle F + 124^\circ + 80^\circ = 360^\circ$$

Corollary to Theorem 8.1

$$m\angle D + m\angle D + 124^\circ + 80^\circ = 360^\circ$$

Substitute $m\angle D$ for $m\angle F$.

$$2(m\angle D) + 204^\circ = 360^\circ$$

Combine like terms.

$$m\angle D = 78^\circ$$

Solve for $m\angle D$.

**GUIDED PRACTICE** for Example 4

6. In a kite, the measures of the angles are $3x^\circ$, $75^\circ$, $90^\circ$, and $120^\circ$. Find the value of $x$. What are the measures of the angles that are congruent?
1. **VOCABULARY** In trapezoid $PQRS$, $PQ \parallel RS$. Sketch $PQRS$ and identify its bases and its legs.

2. **★ WRITING** Describe the differences between a kite and a trapezoid.

**COORDINATE PLANE** Points $A$, $B$, $C$, and $D$ are the vertices of a quadrilateral. Determine whether $ABCD$ is a trapezoid.

3. $A(0, 4), B(4, 4), C(8, 2), D(2, 1)$
4. $A(-5, 0), B(2, 3), C(3, 1), D(-2, -2)$
5. $A(2, 1), B(6, 1), C(3, -3), D(-1, -4)$
6. $A(-3, 3), B(-1, 1), C(1, -4), D(-3, 0)$

**FINDING ANGLE MEASURES** Find $m\angle J$, $m\angle L$, and $m\angle M$.

7. $M \angle 50^\circ$
8. $M \angle 100^\circ$
9. $M \angle 118^\circ$

**REASONING** Determine whether the quadrilateral is a trapezoid. *Explain.*

10.
11.
12.

**FINDING MIDSEGMENTS** Find the length of the midsegment of the trapezoid.

13. $18$
14. $21$
15.

16. **★ MULTIPLE CHOICE** Which statement is not always true?

   - A The base angles of an isosceles trapezoid are congruent.
   - B The midsegment of a trapezoid is parallel to the bases.
   - C The bases of a trapezoid are parallel.
   - D The legs of a trapezoid are congruent.

17. **ERROR ANALYSIS** Describe and correct the error made in finding $m\angle A$.

   *Opposite angles of a kite are congruent, so $m\angle A = 50^\circ$.*
ANGLES OF KITES  

EFGH is a kite. Find \( m \angle G \).

18. \[
\begin{align*}
E & \quad 100^\circ \\
H & \quad 40^\circ \\
F & \quad G
\end{align*}
\]

19. \[
\begin{align*}
E & \quad 60^\circ \\
F & \quad G
\end{align*}
\]

20. \[
\begin{align*}
E & \quad 150^\circ \\
F & \quad G
\end{align*}
\]

DIAGONALS OF KITES  

Use Theorem 8.18 and the Pythagorean Theorem to find the side lengths of the kite. Write the lengths in simplest radical form.

21. \[
\begin{align*}
X & \quad 3 \\
W & \quad 3 \\
Y
\end{align*}
\]

22. \[
\begin{align*}
X & \quad 6 \\
W & \quad 4 \\
Y
\end{align*}
\]

23. \[
\begin{align*}
X & \quad 10 \\
W & \quad 19 \\
Y
\end{align*}
\]

24. ERROR ANALYSIS  

In trapezoid \( ABCD \), \( MN \) is the midsegment. Describe and correct the error made in finding \( DC \).

25. \[
\begin{align*}
2x & \quad 10 \\
7
\end{align*}
\]

26. \[
\begin{align*}
3x + 1 & \quad 12.5 \\
15
\end{align*}
\]

27. \[
\begin{align*}
5x & \quad 18.7 \\
12x - 1.7
\end{align*}
\]

28. ★ SHORT RESPONSE  

The points \( M(-3, 5), N(-1, 5), P(3, -1), \) and \( Q(-5, -1) \) form the vertices of a trapezoid. Draw \( MNPQ \) and find \( MP \) and \( NQ \). What do your results tell you about the trapezoid? Explain.

29. DRAWING  

In trapezoid \( JKLM \), \( JK \parallel LM \) and \( JK = 17 \). The midsegment of \( JKLM \) is \( \overline{XY} \), and \( XY = 37 \). Sketch \( JKLM \) and its midsegment. Then find \( LM \).

30. RATIOS  

The ratio of the lengths of the bases of a trapezoid is 1:3. The length of the midsegment is 24. Find the lengths of the bases.

31. ★ MULTIPLE CHOICE  

In trapezoid \( PQRS \), \( PQ \parallel RS \) and \( MN \) is the midsegment of \( PQRS \). If \( RS = 5 \cdot PQ \), what is the ratio of \( MN \) to \( RS \)?

A 3:5  
B 5:3  
C 2:1  
D 3:1

32. CHALLENGE  

The figure shown at the right is a trapezoid with its midsegment. Find all the possible values of \( x \). What is the length of the midsegment? Explain. (The figure may not be drawn to scale.)

33. REASONING  

Explain why a kite and a general quadrilateral are the only quadrilaterals that can be concave.
34. **FURNITURE** In the photograph of a chest of drawers, \( HC \) is the midsegment of trapezoid \( ABDG \), \( GD \) is the midsegment of trapezoid \( HCEF \), \( AB = 13.9 \) centimeters, and \( GD = 50.5 \) centimeters. Find \( HC \). Then find \( FE \).

35. **GRAPHIC DESIGN** You design a logo in the shape of a convex kite. The measure of one angle of the kite is 90°. The measure of another angle is 30°. Sketch a kite that matches this description. Give the measures of all the angles and mark any congruent sides.

36. **★ EXTENDED RESPONSE** The bridge below is designed to fold up into an octagon shape. The diagram shows a section of the bridge.

- a. Classify the quadrilaterals shown in the diagram.
- b. As the bridge folds up, what happens to the length of \( BF \)? What happens to \( m\angle BAF, m\angle ABC, m\angle BCF \), and \( m\angle CFA \)?
- c. Given \( m\angle CFE = 65° \), find \( m\angle DEF, m\angle FCD, \) and \( m\angle CDE \). Explain.

37. **PROVING THEOREM 8.14** Use the diagram and the auxiliary segment to prove Theorem 8.14. In the diagram, \( EC \) is drawn parallel to \( AB \).

   **GIVEN** \( ABCD \) is an isosceles trapezoid, \( BC \parallel AD \)

   **PROVE** \( \angle A \equiv \angle D, \angle B \equiv \angle BCD \)

   **Hint:** Find a way to show that \( \triangle ECD \) is an isosceles triangle.

38. **PROVING THEOREM 8.15** Use the diagram and the auxiliary segment to prove Theorem 8.15. In the diagram, \( FG \) is drawn parallel to \( EF \).

   **GIVEN** \( EFGH \) is a trapezoid, \( FG \parallel EH, \angle E \equiv \angle H \)

   **PROVE** \( EFGH \) is an isosceles trapezoid.

   **Hint:** Find a way to show that \( \triangle JGH \) is an isosceles triangle.
39. **PROVING THEOREM 8.16** Prove part of Theorem 8.16.

**GIVEN** ▶ \( JKL \) is an isosceles trapezoid.
- \( KL \parallel JM, JK = LM \)

**PROVE** ▶ \( JL = KM \)

40. **REASONING** In the diagram below, \( BG \) is the midsegment of \( \triangle ACD \) and \( GE \) is the midsegment of \( \triangle ADF \). Explain why the midsegment of trapezoid \( ACDF \) is parallel to each base and why its length is one half the sum of the lengths of the bases.

41. **PROVING THEOREM 8.18** Prove Theorem 8.18.

**GIVEN** ▶ \( ABCD \) is a kite.
- \( AB = CB, AD = CD \)

**PROVE** ▶ \( AC \perp BD \)

42. **PROVING THEOREM 8.19** Write a paragraph proof of Theorem 8.19.

**GIVEN** ▶ \( EFGH \) is a kite.
- \( EF = GF, EH = GH \)

**PROVE** ▶ \( \angle E = \angle G, \angle F = \angle H \)

**Plan for Proof** First show that \( \angle E = \angle G \). Then use an indirect argument to show that \( \angle F = \angle H \) if \( \angle F = \angle H \) then \( EFGH \) is a parallelogram. But opposite sides of a parallelogram are congruent. This result contradicts the definition of a kite.

43. **CHALLENGE** In Exercise 39, you proved that part of Theorem 8.16 is true. Write the other part of Theorem 8.16 as a conditional statement. Then prove that the statement is true.

---

**MIXED REVIEW**

44. Place a right triangle in a coordinate plane in a way that is convenient for finding side lengths. Assign coordinates to each vertex. (p. 295)

**Use the diagram to complete the proportion.** (p. 449)

45. \( \frac{AB}{AC} = \frac{?}{AB} \)  
46. \( \frac{AB}{BC} = \frac{BD}{?} \)

Three of the vertices of \( \square ABCD \) are given. Find the coordinates of point \( D \). Show your method. (p. 522)

47. \( A(-1, -2), B(4, -2), C(6, 2), D(x, y) \)  
48. \( A(1, 4), B(0, 1), C(4, 1), D(x, y) \)

---

**EXTRA PRACTICE** for Lesson 8.5, p. 911  
**ONLINE QUIZ** at classzone.com
Draw Three-Dimensional Figures

**GOAL** Create isometric drawings and orthographic projections of three-dimensional figures.

**Key Vocabulary**
- isometric drawing
- orthographic projection

*Technical drawings* are drawings that show different viewpoints of an object. Engineers and architects create technical drawings of products and buildings before actually constructing the actual objects.

**EXAMPLE 1** Draw a rectangular box

**Draw a rectangular box.**

**Solution**

**STEP 1** **Draw** the bases. They are rectangular, but you need to draw them tilted.

**STEP 2** **Connect** the bases using vertical lines.

**STEP 3** **Erase** parts of the hidden edges so that they are dashed lines.

**ISOMETRIC DRAWINGS** Technical drawings may include *isometric drawings*. These drawings look three-dimensional and can be created on a grid of dots using three axes that intersect to form 120° angles.

**EXAMPLE 2** Create an isometric drawing

**Create an isometric drawing of the rectangular box in Example 1.**

**Solution**

**STEP 1** **Draw** three axes on isometric dot paper.

**STEP 2** **Draw** the box so that the edges of the box are parallel to the three axes.

**STEP 3** **Add** depth to the drawing by using different shading for the front, top, and sides.
**ANOTHER VIEW**  Technical drawings may also include an *orthographic projection*. An *orthographic projection* is a two-dimensional drawing of the front, top, and side views of an object. The interior lines in these two-dimensional drawings represent edges of the object.

**EXAMPLE 3  Create an orthographic projection**

Create an orthographic projection of the solid.

**Solution**

On graph paper, draw the front, top, and side views of the solid.

---

**PRACTICE**

**DRAWING BOXES**  Draw a box with the indicated base.

1. Equilateral triangle  
2. Regular hexagon  
3. Square

**DRAWING SOLIDS**  Create an isometric drawing of the solid. Then create an orthographic projection of the solid.

4.  
5.  
6.  
7.  
8.  
9.  

**CREATING ISOMETRIC DRAWINGS**  Create an isometric drawing of the orthographic projection.

10.  
11.  
12.
You identified polygons.
You will identify special quadrilaterals.
So you can describe part of a pyramid, as in Ex. 36.

The diagram below shows relationships among the special quadrilaterals you have studied in Chapter 8. Each shape in the diagram has the properties of the shapes linked above it. For example, a rhombus has the properties of a parallelogram and a quadrilateral.

**Example 1: Identify quadrilaterals**

Quadrilateral $ABCD$ has at least one pair of opposite angles congruent. What types of quadrilaterals meet this condition?

**Solution**

There are many possibilities.

- **Parallelogram**: Opposite angles are congruent.
- **Rhombus**: All angles are congruent.
- **Rectangle**: All angles are congruent.
- **Square**: One pair of opposite angles are congruent.
- **Kite**: None of the above conditions are met.
EXAMPLE 3  Identify a quadrilateral

Is enough information given in the diagram to show that quadrilateral $PQRS$ is an isosceles trapezoid? Explain.

Solution

- **STEP 1**  Show that $PQRS$ is a trapezoid. $\angle R$ and $\angle S$ are supplementary, but $\angle P$ and $\angle S$ are not. So, $\overline{PS} \parallel \overline{QR}$, but $\overline{PQ}$ is not parallel to $\overline{SR}$. By definition, $PQRS$ is a trapezoid.

- **STEP 2**  Show that trapezoid $PQRS$ is isosceles. $\angle P$ and $\angle S$ are a pair of congruent base angles. So, $PQRS$ is an isosceles trapezoid by Theorem 8.15.

Yes, the diagram is sufficient to show that $PQRS$ is an isosceles trapezoid.

EXAMPLE 2  Standardized Test Practice

What is the most specific name for quadrilateral $ABCD$?

- A  Parallelogram
- B  Rhombus
- C  Square
- D  Rectangle

Solution

The diagram shows $\overline{AE} \cong \overline{CE}$ and $\overline{BE} \cong \overline{DE}$. So, the diagonals bisect each other. By Theorem 8.10, $ABCD$ is a parallelogram.

Rectangles, rhombuses and squares are also parallelograms. However, there is no information given about the side lengths or angle measures of $ABCD$. So, you cannot determine whether it is a rectangle, a rhombus, or a square.

The correct answer is A.  A  B  C  D

GUIDED PRACTICE  for Examples 1, 2, and 3

1. Quadrilateral $DEFG$ has at least one pair of opposite sides congruent. What types of quadrilaterals meet this condition?

2. Give the most specific name for the quadrilateral.  Explain your reasoning.

3. ERROR ANALYSIS  A student knows the following information about quadrilateral $MNPQ$: $\overline{MN} \parallel \overline{PQ}$, $\overline{MP} \cong \overline{NQ}$, and $\angle P \cong \angle Q$. The student concludes that $MNPQ$ is an isosceles trapezoid.  Explain why the student cannot make this conclusion.
1. **VOCABULARY** Copy and complete: A quadrilateral that has exactly one pair of parallel sides and diagonals that are congruent is a(n) _?_.

2. **★ WRITING** Describe three methods you could use to prove that a parallelogram is a rhombus.

**PROPERTIES OF QUADRILATERALS** Copy the chart. Put an X in the box if the shape _always_ has the given property.

<table>
<thead>
<tr>
<th>Property</th>
<th>Rectangle</th>
<th>Rhombus</th>
<th>Square</th>
<th>Kite</th>
<th>Trapezoid</th>
</tr>
</thead>
<tbody>
<tr>
<td>3. All sides are <em>≅</em>.</td>
<td>?</td>
<td>?</td>
<td>?</td>
<td>?</td>
<td>?</td>
</tr>
<tr>
<td>7. All <em>△</em> are <em>≅</em>.</td>
<td>?</td>
<td>?</td>
<td>?</td>
<td>?</td>
<td>?</td>
</tr>
</tbody>
</table>

12. **ERROR ANALYSIS** Describe and correct the error in classifying the quadrilateral.

13. **★ MULTIPLE CHOICE** What is the most specific name for the quadrilateral shown at the right?
   - A Rectangle
   - B Parallelogram
   - C Trapezoid
   - D Isosceles trapezoid

14. **CLASSIFYING QUADRILATERALS** Give the most specific name for the quadrilateral. Explain.

15. **CLASSIFYING QUADRILATERALS** Give the most specific name for the quadrilateral. Explain.

16. **CLASSIFYING QUADRILATERALS** Give the most specific name for the quadrilateral. Explain.
17. **DRAWING** Draw a quadrilateral with congruent diagonals and exactly one pair of congruent sides. What is the most specific name for this quadrilateral?

**IDENTIFYING QUADRILATERALS** Tell whether enough information is given in the diagram to classify the quadrilateral by the indicated name. **Explain.**

18. Rhombus  
19. Isosceles trapezoid  
20. Square

**COORDINATE PLANE** Points \( P, Q, R, \) and \( S \) are the vertices of a quadrilateral. Give the most specific name for \( PQRS \). **Justify your answer.**

21. \( P(1, 0), Q(1, 2), R(6, 5), S(3, 0) \)
22. \( P(2, 1), Q(6, 1), R(5, 8), S(3, 8) \)
23. \( P(2, 7), Q(6, 9), R(9, 3), S(5, 1) \)
24. \( P(1, 7), Q(5, 8), R(6, 2), S(2, 1) \)

**TECHNOLOGY** Use geometry drawing software to draw points \( A, B, C, \) and segments \( AC \) and \( BC \). Draw a circle with center \( A \) and radius \( AC \). Draw a circle with center \( B \) and radius \( BC \). Label the other intersection of the circles \( D \). Draw \( \overline{BD} \) and \( \overline{AD} \).

- a. Drag point \( A, B, C, \) or \( D \) to change the shape of \( ABCD \). What types of quadrilaterals can be formed?
- b. Are there types of quadrilaterals that cannot be formed? **Explain.**

**DEVELOPING PROOF** Which pairs of segments or angles must be congruent so that you can prove that \( ABCD \) is the indicated quadrilateral? **Explain.** There may be more than one right answer.

26. Square  
27. Isosceles trapezoid  
28. Parallelogram

**TRAPEZOIDS** In Exercises 29–31, determine whether there is enough information to prove that \( JKL \) is an isosceles trapezoid. **Explain.**

29. **GIVEN** \( \overline{JK} \parallel \overline{LM}, \angle JKL \equiv \angle KJM \)
30. **GIVEN** \( \overline{JK} \parallel \overline{LM}, \angle JML \equiv \angle KLM, m\angle KLM = 90^\circ \)
31. **GIVEN** \( \overline{JL} \equiv \overline{KM}, \overline{JK} \parallel \overline{LM}, JK > LM \)

32. **CHALLENGE** Draw a rectangle and bisect its angles. What type of quadrilateral is formed by the intersecting bisectors? **Justify your answer.**
36. **PYRAMID** Use the photo of the Pyramid of Kukulcan in Mexico.
   a. $EF \parallel HG$, and $EH$ and $FG$ are not parallel. What shape is this part of the pyramid?
   b. $AB \parallel DC$, $AD \parallel BC$, and $\angle A$, $\angle B$, $\angle C$, and $\angle D$ are all congruent to each other. What shape is this part of the pyramid?

37. ★ **SHORT RESPONSE** Explain why a parallelogram with one right angle must be a rectangle.

38. ★ **EXTENDED RESPONSE** Segments $AC$ and $BD$ bisect each other.
   a. Suppose that $AC$ and $BD$ are congruent, but not perpendicular. Draw quadrilateral $ABCD$ and classify it. Justify your answer.
   b. Suppose that $AC$ and $BD$ are perpendicular, but not congruent. Draw quadrilateral $ABCD$ and classify it. Justify your answer.

39. **MULTI-STEP PROBLEM** Polygon $QRSTUV$ shown at the right is a regular hexagon, and $QU$ and $RT$ are diagonals. Follow the steps below to classify quadrilateral $QRTU$. Explain your reasoning in each step.
   a. Show that $\triangle QVU$ and $\triangle RST$ are congruent isosceles triangles.
   b. Show that $QR \cong UT$ and that $QU \cong RT$.
   c. Show that $\angle UQR \cong \angle QRT \cong \angle RTU \cong \angle TUQ$. Find the measure of each of these angles.
   d. Classify quadrilateral $QRTU$.

40. **REASONING** In quadrilateral $WXYZ$, $\overline{WY}$ and $\overline{XZ}$ intersect each other at point $V$. $\overline{WV} \cong \overline{XV}$ and $\overline{YY} \cong \overline{ZV}$, but $\overline{WY}$ and $\overline{XZ}$ do not bisect each other. Draw $\overline{WY}$, $\overline{XY}$, and $\overline{WXYZ}$. What special type of quadrilateral is $WXYZ$? Write a plan for a proof of your answer.
**CHALLENGE** What special type of quadrilateral is EFGH? Write a paragraph proof to show that your answer is correct.

41. **GIVEN** ▶ PQRS is a square.
   E, F, G, and H are midpoints of the sides of the square.
   **PROVE** ▶ EFGH is a _ ? _.

42. **GIVEN** ▶ In the three-dimensional figure, JK ≅ LM; E, F, G, and H are the midpoints of JL, KL, KM, and JM.
   **PROVE** ▶ EFGH is a _ ? _.

---

**MIXED REVIEW**

In Exercises 43 and 44, use the diagram. *(p. 264)*

43. Find the values of x and y. Explain your reasoning.
44. Find m∠ADC, m∠DAC, and m∠DCA. Explain your reasoning.

The vertices of quadrilateral ABCD are A(−2, 1), B(2, 5), C(3, 2), and D(1, −1). Draw ABCD in a coordinate plane. Then draw its image after the indicated translation. *(p. 272)*

45. (x, y) → (x + 1, y − 3)
46. (x, y) → (x − 2, y − 2)

Use the diagram of □ WXYZ to find the indicated length. *(p. 515)*

47. YZ
48. WZ
49. XV
50. XZ

---

**QUIZ for Lessons 8.5–8.6**

Find the unknown angle measures. *(p. 542)*

1.  
2.  
3.  

4. The diagonals of quadrilateral ABCD are congruent and bisect each other. What types of quadrilaterals match this description? *(p. 552)*

5. In quadrilateral EFGH, ∠E ≅ ∠G, ∠F ≅ ∠H, and EF ≅ EH. What is the most specific name for quadrilateral EFGH? *(p. 552)*
Lessons 8.4–8.6

1. **MULTI-STEP PROBLEM** In the photograph shown below, quadrilateral $ABCD$ represents the front view of the roof.

![Image of a roof](image)

a. Explain how you know that the shape of the roof is a trapezoid.

b. Do you have enough information to determine that the roof is an isosceles trapezoid? Explain your reasoning.

2. **SHORT RESPONSE** Is enough information given in the diagram to show that quadrilateral $JKLM$ is a square? Explain your reasoning.

![Image of quadrilateral](image)

3. **EXTENDED RESPONSE** In the photograph, quadrilateral $QRST$ is a kite.

![Image of a kite](image)

a. If $m \angle TQR = 102^\circ$ and $m \angle RST = 125^\circ$, find $m \angle QTS$. Explain your reasoning.

b. If $QS = 11$ ft, $TR = 14$ ft, and $TP \cong QP \cong RP$, find $QR$, $RS$, $ST$, and $TQ$. Round your answers to the nearest foot. Show your work.

4. **GRIDDED ANSWER** The top of the table shown is shaped like an isosceles trapezoid. In $ABCD$, $AB = 48$ inches, $BC = 19$ inches, $CD = 24$ inches, and $DA = 19$ inches. Find the length (in inches) of the midsegment of $ABCD$.

![Image of a table](image)

5. **SHORT RESPONSE** Rhombus $PQRS$ is similar to rhombus $VWXYZ$. In the diagram below, $QS = 32$, $QR = 20$, and $WZ = 20$. Find $WX$. Explain your reasoning.

![Image of similar rhombuses](image)

6. **OPEN-ENDED** In quadrilateral $MNPQ$, $\overline{MP} \cong \overline{NQ}$.

a. What types of quadrilaterals could $MNPQ$ be? Use the most specific names. Explain.

b. For each of your answers in part (a), tell what additional information would allow you to conclude that $MNPQ$ is that type of quadrilateral. Explain your reasoning. (There may be more than one correct answer.)

7. **EXTENDED RESPONSE** Three of the vertices of quadrilateral $EFGH$ are $E(0, 4)$, $F(2, 2)$, and $G(4, 4)$.

a. Suppose that $EFGH$ is a rhombus. Find the coordinates of vertex $H$. Explain why there is only one possible location for $H$.

b. Suppose that $EFGH$ is a convex kite. Show that there is more than one possible set of coordinates for vertex $H$. Describe what all the possible sets of coordinates have in common.
**Big Idea 1: Using Angle Relationships in Polygons**
You can use theorems about the interior and exterior angles of convex polygons to solve problems.

**Polygon Interior Angles Theorem**
The sum of the interior angle measures of a convex \( n \)-gon is \( (n - 2) \cdot 180^\circ \).

**Polygon Exterior Angles Theorem**
The sum of the exterior angle measures of a convex \( n \)-gon is \( 360^\circ \).

**Big Idea 2: Using Properties of Parallelograms**
By definition, a parallelogram is a quadrilateral with both pairs of opposite sides parallel. Other properties of parallelograms:
- Opposite sides are congruent.
- Opposite angles are congruent.
- Diagonals bisect each other.
- Consecutive angles are supplementary.

**Ways to show that a quadrilateral is a parallelogram:**
- Show both pairs of opposite sides are parallel.
- Show both pairs of opposite sides or opposite angles are congruent.
- Show one pair of opposite sides are congruent and parallel.
- Show the diagonals bisect each other.

**Big Idea 3: Classifying Quadrilaterals by Their Properties**
Special quadrilaterals can be classified by their properties. In a parallelogram, both pairs of opposite sides are parallel. In a trapezoid, only one pair of sides are parallel. A kite has two pairs of consecutive congruent sides, but opposite sides are not congruent.
VOCABULARY EXERCISES

In Exercises 1 and 2, copy and complete the statement.

1. The _?_ of a trapezoid is parallel to the bases.

2. A(n) _?_ of a polygon is a segment whose endpoints are nonconsecutive vertices.

3. WRITING Describe the different ways you can show that a trapezoid is an isosceles trapezoid.

In Exercises 4–6, match the figure with the most specific name.

4. 5. 6.

A. Square  
B. Parallelogram  
C. Rhombus

REVIEW EXAMPLES AND EXERCISES

Use the review examples and exercises below to check your understanding of the concepts you have learned in each lesson of Chapter 8.

8.1 Find Angle Measures in Polygons  

Example

The sum of the measures of the interior angles of a convex regular polygon is 1080°. Classify the polygon by the number of sides. What is the measure of each interior angle?

Write and solve an equation for the number of sides \( n \).

\[(n - 2) \cdot 180° = 1080°\]

\[n = 8\]

The polygon has 8 sides, so it is an octagon.

A regular octagon has 8 congruent interior angles, so divide to find the measure of each angle: \(1080° \div 8 = 135°\). The measure of each interior angle is 135°.
**EXERCISES**

7. The sum of the measures of the interior angles of a convex regular polygon is $3960^\circ$. Classify the polygon by the number of sides. What is the measure of each interior angle?

In Exercises 8–10, find the value of $x$.

8. \[\begin{align*}
120^\circ & \quad 97^\circ \\
8^\circ & \quad 130^\circ \\
x^\circ & \quad 150^\circ
\end{align*}\]

9. \[\begin{align*}
160^\circ & \quad 110^\circ \\
2x^\circ & \quad 125^\circ \\
x^\circ & \quad 147^\circ
\end{align*}\]

10. \[\begin{align*}
5x^\circ & \\
8x^\circ & \\
x^\circ &
\end{align*}\]

11. In a regular nonagon, the exterior angles are all congruent. What is the measure of one of the exterior angles? *Explain.*

**8.2 Use Properties of Parallelograms**

**Example**

Quadrilateral $WXYZ$ is a parallelogram. Find the values of $x$ and $y$.

To find the value of $x$, apply Theorem 8.3.

\[XY = WZ \quad \text{Opposite sides of a \(\square\) are \(\cong\).}\]

\[x - 9 = 15 \quad \text{Substitute.}\]

\[x = 24 \quad \text{Add 9 to each side.}\]

By Theorem 8.4, $\angle W \cong \angle Y$, or $m\angle W = m\angle Y$. So, $y = 60$.

**Exercises**

Find the value of each variable in the parallelogram.

12. \[\begin{align*}
10 & \quad 8 \\
8 & \quad m \\
n - 3 & \quad n - 3
\end{align*}\]

13. \[\begin{align*}
11 & \quad 14 \\
d + 4 & \quad c + 5 \\
m & \quad m
\end{align*}\]

14. \[\begin{align*}
18 & \\
(b + 16)^\circ & \\
a - 10 & \quad 103^\circ
\end{align*}\]

15. In $\square PQRS$, $PQ = 5$ centimeters, $QR = 10$ centimeters, and $m\angle PQR = 36^\circ$. Sketch $PQRS$. Find and label all of its side lengths and interior angle measures.

16. The perimeter of $\square EFGH$ is 16 inches. If $EF$ is 5 inches, find the lengths of all the other sides of $EFGH$. *Explain* your reasoning.

17. In $\square JKLm$, the ratio of the measure of $\angle J$ to the measure of $\angle M$ is $5:4$. Find $m\angle J$ and $m\angle M$. *Explain* your reasoning.
Show that a Quadrilateral is a Parallelogram

**Example**

For what value of \( x \) is quadrilateral \( ABCD \) a parallelogram?

If the diagonals bisect each other, then \( ABCD \) is a parallelogram. The diagram shows that \( BE = DE \). You need to find the value of \( x \) that makes \( AE = CE \).

\[
AE = CE \quad \text{Set the segment lengths equal.}
\]

\[
6x + 10 = 11x \quad \text{Substitute expressions for the lengths.}
\]

\[
x = 2 \quad \text{Solve for} \ x.
\]

When \( x = 2 \), \( AE = 6(2) + 10 = 22 \) and \( CE = 11(2) = 22 \). So, \( AE = CE \).

Quadrilateral \( ABCD \) is a parallelogram when \( x = 2 \).

**Exercises**

For what value of \( x \) is the quadrilateral a parallelogram?

18. 

![Quadrilateral with sides labeled](image)

19. 

![Quadrilateral with sides labeled](image)

Properties of Rhombuses, Rectangles, and Squares

**Example**

Classify the special quadrilateral.

In quadrilateral \( UVWX \), the diagonals bisect each other. So, \( UVWX \) is a parallelogram. Also, \( UY \equiv VY \equiv WY \equiv XY \). So, \( UY + YW = VY + XY \).

Because \( UY + YW = UW \), and \( VY + XY = VX \), you can conclude that \( UW \equiv VX \). By Theorem 8.13, \( UVWX \) is a rectangle.

**Exercises**

Classify the special quadrilateral. Then find the values of \( x \) and \( y \).

20. 

![Quadrilateral with angles labeled](image)

21. 

![Quadrilateral with angles labeled](image)

22. The diagonals of a rhombus are 10 centimeters and 24 centimeters. Find the length of a side. Explain.
8.5 Use Properties of Trapezoids and Kites  pp. 542–549

EXAMPLE

Quadrilateral \(ABCD\) is a kite. Find \(m \angle B\) and \(m \angle D\).

A kite has exactly one pair of congruent opposite angles. Because \(\angle A \cong \angle C\), \(\angle B\) and \(\angle D\) must be congruent. Write and solve an equation.

\[
90^\circ + 20^\circ + m \angle B + m \angle D = 360^\circ \\
110^\circ + m \angle B + m \angle D = 360^\circ \\
m \angle B + m \angle D = 250^\circ
\]

Because \(\angle B \cong \angle D\), you can substitute \(m \angle B\) for \(m \angle D\) in the last equation. Then \(m \angle B + m \angle B = 250^\circ\), and \(m \angle B = m \angle D = 125^\circ\).

EXERCISES

In Exercises 23 and 24, use the diagram of a recycling container. One end of the container is an isosceles trapezoid with \(FG \parallel JH\) and \(m \angle F = 79^\circ\).

23. Find \(m \angle G\), \(m \angle H\), and \(m \angle J\).

24. Copy trapezoid \(FGHJ\) and sketch its midsegment. If the midsegment is 16.5 inches long and \(FG\) is 19 inches long, find \(JH\).

8.6 Identify Special Quadrilaterals  pp. 552–557

EXAMPLE

Give the most specific name for quadrilateral \(LMNP\).

In \(LMNP\), \(\angle L\) and \(\angle M\) are supplementary, but \(\angle L\) and \(\angle P\) are not. So, \(MN \parallel LP\), but \(LM\) is not parallel to \(NP\). By definition, \(LMNP\) is a trapezoid.

Also, \(\angle L\) and \(\angle P\) are a pair of base angles and \(\angle L \equiv \angle P\). So, \(LMNP\) is an isosceles trapezoid by Theorem 8.15.

EXERCISES

Give the most specific name for the quadrilateral. Explain your reasoning.

25. \(\begin{array}{c}
A \\
D \\
B \\
C \\
\end{array}\)

26. \(\begin{array}{c}
E \\
F \\
G \\
H \\
\end{array}\)

27. \(\begin{array}{c}
J \\
K \\
M \\
L \\
\end{array}\)

28. In quadrilateral \(RSTU\), \(\angle R\), \(\angle T\), and \(\angle U\) are right angles, and \(RS = ST\). What is the most specific name for quadrilateral \(RSTU\)? Explain.
Find the value of \( x \).

1. 

2. 

3. 

4. In \( \Box EFGH \), \( m \angle F \) is 40° greater than \( m \angle G \). Sketch \( \Box EFGH \) and label each angle with its correct angle measure. Explain your reasoning.

Are you given enough information to determine whether the quadrilateral is a parallelogram? Explain your reasoning.

5. 

6. 

7. 

In Exercises 8–11, list each type of quadrilateral—parallelogram, rectangle, rhombus, and square—for which the statement is always true.

8. It is equilateral.

9. Its interior angles are all right angles.

10. The diagonals are congruent.

11. Opposite sides are parallel.

12. The vertices of quadrilateral \( PQRs \) are \( P(-2, 0) \), \( Q(0, 3) \), \( R(6, -1) \), and \( S(1, -2) \). Draw \( PQRs \) in a coordinate plane. Show that it is a trapezoid.

13. One side of a quadrilateral \( JKLM \) is longer than another side.
   a. Suppose \( JKLM \) is an isosceles trapezoid. In a coordinate plane, find possible coordinates for the vertices of \( JKLM \). Justify your answer.
   b. Suppose \( JKLM \) is a kite. In a coordinate plane, find possible coordinates for the vertices of \( JKLM \). Justify your answer.
   c. Name other special quadrilaterals that \( JKLM \) could be.

Give the most specific name for the quadrilateral. Explain your reasoning.

14. 

15. 

16. 

17. In trapezoid \( WXYZ \), \( WX \parallel YZ \), and \( YZ = 4.25 \) centimeters. The midsegment of trapezoid \( WXYZ \) is 2.75 centimeters long. Find \( WX \).

18. In \( \Box RSTU \), \( RS \) is 3 centimeters shorter than \( ST \). The perimeter of \( \Box RSTU \) is 42 centimeters. Find \( RS \) and \( ST \).
Graph Nonlinear Functions

Example 1: Graph a quadratic function in vertex form

Graph $y = 2(x - 3)^2 - 1$.

The vertex form of a quadratic function is $y = a(x - h)^2 + k$. Its graph is a parabola with vertex at $(h, k)$ and axis of symmetry $x = h$.

The given function is in vertex form. So, $a = 2$, $h = 3$, and $k = -1$. Because $a > 0$, the parabola opens up.

Graph the vertex at $(3, -1)$. Sketch the axis of symmetry, $x = 3$. Use a table of values to find points on each side of the axis of symmetry. Draw a parabola through the points.

<table>
<thead>
<tr>
<th>$x$</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>
<tr>
<td>$y$</td>
<td>-1</td>
<td>1</td>
<td>7</td>
</tr>
</tbody>
</table>

Example 2: Graph an exponential function

Graph $y = 2^x$.

Make a table by choosing a few values for $x$ and finding the values for $y$. Plot the points and connect them with a smooth curve.

<table>
<thead>
<tr>
<th>$x$</th>
<th>-2</th>
<th>-1</th>
<th>0</th>
<th>1</th>
<th>2</th>
</tr>
</thead>
<tbody>
<tr>
<td>$y$</td>
<td>$\frac{1}{4}$</td>
<td>$\frac{1}{2}$</td>
<td>1</td>
<td>2</td>
<td>4</td>
</tr>
</tbody>
</table>

Exercises

Graph the quadratic function. Label the vertex and sketch the axis of symmetry.

1. $y = 3x^2 + 5$
2. $y = -2x^2 + 4$
3. $y = 0.5x^2 - 3$
4. $y = 3(x + 3)^2 - 3$
5. $y = -2(x - 4)^2 - 1$
6. $y = \frac{1}{2}(x - 4)^2 + 3$

Graph the exponential function.

7. $y = 3^x$
8. $y = 8^x$
9. $y = 2.2^x$
10. $y = \left(\frac{1}{3}\right)^x$

Use a table of values to graph the cubic or absolute value function.

11. $y = x^3$
12. $y = x^3 - 2$
13. $y = 3x^3 - 1$
14. $y = 2\left|x\right|$
15. $y = 2\left|x\right| - 4$
16. $y = -\left|x\right| - 1$
CONTEXT-BASED MULTIPLE CHOICE QUESTIONS

Some of the information you need to solve a context-based multiple choice question may appear in a table, a diagram, or a graph.

PROBLEM 1

Which of the statements about the rhombus-shaped ring is not always true?

A. \( m \angle SPT = m \angle TPQ \)
B. \( PT = TR \)
C. \( m \angle STR = 90^\circ \)
D. \( PR = SQ \)

Plan

INTERPRET THE DIAGRAM The diagram shows rhombus \( PQRS \) with its diagonals intersecting at point \( T \). Use properties of rhombuses to figure out which statement is not always true.

Solution

Consider choice A: \( m \angle SPT = m \angle TPQ \).
Each diagonal of a rhombus bisects each of a pair of opposite angles. The diagonal \( PR \) bisects \( \angle SPQ \), so \( m \angle SPT = m \angle TPQ \). Choice A is true.

Consider choice B: \( PT = TR \).
The diagonals of a parallelogram bisect each other. A rhombus is also a parallelogram, so the diagonals of \( PQRS \) bisect each other. So, \( PT = TR \). Choice B is true.

Consider choice C: \( m \angle STR = 90^\circ \).
The diagonals of a rhombus are perpendicular. \( PQRS \) is a rhombus, so its diagonals are perpendicular. Therefore, \( m \angle STR = 90^\circ \). Choice C is true.

Consider choice D: \( PR = SQ \).
If the diagonals of a parallelogram are congruent, then it is a rectangle. But \( PQRS \) is a rhombus. Only in the special case where it is also a square (a type of rhombus that is also a rectangle), would choice D be true. So, choice D is not always true.

The correct answer is D.  A  B  C  D
**Problem 2**

The official dimensions of home plate in professional baseball are shown on the diagram. What is the value of \( x \)?

- **A** 90
- **B** 108
- **C** 135
- **D** 150

**Plan**

**INTERPRET THE DIAGRAM** From the diagram, you can see that home plate is a pentagon. Use what you know about the interior angles of a polygon and the markings given on the diagram to find the value of \( x \).

**Solution**

Home plate has 5 sides. Use the Polygon Interior Angles Theorem to find the sum of the measures of the interior angles.

\[
(n - 2) \cdot 180^\circ = (5 - 2) \cdot 180^\circ
\]

Substitute 5 for \( n \).

\[
= 3 \cdot 180^\circ
\]

Subtract.

\[
= 540^\circ
\]

Multiply.

From the diagram, you know that three interior angles are right angles. The two other angles are congruent, including the one whose measure is \( x^\circ \). Use this information to write an equation. Then solve the equation.

\[
3 \cdot 90^\circ + 2 \cdot x^\circ = 540^\circ
\]

Write equation.

\[
270 + 2x = 540
\]

Multiply.

\[
2x = 270
\]

Subtract 270 from each side.

\[
x = 135
\]

Divide each side by 2.

The correct answer is **C**. **A** **B** **C** **D**

**Practice**

In Exercises 1 and 2, use the part of the quilt shown.

1. What is the value of \( x \)?
   - **A** 3
   - **B** 3.4
   - **C** 3.8
   - **D** 5.5

2. What is the value of \( z \)?
   - **A** 35
   - **B** 55
   - **C** 125
   - **D** 145
MULTIPLE CHOICE

In Exercises 1 and 2, use the diagram of rhombus \(ABCD\) below.

1. What is the value of \(x\)?
   - \(A\) 2
   - \(B\) 4.6
   - \(C\) 8
   - \(D\) 13

2. What is the value of \(y\)?
   - \(A\) 1.8
   - \(B\) 2
   - \(C\) 8
   - \(D\) 18

3. In the design shown below, a green regular hexagon is surrounded by yellow equilateral triangles and blue isosceles triangles. What is the measure of \(\angle 1\)?
   - \(A\) 30°
   - \(B\) 40°
   - \(C\) 50°
   - \(D\) 60°

4. Which statement about \(EFGH\) can be concluded from the given information?
   - \(A\) It is not a kite.
   - \(B\) It is not an isosceles trapezoid.
   - \(C\) It is not a square.
   - \(D\) It is not a rhombus.

5. What is the most specific name for quadrilateral \(FGHJ\)?
   - \(A\) Parallelogram
   - \(B\) Rhombus
   - \(C\) Rectangle
   - \(D\) Square

6. What is the measure of the smallest interior angle of the hexagon shown?
   - \(A\) 50°
   - \(B\) 60°
   - \(C\) 70°
   - \(D\) 80°

In Exercises 7 and 8, use the diagram of a cardboard container. In the diagram, \(\angle S = \angle R\), \(PQ \parallel SR\), and \(PS\) and \(QR\) are not parallel.

7. Which statement is true?
   - \(A\) \(PR = SQ\)
   - \(B\) \(m\angle S + m\angle R = 180°\)
   - \(C\) \(PQ = 2 \cdot SR\)
   - \(D\) \(PQ = QR\)

8. The bases of trapezoid \(PQRS\) are \(PQ\) and \(SR\), and the midsegment is \(MN\). Given \(PQ = 9\) centimeters, and \(MN = 7.2\) centimeters, what is \(SR\)?
   - \(A\) 5.4 cm
   - \(B\) 8.1 cm
   - \(C\) 10.8 cm
   - \(D\) 12.6 cm
**GRIDDED ANSWER**

9. How many degrees greater is the measure of an interior angle of a regular octagon than the measure of an interior angle of a regular pentagon?

10. Parallelogram $ABCD$ has vertices $A(-3, -1)$, $B(-1, 3)$, $C(4, 3)$, and $D(2, -1)$. What is the sum of the $x$- and $y$-coordinates of the point of intersection of the diagonals of $ABCD$?

11. For what value of $x$ is the quadrilateral shown below a parallelogram?

$$\frac{5x + 13\text{°}}{2x - 8\text{°}}$$

12. In kite $JKLM$, the ratio of $JK$ to $KL$ is $3:2$. The perimeter of $JKLM$ is 30 inches. Find the length (in inches) of $JK$.

**SHORT RESPONSE**

13. The vertices of quadrilateral $EFGH$ are $E(-1, -2)$, $F(-1, 3)$, $G(2, 4)$, and $H(3, 1)$. What type of quadrilateral is $EFGH$? Explain.

14. In the diagram below, $PQRS$ is an isosceles trapezoid with $PQ \parallel RS$. Explain how to show that $\triangle PTS \cong \triangle QTR$.

15. In trapezoid $ABCD$, $AB \parallel CD$, $XY$ is the midsegment of $ABCD$, and $CD$ is twice as long as $AB$. Find the ratio of $XY$ to $AB$. Justify your answer.

**EXTENDED RESPONSE**

16. The diagram shows a regular pentagon and diagonals drawn from vertex $F$.

a. The diagonals divide the pentagon into three triangles. Classify the triangles by their angles and side measures. Explain your reasoning.

b. Which triangles are congruent? Explain how you know.

c. For each triangle, find the interior angle measures. Explain your reasoning.

17. In parts (a)–(c), you are given information about a quadrilateral with vertices $A$, $B$, $C$, $D$. In each case, $ABCD$ is a different quadrilateral.

a. Suppose that $AB \parallel CD$, $AB = DC$, and $\angle C$ is a right angle. Draw quadrilateral $ABCD$ and give the most specific name for $ABCD$. Justify your answer.

b. Suppose that $AB \parallel CD$ and $ABCD$ has exactly two right angles, one of which is $\angle C$. Draw quadrilateral $ABCD$ and give the most specific name for $ABCD$. Justify your answer.

c. Suppose you are given only that $AB \parallel CD$. What additional information would you need to know about $AC$ and $BD$ to conclude that $ABCD$ is a rhombus? Explain.
In previous chapters, you learned the following skills, which you’ll use in Chapter 9: translating, reflecting, and rotating polygons, and using similar triangles.

**Prerequisite Skills**

**VOCABULARY CHECK**

Match the transformation of Triangle A with its graph.

1. Translation of Triangle A
2. Reflection of Triangle A
3. Rotation of Triangle A

**SKILLS AND ALGEBRA CHECK**

The vertices of JKLM are J(−1, 6), K(2, 5), L(2, 2), and M(−1, 1). Graph its image after the transformation described. (Review p. 272 for 9.1, 9.3.)

4. Translate 3 units left and 1 unit down.
5. Reflect in the y-axis.

In the diagram, ABCD ~ EFGH. (Review p. 234 for 9.7.)

6. Find the scale factor of ABCD to EFGH.
7. Find the values of x, y, and z.
In Chapter 9, you will apply the big ideas listed below and reviewed in the Chapter Summary on page 635. You will also use the key vocabulary listed below.

**Big Ideas**

1. Performing congruence and similarity transformations
2. Making real-world connections to symmetry and tessellations
3. Applying matrices and vectors in Geometry

**Key Vocabulary**
- image, p. 572
- preimage, p. 572
- isometry, p. 573
- vector, p. 574
- component form, p. 574
- matrix, p. 580
- element, p. 580
- dimensions, p. 580
- line of reflection, p. 589
- center of rotation, p. 598
- angle of rotation, p. 598
- glide reflection, p. 608
- composition of transformations, p. 609
- line symmetry, p. 619
- rotational symmetry, p. 620
- scalar multiplication, p. 627

**Why?**

You can use properties of shapes to determine whether shapes tessellate. For example, you can use angle measurements to determine which shapes can be used to make a tessellation.

**Animated Geometry**

The animation illustrated below for Example 3 on page 617 helps you answer this question: How can you use tiles to tessellate a floor?

Other animations for Chapter 9: pages 582, 590, 599, 602, 611, 619, and 626
## 9.1 Translate Figures and Use Vectors

**Before** You used a coordinate rule to translate a figure.  
**Now** You will use a vector to translate a figure.  
**Why?** So you can find a distance covered on snowshoes, as in Exs. 35–37.

In Lesson 4.8, you learned that a **transformation** moves or changes a figure in some way to produce a new figure called an **image**. Another name for the original figure is the **preimage**.

Recall that a **translation** moves every point of a figure the same distance in the same direction. More specifically, a translation maps, or moves, the points \( P \) and \( Q \) of a plane figure to the points \( P' \) (read “\( P \) prime”) and \( Q' \), so that one of the following statements is true:

- \( PP' = QQ' \) and \( \overrightarrow{PP'} \parallel \overrightarrow{QQ'} \), or
- \( PP' = QQ' \) and \( \overrightarrow{PP'} \) and \( \overrightarrow{QQ'} \) are collinear.

### EXAMPLE 1 Translate a figure in the coordinate plane

Graph quadrilateral \( ABCD \) with vertices \( A(-1, 2), B(-1, 5), C(4, 6), \) and \( D(4, 2) \). Find the image of each vertex after the translation \((x, y) \rightarrow (x + 3, y - 1)\). Then graph the image using prime notation.

**Solution**

First, draw \( ABCD \). Find the translation of each vertex by adding 3 to its \( x \)-coordinate and subtracting 1 from its \( y \)-coordinate. Then graph the image.

\[(x, y) \rightarrow (x + 3, y - 1)\]

- \( A(-1, 2) \rightarrow A'(2, 1) \)
- \( B(-1, 5) \rightarrow B'(2, 4) \)
- \( C(4, 6) \rightarrow C'(7, 5) \)
- \( D(4, 2) \rightarrow D'(7, 1) \)

### GUIDED PRACTICE for Example 1

1. Draw \( \triangle RST \) with vertices \( R(2, 2), S(5, 2), \) and \( T(3, 5) \). Find the image of each vertex after the translation \((x, y) \rightarrow (x + 1, y + 2)\). Graph the image using prime notation.

2. The image of \((x, y) \rightarrow (x + 4, y - 7)\) is \( \overline{P'Q'} \) with endpoints \( P'(-3, 4) \) and \( Q'(2, 1) \). Find the coordinates of the endpoints of the preimage.
An isometry is a transformation that preserves length and angle measure. Isometry is another word for congruence transformation (page 272). An isometry is a transformation that preserves length and angle measure. Isometry is another word for congruence transformation (page 272).

**Example 2** Write a translation rule and verify congruence

Write a rule for the translation of $\triangle ABC$ to $\triangle A'B'C'$. Then verify that the transformation is an isometry.

**Solution**

To go from $A$ to $A'$, move 4 units left and 1 unit up. So, a rule for the translation is $(x, y) \rightarrow (x - 4, y + 1)$.

Use the SAS Congruence Postulate. Notice that $CB = C'B' = 3$, and $AC = A'C' = 2$. The slopes of $CB$ and $C'B'$ are 0, and the slopes of $CA$ and $C'A'$ are undefined, so the sides are perpendicular. Therefore, $\angle C$ and $\angle C'$ are congruent right angles. So, $\triangle ABC \cong \triangle A'B'C'$. The translation is an isometry.

**Theorem**

**Theorem 9.1** Translation Theorem

A translation is an isometry.

*Proof:* below; Ex. 46, p. 579

**Theorem**

A translation is an isometry.

**Proof**

A translation is an isometry.

**Given** $P(a, b)$ and $Q(c, d)$ are two points on a figure translated by $(x, y) \rightarrow (x + s, y + t)$.

**Prove** $PQ = P'Q'$

The translation maps $P(a, b)$ to $P'(a + s, b + t)$ and $Q(c, d)$ to $Q'(c + s, d + t)$.

Use the Distance Formula to find $PQ$ and $P'Q'$. $PQ = \sqrt{(c - a)^2 + (d - b)^2}$.

$P'Q' = \sqrt{[(c + s) - (a + s)]^2 + [(d + t) - (b + t)]^2}$

$= \sqrt{(c + s - a - s)^2 + (d + t - b - t)^2}$

$= \sqrt{(c - a)^2 + (d - b)^2}$

Therefore, $PQ = P'Q'$ by the Transitive Property of Equality.

**Theorem**

**Theorem**

For Your Notebook

**Theorem 9.1** Translation Theorem

A translation is an isometry.

*Proof:* below; Ex. 46, p. 579

![Diagram](https://example.com/diagram.png)

$\triangle ABC \cong \triangle A'B'C'$

**Guided Practice** for Example 2

3. In Example 2, write a rule to translate $\triangle A'B'C'$ back to $\triangle ABC$. 

**Guided Practice** for Example 2

3. In Example 2, write a rule to translate $\triangle A'B'C'$ back to $\triangle ABC$. 

![Diagram](https://example.com/diagram.png)
**EXAMPLE 3** Identify vector components

Name the vector and write its component form.

a. 

![Image of vector BC]

The vector is $\overrightarrow{BC}$. From initial point $B$ to terminal point $C$, you move 9 units right and 2 units down. So, the component form is $\langle 9, -2 \rangle$.

b. 

![Image of vector ST]

The vector is $\overrightarrow{ST}$. From initial point $S$ to terminal point $T$, you move 8 units left and 0 units vertically. The component form is $\langle -8, 0 \rangle$.

**EXAMPLE 4** Use a vector to translate a figure

The vertices of $\triangle ABC$ are $A(0, 3)$, $B(2, 4)$, and $C(1, 0)$. Translate $\triangle ABC$ using the vector $\langle 5, -1 \rangle$.

**Solution**

First, graph $\triangle ABC$. Use $\langle 5, -1 \rangle$ to move each vertex 5 units to the right and 1 unit down. Label the image vertices. Draw $\triangle A'B'C'$. Notice that the vectors drawn from preimage to image vertices are parallel.
Name the vector and write its component form.

4.  

5.  

6.  

7. The vertices of $\triangle LMN$ are $L(2, 2), M(5, 3)$, and $N(9, 1)$. Translate $\triangle LMN$ using the vector $<-2, 6>$.

**Example 5** Solve a multi-step problem

**NAVIGATION** A boat heads out from point $A$ on one island toward point $D$ on another. The boat encounters a storm at $B$, 12 miles east and 4 miles north of its starting point. The storm pushes the boat off course to point $C$, as shown.

![Diagram of boat's path](image)

a. Write the component form of $\overrightarrow{AB}$.

b. Write the component form of $\overrightarrow{BC}$.

c. Write the component form of the vector that describes the straight line path from the boat's current position $C$ to its intended destination $D$.

**Solution**

a. The component form of the vector from $A(0, 0)$ to $B(12, 4)$ is $\overrightarrow{AB} = (12 - 0, 4 - 0) = (12, 4)$.

b. The component form of the vector from $B(12, 4)$ to $C(16, 2)$ is $\overrightarrow{BC} = (16 - 12, 2 - 4) = (4, -2)$.

c. The boat is currently at point $C$ and needs to travel to $D$. The component form of the vector from $C(16, 2)$ to $D(18, 5)$ is $\overrightarrow{CD} = (18 - 16, 5 - 2) = (2, 3)$.

**Guided Practice** for Example 5

8. **WHAT IF?** In Example 5, suppose there is no storm. Write the component form of the vector that describes the straight path from the boat’s starting point $A$ to its final destination $D$. 

---

9.1 Translate Figures and Use Vectors 575
1. **VOCABULARY** Copy and complete: A ___ is a quantity that has both ___ and magnitude.

2. ★ **WRITING** Describe the difference between a vector and a ray.

**IMAGE AND PREIMAGE** Use the translation \((x, y) \rightarrow (x - 8, y + 4)\).

3. What is the image of \(A(2, 6)\)?
4. What is the image of \(B(-1, 5)\)?
5. What is the preimage of \(C’(-3, -10)\)?
6. What is the preimage of \(D’(4, -3)\)?

**GRAPHING AN IMAGE** The vertices of \(\triangle PQR\) are \(P(-2, 3), Q(1, 2),\) and \(R(3, -1)\). Graph the image of the triangle using prime notation.

7. \((x, y) \rightarrow (x + 4, y + 6)\)
8. \((x, y) \rightarrow (x + 9, y - 2)\)
9. \((x, y) \rightarrow (x - 2, y - 5)\)
10. \((x, y) \rightarrow (x - 1, y + 3)\)

**WRITING A RULE** \(\triangle A’B’C’\) is the image of \(\triangle ABC\) after a translation. Write a rule for the translation. Then verify that the translation is an isometry.

11.  

12.  

**ERROR ANALYSIS** Describe and correct the error in graphing the translation of quadrilateral \(EFGH\).

13. ★ **MULTIPLE CHOICE** Translate \(Q(0, -8)\) using \((x, y) \rightarrow (x - 3, y + 2)\).

\[\begin{array}{ccc}
\text{A} & Q’(-2, 5) & \text{B} & Q’(3, -10) & \text{C} & Q’(-3, -6) & \text{D} & Q’(2, -11)
\end{array}\]

**IDENTIFYING VECTORS** Name the vector and write its component form.

15.  
16.  
17.
VECTORS Use the point \( P(-3, 6) \). Find the component form of the vector that describes the translation to \( P' \).

18. \( P'(0, 1) \) 
19. \( P'(-4, 8) \) 
20. \( P'(-2, 0) \) 
21. \( P'(-3, -5) \)

TRANSLATIONS Think of each translation as a vector. Describe the vertical component of the vector. Explain.

22. 
23. 

TRANSLATING A TRIANGLE The vertices of \( \triangle DEF \) are \( D(2, 5) \), \( E(6, 3) \), and \( F(4, 0) \). Translate \( \triangle DEF \) using the given vector. Graph \( \triangle DEF \) and its image.

24. \( \langle 6, 0 \rangle \) 
25. \( \langle 5, -1 \rangle \) 
26. \( \langle -3, -7 \rangle \) 
27. \( \langle -2, -4 \rangle \)

ALGEBRA Find the value of each variable in the translation.

28. 

29. 

ALGEBRA Translation A maps \((x, y)\) to \((x + n, y + m)\). Translation B maps \((x, y)\) to \((x + s, y + t)\).

a. Translate a point using Translation A, then Translation B. Write a rule for the final image of the point.

b. Translate a point using Translation B, then Translation A. Write a rule for the final image of the point.

c. Compare the rules you wrote in parts (a) and (b). Does it matter which translation you do first? Explain.

MULTI-STEP PROBLEM The vertices of a rectangle are \( Q(2, -3) \), \( R(2, 4) \), \( S(5, 4) \), and \( T(5, -3) \).

a. Translate \( Q'R'S'T' \) 3 units left and 2 units down. Find the areas of \( QRST \) and \( Q'R'S'T' \).

b. Compare the areas. Make a conjecture about the areas of a preimage and its image after a translation.

CHALLENGE The vertices of \( \triangle ABC \) are \( A(2, 2) \), \( B(4, 2) \), and \( C(3, 4) \).

a. Graph the image of \( \triangle ABC \) after the transformation \((x, y) \rightarrow (x + y, y)\). Is the transformation an isometry? Explain. Are the areas of \( \triangle ABC \) and \( \triangle A'B'C' \) the same?

b. Graph a new triangle, \( \triangle DEF \), and its image after the transformation given in part (a). Are the areas of \( \triangle DEF \) and \( \triangle D'E'F' \) the same?
HOME DESIGN  Designers can use computers to make patterns in fabrics or floors. On the computer, a copy of the design in Rectangle A is used to cover an entire floor. The translation \((x, y) \rightarrow (x + 3, y)\) maps Rectangle A to Rectangle B.

33. Use coordinate notation to describe the translations that map Rectangle A to Rectangles C, D, E, and F.

34. Write a rule to translate Rectangle F back to Rectangle A.

SNOWSHOEING  You are snowshoeing in the mountains. The distances in the diagram are in miles. Write the component form of the vector.

35. From the cabin to the ski lodge
36. From the ski lodge to the hotel
37. From the hotel back to your cabin

HANG GLIDING  A hang glider travels from point \(A\) to point \(D\). At point \(B\), the hang glider changes direction, as shown in the diagram. The distances in the diagram are in kilometers.

38. Write the component form for \(\overrightarrow{AB}\) and \(\overrightarrow{BC}\).

39. Write the component form of the vector that describes the path from the hang glider’s current position \(C\) to its intended destination \(D\).

40. What is the total distance the hang glider travels?

41. Suppose the hang glider went straight from \(A\) to \(D\). Write the component form of the vector that describes this path. What is this distance?

42. ★ EXTENDED RESPONSE  Use the equation \(2x + y = 4\).
   a. Graph the line and its image after the translation \((-5, 4)\). What is an equation of the image of the line?
   b. Compare the line and its image. What are the slopes? the \(y\)-intercepts? the \(x\)-intercepts?
   c. Write an equation of the image of \(2x + y = 4\) after the translation \((2, -6)\) without using a graph. Explain your reasoning.
43. **SCIENCE** You are studying an amoeba through a microscope. Suppose the amoeba moves on a grid-indexed microscope slide in a straight line from square B3 to square G7.

   a. Describe the translation.
   b. Each grid square is 2 millimeters on a side. How far does the amoeba travel?
   c. Suppose the amoeba moves from B3 to G7 in 24.5 seconds. What is its speed in millimeters per second?

44. **MULTI-STEP PROBLEM** You can write the equation of a parabola in the form $y = (x - h)^2 + k$, where $(h, k)$ is the vertex of the parabola. In the graph, an equation of Parabola 1 is $y = (x - 1)^2 + 3$, with vertex $(1, 3)$. Parabola 2 is the image of Parabola 1 after a translation.

   a. Write a rule for the translation.
   b. Write an equation of Parabola 2.
   c. Suppose you translate Parabola 1 using the vector $\langle -4, 8 \rangle$. Write an equation of the image.
   d. An equation of Parabola 3 is $y = (x + 5)^2 - 3$. Write a rule for the translation of Parabola 1 to Parabola 3. Explain your reasoning.

45. **TECHNOLOGY** The standard form of an exponential equation is $y = a^x$, where $a > 0$ and $a \neq 1$. Use the equation $y = 2^x$.

   a. Use a graphing calculator to graph $y = 2^x$ and $y = 2^x - 4$. Describe the translation from $y = 2^x$ to $y = 2^x - 4$.
   b. Use a graphing calculator to graph $y = 2^x$ and $y = 2^{x-4}$. Describe the translation from $y = 2^x$ to $y = 2^{x-4}$.

46. **CHALLENGE** Use properties of congruent triangles to prove part of Theorem 9.1, that a translation preserves angle measure.

---

**Mixed Review**

PREVIEW Prepare for Lesson 9.2 in Exs. 47–50.

Find the sum, difference, product, or quotient. (p. 869)

$47. -16 - 7 \quad 48. 6 + (-12) \quad 49. (13)(-2) \quad 50. 16 \div (-4)$

Determine whether the two triangles are similar. If they are, write a similarity statement. (pp. 381, 388)

51.

Points $A$, $B$, $C$, and $D$ are the vertices of a quadrilateral. Give the most specific name for $ABCD$. Justify your answer. (p. 552)

53. $A(2, 0), B(7, 0), C(4, 4), D(2, 4)$

54. $A(3, 0), B(7, 2), C(3, 4), D(1, 2)$

EXTRA PRACTICE for Lesson 9.1, p. 912 ONLINE QUIZ at classzone.com
9.2 Use Properties of Matrices

Before
You performed translations using vectors.

Now
You will perform translations using matrix operations.

Why
So you can calculate the total cost of art supplies, as in Ex. 36.

Key Vocabulary
• matrix
• element
• dimensions

A matrix is a rectangular arrangement of numbers in rows and columns. (The plural of matrix is matrices.) Each number in a matrix is called an element.

The dimensions of a matrix are the numbers of rows and columns. The matrix above has three rows and four columns, so the dimensions of the matrix are 3 × 4 (read “3 by 4”).

You can represent a figure in the coordinate plane using a matrix with two rows. The first row has the x-coordinate(s) of the vertices. The second row has the corresponding y-coordinate(s). Each column represents a vertex, so the number of columns depends on the number of vertices of the figure.

Example 1 Represent figures using matrices

Write a matrix to represent the point or polygon.

a. Point A
b. Quadrilateral ABCD

Solution

a. Point matrix for A
b. Polygon matrix for ABCD

Avoid Errors
The columns in a polygon matrix follow the consecutive order of the vertices of the polygon.

Guided Practice for Example 1

1. Write a matrix to represent △ABC with vertices A(3, 5), B(6, 7) and C(7, 3).
2. How many rows and columns are in a matrix for a hexagon?
**Example 2** Add and subtract matrices

a. 
\[
\begin{bmatrix}
5 & -3 \\
6 & -6
\end{bmatrix} +
\begin{bmatrix}
1 & 2 \\
3 & -4
\end{bmatrix} =
\begin{bmatrix}
5 + 1 & 2 - 3 + 2 \\
6 + 3 & -6 + (-4)
\end{bmatrix} =
\begin{bmatrix}
6 & -1 \\
9 & -10
\end{bmatrix}
\]

b. 
\[
\begin{bmatrix}
6 & 8 & 5 \\
4 & 9 & -1
\end{bmatrix} -
\begin{bmatrix}
1 & -7 & 0 \\
4 & -2 & 3
\end{bmatrix} =
\begin{bmatrix}
6 - 1 & 8 - (-7) & 5 - 0 \\
4 - 4 & 9 - (-2) & -1 - 3
\end{bmatrix} =
\begin{bmatrix}
5 & 15 & 5 \\
0 & 11 & -4
\end{bmatrix}
\]

**Translations** You can use matrix addition to represent a translation in the coordinate plane. The image matrix for a translation is the sum of the translation matrix and the matrix that represents the preimage.

**Example 3** Represent a translation using matrices

The matrix 
\[
\begin{bmatrix}
1 & 5 & 3 \\
1 & 0 & -1
\end{bmatrix}
\]
represents \( \triangle ABC \). Find the image matrix that represents the translation of \( \triangle ABC \) 1 unit left and 3 units up. Then graph \( \triangle ABC \) and its image.

**Solution**

The translation matrix is 
\[
\begin{bmatrix}
-1 & -1 & -1 \\
3 & 3 & 3
\end{bmatrix}.
\]

Add this to the polygon matrix for the preimage to find the image matrix.

\[
\begin{bmatrix}
-1 & -1 & -1 \\
3 & 3 & 3
\end{bmatrix} +
\begin{bmatrix}
1 & 5 & 3 \\
1 & 0 & -1
\end{bmatrix} =
\begin{bmatrix}
0 & 4 & 2 \\
4 & 3 & 2
\end{bmatrix}
\]

**Guided Practice** for Examples 2 and 3

In Exercises 3 and 4, add or subtract.

3. 
\[
\begin{bmatrix}
-3 & 7 \\
2 & -5
\end{bmatrix} +
\begin{bmatrix}
2 & 1 \\
-5 & 3
\end{bmatrix}
\]

4. 
\[
\begin{bmatrix}
1 & -4 \\
3 & -5
\end{bmatrix} -
\begin{bmatrix}
2 & 3 \\
7 & 8
\end{bmatrix}
\]

5. The matrix 
\[
\begin{bmatrix}
1 & 2 & 6 \\
2 & -1 & 7 \\
1 & 3 & 7
\end{bmatrix}
\]
represents quadrilateral \( JKL \). Write the translation matrix and the image matrix that represents the translation of \( JKL \) 4 units right and 2 units down. Then graph \( JKL \) and its image.
MULTIPLYING MATRICES The product of two matrices $A$ and $B$ is defined only when the number of columns in $A$ is equal to the number of rows in $B$. If $A$ is an $m \times n$ matrix and $B$ is an $n \times p$ matrix, then the product $AB$ is an $m \times p$ matrix.

**Example 4** Multiply matrices

Multiply
\[
\begin{bmatrix}
1 & 0 \\
4 & 5
\end{bmatrix}
\begin{bmatrix}
2 & -3 \\
-1 & 8
\end{bmatrix}.
\]

**Solution**

The matrices are both $2 \times 2$, so their product is defined. Use the following steps to find the elements of the product matrix.

**Step 1** Multiply the numbers in the first row of the first matrix by the numbers in the first column of the second matrix. Put the result in the first row, first column of the product matrix.

\[
\begin{bmatrix}
1 & 0 \\
4 & 5
\end{bmatrix}
\begin{bmatrix}
2 & -3 \\
-1 & 8
\end{bmatrix} =
\begin{bmatrix}
1(2) + 0(-1) \\
4(-1) + 5(8)
\end{bmatrix}
\]

**Step 2** Multiply the numbers in the first row of the first matrix by the numbers in the second column of the second matrix. Put the result in the first row, second column of the product matrix.

\[
\begin{bmatrix}
1 & 0 \\
4 & 5
\end{bmatrix}
\begin{bmatrix}
2 & -3 \\
-1 & 8
\end{bmatrix} =
\begin{bmatrix}
1(2) + 0(-1) & 1(-3) + 0(8)
\end{bmatrix}
\]

**Step 3** Multiply the numbers in the second row of the first matrix by the numbers in the first column of the second matrix. Put the result in the second row, first column of the product matrix.

\[
\begin{bmatrix}
1 & 0 \\
4 & 5
\end{bmatrix}
\begin{bmatrix}
2 & -3 \\
-1 & 8
\end{bmatrix} =
\begin{bmatrix}
1(2) + 0(-1) & 1(-3) + 0(8)
\end{bmatrix}
\]

**Step 4** Multiply the numbers in the second row of the first matrix by the numbers in the second column of the second matrix. Put the result in the second row, second column of the product matrix.

\[
\begin{bmatrix}
1 & 0 \\
4 & 5
\end{bmatrix}
\begin{bmatrix}
2 & -3 \\
-1 & 8
\end{bmatrix} =
\begin{bmatrix}
1(2) + 0(-1) & 1(-3) + 0(8)
\end{bmatrix}
\]

**Step 5** Simplify the product matrix.

\[
\begin{bmatrix}
1(2) + 0(-1) & 1(-3) + 0(8) \\
4(2) + 5(-1) & 4(-3) + 5(8)
\end{bmatrix} =
\begin{bmatrix}
2 & -3 \\
3 & 28
\end{bmatrix}
\]

You will use matrix multiplication in later lessons to represent transformations.
**Example 5** Solve a real-world problem

**SOFTBALL** Two softball teams submit equipment lists for the season. A bat costs $20, a ball costs $5, and a uniform costs $40. Use matrix multiplication to find the total cost of equipment for each team.

**Solution**

First, write the equipment lists and the costs per item in matrix form. You will use matrix multiplication, so you need to set up the matrices so that the number of columns of the equipment matrix matches the number of rows of the cost per item matrix.

You can find the total cost of equipment for each team by multiplying the equipment matrix by the cost per item matrix. The equipment matrix is $2 \times 3$ and the cost per item matrix is $3 \times 1$, so their product is a $2 \times 1$ matrix.

\[
\begin{bmatrix}
13 & 42 & 16 \\
15 & 45 & 18
\end{bmatrix}
\begin{bmatrix}
20 \\
5 \\
40
\end{bmatrix}
= 
\begin{bmatrix}
13(20) + 42(5) + 16(40) \\
15(20) + 45(5) + 18(40)
\end{bmatrix}
= 
\begin{bmatrix}
1110 \\
1245
\end{bmatrix}
\]

The total cost of equipment for the women’s team is $1110, and the total cost for the men’s team is $1245.

**Guided Practice** for Examples 4 and 5

Use the matrices below. Is the product defined? Explain.

\[
A = \begin{bmatrix}
-3 \\
4
\end{bmatrix}
B = \begin{bmatrix}
2 & 1
\end{bmatrix}
C = \begin{bmatrix}
6.7 & 0 \\
-9.3 & 5.2
\end{bmatrix}
\]

6. $AB$
7. $BA$
8. $AC$

Multiply.

\[
\begin{bmatrix}
1 & 0 \\
0 & -1
\end{bmatrix}
\begin{bmatrix}
3 & 8 \\
-4 & 7
\end{bmatrix}
\begin{bmatrix}
5 & 1 \\
1 & -1
\end{bmatrix}
\]

12. **WHAT IF?** In Example 5, find the total cost if a bat costs $25, a ball costs $4, and a uniform costs $35.
1. **VOCABULARY** Copy and complete: To find the sum of two matrices, add corresponding ?.

2. ★ **WRITING** How can you determine whether two matrices can be added? How can you determine whether two matrices can be multiplied?

**USING A DIAGRAM** Use the diagram to write a matrix to represent the given polygon.

3. \( \triangle EBC \)
4. \( \triangle ECD \)
5. Quadrilateral \( BCDE \)
6. Pentagon \( ABCDE \)

**MATRIX OPERATIONS** Add or subtract.

7. \[ \begin{bmatrix} 3 & 5 \\ 1 & -4 \end{bmatrix} + \begin{bmatrix} 9 & 2 \\ 0 & 8 \end{bmatrix} \]
8. \[ \begin{bmatrix} -12 & 5 \\ 1 & -4 \end{bmatrix} + \begin{bmatrix} 2 & -3 \\ 0 & 8 \end{bmatrix} \]
9. \[ \begin{bmatrix} 9 & 8 \\ -2 & 3 \end{bmatrix} + \begin{bmatrix} 7 & 1 \\ 2 & -3 \end{bmatrix} \]
10. \[ \begin{bmatrix} 4.6 & 8.1 \\ -3.8 & 2.1 \end{bmatrix} \]
11. \[ \begin{bmatrix} -5 & 6 \\ -8 & 9 \end{bmatrix} + \begin{bmatrix} 8 & 10 \\ 4 & -7 \end{bmatrix} \]
12. \[ \begin{bmatrix} 1.2 & 6 \\ 5.3 & 1.1 \end{bmatrix} - \begin{bmatrix} 2.5 & 3.3 \\ 7 & 4 \end{bmatrix} \]

**TRANSLATIONS** Find the image matrix that represents the translation of the polygon. Then graph the polygon and its image.

13. \[ \begin{bmatrix} A \\ B \\ C \end{bmatrix} \]; 4 units up
14. \[ \begin{bmatrix} F \\ G \\ H \\ J \end{bmatrix} \]; 2 units left and 3 units down
15. \[ \begin{bmatrix} L \\ M \\ N \\ P \end{bmatrix} \]; 4 units right and 2 units up
16. \[ \begin{bmatrix} Q \\ R \\ S \end{bmatrix} \]; 3 units right and 1 unit down
17. ★ **MULTIPLE CHOICE** The matrix that represents quadrilateral \( ABCD \) is \[ \begin{bmatrix} 3 & 8 & 9 & 7 \\ 3 & 7 & 3 & 1 \end{bmatrix} \]. Which matrix represents the image of the quadrilateral after translating it 3 units right and 5 units up?

A. \[ \begin{bmatrix} 6 & 11 & 12 & 10 \\ 8 & 12 & 8 & 6 \end{bmatrix} \]
B. \[ \begin{bmatrix} 0 & 5 & 6 & 4 \\ 8 & 12 & 8 & 6 \end{bmatrix} \]
C. \[ \begin{bmatrix} 6 & 11 & 12 & 10 \\ -2 & 2 & -2 & -4 \end{bmatrix} \]
D. \[ \begin{bmatrix} 0 & 6 & 6 & 4 \\ -2 & 3 & -2 & -4 \end{bmatrix} \]
EXAMPLE 4 on p. 582 for Exs. 18–26

**MATRIX OPERATIONS** Multiply.

18. \[\begin{bmatrix} 5 & 2 \\ 3 & \end{bmatrix} \begin{bmatrix} 4 \\ 2 \end{bmatrix} \]

19. \[\begin{bmatrix} 1 & \end{bmatrix} \begin{bmatrix} 2 & 3 \end{bmatrix} \begin{bmatrix} -2 & \\ -1.5 & \end{bmatrix} \]

20. \[\begin{bmatrix} 6 & 7 \\ -5 & 8 \end{bmatrix} \begin{bmatrix} 2 & 1 \\ 9 & -3 \end{bmatrix} \]

21. \[\begin{bmatrix} 0.4 & 6 \\ -6 & 2.3 \end{bmatrix} \begin{bmatrix} 5 & 8 \\ -1 & 2 \end{bmatrix} \]

22. \[\begin{bmatrix} 4 & 8 & -1 \end{bmatrix} \begin{bmatrix} 3 & \\ 2 & \\ 5 & \end{bmatrix} \]

23. \[\begin{bmatrix} 9 & 1 & 2 \\ 8 & -1 & 4 \end{bmatrix} \begin{bmatrix} 4 & \\ 0 & \\ 1 & \end{bmatrix} \]

24. **MULTIPLE CHOICE** Which product is not defined?

A. \[\begin{bmatrix} 1 & 7 \\ 3 & 12 \end{bmatrix} \begin{bmatrix} 6 & \\ 15 & \end{bmatrix} \]

B. \[\begin{bmatrix} 3 & 20 \end{bmatrix} \begin{bmatrix} 9 & \\ 30 & \end{bmatrix} \]

C. \[\begin{bmatrix} 15 & \\ 4 & 6 \end{bmatrix} \begin{bmatrix} 9 & \\ -3 & \end{bmatrix} \]

D. \[\begin{bmatrix} 30 & \\ -7 & 5 \end{bmatrix} \begin{bmatrix} 5 & \\ 5 & \end{bmatrix} \]

25. **OPEN-ENDED MATH** Write two matrices that have a defined product. Then find the product.

26. **ERROR ANALYSIS** Describe and correct the error in the computation.

\[\begin{bmatrix} 9 & -2 \\ 4 & 10 \end{bmatrix} \begin{bmatrix} -6 & 12 \\ 3 & -6 \end{bmatrix} = \begin{bmatrix} 9(-6) & -2(12) \\ 4(3) & 10(-6) \end{bmatrix} \]

27. **TRANSLATIONS** Use the described translation and the graph of the image to find the matrix that represents the preimage.

28. 6 units left and 5 units up

29. **MATRIX EQUATION** Use the description of a translation of a triangle to find the value of each variable. Explain your reasoning. What are the coordinates of the vertices of the image triangle?

\[\begin{bmatrix} 12 & 12 & \end{bmatrix} + \begin{bmatrix} 9 & \end{bmatrix} \begin{bmatrix} a & \end{bmatrix} \begin{bmatrix} -7 & \\ v & -7 \end{bmatrix} = \begin{bmatrix} m & 20 & -8 \\ n & -9 & 13 \end{bmatrix} \]

30. **CHALLENGE** A point in space has three coordinates \((x, y, z)\), as shown at the right. From the origin, a point can be forward or back on the \(x\)-axis, left or right on the \(y\)-axis, and up or down on the \(z\)-axis.

a. You translate a point three units forward, four units right, and five units up. Write a translation matrix for the point.

b. You translate a figure that has five vertices. Write a translation matrix to move the figure five units back, ten units left, and six units down.
31. **COMPUTERS** Two computer labs submit equipment lists. A mouse costs $10, a package of CDs costs $32, and a keyboard costs $15. Use matrix multiplication to find the total cost of equipment for each lab.

32. **SWIMMING** Two swim teams submit equipment lists. The women’s team needs 30 caps and 26 goggles. The men’s team needs 15 caps and 25 goggles. A cap costs $10 and goggles cost $15.
   a. Use matrix addition to find the total number of caps and the total number of goggles for each team.
   b. Use matrix multiplication to find the total equipment cost for each team.
   c. Find the total cost for both teams.

**MATRIX PROPERTIES** In Exercises 33–35, use matrices $A$, $B$, and $C$.

$$A = \begin{bmatrix} 5 & 1 \\ 10 & -2 \end{bmatrix}, \quad B = \begin{bmatrix} -1 & 3 \\ 2 & 0 \end{bmatrix}, \quad C = \begin{bmatrix} 2 & 4 \\ -5 & 1 \end{bmatrix}$$

33. **MULTI-STEP PROBLEM** Use the $2 \times 2$ matrices above to explore the Commutative Property of Multiplication.
   a. What does it mean that multiplication is commutative?
   b. Find and compare $AB$ and $BA$.
   c. Based on part (b), make a conjecture about whether matrix multiplication is commutative.

34. **MULTI-STEP PROBLEM** Use the $2 \times 2$ matrices above to explore the Associative Property of Multiplication.
   a. What does it mean that multiplication is associative?
   b. Find and compare $A(BC)$ and $(AB)C$.
   c. Based on part (b), make a conjecture about whether matrix multiplication is associative.

35. **SHORT RESPONSE** Find and compare $A(B + C)$ and $AB + AC$. Make a conjecture about matrices and the Distributive Property.

36. **ART** Two art classes are buying supplies. A brush is $4 and a paint set is $10. Each class has only $225 to spend. Use matrix multiplication to find the maximum number of brushes Class A can buy and the maximum number of paint sets Class B can buy. Explain.
37. **CHALLENGE** The total United States production of corn was 8,967 million bushels in 2002, and 10,114 million bushels in 2003. The table shows the percents of the total grown by four states.

<table>
<thead>
<tr>
<th></th>
<th>2002</th>
<th>2003</th>
</tr>
</thead>
<tbody>
<tr>
<td>Iowa</td>
<td>21.5%</td>
<td>18.6%</td>
</tr>
<tr>
<td>Illinois</td>
<td>16.4%</td>
<td>17.9%</td>
</tr>
<tr>
<td>Nebraska</td>
<td>10.5%</td>
<td>11.1%</td>
</tr>
<tr>
<td>Minnesota</td>
<td>11.7%</td>
<td>9.6%</td>
</tr>
</tbody>
</table>

a. Use matrix multiplication to find the number of bushels (in millions) harvested in each state each year.

b. How many bushels (in millions) were harvested in these two years in Iowa?

c. The price for a bushel of corn in Nebraska was $2.32 in 2002, and $2.45 in 2003. Use matrix multiplication to find the total value of corn harvested in Nebraska in these two years.

**Mixed Review**

**Copy the figure and draw its image after the reflection. (p. 272)**

38. Reflect the figure in the x-axis.

39. Reflect the figure in the y-axis.

**Find the value of x to the nearest tenth. (p. 466)**

40. [Diagram]

41. [Diagram]

42. [Diagram]

**The diagonals of rhombus WXYZ intersect at V. Given that \( m\angle XYW = 62^\circ \), find the indicated measure. (p. 533)**

43. \( m\angle ZYW = ? \)

44. \( m\angle WXY = ? \)

45. \( m\angle XVY = ? \)

**Quiz for Lessons 9.1-9.2**

1. In the diagram shown, name the vector and write its component form. (p. 572)

**Use the translation \((x, y) \rightarrow (x + 3, y - 2)\). (p. 572)**

2. What is the image of \((-1, 5)\)?

3. What is the image of \((6, 3)\)?

4. What is the preimage of \((-4, -1)\)?

**Add, subtract, or multiply. (p. 580)**

5. \[
\begin{bmatrix}
5 & -3 \\
8 & -2
\end{bmatrix} + \begin{bmatrix}
-9 & 6 \\
4 & -7
\end{bmatrix}
\]

6. \[
\begin{bmatrix}
-6 & 1 \\
3 & 12
\end{bmatrix} - \begin{bmatrix}
4 & 15 \\
-7 & 8
\end{bmatrix}
\]

7. \[
\begin{bmatrix}
5 & 2 \\
-9 & 0 \\
3 & -7
\end{bmatrix}
\]

**Extra Practice** for Lesson 9.2, p. 912  **Online Quiz** at classzone.com
9.3 Reflections in the Plane

MATERIALS • graph paper • straightedge

QUESTION What is the relationship between the line of reflection and the segment connecting a point and its image?

EXPLORE Graph a reflection of a triangle

STEP 1 Draw a triangle Graph \(A(-3, 2), B(-4, 5), \) and \(C(-2, 6).\) Connect the points to form \(\triangle ABC.\)

STEP 2 Graph a reflection Reflect \(\triangle ABC\) in the \(y\)-axis. Label points \(A', B',\) and \(C'\) appropriately.

STEP 3 Draw segments Draw \(AA', BB',\) and \(CC'.\) Label the points where these segments intersect the \(y\)-axis as \(F, G,\) and \(H,\) respectively.

DRAW CONCLUSIONS Use your observations to complete these exercises

1. Find the lengths of \(CH\) and \(HC', BG\) and \(GB',\) and \(AF\) and \(FA'.\) Compare the lengths of each pair of segments.

2. Find the measures of \(\angle CHG, \angle BGF,\) and \(\angle AFG.\) Compare the angle measures.

3. How is the \(y\)-axis related to \(AA', BB',\) and \(CC'?\)

4. Use the graph at the right.
   a. \(KL'\) is the reflection of \(KL\) in the \(x\)-axis. Copy the diagram and draw \(KL'.\)
   b. Draw \(KK'\) and \(LL'.\) Label the points where the segments intersect the \(x\)-axis as \(J\) and \(M.\)
   c. How is the \(x\)-axis related to \(KK'\) and \(LL'?\)

5. How is the line of reflection related to the segment connecting a point and its image?
9.3 Perform Reflections

**Before**
You reflected a figure in the x- or y-axis.

**Now**
You will reflect a figure in any given line.

**Why?**
So you can identify reflections, as in Exs. 31–33.

**Key Vocabulary**
- line of reflection
- reflection, p. 272

In Lesson 4.8, you learned that a reflection is a transformation that uses a line like a mirror to reflect an image. The mirror line is called the **line of reflection**.

A reflection in a line maps every point to a point, so that for each point one of the following properties is true:

- If is not on , then is the perpendicular bisector of , or
- If is on , then .

**Example 1**
Graph reflections in horizontal and vertical lines

The vertices of are . Graph the reflection of described.

**a. In the line** \( x = 3 \)

**b. In the line** \( y = 1 \)

**Solution**

**a.** Point is 2 units left of , so its reflection is 2 units right of at . Also, is 2 units left of at and is 1 unit right of at .

**b.** Point is 2 units above , so is 2 units below at . Also, is 1 unit below at . Because point is on line , you know that .

**Guided Practice** for Example 1

Graph a reflection of from Example 1 in the given line.

1. \( y = 4 \)
2. \( x = -3 \)
3. \( y = 2 \)
**Example 2**  Graph a reflection in $y = x$

The endpoints of $FG$ are $F(-1, 2)$ and $G(1, 2)$. Reflect the segment in the line $y = x$. Graph the segment and its image.

**Solution**

The slope of $y = x$ is 1. The segment from $F$ to its image, $F'$, is perpendicular to the line of reflection $y = x$, so the slope of $FF'$ will be $-1$ (because $1(-1) = -1$). From $F$, move 1.5 units right and 1.5 units down to $y = x$. From that point, move 1.5 units right and 1.5 units down to locate $F'(3, -1)$.

The slope of $GG'$ will also be $-1$. From $G$, move 0.5 units right and 0.5 units down to $y = x$. Then move 0.5 units right and 0.5 units down to locate $G'(2, 1)$.

**Coordinate Rules** You can use coordinate rules to find the images of points reflected in four special lines.

**Key Concept**

- If $(a, b)$ is reflected in the $x$-axis, its image is the point $(a, -b)$.
- If $(a, b)$ is reflected in the $y$-axis, its image is the point $(-a, b)$.
- If $(a, b)$ is reflected in the line $y = x$, its image is the point $(b, a)$.
- If $(a, b)$ is reflected in the line $y = -x$, its image is the point $(-b, -a)$.

**Example 3**  Graph a reflection in $y = -x$

Reflect $FG$ from Example 2 in the line $y = -x$. Graph $FG$ and its image.

**Solution**

Use the coordinate rule for reflecting in $y = -x$.

$$(a, b) \rightarrow (-b, -a)$$

$F(-1, 2) \rightarrow F'(-2, 1)$

$G(1, 2) \rightarrow G'(-2, -1)$

**Guided Practice** for Examples 2 and 3

4. Graph $\triangle ABC$ with vertices $A(1, 3)$, $B(4, 4)$, and $C(3, 1)$. Reflect $\triangle ABC$ in the lines $y = -x$ and $y = x$. Graph each image.

5. In Example 3, verify that $FF'$ is perpendicular to $y = -x$. 

- REVIEW SLOPE
  - The product of the slopes of perpendicular lines is $-1$. 

- **Coordinate Rules**
  - You can use coordinate rules to find the images of points reflected in four special lines.

- **Key Concept**
  - For Your Notebook
  - Coordinate Rules for Reflections
  - • If $(a, b)$ is reflected in the $x$-axis, its image is the point $(a, -b)$.
  - • If $(a, b)$ is reflected in the $y$-axis, its image is the point $(-a, b)$.
  - • If $(a, b)$ is reflected in the line $y = x$, its image is the point $(b, a)$.
  - • If $(a, b)$ is reflected in the line $y = -x$, its image is the point $(-b, -a)$.

- **Example 3**
  - Graph a reflection in $y = -x$

- Reflect $FG$ from Example 2 in the line $y = -x$. Graph $FG$ and its image.

- **Solution**
  - Use the coordinate rule for reflecting in $y = -x$.
  - $$(a, b) \rightarrow (-b, -a)$$

- $F(-1, 2) \rightarrow F'(-2, 1)$

- $G(1, 2) \rightarrow G'(-2, -1)$
**REFLECTION THEOREM** You saw in Lesson 9.1 that the image of a translation is congruent to the original figure. The same is true for a reflection.

**THEOREM**

**Theorem 9.2 Reflection Theorem**

A reflection is an isometry.

*Proof:* Exs. 35–38, p. 595

![Illustration of reflection theorem](image)

**WRITE PROOFS**

Some theorems, such as the Reflection Theorem, have more than one case. To prove this type of theorem, each case must be proven.

**PROVING THEOREM** To prove the Reflection Theorem, you need to show that a reflection preserves the length of a segment. Consider a segment $PQ$ that is reflected in a line $m$ to produce $P'Q'$. There are four cases to prove:

- **Case 1** $P$ and $Q$ are on the same side of $m$.
- **Case 2** $P$ and $Q$ are on opposite sides of $m$.
- **Case 3** $P$ lies on $m$, and $PQ$ is not $\perp$ to $m$.
- **Case 4** $Q$ lies on $m$, and $PQ \perp m$.

**EXAMPLE 4** Find a minimum distance

**PARKING** You are going to buy books. Your friend is going to buy CDs. Where should you park to minimize the distance you both will walk?

**Solution**

Reflect $B$ in line $m$ to obtain $B'$. Then draw $AB'$. Label the intersection of $AB'$ and $m$ as $C$. Because $AB'$ is the shortest distance between $A$ and $B'$ and $BC = B'C$, park at point $C$ to minimize the combined distance, $AC + BC$, you both have to walk.

**GUIDED PRACTICE** for Example 4

6. Look back at Example 4. Answer the question by using a reflection of point $A$ instead of point $B$. 
REFLECTION MATRIX  You can find the image of a polygon reflected in the 
x-axis or y-axis using matrix multiplication. Write the reflection matrix to the 
left of the polygon matrix, then multiply.

Notice that because matrix multiplication is not commutative, the order of 
the matrices in your product is important. The reflection matrix must be first 
followed by the polygon matrix.

**Example 5**  Use matrix multiplication to reflect a polygon

The vertices of \( \triangle DEF \) are \( D(1, 2) \), \( E(3, 3) \), and \( F(4, 0) \). Find the reflection of 
\( \triangle DEF \) in the y-axis using matrix multiplication. Graph \( \triangle DEF \) and its image.

**Solution**

**STEP 1**  Multiply the polygon matrix by the matrix for a reflection in 
the y-axis.

\[
\begin{bmatrix}
1 & 0 \\
0 & -1 \\
\end{bmatrix}
\begin{bmatrix}
1 & 3 & 4 \\
2 & 3 & 0 \\
\end{bmatrix} =
\begin{bmatrix}
-1(1) + 0(2) & -1(3) + 0(3) & -1(4) + 0(0) \\
0(1) + 1(2) & 0(3) + 1(3) & 0(4) + 1(0) \\
\end{bmatrix}
\]

**STEP 2**  Graph \( \triangle DEF \) and \( \triangle D'E'F' \).

**Guided Practice**  for Example 5

The vertices of \( \triangle LMN \) are \( L(-3, 3) \), \( M(1, 2) \), and \( N(-2, 1) \). Find the described 
reflection using matrix multiplication.

7. Reflect \( \triangle LMN \) in the x-axis.  
8. Reflect \( \triangle LMN \) in the y-axis.
1. **VOCABULARY** What is a line of reflection?

2. **WRITING** Explain how to find the distance from a point to its image if you know the distance from the point to the line of reflection.

**REFLECTIONS** Graph the reflection of the polygon in the given line.

3. \(x\)-axis

4. \(y\)-axis

5. \(y = 2\)

6. \(x = -1\)

7. \(y\)-axis

8. \(y = -3\)

9. \(y = x\)

10. \(y = -x\)

11. \(y = x\)

12. **MULTIPLE CHOICE** What is the line of reflection for \(\triangle ABC\) and its image?

   - **A** \(y = 0\) (the \(x\)-axis)
   - **B** \(y = -x\)
   - **C** \(x = 1\)
   - **D** \(y = x\)

**USING MATRIX MULTIPLICATION** Use matrix multiplication to find the image. Graph the polygon and its image.

13. Reflect \(\begin{pmatrix} A & B & C \end{pmatrix} \begin{pmatrix} -2 & 3 & 4 \\ 5 & -3 & 6 \end{pmatrix}\) in the \(x\)-axis.

14. Reflect \(\begin{pmatrix} P & Q & R & S \end{pmatrix} \begin{pmatrix} 2 & 6 & 5 & 2 \\ -2 & -3 & -8 & -5 \end{pmatrix}\) in the \(y\)-axis.
FINDING IMAGE MATRICES  Write a matrix for the polygon. Then find the image matrix that represents the polygon after a reflection in the given line.

15. y-axis

16. x-axis

17. y-axis

18. ERROR ANALYSIS  Describe and correct the error in finding the image matrix of \( \triangle PQR \) reflected in the y-axis.

\[
\begin{bmatrix}
1 & 0 \\
0 & -1 \\
\end{bmatrix}
\begin{bmatrix}
-5 & 4 & -2 \\
4 & 8 & -1 \\
\end{bmatrix}
= \begin{bmatrix}
-5 & 4 & -2 \\
-4 & -8 & -1 \\
\end{bmatrix}
\]

MINIMUM DISTANCE  Find point \( C \) on the x-axis so \( AC + BC \) is a minimum.

19. \( A(1, 4), B(6, 1) \)

20. \( A(4, -3), B(12, -5) \)

21. \( A(-8, 4), B(-1, 3) \)

TWO REFLECTIONS  The vertices of \( \triangle FGH \) are \( F(3, 2), G(1, 5), \) and \( H(-1, 2) \). Reflect \( \triangle FGH \) in the first line. Then reflect \( \triangle F'G'H' \) in the second line. Graph \( \triangle F'G'H' \) and \( \triangle F''G''H'' \).

22. In \( y = 2 \), then in \( y = -1 \)

23. In \( y = -1 \), then in \( x = 2 \)

24. In \( y = x \), then in \( x = -3 \)

25. ★ SHORT RESPONSE  Use your graphs from Exercises 22–24. What do you notice about the order of vertices in the preimages and images?

26. CONSTRUCTION  Use these steps to construct a reflection of \( \triangle ABC \) in line \( m \) using a straightedge and a compass.

**STEP 1**  Draw \( \triangle ABC \) and line \( m \).

**STEP 2**  Use one compass setting to find two points that are equidistant from \( A \) on line \( m \). Use the same compass setting to find a point on the other side of \( m \) that is the same distance from line \( m \). Label that point \( A' \).

**STEP 3**  Repeat Step 2 to find points \( B' \) and \( C' \). Draw \( \triangle A'B'C' \).

27. ★ ALGEBRA  The line \( y = 3x + 2 \) is reflected in the line \( y = -1 \). What is the equation of the image?

28. ★ ALGEBRA  Reflect the graph of the quadratic equation \( y = 2x^2 - 5 \) in the x-axis. What is the equation of the image?

29. REFLECTING A TRIANGLE  Reflect \( \triangle MNQ \) in the line \( y = -2x \).

30. CHALLENGE  Point \( B'(1, 4) \) is the image of \( B(3, 2) \) after a reflection in line \( c \). Write an equation of line \( c \).
**REFLECTIONS** Identify the case of the Reflection Theorem represented.

31.

32.

33.

34. **DELIVERING PIZZA** You park at some point $K$ on line $n$. You deliver a pizza to house $H$, go back to your car, and deliver a pizza to house $J$. Assuming that you can cut across both lawns, how can you determine the parking location $K$ that minimizes the total walking distance?

35. **PROVING THEOREM 9.2** Prove Case 1 of the Reflection Theorem.

**Case 1** The segment does not intersect the line of reflection.

**GIVEN** A reflection in $m$ maps $P$ to $P'$ and $Q$ to $Q'$.

**PROVE** $PQ = P'Q'$

**Plan for Proof**

a. Draw $PP'$, $QQ'$, $RQ$, and $RQ'$. Prove that $\triangle RSQ \cong \triangle RSQ'$.

b. Use the properties of congruent triangles and perpendicular bisectors to prove that $PQ = P'Q'$.

36. **Case 2** The segment intersects the line of reflection.

**GIVEN** A reflection in $m$ maps $P$ to $P'$ and $Q$ to $Q'$.

Also, $PQ$ intersects $m$ at point $R$.

**PROVE** $PQ = P'Q'$

37. **Case 3** One endpoint is on the line of reflection, and the segment is not perpendicular to the line of reflection.

**GIVEN** A reflection in $m$ maps $P$ to $P'$ and $Q$ to $Q'$.

Also, $P$ lies on line $m$, and $PQ$ is not perpendicular to $m$.

**PROVE** $PQ = P'Q'$

38. **Case 4** One endpoint is on the line of reflection, and the segment is perpendicular to the line of reflection.

**GIVEN** A reflection in $m$ maps $P$ to $P'$ and $Q$ to $Q'$.

Also, $Q$ lies on line $m$, and $PQ$ is perpendicular to line $m$.

**PROVE** $PQ = P'Q'$
39. **REFLECTING POINTS** Use \( C(1, 3) \).
   
   a. Point \( A \) has coordinates \((-1, 1)\). Find point \( B \) on \( \overrightarrow{AC} \) so \( AC = CB \).
   
   b. The endpoints of \( \overrightarrow{FG} \) are \( F(2, 0) \) and \( G(3, 2) \). Find point \( H \) on \( \overrightarrow{FC} \) so \( FC = CH \). Find point \( J \) on \( \overrightarrow{GC} \) so \( GC = CJ \).
   
   c. Explain why parts (a) and (b) can be called *reflection in a point*.

**PHYSICS** The Law of Reflection states that the angle of incidence is congruent to the angle of reflection. Use this information in Exercises 40 and 41.

40. ★ **SHORT RESPONSE** Suppose a billiard table has a coordinate grid on it. If a ball starts at the point \((0, 1)\) and rolls at a 45° angle, it will eventually return to its starting point. Would this happen if the ball started from other points on the y-axis between \((0, 0)\) and \((0, 4)\)? Explain.

41. **CHALLENGE** Use the diagram to prove that you can see your full self in a mirror that is only half of your height. Assume that you and the mirror are both perpendicular to the floor.
   
   a. Think of a light ray starting at your foot and reflected in a mirror. Where does it have to hit the mirror in order to reflect to your eye?
   
   b. Think of a light ray starting at the top of your head and reflected in a mirror. Where does it have to hit the mirror in order to reflect to your eye?
   
   c. Show that the distance between the points you found in parts (a) and (b) is half your height.

**MIXED REVIEW**

Tell whether the lines through the given points are parallel, perpendicular, or neither. Justify your answer. *(p. 171)*

42. Line 1: \((3, 7)\) and \((9, 7)\)
   
   Line 2: \((-2, 8)\) and \((-2, 1)\)

43. Line 1: \((-4, -1)\) and \((-8, -4)\)
   
   Line 2: \((1, -3)\) and \((5, 0)\)

Quadrilateral \( EFGH \) is a kite. Find \( m \angle G \). *(p. 542)*

44. \( E \)
   
   \( H \)
   
   \( 105^\circ \)
   
   \( 50^\circ \)

45. \( F \)
   
   \( G \)
   
   \( E \)
   
   \( 55^\circ \)
   
   \( 100^\circ \)

46. \( G \)
   
   \( H \)
   
   \( F \)
   
   \( 80^\circ \)
Lessons 9.1–9.3

1. **MULTI-STEP PROBLEM**  \(\triangle R'S'T'\) is the image of \(\triangle RST\) after a translation.

   ![Diagram of \(\triangle RST\) and \(\triangle R'S'T'\)]

   **a.** Write a rule for the translation.
   **b.** Verify that the transformation is an isometry.
   **c.** Suppose \(\triangle R'S'T'\) is translated using the rule \((x, y) \rightarrow (x + 4, y - 2)\). What are the coordinates of the vertices of \(\triangle R'S'T'\)?

2. **SHORT RESPONSE** During a marching band routine, a band member moves directly from point \(A\) to point \(B\). Write the component form of the vector \(\overrightarrow{AB}\). Explain your answer.

3. **SHORT RESPONSE** Trace the picture below. Reflect the image in line \(m\). How is the distance from \(X\) to line \(m\) related to the distance from \(X'\) to line \(m\)? Write the property that makes this true.

4. **SHORT RESPONSE** The endpoints of \(\overline{AB}\) are \(A(2, 4)\) and \(B(4, 0)\). The endpoints of \(\overline{CD}\) are \(C(3, 3)\) and \(D(7, -1)\). Is the transformation from \(\overline{AB}\) to \(\overline{CD}\) an isometry? Explain.

5. **GRIDDED ANSWER** The vertices of \(\triangle FGH\) are \(F(-4, 3)\), \(G(3, -1)\), and \(H(1, -2)\). The coordinates of \(F'\) are \((-1, 4)\) after a translation. What is the \(x\)-coordinate of \(G'\)?

6. **OPEN-ENDED** Draw a triangle in a coordinate plane. Reflect the triangle in an axis. Write the reflection matrix that would yield the same result.

7. **EXTENDED RESPONSE** Two cross-country teams submit equipment lists for a season. A pair of running shoes costs $60, a pair of shorts costs $18, and a shirt costs $15.

   **Women's Team**
   - 14 pairs of shoes
   - 16 pairs of shorts
   - 16 shirts

   **Men's Team**
   - 10 pairs of shoes
   - 13 pairs of shorts
   - 13 shirts

   **a.** Use matrix multiplication to find the total cost of equipment for each team.
   **b.** How much money will the teams need to raise if the school gives each team $200?
   **c.** Repeat parts (a) and (b) if a pair of shoes costs $65 and a shirt costs $10. Does the change in prices change which team needs to raise more money? Explain.

8. **MULTI-STEP PROBLEM** Use the polygon as the preimage.

   ![Diagram of a polygon]  

   **a.** Reflect the preimage in the \(y\)-axis.
   **b.** Reflect the preimage in the \(x\)-axis.
   **c.** Compare the order of vertices in the preimage with the order in each image.
Recall from Lesson 4.8 that a rotation is a transformation in which a figure is turned about a fixed point called the center of rotation. Rays drawn from the center of rotation to a point and its image form the angle of rotation.

A rotation about a point $P$ through an angle of $x^\circ$ maps every point $Q$ in the plane to a point $Q'$ so that one of the following properties is true:

- If $Q$ is not the center of rotation $P$, then $QP = Q'P$ and $m \angle QPQ' = x^\circ$, or
- If $Q$ is the center of rotation $P$, then the image of $Q$ is $Q$.

A 40° counterclockwise rotation is shown at the right. Rotations can be clockwise or counterclockwise. In this chapter, all rotations are counterclockwise.

**EXAMPLE 1  Draw a rotation**

**Draw a 120° rotation of $\triangle ABC$ about $P$.**

**Solution**

**STEP 1  Draw** a segment from $A$ to $P$.

**STEP 2  Draw** a ray to form a 120° angle with $PA$.

**STEP 3  Draw** $A'$ so that $PA' = PA$.

**STEP 4  Repeat** Steps 1–3 for each vertex. Draw $\triangle A'B'C'$. 

---

**Key Vocabulary**

- center of rotation
- angle of rotation
- rotation, p. 272

---

**DIRECTION OF ROTATION**

- clockwise
- counterclockwise
**Example 2** Rotate a figure using the coordinate rules

Graph quadrilateral $RSTU$ with vertices $R(3, 1)$, $S(5, 1)$, $T(5, 2)$, and $U(2, 2)$. Then rotate the quadrilateral $270^\circ$ about the origin.

**Solution**

Graph $RSTU$. Use the coordinate rule for a $270^\circ$ rotation to find the images of the vertices.

\[
(a, b) \rightarrow (b, -a)
\]

- $R(3, 1) \rightarrow R'(1, -3)$
- $S(5, 1) \rightarrow S'(1, -5)$
- $T(5, 2) \rightarrow T'(2, -5)$
- $U(2, -1) \rightarrow U'(-1, -2)$

Graph the image $R'S'T'U'$.

**Guided Practice** for Examples 1 and 2

1. Trace $\triangle DEF$ and $P$. Then draw a $50^\circ$ rotation of $\triangle DEF$ about $P$.
2. Graph $\triangle JKL$ with vertices $J(3, 0)$, $K(4, 3)$, and $L(6, 0)$. Rotate the triangle $90^\circ$ about the origin.
EXAMPLE 3 Use matrices to rotate a figure

Trapezoid $EFGH$ has vertices $E(-3, 2)$, $F(-3, 4)$, $G(1, 4)$, and $H(2, 2)$. Find the image matrix for a $180^\circ$ rotation of $EFGH$ about the origin. Graph $EFGH$ and its image.

Solution

**STEP 1** Write the polygon matrix:

$$
\begin{bmatrix}
-3 & -3 & 1 & 2 \\
2  & 4  & 4 & 2 
\end{bmatrix}
$$

**STEP 2** Multiply by the matrix for a $180^\circ$ rotation.

$$
\begin{bmatrix}
-1 & 0  \\
0 & -1 
\end{bmatrix}
\begin{bmatrix}
-3 & -3 & 1 & 2 \\
2  & 4  & 4 & 2 
\end{bmatrix} =
\begin{bmatrix}
-3 &  3 & -1 & -2 \\
-2 & -4 & -4 & -2 
\end{bmatrix}
$$

Rotation matrix  Polygon matrix  Image matrix

**STEP 3** Graph the preimage $EFGH$. Graph the image $E'F'G'H'$.

USING MATRICES You can find certain images of a polygon rotated about the origin using matrix multiplication. Write the rotation matrix to the left of the polygon matrix, then multiply.

**KEY CONCEPT**

**Rotation Matrices (Counterclockwise)**

<table>
<thead>
<tr>
<th>Rotation</th>
<th>Matrix</th>
</tr>
</thead>
<tbody>
<tr>
<td>$90^\circ$ rotation</td>
<td>$\begin{bmatrix} 0 &amp; -1 \ 1 &amp; 0 \end{bmatrix}$</td>
</tr>
<tr>
<td>$180^\circ$ rotation</td>
<td>$\begin{bmatrix} -1 &amp; 0 \ 0 &amp; -1 \end{bmatrix}$</td>
</tr>
<tr>
<td>$270^\circ$ rotation</td>
<td>$\begin{bmatrix} 0 &amp; 1 \ -1 &amp; 0 \end{bmatrix}$</td>
</tr>
<tr>
<td>$360^\circ$ rotation</td>
<td>$\begin{bmatrix} 1 &amp; 0 \ 0 &amp; 1 \end{bmatrix}$</td>
</tr>
</tbody>
</table>

**READ VOCABULARY**

Notice that a $360^\circ$ rotation returns the figure to its original position. Multiplying by the matrix that represents this rotation gives you the polygon matrix you started with, which is why it is also called the **identity matrix**.

**AVOID ERRORS**

Because matrix multiplication is not commutative, you should always write the rotation matrix first, then the polygon matrix.

**GUIDED PRACTICE** for Example 3

Use the quadrilateral $EFGH$ in Example 3. Find the image matrix after the rotation about the origin. Graph the image.

3. $90^\circ$  
4. $270^\circ$  
5. $360^\circ$
**THEOREM 9.3 Rotation Theorem**

A rotation is an isometry.

*Proof:* Exs. 33–35, p. 604

**CASES OF THEOREM 9.3** To prove the Rotation Theorem, you need to show that a rotation preserves the length of a segment. Consider a segment $QR$ rotated about point $P$ to produce $Q'R'$. There are three cases to prove:

- **Case 1** $R$, $Q$, and $P$ are noncollinear.
- **Case 2** $R$, $Q$, and $P$ are collinear.
- **Case 3** $P$ and $R$ are the same point.

---

**EXAMPLE 4 Standardized Test Practice**

The quadrilateral is rotated about $P$. What is the value of $y$?

\[ \begin{array}{ll}
\text{A} & 8 \\
\text{B} & 2 \\
\text{C} & 3 \\
\text{D} & 10 \\
\end{array} \]

**Solution**

By Theorem 9.3, the rotation is an isometry, so corresponding side lengths are equal. Then $2x = 6$, so $x = 3$. Now set up an equation to solve for $y$.

\[ 5y = 3x + 1 \quad \text{Corresponding lengths in an isometry are equal.} \]
\[ 5y = 3(3) + 1 \quad \text{Substitute 3 for } x. \]
\[ y = 2 \quad \text{Solve for } y. \]

The correct answer is B. **A** **B** **C** **D**

---

**GUIDED PRACTICE for Example 4**

6. Find the value of $r$ in the rotation of the triangle.

\[ \begin{array}{ll}
\text{A} & 3 \\
\text{B} & 5 \\
\text{C} & 6 \\
\text{D} & 15 \\
\end{array} \]
1. **VOCABULARY** What is a center of rotation?

2. ★ **WRITING** Compare the coordinate rules and the rotation matrices for a rotation of 90°.

**IDENTIFYING TRANSFORMATIONS** Identify the type of transformation, translation, reflection, or rotation, in the photo. Explain your reasoning.

3. 4. 5.

**ANGLE OF ROTATION** Match the diagram with the angle of rotation.

6. 7. 8.

**ROTATING A FIGURE** Trace the polygon and point P on paper. Then draw a rotation of the polygon the given number of degrees about P.

9. 10. 11.

**USING COORDINATE RULES** Rotate the figure the given number of degrees about the origin. List the coordinates of the vertices of the image.

**USING MATRICES** Find the image matrix that represents the rotation of the polygon about the origin. Then graph the polygon and its image.

\[
\begin{align*}
A & \hspace{1cm} B & \hspace{1cm} C & \hspace{1cm} J & \hspace{1cm} K & \hspace{1cm} L & \hspace{1cm} P & \hspace{1cm} Q & \hspace{1cm} R & \hspace{1cm} S \\
\begin{bmatrix} 1 & 5 & 4 \\ 4 & 6 & 3 \end{bmatrix} & \hspace{1cm} \begin{bmatrix} 1 & 2 \\ 1 & -1 \end{bmatrix} & \hspace{1cm} \begin{bmatrix} 2 & 0 \\ -1 & -3 \end{bmatrix} & \hspace{1cm} \begin{bmatrix} -4 & 2 \\ -4 & -2 \end{bmatrix} & \hspace{1cm} \begin{bmatrix} 2 & -5 \\ -7 & -4 \end{bmatrix} & \hspace{1cm} \begin{bmatrix} -1 & 2 \\ 0 & 1 \end{bmatrix} & \hspace{1cm} \begin{bmatrix} 0 & -1 \\ 1 & 3 \end{bmatrix} & \hspace{1cm} \begin{bmatrix} -1 & 2 \\ 0 & 1 \end{bmatrix} & \hspace{1cm} \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix} \\
\text{15.} & \hspace{1cm} \text{90°} & \hspace{1cm} \text{16.} & \hspace{1cm} \text{180°} & \hspace{1cm} \text{17.} & \hspace{1cm} 270° & \hspace{1cm} \text{270°} \end{align*}
\]

**ERROR ANALYSIS** The endpoints of \( \overline{AB} \) are \( A(-1, 1) \) and \( B(2, 3) \). **Describe** and correct the error in setting up the matrix multiplication for a 270° rotation about the origin.

\[
\begin{align*}
\text{270° rotation of } \overline{AB} & \hspace{1cm} \begin{bmatrix} 0 & -1 \\ 1 & 0 \end{bmatrix} \begin{bmatrix} -1 & 2 \\ 0 & 1 \end{bmatrix} \times \begin{bmatrix} -1 & 2 \\ 0 & 1 \end{bmatrix} \\
\text{270° rotation of } \overline{AB} & \hspace{1cm} \begin{bmatrix} -1 & 2 \\ 0 & 1 \end{bmatrix} \begin{bmatrix} 0 & -1 \\ 1 & 3 \end{bmatrix} \times \begin{bmatrix} 0 & -1 \\ 1 & 3 \end{bmatrix}
\end{align*}
\]

**MULTIPLE CHOICE** What is the value of \( y \) in the rotation of the triangle about \( P \)?

\[
\text{A} \hspace{1cm} 4 \hspace{1cm} \text{B} \hspace{1cm} 5 \hspace{1cm} \text{C} \hspace{1cm} \frac{17}{3} \hspace{1cm} \text{D} \hspace{1cm} 10
\]

**MULTIPLE CHOICE** Suppose quadrilateral \( QRST \) is rotated 180° about the origin. In which quadrant is \( Q \)?

\[
\text{A} \hspace{1cm} \text{B} \hspace{1cm} \text{C} \hspace{1cm} \text{D}
\]

**FINDING A PATTERN** The vertices of \( \triangle ABC \) are \( A(2, 0) \), \( B(3, 4) \), and \( C(5, 2) \). Make a table to show the vertices of each image after a 90°, 180°, 270°, 360°, 450°, 540°, 630°, and 720° rotation. What would be the coordinates of \( A' \) after a rotation of 1890°? **Explain.**

**MULTIPLE CHOICE** A rectangle has vertices at \( (4, 0) \), \( (4, 2) \), \( (7, 0) \), and \( (7, 2) \). Which image has a vertex at the origin?

\[
\text{A} \hspace{1cm} \text{B} \hspace{1cm} \text{C} \hspace{1cm} \text{D}
\]

**SHORT RESPONSE** Rotate the triangle in Exercise 12 90° about the origin. Show that corresponding sides of the preimage and image are perpendicular. **Explain.**

**VISUAL REASONING** A point in space has three coordinates \( (x, y, z) \). What is the image of point \( (3, 2, 0) \) rotated 180° about the origin in the \( xz \)-plane? **See Exercise 30, page 585.**

**CHALLENGE** Rotate the line the given number of degrees (a) about the \( x \)-intercept and (b) about the \( y \)-intercept. Write the equation of each image.

\[
\begin{align*}
26. \hspace{1cm} y = 2x - 3; 90° & \hspace{1cm} 27. \hspace{1cm} y = -x + 8; 180° & \hspace{1cm} 28. \hspace{1cm} y = \frac{1}{2}x + 5; 270°
\end{align*}
\]
**ANGLE OF ROTATION**  Use the photo to find the angle of rotation that maps A onto A'. Explain your reasoning.

29. [Image of A and A']
30. [Image of A and A']
31. [Image of A and A']

32. **REVOLVING DOOR**  You enter a revolving door and rotate the door 180°. What does this mean in the context of the situation? Now, suppose you enter a revolving door and rotate the door 360°. What does this mean in the context of the situation? Explain.

33. **PROVING THEOREM 9.3**  Copy and complete the proof of Case 1.

Case 1  The segment is noncollinear with the center of rotation.

**GIVEN**  A rotation about P maps Q to Q' and R to R'.

**PROVE**  QR = Q'R'

**PROVING THEOREM 9.3**  Write a proof for Case 2 and Case 3. (Refer to the diagrams on page 601.)

34. **Case 2**  The segment is collinear with the center of rotation.

**GIVEN**  A rotation about P maps Q to Q' and R to R'. P, Q, and R are collinear.

**PROVE**  QR = Q'R'

35. **Case 3**  The center of rotation is one endpoint of the segment.

**GIVEN**  A rotation about P maps Q to Q' and R to R'. P and R are the same point.

**PROVE**  QR = Q'R'
36. **MULTI-STEP PROBLEM** Use the graph of \( y = 2x - 3 \).
   
   a. Rotate the line 90°, 180°, 270°, and 360° about the origin. 
   
   Describe the relationship between the equation of the preimage and each image.
   
   b. Do you think that the relationships you described in part (a) are true for any line? Explain your reasoning.

37. ★ **EXTENDED RESPONSE** Use the graph of the quadratic equation \( y = x^2 + 1 \) at the right.
   
   a. Rotate the parabola by replacing \( y \) with \( x \) and \( x \) with \( y \) in the original equation, then graph this new equation.
   
   b. What is the angle of rotation?
   
   c. Are the image and the preimage both functions? Explain.

**TWO ROTATIONS** The endpoints of \( FG \) are \( F(1, 2) \) and \( G(3, 4) \). Graph \( F'G' \) and \( F''G'' \) after the given rotations.

38. Rotation: 90° about the origin
   
   Rotation: 180° about \((0, 4)\)

39. Rotation: 270° about the origin
   
   Rotation: 90° about \((-2, 0)\)

40. **CHALLENGE** A polar coordinate system locates a point in a plane by its distance from the origin \( O \) and by the measure of an angle with its vertex at the origin. For example, the point \( A(2, 30°) \) at the right is 2 units from the origin and \( m\angle XO A = 30° \). What are the polar coordinates of the image of point \( A \) after a 90° rotation? 180° rotation? 270° rotation? Explain.

---

**Mixed Review**

**PREVIEW** Prepare for Lesson 9.5 in Exs. 41–43.

In the diagram, \( \overline{DC} \) is the perpendicular bisector of \( \overline{AB} \). (p. 303)

41. What segment lengths are equal?
42. What is the value of \( x \)?
43. Find \( BD \). (p. 433)

Use a sine or cosine ratio to find the value of each variable. Round decimals to the nearest tenth. (p. 473)

44. 

45. 

46. 

**EXTRA PRACTICE** for Lesson 9.4, p. 912 **ONLINE QUIZ** at classzone.com
Another Way to Solve Example 2, page 599

**MULTIPLE REPRESENTATIONS** In Example 2 on page 599, you saw how to use a coordinate rule to rotate a figure. You can also *use tracing paper* and move a copy of the figure around the coordinate plane.

**Using Tracing Paper** You can use tracing paper to rotate a figure.

**STEP 1** Graph the original figure in the coordinate plane.

**STEP 2** Trace the quadrilateral and the axes on tracing paper.

**STEP 3** Rotate the tracing paper 270°. Then transfer the resulting image onto the graph paper.

---

**Practice**

1. **GRAPH** Graph quadrilateral $ABCD$ with vertices $A(2, -2)$, $B(5, -3)$, $C(4, -5)$, and $D(2, -4)$. Then rotate the quadrilateral 180° about the origin using tracing paper.

2. **GRAPH** Graph $\triangle RST$ with vertices $R(0, 6)$, $S(1, 4)$, and $T(-2, 3)$. Then rotate the triangle 270° about the origin using tracing paper.

3. **SHORT RESPONSE** *Explain* why rotating a figure 90° clockwise is the same as rotating the figure 270° counterclockwise.

4. **SHORT RESPONSE** *Explain* how you could use tracing paper to do a reflection.

5. **REASONING** If you rotate the point $(3, 4)$ 90° about the origin, what happens to the $x$-coordinate? What happens to the $y$-coordinate?

6. **GRAPH** Graph $\triangle JKL$ with vertices $J(4, 8)$, $K(4, 6)$, and $L(2, 6)$. Then rotate the triangle 90° about the point $(-1, 4)$ using tracing paper.
9.5 Double Reflections

**MATERIALS** • graphing calculator or computer

**QUESTION** What happens when you reflect a figure in two lines in a plane?

**EXPLORE 1** Double reflection in parallel lines

**STEP 1** Draw a scalene triangle Construct a scalene triangle like the one at the right. Label the vertices $D$, $E$, and $F$.

**STEP 2** Draw parallel lines Construct two parallel lines $p$ and $q$ on one side of the triangle. Make sure that the lines do not intersect the triangle. Save as “EXPLORE1”.

**STEP 3** Reflect triangle Reflect $\triangle DEF$ in line $p$. Reflect $\triangle D'E'F'$ in line $q$. How is $\triangle D'E'F'$ related to $\triangle DEF$?

**STEP 4** Make conclusion Drag line $q$. Does the relationship appear to be true if $p$ and $q$ are not on the same side of the figure?

**EXPLORE 2** Double reflection in intersecting lines

**STEP 1** Draw intersecting lines Follow Step 1 in Explore 1 for $\triangle ABC$. Change Step 2 from parallel lines to intersecting lines $k$ and $m$. Make sure that the lines do not intersect the triangle. Label the point of intersection of lines $k$ and $m$ as $P$. Save as “EXPLORE2”.

**STEP 2** Reflect triangle Reflect $\triangle ABC$ in line $k$. Reflect $\triangle A'B'C'$ in line $m$. How is $\triangle A'B'C'$ related to $\triangle ABC$?

**STEP 3** Measure angles Measure $\angle APA'$ and the acute angle formed by lines $k$ and $m$. What is the relationship between these two angles? Does this relationship remain true when you move lines $k$ and $m$?

**DRAW CONCLUSIONS** Use your observations to complete these exercises

1. What other transformation maps a figure onto the same image as a reflection in two parallel lines?
2. What other transformation maps a figure onto the same image as a reflection in two intersecting lines?
### 9.5 Apply Compositions of Transformations

**Key Vocabulary**
- glide reflection
- composition of transformations

A translation followed by a reflection can be performed one after the other to produce a *glide reflection*. A translation can be called a glide. A glide reflection is a transformation in which every point \( P \) is mapped to a point \( P'' \) by the following steps.

**STEP 1** First, a translation maps \( P \) to \( P' \).

**STEP 2** Then, a reflection in a line \( k \) parallel to the direction of the translation maps \( P' \) to \( P'' \).

#### Example 1 Find the image of a glide reflection

The vertices of \( \triangle ABC \) are \( A(3, 2) \), \( B(6, 3) \), and \( C(7, 1) \). Find the image of \( \triangle ABC \) after the glide reflection.

Translation: \((x, y) \rightarrow (x - 12, y)\)

Reflection: in the \( x \)-axis

**Solution**

Begin by graphing \( \triangle ABC \). Then graph \( \triangle A'B'C' \) after a translation 12 units left. Finally, graph \( \triangle A''B''C'' \) after a reflection in the \( x \)-axis.

**Guided Practice** for Example 1

1. Suppose \( \triangle ABC \) in Example 1 is translated 4 units down, then reflected in the \( y \)-axis. What are the coordinates of the vertices of the image?

2. In Example 1, *describe* a glide reflection from \( \triangle A''B''C'' \) to \( \triangle ABC \).
**COMPOSITIONS** When two or more transformations are combined to form a single transformation, the result is a **composition of transformations**. A glide reflection is an example of a composition of transformations.

In this lesson, a composition of transformations uses isometries, so the final image is congruent to the preimage. This suggests the Composition Theorem.

### THEOREM

**THEOREM 9.4 Composition Theorem**

The composition of two (or more) isometries is an isometry.

*Proof:* Exs. 35–36, p. 614

### EXAMPLE 2 Find the image of a composition

The endpoints of $\overline{RS}$ are $R(1, -3)$ and $S(2, -6)$. Graph the image of $\overline{RS}$ after the composition.

- **Reflection:** in the $y$-axis
- **Rotation:** $90^\circ$ about the origin

#### Solution

**STEP 1** Graph $\overline{RS}$.

**STEP 2** Reflect $\overline{RS}$ in the $y$-axis.

$R'$ has endpoints $R'(-1, -3)$ and $S'(-2, -6)$.

**STEP 3** Rotate $\overline{R'S'}$ $90^\circ$ about the origin. $R''S''$ has endpoints $R''(3, -1)$ and $S''(6, -2)$.

---

**TWO REFLECTIONS** Compositions of two reflections result in either a translation or a rotation, as described in Theorems 9.5 and 9.6.

### THEOREM

**THEOREM 9.5 Reflections in Parallel Lines Theorem**

If lines $k$ and $m$ are parallel, then a reflection in line $k$ followed by a reflection in line $m$ is the same as a translation.

If $P''$ is the image of $P$, then:

1. $PP''$ is perpendicular to $k$ and $m$, and
2. $PP'' = 2d$, where $d$ is the distance between $k$ and $m$.

*Proof:* Ex. 37, p. 614
**Example 3** Use Theorem 9.5

In the diagram, a reflection in line \( k \) maps \( \overline{GH} \) to \( \overline{G'H'} \). A reflection in line \( m \) maps \( \overline{G'H'} \) to \( \overline{G''H''} \). Also, \( HB = 9 \) and \( DH'' = 4 \).

a. Name any segments congruent to each segment: \( \overline{HG} \), \( \overline{HB} \), and \( \overline{GA} \).

b. Does \( AC = BD \)? Explain.

c. What is the length of \( \overline{GG''} \)?

**Solution**

a. \( \overline{HG} \cong \overline{H'G'} \), and \( \overline{HG} \cong \overline{H''G''} \). \( \overline{HB} \cong \overline{H'B'} \). \( \overline{GA} \cong \overline{G'A} \).

b. Yes, \( AC = BD \) because \( \overline{GG''} \) and \( \overline{HH''} \) are perpendicular to both \( k \) and \( m \), so \( BD \) and \( AC \) are opposite sides of a rectangle.

c. By the properties of reflections, \( H'B = 9 \) and \( H'D = 4 \). Theorem 9.5 implies that \( GG'' = HH'' = 2 \cdot BD \), so the length of \( \overline{GG''} \) is \( 2(9 + 4) \), or 26 units.

**GUIDED PRACTICE**

for Examples 2 and 3

3. Graph \( \overline{RS} \) from Example 2. Do the rotation first, followed by the reflection. Does the order of the transformations matter? Explain.

4. In Example 3, part (c), explain how you know that \( GG'' = HH'' \).

Use the figure below for Exercises 5 and 6. The distance between line \( k \) and line \( m \) is 1.6 centimeters.

5. The preimage is reflected in line \( k \), then in line \( m \). Describe a single transformation that maps the blue figure to the green figure.

6. What is the distance between \( P \) and \( P'' \)? If you draw \( \overline{PP''} \), what is its relationship with line \( k \)? Explain.

**Theorem**

**Theorem 9.6 Reflections in Intersecting Lines Theorem**

If lines \( k \) and \( m \) intersect at point \( P \), then a reflection in \( k \) followed by a reflection in \( m \) is the same as a rotation about point \( P \).

The angle of rotation is \( 2x^\circ \), where \( x^\circ \) is the measure of the acute or right angle formed by \( k \) and \( m \).

*Proof*: Ex. 38, p. 614
**Example 4** Use Theorem 9.6

In the diagram, the figure is reflected in line $k$. The image is then reflected in line $m$. Describe a single transformation that maps $F$ to $F''$.

**Solution**

The measure of the acute angle formed between lines $k$ and $m$ is $70^\circ$. So, by Theorem 9.6, a single transformation that maps $F$ to $F''$ is a $140^\circ$ rotation about point $P$.

You can check that this is correct by tracing lines $k$ and $m$ and point $F$, then rotating the point $140^\circ$.

**Guided Practice** for Example 4

7. In the diagram at the right, the preimage is reflected in line $k$, then in line $m$. Describe a single transformation that maps the blue figure onto the green figure.

8. A rotation of $76^\circ$ maps $C$ to $C'$. To map $C$ to $C'$ using two reflections, what is the angle formed by the intersecting lines of reflection?

---

**9.5 Exercises**

**Skill Practice**

1. **Vocabulary** Copy and complete: In a glide reflection, the direction of the translation must be ____ to the line of reflection.

2. **Writing** Explain why a glide reflection is an isometry.

**Glide Reflection** The endpoints of $\overline{CD}$ are $C(2, -5)$ and $D(4, 0)$. Graph the image of $\overline{CD}$ after the glide reflection.

3. Translation: $(x, y) \to (x, y - 1)$  
   Reflection: in the $y$-axis
5. Translation: $(x, y) \to (x, y + 4)$  
   Reflection: in $x = 3$

4. Translation: $(x, y) \to (x - 3, y)$  
   Reflection: in $y = -1$
6. Translation: $(x, y) \to (x + 2, y + 2)$  
   Reflection: in $y = x$
GRAPHING COMPOSITIONS The vertices of \( \triangle PQR \) are \( P(2, 4), Q(6, 0), \) and \( R(7, 2) \). Graph the image of \( \triangle PQR \) after a composition of the transformations in the order they are listed.

7. Translation: \((x, y) \rightarrow (x, y - 5)\)  
   Reflection: in the \( y \)-axis
8. Translation: \((x, y) \rightarrow (x - 3, y + 2)\)  
   Rotation: \(90^\circ\) about the origin
9. Translation: \((x, y) \rightarrow (x + 12, y + 4)\)  
   Translation: \((x, y) \rightarrow (x - 5, y - 9)\)
10. Reflection: in the \( x \)-axis  
    Rotation: \(90^\circ\) about the origin

REVERSING ORDERS Graph \( F \rightarrow G \) after a composition of the transformations in the order they are listed. Then perform the transformations in reverse order. Does the order affect the final image \( F \rightarrow G \)?

11. \( F(-5, 2), G(-2, 4) \)  
    Translation: \((x, y) \rightarrow (x + 3, y - 8)\)  
    Reflection: in the \( x \)-axis
12. \( F(-1, -8), G(-6, -3) \)  
    Reflection: in the line \( y = 2 \)  
    Rotation: \(90^\circ\) about the origin

DESCRIBING COMPOSITIONS Describe the composition of transformations.

13. \[ 
\begin{array}{c}
A' B' C' \\
A \\
C \\
B \\
\end{array} \]

14. \[ 
\begin{array}{c}
A' B' C' \\
A \\
C \\
B \\
\end{array} \]

USING THEOREM 9.5 In the diagram, \( k \parallel m \), \( \triangle ABC \) is reflected in line \( k \), and \( \triangle A'B'C' \) is reflected in line \( m \).

15. A translation maps \( \triangle ABC \) onto which triangle?
16. Which lines are perpendicular to \( \overrightarrow{AA'} \)?
17. Name two segments parallel to \( \overrightarrow{BB'} \).
18. If the distance between \( k \) and \( m \) is 2.6 inches, what is the length of \( \overrightarrow{CC'} \)?
19. Is the distance from \( B' \) to \( m \) the same as the distance from \( B'' \) to \( m \)? Explain.

USING THEOREM 9.6 Find the angle of rotation that maps \( A \) onto \( A' \).

20. \[ 
\begin{array}{c}
A' \rightarrow A'' \\
A' \\
\end{array} \]

21. \[ 
\begin{array}{c}
A' \rightarrow A'' \\
A' \\
\end{array} \]
22. **ERROR ANALYSIS** A student described the translation of \(AB\) to \(A'B'\) followed by the reflection of \(A'B'\) to \(A''B''\) in the \(y\)-axis as a glide reflection. *Describe* and correct the student’s error.

**USING MATRICES** The vertices of \(\triangle PQR\) are \(P(1, 4), Q(3, -2),\) and \(R(7, 1)\). Use matrix operations to find the image matrix that represents the composition of the given transformations. Then graph \(\triangle PQR\) and its image.

23. **Translation:** \((x, y) \rightarrow (x, y + 5)\)

24. **Reflection:** in the \(x\)-axis

**Translation:** \((x, y) \rightarrow (x - 9, y - 4)\)

25. ★ **OPEN-ENDED MATH** Sketch a polygon. Apply three transformations of your choice on the polygon. What can you say about the congruence of the preimage and final image after multiple transformations? *Explain.*

26. **CHALLENGE** The vertices of \(\triangle JKL\) are \(J(1, -3), K(2, 2),\) and \(L(3, 0)\). Find the image of the triangle after a 180° rotation about the point \((-2, 2)\), followed by a reflection in the line \(y = -x\).

---

**PROBLEM SOLVING**

**EXAMPLE 1** on p. 608 for Exs. 27–30

**ANIMAL TRACKS** The left and right prints in the set of animal tracks can be related by a glide reflection. Copy the tracks and *describe* a translation and reflection that combine to create the glide reflection.

27. bald eagle (2 legs)
28. armadillo (4 legs)

---

29. ★ **MULTIPLE CHOICE** Which is *not* a glide reflection?

- **A** The teeth of a closed zipper
- **B** The tracks of a walking duck
- **C** The keys on a computer keyboard
- **D** The red squares on two adjacent rows of a checkerboard

---

30. **ROWING** *Describe* the transformations that are combined to represent an eight-person rowing shell.
SWEATER PATTERNS In Exercises 31–33, describe the transformations that are combined to make each sweater pattern.

31. \[\text{Pattern 1}\]
32. \[\text{Pattern 2}\]
33. \[\text{Pattern 3}\]

34. ★ SHORT RESPONSE Use Theorem 9.5 to explain how you can make a glide reflection using three reflections. How are the lines of reflection related?

35. PROVING THEOREM 9.4 Write a plan for proof for one case of the Composition Theorem.

**GIVEN** A rotation about \(P\) maps \(Q\) to \(Q'\) and \(R\) to \(R'\). A reflection in \(m\) maps \(Q'\) to \(Q''\) and \(R'\) to \(R''\).

**PROVE** \(QR = Q''R''\)

36. PROVING THEOREM 9.4 A composition of a rotation and a reflection, as in Exercise 35, is one case of the Composition Theorem. List all possible cases, and prove the theorem for another pair of compositions.

37. PROVING THEOREM 9.5 Prove the Reflection in Parallel Lines Theorem.

**GIVEN** A reflection in line \(\ell\) maps \(JK\) to \(J'K'\), a reflection in line \(m\) maps \(J'K'\) to \(J''K''\), and \(\ell \parallel m\).

**PROVE**

a. \(KK''\) is perpendicular to \(\ell\) and \(m\).

b. \(KK'' = 2d\), where \(d\) is the distance between \(\ell\) and \(m\).

38. PROVING THEOREM 9.6 Prove the Reflection in Intersecting Lines Theorem.

**GIVEN** Lines \(k\) and \(m\) intersect at point \(P\). \(Q\) is any point not on \(k\) or \(m\).

**PROVE**

a. If you reflect point \(Q\) in \(k\), and then reflect its image \(Q'\) in \(m\), \(Q''\) is the image of \(Q\) after a rotation about point \(P\).

b. \(m \angle QPQ'' = 2(m \angle APB)\)

**Plan for Proof** First show \(k \perp QQ'\) and \(\overline{QA} \cong \overline{Q'A}\). Then show \(\triangle QAP \cong \triangle Q'AP\). In the same way, show \(\triangle Q'BP \cong \triangle Q''BP\). Use congruent triangles and substitution to show that \(QF \cong Q''P\). That proves part (a) by the definition of a rotation. Then use congruent triangles to prove part (b).

39. VISUAL REASONING You are riding a bicycle along a flat street.

a. What two transformations does the wheel's motion use?

b. Explain why this is not a composition of transformations.
40. **MULTI-STEP PROBLEM** A point in space has three coordinates \((x, y, z)\). From the origin, a point can be forward or back on the \(x\)-axis, left or right on the \(y\)-axis, and up or down on the \(z\)-axis. The endpoints of segment \(\overline{AB}\) in space are \(A(2, 0, 0)\) and \(B(2, 3, 0)\), as shown at the right.

a. Rotate \(\overline{AB}\) \(90^\circ\) about the \(x\)-axis with center of rotation \(A\). What are the coordinates of \(A'B'\)?

b. Translate \(\overline{AB}\) using the vector \(\langle 4, 0, -1 \rangle\). What are the coordinates of \(A''B''\)?

41. **CHALLENGE** Justify the following conjecture or provide a counterexample.

Conjecture When performing a composition of two transformations of the same type, order does not matter.

**MIXED REVIEW**

Find the unknown side length. Write your answer in simplest radical form. *(p. 433)*

1. \(30\)
2. \(16\)
3. \(8\)
4. \(12\)
5. \(26\)
6. \(31\)

The coordinates of \(\triangle PQR\) are \(P(3, 1)\), \(Q(3, 3)\), and \(R(6, 1)\). Graph the image of the triangle after the translation. *(p. 572)*

45. \((x, y) \rightarrow (x + 3, y)\)
46. \((x, y) \rightarrow (x - 3, y)\)
47. \((x, y) \rightarrow (x, y + 2)\)
48. \((x, y) \rightarrow (x + 3, y + 2)\)

**QUIZ for Lessons 9.3–9.5**

The vertices of \(\triangle ABC\) are \(A(7, 1)\), \(B(3, 5)\), and \(C(10, 7)\). Graph the reflection in the line. *(p. 589)*

1. \(y\)-axis
2. \(x = -4\)
3. \(y = -x\)

Find the coordinates of the image of \(P(2, -3)\) after the rotation about the origin. *(p. 598)*

4. \(180^\circ\) rotation
5. \(90^\circ\) rotation
6. \(270^\circ\) rotation

The vertices of \(\triangle PQR\) are \(P(-8, 8)\), \(Q(-5, 0)\), and \(R(-1, 3)\). Graph the image of \(\triangle PQR\) after a composition of the transformations in the order they are listed. *(p. 608)*

7. Translation: \((x, y) \rightarrow (x + 6, y)\)  
   Reflection: in the \(y\)-axis
8. Reflection: in the line \(y = -2\)  
   Rotation: \(90^\circ\) about the origin
9. Translation: \((x, y) \rightarrow (x - 5, y)\)  
   Translation: \((x, y) \rightarrow (x + 2, y + 7)\)
10. Rotation: \(180^\circ\) about the origin  
    Translation: \((x, y) \rightarrow (x + 4, y - 3)\)
**Key Vocabulary**
- tessellation

**GOAL** Make tessellations and discover their properties.

A tessellation is a collection of figures that cover a plane with no gaps or overlaps. You can use transformations to make tessellations.

A regular tessellation is a tessellation of congruent regular polygons. In the figures above, the tessellation of equilateral triangles is a regular tessellation.

**EXAMPLE 1** Determine whether shapes tessellate

Does the shape tessellate? If so, tell whether the tessellation is regular.

a. Regular octagon  
![Regular octagon]

b. Trapezoid  
![Trapezoid]

b. The trapezoid tessellates. The tessellation is not regular because the trapezoid is not a regular polygon.

b. Regular hexagon  
![Regular hexagon]

c. A regular hexagon tessellates using translations. The tessellation is regular because it is made of congruent regular hexagons.

**AVOID ERRORS**

The sum of the angles surrounding every vertex of a tessellation is 360°. This means that no regular polygon with more than six sides can be used in a regular tessellation.
**Example 2** Draw a tessellation using one shape

Change a triangle to make a tessellation.

**Solution**

**Step 1**

Cut a piece from the triangle.

**Step 2**

Slide the piece to another side.

**Step 3**

Translate and reflect the figure to make a tessellation.

**Example 3** Draw a tessellation using two shapes

Draw a tessellation using the given floor tiles.

**Solution**

**Step 1**

Combine one octagon and one square by connecting sides of the same length.

**Step 2**

Translate the pair of polygons to make a tessellation.

---

**Read Vocabulary**

Notice that in the tessellation in Example 3, the same combination of regular polygons meet at each vertex. This type of tessellation is called semi-regular.

---

**Practice**

**Example 1** on p. 616 for Exs. 1–4

**Regular Tessellations** Does the shape tessellate? If so, tell whether the tessellation is regular.

1. Equilateral triangle
2. Circle
3. Kite

4. ★ Open-Ended Math Draw a rectangle. Use the rectangle to make two different tessellations.
5. **MULTI-STEP PROBLEM** Choose a tessellation and measure the angles at three vertices.
   a. What is the sum of the measures of the angles? What can you conclude?
   b. Explain how you know that any *quadrilateral* will tessellate.

**DRAWING TESSELLATIONS** In Exercises 6–8, use the steps in Example 2 to make a figure that will tessellate.

6. Make a tessellation using a triangle as the base figure.
7. Make a tessellation using a square as the base figure. Change both pairs of opposite sides.
8. Make a tessellation using a hexagon as the base figure. Change all three pairs of opposite sides.

9. **ROTATION TESSELLATION** Use these steps to make another tessellation based on a regular hexagon ABCDEF.
   a. Connect points A and B with a curve. Rotate the curve 120° about A so that B coincides with F.
   b. Connect points E and F with a curve. Rotate the curve 120° about E so that F coincides with D.
   c. Connect points C and D with a curve. Rotate the curve 120° about C so that D coincides with B.
   d. Use this figure to draw a tessellation.

**EXAMPLE 3**

**USING TWO POLYGONS** Draw a tessellation using the given polygons.

10.  
11.  
12.  

13. **OPEN-ENDED MATH** Draw a tessellation using three different polygons.

**TRANSFORMATIONS** Describe the transformation(s) used to make the tessellation.

14.  
15.  

16.  
17.  

18. **USING SHAPES** On graph paper, outline a capital H. Use this shape to make a tessellation. What transformations did you use?
9.6 Identify Symmetry

**Before**
You reflected or rotated figures.

**Now**
You will identify line and rotational symmetries of a figure.

**Why?**
So you can identify the symmetry in a bowl, as in Ex. 11.

**Key Vocabulary**
• line symmetry
• line of symmetry
• rotational symmetry
• center of symmetry

A figure in the plane has **line symmetry** if the figure can be mapped onto itself by a reflection in a line. This line of reflection is a **line of symmetry**, such as line \( m \) at the right. A figure can have more than one line of symmetry.

**Example 1** Identify lines of symmetry

How many lines of symmetry does the hexagon have?

- a. 
- b. 
- c. 

**Solution**

- a. Two lines of symmetry
- b. Six lines of symmetry
- c. One line of symmetry

**Review Reflection**
Notice that the lines of symmetry are also lines of reflection.

**Guided Practice**

for Example 1

How many lines of symmetry does the object appear to have?

1. 
2. 
3. 
4. Draw a hexagon with no lines of symmetry.
ROTATIONAL SYMMETRY A figure in a plane has rotational symmetry if the figure can be mapped onto itself by a rotation of 180° or less about the center of the figure. This point is the center of symmetry. Note that the rotation can be either clockwise or counterclockwise.

REVIEW ROTATION
For a figure with rotational symmetry, the angle of rotation is the smallest angle that maps the figure onto itself.

For example, the figure below has rotational symmetry, because a rotation of either 90° or 180° maps the figure onto itself (although a rotation of 45° does not).

The figure above also has point symmetry, which is 180° rotational symmetry.

EXAMPLE 2 Identify rotational symmetry

Does the figure have rotational symmetry? If so, describe any rotations that map the figure onto itself.

a. Parallelogram
b. Regular octagon
c. Trapezoid

Solution

a. The parallelogram has rotational symmetry. The center is the intersection of the diagonals. A 180° rotation about the center maps the parallelogram onto itself.

b. The regular octagon has rotational symmetry. The center is the intersection of the diagonals. Rotations of 45°, 90°, 135°, or 180° about the center all map the octagon onto itself.

c. The trapezoid does not have rotational symmetry because no rotation of 180° or less maps the trapezoid onto itself.

GUIDED PRACTICE for Example 2

Does the figure have rotational symmetry? If so, describe any rotations that map the figure onto itself.

5. Rhombus
6. Octagon
7. Right triangle
9.6 Identify Symmetry

1. **VOCABULARY** What is a center of symmetry?

2. **WRITING** Draw a figure that has one line of symmetry and does not have rotational symmetry. Can a figure have two lines of symmetry and no rotational symmetry?

3. **LINE SYMMETRY** How many lines of symmetry does the triangle have?

- 3. 4. 5.

**GUIDED PRACTICE** for Example 3

8. Describe the lines of symmetry and rotational symmetry of a non-equilateral isosceles triangle.

**EXAMPLE 3** Standardized Test Practice

Identify the line symmetry and rotational symmetry of the equilateral triangle at the right.

- A 3 lines of symmetry, 60° rotational symmetry
- B 3 lines of symmetry, 120° rotational symmetry
- C 1 line of symmetry, 180° rotational symmetry
- D 1 line of symmetry, no rotational symmetry

**Solution**

The triangle has line symmetry. Three lines of symmetry can be drawn for the figure.

For a figure with $s$ lines of symmetry, the smallest rotation that maps the figure onto itself has the measure $\frac{360°}{s}$. So, the equilateral triangle has $\frac{360°}{3}$, or 120° rotational symmetry.

The correct answer is B.

**HOMEWORK KEY**

- ○ = WORKED-OUT SOLUTIONS on p. WS1 for Exs. 7, 13, and 31
- ★ = STANDARDIZED TEST PRACTICE Exs. 2, 13, 14, 21, and 23

**SKILL PRACTICE**

1. **VOCABULARY** What is a center of symmetry?

2. **WRITING** Draw a figure that has one line of symmetry and does not have rotational symmetry. Can a figure have two lines of symmetry and no rotational symmetry?
**ROTATIONAL SYMMETRY** Does the figure have rotational symmetry? If so, describe any rotations that map the figure onto itself.

6. 7. 8. 9.

**SYMMETRY** Determine whether the figure has line symmetry and whether it has rotational symmetry. Identify all lines of symmetry and angles of rotation that map the figure onto itself.

10. 11. 12.

13. ★ **MULTIPLE CHOICE** Identify the line symmetry and rotational symmetry of the figure at the right.

A 1 line of symmetry, no rotational symmetry
B 1 line of symmetry, 180° rotational symmetry
C No lines of symmetry, 90° rotational symmetry
D No lines of symmetry, 180° rotational symmetry

14. ★ **MULTIPLE CHOICE** Which statement best describes the rotational symmetry of a square?

A The square has no rotational symmetry.
B The square has 90° rotational symmetry.
C The square has point symmetry.
D Both B and C are correct.

**ERROR ANALYSIS** Describe and correct the error made in describing the symmetry of the figure.

15. 16.

**DRAWING FIGURES** In Exercises 17–20, use the description to draw a figure. If not possible, write not possible.

17. A quadrilateral with no line of symmetry
18. An octagon with exactly two lines of symmetry
19. A hexagon with no point symmetry
20. A trapezoid with rotational symmetry
21. ★ OPEN-ENDED MATH Draw a polygon with $180^\circ$ rotational symmetry and with exactly two lines of symmetry.

22. POINT SYMMETRY In the graph, $\overline{AB}$ is reflected in the point $C$ to produce the image $A'B'$. To make a reflection in a point $C$ for each point $N$ on the preimage, locate $N'$ so that $N'C = NC$ and $N'$ is on $\overline{NC}$. Explain what kind of rotation would produce the same image. What kind of symmetry does quadrilateral $AB'A'B$ have?

23. ★ SHORT RESPONSE A figure has more than one line of symmetry. Can two of the lines of symmetry be parallel? Explain.

24. REASONING How many lines of symmetry does a circle have? How many angles of rotational symmetry does a circle have? Explain.

25. VISUAL REASONING How many planes of symmetry does a cube have?

26. CHALLENGE What can you say about the rotational symmetry of a regular polygon with $n$ sides? Explain.

**PROBLEM SOLVING**

**EXAMPLES** 1 and 2 on pp. 619–620 for Exs. 27–30

**WORDS** Identify the line symmetry and rotational symmetry (if any) of each word.

27. **MOW** 28. **RADAR** 29. **OHIO** 30. **pod**

@HomeTutor for problem solving help at classzone.com

**KALEIDOSCOPES** In Exercises 31–33, use the following information about kaleidoscopes.

Inside a kaleidoscope, two mirrors are placed next to each other to form a V, as shown at the right. The angle between the mirrors determines the number of lines of symmetry in the image. Use the formula $n(m\angle 1) = 180^\circ$ to find the measure of $\angle 1$ between the mirrors or the number $n$ of lines of symmetry in the image.

Calculate the angle at which the mirrors must be placed for the image of a kaleidoscope to make the design shown.

31. 32. 33.
34. **CHEMISTRY** The diagram at the right shows two forms of the amino acid alanine. One form is laevo-alanine and the other is dextro-alanine. How are the structures of these two molecules related? Explain.

35. **MULTI-STEP PROBLEM** The Castillo de San Marcos in St. Augustine, Florida, has the shape shown.

   - a. What kind(s) of symmetry does the shape of the building show?
   - b. Imagine the building on a three-dimensional coordinate system. Copy and complete the following statement: The lines of symmetry in part (a) are now described as ? of symmetry and the rotational symmetry about the center is now described as rotational symmetry about the ?.

36. **CHALLENGE** Spirals have a type of symmetry called spiral, or helical, symmetry. Describe the two transformations involved in a spiral staircase. Then explain the difference in transformations between the two staircases at the right.

---

**MIXED REVIEW**

**PREVIEW** Prepare for Lesson 9.7 in Exs. 37–39.

**Solve the proportion. (p. 356)**

37. \( \frac{5}{x} = \frac{15}{27} \)

38. \( \frac{a + 4}{7} = \frac{49}{56} \)

39. \( \frac{5}{2b - 3} = \frac{1}{3b + 1} \)

**Determine whether the dilation from Figure A to Figure B is a reduction or an enlargement. Then find its scale factor. (p. 409)**

40.

41.

**Write a matrix to represent the given polygon. (p. 580)**

42. Triangle A in Exercise 40

43. Triangle B in Exercise 40

44. Pentagon A in Exercise 41

45. Pentagon B in Exercise 41
9.7 Investigate Dilations

**MATERIALS** • straightedge • compass • ruler

**QUESTION** How do you construct a dilation of a figure?

Recall from Lesson 6.7 that a dilation enlarges or reduces a figure to make a similar figure. You can use construction tools to make enlargement dilations.

**EXPLORE** Construct an enlargement dilation

Use a compass and straightedge to construct a dilation of $\triangle PQR$ with a scale factor of 2, using a point $C$ outside the triangle as the center of dilation.

**STEP 1**

Draw a triangle  Draw $\triangle PQR$ and choose the center of the dilation $C$ outside the triangle. Draw lines from $C$ through the vertices of the triangle.

**STEP 2**

Use a compass  Use a compass to locate $P'$ on $CP$ so that $CP' = 2(CP)$. Locate $Q'$ and $R'$ in the same way.

**STEP 3**

Connect points  Connect points $P'$, $Q'$, and $R'$ to form $\triangle P'Q'R'$.

**DRAW CONCLUSIONS** Use your observations to complete these exercises

1. Find the ratios of corresponding side lengths of $\triangle PQR$ and $\triangle P'Q'R'$. Are the triangles similar? Explain.

2. Draw $\triangle DEF$. Use a compass and straightedge to construct a dilation with a scale factor of 3, using point $D$ on the triangle as the center of dilation.

3. Find the ratios of corresponding side lengths of $\triangle DEF$ and $\triangle D'E'F'$. Are the triangles similar? Explain.

4. Draw $\triangle JKL$. Use a compass and straightedge to construct a dilation with a scale factor of 2, using a point $A$ inside the triangle as the center of dilation.

5. Find the ratios of corresponding side lengths of $\triangle JKL$ and $\triangle J'K'L'$. Are the triangles similar? Explain.

6. What can you conclude about the corresponding angles measures of a triangle and an enlargement dilation of the triangle?
9.7 Identify and Perform Dilations

Key Vocabulary
• scalar multiplication
• dilation, p. 409
• reduction, p. 409
• enlargement, p. 409

Recall from Lesson 6.7 that a dilation is a transformation in which the original figure and its image are similar.

A dilation with center \( C \) and scale factor \( k \) maps every point \( P \) in a figure to a point \( P' \) so that one of the following statements is true:

- If \( P \) is not the center point \( C \), then the image point \( P' \) lies on \( \overline{CP} \). The scale factor \( k \) is a positive number such that \( k = \frac{CP'}{CP} \) and \( k > 1 \), or
- If \( P \) is the center point \( C \), then \( P = P' \).

As you learned in Lesson 6.7, the dilation is a reduction if \( 0 < k < 1 \) and it is an enlargement if \( k > 1 \).

**EXAMPLE 1** Identify dilations

Find the scale factor of the dilation. Then tell whether the dilation is a reduction or an enlargement.

a. b.

**Solution**

a. Because \( \frac{CP'}{CP} = \frac{12}{8} \), the scale factor is \( k = \frac{3}{2} \). The image \( P' \) is an enlargement.

b. Because \( \frac{CP'}{CP} = \frac{18}{30} \), the scale factor is \( k = \frac{3}{5} \). The image \( P' \) is a reduction.
EXAMPLE 2  Draw a dilation

Draw and label $\triangle DEFG$. Then construct a dilation of $\triangle DEFG$ with point $D$ as the center of dilation and a scale factor of 2.

Solution

**STEP 1**

Draw $\triangle DEFG$. Draw rays from $D$ through vertices $E$, $F$, and $G$.

**STEP 2**

Open the compass to the length of $DE$. Locate $E'$ on $DE$ so $DE' = 2(DE)$. Locate $F'$ and $G'$ the same way.

**STEP 3**

Add a second label $D'$ to point $D$. Draw the sides of $D'E'F'G'$.

GUIDED PRACTICE for Examples 1 and 2

1. In a dilation, $CP' = 3$ and $CP = 12$. Tell whether the dilation is a reduction or an enlargement and find its scale factor.

2. Draw and label $\triangle RST$. Then construct a dilation of $\triangle RST$ with $R$ as the center of dilation and a scale factor of 3.

MATRICES  Scalar multiplication is the process of multiplying each element of a matrix by a real number or scalar.

EXAMPLE 3  Scalar multiplication

Simplify the product: $4 \begin{bmatrix} 3 & 0 & 1 \\ 2 & -1 & -3 \end{bmatrix}$.

Solution

$$4 \begin{bmatrix} 3 & 0 & 1 \\ 2 & -1 & -3 \end{bmatrix} = 4 \begin{bmatrix} 3(3) & 4(0) & 4(1) \\ 4(2) & 4(-1) & 4(-3) \end{bmatrix} = \begin{bmatrix} 12 & 0 & 4 \\ 8 & -4 & -12 \end{bmatrix}$$

Multiply each element in the matrix by 4.

GUIDED PRACTICE for Example 3

Simplify the product.

3. $5 \begin{bmatrix} 2 & 1 & -10 \\ 3 & -4 & 7 \end{bmatrix}$

4. $-2 \begin{bmatrix} -4 & 1 & 0 \\ 9 & -5 & -7 \end{bmatrix}$
**Example 4** Use scalar multiplication in a dilation

The vertices of quadrilateral $KLMN$ are $K(-6, 6)$, $L(-3, 6)$, $M(0, 3)$, and $N(-6, 0)$. Use scalar multiplication to find the image of $KLMN$ after a dilation with its center at the origin and a scale factor of $\frac{1}{3}$. Graph $KLMN$ and its image.

**Solution**

\[
\begin{bmatrix}
1 & 1 & 1 & 1 \\
-6 & -3 & 0 & -6 \\
6 & 6 & 3 & 0
\end{bmatrix}
\begin{bmatrix}
\frac{1}{3} & 0 & 0 & 0 \\
-2 & -1 & 0 & -2 \\
2 & 2 & 1 & 0
\end{bmatrix}
\]

**Example 5** Find the image of a composition

The vertices of $\triangle ABC$ are $A(-4, 1)$, $B(-2, 2)$, and $C(-2, 1)$. Find the image of $\triangle ABC$ after the given composition.

Translation: $(x, y) \rightarrow (x + 5, y + 1)$

Dilation: centered at the origin with a scale factor of 2

**Solution**

**Step 1** Graph the preimage $\triangle ABC$ on the coordinate plane.

**Step 2** Translate $\triangle ABC$ 5 units to the right and 1 unit up. Label it $\triangle A'B'C'$.

**Step 3** Dilate $\triangle A'B'C'$ using the origin as the center and a scale factor of 2 to find $\triangle A''B''C''$.

**Guided Practice** for Examples 4 and 5

5. The vertices of $\triangle RST$ are $R(1, 2)$, $S(2, 1)$, and $T(2, 2)$. Use scalar multiplication to find the vertices of $\triangle R'S'T'$ after a dilation with its center at the origin and a scale factor of 2.

6. A segment has the endpoints $C(-1, 1)$ and $D(1, 1)$. Find the image of $\overline{CD}$ after a 90° rotation about the origin followed by a dilation with its center at the origin and a scale factor of 2.
1. **VOCABULARY** What is a scalar?

2. ★ **WRITING** If you know the scale factor, explain how to determine if an image is larger or smaller than the preimage.

**IDENTIFYING DILATIONS** Find the scale factor. Tell whether the dilation is a reduction or an enlargement. Find the value of $x$.

3. 

4. 

5. 

6. **ERROR ANALYSIS** Describe and correct the error in finding the scale factor $k$ of the dilation.

**CONSTRUCTION** Copy the diagram. Then draw the given dilation.

7. Center $H$; $k = 2$

8. Center $H$; $k = 3$

9. Center $J$; $k = 2$

10. Center $F$; $k = 2$

11. Center $J$; $k = \frac{1}{2}$

12. Center $F$; $k = \frac{3}{2}$

13. Center $D$; $k = \frac{3}{2}$

14. Center $G$; $k = \frac{1}{2}$

**SCALAR MULTIPLICATION** Simplify the product.

15. $\begin{bmatrix} 3 & 7 & 4 \\ 0 & 9 & -1 \end{bmatrix}$

16. $-5 \begin{bmatrix} -2 & -5 & 7 \\ 3 & 1 & 4 \end{bmatrix}$

17. $9 \begin{bmatrix} 0 & 3 & 2 \\ -1 & 7 & 0 \end{bmatrix}$

**DILATIONS WITH MATRICES** Find the image matrix that represents a dilation of the polygon centered at the origin with the given scale factor. Then graph the polygon and its image.

18. $\begin{bmatrix} 2 & 3 & 5 \\ 1 & 6 & 4 \end{bmatrix}; k = 2$

19. $\begin{bmatrix} -2 & 0 & 6 \\ -4 & 2 & -2 \end{bmatrix}; k = \frac{1}{2}$

20. $\begin{bmatrix} -6 & -3 & 3 & 3 \\ 0 & 3 & 0 & -3 \end{bmatrix}; k = \frac{2}{3}$
COMPOSING TRANSFORMATIONS  The vertices of \( \triangle FGH \) are \( F(-2, -2) \), 
\( G(-2, -4) \), and \( H(-4, -4) \). Graph the image of the triangle after a 
composition of the transformations in the order they are listed.

21. Translation: \((x, y) \rightarrow (x + 3, y + 1)\)
Dilation: centered at the origin with a scale factor of 2

22. Dilation: centered at the origin with a scale factor of \( \frac{1}{2} \)
Reflection: in the \( y \)-axis

23. Rotation: 90° about the origin
Dilation: centered at the origin with a scale factor of 3

24. ★ WRITING  Is a composition of transformations that includes a dilation 
ever an isometry? Explain.

25. ★ MULTIPLE CHOICE  In the diagram, the 
center of the dilation of \( \Box PQRS \) is point \( C \). 
The length of a side of \( \Box P'Q'R'S' \) is what 
percent of the length of the corresponding 
side of \( \Box PQRS \)?

(A) 25%  (B) 33%  (C) 300%  (D) 400%

26. REASONING  The distance from the center of dilation to the image of 
a point is shorter than the distance from the center of dilation to the 
preimage. Is the dilation a reduction or an enlargement? Explain.

27. ★ SHORT RESPONSE  Graph a triangle in the coordinate plane. Rotate the 
triangle, then dilate it. Then do the same dilation first, followed by the 
rotation. In this composition of transformations, does it matter in which 
order the triangle is dilated and rotated? Explain your answer.

28. REASONING  A dilation maps \( A(5, 1) \) to \( A'(2, 1) \) and \( B(7, 4) \) to \( B'(6, 7) \).
a. Find the scale factor of the dilation.
b. Find the center of the dilation.

29. ★ MULTIPLE CHOICE  Which transformation of \((x, y)\) is a dilation?
(A) \((3x, y)\)  (B) \((-x, 3y)\)  (C) \((3x, 3y)\)  (D) \((x + 3, y + 3)\)

30. ★ ALGEBRA  Graph parabolas of the form \( y = ax^2 \) using three different 
values of \( a \). Describe the effect of changing the value of \( a \). Is this a 
dilation? Explain.

31. REASONING  In the graph at the right, determine 
whether \( \triangle D'E'F' \) is a dilation of \( \triangle DEF \). Explain.

32. CHALLENGE  \( \triangle ABC \) has vertices \( A(4, 2) \), \( B(4, 6) \), 
and \( C(7, 2) \). Find the vertices that represent a 
dilation of \( \triangle ABC \) centered at \((4, 0)\) with a scale 
factor of 2.
SCIENCE  You are using magnifying glasses. Use the length of the insect and the magnification level to determine the length of the image seen through the magnifying glass.

33. Emperor moth  magnification 5x
34. Ladybug  magnification 10x
35. Dragonfly  magnification 20x

36. MURALS  A painter sketches plans for a mural. The plans are 2 feet by 4 feet. The actual mural will be 25 feet by 50 feet. What is the scale factor? Is this a dilation? Explain.

37. PHOTOGRAPHY  By adjusting the distance between the negative and the enlarged print in a photographic enlarger, you can make prints of different sizes. In the diagram shown, you want the enlarged print to be 9 inches wide $(AB')$. The negative is 1.5 inches wide $(AB)$, and the distance between the light source and the negative is 1.75 inches $(CD)$.
   a. What is the scale factor of the enlargement?
   b. What is the distance between the negative and the enlarged print?

38. ★ OPEN-ENDED MATH  Graph a polygon in a coordinate plane. Draw a figure that is similar but not congruent to the polygon. What is the scale factor of the dilation you drew? What is the center of the dilation?

39. MULTI-STEP PROBLEM  Use the figure at the right.
   a. Write a polygon matrix for the figure. Multiply the matrix by the scalar $-2$.
   b. Graph the polygon represented by the new matrix.
   c. Repeat parts (a) and (b) using the scalar $-\frac{1}{2}$.
   d. Make a conjecture about the effect of multiplying a polygon matrix by a negative scale factor.

40. AREA  You have an 8 inch by 10 inch photo.
   a. What is the area of the photo?
   b. You photocopy the photo at 50%. What are the dimensions of the image? What is the area of the image?
   c. How many images of this size would you need to cover the original photo?
41. **REASONING** You put a reduction of a page on the original page. Explain why there is a point that is in the same place on both pages.

42. **CHALLENGE** Draw two concentric circles with center $A$. Draw $AB$ and $AC$ to the larger circle to form a $45^\circ$ angle. Label points $D$ and $F$, where $AB$ and $AC$ intersect the smaller circle. Locate point $E$ at the intersection of $BF$ and $CD$. Choose a point $G$ and draw quadrilateral $DEFG$. Use $A$ as the center of the dilation and a scale factor of $\frac{1}{2}$. Dilate $DEFG$, $\triangle DBE$, and $\triangle CEF$ two times. Sketch each image on the circles. Describe the result.

9.7 Compositions With Dilations

**MATERIALS** • graphing calculator or computer

**QUESTION** How can you graph compositions with dilations?

You can use geometry drawing software to perform compositions with dilations.

**EXAMPLE** Perform a reflection and dilation

**STEP 1** Draw triangle
Construct a scalene triangle like \( \triangle ABC \) at the right. Label the vertices \( A, B, \) and \( C \). Construct a line that does not intersect the triangle. Label the line \( p \).

**STEP 2** Reflect triangle
Select Reflection from the F4 menu. To reflect \( \triangle ABC \) in line \( p \), choose the triangle, then the line.

**STEP 3** Dilate triangle
Select Hide/Show from the F5 menu and show the axes. To set the scale factor, select Alpha-Num from the F5 menu, press ENTER when the cursor is where you want the number, and then enter 0.5 for the scale factor.

Next, select Dilation from the F4 menu. Choose the image of \( \triangle ABC \), then choose the origin as the center of dilation, and finally choose 0.5 as the scale factor to dilate the triangle. Save this as “DILATE”.

**PRACTICE**

1. Move the line of reflection. How does the final image change?

2. To change the scale factor, select the Alpha-Num tool. Place the cursor over the scale factor. Press ENTER, then DELETE. Enter a new scale. How does the final image change?

3. Dilate with a center not at the origin. How does the final image change?

4. Use \( \triangle ABC \) and line \( p \), and the dilation and reflection from the Example. Dilate the triangle first, then reflect it. How does the final image change?
Lessons 9.4–9.7

1. **GRIDDED ANSWER** What is the angle of rotation, in degrees, that maps \(A\) to \(A'\) in the photo of the ceiling fan below?

![Ceiling Fan Image]

2. **SHORT RESPONSE** The vertices of \(\triangle DEF\) are \(D(-3, 2), E(2, 3), \) and \(F(3, -1)\). Graph \(\triangle DEF\). Rotate \(\triangle DEF\) \(90^\circ\) about the origin. Compare the slopes of corresponding sides of the preimage and image. What do you notice?

3. **MULTI-STEP PROBLEM** Use pentagon \(PQRST\) shown below.

![Pentagon Image]

a. Write the polygon matrix for \(PQRST\).

b. Find the image matrix for a \(270^\circ\) rotation about the origin.

c. Graph the image.

4. **SHORT RESPONSE** Describe the transformations that can be found in the quilt pattern below.

![Quilt Image]

5. **MULTI-STEP PROBLEM** The diagram shows the pieces of a puzzle.

![Puzzle Image]

a. Which pieces are translated?

b. Which pieces are reflected?

c. Which pieces are glide reflected?

6. **OPEN-ENDED** Draw a figure that has the given type(s) of symmetry.

a. Line symmetry only

b. Rotational symmetry only

c. Both line symmetry and rotational symmetry

7. **EXTENDED RESPONSE** In the graph below, \(\triangle A'B'C'\) is a dilation of \(\triangle ABC\).

![Triangle Image]

a. Is the dilation a reduction or an enlargement?

b. What is the scale factor? Explain your steps.

[c. What is the polygon matrix? What is the image matrix?]

d. When you perform a composition of a dilation and a translation on a figure, does order matter? Justify your answer using the translation \((x, y) \rightarrow (x + 3, y - 1)\) and the dilation of \(\triangle ABC\).
### BIG IDEAS

**Performing Congruence and Similarity Transformations**

<table>
<thead>
<tr>
<th>Transformation</th>
<th>Description</th>
<th>Diagram</th>
</tr>
</thead>
<tbody>
<tr>
<td>Translation</td>
<td>Translate a figure right or left, up or down.</td>
<td><img src="image" alt="Translation Diagram" /></td>
</tr>
<tr>
<td>Reflection</td>
<td>Reflect a figure in a line.</td>
<td><img src="image" alt="Reflection Diagram" /></td>
</tr>
<tr>
<td>Rotation</td>
<td>Rotate a figure about a point.</td>
<td><img src="image" alt="Rotation Diagram" /></td>
</tr>
<tr>
<td>Dilation</td>
<td>Dilate a figure to change the size but not the shape.</td>
<td><img src="image" alt="Dilation Diagram" /></td>
</tr>
</tbody>
</table>

You can combine congruence and similarity transformations to make a composition of transformations, such as a glide reflection.

**Making Real-World Connections to Symmetry and Tessellations**

<table>
<thead>
<tr>
<th>Symmetry Type</th>

90° rotational symmetry

**Applying Matrices and Vectors in Geometry**

You can use matrices to represent points and polygons in the coordinate plane. Then you can use matrix addition to represent translations, matrix multiplication to represent reflections and rotations, and scalar multiplication to represent dilations. You can also use vectors to represent translations.
REVIEW KEY VOCABULARY

- image, p. 572
- preimage, p. 572
- isometry, p. 573
- vector, p. 574
- initial point, terminal point, horizontal component, vertical component
- component form, p. 574
- matrix, p. 580
- element, p. 580
- dimensions, p. 580
- line of reflection, p. 589
- center of rotation, p. 598
- angle of rotation, p. 598
- glide reflection, p. 608
- composition of transformations, p. 609
- line symmetry, p. 619
- line of symmetry, p. 619
- rotational symmetry, p. 620
- center of symmetry, p. 620
- scalar multiplication, p. 627

VOCABULARY EXERCISES

1. Copy and complete: A(n) ___ is a transformation that preserves lengths.
2. Draw a figure with exactly one line of symmetry.
3. WRITING Explain how to identify the dimensions of a matrix. Include an example with your explanation.

Match the point with the appropriate name on the vector.

4. T
   A. Initial point
5. H
   B. Terminal point

REVIEW EXAMPLES AND EXERCISES

Use the review examples and exercises below to check your understanding of the concepts you have learned in each lesson of Chapter 9.

9.1 Translate Figures and Use Vectors

Example

Name the vector and write its component form.

The vector is \overrightarrow{EF}. From initial point \(E\) to terminal point \(F\), you move 4 units right and 1 unit down. So, the component form is \(\langle 4, 1 \rangle\).

Exercises

6. The vertices of \(\triangle ABC\) are \(A(2, 3), B(1, 0),\) and \(C(-2, 4)\). Graph the image of \(\triangle ABC\) after the translation \((x, y) \rightarrow (x + 3, y - 2)\).

7. The vertices of \(\triangle DEF\) are \(D(-6, 7), E(-5, 5),\) and \(F(-8, 4)\). Graph the image of \(\triangle DEF\) after the translation using the vector \((-1, 6)\).
9.2 Use Properties of Matrices

**Example**

Add \[
\begin{bmatrix}
-9 & 12 \\
5 & -4
\end{bmatrix}
+ \begin{bmatrix}
20 & 18 \\
11 & 25
\end{bmatrix}.
\]

These two matrices have the same dimensions, so you can perform the addition. To add matrices, you add corresponding elements.

\[
\begin{bmatrix}
-9 & 12 \\
5 & -4
\end{bmatrix}
+ \begin{bmatrix}
20 & 18 \\
11 & 25
\end{bmatrix}
= \begin{bmatrix}
-9 + 20 & 12 + 18 \\
5 + 11 & -4 + 25
\end{bmatrix}
= \begin{bmatrix}
11 & 30 \\
16 & 21
\end{bmatrix}
\]

**Exercises**

Find the image matrix that represents the translation of the polygon. Then graph the polygon and its image.

8. \[
\begin{bmatrix}
A & B & C \\
2 & 8 & 1 \\
4 & 3 & 2
\end{bmatrix};
\]
5 units up and 3 units left

9. \[
\begin{bmatrix}
D & E & F & G \\
-2 & 3 & 4 & -1 \\
3 & 6 & 4 & -1
\end{bmatrix};
\]
2 units down

9.3 Perform Reflections

**Example**

The vertices of \(\triangle MLN\) are \(M(4, 3), L(6, 3),\) and \(N(5, 1)\). Graph the reflection of \(\triangle MLN\) in the line \(p\) with equation \(x = 2\).

Point \(M\) is 2 units to the right of \(p\), so its reflection \(M'\) is 2 units to the left of \(p\) at \((0, 3)\). Similarly, \(L'\) is 4 units to the left of \(p\) at \((-2, 3)\) and \(N'\) is 3 units to the left of \(p\) at \((-1, 1)\).

**Exercises**

Graph the reflection of the polygon in the given line.

10. \(x = 4\)

11. \(y = 3\)

12. \(y = x\)
9.4 Perform Rotations

**Example**

Find the image matrix that represents the $90^\circ$ rotation of $ABCD$ about the origin.

The polygon matrix for $ABCD$ is $\begin{bmatrix} -2 & 1 & 2 & -3 \\ 4 & 4 & 2 & 2 \end{bmatrix}$.

Multiply by the matrix for a $90^\circ$ rotation.

$\begin{bmatrix} 0 & -1 \\ 1 & 0 \end{bmatrix} \begin{bmatrix} -2 & 1 & 2 & -3 \\ 4 & 4 & 2 & 2 \end{bmatrix} = \begin{bmatrix} -4 & -4 & -2 & -2 \\ -2 & 1 & 2 & -3 \end{bmatrix}$

**Exercises**

Find the image matrix that represents the given rotation of the polygon about the origin. Then graph the polygon and its image.

13. $FQRS$; $180^\circ$

14. $LMNP$; $270^\circ$

9.5 Apply Compositions of Transformations

**Example**

The vertices of $\triangle ABC$ are $A(4, -4)$, $B(3, -2)$, and $C(8, -3)$. Graph the image of $\triangle ABC$ after the glide reflection.

Translation: $(x, y) \rightarrow (x, y + 5)$

Reflection: in the $y$-axis

Begin by graphing $\triangle ABC$. Then graph the image $\triangle A'B'C'$ after a translation of 5 units up. Finally, graph the image $\triangle A''B''C''$ after a reflection in the $y$-axis.

**Exercises**

Graph the image of $H(-4, 5)$ after the glide reflection.

15. Translation: $(x, y) \rightarrow (x + 6, y - 2)$

16. Translation: $(x, y) \rightarrow (x - 4, y - 5)$
### 9.6 Identify Symmetry

**Example**

Determine whether the rhombus has *line symmetry* and/or *rotational symmetry*. Identify the number of lines of symmetry and/or the rotations that map the figure onto itself.

The rhombus has two lines of symmetry. It also has rotational symmetry, because a $180^\circ$ rotation maps the rhombus onto itself.

**Exercises**

Determine whether the figure has *line symmetry* and/or *rotational symmetry*. Identify the number of lines of symmetry and/or the rotations that map the figure onto itself.

17.  
18.  
19.

---

### 9.7 Identify and Perform Dilations

**Example**

Quadrilateral $ABCD$ has vertices $A(0, 0)$, $B(0, 3)$, $C(2, 2)$, and $D(2, 0)$. Use scalar multiplication to find the image of $ABCD$ after a dilation with its center at the origin and a scale factor of 2. Graph $ABCD$ and its image.

To find the image matrix, multiply each element of the polygon matrix by the scale factor.

<table>
<thead>
<tr>
<th>Scale factor</th>
<th>Polygon matrix</th>
<th>Image matrix</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>$\begin{bmatrix} 1 &amp; 1 &amp; 3 &amp; 3 \ 1 &amp; 3 &amp; 2 &amp; 1 \end{bmatrix}$</td>
<td>$\begin{bmatrix} 2 &amp; 2 &amp; 6 &amp; 6 \ 2 &amp; 6 &amp; 4 &amp; 2 \end{bmatrix}$</td>
</tr>
</tbody>
</table>

**Exercises**

Find the image matrix that represents a dilation of the polygon centered at the origin with the given scale factor. Then graph the polygon and its image.

20. $\begin{bmatrix} 2 & 4 & 8 \\ 2 & 4 & 2 \end{bmatrix}$; $k = \frac{1}{4}$

21. $\begin{bmatrix} -1 & 1 & 2 \\ -2 & 3 & 4 \end{bmatrix}$; $k = 3$
Write a rule for the translation of $\triangle ABC$ to $\triangle A'B'C'$. Then verify that the translation is an isometry.

1. \[
\begin{bmatrix}
3 & -8 \\
9 & 4.3
\end{bmatrix}
+ \begin{bmatrix}
-10 & 2 \\
5.1 & -5
\end{bmatrix}
\]

2. \[
\begin{bmatrix}
-2 & 2.6 \\
0.8 & 4
\end{bmatrix}
- \begin{bmatrix}
6 & 9 \\
-1 & 3
\end{bmatrix}
\]

3. \[
\begin{bmatrix}
7 & -3 & 2 \\
5 & 1 & -4
\end{bmatrix}
\begin{bmatrix}
1 \\
0 \\
3
\end{bmatrix}
\]

Add, subtract, or multiply.

Graph the image of the polygon after the reflection in the given line.

7. $x$-axis

8. $y = 3$

9. $y = -x$

Find the image matrix that represents the rotation of the polygon. Then graph the polygon and its image.

10. $\triangle ABC$: \[
\begin{bmatrix}
2 & 4 & 6 \\
2 & 5 & 1
\end{bmatrix}; 90^\circ \text{ rotation}
\]

11. $KLMN$: \[
\begin{bmatrix}
-5 & -2 & -3 & -5 \\
0 & 3 & -1 & -3
\end{bmatrix}; 180^\circ \text{ rotation}
\]

The vertices of $\triangle PQR$ are $P(-5, 1)$, $Q(-4, 6)$, and $R(-2, 3)$. Graph $\triangle P'Q'R'$ after a composition of the transformations in the order they are listed.

12. Translation: $(x, y) \rightarrow (x - 8, y)$

13. Reflection: in the $y$-axis

   Dilation: centered at the origin, $k = 2$

   Rotation: $90^\circ$ about the origin

Determine whether the flag has line symmetry and/or rotational symmetry. Identify all lines of symmetry and/or angles of rotation that map the figure onto itself.
MULTIPLY BINOMIALS AND USE QUADRATIC FORMULA

**Example 1** Multiply binomials

Find the product \((2x + 3)(x - 7)\).

**Solution**

Use the FOIL pattern: Multiply the First, Outer, Inner, and Last terms.

\[
\begin{array}{c|c|c|c|c}
\text{First} & \text{Outer} & \text{Inner} & \text{Last} \\
(2x + 3)(x - 7) & 2x(x) & 2x(-7) & 3(x) & 3(-7) \\
& = 2x^2 - 14x + 3x - 21 \\
& = 2x^2 - 11x - 21
\end{array}
\]

**Example 2** Solve a quadratic equation using the quadratic formula

Solve \(2x^2 + 1 = 5x\).

**Solution**

Write the equation in standard form to be able to use the quadratic formula.

\[
2x^2 + 1 = 5x \\
2x^2 - 5x + 1 = 0
\]

Write the quadratic formula.

\[
x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}
\]

Substitute values in the quadratic formula: \(a = 2, \ b = -5, \) and \(c = 1\).

\[
x = \frac{-(-5) \pm \sqrt{(-5)^2 - 4(2)(1)}}{2(2)}
\]

Simplify.

\[
x = \frac{5 \pm \sqrt{25 - 8}}{4} = \frac{5 \pm \sqrt{17}}{4}
\]

The solutions are \(\frac{5 + \sqrt{17}}{4} \approx 2.28\) and \(\frac{5 - \sqrt{17}}{4} \approx 0.22\).

**Exercises**

Find the product.

1. \((x + 3)(x - 2)\)  
2. \((x - 8)^2\)  
3. \((x + 4)(x - 4)\)

4. \((x - 5)(x - 1)\)  
5. \((7x + 6)^2\)  
6. \((3x - 1)(x + 9)\)

7. \((2x + 1)(2x - 1)\)  
8. \((-3x + 1)^2\)  
9. \((x + y)(2x + y)\)

Use the quadratic formula to solve the equation.

10. \(3x^2 - 2x - 5 = 0\)  
11. \(x^2 - 7x + 12 = 0\)  
12. \(x^2 + 5x - 2 = 0\)

13. \(4x^2 + 9x + 2 = 0\)  
14. \(3x^2 + 4x - 10 = 0\)  
15. \(x^2 + x = 7\)

16. \(3x^2 = 5x - 1\)  
17. \(x^2 = -11x - 4\)  
18. \(5x^2 + 6 = 17x\)

Algebra Review 641
**SHORT RESPONSE QUESTIONS**

**Problem**

The vertices of \( \triangle PQR \) are \( P(1, -1) \), \( Q(4, -1) \), and \( R(0, -3) \). What are the coordinates of the image of \( \triangle PQR \) after the given composition? Describe your steps. Include a graph with your answer.

**Translation:** \((x, y) \rightarrow (x - 6, y)\)

**Reflection:** in the \( x \)-axis

Below are sample solutions to the problem. Read each solution and the comments in blue to see why the sample represents full credit, partial credit, or no credit.

**Sample 1: Full credit solution**

First, graph \( \triangle PQR \). Next, to translate \( \triangle PQR \) 6 units left, subtract 6 from the \( x \)-coordinate of each vertex.

\[
P(1, -1) \rightarrow P'( -5, -1)
Q(4, -1) \rightarrow Q'( -2, -1)
R(0, -3) \rightarrow R'( -6, -3)
\]

Finally, reflect \( \triangle P'Q'R' \) in the \( x \)-axis by multiplying the \( y \)-coordinates by \(-1\).

\[
P'( -5, -1) \rightarrow P''( -5, 1)
Q'( -2, -1) \rightarrow Q''( -2, 1)
R'( -6, -3) \rightarrow R''( -6, 3)
\]

**Sample 2: Partial credit solution**

First, graph \( \triangle PQR \). Next, reflect \( \triangle PQR \) over the \( x \)-axis by multiplying each \( y \)-coordinate by \(-1\). Finally, to translate \( \triangle P'Q'R' \) 6 units left, subtract 6 from each \( x \)-coordinate.

The coordinates of the image of \( \triangle PQR \) after the composition are \( P''( -2, 1) \), \( Q''( -5, 1) \), and \( R'' ( -6, 3) \).
The reasoning is correct, but the student does not show a graph.

SAMPLE 3: Partial credit solution

First subtract 6 from each x-coordinate. So, \(P'(1 - 6, -1) = P'(-5, -1), Q'(4 - 6, -1) = Q'(-2, -1),\) and \(R'(0 - 6, -3) = R'(-6, -3).\) Then reflect the triangle in the x-axis by multiplying each y-coordinate by \(-1.\) So, \(P''(-5, -1 \cdot (-1)) = P''(-5, 1), Q''(-2, -1 \cdot (-1)) = Q''(-2, 1),\) and \(R''(-6, -1 \cdot (-3)) = R''(-6, 3).\)

SAMPLE 4: No credit solution

Translate \(\triangle PQR\) 6 units by adding 6 to each x-coordinate. Then multiply each x-coordinate by \(-1\) to reflect the image over the x-axis. The resulting \(\triangle P'Q'R'\) has vertices \(P'(-7, 1), Q'(-10, -1),\) and \(R'(-6, -3).\)

PRACTICE Apply Scoring Rubric

Use the rubric on page 642 to score the solution to the problem below as full credit, partial credit, or no credit. Explain your reasoning.

PROBLEM The vertices of \(ABCD\) are \(A(-6, 2),\) \(B(-2, 3),\) \(C(-1, 1),\) and \(D(-5, 1).\) Graph the reflection of \(ABCD\) in line \(m\) with equation \(x = 1.\)

1. First, graph \(ABCD.\) Because \(m\) is a vertical line, the reflection will not change the y-coordinates. A is 7 units left of \(m,\) so \(A'\) is 7 units right of \(m,\) at \(A'(8, 2).\) Since \(B\) is 3 units left of \(m, B'\) is 3 units right of \(m,\) at \(B'(4, 3).\) The images of \(C\) and \(D\) are \(C'(3, 1)\) and \(D'(7, 1).\)

2. First, graph \(ABCD.\) The reflection is in a vertical line, so only the x-coordinates change. Multiply the x-coordinates in \(ABCD\) by \(-1\) to get \(A'(6, 2), B'(2, 3), C'(-1, 1),\) and \(D'(5, 1).\) Graph \(A'B'C'D'.\)
1. Use the square window shown below.

a. Draw a sketch showing all the lines of symmetry in the window design.

b. Does the design have rotational symmetry? If so, describe the rotations that map the design onto itself.

2. The vertices of a triangle are \( A(0, 2) \), \( B(2, 0) \), and \( C(-2, 0) \). What are the coordinates of the image of \( \triangle ABC \) after the given composition? Include a graph with your answer.

Dilation: \( (x, y) \rightarrow (3x, 3y) \)
Translation: \( (x, y) \rightarrow (x - 2, y - 2) \)

3. The red square is the image of the blue square after a single transformation. Describe three different transformations that could produce the image.

4. At a stadium concession stand, a hotdog costs $3.25, a soft drink costs $2.50, and a pretzel costs $3. The Johnson family buys 5 hotdogs, 3 soft drinks, and 1 pretzel. The Scott family buys 4 hotdogs, 4 soft drinks, and 2 pretzels. Use matrix multiplication to find the total amount spent by each family. Which family spends more money? Explain.

5. The design below is made of congruent isosceles trapezoids. Find the measures of the four interior angles of one of the trapezoids. Explain your reasoning.

6. Two swimmers design a race course near a beach. The swimmers must move from point \( A \) to point \( B \). Then they swim from point \( B \) to point \( C \). Finally, they swim from point \( C \) to point \( D \). Write the component form of the vectors shown in the diagram, \( \overrightarrow{AB} \), \( \overrightarrow{BC} \), and \( \overrightarrow{CD} \). Then write the component form of \( \overrightarrow{AD} \).

7. A polygon is reflected in the \( x \)-axis and then reflected in the \( y \)-axis. Explain how you can use a rotation to obtain the same result as this composition of transformations. Draw an example.

8. In rectangle \( PQRS \), one side is twice as long as the other side. Rectangle \( P'Q'R'S' \) is the image of \( PQRS \) after a dilation centered at \( P \) with a scale factor of 0.5. The area of \( P'Q'R'S' \) is 32 square inches.

a. Find the lengths of the sides of \( PQRS \). Explain.

b. Find the ratio of the area of \( PQRS \) to the area of \( P'Q'R'S' \).
MULTIPLE CHOICE

9. Which matrix product is equivalent to the product \[
\begin{bmatrix} 3 & -1 \\ 7 & 4 \end{bmatrix} \]?

\[ \text{A} \begin{bmatrix} -3 & 1 \\ -7 & 4 \end{bmatrix} \]

\[ \text{B} \begin{bmatrix} 1 & 3 \\ -4 & 7 \end{bmatrix} \]

\[ \text{C} \begin{bmatrix} -1 & 3 \\ 7 & 4 \end{bmatrix} \]

\[ \text{D} \begin{bmatrix} 1 & -3 \\ 4 & -7 \end{bmatrix} \]

10. Which transformation is not an isometry?

\[ \text{A} \text{ Translation} \quad \text{B} \text{ Reflection} \]

\[ \text{C} \text{ Rotation} \quad \text{D} \text{ Dilation} \]

GRIDDED ANSWER

11. Line \( p \) passes through points \( J(2, 5) \) and \( K(-4, 13) \). Line \( q \) is the image of line \( p \) after line \( p \) is reflected in the \( x \)-axis. Find the slope of line \( q \).

12. The red triangle is the image of the blue triangle after it is rotated about point \( P \). What is the value of \( y \)?

13. The vertices of \( \triangle PQR \) are \( P(1, 4), Q(2, 0), \) and \( R(4, 5) \). What is the \( x \)-coordinate of \( Q' \) after the given composition?

Translation: \((x, y) \rightarrow (x - 2, y + 1)\)

Dilation: centered at \((0, 0)\) with \( k = 2 \)

EXTENDED RESPONSE

14. An equation of line \( l \) is \( y = 3x \).

a. Graph line \( l \). Then graph the image of line \( l \) after it is reflected in the line \( y = x \).

b. Find the equation of the image.

c. Suppose a line has an equation of the form \( y = ax \). Make a conjecture about the equation of the image of that line when it is reflected in the line \( y = x \). Use several examples to support your conjecture.

15. The vertices of \( \triangle EFG \) are \( E(4, 2), F(-2, 1), \) and \( G(0, -3) \).

a. Find the coordinates of the vertices of \( \triangle E'F'G' \), the image of \( \triangle EFG \) after a dilation centered at the origin with a scale factor of 2. Graph \( \triangle EFG \) and \( \triangle E'F'G' \) in the same coordinate plane.

b. Find the coordinates of the vertices of \( \triangle E''F''G'' \), the image of \( \triangle E'F'G' \) after a dilation centered at the origin with a scale factor of 2.5. Graph \( \triangle E''F''G'' \) in the same coordinate plane you used in part (a).

c. What is the dilation that maps \( \triangle EFG \) to \( \triangle E''F''G'' \)?

d. What is the scale factor of a dilation that is equivalent to the composition of two dilations described below? Explain.

Dilation: centered at \((0, 0)\) with a scale factor of \( a \)

Dilation: centered at \((0, 0)\) with a scale factor of \( b \)
Tell whether the lines through the given points are parallel, perpendicular, or neither. (p. 171)

1. Line 1: (3, 5), (−2, 6)
   Line 2: (−3, 5), (−4, 10)
2. Line 1: (2, −10), (9, −8)
   Line 2: (8, 6), (1, 4)

Write an equation of the line shown. (p. 180)

3. 
   \[ \begin{align*}
   y &= 2x + 4 \\
   \end{align*} \]
4. 
   \[ \begin{align*}
   y &= -2x + 1 \\
   \end{align*} \]
5. 
   \[ \begin{align*}
   y &= 2x + 1 \\
   \end{align*} \]

State the third congruence that must be given to prove that the triangles are congruent using the given postulate or theorem. (pp. 234, 240, and 249)

6. SSS Congruence Post.
7. SAS Congruence Post.
8. AAS Congruence Thm

Determine whether \( BD \) is a perpendicular bisector, median, or altitude of \( \triangle ABC \). (p. 319)

9. 
10. 
11. 

Determine whether the segment lengths form a triangle. If so, would the triangle be acute, right, or obtuse? (pp. 328 and 441)

12. 11, 11, 15
13. 33, 44, 55
14. 9, 9, 13
15. 7, 8, 16
16. 9, 40, 41
17. 0.5, 1.2, 1.3

Classify the special quadrilateral. Explain your reasoning. Then find the values of \( x \) and \( y \). (p. 533)

18. 
19. 
20. 

Graph the image of the triangle after the composition of the transformations in the order they are listed. (p. 608)

21. \( P(-5, 2), Q(-2, 4), R(0, 0) \)
   Translation: \((x, y) \rightarrow (x - 2, y + 5)\)
   Reflection: in the \(x\)-axis

22. \( F(-1, -8), G(-6, -3), R(0, 0) \)
   Reflection: in the line \(x = 2\)
   Rotation: 90° about the origin

FIRE ESCAPE In the diagram, the staircases on the fire escape are parallel. The measure of \( \angle 1 \) is 48°. (p. 154)

23. Identify the angle(s) congruent to \( \angle 1 \).
24. Identify the angle(s) congruent to \( \angle 2 \).
25. What is \( m \angle 2 \)?
26. What is \( m \angle 6 \)?

27. BAHAMA ISLANDS The map of some of the Bahamas has a scale of \( \frac{1}{2} \) inch : 60 miles. Use a ruler to estimate the actual distance from Freeport to Nassau. (p. 364)

![Map of the Bahamas]

28. ANGLE OF ELEVATION You are standing 12 feet away from your house and the angle of elevation is 65° from your foot. How tall is your house? Round to the nearest foot. (p. 473)

29. PURSE You are decorating 8 trapezoid-shaped purses to sell at a craft show. You want to decorate the front of each purse with a string of beads across the midsegment. On each purse, the length of the bottom is 5.5 inches and the length of the top is 9 inches. If the beading costs $1.59 per foot, how much will it cost to decorate the 8 purses? (p. 542)

TILE PATTERNS Describe the transformations that are combined to make the tile pattern. (p. 607)

30. 
31. 
32. 

Cumulative Review: Chapters 1–9 647
In previous chapters, you learned the following skills, which you’ll use in Chapter 10: classifying triangles, finding angle measures, and solving equations.

**Prerequisite Skills**

**VOCABULARY CHECK**

Copy and complete the statement.

1. Two similar triangles have congruent corresponding angles and ___ corresponding sides.

2. Two angles whose sides form two pairs of opposite rays are called ___.

3. The ___ of an angle is all of the points between the sides of the angle.

**SKILLS AND ALGEBRA CHECK**

Use the Converse of the Pythagorean Theorem to classify the triangle.  
(Review p. 441 for 10.1.)

4. 0.6, 0.8, 0.9

5. 11, 12, 17

6. 1.5, 2, 2.5

Find the value of the variable.  (Review pp. 24, 35 for 10.2, 10.4.)

7. $5x^\circ$ and $(6x - 8)^\circ$

8. $(8x - 2)^\circ$ and $(2x + 2)^\circ$

9. $(5x + 40)^\circ$ and $7x^\circ$
In Chapter 10, you will apply the big ideas listed below and reviewed in the Chapter Summary on page 707. You will also use the key vocabulary listed below.

**Big Ideas**
1. **Using properties of segments that intersect circles**
2. **Applying angle relationships in circles**
3. **Using circles in the coordinate plane**

**Key Vocabulary**
- circle, p. 651  
  center, radius, diameter
- chord, p. 651
- secant, p. 651
- tangent, p. 651
- central angle, p. 659
- minor arc, p. 659
- major arc, p. 659
- semicircle, p. 659
- congruent circles, p. 660
- congruent arcs, p. 660
- inscribed angle, p. 672
- intercepted arc, p. 672
- standard equation of a circle, p. 699

**Why?**
Circles can be used to model a wide variety of natural phenomena. You can use properties of circles to investigate the Northern Lights.

**Animated Geometry**
The animation illustrated below for Example 4 on page 682 helps you answer this question: From what part of Earth are the Northern Lights visible?

Other animations for Chapter 10: pages 655, 661, 671, 691, and 701
10.1 Explore Tangent Segments

**Materials**
- compass
- ruler

**Question**
How are the lengths of tangent segments related?

A line can intersect a circle at 0, 1, or 2 points. If a line is in the plane of a circle and intersects the circle at 1 point, the line is a tangent.

**Explore**
Draw tangents to a circle

**Step 1**
Draw a circle. Use a compass to draw a circle. Label the center $P$.

**Step 2**
Draw tangents $AB$ and $CB$ so that they intersect $\odot P$ only at $A$ and $C$, respectively. These lines are called tangents.

**Step 3**
Measure segments $AB$ and $CB$ are called tangent segments. Measure and compare the lengths of the tangent segments.

**Draw Conclusions**
Use your observations to complete these exercises

1. Repeat Steps 1–3 with three different circles.

2. Use your results from Exercise 1 to make a conjecture about the lengths of tangent segments that have a common endpoint.

3. In the diagram, $L$, $Q$, $N$, and $P$ are points of tangency. Use your conjecture from Exercise 2 to find $LQ$ and $NP$ if $LM = 7$ and $MP = 5.5$.

4. In the diagram below, $A$, $B$, $D$, and $E$ are points of tangency. Use your conjecture from Exercise 2 to explain why $AB \cong ED$. 

---

**Activity**
Investigating Geometry

*Use before Lesson 10.1*
10.1 Use Properties of Tangents

**Before**
You found the circumference and area of circles.

**Now**
You will use properties of a tangent to a circle.

**Why?**
So you can find the range of a GPS satellite, as in Ex. 37.

**Key Vocabulary**
- circle
- center, radius, diameter
- chord
- secant
- tangent

A **circle** is the set of all points in a plane that are equidistant from a given point called the **center** of the circle. A circle with center \( P \) is called “circle \( P \)” and can be written \( \odot P \). A segment whose endpoints are the center and any point on the circle is a **radius**.

A **chord** is a segment whose endpoints are on a circle. A **diameter** is a chord that contains the center of the circle.

A **secant** is a line that intersects a circle in two points. A **tangent** is a line in the plane of a circle that intersects the circle in exactly one point, the **point of tangency**. The tangent ray \( \overrightarrow{AB} \) and the tangent segment \( \overline{AB} \) are also called tangents.

**Example 1** Identify special segments and lines

Tell whether the line, ray, or segment is best described as a diameter, chord, radius, secant, or tangent of \( \odot C \).

- a. \( \overline{AC} \)
- b. \( \overline{AB} \)
- c. \( \overline{DE} \)
- d. \( \overrightarrow{AE} \)

**Solution**

- a. \( \overline{AC} \) is a radius because \( C \) is the center and \( A \) is a point on the circle.
- b. \( \overline{AB} \) is a diameter because it is a chord that contains the center \( C \).
- c. \( \overline{DE} \) is a tangent ray because it is contained in a line that intersects the circle at only one point.
- d. \( \overrightarrow{AE} \) is a secant because it is a line that intersects the circle in two points.

**Guided Practice** for Example 1

1. In Example 1, what word best describes \( \overline{AG} \)? \( \overline{CB} \)?
2. In Example 1, name a tangent and a tangent segment.
**EXAMPLE 2** Find lengths in circles in a coordinate plane

Use the diagram to find the given lengths.

- **a.** Radius of $\odot A$
- **b.** Diameter of $\odot A$
- **c.** Radius of $\odot B$
- **d.** Diameter of $\odot B$

**Solution**

- **a.** The radius of $\odot A$ is 3 units.
- **b.** The diameter of $\odot A$ is 6 units.
- **c.** The radius of $\odot B$ is 2 units.
- **d.** The diameter of $\odot B$ is 4 units.

**GUIDED PRACTICE** for Example 2

3. Use the diagram in Example 2 to find the radius and diameter of $\odot C$ and $\odot D$.

**COPLANAR CIRCLES** Two circles can intersect in two points, one point, or no points. Coplanar circles that intersect in one point are called **tangent circles**. Coplanar circles that have a common center are called **concentric**.

**COMMON TANGENTS** A line, ray, or segment that is tangent to two coplanar circles is called a **common tangent**.
**Example 3**  
**Draw common tangents**

Tell how many common tangents the circles have and draw them.

![Image of circles with tangents]

**Solution**

a. 4 common tangents  
b. 3 common tangents  
c. 2 common tangents

**Guided Practice** for Example 3

Tell how many common tangents the circles have and draw them.

4.  
5.  
6.

**Theorem**

**Theorem 10.1**

In a plane, a line is tangent to a circle if and only if the line is perpendicular to a radius of the circle at its endpoint on the circle.

*Proof: Exs. 39–40, p. 658*

**Example 4**  
**Verify a tangent to a circle**

In the diagram, $PT$ is a radius of $\odot P$. Is $ST$ tangent to $\odot P$?

**Solution**

Use the Converse of the Pythagorean Theorem. Because $12^2 + 35^2 = 37^2$, $\triangle PST$ is a right triangle and $ST \perp PT$. So, $ST$ is perpendicular to a radius of $\odot P$ at its endpoint on $\odot P$. By Theorem 10.1, $ST$ is tangent to $\odot P$. 

10.1 Use Properties of Tangents  653
**EXAMPLE 5**  Find the radius of a circle

In the diagram, B is a point of tangency. Find the radius $r$ of $\odot C$.

**Solution**

You know from Theorem 10.1 that $\overline{AB} \perp \overline{BC}$, so $\triangle ABC$ is a right triangle. You can use the Pythagorean Theorem.

\[
AC^2 = BC^2 + AB^2 \quad \text{Pythagorean Theorem}
\]

\[
(r + 50)^2 = r^2 + 80^2 \quad \text{Substitute.}
\]

\[
r^2 + 100r + 2500 = r^2 + 6400 \quad \text{Multiply.}
\]

\[
100r = 3900 \quad \text{Subtract from each side.}
\]

\[
r = 39 \, \text{ft} \quad \text{Divide each side by 100.}
\]

**THEOREM**

**THEOREM 10.2**

Tangent segments from a common external point are congruent.

*Proof:* Ex. 41, p. 658

**EXAMPLE 6**  Find the radius of a circle

$RS$ is tangent to $\odot C$ at $S$ and $RT$ is tangent to $\odot C$ at $T$. Find the value of $x$.

**Solution**

$RS = RT$  \hspace{1cm} \text{Tangent segments from the same point are } \cong.

$28 = 3x + 4$  \hspace{1cm} \text{Substitute.}

$8 = x$  \hspace{1cm} \text{Solve for } x.

**GUIDED PRACTICE** for Examples 4, 5, and 6

7. Is $DE$ tangent to $\odot C$?

8. $ST$ is tangent to $\odot Q$. Find the value of $r$.

9. Find the value(s) of $x$.
1. **VOCABULARY** Copy and complete: The points \( A \) and \( B \) are on \( \odot C \). If \( C \) is a point on \( AB \), then \( AB \) is a ?.

2. ★ **WRITING** Explain how you can determine from the context whether the words *radius* and *diameter* are referring to a segment or a length.

**MATCHING TERMS** Match the notation with the term that best describes it.

3. \( B \)  
   A. Center

4. \( \overrightarrow{BH} \)  
   B. Radius

5. \( \overline{AB} \)  
   C. Chord

6. \( \overrightarrow{AB} \)  
   D. Diameter

7. \( \overrightarrow{AE} \)  
   E. Secant

8. \( G \)  
   F. Tangent

9. \( \overline{CD} \)  
   G. Point of tangency

10. \( \overline{BD} \)  
    H. Common tangent

**ERROR ANALYSIS** Describe and correct the error in the statement about the diagram.

**COORDINATE GEOMETRY** Use the diagram at the right.

12. What are the radius and diameter of \( \odot C \)?

13. What are the radius and diameter of \( \odot D \)?

14. Copy the circles. Then draw all the common tangents of the two circles.

**DRAWING TANGENTS** Copy the diagram. Tell how many common tangents the circles have and draw them.

15. 

16. 

17.
DETERMINING TANGENCY  Determine whether $AB$ is tangent to $\odot C$. Explain.

18. 

19. 

20. 

21. 

22. 

23. 

24. 

25. 

26. 

COMMON TANGENTS  A common internal tangent intersects the segment that joins the centers of two circles. A common external tangent does not intersect the segment that joins the centers of the two circles. Determine whether the common tangents shown are internal or external.

27. 

28. 

29. ★ MULTIPLE CHOICE  In the diagram, $\odot P$ and $\odot Q$ are tangent circles. $RS$ is a common tangent. Find $RS$.

A $-2\sqrt{15}$  
B 4  
C $2\sqrt{15}$  
D 8

30. REASONING  In the diagram, $PB$ is tangent to $\odot Q$ and $\odot R$. Explain why $PA \equiv PB \equiv PC$ even though the radius of $\odot Q$ is not equal to the radius of $\odot R$.

31. TANGENT LINES  When will two lines tangent to the same circle not intersect? Use Theorem 10.1 to explain your answer.
32. **ANGLE BISECTOR** In the diagram at right, $A$ and $D$ are points of tangency on $\odot C$. *Explain* how you know that $BC$ bisects $\angle ABD$. *(Hint: Use Theorem 5.6, page 310.)*

33. ★ **SHORT RESPONSE** For any point outside of a circle, is there ever only one tangent to the circle that passes through the point? Are there ever more than two such tangents? *Explain* your reasoning.

34. **CHALLENGE** In the diagram at the right, $AB = AC = 12$, $BC = 8$, and all three segments are tangent to $\odot P$. What is the radius of $\odot P$?

---

**BICYCLES** On modern bicycles, rear wheels usually have *tangential spokes*. Occasionally, front wheels have *radial spokes*. Use the definitions of *tangent* and *radius* to determine if the wheel shown has *tangential spokes* or *radial spokes*.

35.  
36.

**GLOBAL POSITIONING SYSTEM (GPS)** GPS satellites orbit about 11,000 miles above Earth. The mean radius of Earth is about 3959 miles. Because GPS signals cannot travel through Earth, a satellite can transmit signals only as far as points $A$ and $C$ from point $B$, as shown. Find $BA$ and $BC$ to the nearest mile.

37. ★ **SHORT RESPONSE** In the diagram, $RS$ is a common internal tangent (see Exercises 27–28) to $\odot A$ and $\odot B$. Use similar triangles to *explain* why $\frac{AC}{BC} = \frac{RC}{SC}$.
39. **PROVING THEOREM 10.1** Use parts (a)–(c) to prove indirectly that if a line is tangent to a circle, then it is perpendicular to a radius.

**GIVEN** Line \( m \) is tangent to \( \odot Q \) at \( P \).

**PROVE** \( m \perp \overline{QP} \)

a. Assume \( m \) is not perpendicular to \( \overline{QP} \). Then the perpendicular segment from \( Q \) to \( m \) intersects \( m \) at some other point \( R \). Because \( m \) is a tangent, \( R \) cannot be inside \( \odot Q \). Compare the length \( QR \) to \( QP \).

b. Because \( QR \) is the perpendicular segment from \( Q \) to \( m \), \( QR \) is the shortest segment from \( Q \) to \( m \). Now compare \( QR \) to \( QP \).

c. Use your results from parts (a) and (b) to complete the indirect proof.

40. **PROVING THEOREM 10.1** Write an indirect proof that if a line is perpendicular to a radius at its endpoint, the line is a tangent.

**GIVEN** \( m \perp \overline{QP} \)

**PROVE** Line \( m \) is tangent to \( \odot Q \).

41. **PROVING THEOREM 10.2** Write a proof that tangent segments from a common external point are congruent.

**GIVEN** \( SR \) and \( ST \) are tangent to \( \odot P \).

**PROVE** \( SR \equiv ST \)

**Plan for Proof** Use the Hypotenuse–Leg Congruence Theorem to show that \( \triangle SRP \equiv \triangle STP \).

42. **CHALLENGE** Point \( C \) is located at the origin. Line \( \ell \) is tangent to \( \odot C \) at \((-4, 3)\). Use the diagram at the right to complete the problem.

a. Find the slope of line \( \ell \).

b. Write the equation for \( \ell \).

c. Find the radius of \( \odot C \).

d. Find the distance from \( \ell \) to \( \odot C \) along the \( y \)-axis.

---

**MIXED REVIEW**

43. \( D \) is in the interior of \( \angle ABC \). If \( m\angle ABD = 25^\circ \) and \( m\angle ABC = 70^\circ \), find \( m\angle DBC \). (p. 24)

Find the values of \( x \) and \( y \). (p. 154)

44. 

45. 

46. 

47. A triangle has sides of lengths 8 and 13. Use an inequality to describe the possible length of the third side. What if two sides have lengths 4 and 11? (p. 328)
A central angle of a circle is an angle whose vertex is the center of the circle. In the diagram, \( \angle ACB \) is a central angle of \( \odot C \).

If \( m\angle ACB \) is less than 180°, then the points on \( \odot C \) that lie in the interior of \( \angle ACB \) form a minor arc with endpoints \( A \) and \( B \). The points on \( \odot C \) that do not lie on minor arc \( \overset{\frown}{AB} \) form a major arc with endpoints \( A \) and \( B \). A semicircle is an arc with endpoints that are the endpoints of a diameter.

NAMING ARCS Minor arcs are named by their endpoints. The minor arc associated with \( \angle ACB \) is named \( \overset{\frown}{AB} \). Major arcs and semicircles are named by their endpoints and a point on the arc. The major arc associated with \( \angle ACB \) can be named \( \overset{\frown}{ADB} \).

**KEY CONCEPT**

**Measuring Arcs**

The measure of a minor arc is the measure of its central angle. The expression \( m\overset{\frown}{AB} \) is read as “the measure of arc \( AB \).”

The measure of the entire circle is 360°. The measure of a major arc is the difference between 360° and the measure of the related minor arc. The measure of a semicircle is 180°.

**Example 1** Find measures of arcs

Find the measure of each arc of \( \odot P \), where \( \overline{RT} \) is a diameter.

- a. \( \overline{RS} \)
- b. \( \overline{RTS} \)
- c. \( \overline{RST} \)

**Solution**

- a. \( \overset{\frown}{RS} \) is a minor arc, so \( m\overset{\frown}{RS} = m\angle RPS = 110° \).
- b. \( \overset{\frown}{RTS} \) is a major arc, so \( m\overset{\frown}{RTS} = 360° - 110° = 250° \).
- c. \( \overset{\frown}{RT} \) is a diameter, so \( \overset{\frown}{RST} \) is a semicircle, and \( m\overset{\frown}{RST} = 180° \).
**ADJACENT ARCS** Two arcs of the same circle are *adjacent* if they have a common endpoint. You can add the measures of two adjacent arcs.

---

**POSTULATE 23** **Arc Addition Postulate**

The measure of an arc formed by two adjacent arcs is the sum of the measures of the two arcs.

---

**Example 2** Find measures of arcs

**SURVEY** A recent survey asked teenagers if they would rather meet a famous musician, athlete, actor, inventor, or other person. The results are shown in the circle graph. Find the indicated arc measures.

- **a.** $m\widehat{AC}$
- **b.** $m\widehat{ACD}$
- **c.** $m\widehat{ADC}$
- **d.** $m\widehat{EBD}$

**Solution**

- **a.** $m\widehat{AC} = m\widehat{AB} + m\widehat{BC} = 29^\circ + 108^\circ = 137^\circ$
- **b.** $m\widehat{ACD} = m\widehat{AC} + m\widehat{CD} = 137^\circ + 83^\circ = 220^\circ$
- **c.** $m\widehat{ADC} = 360^\circ - m\widehat{AC} = 360^\circ - 137^\circ = 223^\circ$
- **d.** $m\widehat{EBD} = 360^\circ - m\widehat{ED} = 360^\circ - 61^\circ = 299^\circ$

---

**GUIDED PRACTICE** for Examples 1 and 2

Identify the given arc as a *major arc*, *minor arc*, or *semicircle*, and find the measure of the arc.

1. $\widehat{TQ}$
2. $\widehat{QRT}$
3. $\widehat{TQR}$
4. $\widehat{QS}$
5. $\widehat{TS}$
6. $\widehat{RST}$

---

**CONGRUENT CIRCLES AND ARCS** Two circles are *congruent circles* if they have the same radius. Two arcs are *congruent arcs* if they have the same measure and they are arcs of the same circle or of congruent circles. If $\odot C$ is congruent to $\odot D$, then you can write $\odot C \equiv \odot D$. 
**Example 3** Identify congruent arcs

Tell whether the red arcs are congruent. Explain why or why not.

a. \( \overparen{CD} \cong \overparen{EF} \) because they are in the same circle and \( m\overarc{CD} = m\overarc{EF} \).

b. \( \overparen{RS} \) and \( \overparen{TU} \) have the same measure, but are not congruent because they are arcs of circles that are not congruent.

c. \( \overparen{VX} \cong \overparen{YZ} \) because they are in congruent circles and \( m\overarc{VX} = m\overarc{YZ} \).

**Guided Practice** for Example 3

Tell whether the red arcs are congruent. Explain why or why not.

7. \( \overparen{AB} \) and \( \overparen{CD} \)

8. \( \overparen{MN} \) and \( \overparen{PQ} \)

**Exercises**

1. **Vocabulary** Copy and complete: If \( \angle ACB \) and \( \angle DCE \) are congruent central angles of \( \odot C \), then \( \overparen{AB} \) and \( \overparen{DE} \) are ____________.

2. **Writing** What do you need to know about two circles to show that they are congruent? Explain.

**Measuring Arcs** \( \overparen{AC} \) and \( \overparen{BE} \) are diameters of \( \odot F \). Determine whether the arc is a minor arc, a major arc, or a semicircle of \( \odot F \). Then find the measure of the arc.

3. \( \overparen{BC} \)

4. \( \overparen{DC} \)

5. \( \overparen{DB} \)

6. \( \overparen{AE} \)

7. \( \overparen{AD} \)

8. \( \overparen{ABC} \)

9. \( \overparen{ACD} \)

10. \( \overparen{EAC} \)
11. ★ MULTIPLE CHOICE In the diagram, \( QS \) is a diameter of \( \odot P \). Which arc represents a semicircle?
   - A) \( QR \)
   - B) \( RQT \)
   - C) \( QRS \)
   - D) \( QRT \)

CONGRUENT ARCS Tell whether the red arcs are congruent. Explain why or why not.

12. \( \text{CONGRUENT ARCS} \) Tell whether the red arcs are congruent. Explain why or why not.

13. \( \text{CONGRUENT ARCS} \) Tell whether the red arcs are congruent. Explain why or why not.

14. \( \text{CONGRUENT ARCS} \) Tell whether the red arcs are congruent. Explain why or why not.

15. ERROR ANALYSIS Explain what is wrong with the statement.

16. ARCS Two diameters of \( \odot P \) are \( AB \) and \( CD \). If \( m\overarc{AD} = 20^\circ \), find \( m\overarc{ACD} \) and \( m\overarc{AC} \).

17. ★ MULTIPLE CHOICE \( \odot P \) has a radius of 3 and \( AB \) has a measure of 90°. What is the length of \( AB \)?
   - A) \( 3\sqrt{2} \)
   - B) \( 3\sqrt{3} \)
   - C) 6
   - D) 9

18. ★ SHORT RESPONSE On \( \odot C \), \( m\overarc{EF} = 100^\circ \), \( m\overarc{FG} = 120^\circ \), and \( m\overarc{EFG} = 220^\circ \). If \( H \) is on \( \odot C \) so that \( m\overarc{GH} = 150^\circ \), explain why \( H \) must be on \( EF \).

19. REASONING In \( \odot R \), \( m\overarc{AB} = 60^\circ \), \( m\overarc{BC} = 25^\circ \), \( m\overarc{CD} = 70^\circ \), and \( m\overarc{DE} = 20^\circ \). Find two possible values for \( m\overarc{AE} \).

20. CHALLENGE In the diagram shown, \( \overline{PQ} \perp \overline{AB} \), \( QA \) is tangent to \( \odot P \), and \( m\overarc{AVB} = 60^\circ \).
   What is \( m\overarc{AUB} \)?

21. CHALLENGE In the coordinate plane shown, \( C \) is at the origin. Find the following arc measures on \( \odot C \).
   a. \( m\overarc{BD} \)
   b. \( m\overarc{AD} \)
   c. \( m\overarc{AB} \)
22. BRIDGES The deck of a bascule bridge creates an arc when it is moved from the closed position to the open position. Find the measure of the arc.

23. DARTS On a regulation dartboard, the outermost circle is divided into twenty congruent sections. What is the measure of each arc in this circle?

24. ★ EXTENDED RESPONSE A surveillance camera is mounted on a corner of a building. It rotates clockwise and counterclockwise continuously between Wall A and Wall B at a rate of $10^\circ$ per minute.
   a. What is the measure of the arc surveyed by the camera?
   b. How long does it take the camera to survey the entire area once?
   c. If the camera is at an angle of $85^\circ$ from Wall B while rotating counterclockwise, how long will it take for the camera to return to that same position?
   d. The camera is rotating counterclockwise and is $50^\circ$ from Wall A. Find the location of the camera after 15 minutes.

25. CHALLENGE A clock with hour and minute hands is set to 1:00 P.M.
   a. After 20 minutes, what will be the measure of the minor arc formed by the hour and minute hands?
   b. At what time before 2:00 P.M., to the nearest minute, will the hour and minute hands form a diameter?
10.3 Apply Properties of Chords

**Key Vocabulary**
- **chord**, p. 651
- **arc**, p. 659
- **semicircle**, p. 659

Recall that a **chord** is a segment with endpoints on a circle. Because its endpoints lie on the circle, any chord divides the circle into two arcs. A diameter divides a circle into two semicircles. Any other chord divides a circle into a minor arc and a major arc.

**THEOREM**

**Theorem 10.3**
In the same circle, or in congruent circles, two minor arcs are congruent if and only if their corresponding chords are congruent.

*Proof: Exs. 27–28, p. 669*

\[ AB = CD \text{ if and only if } AB \parallel CD. \]

**Example 1**

**Use congruent chords to find an arc measure**

In the diagram, \( O \cong O \), \( FG \cong JK \), and \( m\angle JK = 80^\circ \). Find \( m\angle FG \).

**Solution**

Because \( FG \) and \( JK \) are congruent chords in congruent circles, the corresponding minor arcs \( FG \) and \( JK \) are congruent.

So, \( m\angle FG = m\angle JK = 80^\circ \).

**Guided Practice**

Use the diagram of \( C \).

1. If \( m\angle AB = 110^\circ \), find \( m\angle BC \).
2. If \( m\angle AC = 150^\circ \), find \( m\angle AB \).
**THEOREMS**

**Theorem 10.4**

If one chord is a perpendicular bisector of another chord, then the first chord is a diameter.

If $QS$ is a perpendicular bisector of $TR$, then $QS$ is a diameter of the circle.

*Proof:* Ex. 31, p. 670

**Theorem 10.5**

If a diameter of a circle is perpendicular to a chord, then the diameter bisects the chord and its arc.

If $EG$ is a diameter and $EG \perp DF$, then $HD \equiv HF$ and $GD \equiv GF$.

*Proof:* Ex. 32, p. 670

**Example 2** Use perpendicular bisectors

**Gardening** Three bushes are arranged in a garden as shown. Where should you place a sprinkler so that it is the same distance from each bush?

**Solution**

1. **Step 1**
   - Label the bushes $A, B$, and $C$, as shown. Draw segments $AB$ and $BC$.

2. **Step 2**
   - Draw the perpendicular bisectors of $AB$ and $BC$. By Theorem 10.4, these are diameters of the circle containing $A, B$, and $C$.

3. **Step 3**
   - Find the point where these bisectors intersect. This is the center of the circle through $A, B$, and $C$, and so it is equidistant from each point.
**Example 3**  Use a diameter

Use the diagram of \( \bigcirc E \) to find the length of \( \overline{AC} \). Tell what theorem you use.

**Solution**

Diameter \( \overline{BD} \) is perpendicular to \( \overline{AC} \). So, by Theorem 10.5, \( \overline{BD} \) bisects \( \overline{AC} \), and \( CF = AF \). Therefore, \( AC = 2(AF) = 2(7) = 14 \).

---

**Guided Practice** for Examples 2 and 3

Find the measure of the indicated arc in the diagram.

3. \( \overparen{CD} \)
4. \( \overparen{DE} \)
5. \( \overparen{CE} \)

---

**Theorem**

**Theorem 10.6**

In the same circle, or in congruent circles, two chords are congruent if and only if they are equidistant from the center.

**Proof:** Ex. 33, p. 670

\[ \overline{AB} = \overline{CD} \text{ if and only if } EF = EG. \]

---

**Example 4**  Use Theorem 10.6

In the diagram of \( \bigcirc C \), \( QR = ST = 16 \). Find \( CU \).

**Solution**

Chords \( \overline{QR} \) and \( \overline{ST} \) are congruent, so by Theorem 10.6 they are equidistant from \( C \). Therefore, \( CU = CV \).

\[ CU = CV \quad \text{Use Theorem 10.6.} \]

\[ 2x = 5x - 9 \quad \text{Substitute.} \]

\[ x = 3 \quad \text{Solve for } x. \]

So, \( CU = 2x = 2(3) = 6 \).

---

**Guided Practice** for Example 4

In the diagram in Example 4, suppose \( ST = 32 \), and \( CU = CV = 12 \). Find the given length.

6. \( QR \)
7. \( QU \)
8. The radius of \( \bigcirc C \)
1. **Vocabulary** Describe what it means to *bisect* an arc.

2. ★ **Writing** Two chords of a circle are perpendicular and congruent. Does one of them have to be a diameter? *Explain* your reasoning.

**Finding Arc Measures** Find the measure of the red arc or chord in $\odot C$.

3. 4.

5. 6.

**Algebra** Find the value of $x$ in $\odot Q$. *Explain* your reasoning.

7.

8.

9.

10.

11.

**Reasoning** In Exercises 12–14, what can you conclude about the diagram shown? State a theorem that justifies your answer.

12.

13.

14.

15. ★ **Multiple Choice** In the diagram of $\odot R$, which congruence relation is not necessarily true?

   - $\overline{PQ} \cong \overline{QN}$
   - $\overline{NL} \cong \overline{LP}$
   - $\overline{MN} \cong \overline{MP}$
   - $\overline{PN} \cong \overline{PL}$
16. **ERROR ANALYSIS** Explain what is wrong with the diagram of \( \odot P \).

17. **ERROR ANALYSIS** Explain why the congruence statement is wrong.

**IDENTIFYING DIAMETERS** Determine whether \( AB \) is a diameter of the circle. Explain your reasoning.

18. ![Diagram 1](image1)

19. ![Diagram 2](image2)

20. ![Diagram 3](image3)

21. **REASONING** In the diagram of semicircle \( BCQ \), \( PC \equiv AB \) and \( mAC = 30^\circ \). Explain how you can conclude that \( \triangle ADC \equiv \triangle BDC \).

22. ★ **WRITING** Theorem 10.4 is nearly the converse of Theorem 10.5.
   a. Write the converse of Theorem 10.5. Explain how it is different from Theorem 10.4.
   b. Copy the diagram of \( \odot C \) and draw auxiliary segments \( PC \) and \( RC \). Use congruent triangles to prove the converse of Theorem 10.5.
   c. Use the converse of Theorem 10.5 to show that \( QP = QR \) in the diagram of \( \odot C \).

23. ★ **ALGEBRA** In \( \odot P \) below, \( AC, BC \), and all arcs have integer measures. Show that \( x \) must be even.

24. **CHALLENGE** In \( \odot P \) below, the lengths of the parallel chords are 20, 16, and 12. Find \( mAB \).
25. **LOGO DESIGN** The owner of a new company would like the company logo to be a picture of an arrow inscribed in a circle, as shown. For symmetry, she wants $\overline{AB}$ to be congruent to $\overline{BC}$. How should $\overline{AB}$ and $\overline{BC}$ be related in order for the logo to be exactly as desired?

26. ★ **OPEN-ENDED MATH** In the cross section of the submarine shown, the control panels are parallel and the same length. *Explain* two ways you can find the center of the cross section.

27. **PROVING THEOREM 10.3** In Exercises 27 and 28, prove Theorem 10.3.
   27. **GIVEN** $\overline{AB}$ and $\overline{CD}$ are congruent chords.
   **PROVE** $\overline{AB} \cong \overline{CD}$
   28. **GIVEN** $\overline{AB}$ and $\overline{CD}$ are chords and $\overline{AB} \cong \overline{CD}$.
   **PROVE** $\overline{AB} = \overline{CD}$

29. **CHORD LENGTHS** Make and prove a conjecture about chord lengths.
   a. Sketch a circle with two noncongruent chords. Is the *longer* chord or the *shorter* chord closer to the center of the circle? Repeat this experiment several times.
   b. Form a conjecture related to your experiment in part (a).
   c. Use the Pythagorean Theorem to prove your conjecture.

30. **MULTI-STEP PROBLEM** If a car goes around a turn too quickly, it can leave tracks that form an arc of a circle. By finding the radius of the circle, accident investigators can estimate the speed of the car.
   a. To find the radius, choose points $A$ and $B$ on the tire marks. Then find the midpoint $C$ of $\overline{AB}$. Measure $\overline{CD}$, as shown. Find the radius $r$ of the circle.
   b. The formula $S = 3.86\sqrt{fr}$ can be used to estimate a car’s speed in miles per hours, where $f$ is the *coefficient of friction* and $r$ is the radius of the circle in feet. The coefficient of friction measures how slippery a road is. If $f = 0.7$, estimate the car’s speed in part (a).
PROVING THEOREMS 10.4 AND 10.5  Write proofs.

31. GIVEN \( \overline{QS} \) is the perpendicular bisector of \( \overline{RT} \).
   PROVE \( \overline{QS} \) is a diameter of \( \odot L \).

   Plan for Proof  Use indirect reasoning. Assume center \( L \) is not on \( QS \). Prove that \( \triangle RLP \cong \triangle TLP \), so \( PL \perp RT \). Then use the Perpendicular Postulate.

32. GIVEN \( \overline{EG} \) is a diameter of \( \odot L \).
   PROVE \( \overline{CD} \cong \overline{CF}, \overline{DG} \cong \overline{FG} \)

   Plan for Proof  Draw \( LD \) and \( LF \). Use congruent triangles to show \( \overline{CD} \cong \overline{CF} \) and \( \angle DLG \cong \angle FLG \). Then show \( \overline{DG} \cong \overline{FG} \).

33. PROVING THEOREM 10.6  For Theorem 10.6, prove both cases of the biconditional. Use the diagram shown for the theorem on page 666.

34. CHALLENGE  A car is designed so that the rear wheel is only partially visible below the body of the car, as shown. The bottom panel is parallel to the ground. Prove that the point where the tire touches the ground bisects \( \overline{AB} \).

Mixed Review

35. The measures of the interior angles of a quadrilateral are 100°, 140°, \((x + 20)°\), and \((2x + 10)°\). Find the value of \( x \). (p. 507)

   Quadrilateral \( JKLM \) is a parallelogram. Graph \( \square JKLM \). Decide whether it is best described as a rectangle, a rhombus, or a square. (p. 552)

   36. \( J(-3, 5), K(2, 5), L(2, -1), M(-3, -1) \)  
   37. \( J(-5, 2), K(1, 1), L(2, -5), M(-4, -4) \)

Quiz for Lessons 10.1–10.3

Determine whether \( \overline{AB} \) is tangent to \( \odot C \). Explain your reasoning. (p. 651)

1. [Diagram]

2. [Diagram]

3. If \( m\angle FGC = 195° \), and \( m\angle EF = 80° \), find \( m\angle FG \) and \( m\angle EG \). (p. 659)

4. The points \( A, B, \) and \( D \) are on \( \odot C \), \( \overline{AB} \equiv \overline{BD} \), and \( m\angle ABD = 194° \). What is the measure of \( \overline{AB} \)? (p. 664)
10.4 Explore Inscribed Angles

**MATERIALS**
- compass
- straightedge
- protractor

**QUESTION**
How are inscribed angles related to central angles?

The vertex of a central angle is at the center of the circle. The vertex of an *inscribed angle* is on the circle, and its sides form chords of the circle.

**EXPLORE**
Construct inscribed angles of a circle

**STEP 1**
Draw a central angle

Use a compass to draw a circle. Label the center \( P \). Use a straightedge to draw a central angle. Label it \( \angle RPS \).

**STEP 2**
Draw points

Locate three points on \( \odot P \) in the exterior of \( \angle RPS \) and label them \( T, U, \) and \( V \).

**STEP 3**
Measure angles

Draw \( \angle RTS, \angle RUS, \) and \( \angle RVS \). These are called *inscribed angles*. Measure each angle.

**DRAW CONCLUSIONS**
Use your observations to complete these exercises

1. Copy and complete the table.

<table>
<thead>
<tr>
<th>Central angle</th>
<th>Inscribed angle 1</th>
<th>Inscribed angle 2</th>
<th>Inscribed angle 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>( \angle RPS )</td>
<td>( \angle RTS )</td>
<td>( \angle RUS )</td>
</tr>
<tr>
<td>Measure</td>
<td>?</td>
<td>?</td>
<td>?</td>
</tr>
</tbody>
</table>

2. Draw two more circles. Repeat Steps 1–3 using different central angles. Record the measures in a table similar to the one above.

3. Use your results to make a conjecture about how the measure of an inscribed angle is related to the measure of the corresponding central angle.
You used central angles of circles.

You will use inscribed angles of circles.

So you can take a picture from multiple angles, as in Example 4.

**Key Vocabulary**
- inscribed angle
- intercepted arc
- inscribed polygon
- circumscribed circle

An inscribed angle is an angle whose vertex is on a circle and whose sides contain chords of the circle. The arc that lies in the interior of an inscribed angle and has endpoints on the angle is called the intercepted arc of the angle.

**THEOREM**

**THEOREM 10.7 Measure of an Inscribed Angle Theorem**

The measure of an inscribed angle is one half the measure of its intercepted arc.

Proof: Exs. 31–33, p. 678

The proof of Theorem 10.7 in Exercises 31–33 involves three cases.

**EXAMPLE 1 Use inscribed angles**

Find the indicated measure in \( \odot P \).

**Solution**

a. \( m\angle T = \frac{1}{2} m\overset{⏜}{RS} = \frac{1}{2}(48^\circ) = 24^\circ \)

b. \( m\overset{⏜}{TQR} = 2m\angle R = 2 \cdot 50^\circ = 100^\circ \). Because \( \overset{⏜}{TQR} \) is a semicircle, \( m\overset{⏜}{Q} = 180^\circ - m\overset{⏜}{TQ} = 180^\circ - 100^\circ = 80^\circ \). So, \( m\overset{⏜}{QR} = 80^\circ \).
10.4 Use Inscribed Angles and Polygons

GUIDED PRACTICE for Examples 1, 2, and 3

Find the measure of the red arc or angle.

1. \( \overline{DH} \) and \( \angle HDG \).
2. \( \overline{TV} \) and \( \angle TVU \).
3. \( \overline{XZ} \) and \( \angle XZW \).
**THEOREM**

**THEOREM 10.9**

If a right triangle is inscribed in a circle, then the hypotenuse is a diameter of the circle. Conversely, if one side of an inscribed triangle is a diameter of the circle, then the triangle is a right triangle and the angle opposite the diameter is the right angle.

*Proof*: Ex. 35, p. 678

---

**EXEMPLARY USE**

**EXAMPLE 4** Use a circumscribed circle

**PHOTOGRAPHY** Your camera has a 90° field of vision and you want to photograph the front of a statue. You move to a spot where the statue is the only thing captured in your picture, as shown. You want to change your position. Where else can you stand so that the statue is perfectly framed in this way?

**Solution**

From Theorem 10.9, you know that if a right triangle is inscribed in a circle, then the hypotenuse of the triangle is a diameter of the circle. So, draw the circle that has the front of the statue as a diameter. The statue fits perfectly within your camera’s 90° field of vision from any point on the semicircle in front of the statue.

---

**GUIDED PRACTICE** for Example 4

**4. WHAT IF?** In Example 4, explain how to find locations if you want to frame the front and left side of the statue in your picture.
**INSCRIBED QUADRILATERAL** Only certain quadrilaterals can be inscribed in a circle. Theorem 10.10 describes these quadrilaterals.

**THEOREM**

**Theorem 10.10**

A quadrilateral can be inscribed in a circle if and only if its opposite angles are supplementary.

Proof: Ex. 30, p. 678; p. 938

---

**Example 5** Use Theorem 10.10

Find the value of each variable.

**Solution**

**a.** PQRS is inscribed in a circle, so opposite angles are supplementary.

\[ m\angle P + m\angle R = 180^\circ \quad m\angle Q + m\angle S = 180^\circ \]

\[ 75^\circ + y^\circ = 180^\circ \quad 80^\circ + x^\circ = 180^\circ \]

\[ y = 105 \quad x = 100 \]

**b.** JKLM is inscribed in a circle, so opposite angles are supplementary.

\[ m\angle J + m\angle L = 180^\circ \quad m\angle K + m\angle M = 180^\circ \]

\[ 2a^\circ + 2a^\circ = 180^\circ \quad 4b^\circ + 2b^\circ = 180^\circ \]

\[ 4a = 180 \quad 6b = 180 \]

\[ a = 45 \quad b = 30 \]

---

**Guided Practice** for Example 5

Find the value of each variable.

5.  

6.  

10.4 Use Inscribed Angles and Polygons
1. **VOCABULARY** Copy and complete: If a circle is circumscribed about a polygon, then the polygon is **inscribed** in the circle.

2. ★ **WRITING** Explain why the diagonals of a rectangle inscribed in a circle are diameters of the circle.

**INSCRIBED ANGLES** Find the indicated measure.

3. \( m\angle A \)

4. \( m\angle G \)

5. \( m\angle N \)

\[
\begin{align*}
A & \quad B \\
C & \quad D \\
84^\circ & \\
\end{align*}
\]

\[
\begin{align*}
F & \quad G \\
D & \quad E \\
120^\circ & \\
\end{align*}
\]

\[
\begin{align*}
L & \quad M \\
N & \quad O \\
160^\circ & \\
\end{align*}
\]

6. \( m\overline{RS} \)

7. \( m\overline{VU} \)

8. \( m\overline{WX} \)

\[
\begin{align*}
D & \quad E \\
F & \quad G \\
67^\circ & \\
\end{align*}
\]

\[
\begin{align*}
T & \quad U \\
V & \quad W \\
30^\circ & \\
\end{align*}
\]

\[
\begin{align*}
W & \quad X \\
Y & \quad Z \\
75^\circ & \\
\end{align*}
\]

9. **ERROR ANALYSIS** Describe the error in the diagram of \( \odot C \). Find two ways to correct the error.

**CONGRUENT ANGLES** Name two pairs of congruent angles.

10. \( \angle B \)

11. \( \angle J \)

12. \( \angle W \)

\[
\begin{align*}
A & \quad B \\
C & \quad D \\
\end{align*}
\]

\[
\begin{align*}
K & \quad L \\
J & \quad M \\
\end{align*}
\]

\[
\begin{align*}
X & \quad Y \\
W & \quad Z \\
\end{align*}
\]

**ALGEBRA** Find the values of the variables.

13. \( \angle R \)

14. \( \angle D \)

15. \( \angle J \)

\[
\begin{align*}
R & \quad S \\
T & \quad U \\
95^\circ & \\
\end{align*}
\]

\[
\begin{align*}
D & \quad E \\
F & \quad G \\
60^\circ & \\
\end{align*}
\]

\[
\begin{align*}
M & \quad N \\
K & \quad L \\
130^\circ & \\
\end{align*}
\]
16. ★ MULTIPLE CHOICE In the diagram, \( \angle ADC \) is a central angle and \( m\angle ADC = 60^\circ \). What is \( m\angle ABC \)?

A 15°  B 30°  C 60°  D 120°

17. INSCRIBED ANGLES In each star below, all of the inscribed angles are congruent. Find the measure of an inscribed angle for each star. Then find the sum of all the inscribed angles for each star.

a.  b.  c.

18. ★ MULTIPLE CHOICE What is the value of \( x \)?

A 5  B 10  C 13  D 15

19. PARALLELOGRAM Parallelogram \( QRST \) is inscribed in \( \odot C \). Find \( m\angle R \).

REASONING Determine whether the quadrilateral can always be inscribed in a circle. Explain your reasoning.

26. CHALLENGE In the diagram, \( \angle C \) is a right angle. If you draw the smallest possible circle through \( C \) and tangent to \( \overline{AB} \), the circle will intersect \( \overline{AC} \) at \( J \) and \( \overline{BC} \) at \( K \). Find the exact length of \( JK \).

10.4 Use Inscribed Angles and Polygons 677
29. ★ WRITING A right triangle is inscribed in a circle and the radius of the circle is given. Explain how to find the length of the hypotenuse.

30. PROVING THEOREM 10.10 Copy and complete the proof that opposite angles of an inscribed quadrilateral are supplementary.

**GIVEN** ▶ \( \odot C \) with inscribed quadrilateral \( DEFG \)

**PROVE** ▶ \( m\angle D + m\angle F = 180^\circ \), \( m\angle E + m\angle G = 180^\circ \).

By the Arc Addition Postulate, \( m\overset{rown}{EF} + \ ? = 360^\circ \) and \( m\overset{rown}{FDG} + m\overset{rown}{DEF} = 360^\circ \). Using the _?_ Theorem, \( m\overset{rown}{EDG} = 2m\angle F \), \( m\overset{rown}{EFG} = 2m\angle D \), \( m\overset{rown}{DEF} = 2m\angle G \), and \( m\overset{rown}{FGD} = 2m\angle E \). By the Substitution Property, \( 2m\angle D + \ ? = 360^\circ \), so _?_. Similarly, _?_.

PROVING THEOREM 10.7 If an angle is inscribed in \( \odot Q \), the center \( Q \) can be on a side of the angle, in the interior of the angle, or in the exterior of the angle. In Exercises 31–33, you will prove Theorem 10.7 for each of these cases.

31. **Case 1** Prove Case 1 of Theorem 10.7.

**GIVEN** ▶ \( \angle B \) is inscribed in \( \odot Q \). Let \( m\angle B = x^\circ \). Point \( Q \) lies on \( BC \).

**PROVE** ▶ \( m\angle B = \frac{1}{2}m\overset{rown}{AC} \)

**Plan for Proof** Show that \( \triangle AQB \) is isosceles. Use the Base Angles Theorem and the Exterior Angles Theorem to show that \( m\overset{rown}{AQC} = 2x^\circ \). Then, show that \( m\overset{rown}{AC} = 2x^\circ \). Solve for \( x \), and show that \( m\angle B = \frac{1}{2}m\overset{rown}{AC} \).

32. **Case 2** Use the diagram and auxiliary line to write GIVEN and PROVE statements for Case 2 of Theorem 10.7. Then write a plan for proof.

33. **Case 3** Use the diagram and auxiliary line to write GIVEN and PROVE statements for Case 3 of Theorem 10.7. Then write a plan for proof.

34. PROVING THEOREM 10.8 Write a paragraph proof of Theorem 10.8. First draw a diagram and write GIVEN and PROVE statements.

35. PROVING THEOREM 10.9 Theorem 10.9 is written as a conditional statement and its converse. Write a plan for proof of each statement.

36. ★ EXTENDED RESPONSE In the diagram, \( \odot C \) and \( \odot M \) intersect at \( B \), and \( AC \) is a diameter of \( \odot M \). Explain why \( AB \) is tangent to \( \odot C \).
**CHALLENGE** In Exercises 37 and 38, use the following information.

You are making a circular cutting board. To begin, you glue eight 1 inch by 2 inch boards together, as shown at the right. Then you draw and cut a circle with an 8 inch diameter from the boards.

37. $FH$ is a diameter of the circular cutting board. Write a proportion relating $GJ$ and $JH$. State a theorem to justify your answer.

38. Find $FJ$, $JH$, and $JG$. What is the length of the cutting board seam labeled $GK$?

39. **SPACE SHUTTLE** To maximize thrust on a NASA space shuttle, engineers drill an 11-point star out of the solid fuel that fills each booster. They begin by drilling a hole with radius 2 feet, and they would like each side of the star to be 1.5 feet. Is this possible if the fuel cannot have angles greater than $45^\circ$ at its points?

**MIXED REVIEW**

Find the approximate length of the hypotenuse. Round your answer to the nearest tenth. (p. 433)

40. $\triangle$ with side lengths 55, 60, and $x$

41. $\triangle$ with side lengths 82, 38, and $x$

42. $\triangle$ with side lengths 26, 16, and $x$

Graph the reflection of the polygon in the given line. (p. 589)

43. $y$-axis

44. $x = 3$

45. $y = 2$

Sketch the image of $A(3, -4)$ after the described glide reflection. (p. 608)

46. Translation: $(x, y) \rightarrow (x, y - 2)$
   Reflection: in the $y$-axis

47. Translation: $(x, y) \rightarrow (x + 1, y + 4)$
   Reflection: in $y = 4x$
Before

You found the measures of angles formed on a circle.

Now

You will find the measures of angles inside or outside a circle.

Why

So you can determine the part of Earth seen from a hot air balloon, as in Ex. 25.

Key Vocabulary

• chord, p. 651
• secant, p. 651
• tangent, p. 651

You know that the measure of an inscribed angle is half the measure of its intercepted arc. This is true even if one side of the angle is tangent to the circle.

THEOREM

For Your Notebook

THEOREM 10.11

If a tangent and a chord intersect at a point on a circle, then the measure of each angle formed is one half the measure of its intercepted arc.

Proof: Ex. 27, p. 685

\[ m \angle 1 = \frac{1}{2} m \overline{AB} \quad m \angle 2 = \frac{1}{2} m \overline{BCA} \]

EXAMPLE 1

Find angle and arc measures

Line \( m \) is tangent to the circle. Find the measure of the red angle or arc.

a. \( m \overline{AB} = 130° \)

b. \( m \overline{JL} = 125° \)

Solution

a. \( m \angle 1 = \frac{1}{2} (130°) = 65° \)

b. \( m \overline{KJL} = 2(125°) = 250° \)

GUIDED PRACTICE for Example 1

Find the indicated measure.

1. \( m \angle 1 \)

2. \( m \overline{RST} \)

3. \( m \overline{XY} \)
**INTERSECTING LINES AND CIRCLES** If two lines intersect a circle, there are three places where the lines can intersect.

You can use Theorems 10.12 and 10.13 to find measures when the lines intersect inside or outside the circle.

**THEOREMS**

\[ m\angle 1 = \frac{1}{2} (m\overset{⏜}{BC} - m\overset{⏜}{AC}) \]

\[ m\angle 2 = \frac{1}{2} (m\overset{⏜}{PQR} - m\overset{⏜}{PR}) \]

\[ m\angle 3 = \frac{1}{2} (m\overset{⏜}{XY} - m\overset{⏜}{WZ}) \]

*Proof:* Ex. 29, p. 685

**EXAMPLE 2** Find an angle measure inside a circle

Find the value of \( x \).

**Solution**

The chords \( \overline{JL} \) and \( \overline{KM} \) intersect inside the circle.

\[ x^\circ = \frac{1}{2} (m\overset{⏜}{JM} + m\overset{⏜}{LK}) \] Use Theorem 10.12.

\[ x^\circ = \frac{1}{2} (130^\circ + 156^\circ) \] Substitute.

\[ x = 143 \] Simplify.
EXAMPLE 3  Find an angle measure outside a circle

Find the value of $x$.

Solution

The tangent $\overrightarrow{CD}$ and the secant $\overrightarrow{CB}$ intersect outside the circle.

$$m\angle BCD = \frac{1}{2}(m\overarc{AD} - m\overarc{BD})$$  Use Theorem 10.13.

$$x^\circ = \frac{1}{2}(178^\circ - 76^\circ)$$  Substitute.

$$x = 51$$  Simplify.

EXAMPLE 4  Solve a real-world problem

SCIENCE  The Northern Lights are bright flashes of colored light between 50 and 200 miles above Earth. Suppose a flash occurs 150 miles above Earth. What is the measure of arc $BD$, the portion of Earth from which the flash is visible? (Earth’s radius is approximately 4000 miles.)

Solution

Because $\overrightarrow{CB}$ and $\overrightarrow{CD}$ are tangents, $\overrightarrow{CB} \perp \overrightarrow{AB}$ and $\overrightarrow{CD} \perp \overrightarrow{AD}$. Also, $\overarc{BC} \equiv \overarc{DC}$ and $\overarc{CA} \equiv \overarc{CA}$. So, $\triangle ABC \equiv \triangle ADC$ by the Hypotenuse-Leg Congruence Theorem, and $\angle BCA \equiv \angle DCA$. Solve right $\triangle CBA$ to find that $m\angle BCA \approx 74.5^\circ$.

So, $m\angle BCD = 2(74.5^\circ) = 149^\circ$. Let $m\overarc{BD} = x^\circ$.

$$m\angle BCD = \frac{1}{2}(m\overarc{DEB} - m\overarc{BD})$$  Use Theorem 10.13.

$$149^\circ \approx \frac{1}{2}[(360^\circ - x^\circ) - x^\circ]$$  Substitute.

$$x \approx 31$$  Solve for $x$.

The measure of the arc from which the flash is visible is about 31°.

GUIDED PRACTICE for Examples 2, 3, and 4

Find the value of the variable.

4.  

5.  

6.  

FPNFUSZ at classzone.com
1. **VOCABULARY** Copy and complete: The points $A$, $B$, $C$, and $D$ are on a circle and $\overline{AB}$ intersects $\overline{CD}$ at $P$. If $m\angle APC = \frac{1}{2}(m\angle BD - m\angle AC)$, then $P$ is ? (inside, on, or outside) the circle.

2. ★ **WRITING** What does it mean in Theorem 10.12 if $m\angle AB = 0^\circ$? Is this consistent with what you learned in Lesson 10.4? Explain your answer.

**FINDING MEASURES** Line $t$ is tangent to the circle. Find the indicated measure.

3. $m\overline{AB}$

![Diagram](image)

4. $m\overline{DEF}$

![Diagram](image)

5. $m\angle 1$

![Diagram](image)

6. ★ **MULTIPLE CHOICE** The diagram at the right is not drawn to scale. $\overline{AB}$ is any chord that is not a diameter of the circle. Line $m$ is tangent to the circle at point $A$. Which statement must be true?

- A) $x \leq 90$
- B) $x \geq 90$
- C) $x = 90$
- D) $x \neq 90$

**FINDING MEASURES** Find the value of $x$.

7. ![Diagram](image)

8. ![Diagram](image)

9. ![Diagram](image)

10. ![Diagram](image)

11. ![Diagram](image)

12. ![Diagram](image)

13. ★ **MULTIPLE CHOICE** In the diagram, $t$ is tangent to the circle at $P$. Which relationship is not true?

- A) $m\angle 1 = 110^\circ$
- B) $m\angle 2 = 70^\circ$
- C) $m\angle 3 = 80^\circ$
- D) $m\angle 4 = 90^\circ$
14. **ERROR ANALYSIS** Describe the error in the diagram below.

15. ★ **SHORT RESPONSE** In the diagram at the right, \( PL \) is tangent to the circle and \( KJ \) is a diameter. What is the range of possible angle measures of \( \angle LPJ \)? Explain.

16. **CONCENTRIC CIRCLES** The circles below are concentric.
   a. Find the value of \( x \).
   b. Express \( c \) in terms of \( a \) and \( b \).

17. **INSCRIBED CIRCLE** In the diagram, the circle is inscribed in \( \triangle PQR \). Find \( m\angle EF \), \( m\angle FG \), and \( m\angle GE \).

18. ★ **ALGEBRA** In the diagram, \( BA \) is tangent to \( \odot E \). Find \( m\angle CD \).

19. ★ **WRITING** Points \( A \) and \( B \) are on a circle and \( t \) is a tangent line containing \( A \) and another point \( C \).
   a. Draw two different diagrams that illustrate this situation.
   b. Write an equation for \( m\angle AB \) in terms of \( m\angle BAC \) for each diagram.
   c. When will these equations give the same value for \( m\angle AB \)?

**CHALLENGE** Find the indicated measure(s).

20. Find \( m\angle WP \) if \( m\angle WZY = 200^\circ \).

21. Find \( m\angle AB \) and \( m\angle ED \).
**VIDEO RECORDING** In the diagram at the right, television cameras are positioned at $A$, $B$, and $C$ to record what happens on stage. The stage is an arc of $\odot A$. Use the diagram for Exercises 22–24.

22. Find $m\angle A$, $m\angle B$, and $m\angle C$.

23. The wall is tangent to the circle. Find $x$ without using the measure of $\angle C$.

24. You would like Camera $B$ to have a $30^\circ$ view of the stage. Should you move the camera closer or further away from the stage? *Explain.*

25. **HOT AIR BALLOON** You are flying in a hot air balloon about 1.2 miles above the ground. Use the method from Example 4 to find the measure of the arc that represents the part of Earth that you can see. The radius of Earth is about 4000 miles.

26. **★ EXTENDED RESPONSE** A cart is resting on its handle. The angle between the handle and the ground is $14^\circ$ and the handle connects to the center of the wheel. What are the measures of the arcs of the wheel between the ground and the cart? *Explain.*

27. **PROVING THEOREM 10.11** The proof of Theorem 10.11 can be split into three cases. The diagram at the right shows the case where $\overline{AB}$ contains the center of the circle. Use Theorem 10.1 to write a paragraph proof for this case. What are the other two cases? (*Hint: See Exercises 31–33 on page 678.*) Draw a diagram and write plans for proof for these cases.

28. **PROVING THEOREM 10.12** Write a proof of Theorem 10.12.

Given: Chords $\overline{AC}$ and $\overline{BD}$ intersect.

Prove: $m\angle 1 = \frac{1}{2}(m\angle DC + m\angle AB)$

29. **PROVING THEOREM 10.13** Use the diagram at the right to prove Theorem 10.13 for the case of a tangent and a secant. Draw $\overline{BC}$. *Explain* how to use the Exterior Angle Theorem in the proof of this case. Then copy the diagrams for the other two cases from page 681, draw appropriate auxiliary segments, and write plans for proof for these cases.
30. **PROOF**  Q and R are points on a circle. P is a point outside the circle. \( \overline{PQ} \) and \( \overline{PR} \) are tangents to the circle. Prove that \( \overline{QR} \) is not a diameter.

31. **CHALLENGE**  A block and tackle system composed of two pulleys and a rope is shown at the right. The distance between the centers of the pulleys is 113 centimeters and the pulleys each have a radius of 15 centimeters. What percent of the circumference of the bottom pulley is not touching the rope?

---

### MIXED REVIEW

Classify the dilation and find its scale factor. *(p. 626)*

![Dilation Diagram]

32. \( \triangle ABC \)
33. \( \triangle DEF \)

Use the quadratic formula to solve the equation. Round decimal answers to the nearest hundredth. *(pp. 641, 883)*

34. \( x^2 + 7x + 6 = 0 \)
35. \( x^2 - x - 12 = 0 \)
36. \( x^2 + 16 = 8x \)
37. \( x^2 + 6x = 10 \)
38. \( 5x + 9 = 2x^2 \)
39. \( 4x^2 + 3x - 11 = 0 \)

### QUIZ for Lessons 10.4–10.5

Find the value(s) of the variable(s).

1. \( m\angle ABC = z^\circ \) *(p. 672)*
2. \( m\angle GHE = z^\circ \) *(p. 672)*
3. \( m\angle JKL = z^\circ \) *(p. 672)*

![Angle Diagrams]

4. \( x^\circ \)
5. \( y^\circ \)
6. \( z^\circ \)

7. **MOUNTAIN**  You are on top of a mountain about 1.37 miles above sea level. Find the measure of the arc that represents the part of Earth that you can see. Earth’s radius is approximately 4000 miles. *(p. 680)*
Lessons 10.1–10.5

1. **MULTI-STEP PROBLEM** An official stands 2 meters from the edge of a discus circle and 3 meters from a point of tangency.

   a. Find the radius of the discus circle.
   b. How far is the official from the center of the discus circle?

2. **GRIDDED ANSWER** In the diagram, \( XY \parallel YZ \) and \( m\angle XQZ = 199^\circ \). Find \( m\angle Y \) in degrees.

3. **MULTI-STEP PROBLEM** A wind turbine has three equally spaced blades that are each 131 feet long.

   a. What is the measure of the arc between any two blades?
   b. The highest point reached by a blade is 361 feet above the ground. Find the distance \( x \) between the lowest point reached by the blades and the ground.
   c. What is the distance \( y \) from the tip of one blade to the tip of another blade? Round your answer to the nearest tenth.

4. **EXTENDED RESPONSE** The Navy Pier Ferris Wheel in Chicago is 150 feet tall and has 40 spokes.

   a. Find the measure of the angle between any two spokes.
   b. Two spokes form a central angle of 72°. How many spokes are between the two spokes?
   c. The bottom of the wheel is 10 feet from the ground. Find the diameter and radius of the wheel. **Explain** your reasoning.

5. **OPEN-ENDED** Draw a quadrilateral inscribed in a circle. Measure two consecutive angles. Then find the measures of the other two angles algebraically.

6. **MULTI-STEP PROBLEM** Use the diagram.

   a. Find the value of \( x \).
   b. Find the measures of the other three angles formed by the intersecting chords.

7. **SHORT RESPONSE** Use the diagram to show that \( m\angle DA = y^\circ - x^\circ \).
10.6 Investigate Segment Lengths

**MATERIALS** • graphing calculator or computer

**QUESTION** What is the relationship between the lengths of segments in a circle?

You can use geometry drawing software to find a relationship between the segments formed by two intersecting chords.

**EXPLORE** Draw a circle with two chords

**STEP 1** Draw a circle and choose four points on the circle. Label them $A$, $B$, $C$, and $D$.

**STEP 2** Draw secants $\overline{AC}$ and $\overline{BD}$ and label the intersection point $E$.

**STEP 3** Measure segments Note that $\overline{AC}$ and $\overline{BD}$ are chords. Measure $\overline{AE}$, $\overline{CE}$, $\overline{BE}$, and $\overline{DE}$ in your diagram.

**STEP 4** Perform calculations Calculate the products $\overline{AE} \cdot \overline{CE}$ and $\overline{BE} \cdot \overline{DE}$.

**DRAW CONCLUSIONS** Use your observations to complete these exercises

1. What do you notice about the products you found in Step 4?
2. Drag points $A$, $B$, $C$, and $D$, keeping point $E$ inside the circle. What do you notice about the new products from Step 4?
3. Make a conjecture about the relationship between the four chord segments.
4. Let $\overline{PQ}$ and $\overline{RS}$ be two chords of a circle that intersect at the point $T$. If $\overline{PT} = 9$, $\overline{QT} = 5$, and $\overline{RT} = 15$, use your conjecture from Exercise 3 to find $\overline{ST}$. 

---

688 Chapter 10 Properties of Circles
10.6 Find Segment Lengths in Circles

**Before**
You found angle and arc measures in circles.

**Now**
You will find segment lengths in circles.

**Why?**
So you can find distances in astronomy, as in Example 4.

**Key Vocabulary**
- segments of a chord
- secant segment
- external segment

When two chords intersect in the interior of a circle, each chord is divided into two segments that are called **segments of the chord**.

---

**THEOREM**

**THEOREM 10.14 Segments of Chords Theorem**

If two chords intersect in the interior of a circle, then the product of the lengths of the segments of one chord is equal to the product of the lengths of the segments of the other chord.

*Proof:* Ex. 21, p. 694

**Plan for Proof** To prove Theorem 10.14, construct two similar triangles. The lengths of the corresponding sides are proportional, so \( \frac{EA}{ED} = \frac{EC}{EB} \). By the Cross Products Property, \( EA \cdot EB = EC \cdot ED \).

---

**EXAMPLE 1** Find lengths using Theorem 10.14

**ALGEBRA** Find \( ML \) and \( JK \).

**Solution**

\[
NK \cdot NJ = NL \cdot NM
\]

\[
x \cdot (x + 4) = (x + 1) \cdot (x + 2)
\]

\[
x^2 + 4x = x^2 + 3x + 2
\]

\[
4x = 3x + 2
\]

\[
x = 2
\]

Find \( ML \) and \( JK \) by substitution.

\[
ML = (x + 2) + (x + 1)
\]

\[
= 2 + 2 + 2 + 1
\]

\[
= 7
\]

\[
JK = x + (x + 4)
\]

\[
= 2 + 2 + 4
\]

\[
= 8
\]
**TANGENTS AND SECANTS** A **secant segment** is a segment that contains a chord of a circle, and has exactly one endpoint outside the circle. The part of a secant segment that is outside the circle is called an **external segment**.

**THEOREM**

**THEOREM 10.15 Segments of Secants Theorem**

If two secant segments share the same endpoint outside a circle, then the product of the lengths of one secant segment and its external segment equals the product of the lengths of the other secant segment and its external segment.

*Proof: Ex. 25, p. 694*

**EXAMPLE 2 Standardized Test Practice**

What is the value of \(x\)?

- **A** 6
- **B** \(\frac{22}{3}\)
- **C** 8
- **D** 9

**Solution**

\[ RQ \cdot RP = RS \cdot RT \]

Use Theorem 10.15.

\[ 4 \cdot (5 + 4) = 3 \cdot (x + 3) \]

Substitute.

\[ 36 = 3x + 9 \]

Simplify.

\[ 9 = x \]

Solve for \(x\).

The correct answer is **D**. **A**  **B**  **C**  **D**

**GUIDED PRACTICE** for Examples 1 and 2

Find the value(s) of \(x\).

1. \[ x \quad 6 \]
2. \[ x \quad 6 \]
3. \[ x + 1 \quad x - 1 \]
**THEOREM 10.16 Segments of Secants and Tangents Theorem**

If a secant segment and a tangent segment share an endpoint outside a circle, then the product of the lengths of the secant segment and its external segment equals the square of the length of the tangent segment.

*Proof:* Ex. 26, p. 694

**EXAMPLE 3** Find lengths using Theorem 10.16

Use the figure at the right to find $RS$.

**Solution**

\[ RQ^2 = RS \cdot RT \]

\[ 16^2 = x \cdot (x + 8) \]

\[ 256 = x^2 + 8x \]

\[ 0 = x^2 + 8x - 256 \]

\[ x = \frac{-8 \pm \sqrt{8^2 - 4(1)(-256)}}{2(1)} \]

\[ x = -4 \pm 4\sqrt{17} \]

Use the positive solution, because lengths cannot be negative.

\[ So, x = -4 + 4\sqrt{17} \approx 12.49, \text{ and } RS \approx 12.49. \]

**GUIDED PRACTICE** for Example 3

Find the value of $x$.

4. \[ \begin{array}{c}
\text{3} \\
\text{1} \\
\text{x}
\end{array} \]

5. \[ \begin{array}{c}
\text{7} \\
x
\end{array} \]

6. \[ \begin{array}{c}
\text{10} \\
x
\end{array} \]

Determine which theorem you would use to find $x$. Then find the value of $x$.

7. \[ \begin{array}{c}
15 \\
x
\end{array} \]

8. \[ \begin{array}{c}
8 \\
x
\end{array} \]

9. \[ \begin{array}{c}
22 \\
x
\end{array} \]

10. In the diagram for Theorem 10.16, what must be true about $EC$ compared to $EA$?
Chapter 10  Properties of Circles

1. VOCABULARY Copy and complete: The part of the secant segment that is outside the circle is called a(n) ? .

2. ★ WRITING Explain the difference between a tangent segment and a secant segment.

FINDING SEGMENT LENGTHS Find the value of x.

3. \[ \frac{10}{x} = \frac{12}{6} \]

4. \[ \frac{x - 3}{10} = \frac{18}{9} \]

5. \[ \frac{x}{8} = \frac{6}{x + 8} \]

Example 4  Solve a real-world problem

SCIENCE  Tethys, Calypso, and Telesto are three of Saturn’s moons. Each has a nearly circular orbit 295,000 kilometers in radius. The Cassini-Huygens spacecraft entered Saturn’s orbit in July 2004. Telesto is on a point of tangency. Find the distance DB from Cassini to Tethys.

Solution

\[ DC \cdot DB = AD^2 \] Use Theorem 10.16.

\[ 83,000 \cdot DB = 203,000^2 \] Substitute.

\[ DB \approx 496,494 \] Solve for DB.

Cassini is about 496,494 kilometers from Tethys.

Guided Practice for Example 4

11. Why is it appropriate to use the approximation symbol \( \approx \) in the last two steps of the solution to Example 4?
FINDING SEGMENT LENGTHS Find the value of $x$.

10. ERROR ANALYSIS Describe and correct the error in finding $CD$.

FINDING SEGMENT LENGTHS Find the value of $x$. Round to the nearest tenth.

16. ★ MULTIPLE CHOICE Which of the following is a possible value of $x$?

19. CHALLENGE In the figure, $AB = 12$, $BC = 8$, $DE = 6$, $PD = 4$, and $A$ is a point of tangency. Find the radius of $\odot P$. 

10.6 Find Segment Lengths in Circles 693
20. ARCHAEOLOGY The circular stone mound in Ireland called Newgrange has a diameter of 250 feet. A passage 62 feet long leads toward the center of the mound. Find the perpendicular distance $x$ from the end of the passage to either side of the mound.

22. WELLS In the diagram of the water well, $AB$, $AD$, and $DE$ are known. Write an equation for $BC$ using these three measurements.

23. PROOF Use Theorem 10.1 to prove Theorem 10.16 for the special case when the secant segment contains the center of the circle.

24. ★ SHORT RESPONSE You are designing an animated logo for your website. Sparkles leave point $C$ and move to the circle along the segments shown so that all of the sparkles reach the circle at the same time. Sparkles travel from point $C$ to point $D$ at 2 centimeters per second. How fast should sparkles move from point $C$ to point $N$? Explain.

25. PROVING THEOREM 10.15 Use the plan to prove Theorem 10.15.

26. PROVING THEOREM 10.16 Use the plan to prove Theorem 10.16.
27. ★ EXTENDED RESPONSE  In the diagram, $\overline{EF}$ is a tangent segment, $m\angle DAB = 140^\circ$, $m\overline{AB} = 20^\circ$, $m\angle EFD = 60^\circ$, $AC = 6$, $AB = 3$, and $DC = 10$.

a. Find $m\angle CAB$.

b. Show that $\triangle ABC \sim \triangle FEC$.

c. Let $EF = y$ and $DF = x$. Use the results of part (b) to write a proportion involving $x$ and $y$. Solve for $y$.

d. Use a theorem from this section to write another equation involving both $x$ and $y$.

e. Use the results of parts (c) and (d) to solve for $x$ and $y$.

f. Explain how to find $CE$.

28. CHALLENGE  Stereographic projection is a map-making technique that takes points on a sphere with radius one unit (Earth) to points on a plane (the map). The plane is tangent to the sphere at the origin.

The map location for each point $P$ on the sphere is found by extending the line that connects $N$ and $P$. The point’s projection is where the line intersects the plane. Find the distance $d$ from the point $P$ to its corresponding point $P'(4, -3)$ on the plane.

---

MIXED REVIEW

Evaluate the expression. (p. 874)

29. $\sqrt{(-10)^2 - 8^2}$

30. $\sqrt{-5 + (-4) + (6 - 1)^2}$

31. $\sqrt{[-2 - (-6)]^2 + (3 - 6)^2}$

32. In right $\triangle PQR$, $PQ = 8$, $m\angle Q = 40^\circ$, and $m\angle R = 50^\circ$. Find $QR$ and $PR$ to the nearest tenth. (p. 473)

33. $\overline{EF}$ is tangent to $\odot C$ at $E$. The radius of $\odot C$ is 5 and $EF = 8$. Find $FC$. (p. 651)

Find the indicated measure. $\overline{AC}$ and $\overline{BE}$ are diameters. (p. 659)

34. $m\overline{AB}$

EXTRA PRACTICE for Lesson 10.6, p. 915  ONLINE QUIZ at classzone.com  695
Another Way to Solve Example 3, page 691

MULTIPLE REPRESENTATIONS You can use similar triangles to find the length of an external secant segment.

**Problem**

Use the figure at the right to find $RS$.

![Diagram of a circle with points R, S, T, Q, and x, with lines RS, RQ, and QT drawn]

**Method**

**Using Similar Triangles**

**Step 1** Draw segments $QS$ and $QT$, and identify the similar triangles.

Because they both intercept the same arc, $\angle RQS \cong \angle RTQ$.

By the Reflexive Property of Angle Congruence, $\angle QRS \cong \angle TRQ$.

So, $\triangle RSQ \sim \triangle RTQ$ by the AA Similarity Postulate.

**Step 2** Use a proportion to solve for $RS$.

$$\frac{RS}{RQ} = \frac{RQ}{RT} \quad \Rightarrow \quad \frac{x}{16} = \frac{16}{x + 8}$$

By the Cross Products Property, $x^2 + 8x = 256$. Use the quadratic formula to find that $x = -4 \pm 4\sqrt{17}$. Taking the positive solution, $x = -4 + 4\sqrt{17}$ and $RS = 12.49$.

**Practice**

1. **What If?** Find $RQ$ in the problem above if the known lengths are $RS = 4$ and $ST = 9$.

2. **Multi-Step Problem** Copy the diagram.

![Diagram of a circle with points A, B, C, D, E, and x, with lines AB, BC, and AE drawn]

a. Draw auxiliary segments $BE$ and $CD$.

   Name two similar triangles.

b. If $AB = 15$, $BC = 5$, and $AE = 12$, find $DE$.

3. **Chord** Find the value of $x$.

![Diagram of a circle with points and x, with lines and w drawn]

4. **Segments of Secants** Use the Segments of Secants Theorem to write an expression for $w$ in terms of $x$, $y$, and $z$.

696 Chapter 10 Properties of Circles
**Extension: Locus**

**Use after Lesson 10.6**

**Key Vocabulary**
- *locus*

---

**GOAL**
Draw the locus of points satisfying certain conditions.

A **locus** in a plane is the set of all points in a plane that satisfy a given condition or a set of given conditions. The word *locus* is derived from the Latin word for “location.” The plural of locus is *loci*, pronounced “low-sigh.”

A locus is often described as the path of an object moving in a plane. For example, the reason that many clock faces are circular is that the locus of the end of a clock’s minute hand is a circle.

---

**EXAMPLE 1 Find a locus**

Draw a point $C$ on a piece of paper. Draw and describe the locus of all points on the paper that are 1 centimeter from $C$.

**Solution**

**STEP 1**

*Draw* point $C$. Locate several points 1 centimeter from $C$.

**STEP 2**

*Recognize* a pattern: the points lie on a circle.

**STEP 3**

*Draw* the circle.

The locus of points on the paper that are 1 centimeter from $C$ is a circle with center $C$ and radius 1 centimeter.

---

**KEY CONCEPT**

**For Your Notebook**

**How to Find a Locus**

To find the locus of points that satisfy a given condition, use the following steps.

**STEP 1** *Draw* any figures that are given in the statement of the problem. Locate several points that satisfy the given condition.

**STEP 2** *Continue* drawing points until you can recognize the pattern.

**STEP 3** *Draw* the locus and describe it in words.
**EXAMPLE 2** Draw a locus satisfying two conditions

Points $A$ and $B$ lie in a plane. What is the locus of points in the plane that are equidistant from points $A$ and $B$ and are a distance of $AB$ from $B$?

**Solution**

1. **STEP 1**
   - The locus of all points that are equidistant from $A$ and $B$ is the perpendicular bisector of $AB$.

2. **STEP 2**
   - The locus of all points that are a distance of $AB$ from $B$ is the circle with center $B$ and radius $AB$.

3. **STEP 3**
   - These loci intersect at $D$ and $E$. So $D$ and $E$ form the locus of points that satisfy both conditions.

**PRACTICE**

**DRAWING A LOCUS** Draw the figure. Then sketch the locus of points on the paper that satisfy the given condition.

1. Point $P$, the locus of points that are 1 inch from $P$
2. Line $k$, the locus of points that are 1 inch from $k$
3. Point $C$, the locus of points that are at least 1 inch from $C$
4. Line $j$, the locus of points that are no more than 1 inch from $j$

**WRITING** Write a description of the locus. Include a sketch.

5. Point $P$ lies on line $l$. What is the locus of points on $l$ and 3 cm from $P$?
6. Point $Q$ lies on line $m$. What is the locus of points 5 cm from $Q$ and 3 cm from $m$?
7. Point $R$ is 10 cm from line $k$. What is the locus of points that are within 10 cm of $R$, but further than 10 cm from $k$?
8. Lines $l$ and $m$ are parallel. Point $P$ is 5 cm from both lines. What is the locus of points between $l$ and $m$ and no more than 8 cm from $P$?

9. **DOG LEASH** A dog’s leash is tied to a stake at the corner of its doghouse, as shown at the right. The leash is 9 feet long. Make a scale drawing of the doghouse and sketch the locus of points that the dog can reach.
10.7 Write and Graph Equations of Circles

**Before**
You wrote equations of lines in the coordinate plane.

**Now**
You will write equations of circles in the coordinate plane.

**Why?**
So you can determine zones of a commuter system, as in Ex. 36.

Let \((x, y)\) represent any point on a circle with center at the origin and radius \(r\). By the Pythagorean Theorem,

\[ x^2 + y^2 = r^2. \]

This is the equation of a circle with radius \(r\) and center at the origin.

**Example 1** Write an equation of a circle

Write the equation of the circle shown.

**Solution**

The radius is 3 and the center is at the origin.

\[
\begin{align*}
&x^2 + y^2 = r^2 \quad \text{Equation of circle} \\
&x^2 + y^2 = 3^2 \quad \text{Substitute.} \\
&x^2 + y^2 = 9 \quad \text{Simplify.}
\end{align*}
\]

\(\text{The equation of the circle is } x^2 + y^2 = 9.\)

**Circles Centered at \((h, k)\)** You can write the equation of any circle if you know its radius and the coordinates of its center.

Suppose a circle has radius \(r\) and center \((h, k)\). Let \((x, y)\) be a point on the circle. The distance between \((x, y)\) and \((h, k)\) is \(r\), so by the Distance Formula

\[
\sqrt{(x - h)^2 + (y - k)^2} = r.
\]

Square both sides to find the **standard equation of a circle**.

---

**Key Vocabulary**
- **standard equation of a circle**

**For Your Notebook**

**Standard Equation of a Circle**

The standard equation of a circle with center \((h, k)\) and radius \(r\) is:

\[
(x - h)^2 + (y - k)^2 = r^2
\]
EXAMPLE 2 Write the standard equation of a circle

Write the standard equation of a circle with center \((0, -9)\) and radius 4.2.

Solution

\[
(x - h)^2 + (y - k)^2 = r^2
\]

\[
(x - 0)^2 + (y - (-9))^2 = 4.2^2
\]

\[
x^2 + (y + 9)^2 = 17.64
\]

Substitute.

Simplify.

GUIDED PRACTICE for Examples 1 and 2

Write the standard equation of the circle with the given center and radius.

1. Center \((0, 0)\), radius 2.5

2. Center \((-2, 5)\), radius 7

EXAMPLE 3 Write the standard equation of a circle

The point \((-5, 6)\) is on a circle with center \((-1, 3)\). Write the standard equation of the circle.

Solution

To write the standard equation, you need to know the values of \(h\), \(k\), and \(r\). To find \(r\), find the distance between the center and the point \((-5, 6)\) on the circle.

\[
r = \sqrt{(-5 - (-1))^2 + (6 - 3)^2}
\]

\[
= \sqrt{(-4)^2 + 3^2}
\]

\[
= 5
\]

Distance Formula

Simplify.

Simplify.

Substitute \((h, k) = (-1, 3)\) and \(r = 5\) into the standard equation of a circle.

\[
(x - h)^2 + (y - k)^2 = r^2
\]

\[
[x - (-1)]^2 + (y - 3)^2 = 5^2
\]

\[
(x + 1)^2 + (y - 3)^2 = 25
\]

Substitute.

Simplify.

The standard equation of the circle is \((x + 1)^2 + (y - 3)^2 = 25\).

GUIDED PRACTICE for Example 3

3. The point \((3, 4)\) is on a circle whose center is \((1, 4)\). Write the standard equation of the circle.

4. The point \((-1, 2)\) is on a circle whose center is \((2, 6)\). Write the standard equation of the circle.
**Example 4**  Graph a circle

The equation of a circle is \((x - 4)^2 + (y + 2)^2 = 36\). Graph the circle.

**Solution**

Rewrite the equation to find the center and radius.

\[
(x - 4)^2 + (y + 2)^2 = 36
\]

\[
(x - 4)^2 + [y - (-2)]^2 = 6^2
\]

The center is \((4, -2)\) and the radius is 6. Use a compass to graph the circle.

**Example 5**  Use graphs of circles

**Earthquakes**  The epicenter of an earthquake is the point on Earth’s surface directly above the earthquake’s origin. A seismograph can be used to determine the distance to the epicenter of an earthquake. Seismographs are needed in three different places to locate an earthquake’s epicenter.

Use the seismograph readings from locations A, B, and C to find the epicenter of an earthquake.

- The epicenter is 7 miles away from \(A(-2, 2.5)\).
- The epicenter is 4 miles away from \(B(4, 6)\).
- The epicenter is 5 miles away from \(C(3, -2.5)\).

**Solution**

The set of all points equidistant from a given point is a circle, so the epicenter is located on each of the following circles.

- \(O_A\) with center \((-2, 2.5)\) and radius 7
- \(O_B\) with center \((4, 6)\) and radius 4
- \(O_C\) with center \((3, -2.5)\) and radius 5

To find the epicenter, graph the circles on a graph where units are measured in miles. Find the point of intersection of all three circles.

- The epicenter is at about \((5, 2)\).

**Guided Practice**  for Examples 4 and 5

5. The equation of a circle is \((x - 4)^2 + (y + 3)^2 = 16\). Graph the circle.

6. The equation of a circle is \((x + 8)^2 + (y + 5)^2 = 121\). Graph the circle.

7. Why are three seismographs needed to locate an earthquake’s epicenter?
1. VOCABULARY Copy and complete: The standard equation of a circle can be written for any circle with known ? and ?.

2. ★ WRITING Explain why the location of the center and one point on a circle is enough information to draw the rest of the circle.

WRITING EQUATIONS Write the standard equation of the circle.

3. \(x^2 + y^2 = 1\)
4. \((x - 1)^2 + (y - 1)^2 = 1\)
5. \((x - 10)^2 + (y - 10)^2 = 1\)

WRITING EQUATIONS Write the standard equation of the circle with the given center and radius.

9. Center (0, 0), radius 7
10. Center (-4, 1), radius 1
11. Center (7, -6), radius 8
12. Center (4, 1), radius 5
13. Center (3, -5), radius 7
14. Center (-3, 4), radius 5

15. ERROR ANALYSIS Describe and correct the error in writing the equation of a circle.

16. ★ MULTIPLE CHOICE The standard equation of a circle is \((x - 2)^2 + (y + 1)^2 = 16\). What is the diameter of the circle?
   \(\text{A} \ 2 \quad \text{B} \ 4 \quad \text{C} \ 8 \quad \text{D} \ 16\)

WRITING EQUATIONS Use the given information to write the standard equation of the circle.

17. The center is (0, 0), and a point on the circle is (0, 6).
18. The center is (1, 2), and a point on the circle is (4, 2).
19. The center is (-3, 5), and a point on the circle is (1, 8).
**GRAPHING CIRCLES** Graph the equation.

20. \( x^2 + y^2 = 49 \)
21. \( (x - 3)^2 + y^2 = 16 \)
22. \( x^2 + (y + 2)^2 = 36 \)
23. \( (x - 4)^2 + (y - 1)^2 = 1 \)
24. \( (x + 5)^2 + (y - 3)^2 = 9 \)
25. \( (x + 2)^2 + (y + 6)^2 = 25 \)

26. **MULTIPLE CHOICE** Which of the points does not lie on the circle described by the equation \( (x + 2)^2 + (y - 4)^2 = 25 \)?
- A \((-2, -1)\)
- B \((1, 8)\)
- C \((3, 4)\)
- D \((0, 5)\)

**ALGEBRA** Determine whether the given equation defines a circle. If the equation defines a circle, rewrite the equation in standard form.

27. \( x^2 + y^2 - 6y + 9 = 4 \)
28. \( x^2 - 8x + 16 + y^2 + 2y + 4 = 25 \)
29. \( x^2 + y^2 + 4y + 3 = 16 \)
30. \( x^2 - 2x + 5 + y^2 = 81 \)

**IDENTIFYING TYPES OF LINES** Use the given equations of a circle and a line to determine whether the line is a tangent, secant, secant that contains a diameter, or none of these.

31. Circle: \( (x - 4)^2 + (y - 3)^2 = 9 \)
   Line: \( y = -3x + 6 \)
32. Circle: \( (x + 2)^2 + (y - 2)^2 = 16 \)
   Line: \( y = 2x - 4 \)
33. Circle: \( (x - 5)^2 + (y + 1)^2 = 4 \)
   Line: \( y = \frac{1}{5}x - 3 \)
34. Circle: \( (x + 3)^2 + (y - 6)^2 = 25 \)
   Line: \( y = -\frac{4}{3}x + 2 \)

35. **CHALLENGE** Four tangent circles are centered on the x-axis. The radius of \( \odot A \) is twice the radius of \( \odot O \). The radius of \( \odot B \) is three times the radius of \( \odot O \). The radius of \( \odot C \) is four times the radius of \( \odot O \). All circles have integer radii and the point \((63, 16)\) is on \( \odot C \). What is the equation of \( \odot A \)?

**COMMUTER TRAINS** A city’s commuter system has three zones covering the regions described. Zone 1 covers people living within three miles of the city center. Zone 2 covers those between three and seven miles from the center, and Zone 3 covers those over seven miles from the center.

a. Graph this situation with the city center at the origin, where units are measured in miles.

b. Find which zone covers people living at \((3, 4)\), \((6, 5)\), \((1, 2)\), \((0, 3)\), and \((1, 6)\).
37. **COMPACT DISCS** The diameter of a CD is about 4.8 inches. The diameter of the hole in the center is about 0.6 inches. You place a CD on the coordinate plane with center at (0, 0). Write the equations for the outside edge of the disc and the edge of the hole in the center.

38. **REULEAUX POLYGONS** In Exercises 38–41, use the following information.

![Reuleaux polygon diagram](image)

The figure at the right is called a **Reuleaux polygon**. It is not a true polygon because its sides are not straight. \( \triangle ABC \) is equilateral.

38. \( JD \) lies on a circle with center \( A \) and radius \( AD \). Write an equation of this circle.

39. \( DE \) lies on a circle with center \( B \) and radius \( BD \). Write an equation of this circle.

40. **CONSTRUCTION** The remaining arcs of the polygon are constructed in the same way as \( JD \) and \( DE \) in Exercises 38 and 39. Construct a Reuleaux polygon on a piece of cardboard.

41. Cut out the Reuleaux polygon from Exercise 40. Roll it on its edge like a wheel and measure its height when it is in different orientations. **Explain** why a Reuleaux polygon is said to have constant width.

42. **★ EXTENDED RESPONSE** Telecommunication towers can be used to transmit cellular phone calls. Towers have a range of about 3 km. A graph with units measured in kilometers shows towers at points \((0, 0)\), \((0, 5)\), and \((6, 3)\).

   a. Draw the graph and locate the towers. Are there any areas that may receive calls from more than one tower?

   b. Suppose your home is located at \((2, 6)\) and your school is at \((2.5, 3)\). Can you use your cell phone at either or both of these locations?

   c. City \( A \) is located at \((-2, 2.5)\) and City \( B \) is at \((5, 4)\). Each city has a radius of 1.5 km. Which city seems to have better cell phone coverage? **Explain**.

43. **REASONING** The lines \( y = \frac{3}{4}x + 2 \) and \( y = -\frac{3}{4}x + 16 \) are tangent to \( \odot C \) at the points \((4, 5)\) and \((4, 13)\), respectively.

   a. Find the coordinates of \( C \) and the radius of \( \odot C \). **Explain** your steps.

   b. Write the standard equation of \( \odot C \) and draw its graph.

44. **PROOF** Write a proof.

   **GIVEN** \( A \) circle passing through the points \((-1, 0)\) and \((1, 0)\)

   **PROVE** The equation of the circle is \( x^2 - 2yk + y^2 = 1 \) with center at \((0, k)\).
45. **CHALLENGE** The intersecting lines \( m \) and \( n \) are tangent to \( \odot C \) at the points \((8, 6)\) and \((10, 8)\), respectively.

a. What is the intersection point of \( m \) and \( n \) if the radius \( r \) of \( \odot C \) is 2? What is their intersection point if \( r \) is 10? What do you notice about the two intersection points and the center \( C \)?

b. Write the equation that describes the locus of intersection points of \( m \) and \( n \) for all possible values of \( r \).

---

**MIXED REVIEW**

In Exercises 4 and 5, use the given information to write the standard equation of the circle. (p. 699)

4. The center is \((1, 4)\), and the radius is 6.

5. The center is \((5, -7)\), and a point on the circle is \((5, -3)\).

6. **TIRES** The diameter of a certain tire is 24.2 inches. The diameter of the rim in the center is 14 inches. Draw the tire in a coordinate plane with center at \((-4, 3)\). Write the equations for the outer edge of the tire and for the rim where units are measured in inches. (p. 699)
1. **SHORT RESPONSE** A local radio station can broadcast its signal 20 miles. The station is located at the point (20, 30) where units are measured in miles.
   a. Write an inequality that represents the area covered by the radio station.
   b. Determine whether you can receive the radio station's signal when you are located at each of the following points: E(25, 25), F(10, 10), G(20, 16), and H(35, 30).

2. **EXTENDED RESPONSE** Cell phone towers are used to transmit calls. An area has cell phone towers at points (2, 3), (4, 5), and (5, 3) where units are measured in miles. Each tower has a transmission radius of 2 miles.
   a. Draw the area on a graph and locate the three cell phone towers. Are there any areas that can transmit calls using more than one tower?
   b. Suppose you live at (3, 5) and your friend lives at (1, 7). Can you use your cell phone at either or both of your homes?
   c. City A is located at (−1, 1) and City B is located at (4, 7). Each city has a radius of 5 miles. Which city has better coverage from the cell phone towers?

3. **SHORT RESPONSE** You are standing at point P inside a go-kart track. To determine if the track is a circle, you measure the distance to four points on the track, as shown in the diagram. What can you conclude about the shape of the track? Explain.

4. **SHORT RESPONSE** You are at point A, about 6 feet from a circular aquarium tank. The distance from you to a point of tangency on the tank is 17 feet.

5. **EXTENDED RESPONSE** You are given seismograph readings from three locations.
   - At A(−2, 3), the epicenter is 4 miles away.
   - At B(5, −1), the epicenter is 5 miles away.
   - At C(2, 5), the epicenter is 2 miles away.
   a. Graph circles centered at A, B, and C with radii of 4, 5, and 2 miles, respectively.
   b. Locate the epicenter.
   c. The earthquake could be felt up to 12 miles away. If you live at (14, 16), could you feel the earthquake? Explain.

6. **MULTI-STEP PROBLEM** Use the diagram.
   a. Use Theorem 10.16 and the quadratic formula to write an equation for y in terms of x.
   b. Find the value of x.
   c. Find the value of y.
Using Properties of Segments that Intersect Circles

You learned several relationships between tangents, secants, and chords. Some of these relationships can help you determine that two chords or tangents are congruent. For example, tangent segments from the same exterior point are congruent.

Other relationships allow you to find the length of a secant or chord if you know the length of related segments. For example, with the Segments of a Chord Theorem you can find the length of an unknown chord segment.

Applying Angle Relationships in Circles

You learned to find the measures of angles formed inside, outside, and on circles.

Angles formed on circles

\[ m\angle ADB = \frac{1}{2}m\overline{AB} \]

Angles formed inside circles

\[ m\angle 1 = \frac{1}{2}(m\overline{AB} + m\overline{CD}) \]

\[ m\angle 2 = \frac{1}{2}(m\overline{AD} + m\overline{BC}) \]

Angles formed outside circles

\[ m\angle 3 = \frac{1}{2}(m\angle YX - m\angle WZ) \]

Using Circles in the Coordinate Plane

The standard equation of \( \odot C \) is:

\[ (x - h)^2 + (y - k)^2 = r^2 \]

\[ (x - 2)^2 + (y - 1)^2 = 4 \]
Chapter 10  Properties of Circles

 REVIEW EXAMPLES AND EXERCISES

Use the review examples and exercises below to check your understanding of the concepts you have learned in each lesson of Chapter 10.

VOCABULARY EXERCISES

1. Copy and complete: If a chord passes through the center of a circle, then it is called a(n) \( ? \).

2. Draw and describe an inscribed angle and an intercepted arc.

3. WRITING  Describe how the measure of a central angle of a circle relates to the measure of the minor arc and the measure of the major arc created by the angle.

In Exercises 4–6, match the term with the appropriate segment.

4. Tangent segment  
   A.  \( \overline{LM} \)

5. Secant segment  
   B.  \( \overline{KL} \)

6. External segment  
   C.  \( \overline{LN} \)

REVIEW EXAMPLES AND EXERCISES

Use the review examples and exercises below to check your understanding of the concepts you have learned in each lesson of Chapter 10.

10.1 Use Properties of Tangents  

Example

In the diagram, \( B \) and \( D \) are points of tangency on \( \odot C \). Find the value of \( x \).

Use Theorem 10.2 to find \( x \).

\[
\begin{align*}
AB &= AD \\
2x + 5 &= 33 \\
x &= 14
\end{align*}
\]
EXERCISES

Find the value of the variable. \( Y \) and \( Z \) are points of tangency on \( \odot W \).

7. \[ 9a^2 - 30 \]

8. \[ 2a^2 + 9b + 6 \]

9. \[ 9c + 14 \]

10.2 Find Arc Measures

**Example**

Find the measure of the arc of \( \odot P \). In the diagram, \( LN \) is a diameter.

a. \( MN \)  
   \[ \text{a. } MN \text{ is a minor arc, so } m\overarc{MN} = m\angle MPN = 120^\circ. \]

b. \( NLM \)  
   \[ \text{b. } NLM \text{ is a major arc, so } m\overarc{NLM} = 360^\circ - 120^\circ = 240^\circ. \]

c. \( NML \)  
   \[ \text{c. } NML \text{ is a semicircle, so } m\overarc{NML} = 180^\circ. \]

**Exercises**

Use the diagram above to find the measure of the indicated arc.

10. \( KL \)  
11. \( LM \)  
12. \( KM \)  
13. \( KN \)

10.3 Apply Properties of Chords

**Example**

In the diagram, \( \odot A \equiv \odot B, CD \equiv FE, \) and \( m\overarc{FE} = 75^\circ \). Find \( m\overarc{CD} \).

By Theorem 10.3, \( CD \) and \( FE \) are congruent chords in congruent circles, so the corresponding minor arcs \( FE \) and \( CD \) are congruent. So, \( m\overarc{CD} = m\overarc{FE} = 75^\circ. \)

**Exercises**

Find the measure of \( AB \).

14.  
15.  
16.
10 CHAPTER REVIEW

10.4 Use Inscribed Angles and Polygons pp. 672–679

**Example**

Find the value of each variable.

LMNP is inscribed in a circle, so by Theorem 10.10, opposite angles are supplementary.

\[
\begin{align*}
\angle L + \angle N &= 180^\circ \\
\angle P + \angle M &= 180^\circ \\
3a^\circ + 3a^\circ &= 180^\circ \\
b^\circ + 50^\circ &= 180^\circ \\
6a &= 180 \\
b &= 130 \\
a &= 30
\end{align*}
\]

**Exercises**

Find the value(s) of the variable(s).

17. \(x\) \(y\) \(z\)

18. \(a\) \(b\) \(c\)

19. \(d\) \(e\) \(f\)

10.5 Apply Other Angle Relationships in Circles pp. 680–686

**Example**

Find the value of \(y\).

The tangent \(\overline{RQ}\) and secant \(\overline{RT}\) intersect outside the circle, so you can use Theorem 10.13 to find the value of \(y\).

\[
y^\circ = \frac{1}{2}(m\overline{QT} - m\overline{SQ})
\]

Use Theorem 10.13.

\[
y^\circ = \frac{1}{2}(190^\circ - 60^\circ)
\]

Substitute.

\[
y = 65
\]

Simplify.

**Exercises**

Find the value of \(x\).

20. \(x\)

21. \(x\)

22. \(x\)
**10.6 Find Segment Lengths in Circles**  
pp. 689–695

**Example**

Find the value of \( x \).

The chords \( EG \) and \( FH \) intersect inside the circle, so you can use Theorem 10.14 to find the value of \( x \).

\[
EP \cdot PG = FP \cdot PH
\]

\[
x \cdot 2 = 3 \cdot 6
\]

\[
x = 9
\]

**Exercise**

23. **SKATING RINK** A local park has a circular ice skating rink. You are standing at point \( A \), about 12 feet from the edge of the rink. The distance from you to a point of tangency on the rink is about 20 feet. Estimate the radius of the rink.

**10.7 Write and Graph Equations of Circles**  
pp. 699–705

**Example**

Write an equation of the circle shown.

The radius is 2 and the center is at \((-2, 4)\).

\[
(x - h)^2 + (y - k)^2 = r^2
\]

\[
(x - (-2))^2 + (y - 4)^2 = 4^2
\]

\[
(x + 2)^2 + (y - 4)^2 = 16
\]

**Exercises**

24. Write an equation of the circle shown.

25. Write an equation of the circle shown.

26. Write the standard equation of the circle with the given center and radius.

27. Center (0, 0), radius 9  
28. Center (-5, 2), radius 1.3  
29. Center (6, 21), radius 4  
30. Center (-3, 2), radius 16  
31. Center (10, 7), radius 3.5  
32. Center (0, 0), radius 5.2
In \( \bigcirc C \), \( B \) and \( D \) are points of tangency. Find the value of the variable.

1. \( 5x - 4 \)

2. \( 6 \)

3. \( 2x^2 + 8x - 17 \)

Tell whether the red arcs are congruent. Explain why or why not.

4. \( B \)

5. \( J \)

Determine whether \( AB \) is a diameter of the circle. Explain your reasoning.

7. \( A \)

8. \( A \)

9. \( A \)

Find the indicated measure.

10. \( m \angle ABC \)

11. \( m \overarc{DF} \)

12. \( m \overarc{GHJ} \)

13. \( m \angle 1 \)

14. \( m \angle 2 \)

15. \( m \angle AC \)

Find the value of \( x \). Round decimal answers to the nearest tenth.

16. \( 14 \)

17. \( x \)

18. \( x \)

19. Find the center and radius of a circle that has the standard equation \((x + 2)^2 + (y - 5)^2 = 169\).
Factor Binomials and Trinomials

**Example 1** Factor using greatest common factor

Factor $2x^3 + 6x^2$.

Identify the greatest common factor of the terms. The greatest common factor (GCF) is the product of all the common factors.

First, factor each term. $2x^3 = 2 \cdot x \cdot x \cdot x$ and $6x^2 = 2 \cdot 3 \cdot x \cdot x$

Then, write the product of the common terms. GCF $= 2 \cdot x \cdot x = 2x^2$

Finally, use the distributive property with the GCF. $2x^3 + 6x^2 = 2x^2(x + 3)$

**Example 2** Factor binomials and trinomials

Factor.

a. $2x^2 - 5x + 3$

b. $x^2 - 9$

**Solution**

a. Make a table of possible factorizations. Because the middle term, $-5x$, is negative, both factors of the third term, 3, must be negative.

<table>
<thead>
<tr>
<th>Factors of 2</th>
<th>Factors of 3</th>
<th>Possible factorization</th>
<th>Middle term when multiplied</th>
</tr>
</thead>
<tbody>
<tr>
<td>1, 2</td>
<td>-3, -1</td>
<td>$(x - 3)(2x - 1)$</td>
<td>$-x - 6x = -7x$</td>
</tr>
<tr>
<td>1, 2</td>
<td>-1, -3</td>
<td>$(x - 1)(2x - 3)$</td>
<td>$-3x - 2x = -5x$</td>
</tr>
</tbody>
</table>

b. Use the special factoring pattern $a^2 - b^2 = (a + b)(a - b)$.

$x^2 - 9 = x^2 - 3^2$ Write in the form $a^2 - b^2$.

$= (x + 3)(x - 3)$ Factor using the pattern.

**Exercises**

Factor.

1. $6x^2 + 18x^4$
2. $16a^2 - 24b$
3. $9r^2 - 15rs$
4. $14x^5 + 27x^3$
5. $8t^4 + 6t^2 - 10t$
6. $9z^3 + 3z + 21z^2$
7. $5y^6 - 4y^5 + 2y^3$
8. $30v^7 - 25v^5 - 10v^4$
9. $6x^3y + 15x^2y^3$
10. $x^2 + 6x + 8$
11. $y^2 - y - 6$
12. $a^2 - 64$
13. $z^2 - 8z + 16$
14. $3s^2 + 2s - 1$
15. $5b^2 - 16b + 3$
16. $4x^4 - 49$
17. $25r^2 - 81$
18. $4x^2 + 12x + 9$
19. $x^2 + 10x + 21$
20. $x^2 - 121$
21. $y^2 + y - 6$
22. $z^2 + 12z + 36$
23. $x^2 - 49$
24. $2x^2 - 12x - 14$
MULTIPLE CHOICE QUESTIONS

If you have difficulty solving a multiple choice question directly, you may be able to use another approach to eliminate incorrect answer choices and obtain the correct answer.

**Problem 1**

In the diagram, \( \triangle PQR \) is inscribed in a circle. The ratio of the angle measures of \( \triangle PQR \) is 4:7:7. What is \( m\angle QCR \)?

- A. 20°
- B. 40°
- C. 80°
- D. 140°

**Method 1**

**Solve Directly**

Use the Interior Angles Theorem to find \( m\angle QPR \). Then use the fact that \( \angle QPR \) intercepts \( \overline{QR} \) to find \( m\angle QCR \).

**Step 1**

Use the ratio of the angle measures to write an equation. Because \( \triangle EFG \) is isosceles, its base angles are congruent. Let \( 4x \) be \( m\angle QPR \). Then \( m\angle Q = m\angle R = 7x \). You can write:

\[
4x^\circ + 7x^\circ = 180^\circ
\]

**Step 2**

Solve the equation to find the value of \( x \).

\[
18x^\circ = 180^\circ
\]

\[
x = 10
\]

**Step 3**

Find \( m\angle QPR \). From Step 1, \( m\angle QPR = 4x^\circ \), so \( m\angle QPR = 4 \cdot 10^\circ = 40^\circ \).

**Step 4**

Find \( m\angle QCR \). Because \( \angle QPR \) intercepts \( \overline{QR} \), \( m\angle QCR = 2 \cdot m\angle QPR \). So, \( m\angle QCR = 2 \cdot 40^\circ = 80^\circ \).

The correct answer is C. **A** **B** **C** **D**

**Method 2**

**Eliminate Choices**

Because \( \angle QPR \) intercepts \( \overline{QR} \), \( m\angle QPR = \frac{1}{2} \cdot m\angle QCR \). Also, because \( \triangle PQR \) is isosceles, its base angles, \( \angle Q \) and \( \angle R \), are congruent. For each choice, find \( m\angle QPR \), \( m\angle Q \), and \( m\angle R \). Determine whether the ratio of the angle measures is 4:7:7.

**Choice A:** If \( m\angle QCR = 20^\circ \), \( m\angle QPR = 10^\circ \).

So, \( m\angle Q + m\angle R = 180^\circ - 10^\circ = 170^\circ \), and \( m\angle Q = m\angle R = \frac{170^\circ}{2} = 85^\circ \). The angle measures 10°, 85°, and 85° are not in the ratio 4:7:7, so Choice A is not correct.

**Choice B:** If \( m\angle QCR = 40^\circ \), \( m\angle QPR = 20^\circ \).

So, \( m\angle Q + m\angle R = 180^\circ - 20^\circ = 160^\circ \), and \( m\angle Q = m\angle R = 80^\circ \). The angle measures 20°, 80°, and 80° are not in the ratio 4:7:7, so Choice B is not correct.

**Choice C:** If \( m\angle QCR = 80^\circ \), \( m\angle QPR = 40^\circ \).

So, \( m\angle Q + m\angle R = 180^\circ - 40^\circ = 140^\circ \), and \( m\angle Q = m\angle R = 70^\circ \). The angle measures 40°, 70°, and 70° are in the ratio 4:7:7. So, \( m\angle QCR = 80^\circ \).

The correct answer is C. **A** **B** **C** **D**
Problem 2

In the circle shown, \(JK\) intersects \(LM\) at point \(N\). What is the value of \(x\)?

\[\begin{align*}
A & \quad -1 \\
B & \quad 2 \\
C & \quad 7 \\
D & \quad 10
\end{align*}\]

Method 1

Solve Directly

Write and solve an equation.

**Step 1** Write an equation. By the Segments of a Chord Theorem, \(NJ \cdot NK = NL \cdot NM\). You can write \((x - 2)(x - 7) = 6 \cdot 4 = 24\).

**Step 2** Solve the equation.

\[
(x - 2)(x - 7) = 24 \\
x^2 - 9x + 14 = 24 \\
x^2 - 9x + 10 = 0 \\
(x - 10)(x + 1) = 0
\]

So, \(x = 10\) or \(x = -1\).

**Step 3** Decide which value makes sense.

If \(x = -1\), then \(NJ = -3\) and \(NK = -8\). A distance cannot be negative, so you can eliminate Choice A.

If \(x = 10\), then \(NJ = 10 - 2 = 8\), and \(NK = 10 - 7 = 3\). So, \(x = 10\).

The correct answer is D. \(A \quad B \quad C \quad D\)

Method 2

Eliminate Choices

Check to see if any choices do not make sense.

**Step 1** Check to see if any choices give impossible values for \(NJ\) and \(NK\). Use the fact that \(NJ = x - 2\) and \(NK = x - 7\).

**Choice A:** If \(x = -1\), then \(NJ = -3\) and \(NK = -8\). A distance cannot be negative, so you can eliminate Choice A.

**Choice B:** If \(x = 2\), then \(NJ = 0\) and \(NK = -5\). A distance cannot be negative or 0, so you can eliminate Choice B.

**Choice C:** If \(x = 7\), then \(NJ = 5\) and \(NK = 0\). A distance cannot be 0, so you can eliminate Choice C.

**Step 2** Verify that Choice D is correct. By the Segments of a Chord Theorem, \((x - 7)(x - 2) = 6(4)\). This equation is true when \(x = 10\).

The correct answer is D. \(A \quad B \quad C \quad D\)

Exercises

Explain why you can eliminate the highlighted answer choice.

1. In the diagram, what is \(m\overline{NQ}\)?

\[\begin{align*}
A & \quad 20^\circ \\
B & \quad 26^\circ \\
C & \quad 40^\circ \\
D & \quad 52^\circ
\end{align*}\]

2. Isosceles trapezoid \(EFGH\) is inscribed in a circle, \(m\angle E = (x + 8)^\circ\), and \(m\angle G = (3x + 12)^\circ\). What is the value of \(x\)?

\[\begin{align*}
A & \quad 4 \quad \mbox{or} \quad 10 \\
B & \quad 10 \\
C & \quad 40 \\
D & \quad 72
\end{align*}\]
1. In \( \bigcirc L, MN \cong PQ \), Which statement is not necessarily true?

- \( \text{A} \) \( MN \cong PQ \)
- \( \text{B} \) \( NQP \cong QNM \)
- \( \text{C} \) \( MP \cong NQ \)
- \( \text{D} \) \( MPQ \cong NMP \)

2. In \( \bigcirc T, PV = 5x - 2 \) and \( PR = 4x + 14 \). What is the value of \( x \)?

- \( \text{A} \) 17 in.
- \( \text{B} \) 22 in.
- \( \text{C} \) 25 in.
- \( \text{D} \) 30 in.

3. What are the coordinates of the center of a circle with equation \( (x + 2)^2 + (y - 4)^2 = 9 \)?

- \( \text{A} \) \((-2, -4)\)
- \( \text{B} \) \((-2, 4)\)
- \( \text{C} \) \((2, -4)\)
- \( \text{D} \) \((2, 4)\)

4. In the circle shown below, what is \( m\angle QPR \)?

- \( \text{A} \) 24°
- \( \text{B} \) 27°
- \( \text{C} \) 48°
- \( \text{D} \) 96°

5. Regular hexagon \( FGHJKL \) is inscribed in a circle. What is \( m\angle KL \)?

- \( \text{A} \) 6°
- \( \text{B} \) 60°
- \( \text{C} \) 120°
- \( \text{D} \) 240°

6. In the design for a jewelry store sign, \( STUV \) is inscribed inside a circle, \( ST = TU = 12 \) inches, and \( SV = UV = 18 \) inches. What is the approximate diameter of the circle?

- \( \text{A} \) 17 in.
- \( \text{B} \) 22 in.
- \( \text{C} \) 25 in.
- \( \text{D} \) 30 in.

7. In the diagram shown, \( QS \) is tangent to \( \bigcirc N \) at \( R \). What is \( m\angle RPT \)?

- \( \text{A} \) \(62^\circ\)
- \( \text{B} \) \(118^\circ\)
- \( \text{C} \) \(124^\circ\)
- \( \text{D} \) \(236^\circ\)

8. Two distinct circles intersect. What is the maximum number of common tangents?

- \( \text{A} \) 1
- \( \text{B} \) 2
- \( \text{C} \) 3
- \( \text{D} \) 4

9. In the circle shown, \( m\angle EFG = 146^\circ \) and \( m\angle FG \overarc{F} = 172^\circ \). What is the value of \( x \)?

- \( \text{A} \) 10.5
- \( \text{B} \) 21
- \( \text{C} \) 42
- \( \text{D} \) 336
10. \(LK\) is tangent to \(\odot T\) at \(K\). \(LM\) is tangent to \(\odot T\) at \(M\). Find the value of \(x\).

\[
\begin{align*}
L &\quad K \\
\odot T &\quad M \\
\frac{1}{2}x + 5 &\quad x - 1
\end{align*}
\]

11. In \(\odot H\), find \(m\angle AHB\) in degrees.

\[
\begin{align*}
111{}^\circ \\
D &\quad A \\
A &\quad B \\
H &\quad C
\end{align*}
\]

12. Find the value of \(x\).

\[
\begin{align*}
20 &\quad 6x \\
2x &\quad 2x
\end{align*}
\]

13. Explain why \(\triangle PSR\) is similar to \(\triangle TQR\).

\[
\begin{align*}
P &\quad Q \\
S &\quad R \\
T &\quad T
\end{align*}
\]

14. Let \(x^\circ\) be the measure of an inscribed angle, and let \(y^\circ\) be the measure of its intercepted arc. Graph \(y\) as a function of \(x\) for all possible values of \(x\). Give the slope of the graph.

15. In \(\odot J\), \(\overline{JD} \cong \overline{JH}\). Write two true statements about congruent arcs and two true statements about congruent segments in \(\odot J\). Justify each statement.

\[
\begin{align*}
C &\quad E \\
D &\quad F \\
B &\quad G \\
H &\quad A
\end{align*}
\]

16. The diagram shows a piece of broken pottery found by an archaeologist. The archaeologist thinks that the pottery is part of a circular plate and wants to estimate the diameter of the plate.

a. Trace the outermost arc of the diagram on a piece of paper. Draw any two chords whose endpoints lie on the arc.

b. Construct the perpendicular bisector of each chord. Mark the point of intersection of the perpendiculars bisectors. How is this point related to the circular plate?

c. Based on your results, describe a method the archaeologist could use to estimate the diameter of the actual plate. Explain your reasoning.

17. The point \(P(3, -8)\) lies on a circle with center \(C(-2, 4)\).

a. Write an equation for \(\odot C\).

b. Write an equation for the line that contains radius \(\overline{CP}\). Explain.

c. Write an equation for the line that is tangent to \(\odot C\) at point \(P\). Explain.
In previous chapters, you learned the following skills, which you’ll use in Chapter 11: applying properties of circles and polygons, using formulas, solving for lengths in right triangles, and using ratios and proportions.

**Prerequisite Skills**

**VOCABULARY CHECK**

Give the indicated measure for \( \odot P \).

1. The radius  
2. The diameter  
3. \( m\angle ADB \)

**SKILLS AND ALGEBRA CHECK**

4. Use a formula to find the width \( w \) of the rectangle that has a perimeter of 24 centimeters and a length of 9 centimeters. *(Review p. 49 for 11.1.)*

In \( \triangle ABC \), angle \( C \) is a right angle. Use the given information to find \( AC \).
*(Review pp. 433, 457, 473 for 11.1, 11.6.)*

5. \( AB = 14, BC = 6 \)  
6. \( m\angle A = 35^\circ, AB = 25 \)  
7. \( m\angle B = 60^\circ, BC = 5 \)

8. Which special quadrilaterals have diagonals that bisect each other? *(Review pp. 533, 542 for 11.2.)*

9. Use a proportion to find \( XY \) if \( \triangle UVW \sim \triangle XYZ \). *(Review p. 372 for 11.3.)*
In Chapter 11, you will apply the big ideas listed below and reviewed in the Chapter Summary on page 779. You will also use the key vocabulary listed below.

**Big Ideas**

1. Using area formulas for polygons
2. Relating length, perimeter, and area ratios in similar polygons
3. Comparing measures for parts of circles and the whole circle

**Key Vocabulary**

- bases of a parallelogram, p. 720
- height of a parallelogram, p. 720
- height of a trapezoid, p. 730
- circumference, p. 746
- arc length, p. 747
- sector of a circle, p. 756
- center of a polygon, p. 762
- radius of a polygon, p. 762
- apothem of a polygon, p. 762
- central angle of a regular polygon, p. 762
- probability, p. 771
- geometric probability, p. 771

**Why?**

You can apply formulas for perimeter, circumference, and area to find and compare measures. To find lengths along a running track, you can break the track into straight sides and semicircles.

**Animated Geometry**

The animation illustrated below for Example 5 on page 749 helps you answer this question: How far does a runner travel to go around a track?

**Other animations for Chapter 11:** pages 720, 739, 759, 765, and 771
11.1 Areas of Triangles and Parallelograms

You learned properties of triangles and parallelograms. You will find areas of triangles and parallelograms. So you can plan a jewelry making project, as in Ex. 44.

Key Vocabulary
- bases of a parallelogram
- height of a parallelogram
- area, p. 49
- perimeter, p. 49

POSTULATES

**POSTULATE 24 Area of a Square Postulate**
The area of a square is the square of the length of its side.

**POSTULATE 25 Area Congruence Postulate**
If two polygons are congruent, then they have the same area.

**POSTULATE 26 Area Addition Postulate**
The area of a region is the sum of the areas of its nonoverlapping parts.

RECTANGLES
A rectangle that is \( b \) units by \( h \) units can be split into \( b \times h \) unit squares, so the area formula for a rectangle follows from Postulates 24 and 26.

**THEOREM 11.1 Area of a Rectangle**
The area of a rectangle is the product of its base and height.

*Justification:* Ex. 46, p. 726

PARALLELOGRAMS
Either pair of parallel sides can be used as the bases of a parallelogram. The height is the perpendicular distance between these bases.

If you transform a rectangle to form other parallelograms with the same base and height, the area stays the same.
**THEOREMS**

**THEOREM 11.2  Area of a Parallelogram**

The area of a parallelogram is the product of a base and its corresponding height.

Justification: Ex. 42, p. 725

**THEOREM 11.3  Area of a Triangle**

The area of a triangle is one half the product of a base and its corresponding height.

Justification: Ex. 43, p. 726

**RELATING AREA FORMULAS**

As illustrated below, the area formula for a parallelogram is related to the formula for a rectangle, and the area formula for a triangle is related to the formula for a parallelogram. You will write a justification of these relationships in Exercises 42 and 43 on pages 725–726.

- Area of \( \square \) = Area of Rectangle
- Area of \( \triangle \) = \( \frac{1}{2} \cdot \) Area of \( \square \)

**EXAMPLE 1  Use a formula to find area**

Find the area of \( \square PQRS \).

**Solution**

**Method 1** Use \( PS \) as the base.

The base is extended to measure the height \( RU \). So, \( b = 6 \) and \( h = 8 \).

\[
\text{Area} = bh = 6(8) = 48 \text{ square units}
\]

**Method 2** Use \( PQ \) as the base.

Then the height is \( QT \). So, \( b = 12 \) and \( h = 4 \).

\[
\text{Area} = bh = 12(4) = 48 \text{ square units}
\]

**GUIDED PRACTICE**

Find the perimeter and area of the polygon.

1. [Diagram of a triangle with sides 17, 8, and 21]
2. [Diagram of a parallelogram with sides 17, 20, and 30]
3. [Diagram of a triangle with sides 5 and 13]
**Example 2** Solve for unknown measures

**Algebra** The base of a triangle is twice its height. The area of the triangle is 36 square inches. Find the base and height.

Let \( h \) represent the height of the triangle. Then the base is \( 2h \).

\[
A = \frac{1}{2}bh
\]

Write formula.

\[
36 = \frac{1}{2}(2h)(h)
\]

Substitute 36 for \( A \) and \( 2h \) for \( b \).

\[
36 = h^2
\]

Simplify.

\[
6 = h
\]

Find positive square root of each side.

The height of the triangle is 6 inches, and the base is \( 6 \cdot 2 = 12 \) inches.

**Example 3** Solve a multi-step problem

**Painting** You need to buy paint so that you can paint the side of a barn. A gallon of paint covers 350 square feet. How many gallons should you buy?

**Solution**

You can use a right triangle and a rectangle to approximate the area of the side of the barn.

**Step 1** Find the length \( x \) of each leg of the triangle.

\[
26^2 = x^2 + x^2
\]

Use Pythagorean Theorem.

\[
676 = 2x^2
\]

Simplify.

\[
\sqrt{338} = x
\]

Solve for the positive value of \( x \).

**Step 2** Find the approximate area of the side of the barn.

\[
\text{Area} = \text{Area of rectangle} + \text{Area of triangle}
\]

\[
= 26(18) + \frac{1}{2} \cdot [\sqrt{338} \cdot \sqrt{338}] = 637 \text{ ft}^2
\]

**Step 3** Determine how many gallons of paint you need.

\[
637 \text{ ft}^2 \cdot \frac{1 \text{ gal}}{350 \text{ ft}^2} \approx 1.82 \text{ gal}
\]

Use unit analysis.

Round up so you will have enough paint. You need to buy 2 gallons of paint.

**Guided Practice** for Examples 2 and 3

4. A parallelogram has an area of 153 square inches and a height of 17 inches. What is the length of the base?

5. **What If?** In Example 3, suppose there is a 5 foot by 10 foot rectangular window on the side of the barn. What is the approximate area you need to paint?
11.1 EXERCISES

1. **VOCABULARY** Copy and complete: Either pair of parallel sides of a parallelogram can be called its _?_, and the perpendicular distance between these sides is called the _?_.

2. ★ **WRITING** What are the two formulas you have learned for the area of a rectangle? Explain why these formulas give the same results.

**FINDING AREA** Find the area of the polygon.

3. 

4. 

5. 

6. 

7. 

8. 

9. **COMPARING METHODS** Show two different ways to calculate the area of parallelogram ABCD. Compare your results.

**ERROR ANALYSIS** Describe and correct the error in finding the area of the parallelogram.

10. 

11. 

**PYTHAGOREAN THEOREM** The lengths of the hypotenuse and one leg of a right triangle are given. Find the perimeter and area of the triangle.

13. Hypotenuse: 34 ft; leg: 16 ft  
14. Hypotenuse: 85 m; leg: 84 m  
15. Hypotenuse: 29 cm; leg: 20 cm

**EXAMPLE 2** on p. 722 for Exs. 16–21

**ALGEBRA** Find the value of x.

16. $A = 36 \text{ in.}^2$  
17. $A = 276 \text{ ft}^2$  
18. $A = 476 \text{ cm}^2$
19. **ALGEBRA** The area of a triangle is 4 square feet. The height of the triangle is half its base. Find the base and the height.

20. **ALGEBRA** The area of a parallelogram is 507 square centimeters, and its height is three times its base. Find the base and the height.

21. **OPEN-ENDED MATH** A polygon has an area of 80 square meters and a height of 10 meters. Make scale drawings of three different triangles and three different parallelograms that match this description. Label the base and the height.

**FINDING AREA** Find the area of the shaded polygon.

22.

23.

24.

25.

26.

27.

**COORDINATE GRAPHING** Graph the points and connect them to form a polygon. Find the area of the polygon.

28. \((3, 3), (10, 3), (8, -3), (1, -3)\)

29. \((-2, -2), (5, 1), (3, -2)\)

30. **MULTIPLE CHOICE** What is the area of the parallelogram shown at the right?

A) 8 ft² 6 in.²  
B) 1350 in. ²  
C) 675 in.²  
D) 9.375 ft²

31. **TECHNOLOGY** Use geometry drawing software to draw a line \(l\) and a line \(m\) parallel to \(l\). Then draw \(\triangle ABC\) so that \(C\) is on line \(l\) and \(AB\) is on line \(m\). Find the base \(AB\), the height \(CD\), and the area of \(\triangle ABC\). Move point \(C\) to change the shape of \(\triangle ABC\). What do you notice about the base, height, and area of \(\triangle ABC\)?

32. **USING TRIGONOMETRY** In \(\square ABCD\), base \(AD\) is 15 and \(AB\) is 8. What are the height and area of \(\square ABCD\) if \(m\angle DAB = 20^\circ\)? if \(m\angle DAB = 50^\circ\)?

33. **ALGEBRA** Find the area of a right triangle with side lengths 12 centimeters, 35 centimeters, and 37 centimeters. Then find the length of the altitude drawn to the hypotenuse.

34. **ALGEBRA** Find the area of a triangle with side lengths 5 feet, 5 feet, and 8 feet. Then find the lengths of all three altitudes of the triangle.

35. **CHALLENGE** The vertices of quadrilateral \(ABCD\) are \(A(2, -2), B(6, 4), C(-1, 5),\) and \(D(-5, 2)\). Without using the Distance Formula, find the area of \(ABCD\). Show your steps.
36. **SAILING** Sails A and B are right triangles. The lengths of the legs of Sail A are 65 feet and 35 feet. The lengths of the legs of Sail B are 29.5 feet and 10.5 feet. Find the area of each sail to the nearest square foot. About how many times as great is the area of Sail A as the area of Sail B?

37. **MOWING** You can mow 10 square yards of grass in one minute. How long does it take you to mow a triangular plot with height 25 yards and base 24 yards? How long does it take you to mow a rectangular plot with base 24 yards and height 36 yards?

38. **CARPENTRY** You are making a table in the shape of a parallelogram to replace an old 24 inch by 15 inch rectangular table. You want the areas of two tables to be equal. The base of the parallelogram is 20 inches. What should the height be?

39. **SHORT RESPONSE** A 4 inch square is a square that has a side length of 4 inches. Does a 4 inch square have an area of 4 square inches? If not, what size square does have an area of 4 square inches? *Explain.*

40. **PAINTING** You are earning money by painting a shed. You plan to paint two sides of the shed today. Each of the two sides has the dimensions shown at the right. You can paint 200 square feet per hour, and you charge $20 per hour. How much will you get paid for painting those two sides of the shed?

41. **ENVELOPES** The pattern below shows how to make an envelope to fit a card that is 17 centimeters by 14 centimeters. What are the dimensions of the rectangle you need to start with? What is the area of the paper that is actually used in the envelope? of the paper that is cut off?

42. **JUSTIFYING THEOREM 11.2** You can use the area formula for a rectangle to justify the area formula for a parallelogram. First draw \( \square PQRS \) with base \( b \) and height \( h \), as shown. Then draw a segment perpendicular to \( PS \) through point \( R \). Label point \( V \).

   a. In the diagram, explain how you know that \( \triangle PQT \cong \triangle SRV \).

   b. Explain how you know that the area of \( PQRS \) is equal to the area of \( QRVT \). How do you know that Area of \( PQRS = bh \)?
43. **JUSTIFYING THEOREM 11.3** You can use the area formula for a parallelogram to justify the area formula for a triangle. Start with two congruent triangles with base $b$ and height $h$. Place and label them as shown. Explain how you know that $XYZW$ is a parallelogram and that $\text{Area of } \triangle XYW = \frac{1}{2}bh$.

44. **MULTI-STEP PROBLEM** You have enough silver to make a pendant with an area of 4 square centimeters. The pendant will be an equilateral triangle. Let $s$ be the side length of the triangle.

   a. Find the height $h$ of the triangle in terms of $s$. Then write a formula for the area of the triangle in terms of $s$.

   b. Find the side length of the triangle. Round to the nearest centimeter.

45. **★ EXTENDED RESPONSE** The base of a parallelogram is 7 feet and the height is 3 feet. Explain why the perimeter cannot be determined from the given information. Is there a least possible perimeter for the parallelogram? Is there a greatest possible perimeter? Explain.

46. **JUSTIFYING THEOREM 11.1** You can use the diagram to show that the area of a rectangle is the product of its base $b$ and height $h$.

   a. Figures $MRVU$ and $VSPT$ are congruent rectangles with base $b$ and height $h$. Explain why $RNSV$, $UVTQ$, and $MNPQ$ are squares. Write expressions in terms of $b$ and $h$ for the areas of the squares.

   b. Let $A$ be the area of $MRVU$. Substitute $A$ and the expressions from part (a) into the equation below. Solve to find an expression for $A$.

\[
\text{Area of } MNPQ = \text{Area of } MRVU + \text{Area of } UVTQ + \text{Area of } RNSV + \text{Area of } VSPT
\]

47. **CHALLENGE** An equation of $AB$ is $y = x$. An equation of $AC$ is $y = 2$. Suppose $BC$ is placed so that $\triangle ABC$ is isosceles with an area of 4 square units. Find two different lines that fit these conditions. Give an equation for each line. Is there another line that could fit this requirement for $BC$? Explain.

---

**MIXED REVIEW**

Find the length of the midsegment $MN$ of the trapezoid. (p. 542)

48. 18

49. 13

50. 27

The coordinates of $\triangle PQR$ are $P(-4, 1)$, $Q(2, 5)$, and $R(1, -4)$. Graph the image of the triangle after the translation. Use prime notation. (p. 572)

51. $(x, y) \rightarrow (x + 1, y + 4)$

52. $(x, y) \rightarrow (x + 3, y - 5)$

53. $(x, y) \rightarrow (x - 3, y - 2)$

54. $(x, y) \rightarrow (x - 2, y + 3)$
Extension: Determine Precision and Accuracy

Determine the precision and accuracy of measurements.

All measurements are approximations. The length of each segment below, to the nearest inch, is 2 inches. The measurement is to the nearest inch, so the unit of measure is 1 inch.

| Inches | 1 | 2 |

If you are told that an object is 2 inches long, you know that its exact length is between 1 1/2 inches and 2 1/2 inches, or within 1/2 inch of 2 inches. The greatest possible error of a measurement is equal to one half of the unit of measure.

When the unit of measure is smaller, the greatest possible error is smaller and the measurement is more precise. Using one-eighth inch as the unit of measure for the segments above gives lengths of 1 5/8 inches and 2 3/8 inches and a greatest possible error of 1/16 inch.

### Example 1 Find greatest possible error

**Amusement Park** The final drop of a log flume ride is listed in the park guide as 52.3 feet. Find the unit of measure and the greatest possible error.

**Solution**

The measurement 52.3 feet is given to the nearest tenth of a foot. So, the unit of measure is 1/10 foot. The greatest possible error is half the unit of measure.

Because \( \frac{1}{2} \times \frac{1}{10} = \frac{1}{20} = 0.05 \), the greatest possible error is 0.05 foot.

### Relative Error

The diameter of a bicycle tire is 26 inches. The diameter of a key ring is 1 inch. In each case, the greatest possible error is 1/2 inch, but a half-inch error has a much greater effect on the diameter of a smaller object.

The relative error of a measurement is the ratio of the greatest possible error to the measured length.

<table>
<thead>
<tr>
<th>Bicycle tire diameter</th>
<th>Key ring diameter</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rel. error = ( \frac{0.5}{26} ) = 0.01923 = 1.9%</td>
<td>Rel. error = ( \frac{0.5}{1} ) = 0.5 = 50%</td>
</tr>
</tbody>
</table>

The measurement with the smaller relative error is said to be more accurate.
**EXAMPLE 2** Find relative error

**PLAYING AREAS** An air hockey table is 3.7 feet wide. An ice rink is 85 feet wide. Find the relative error of each measurement. Which measurement is more accurate?

<table>
<thead>
<tr>
<th>Unit of measure</th>
<th>Air hockey table (3.7 ft)</th>
<th>Ice rink (85 ft)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Greatest possible error</td>
<td>$\frac{1}{2}(0.1 \text{ ft}) = 0.05 \text{ ft}$</td>
<td>$\frac{1}{2}(1 \text{ ft}) = 0.5 \text{ ft}$</td>
</tr>
<tr>
<td>Relative error</td>
<td>$\frac{0.05}{3.7} \approx 0.0135 \approx 1.4%$</td>
<td>$\frac{0.5}{85} \approx 0.00588 \approx 0.6%$</td>
</tr>
</tbody>
</table>

The ice rink width has the smaller relative error, so it is more accurate.

---

**PRACTICE**

1. **VOCABULARY** Describe the difference between the precision of a measurement and the accuracy of a measurement. Give an example that illustrates the difference.

2. **GREATEST POSSIBLE ERROR** Find the unit of measure. Then find the greatest possible error.
   - 2. 14.6 in.
   - 3. 6 m
   - 4. 8.217 km
   - 5. $4\frac{5}{16}$ yd

3. **RELATIVE ERROR** Find the relative error of the measurement.
   - 6. 4.0 cm
   - 7. 28 in.
   - 8. 4.6 m
   - 9. 12.16 mm

4. **CHOOSING A UNIT** You are estimating the amount of paper needed to make book covers for your textbooks. Which unit of measure, 1 foot, 1 inch, or $\frac{1}{16}$ inch, should you use to measure your textbooks? Explain.

5. **REASONING** The greatest possible error of a measurement is $\frac{1}{16}$ inch. Explain how such a measurement could be more accurate in one situation than in another situation.

6. **PRECISION AND ACCURACY** Tell which measurement is more precise. Then tell which of the two measurements is more accurate.
   - 12. 17 cm; 12 cm
   - 13. 18.65 ft; 25.6 ft
   - 14. 6.8 in.; 13.4 ft
   - 15. 3.5 ft; 35 in.

7. **PERIMETER** A side of the eraser shown is a parallelogram. What is the greatest possible error for the length of each side of the parallelogram? for the perimeter of the parallelogram? Find the greatest and least possible perimeter of the parallelogram.
11.2 Areas of Trapezoids and Kites

**MATERIALS** • graph paper • straightedge • scissors • tape

**QUESTION** How can you use a parallelogram to find other areas?

A trapezoid or a kite can be cut out and rearranged to form a parallelogram.

**EXPLORE 1** Use two congruent trapezoids to form a parallelogram

**STEP 1**
Draw a trapezoid

**STEP 2**
Create a parallelogram

**Draw a trapezoid** Fold graph paper in half and draw a trapezoid. Cut out two congruent trapezoids. Label as shown.

**Create a parallelogram** Arrange the two trapezoids from Step 1 to form a parallelogram. Then tape them together.

**EXPLORE 2** Use one kite to form a rectangle

**STEP 1**
Draw a kite

**STEP 2**
Cut triangles

**STEP 3**
Create a rectangle

**Draw a kite** Draw a kite and its perpendicular diagonals. Label the diagonal that is a line of symmetry $d_1$. Label the other diagonal $d_2$.

**Cut triangles** Cut out the kite. Cut along $d_1$ to form two congruent triangles. Then cut one triangle along part of $d_2$ to form two right triangles.

**Create a rectangle** Turn over the right triangles. Place each with its hypotenuse along a side of the larger triangle to form a rectangle. Then tape the pieces together.

**DRAW CONCLUSIONS** Use your observations to complete these exercises

1. In Explore 1, how does the area of one trapezoid compare to the area of the parallelogram formed from two trapezoids? Write expressions in terms of $b_1$, $b_2$, and $h$ for the base, height, and area of the parallelogram. Then write a formula for the area of a trapezoid.

2. In Explore 2, how do the base and height of the rectangle compare to $d_1$ and $d_2$? Write an expression for the area of the rectangle in terms of $d_1$ and $d_2$. Then use that expression to write a formula for the area of a kite.
As you saw in the Activity on page 729, you can use the area formula for a parallelogram to develop area formulas for other special quadrilaterals. The areas of the figures below are related to the lengths of the marked segments.

The **height of a trapezoid** is the perpendicular distance between its bases.

### THEOREM

**THEOREM 11.4 Area of a Trapezoid**

The area of a trapezoid is one half the product of the height and the sum of the lengths of the bases.

\[ A = \frac{1}{2}h(b_1 + b_2) \]

*Proof: Ex. 40, p. 736*

### EXAMPLE 1 Find the area of a trapezoid

**BASKETBALL** The free-throw lane on an international basketball court is shaped like a trapezoid. Find the area of the free-throw lane.

**Solution**

The height of the trapezoid is 5.8 meters. The lengths of the bases are 3.6 meters and 6 meters.

\[ A = \frac{1}{2}h(b_1 + b_2) \quad \text{Formula for area of a trapezoid} \]

\[ = \frac{1}{2}(5.8)(3.6 + 6) \quad \text{Substitute 5.8 for } h, \ 3.6 \text{ for } b_1, \text{ and 6 for } b_2. \]

\[ = 27.84 \quad \text{Simplify.} \]

The area of the free-throw lane is about 27.8 square meters.
EXAMPLE 2  Find the area of a rhombus

MUSIC  Rhombus PQRS represents one of the inlays on the guitar in the photo. Find the area of the inlay.

Solution

STEP 1  Find the length of each diagonal. The diagonals of a rhombus bisect each other, so $QN = NS$ and $PN = NR$.

$QS = QN + NS = 9 + 9 = 18 \text{ mm}$

$PR = PN + NR = 12 + 12 = 24 \text{ mm}$

STEP 2  Find the area of the rhombus. Let $d_1$ represent $QS$ and $d_2$ represent $PR$.

$A = \frac{1}{2}d_1d_2$  

Formula for area of a rhombus

$= \frac{1}{2}(18)(24)$  

Substitute.

$= 216$  

Simplify.

The area of the inlay is 216 square millimeters.

GUIDED PRACTICE for Examples 1 and 2

Find the area of the figure.

1.  

2.  

3.  

11.2  Areas of Trapezoids, Rhombuses, and Kites  731
EXAMPLE 3  Standardized Test Practice

One diagonal of a kite is twice as long as the other diagonal. The area of the kite is 72.25 square inches. What are the lengths of the diagonals?

A) 6 in., 6 in.  B) 8.5 in., 8.5 in.  C) 8.5 in., 17 in.  D) 6 in., 12 in.

Solution

Draw and label a diagram. Let \( x \) be the length of one diagonal. The other diagonal is twice as long, so label it \( 2x \).

Use the formula for the area of a kite to find the value of \( x \).

\[
A = \frac{1}{2}d_1d_2 \quad \text{Formula for area of a kite}
\]

\[
72.25 = \frac{1}{2}(x)(2x) \quad \text{Substitute 72.25 for } A, \text{ } x \text{ for } d_1, \text{ and } 2x \text{ for } d_2.
\]

\[
72.25 = x^2 \quad \text{Simplify.}
\]

\[
8.5 = x \quad \text{Find the positive square root of each side.}
\]

The lengths of the diagonals are 8.5 inches and \( 2(8.5) = 17 \) inches.

The correct answer is C.  \( \text{A B C D} \)

EXAMPLE 4  Find an area in the coordinate plane

CITY PLANNING  You have a map of a city park. Each grid square represents a 10 meter by 10 meter square. Find the area of the park.

Solution

STEP 1  Find the lengths of the bases and the height of trapezoid \( ABCD \).

\[
b_1 = BC = |70 - 30| = 40 \text{ m}
\]

\[
b_2 = AD = |80 - 10| = 70 \text{ m}
\]

\[
h = BE = |60 - 10| = 50 \text{ m}
\]

STEP 2  Find the area of \( ABCD \).

\[
A = \frac{1}{2}h(b_1 + b_2) = \frac{1}{2}(50)(40 + 70) = 2750
\]

The area of the park is 2750 square meters.

GUIDED PRACTICE  for Examples 3 and 4

4. The area of a kite is 80 square feet. One diagonal is 4 times as long as the other. Find the diagonal lengths.

5. Find the area of a rhombus with vertices \( M(1, 3), N(5, 5), P(9, 3), \) and \( Q(5, 1) \).
11.2 **EXERCISES**

1. **VOCABULARY** Copy and complete: The perpendicular distance between the bases of a trapezoid is called the _?_ of the trapezoid.

2. ★ **WRITING** Sketch a kite and its diagonals. Describe what you know about the segments and angles formed by the intersecting diagonals.

**FINDING AREA** Find the area of the trapezoid.

3. 
   \[
   \begin{array}{c}
   10 \\
   8 \\
   11 \\
   \end{array}
   \]

4.

   48 \\
   \end{array}
   \]

9. 
   \[
   \begin{array}{c}
   18 \\
   21 \\
   \end{array}
   \]

10. 
    \[
    \begin{array}{c}
    10 \\
    19 \\
    \end{array}
    \]

11. 
    \[
    \begin{array}{c}
    12 \\
    15 \\
    \end{array}
    \]

12. 
    \[
    \begin{array}{c}
    2 \\
    4 \\
    5 \\
    \end{array}
    \]

**ERROR ANALYSIS** Describe and correct the error in finding the area.

13. 
    \[
    \begin{array}{c}
    13 \text{ cm} \\
    14 \text{ cm} \\
    19 \text{ cm} \\
    \end{array}
    \]
    \[
    A = \frac{1}{2}(13)(14 + 19) \\
    = 214.5 \text{ cm}^2
    \]

14. 
    \[
    \begin{array}{c}
    12 \text{ cm} \\
    5 \text{ cm} \\
    16 \text{ cm} \\
    \end{array}
    \]
    \[
    A = \frac{1}{2}(12)(21) \\
    = 126 \text{ cm}^2
    \]

15. ★ **MULTIPLE CHOICE** One diagonal of a rhombus is three times as long as the other diagonal. The area of the rhombus is 24 square feet. What are the lengths of the diagonals?
   
   A. 8 ft, 11 ft  
   B. 4 ft, 12 ft  
   C. 2 ft, 6 ft  
   D. 6 ft, 24 ft
ALGEBRA Use the given information to find the value of $x$.

16. Area $= 108 \text{ ft}^2$

17. Area $= 300 \text{ m}^2$

18. Area $= 100 \text{ yd}^2$

COORDINATE GEOMETRY Find the area of the figure.

19.

20.

21.

ALGEBRA Find the lengths of the bases of the trapezoid described.

22. The height is 3 feet. One base is twice as long as the other base. The area is 13.5 square feet.

23. One base is 8 centimeters longer than the other base. The height is 6 centimeters and the area is 54 square centimeters.

FINDING AREA Find the area of the shaded region.

24.

25.

26.

27.

28.

29.

30. ★ OPEN-ENDED MATH Draw three examples of trapezoids that match this description: The height of the trapezoid is 3 units and its area is the same as the area of a parallelogram with height 3 units and base 8 units.

VISUALIZING Sketch the figure. Then determine its perimeter and area.

31. The figure is a trapezoid. It has two right angles. The lengths of its bases are 7 and 15. Its height is 6.

32. The figure is a rhombus. Its side length is 13. The length of one of its diagonals is 24.

33. CHALLENGE In the diagram shown at the right, $ABCD$ is a parallelogram and $BF = 16$. Find the area of $\square ABCD$. Explain your reasoning. (Hint: Draw auxiliary lines through point $A$ and through point $D$ that are parallel to $EH$.)
34. **TRUCKS** The windshield in a truck is in the shape of a trapezoid. The lengths of the bases of the trapezoid are 70 inches and 79 inches. The height is 35 inches. Find the area of the glass in the windshield.

35. **INTERNET** You are creating a kite-shaped logo for your school’s website. The diagonals of the logo are 8 millimeters and 5 millimeters long. Find the area of the logo. Draw two different possible shapes for the logo.

36. **DESIGN** You are designing a wall hanging that is in the shape of a rhombus. The area of the wall hanging is 432 square inches and the length of one diagonal is 36 inches. Find the length of the other diagonal.

37. **MULTI-STEP PROBLEM** As shown, a baseball stadium’s playing field is shaped like a pentagon. To find the area of the playing field shown at the right, you can divide the field into two smaller polygons.
   a. Classify the two polygons.
   b. Find the area of the playing field in square feet. Then express your answer in square yards. Round to the nearest square foot.

38. **VISUAL REASONING** Follow the steps in parts (a)–(c).
   a. **Analyze** Copy the table and extend it to include a column for \( n = 5 \). Complete the table for \( n = 4 \) and \( n = 5 \).

<table>
<thead>
<tr>
<th>Rhombus number, ( n )</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>Diagram</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Area, ( A )</td>
<td>2</td>
<td>4</td>
<td>6</td>
<td>?</td>
</tr>
</tbody>
</table>

   b. **Use Algebra** Describe the relationship between the rhombus number \( n \) and the area of the rhombus. Then write an algebraic rule for finding the area of the \( n \)th rhombus.

   c. **Compare** In each rhombus, the length of one diagonal \( (d_1) \) is 2. What is the length of the other diagonal \( (d_2) \) for the \( n \)th rhombus? Use the formula for the area of a rhombus to write a rule for finding the area of the \( n \)th rhombus. Compare this rule with the one you wrote in part (b).

39. ★ **SHORT RESPONSE** Look back at the Activity on page 729. Explain how the results for kites in Explore 2 can be used to justify Theorem 11.5, the formula for the area of a rhombus.
PROVING THEOREMS 11.4 AND 11.6  Use the triangle area formula and the triangles in the diagram to write a plan for the proof.

40. Show that the area \( A \) of the trapezoid shown is \( \frac{1}{2}h(b_1 + b_2) \).

41. Show that the area \( A \) of the kite shown is \( \frac{1}{2}d_1d_2 \).

42. ★ EXTENDED RESPONSE  You will explore the effect of moving a diagonal.

43. CHALLENGE  James A. Garfield, the twentieth president of the United States, discovered a proof of the Pythagorean Theorem in 1876. His proof involved the fact that a trapezoid can be formed from two congruent right triangles and an isosceles right triangle. Use the diagram to show that \( a^2 + b^2 = c^2 \).
11.3 Perimeter and Area of Similar Figures

**Before**
You used ratios to find perimeters of similar figures.

**Now**
You will use ratios to find areas of similar figures.

**Why**
So you can apply similarity in cooking, as in Example 3.

**Key Vocabulary**
- regular polygon, p. 43
- corresponding sides, p. 225
- similar polygons, p. 372

In Chapter 6 you learned that if two polygons are similar, then the ratio of their perimeters, or of any two corresponding lengths, is equal to the ratio of their corresponding side lengths. As shown below, the areas have a different ratio.

<table>
<thead>
<tr>
<th>Ratio of perimeters</th>
<th>Ratio of areas</th>
</tr>
</thead>
<tbody>
<tr>
<td>Blue/Red = $\frac{10t}{10} = t$</td>
<td>Blue/Red = $\frac{6t^2}{6} = t^2$</td>
</tr>
</tbody>
</table>

**Theorem 11.7 Areas of Similar Polygons**

If two polygons are similar with the lengths of corresponding sides in the ratio of $a:b$, then the ratio of their areas is $a^2:b^2$.

- Side length of Polygon I
- Side length of Polygon II
- Area of Polygon I
- Area of Polygon II

**Justification:** Ex. 30, p. 742

**Example 1** Find ratios of similar polygons

In the diagram, $\triangle ABC \sim \triangle DEF$. Find the indicated ratio.

a. Ratio (red to blue) of the perimeters
b. Ratio (red to blue) of the areas

**Solution**

The ratio of the lengths of corresponding sides is $\frac{8}{12} = \frac{2}{3}$, or 2:3.

a. By Theorem 6.1 on page 374, the ratio of the perimeters is 2:3.
b. By Theorem 11.7 above, the ratio of the areas is $2^2:3^2$, or 4:9.
Chapter 11  Measuring Length and Area

**GUIDED PRACTICE** for Examples 1 and 2

1. The perimeter of \(\triangle ABC\) is 16 feet, and its area is 64 feet. The perimeter of \(\triangle DEF\) is 12 feet. Given \(\triangle ABC \sim \triangle DEF\), find the ratio of the area of \(\triangle ABC\) to the area of \(\triangle DEF\). Then find the area of \(\triangle DEF\).

**EXAMPLE 2** Standardized Test Practice

You are installing the same carpet in a bedroom and den. The floors of the rooms are similar. The carpet for the bedroom costs $225. Carpet is sold by the square foot. How much does it cost to carpet the den?

- A $115
- B $161
- C $315
- D $441

**Solution**

The ratio of a side length of the den to the corresponding side length of the bedroom is 14 : 10, or 7 : 5. So, the ratio of the areas is \(7^2 : 5^2\), or 49 : 25. This ratio is also the ratio of the carpeting costs. Let \(x\) be the cost for the den.

\[
\frac{49}{25} = \frac{x}{225} 
\]

Solve for \(x\).

\[
x = 441
\]

It costs $441 to carpet the den. The correct answer is D.

**USE ESTIMATION**

The cost for the den is \(\frac{49}{25}\) times the cost for the bedroom. Because \(\frac{49}{25}\) is a little less than 2, the cost for the den is a little less than twice $225. The only possible choice is D.

**EXAMPLE 3** Use a ratio of areas

**COOKING** A large rectangular baking pan is 15 inches long and 10 inches wide. A smaller pan is similar to the large pan. The area of the smaller pan is 96 square inches. Find the width of the smaller pan.

**Solution**

First draw a diagram to represent the problem. Label dimensions and areas.

Then use Theorem 11.7. If the area ratio is \(a^2 : b^2\), then the length ratio is \(a : b\).

\[
\frac{\text{Area of smaller pan}}{\text{Area of large pan}} = \frac{96}{150} = \frac{16}{25}
\]

Find square root of area ratio.

\[
\frac{\text{Length in smaller pan}}{\text{Length in large pan}} = \frac{4}{5}
\]

Any length in the smaller pan is \(\frac{4}{5}\) or 0.8, of the corresponding length in the large pan. So, the width of the smaller pan is 0.8(10 inches) = 8 inches.
**REGULAR POLYGONS** Consider two regular polygons with the same number of sides. All of the angles are congruent. The lengths of all pairs of corresponding sides are in the same ratio. So, any two such polygons are similar. Also, any two circles are similar.

**EXAMPLE 4** Solve a multi-step problem

**GAZEBO** The floor of the gazebo shown is a regular octagon. Each side of the floor is 8 feet, and the area is about 309 square feet. You build a small model gazebo in the shape of a regular octagon. The perimeter of the floor of the model gazebo is 24 inches. Find the area of the floor of the model gazebo to the nearest tenth of a square inch.

**Solution**

All regular octagons are similar, so the floor of the model is similar to the floor of the full-sized gazebo.

**STEP 1** Find the ratio of the lengths of the two floors by finding the ratio of the perimeters. Use the same units for both lengths in the ratio.

\[
\frac{\text{Perimeter of full-sized}}{\text{Perimeter of model}} = \frac{\frac{8(8 \text{ ft})}{24 \text{ in.}}}{\frac{24 \text{ in.}}{2 \text{ ft}}} = 32 : 1
\]

So, the ratio of corresponding lengths (full-sized to model) is 32 : 1.

**STEP 2** Calculate the area of the model gazebo's floor. Let \(x\) be this area.

\[
\frac{(\text{Length in full-sized})^2}{(\text{Length in model})^2} = \frac{\text{Area of full-sized}}{\text{Area of model}}
\]

\[
\frac{32^2}{1^2} = \frac{309 \text{ ft}^2}{x \text{ ft}^2}
\]

Cross Products Property

\[1024x = 309\]

Solve for \(x\).

\[x \approx 0.302 \text{ ft}^2\]

**STEP 3** Convert the area to square inches.

\[0.302 \text{ ft}^2 \times \frac{144 \text{ in.}^2}{1 \text{ ft}^2} \approx 43.5 \text{ in.}^2\]

The area of the floor of the model gazebo is about 43.5 square inches.

**ANOTHER WAY**

In Step 1, instead of finding the perimeter of the full-sized and comparing perimeters, you can find the side length of the model and compare side lengths. \(24 \div 8 = 3\), so the ratio of side lengths is \(\frac{8 \text{ ft}}{3 \text{ in.}} = \frac{32}{96} = \frac{1}{3}\).

**GUIDED PRACTICE** for Examples 3 and 4

2. The ratio of the areas of two regular decagons is 20 : 36. What is the ratio of their corresponding side lengths in simplest radical form?

3. Rectangles I and II are similar. The perimeter of Rectangle I is 66 inches. Rectangle II is 35 feet long and 20 feet wide. Show the steps you would use to find the ratio of the areas and then find the area of Rectangle I.
1. **VOCABULARY** Sketch two similar triangles. Use your sketch to explain what is meant by *corresponding side lengths*.

2. **★ WRITING** Two regular $n$-gons are similar. The ratio of their side lengths is $3:4$. Do you need to know the value of $n$ to find the ratio of the perimeters or the ratio of the areas of the polygons? *Explain*.

**FINDING RATIOS** Copy and complete the table of ratios for similar polygons.

<table>
<thead>
<tr>
<th>Ratio of corresponding side lengths</th>
<th>Ratio of perimeters</th>
<th>Ratio of areas</th>
</tr>
</thead>
<tbody>
<tr>
<td>6:11</td>
<td>?</td>
<td>?</td>

**RATIOS AND AREAS** Corresponding lengths in similar figures are given. Find the ratios (red to blue) of the perimeters and areas. Find the unknown area.

5. \[ A = 2 \text{ ft}^2 \]
   \[ 6 \text{ ft} \]
   \[ 2 \text{ ft} \]

6. \[ A = 240 \text{ cm}^2 \]
   \[ 15 \text{ cm} \]
   \[ 20 \text{ cm} \]

7. \[ A = 210 \text{ in}^2 \]
   \[ 7 \text{ in.} \]
   \[ 9 \text{ in.} \]

8. \[ A = 40 \text{ yd}^2 \]
   \[ 5 \text{ yd} \]
   \[ 3 \text{ yd} \]

**FINDING LENGTH RATIOS** The ratio of the areas of two similar figures is given. Write the ratio of the lengths of corresponding sides.

9. Ratio of areas = 49:16
10. Ratio of areas = 16:121
11. Ratio of areas = 121:144

12. **★ MULTIPLE CHOICE** The area of $\triangle LMN$ is 18 ft² and the area of $\triangle FGH$ is 24 ft². If $\triangle LMN \sim \triangle FGH$, what is the ratio of $LM$ to $FG$?
   \[ \text{A} \ 3:4 \quad \text{B} \ 9:16 \quad \text{C} \ \sqrt{3}:2 \quad \text{D} \ 4:3 \]

**FINDING SIDE LENGTHS** Use the given area to find $XY$.

13. $\triangle DEF \sim \triangle XYZ$
\[ D \quad 4 \text{ cm} \]
\[ E \]
\[ F \]
\[ A = 7 \text{ cm}^2 \]
\[ X \]
\[ Y \]
\[ Z \]
\[ A = 28 \text{ cm}^2 \]

14. $UVWX \sim LMNPQ$
\[ U \]
\[ V \]
\[ W \]
\[ X \]
\[ Y \]
\[ M \]
\[ N \]
\[ L \]
\[ P \]
\[ Q \]
\[ A = 198 \text{ in}^2 \]
\[ A = 88 \text{ in}^2 \]
\[ 5 \text{ in.} \]
\[ 10 \text{ in.} \]
15. **ERROR ANALYSIS** In the diagram, Rectangles $DEFG$ and $WXYZ$ are similar. The ratio of the area of $DEFG$ to the area of $WXYZ$ is $1:4$. Describe and correct the error in finding $ZY$.

16. **REGULAR PENTAGONS** Regular pentagon $QRSTU$ has a side length of 12 centimeters and an area of about 248 square centimeters. Regular pentagon $VWXYZ$ has a perimeter of 140 centimeters. Find its area.

17. **RHOMBUSES** Rhombuses $MNPQ$ and $RSTU$ are similar. The area of $RSTU$ is 28 square feet. The diagonals of $MNPQ$ are 25 feet long and 14 feet long. Find the area of $MNPQ$. Then use the ratio of the areas to find the lengths of the diagonals of $RSTU$.

18. ★ **SHORT RESPONSE** You enlarge the same figure three different ways. In each case, the enlarged figure is similar to the original. List the enlargements in order from smallest to largest. Explain.

   - **Case 1** The side lengths of the original figure are multiplied by 3.
   - **Case 2** The perimeter of the original figure is multiplied by 4.
   - **Case 3** The area of the original figure is multiplied by 5.

**REASONING** In Exercises 19 and 20, copy and complete the statement using always, sometimes, or never. Explain your reasoning.

19. Doubling the side length of a square ? doubles the area.

20. Two similar octagons ? have the same perimeter.

21. **FINDING AREA** The sides of $\triangle ABC$ are 4.5 feet, 7.5 feet, and 9 feet long. The area is about 17 square feet. Explain how to use the area of $\triangle ABC$ to find the area of a $\triangle DEF$ with side lengths 6 feet, 10 feet, and 12 feet.

22. **RECTANGLES** Rectangles $ABCD$ and $DEFG$ are similar. The length of $ABCD$ is 24 feet and the perimeter is 84 square feet. The width of $DEFG$ is 3 yards. Find the ratio of the area of $ABCD$ to the area of $DEFG$.

**SIMILAR TRIANGLES** Explain why the red and blue triangles are similar. Find the ratio (red to blue) of the areas of the triangles. Show your steps.

23.  

24.  

25. **CHALLENGE** In the diagram shown, $ABCD$ is a parallelogram. The ratio of the area of $\triangle AGB$ to the area of $\triangle CGE$ is $9:25$, $CG = 10$, and $GE = 15$.

   - **a.** Find $AG$, $GB$, $GF$, and $FE$. Show your methods.
   - **b.** Give two area ratios other than $9:25$ or $25:9$ for pairs of similar triangles in the figure. Explain.
26. **BANNER** Two rectangular banners from this year’s music festival are shown. Organizers of next year’s festival want to design a new banner that will be similar to the banner whose dimensions are given in the photograph. The length of the longest side of the new banner will be 5 feet. Find the area of the new banner.

27. **PATIO** A new patio will be an irregular hexagon. The patio will have two long parallel sides and an area of 360 square feet. The area of a similar shaped patio is 250 square feet, and its long parallel sides are 12.5 feet apart. What will be the corresponding distance on the new patio?

28. **MULTIPLE CHOICE** You need 20 pounds of grass seed to plant grass inside the baseball diamond shown. About how many pounds do you need to plant grass inside the softball diamond?

   - A 6
   - B 9
   - C 13
   - D 20

29. **MULTI-STEP PROBLEM** Use graph paper for parts (a) and (b).
   a. Draw a triangle and label its vertices. Find the area of the triangle.
   b. Mark and label the midpoints of each side of the triangle. Connect the midpoints to form a smaller triangle. Show that the larger and smaller triangles are similar. Then use the fact that the triangles are similar to find the area of the smaller triangle.

30. **JUSTIFYING THEOREM 11.7** Choose a type of polygon for which you know the area formula. Use algebra and the area formula to prove Theorem 11.7 for that polygon. (Hint: Use the ratio for the corresponding side lengths in two similar polygons to express each dimension in one polygon as \( \frac{a}{b} \) times the corresponding dimension in the other polygon.)

31. **MISLEADING GRAPHS** A student wants to show that the students in a science class prefer mysteries to science fiction books. Over a two month period, the students in the class read 50 mysteries, but only 25 science fiction books. The student makes a bar graph of these data. Explain why the graph is visually misleading. Show how the student could redraw the bar graph.
32. ★ OPEN-ENDED MATH  The ratio of the areas of two similar polygons is 9 : 6. Draw two polygons that fit this description. Find the ratio of their perimeters. Then write the ratio in simplest radical form.

33. ★ EXTENDED RESPONSE  Use the diagram shown at the right.
   a. Name as many pairs of similar triangles as you can. Explain your reasoning.
   b. Find the ratio of the areas for one pair of similar triangles.
   c. Show two ways to find the length of $\overline{DE}$.

34. CHALLENGE  In the diagram, the solid figure is a cube. Quadrilateral $JKNM$ is on a plane that cuts through the cube, with $JL = KL$.
   a. Explain how you know that $\triangle JKL \sim \triangle MNP$.
   b. Suppose $\frac{JK}{MN} = \frac{1}{3}$. Find the ratio of the area of $\triangle JKL$ to the area of one face of the cube.
   c. Find the ratio of the area of $\triangle JKL$ to the area of pentagon $JKQRS$.

**MIXED REVIEW**

Find the circumference of the circle with the given radius $r$ or diameter $d$. Use $\pi \approx 3.14$. Round your answers to the nearest hundredth. (p. 49)

<table>

5. The ratio of the lengths of corresponding sides of two similar heptagons is 7 : 20. Find the ratio of their perimeters and their areas. (p. 737)

6. Triangles $PQR$ and $XYZ$ are similar. The area of $\triangle PQR$ is 1200 ft\(^2\) and the area of $\triangle XYZ$ is 48 ft\(^2\). Given $PQ = 50$ ft, find $XY$. (p. 737)
**Using ALTERNATIVE METHODS**

**Lesson 11.3**

Another Way to Solve Example 3, page 738

**MULTIPLE REPRESENTATIONS** In Example 3 on page 738, you used proportional reasoning to solve a problem about cooking. You can also solve the problem by using an area formula.

**PROBLEM**

**COOKING** A large rectangular baking pan is 15 inches long and 10 inches wide. A smaller pan is similar to the large pan. The area of the smaller pan is 96 square inches. Find the width of the smaller pan.

**METHOD**

**Using a Formula** You can use what you know about side lengths of similar figures to find the width of the pan.

**STEP 1** Use the given dimensions of the large pan to write expressions for the dimensions of the smaller pan. Let $x$ represent the width of the smaller pan.

The length of the larger pan is 1.5 times its width. So, the length of the smaller pan is also 1.5 times its width, or $1.5x$.

**STEP 2** Use the formula for the area of a rectangle to write an equation.

$$A = lw$$

Formula for area of a rectangle

$96 = 1.5x \cdot x$ Substitute $1.5x$ for $l$ and $x$ for $w$.

$8 = x$ Solve for a positive value of $x$.

The width of the smaller pan is 8 inches.

**PRACTICE**

1. **COOKING** A third pan is similar to the large pan shown above and has 1.44 times its area. Find the length of the third pan.

2. **TRAPEZOIDS** Trapezoid $PQRS$ is similar to trapezoid $WXYZ$. The area of $WXYZ$ is 28 square units. Find $WZ$.

3. **SQUARES** One square has sides of length $s$. If another square has twice the area of the first square, what is its side length?

4. **REASONING** $\triangle ABC \sim \triangle DEF$ and the area of $\triangle DEF$ is 11.25 square centimeters. Find $DE$ and $DF$. Explain your reasoning.
Lessons 11.1–11.3

1. **MULTI-STEP PROBLEM** The diagram below represents a rectangular flower bed. In the diagram, \( AG = 9.5 \) feet and \( GE = 15 \) feet.

   ![Diagram of a rectangular flower bed]

   a. *Explain* how you know that \( BDFH \) is a rhombus.

   b. Find the area of rectangle \( ACEG \) and the area of rhombus \( BDFH \).

   c. You want to plant asters inside rhombus \( BDFH \) and marigolds in the other parts of the flower bed. It costs about \$0.30\) per square foot to plant marigolds and about \$0.40\) per square foot to plant asters. How much will you spend on flowers?

2. **OPEN-ENDED** A polygon has an area of 48 square meters and a height of 8 meters. Draw three different triangles that fit this description and three different parallelograms. *Explain* your thinking.

3. **EXTENDED RESPONSE** You are tiling a 12 foot by 21 foot rectangular floor. Prices are shown below for two sizes of square tiles.

   ![Prices of square tiles]

   a. How many small tiles would you need for the floor? How many large tiles?

   b. Find the cost of buying large tiles for the floor and the cost of buying small tiles for the floor. Which tile should you use if you want to spend as little as possible?

   c. *Compare* the side lengths, the areas, and the costs of the two tiles. Is the cost per tile based on side length or on area? *Explain*.

4. **SHORT RESPONSE** What happens to the area of a rhombus if you double the length of each diagonal? if you triple the length of each diagonal? *Explain* what happens to the area of a rhombus if each diagonal is multiplied by the same number \( n \).

5. **MULTI-STEP PROBLEM** The pool shown is a right triangle with legs of length 40 feet and 41 feet. The path around the pool is 40 inches wide.

   ![Diagram of a right triangle with a path]

   a. Find the area of \( \triangle STU \).

   b. In the diagram, \( \triangle PQR \sim \triangle STU \), and the scale factor of the two triangles is 1.3 : 1. Find the perimeter of \( \triangle PQR \).

   c. Find the area of \( \triangle PQR \). Then find the area of the path around the pool.

6. **GRIDDED ANSWER** In trapezoid \( ABCD \), \( AB \parallel CD \), \( \angle D = 90^\circ \), \( AD = 5 \) inches, and \( CD = 3 \cdot AB \). The area of trapezoid \( ABCD \) is 1250 square inches. Find the length (in inches) of \( CD \).

7. **EXTENDED RESPONSE** In the diagram below, \( \triangle EFH \) is an isosceles right triangle, and \( \triangle FGH \) is an equilateral triangle.

   ![Diagram of an isosceles right triangle and an equilateral triangle]

   a. Find \( FH \). *Explain* your reasoning.

   b. Find \( EG \). *Explain* your reasoning.

   c. Find the area of \( EFGH \).
The **circumference** of a circle is the distance around the circle. For all circles, the ratio of the circumference to the diameter is the same. This ratio is known as $\pi$, or $pi$. In Chapter 1, you used 3.14 to approximate the value of $\pi$. Throughout this chapter, you should use the $\pi$ key on a calculator, then round to the hundredths place unless instructed otherwise.

**THEOREM 11.8  Circumference of a Circle**

The circumference $C$ of a circle is $C = \pi d$ or $C = 2\pi r$, where $d$ is the diameter of the circle and $r$ is the radius of the circle.

*Justification: Ex. 2, p. 769*

**EXAMPLE 1  Use the formula for circumference**

Find the indicated measure.

a. Circumference of a circle with radius 9 centimeters

b. Radius of a circle with circumference 26 meters

**Solution**

a. $C = 2\pi r$  
   Write circumference formula.
   
   $= 2 \cdot \pi \cdot 9$  
   Substitute 9 for $r$.
   
   $= 18\pi$  
   Simplify.
   
   $\approx 56.55$  
   Use a calculator.

$\triangleright$ The circumference is about 56.55 centimeters.

b. $C = 2\pi r$  
   Write circumference formula.
   
   $26 = 2\pi r$  
   Substitute 26 for $C$.
   
   $\frac{26}{2\pi} = r$  
   Divide each side by $2\pi$.
   
   $4.14 \approx r$  
   Use a calculator.

$\triangleright$ The radius is about 4.14 meters.
**Example 2** Use circumference to find distance traveled

**TIRE REVOLUTIONS** The dimensions of a car tire are shown at the right. To the nearest foot, how far does the tire travel when it makes 15 revolutions?

**Solution**

**STEP 1** Find the diameter of the tire.
\[ d = 15 + 2(5.5) = 26 \text{ in.} \]

**STEP 2** Find the circumference of the tire.
\[ C = \pi d = \pi(26) \approx 81.68 \text{ in.} \]

**STEP 3** Find the distance the tire travels in 15 revolutions. In one revolution, the tire travels a distance equal to its circumference.

In 15 revolutions, the tire travels a distance equal to 15 times its circumference.

\[
\text{Distance traveled} = \text{Number of revolutions} \cdot \text{Circumference}
\]

\[ \approx 15 \cdot 81.68 \text{ in.} \]

\[ = 1225.2 \text{ in.} \]

**STEP 4** Use unit analysis. Change 1225.2 inches to feet.

\[ 1225.2 \text{ in.} \cdot \frac{1 \text{ ft}}{12 \text{ in.}} = 102.1 \text{ ft} \]

The tire travels approximately 102 feet.

**Guided Practice** for Examples 1 and 2

1. Find the circumference of a circle with diameter 5 inches. Find the diameter of a circle with circumference 17 feet.

2. A car tire has a diameter of 28 inches. How many revolutions does the tire make while traveling 500 feet?

**Arc Length** An arc length is a portion of the circumference of a circle. You can use the measure of the arc (in degrees) to find its length (in linear units).

**Corollary**

**Arc Length Corollary**

In a circle, the ratio of the length of a given arc to the circumference is equal to the ratio of the measure of the arc to 360°.

\[
\frac{\text{Arc length of } \overline{AB}}{2\pi r} = \frac{\text{m}\overline{AB}}{360°}, \text{ or Arc length of } \overline{AB} = \frac{\text{m}\overline{AB}}{360°} \cdot 2\pi r
\]
EXAMPLE 3  Find arc lengths

Find the length of each red arc.

a.  

\[
\text{Arc length of } \overparen{AB} = \frac{60^\circ}{360^\circ} \cdot 2\pi(8) \approx 8.38 \text{ centimeters}
\]

b.  

\[
\text{Arc length of } \overparen{EF} = \frac{60^\circ}{360^\circ} \cdot 2\pi(11) \approx 11.52 \text{ centimeters}
\]

c.  

\[
\text{Arc length of } \overparen{GH} = \frac{120^\circ}{360^\circ} \cdot 2\pi(11) \approx 23.04 \text{ centimeters}
\]

EXAMPLE 4  Use arc lengths to find measures

Find the indicated measure.

a.  

\[
\text{Circumference } C \text{ of } \odot Z = \frac{m\overparen{XY}}{360^\circ} \cdot 2\pi(4.19) = 37.71 \text{ inches}
\]

b.  

\[
\text{Angle } m\angle RST = \frac{2\pi(15.28)}{44} \approx 165^\circ
\]

GUIDED PRACTICE for Examples 3 and 4

Find the indicated measure.

3.  

\[
\text{Length of } \overparen{PQ} = 9 \text{ yards}
\]

4.  

\[
\text{Circumference of } \odot N = 61.26 \text{ meters}
\]

5.  

\[
\text{Radius of } \odot G = 10.5 \text{ feet}
\]
Example 5 Use arc length to find distances

**TRACK** The curves at the ends of the track shown are 180° arcs of circles. The radius of the arc for a runner on the red path shown is 36.8 meters. About how far does this runner travel to go once around the track? Round to the nearest tenth of a meter.

**Solution**
The path of a runner is made of two straight sections and two semicircles. To find the total distance, find the sum of the lengths of each part.

\[
\text{Distance} = 2 \times \text{Length of each straight section} + 2 \times \text{Length of each semicircle}
\]

\[
= 2(84.39) + 2 \times \left(\frac{1}{2} \times 2\pi \times 36.8\right)
\]

\[
= 400.0 \text{ meters}
\]

The runner on the red path travels about 400 meters.

**Guided Practice** for Example 5

6. In Example 5, the radius of the arc for a runner on the blue path is 44.02 meters, as shown in the diagram. About how far does this runner travel to go once around the track? Round to the nearest tenth of a meter.

### 11.4 Exercises

**Skill Practice**

In Exercises 1 and 2, refer to the diagram of \( \odot P \) shown.

1. **Vocabulary** Copy and complete the equation: \( \frac{?}{2\pi r} = \frac{m\overline{AB}}{?} \).

2. **Writing** Describe the difference between the arc measure and the arc length of \( \overline{AB} \).

**Using Circumference** Use the diagram to find the indicated measure.

3. Find the circumference. 4. Find the circumference. 5. Find the radius.
FINDING EXACT MEASURES  Find the indicated measure.
6. The exact circumference of a circle with diameter 5 inches
7. The exact radius of a circle with circumference \(28\pi\) meters

FINDING CIRCUMFERENCE  Find the circumference of the red circle.
8. 
9. 
10. 

FINDING ARC LENGTHS  Find the length of \(\overarc{AB}\).
11. 
12. 
13. 

14. ERROR ANALYSIS  A student says that two arcs from different circles have the same arc length if their central angles have the same measure. Explain the error in the student’s reasoning.

FINDING MEASURES  In \(\odot P\) shown at the right, \(\angle QPR \cong \angle RPS\). Find the indicated measure.
15. \(m\overarc{QRS}\)  
16. Length of \(\overarc{QRS}\)  
17. \(m\overarc{QR}\)  
18. \(m\overarc{RSQ}\)  
19. Length of \(\overarc{QR}\)  
20. Length of \(\overarc{RSQ}\)

USING ARC LENGTH  Find the indicated measure.
21. \(m\overarc{AB}\)  
22. Circumference of \(\odot Q\)  
23. Radius of \(\odot Q\)

FINDING PERIMETERS  Find the perimeter of the shaded region.
24. 
25. 

COORDINATE GEOMETRY  The equation of a circle is given. Find the circumference of the circle. Write the circumference in terms of \(\pi\).
26. \(x^2 + y^2 = 16\)  
27. \((x + 2)^2 + (y - 3)^2 = 9\)  
28. \(x^2 + y^2 = 18\)

29. \(\star\) ALGEBRA  Solve the formula \(C = 2\pi r\) for \(r\). Solve the formula \(C = \pi d\) for \(d\). Use the rewritten formulas to find \(r\) and \(d\) when \(C = 26\pi\).
30. **FINDING VALUES** In the table below, \( \overparen{AB} \) refers to the arc of a circle. Copy and complete the table.

<table>
<thead>
<tr>
<th>Radius</th>
<th>2</th>
<th>0.8</th>
<th>4.2</th>
<th>?</th>
<th>( 4\sqrt{2} )</th>
</tr>
</thead>
<tbody>
<tr>
<td>( m\overparen{AB} )</td>
<td>45°</td>
<td>60°</td>
<td>?</td>
<td>183°</td>
<td>90°</td>
</tr>
<tr>
<td>Length of ( \overparen{AB} )</td>
<td>4</td>
<td>?</td>
<td>0.3</td>
<td>?</td>
<td>3.22</td>
</tr>
</tbody>
</table>

31. **SHORT RESPONSE** Suppose \( \overparen{EF} \) is an arc on a circle with radius \( r \). Let \( x^\circ \) be the measure of \( \overparen{EF} \). Describe the effect on the length of \( \overparen{EF} \) if you (a) double the radius of the circle, and (b) double the measure of \( \overparen{EF} \).

32. **MULTIPLE CHOICE** In the diagram, \( WY \) and \( XZ \) are diameters of \( \odot T \), and \( WY = XZ = 6 \). If \( m\overparen{XY} = 140^\circ \), what is the length of \( \overparen{TZ} \)?

- A \( \frac{2}{3}\pi \)
- B \( \frac{4}{3}\pi \)
- C \( 6\pi \)
- D \( 4\pi \)

33. **CHALLENGE** Find the circumference of a circle inscribed in a rhombus with diagonals that are 12 centimeters and 16 centimeters long. *Explain.*

34. **FINDING CIRCUMFERENCE** In the diagram, the measure of the shaded red angle is 30°. The arc length \( a \) is 2. *Explain* how to find the circumference of the blue circle without finding the radius of either the red or the blue circles.

---

**Problem Solving**

35. **TREES** A group of students wants to find the diameter of the trunk of a young sequoia tree. The students wrap a rope around the tree trunk, then measure the length of rope needed to wrap one time around the trunk. This length is 21 feet 8 inches. *Explain* how they can use this length to estimate the diameter of the tree trunk to the nearest half foot.

36. **INScribed SQUARE** A square with side length 6 units is inscribed in a circle so that all four vertices are on the circle. Draw a sketch to represent this problem. Find the circumference of the circle.

37. **MEASURING WHEEL** As shown, a measuring wheel is used to calculate the length of a path. The diameter of the wheel is 8 inches. The wheel rotates 87 times along the length of the path. About how long is the path?
38. ★ EXTENDED RESPONSE A motorized scooter has a chain drive. The chain goes around the front and rear sprockets.

a. About how long is the chain? Explain.

b. Each sprocket has teeth that grip the chain. There are 76 teeth on the larger sprocket, and 15 teeth on the smaller sprocket. About how many teeth are gripping the chain at any given time? Explain.

39. SCIENCE Over 2000 years ago, the Greek scholar Eratosthenes estimated Earth’s circumference by assuming that the Sun’s rays are parallel. He chose a day when the Sun shone straight down into a well in the city of Syene. At noon, he measured the angle the Sun’s rays made with a vertical stick in the city of Alexandria. Eratosthenes assumed that the distance from Syene to Alexandria was equal to about 575 miles.

Find $m \angle 1$. Then estimate Earth’s circumference.

CHALLENGE Suppose $\overline{AB}$ is divided into four congruent segments, and semicircles with radius $r$ are drawn.

40. What is the sum of the four arc lengths if the radius of each arc is $r$?

41. Suppose that $\overline{AB}$ is divided into $n$ congruent segments and that semicircles are drawn, as shown. What will the sum of the arc lengths be for 8 segments? for 16 segments? for $n$ segments? Explain your thinking.

Find the area of a circle with radius $r$. Round to the nearest hundredth. (p. 49)

42. $r = 6$ cm  
43. $r = 4.2$ in.  
44. $r = 8 \frac{3}{4}$ mi  
45. $r = 1 \frac{3}{8}$ in.

Find the value of $x$. (p. 689)

46.  
47.  
48.
Geometry on a Sphere

**GOAL** Compare Euclidean and spherical geometries.

In Euclidean geometry, a plane is a flat surface that extends without end in all directions, and a line in the plane is a set of points that extends without end in two directions. Geometry on a sphere is different.

In spherical geometry, a plane is the surface of a sphere. A line is defined as a great circle, which is a circle on the sphere whose center is the center of the sphere.

**KEY CONCEPT**

<table>
<thead>
<tr>
<th>Euclidean Geometry</th>
<th>Spherical Geometry</th>
</tr>
</thead>
<tbody>
<tr>
<td>Plane $P$ contains line $\ell$ and point $A$ not on the line $\ell$.</td>
<td>Sphere $S$ contains great circle $m$ and point $A$ not on $m$. Great circle $m$ is a line.</td>
</tr>
</tbody>
</table>

Some properties and postulates in Euclidean geometry are true in spherical geometry. Others are not, or are true only under certain circumstances. For example, in Euclidean geometry, Postulate 5 states that through any two points there exists exactly one line. On a sphere, this postulate is true only for points that are not the endpoints of a diameter of the sphere.

**EXAMPLE 1** Compare Euclidean and spherical geometry

Tell whether the following postulate in Euclidean geometry is also true in spherical geometry. Draw a diagram to support your answer.

Parallel Postulate: If there is a line $\ell$ and a point $A$ not on the line, then there is exactly one line through the point $A$ parallel to the given line $\ell$.

**Solution**

Parallel lines do not intersect. The sphere shows a line $\ell$ (a great circle) and a point $A$ not on $\ell$. Several lines are drawn through $A$. Each great circle containing $A$ intersects $\ell$. So, there can be no line parallel to $\ell$. The parallel postulate is not true in spherical geometry.
**Example 2** Find distances on a sphere

The diameter of the sphere shown is 15, and $m\overline{AB} = 60^\circ$. Find the distances between $A$ and $B$.

**Solution**

Find the lengths of the minor arc $\overline{AB}$ and the major arc $\overline{ACB}$ of the great circle shown. In each case, let $x$ be the arc length.

\[
\frac{2\pi}{360^\circ} \cdot m\overline{AB} = \frac{x}{15\pi} = \frac{60^\circ}{360^\circ} = x = 2.5\pi
\]

\[
\frac{2\pi}{360^\circ} \cdot m\overline{ACB} = \frac{x}{15\pi} = \frac{360^\circ - 60^\circ}{360^\circ} = x = 12.5\pi
\]

The distances are $2.5\pi$ and $12.5\pi$.

**Practice**

1. **Writing** Lines of latitude and longitude are used to identify positions on Earth. Which of the lines shown in the figure are great circles. Which are not? Explain your reasoning.

2. **Comparing Geometries** Draw sketches to show that there is more than one line through the endpoints of a diameter of a sphere, but only one line through two points that are not endpoints of a diameter.

3. **Comparing Geometries** The following statement is true in Euclidean geometry: If two lines intersect, then their intersection is exactly one point. Rewrite this statement to be true for lines on a sphere. Explain.

**Finding Distances** Use the diagram and the given arc measure to find the distances between points $A$ and $B$. Leave your answers in terms of $\pi$.

4. $m\overline{AB} = 120^\circ$
5. $m\overline{AB} = 90^\circ$
6. $m\overline{AB} = 140^\circ$
11.5 Areas of Circles and Sectors

Before
You found circumferences of circles.

Now
You will find the areas of circles and sectors.

Why
So you can estimate walking distances, as in Ex. 38.

Key Vocabulary
• sector of a circle

In Chapter 1, you used the formula for the area of a circle. This formula is presented below as Theorem 11.9.

THEOREM

THEOREM 11.9 Area of a Circle
The area of a circle is \( \pi \) times the square of the radius.

Justification: Ex. 43, p. 761; Ex. 3, p. 769

For Your Notebook

EXAMPLE 1 Use the formula for area of a circle

Find the indicated measure.

a. Area
r = 2.5 cm

b. Diameter
A = 113.1 cm²

Solution

a. \[ A = \pi r^2 \]
   \[ = \pi \cdot (2.5)^2 \]
   \[ = 6.25\pi \]
   \[ \approx 19.63 \]
   Use a calculator.

   ▶ The area of \( \odot A \) is about 19.63 square centimeters.

b. \[ A = \pi r^2 \]
   \[ 113.1 = \pi r^2 \]
   Substitute 113.1 for \( A \).
   \[ \frac{113.1}{\pi} = r^2 \]
   Divide each side by \( \pi \).
   \[ 6 \approx r \]
   Find the positive square root of each side.

   ▶ The radius is about 6 inches, so the diameter is about 12 centimeters.
SECTORS A **sector of a circle** is the region bounded by two radii of the circle and their intercepted arc. In the diagram below, sector $APB$ is bounded by $AP$, $BP$, and $AB$. Theorem 11.10 gives a method for finding the area of a sector.

### Theorem 11.10 Area of a Sector

The ratio of the area of a sector of a circle to the area of the whole circle $(\pi r^2)$ is equal to the ratio of the measure of the intercepted arc to $360^\circ$.

\[
\frac{\text{Area of sector } APB}{\pi r^2} = \frac{m\overarc{AB}}{360^\circ}, \quad \text{or} \quad \text{Area of sector } APB = \frac{m\overarc{AB}}{360^\circ} \cdot \pi r^2
\]

### Example 2 Find areas of sectors

Find the areas of the sectors formed by $\angle UTV$.

**Solution**

**STEP 1** Find the measures of the minor and major arcs.

Because $m\angle UTV = 70^\circ$, $m\overarc{UV} = 70^\circ$ and $m\overarc{USV} = 360^\circ - 70^\circ = 290^\circ$.

**STEP 2** Find the areas of the small and large sectors.

Area of small sector

\[
\frac{m\overarc{UV}}{360^\circ} \cdot \pi r^2 = \frac{70^\circ}{360^\circ} \cdot \pi \cdot 8^2
\]

\[
\approx 39.10 \quad \text{Use a calculator.}
\]

Area of large sector

\[
\frac{m\overarc{USV}}{360^\circ} \cdot \pi r^2 = \frac{290^\circ}{360^\circ} \cdot \pi \cdot 8^2
\]

\[
\approx 161.97 \quad \text{Use a calculator.}
\]

The areas of the small and large sectors are about 39.10 square units and 161.97 square units, respectively.

### Guided Practice for Examples 1 and 2

Use the diagram to find the indicated measure.

1. Area of $\odot D$
2. Area of red sector
3. Area of blue sector
EXAMPLE 3  Use the Area of a Sector Theorem

Use the diagram to find the area of \( \odot V \).

**Solution**

Area of sector \( TVU = \frac{m \angle TVU}{360^\circ} \cdot \text{Area of } \odot V \)

Write formula for area of a sector.

\[
35 = \frac{40^\circ}{360^\circ} \cdot \text{Area of } \odot V
\]

Substitute.

\[
315 = \text{Area of } \odot V
\]

Solve for Area of \( \odot V \).

The area of \( \odot V \) is 315 square meters.

EXAMPLE 4  Standardized Test Practice

A rectangular wall has an entrance cut into it. You want to paint the wall. To the nearest square foot, what is the area of the region you need to paint?

(A) 357 ft\(^2\)  
(B) 479 ft\(^2\)  
(C) 579 ft\(^2\)  
(D) 936 ft\(^2\)

**Solution**

The area you need to paint is the area of the rectangle minus the area of the entrance. The entrance can be divided into a semicircle and a square.

\[
\text{Area of wall} = \text{Area of rectangle} - (\text{Area of semicircle} + \text{Area of square})
\]

\[
= 36(26) - \left[ \frac{180^\circ}{360^\circ} \cdot (\pi \cdot 8^2) + 16^2 \right]
\]

\[
= 936 - [32\pi + 256]
\]

\[
= 579.47
\]

The area is about 579 square feet.

The correct answer is C.  
(A)  (B)  (C)  (D)

GUIDED PRACTICE for Examples 3 and 4

4. Find the area of \( \odot H \).

5. Find the area of the figure.

6. If you know the area and radius of a sector of a circle, can you find the measure of the intercepted arc? Explain.
1. **VOCABULARY** Copy and complete: A _?_ of a circle is the region bounded by two radii of the circle and their intercepted arc.

2. **WRITING** Suppose you double the arc measure of a sector in a given circle. Will the area of the sector also be doubled? Explain.

### FINDING AREA
Find the exact area of a circle with the given radius $r$ or diameter $d$. Then find the area to the nearest hundredth.

3. $r = 5$ in.
4. $d = 16$ ft
5. $d = 23$ cm
6. $r = 1.5$ km

### USING AREA
In Exercises 7–9, find the indicated measure.

7. The area of a circle is 154 square meters. Find the radius.
8. The area of a circle is 380 square inches. Find the radius.
9. The area of a circle is $676\pi$ square centimeters. Find the diameter.

### ERROR ANALYSIS
In the diagram at the right, the area of $\odot Z$ is 48 square feet. A student writes a proportion to find the area of sector $XZY$. Describe and correct the error in writing the proportion. Then find the area of sector $XZY$.

### FINDING AREA OF SECTORS
Find the areas of the sectors formed by $\angle DFE$.

11. [Diagram of sector with $10$ in., $\theta = 60^\circ$, $E$ to $F$ and $F$ to $G$]
12. [Diagram of sector with $14$ cm, $\theta = 256^\circ$, $F$ to $G$]
13. [Diagram of sector with $137^\circ$, $28$ m, $D$ to $E$]

### USING AREA OF A SECTOR
Use the diagram to find the indicated measure.

14. Find the area of $\odot M$.
15. Find the area of $\odot M$.
16. Find the radius of $\odot M$.

### FINDING AREA
Find the area of the shaded region.

17. [Diagram of two overlapping circles with shaded region and $6$ m, $6$ m, $6$ m]
18. [Diagram of a shape with shaded region and $20$ in., $8$ in., $16$ in.]
19. ★ MULTIPLE CHOICE  The diagram shows the shape of a putting green at a miniature golf course. One part of the green is a sector of a circle. To the nearest square foot, what is the area of the putting green?

- A) 46 ft$^2$
- B) 49 ft$^2$
- C) 56 ft$^2$
- D) 75 ft$^2$

FINDING MEASURES  The area of $\odot M$ is 260.67 square inches. The area of sector $KML$ is 42 square inches. Find the indicated measure.

20. Radius of $\odot M$  21. Circumference of $\odot M$

22. $m\overarc{KL}$  23. Perimeter of blue region

24. Length of $\overarc{KL}$  25. Perimeter of red region

FINDING AREA  Find the area of the shaded region.

26. 27. 28. 29. 30. 31.

32. TANGENT CIRCLES  In the diagram at the right, $\odot Q$ and $\odot P$ are tangent, and $P$ lies on $\odot Q$. The measure of $\overarc{RS}$ is $108^\circ$. Find the area of the red region, the area of the blue region, and the area of the yellow region. Leave your answers in terms of $\pi$.

33. SIMILARITY  Look back at the Perimeters of Similar Polygons Theorem on page 374 and the Areas of Similar Polygons Theorem on page 737. How would you rewrite these theorems to apply to circles? Explain.

34. ERROR ANALYSIS  The ratio of the lengths of two arcs in a circle is 2 : 1. A student claims that the ratio of the areas of the sectors bounded by these arcs is 4 : 1, because $\left(\frac{2}{1}\right)^2 = \frac{4}{1}$. Describe and correct the error.

35. DRAWING A DIAGRAM  A square is inscribed in a circle. The same square is also circumscribed about a smaller circle. Draw a diagram. Find the ratio of the area of the large circle to the area of the small circle.

36. CHALLENGE  In the diagram at the right, $\overarc{FG}$ and $\overarc{EH}$ are arcs of concentric circles, and $\overarc{EF}$ and $\overarc{GH}$ lie on radii of the larger circle. Find the area of the shaded region.
37. **METEOROLOGY** The *eye of a hurricane* is a relatively calm circular region in the center of the storm. The diameter of the eye is typically about 20 miles. If the eye of a hurricane is 20 miles in diameter, what is the area of the land that is underneath the eye?

38. **WALKING** The area of a circular pond is about 138,656 square feet. You are going to walk around the entire edge of the pond. About how far will you walk? Give your answer to the nearest foot.

39. **CIRCLE GRAPH** The table shows how students get to school.
   a. *Explain* why a circle graph is appropriate for the data.
   b. You will represent each method by a sector of a circle graph. Find the central angle to use for each sector. Then use a protractor and a compass to construct the graph. Use a radius of 2 inches.
   c. Find the area of each sector in your graph.

40. **★ SHORT RESPONSE** It takes about $\frac{3}{4}$ cup of dough to make a tortilla with a 6 inch diameter. How much dough does it take to make a tortilla with a 12 inch diameter? *Explain* your reasoning.

41. **HIGHWAY SIGNS** A new typeface has been designed to make highway signs more readable. One change was to redesign the form of the letters to increase the space inside letters.
   a. Estimate the interior area for the old and the new “a.” Then find the percent increase in interior area.
   b. Do you think the change in interior area is just a result of a change in height and width of the letter *a*? *Explain*.

42. **★ EXTENDED RESPONSE** A circular pizza with a 12 inch diameter is enough for you and 2 friends. You want to buy pizza for yourself and 7 friends. A 10 inch diameter pizza with one topping costs $6.99 and a 14 inch diameter pizza with one topping costs $12.99. How many 10 inch and 14 inch pizzas should you buy in each situation below? *Explain*.
   a. You want to spend as little money as possible.
   b. You want to have three pizzas, each with a different topping.
   c. You want to have as much of the thick outer crust as possible.
43. **JUSTIFYING THEOREM 11.9** You can follow the steps below to justify the formula for the area of a circle with radius $r$.

- Divide a circle into 16 congruent sectors. Cut out the sectors.
- Rearrange the 16 sectors to form a shape resembling a parallelogram.

a. Write expressions in terms of $r$ for the approximate height and base of the parallelogram. Then write an expression for its area.

b. *Explain* how your answers to part (a) justify Theorem 11.9.

44. **CHALLENGE** Semicircles with diameters equal to the three sides of a right triangle are drawn, as shown. Prove that the sum of the area of the two shaded crescents equals the area of the triangle.

### MIXED REVIEW

**PREVIEW**

Prepare for Lesson 11.6 In Exs. 45–47.

**Triangle $DEG$ is isosceles with altitude $DF$.** Find the given measurement. *Explain* your reasoning. (p. 319)

45. $m \angle DFG$

46. $m \angle FDG$

47. $FG$

**Sketch the indicated figure. Draw all of its lines of symmetry.** (p. 619)

48. Isosceles trapezoid

49. Regular hexagon

**Graph $\triangle ABC$. Then find its area.** (p. 720)

50. $A(2, 2), B(9, 2), C(4, 16)$

51. $A(-8, 3), B(-3, 3), C(-1, -10)$

### QUIZ for Lessons 11.4–11.5

**Find the indicated measure.** (p. 746)

1. Length of $AB$

2. Circumference of $\odot F$

3. Radius of $\odot L$

**Find the area of the shaded region.** (p. 755)

4. 11 m

5. 8.7 in.

6. 6 cm
### Key Vocabulary
- center of a polygon
- radius of a polygon
- apothem of a polygon
- central angle of a regular polygon

The diagram shows a regular polygon inscribed in a circle. The center of the polygon and the radius of the polygon are the center and the radius of its circumscribed circle.

The distance from the center to any side of the polygon is called the apothem of the polygon.

A central angle of a regular polygon is an angle formed by two radii drawn to consecutive vertices of the polygon. To find the measure of each central angle, divide 360° by the number of sides.

#### Example 1
**Find angle measures in a regular polygon**

In the diagram, $ABCDE$ is a regular pentagon inscribed in $\odot F$. Find each angle measure.

a. $m\angle AFB$

b. $m\angle AFG$

c. $m\angle GAF$

**Solution**

a. $\angle AFB$ is a central angle, so $m\angle AFB = \frac{360^\circ}{5}$, or $72^\circ$.

b. $FG$ is an apothem, which makes it an altitude of isosceles $\triangle AFB$.

So, $FG$ bisects $\angle AFB$ and $m\angle AFG = \frac{1}{2} m\angle AFB = 36^\circ$.

c. The sum of the measures of right $\triangle GAF$ is $180^\circ$.

So, $90^\circ + 36^\circ + m\angle GAF = 180^\circ$, and $m\angle GAF = 54^\circ$.

#### Guided Practice for Example 1

In the diagram, $WXYZ$ is a square inscribed in $\odot P$.

1. Identify the center, a radius, an apothem, and a central angle of the polygon.

2. Find $m\angle XPY$, $m\angle XPQ$, and $m\angle PXQ$. 
**AREA OF AN n-GON** You can find the area of any regular n-gon by dividing it into congruent triangles.

\[ A = \text{Area of one triangle} \cdot \text{Number of triangles} \]

\[ = \left( \frac{1}{2} \cdot s \cdot a \right) \cdot n \quad \text{Base of triangle is } s \text{ and height of triangle is } a. \text{ Number of triangles is } n. \]

\[ = \frac{1}{2} \cdot a \cdot (n \cdot s) \quad \text{Commutative and Associative Properties of Equality} \]

\[ = \frac{1}{2} a \cdot P \quad \text{There are } n \text{ congruent sides of length } s, \text{ so perimeter } P \text{ is } n \cdot s. \]

**THEOREM**

**THEOREM 11.11 Area of a Regular Polygon**

The area of a regular n-gon with side length s is half the product of the apothem a and the perimeter P, so \( A = \frac{1}{2} aP \), or \( A = \frac{1}{2} a \cdot ns \).

**EXAMPLE 2** Find the area of a regular polygon

**DECORATING** You are decorating the top of a table by covering it with small ceramic tiles. The table top is a regular octagon with 15 inch sides and a radius of about 19.6 inches. What is the area you are covering?

**Solution**

**STEP 1** Find the perimeter P of the table top.

An octagon has 8 sides, so \( P = 8(15) = 120 \) inches.

**STEP 2** Find the apothem a. The apothem is height RS of \( \triangle PQR \).

Because \( \triangle PQR \) is isosceles, altitude RS bisects \( \overline{QP} \).

So, \( QS = \frac{1}{2}(QP) = \frac{1}{2}(15) = 7.5 \) inches.

To find RS, use the Pythagorean Theorem for \( \triangle RQS \).

\[ a = RS \approx \sqrt{19.6^2 - 7.5^2} = \sqrt{327.91} = 18.108 \]

**STEP 3** Find the area A of the table top.

\[ A = \frac{1}{2} aP \quad \text{Formula for area of regular polygon} \]

\[ = \frac{1}{2}(18.108)(120) \quad \text{Substitute.} \]

\[ = 1086.5 \quad \text{Simplify.} \]

So, the area you are covering with tiles is about 1086.5 square inches.
EXAMPLE 3  Find the perimeter and area of a regular polygon

A regular nonagon is inscribed in a circle with radius 4 units. Find the perimeter and area of the nonagon.

Solution

The measure of central $\angle JLK$ is $\frac{360^\circ}{9}$, or $40^\circ$. Apothem $LM$ bisects the central angle, so $m\angle KLM$ is $20^\circ$. To find the lengths of the legs, use trigonometric ratios for right $\triangle KLM$.

$$\sin 20^\circ = \frac{MK}{LK} \quad \cos 20^\circ = \frac{LM}{LK}$$

$$\sin 20^\circ = \frac{MK}{4} \quad \cos 20^\circ = \frac{LM}{4}$$

$$4 \cdot \sin 20^\circ = MK \quad 4 \cdot \cos 20^\circ = LM$$

The regular nonagon has side length $s = 2MK = 2(4 \cdot \sin 20^\circ) = 8 \cdot \sin 20^\circ$ and apothem $a = LM = 4 \cdot \cos 20^\circ$.

$\therefore$ So, the perimeter is $P = 9s = 9(8 \cdot \sin 20^\circ) = 72 \cdot \sin 20^\circ \approx 24.6$ units, and the area is $A = \frac{1}{2}aP = \frac{1}{2}(4 \cdot \cos 20^\circ)(72 \cdot \sin 20^\circ) \approx 46.3$ square units.

GUIDED PRACTICE for Examples 2 and 3

Find the perimeter and area of the regular polygon.

3. 4. 5. 6. Which of Exercises 3–5 above can be solved using special right triangles?

CONCEPT SUMMARY For Your Notebook

Finding Lengths in a Regular $n$-gon

To find the area of a regular $n$-gon with radius $r$, you may need to first find the apothem $a$ or the side length $s$.

<table>

11.6 EXERCISES

VOCABULARY In Exercises 1–4, use the diagram shown.

1. Identify the center of regular polygon ABCDE.
2. Identify a central angle of the polygon.
3. What is the radius of the polygon?
4. What is the apothem?

5. ★ WRITING Explain how to find the measure of a central angle of a regular polygon with \( n \) sides.

MEASURES OF CENTRAL ANGLES Find the measure of a central angle of a regular polygon with the given number of sides. Round answers to the nearest tenth of a degree, if necessary.

6. 10 sides
7. 18 sides
8. 24 sides
9. 7 sides

FINDING ANGLE MEASURES Find the given angle measure for the regular octagon shown.

10. \( m \angle GJH \)
11. \( m \angle GJK \)
12. \( m \angle KGJ \)
13. \( m \angle EJH \)

FINDING AREA Find the area of the regular polygon.

14.
15.
16.

17. ERROR ANALYSIS Describe and correct the error in finding the area of the regular hexagon.

\[
\sqrt{15^2 - 13^2} = 7.5
\]
\[
A = \frac{1}{2} a \cdot h
\]
\[
A = \frac{1}{2} (13)(6)(7.5) = 292.5
\]

18. ★ MULTIPLE CHOICE Which expression gives the apothem for a regular dodecagon with side length 8?

(A) \( a = \frac{4}{\tan 30^\circ} \)      (B) \( a = \frac{4}{\tan 15^\circ} \)      (C) \( a = \frac{8}{\tan 15^\circ} \)      (D) \( a = 8 \cdot \cos 15^\circ \)
PERIMETER AND AREA  Find the perimeter and area of the regular polygon.

19.  

20.  

21.  

22. ★ SHORT RESPONSE  The perimeter of a regular nonagon is 18 inches. Is that enough information to find the area? If so, find the area and explain your steps. If not, explain why not.

CHOOSE A METHOD  Identify any unknown length(s) you need to know to find the area of the regular polygon. Which methods in the table on page 764 can you use to find those lengths? Choose a method and find the area.

23.  

24.  

25.  

26. INSCRIBED SQUARE  Find the area of the unshaded region in Exercise 23.

POLYGONS IN CIRCLES  Find the area of the shaded region.

27.  

28.  

29.  

30. COORDINATE GEOMETRY  Find the area of a regular pentagon inscribed in a circle whose equation is given by $(x - 4)^2 + (y + 2)^2 = 25$.

REASONING  Decide whether the statement is true or false. Explain.

31. The area of a regular $n$-gon of fixed radius $r$ increases as $n$ increases.

32. The apothem of a regular polygon is always less than the radius.

33. The radius of a regular polygon is always less than the side length.

34. FORMULAS  In Exercise 44 on page 726, the formula $A = \frac{\sqrt{3}s^2}{4}$ for the area $A$ of an equilateral triangle with side length $s$ was developed. Show that the formulas for the area of a triangle and for the area of a regular polygon, $A = \frac{1}{2}bh$ and $A = \frac{1}{2}a \cdot ns$, also result in this formula when they are applied to an equilateral triangle with side length $s$.

35. CHALLENGE  An equilateral triangle is shown inside a square inside a regular pentagon inside a regular hexagon. Write an expression for the exact area of the shaded regions in the figure. Then find the approximate area of the entire shaded region, rounded to the nearest whole unit.

= WORKED-OUT SOLUTIONS  on p. WS1  ★ = STANDARDIZED TEST PRACTICE
36. **BASALTIC COLUMNS** Basaltic columns are geological formations that result from rapidly cooling lava. The Giant’s Causeway in Ireland, pictured here, contains many hexagonal columns. Suppose that one of the columns is in the shape of a regular hexagon with radius 8 inches.

   a. What is the apothem of the column?
   b. Find the perimeter and area of the column. Round the area to the nearest square inch.

37. **WATCH** A watch has a circular face on a background that is a regular octagon. Find the apothem and the area of the octagon. Then find the area of the silver border around the circular face.

38. **COMPARING AREAS** Predict which figure has the greatest area and which has the smallest area. Check by finding the area of each figure.

39. **CRAFTS** You want to make two wooden trivets, a large one and a small one. Both trivets will be shaped like regular pentagons. The perimeter of the small trivet is 15 inches, and the perimeter of the large trivet is 25 inches. Find the area of the small trivet. Then use the Areas of Similar Polygons Theorem to find the area of the large trivet. Round your answers to the nearest tenth.

40. **CONSTRUCTION** Use a ruler and compass.

   a. Draw $AB$ with a length of 1 inch. Open the compass to 1 inch and draw a circle with that radius. Using the same compass setting, mark off equal parts along the circle. Then connect the six points where the compass marks and circle intersect to draw a regular hexagon as shown.

   b. What is the area of the hexagon? of the shaded region?

41. **HEXAGONS AND TRIANGLES** Show that a regular hexagon can be divided into six equilateral triangles with the same side length.

42. **ALTERNATIVE METHODS** Find the area of a regular hexagon with side length 2 and apothem $\sqrt{3}$ in at least four different ways.
43. **APPLYING TRIANGLE PROPERTIES** In Chapter 5, you learned properties of special segments in triangles. Use what you know about special segments in triangles to show that radius $CP$ in equilateral $\triangle ABC$ is twice the apothem $DP$.

44. ★ **EXTENDED RESPONSE** Assume that each honeycomb cell is a regular hexagon. The distance is measured through the center of each cell.

   a. Find the average distance across a cell in centimeters.
   b. Find the area of a “typical” cell in square centimeters. Show your steps.
   c. What is the area of 100 cells in square centimeters? in square decimeters? (1 decimeter = 10 centimeters.)
   d. Scientists are often interested in the number of cells per square decimeter. Explain how to rewrite your results in this form.

45. **CONSTANT PERIMETER** Use a piece of string that is 60 centimeters long.

   a. Arrange the string to form an equilateral triangle and find the area. Next form a square and find the area. Then do the same for a regular pentagon, a regular hexagon, and a regular decagon. What is happening to the area?
   b. Predict and then find the areas of a regular 60-gon and a regular 120-gon.
   c. Graph the area $A$ as a function of the number of sides $n$. The graph approaches a limiting value. What shape do you think will have the greatest area? What will that area be?

46. **CHALLENGE** Two regular polygons both have $n$ sides. One of the polygons is inscribed in, and the other is circumscribed about, a circle of radius $r$. Find the area between the two polygons in terms of $n$ and $r$.

---

**MIXED REVIEW**

A jar contains 10 red marbles, 6 blue marbles, and 2 white marbles. Find the probability of the event described. (p. 893)

47. You randomly choose one red marble from the jar, put it back in the jar, and then randomly choose a red marble.

48. You randomly choose one blue marble from the jar, keep it, and then randomly choose one white marble.

Find the ratio of the width to the length of the rectangle. Then simplify the ratio. (p. 356)

49.  
   \[ \frac{9 \text{ ft}}{18 \text{ ft}} \]

50.  
   \[ \frac{12 \text{ cm}}{42 \text{ cm}} \]

51.  
   \[ \frac{45 \text{ in.}}{36 \text{ in.}} \]

52. The vertices of quadrilateral $ABCD$ are $A(-3, 3), B(1, 1), C(1, -3)$, and $D(-3, -1)$. Draw $ABCD$ and determine whether it is a parallelogram. (p. 522)
11.6 Perimeter and Area of Polygons

MATERIALS • computer

QUESTION How can you use a spreadsheet to find perimeters and areas of regular \( n \)-gons?

First consider a regular octagon with radius 1.

Because there are 8 central angles, \( m \angle JQB = \frac{360^\circ}{8} = \frac{180^\circ}{4} \), or 22.5°.

You can express the side length and apothem using trigonometric functions.

\[
sin 22.5^\circ = \frac{JB}{QB} = \frac{JB}{1} = JB
\]

\[
cos 22.5^\circ = \frac{QJ}{QB} = \frac{QJ}{1} = QJ
\]

So, side length \( s = 2(\frac{JB}{\frac{180^\circ}{n}}) = 2 \cdot \sin 22.5^\circ \) So, apothem \( a \) is \( \frac{QJ}{\frac{180^\circ}{n}} = \cos 22.5^\circ \)

Perimeter \( P = 8s = 8(2 \cdot \sin 22.5^\circ) = 16 \cdot \sin 22.5^\circ \)

Area \( A = \frac{1}{2}aP = \frac{1}{2}(\cos 22.5^\circ)(16 \cdot \sin 22.5^\circ) = 8(\cos 22.5^\circ)(\sin 22.5^\circ) \)

Using these steps for any regular \( n \)-gon inscribed in a circle of radius 1 gives

\[ P = 2n \cdot \sin \left(\frac{180^\circ}{n}\right) \text{ and } A = n \cdot \sin \left(\frac{180^\circ}{n}\right) \cdot \cos \left(\frac{180^\circ}{n}\right) . \]

EXAMPLE Use a spreadsheet to find measures of regular \( n \)-gons

STEP 1 Make a table Use a spreadsheet to make a table with three columns.

<table>
<thead>
<tr>
<th>A</th>
<th>B</th>
<th>C</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Number of sides</td>
<td>Perimeter</td>
</tr>
<tr>
<td>2</td>
<td>( n )</td>
<td>( 2n \sin(180/n) )</td>
</tr>
<tr>
<td>3</td>
<td>3</td>
<td>( 2A3 \sin(180/A3) )</td>
</tr>
<tr>
<td>4</td>
<td>( A3 + 1 )</td>
<td>( 2A4 \sin(180/A4) )</td>
</tr>
</tbody>
</table>

STEP 2 Enter formulas Enter the formulas shown in cells A4, B3, and C3. Then use the Fill Down feature to create more rows.

PRACTICE

1. What shape do the regular \( n \)-gons approach as the value of \( n \) gets very large? Explain your reasoning.

2. What value do the perimeters approach as the value of \( n \) gets very large? Explain how this result justifies the formula for the circumference of a circle.

3. What value do the areas approach as the value of \( n \) gets very large? Explain how this result justifies the formula for the area of a circle.
11.7 Investigate Geometric Probability

**MATERIALS** • graph paper • small dried bean

**QUESTION** How do theoretical and experimental probabilities compare?

**EXPLORE** Find geometric probabilities

**STEP 1** Draw a target On a piece of graph paper, make a target by drawing some polygons. Choose polygons whose area you can calculate and make them as large as possible. Shade in the polygons. An example is shown.

**STEP 2** Calculate theoretical probability Calculate the theoretical probability that a randomly tossed bean that lands on the target will land in a shaded region.

\[
\text{Theoretical probability} = \frac{\text{Sum of areas of polygons}}{\text{Area of paper}}
\]

**STEP 3** Perform an experiment Place the target on the floor against a wall. Toss a dried bean so that it hits the wall and then bounces onto the target. Determine whether the bean lands on a shaded or unshaded region of the target. If the bean lands so that it lies in both a shaded and unshaded region, use the region in which most of the bean lies. If the bean does not land completely on the target, repeat the toss.

**STEP 4** Make a table Record the results of the toss in a table. Repeat until you have recorded the results of 50 tosses.

<table>
<thead>
<tr>
<th>Toss</th>
<th>Shaded area</th>
<th>Unshaded area</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>X</td>
<td></td>
</tr>
<tr>
<td>2</td>
<td></td>
<td>X</td>
</tr>
<tr>
<td>...</td>
<td></td>
<td>...</td>
</tr>
<tr>
<td>50</td>
<td>X</td>
<td></td>
</tr>
</tbody>
</table>

**STEP 5** Calculate experimental probability Use the results from your table to calculate the experimental probability that a randomly tossed bean that lands on the target will land in a shaded region.

\[
\text{Experimental probability} = \frac{\text{Number of times a bean landed on a shaded region}}{\text{Total number of tosses}}
\]

**DRAW CONCLUSIONS** Use your observations to complete these exercises

1. Compare the theoretical probability from Step 2 with the experimental probability from Step 5. What do you notice?

2. Repeat Steps 3–5, this time using only 10 tosses. Calculate the experimental probability for those 10 tosses. Compare the experimental probability and the theoretical probability.

3. **REASONING** How does the number of tosses affect the relationship between the experimental and theoretical probabilities? Explain.
### Key Vocabulary
- **probability**
- **geometric probability**

The **probability** of an event is a measure of the likelihood that the event will occur. It is a number between 0 and 1, inclusive, and can be expressed as a fraction, decimal, or percent. The probability of event $A$ is written as $P(A)$.

<table>
<thead>
<tr>
<th>$P$</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>$P = 0$</td>
<td>Impossible</td>
</tr>
<tr>
<td>$0.25$</td>
<td>Unlikely</td>
</tr>
<tr>
<td>$0.5$</td>
<td>Equally likely to occur or not occur</td>
</tr>
<tr>
<td>$0.75$</td>
<td>Likely</td>
</tr>
<tr>
<td>$1$</td>
<td>Certain</td>
</tr>
</tbody>
</table>

In a previous course, you may have found probability by calculating the ratio of the number of favorable outcomes to the total number of possible outcomes. In this lesson, you will find geometric probabilities.

A **geometric probability** is a ratio that involves a geometric measure such as length or area.

### Example 1
**Use lengths to find a geometric probability**

Find the probability that a point chosen at random on $PQ$ is on $RS$.

**Solution**

$P(\text{Point is on } RS) = \frac{\text{Length of } RS}{\text{Length of } PQ} = \frac{4 - (-2)}{5 - (-5)} = \frac{6}{10} = 0.6$, or 60%.
Example 2  Use a segment to model a real-world probability

**MONORAIL** A monorail runs every 12 minutes. The ride from the station near your home to the station near your work takes 9 minutes. One morning, you arrive at the station near your home at 8:46. You want to get to the station near your work by 8:58. What is the probability you will get there by 8:58?

**Solution**

**STEP 1** Find the longest you can wait for the monorail and still get to the station near your work by 8:58. The ride takes 9 minutes, so you need to catch the monorail no later than 9 minutes before 8:58, or by 8:49. The longest you can wait is 3 minutes (8:49 − 8:46 = 3 min).

**STEP 2** Model the situation. The monorail runs every 12 minutes, so it will arrive in 12 minutes or less. You need it to arrive within 3 minutes.

<table>
<thead>
<tr>
<th>Time</th>
<th>Minutes waiting</th>
</tr>
</thead>
<tbody>
<tr>
<td>8:46</td>
<td>0</td>
</tr>
<tr>
<td>8:48</td>
<td>1</td>
</tr>
<tr>
<td>8:50</td>
<td>2</td>
</tr>
<tr>
<td>8:52</td>
<td>3</td>
</tr>
<tr>
<td>8:54</td>
<td>4</td>
</tr>
<tr>
<td>8:55</td>
<td>5</td>
</tr>
<tr>
<td>8:56</td>
<td>6</td>
</tr>
<tr>
<td>8:58</td>
<td>7</td>
</tr>
</tbody>
</table>

The monorail needs to arrive within the first 3 minutes.

**STEP 3** Find the probability.

\[
P(\text{You get to the station by 8:58}) = \frac{\text{Favorable waiting time}}{\text{Maximum waiting time}} = \frac{3}{12} = \frac{1}{4}
\]

The probability that you will get to the station by 8:58 is \(\frac{1}{4}\) or 25%.

Guided Practice for Examples 1 and 2

Find the probability that a point chosen at random on \(PQ\) is on the given segment. Express your answer as a fraction, a decimal, and a percent.

1. \(RT\)  
2. \(TS\)  
3. \(PT\)  
4. \(RQ\)

5. **WHAT IF?** In Example 2, suppose you arrive at the station near your home at 8:43. What is the probability that you will get to the station near your work by 8:58?

**Probability and Area** Another formula for geometric probability involves the ratio of the areas of two regions.

**KEY CONCEPT**  
**For Your Notebook**

**Probability and Area**

Let \(J\) be a region that contains region \(M\). If a point \(K\) in \(J\) is chosen at random, then the probability that it is in region \(M\) is the ratio of the area of \(M\) to the area of \(J\).

\[
P(K \text{ is in region } M) = \frac{\text{Area of } M}{\text{Area of } J}
\]
**EXAMPLE 3** Use areas to find a geometric probability

**ARCHERY** The diameter of the target shown at the right is 80 centimeters. The diameter of the red circle on the target is 16 centimeters. An arrow is shot and hits the target. If the arrow is equally likely to land on any point on the target, what is the probability that it lands in the red circle?

**Solution**

Find the ratio of the area of the red circle to the area of the target.

\[
P(\text{arrow lands in red region}) = \frac{\text{Area of red circle}}{\text{Area of target}} = \frac{\pi (8^2)}{\pi (40^2)} = \frac{64\pi}{1600\pi} = \frac{4}{25}
\]

The probability that the arrow lands in the red region is \(\frac{4}{25}\), or 16%.

**ANOTHER WAY**

All circles are similar and the Area of Similar Polygons Theorem also applies to circles. The ratio of radii is 8:40, or 1:5, so the ratio of areas is \(1^2:5^2\), or 1:25.

**EXAMPLE 4** Estimate area on a grid to find a probability

**SCALE DRAWING** Your dog dropped a ball in a park. A scale drawing of the park is shown. If the ball is equally likely to be anywhere in the park, estimate the probability that it is in the field.

**Solution**

**STEP 1** Find the area of the field. The shape is a rectangle, so the area is \(bh = 10 \cdot 3 = 30\) square units.

**STEP 2** Find the total area of the park.

Count the squares that are fully covered. There are 30 squares in the field and 22 in the woods. So, there are 52 full squares.

Make groups of partially covered squares so the combined area of each group is about 1 square unit. The total area of the partial squares is about 6 or 7 square units. So, use \(52 + 6.5 = 58.5\) square units for the total area.

**STEP 3** Write a ratio of the areas to find the probability.

\[
P(\text{ball in field}) = \frac{\text{Area of field}}{\text{Total area of park}} = \frac{30}{58.5} = \frac{300}{585} = \frac{20}{39}
\]

The probability that the ball is in the field is \(\frac{20}{39}\), or 51.3%.

**CHECK RESULTS**

The ball must be either in the field or in the woods, so check that the probabilities in Example 4 and Guided Practice Exercise 7 add up to 100%.

**GUIDED PRACTICE** for Examples 3 and 4

6. In the target in Example 3, each ring is 8 centimeters wide. Find the probability that an arrow lands in the black region.

7. In Example 4, estimate the probability that the ball is in the woods.
1. **VOCABULARY** Copy and complete: If an event cannot occur, its probability is **?**. If an event is certain to occur, its probability is **?**.

2. ★ **WRITING** Compare a geometric probability and a probability found by dividing the number of favorable outcomes by the total number of possible outcomes.

**PROBABILITY ON A SEGMENT** In Exercises 3–6, find the probability that a point \(K\), selected randomly on \(\overrightarrow{AE}\), is on the given segment. Express your answer as a fraction, decimal, and percent.

3. \(\overrightarrow{AD}\)  
4. \(\overrightarrow{BC}\)  
5. \(\overrightarrow{DE}\)  
6. \(\overrightarrow{AE}\)

7. ★ **WRITING** Look at your answers to Exercises 3 and 5. **Describe** how the two probabilities are related.

**FIND A GEOMETRIC PROBABILITY** Find the probability that a randomly chosen point in the figure lies in the shaded region.

8.  
9.  
10.  
11. **ERROR ANALYSIS** Three sides of the rectangle are tangent to the semicircle. **Describe** and correct the error in finding the probability that a randomly chosen point in the figure lies in the shaded region.

**ESTIMATING AREA** Use the scale drawing.

12. What is the approximate area of the north side of the island? the south side of the island? the whole island?

13. Find the probability that a randomly chosen location on the island lies on the north side.

14. Find the probability that a randomly chosen location on the island lies on the south side.
15. **SIMILAR TRIANGLES** In Exercise 9, how do you know that the shaded triangle is similar to the whole triangle? **Explain** how you can use the Area of Similar Polygons Theorem to find the desired probability.

**ALGEBRA** In Exercises 16–19, find the probability that a point chosen at random on the segment satisfies the inequality.

16. \( x - 6 \leq 1 \)  
17. \( 1 \leq 2x - 3 \leq 5 \)  
18. \( \frac{x}{2} \geq 7 \)  
19. \( 3x \leq 27 \)

**FIND A GEOMETRIC PROBABILITY** Find the probability that a randomly chosen point in the figure lies in the shaded region. **Explain** your steps.

20. ![Figure 20](image1.png)  
21. ![Figure 21](image2.png)  
22. ![Figure 22](image3.png)

23. **★ MULTIPLE CHOICE** A point \( X \) is chosen at random in region \( U \), and \( U \) includes region \( A \). What is the probability that \( X \) is not in \( A \)?

   A. \( \frac{\text{Area of } A}{\text{Area of } U} \)  
   B. \( \frac{\text{Area of } A}{\text{Area of } U - \text{Area of } A} \)  
   C. \( \frac{1}{\text{Area of } A} \)  
   D. \( \frac{\text{Area of } U - \text{Area of } A}{\text{Area of } U} \)

24. **ARCS AND SECTORS** A sector of a circle intercepts an arc of 80°. Find the probability that a randomly chosen point on the circle lies on the arc. Find the probability that a randomly chosen point in the circle lies in the sector. **Explain** why the probabilities do not depend on the radius.

**INScribed Polygons** Find the probability that a randomly chosen point in the circle described lies in the inscribed polygon.

25. Regular hexagon inscribed in circle with circumference \( C \approx 188.5 \)
26. Regular octagon inscribed in circle with radius \( r \)
27. **INScribed ANGLES** Points \( A \) and \( B \) are the endpoints of a diameter of \( \odot D \). Point \( C \) is chosen at random from the other points on the circle. What is the probability that \( \triangle ABC \) is a right triangle? What is the probability that \( m\angle CAB \leq 45^\circ \)?

28. **COORDINATE GRAPHS** Graph the system of inequalities \( 0 \leq x \leq 2, \ 0 \leq y \leq 3, \) and \( y \geq x \). If a point \( (x, y) \) is chosen at random in the solution region, what is the probability that \( x^2 + y^2 \geq 4 \)?

29. **CHALLENGE** You carry out a series of steps to paint a walking stick. In the first step, you paint half the length of the stick. For each following step, you paint half of the remaining unpainted portion of the stick. After \( n \) steps, you choose a point at random on the stick. Find a value of \( n \) so that the probability of choosing a point on the painted portion of the stick after the \( n \)th step is greater than 99.95%.
30. **DARTBOARD** A dart is thrown and hits the target shown. If the dart is equally likely to hit any point on the target, what is the probability that it hits inside the inner square? that it hits outside the inner square but inside the circle?

![Dartboard Diagram]

31. **TRANSPORTATION** A fair provides a shuttle bus from a parking lot to the fair entrance. Buses arrive at the parking lot every 10 minutes. They wait for 4 minutes while passengers get on and get off. Then the buses depart.

![Bus Wait Time Graph]

a. What is the probability that there is a bus waiting when a passenger arrives at a random time?

b. What is the probability that there is not a bus waiting when a passenger arrives at a random time?

32. **FIRE ALARM** Suppose that your school day is from 8:00 A.M. until 3:00 P.M. You eat lunch at 12:00 P.M. If there is a fire drill at a random time during the day, what is the probability that it begins before lunch?

33. **PHONE CALL** You are expecting a call from a friend anytime between 7:00 P.M. and 8:00 P.M. You are practicing the drums and cannot hear the phone from 6:55 P.M. to 7:10 P.M. What is the probability that you missed your friend’s call?

34. **EXTENDED RESPONSE** Scientists lost contact with the space probe Beagle 2 when it was landing on Mars in 2003. They have been unable to locate it since. Early in the search, some scientists thought that it was possible, though unlikely, that Beagle had landed in a circular crater inside the planned landing region. The diameter of the crater is 1 km.

![Crater Diagram]

a. In the scale drawing, each square has side length 2 kilometers. Estimate the area of the planned landing region. Explain your steps.

b. Estimate the probability of Beagle 2 landing in the crater if it was equally likely to land anywhere in the planned landing region.

35. **SHORT RESPONSE** If the central angle of a sector of a circle stays the same and the radius of the circle doubles, what can you conclude about the probability of a randomly selected point being in the sector? Explain. Include an example with your explanation.
36. **PROBABILITY AND LENGTH** A 6 inch long rope is cut into two pieces at a random point. Find the probability both pieces are at least 1 inch long.

37. **COMPOUND EVENTS** You throw two darts at the dartboard in Exercise 30 on page 776. Each dart hits the dartboard. The throws are independent of each other. Find the probability of the compound event described.
   a. Both darts hit the yellow square.
   b. The first dart hits the yellow square and the second hits outside the circle.
   c. Both darts hit inside the circle but outside the yellow square.

38. **CHALLENGE** A researcher used a 1 hour tape to record birdcalls. Eight minutes after the recorder was turned on, a 5 minute birdcall began. Later, the researcher accidentally erased 10 continuous minutes of the tape. What is the probability that part of the birdcall was erased? What is the probability that all of the birdcall was erased?

---

**MIXED REVIEW**

39. Draw a concave hexagon and a concave pentagon. (p. 42)

Think of each segment shown as part of a line.

40. Name the intersection of plane $DCH$ and plane $ADE$. (p. 96)

41. Name a plane that appears to be parallel to plane $ADH$. (p. 147)

Find the area of the polygon.

42. \[ \text{Area} = 0.3 \times 1.5 + 0.6 \] (p. 720)

43. \[ \text{Area} = 9 \times 7 + 12 \times 7 \] (p. 730)

44. \[ \text{Area} = 4 \times 1.6 \] (p. 762)

**QUIZ for Lessons 11.6–11.7**

Find the area of the regular polygon. (p. 762)

1. \[ \text{Area} = 17 \times 20 \]

Find the probability that a randomly chosen point in the figure lies in the shaded region. (p. 771)

2. \[ \text{Area} = 25 \]

3. \[ \text{Area} = 10 \]

4. \[ \text{Area} = 8 \]

---

EXTRA PRACTICE for Lesson 11.7, p. 917

ONLINE QUIZ at classzone.com
1. **MULTI-STEP PROBLEM** The Hobby-Eberly optical telescope is located in Fort Davis, Texas. The telescope's primary mirror is made of 91 small mirrors that form a hexagon. Each small mirror is a regular hexagon with side length 0.5 meter.

   a. Find the apothem of a small mirror.
   b. Find the area of one of the small mirrors.
   c. Find the area of the primary mirror.

2. **GRIDDED ANSWER** As shown, a circle is inscribed in a regular pentagon. The circle and the pentagon have the same center. Find the area of the shaded region. Round to the nearest tenth.

3. **EXTENDED RESPONSE** The diagram shows a projected beam of light from a lighthouse.

   a. Find the area of the water's surface that is illuminated by the lighthouse.
   b. A boat traveling along a straight line is illuminated by the lighthouse for about 31 miles. Find the closest distance between the lighthouse and the boat. Explain your steps.

4. **SHORT RESPONSE** At a school fundraiser, a glass jar with a circular base is filled with water. A circular red dish is placed at the bottom of the jar. A person donates a coin by dropping it into the jar. If the coin lands in the dish, the person wins a small prize.

   a. Suppose a coin tossed into the jar has an equally likely chance of landing anywhere on the bottom of the jar, including in the dish. What is the probability that it will land in the dish?
   b. Suppose 400 coins are dropped into the jar. About how many prizes would you expect people to win? Explain.

5. **SHORT RESPONSE** The figure is made of a right triangle and three semicircles. Write expressions for the perimeter and area of the figure in terms of $\pi$. Explain your reasoning.

6. **OPEN-ENDED** In general, a fan with a greater area does a better job of moving air and cooling you. The fan below is a sector of a cardboard circle. Give an example of a cardboard fan with a smaller radius that will do a better job of cooling you. The intercepted arc should be less than 180°.

Sometimes you need to use the Pythagorean Theorem, special right triangles, or trigonometry to find a length in a polygon before you can find its area.

**Relating Length, Perimeter, and Area Ratios in Similar Polygons**

You can use ratios of corresponding measures to find other ratios of measures. You can solve proportions to find unknown lengths or areas.

<table>

CHAPTER REVIEW

REVIEW KEY VOCABULARY

For a list of postulates and theorems, see pp. 926–931.

• bases of a parallelogram, p. 720
• height of a parallelogram, p. 720
• height of a trapezoid, p. 730
• circumference, p. 746
• arc length, p. 747
• sector of a circle, p. 756

• center of a polygon, p. 762
• radius of a polygon, p. 762
• apothem of a polygon, p. 762
• central angle of a regular polygon, p. 762
• probability, p. 771
• geometric probability, p. 771

VOCABULARY EXERCISES

1. Copy and complete: A sector of a circle is the region bounded by ___.

2. WRITING Explain the relationship between the height of a parallelogram and the bases of a parallelogram.

The diagram shows a square inscribed in a circle.
Name an example of the given segment.

3. An apothem of the square
4. A radius of the square

REVIEW EXAMPLES AND EXERCISES

Use the review examples and exercises below to check your understanding of the concepts you have learned in each lesson of Chapter 11.

Areas of Triangles and Parallelograms pp. 720–726

EXAMPLE

The area of □ABCD is 96 square units. Find its height \( h \).

\[ A = bh \]

\[ 96 = 8h \]

\[ h = 12 \]

EXERCISES

Find the area of the polygon.

5. 6. 7.

8. The area of a triangle is 147 square inches and its height is 1.5 times its base. Find the base and the height of the triangle.
11.2 Areas of Trapezoids, Rhombuses, and Kites

**Example**

Find the area of the kite.

Find the lengths of the diagonals of the kite.

\[ d_1 = BD = |2 - (-4)| = 6 \]
\[ d_2 = AC = |4 - (-3)| = 7 \]

Find the area of ABCD.

\[ A = \frac{1}{2}d_1d_2 \]
\[ = \frac{1}{2}(6)(7) = 21 \]

The area of the kite is 21 square units.

**Exercises**

Graph the polygon with the given vertices and find its area.

9. \( L(2, 2), M(6, 2), N(8, 4), P(4, 4) \)
10. \( Q(-3, 0), R(-2, 3), S(-1, 0), T(-2, -2) \)
11. \( D(-1, 4), E(5, 4), F(3, -2), G(1, -2) \)

11.3 Perimeter and Area of Similar Figures

**Example**

Quadrilaterals JKLm and WXYZ are similar. Find the ratios (red to blue) of the perimeters and of the areas.

The ratio of the lengths of the corresponding sides is 21:35, or 3:5. Using Theorem 6.1, the ratio of the perimeters is 3:5. Using Theorem 11.7, the ratio of the areas is 3^2:5^2, or 9:25.

**Exercises**

The polygons are similar. Find the ratio (red to blue) of the perimeters and of the areas. Then find the unknown area.

12. \( \triangle ABC \sim \triangle DEF \)
13. \( \triangle WXYZ \sim \triangle ABCD \)

14. The ratio of the areas of two similar figures is 144:49. Write the ratio of the lengths of corresponding sides.
11.4 Circumference and Arc Length

**Example**

The arc length of $QR$ is 6.54 feet. Find the radius of $P$.

\[
\frac{\text{Arc length of } QR}{2\pi} = \frac{m\overline{QR}}{360^\circ}
\]

\[
\frac{6.54}{2\pi} = \frac{75^\circ}{360^\circ}
\]

\[
6.54(360^\circ) = 75^\circ(2\pi)
\]

\[
r \approx 5.00 \text{ ft}
\]

**EXERCISES**

Find the indicated measure.

15. Diameter of $F$
16. Circumference of $F$
17. Length of $GH$

\[
C = 94.24 \text{ ft}
\]

\[
35^\circ
\]

\[
5.50 \text{ cm}
\]

\[
13 \text{ in.}
\]

---

11.5 Areas of Circles and Sectors

**Example**

Find the area of sector $ADB$.

First find the measure of the minor arc.

\[
m\angle ADB = 360^\circ - 280^\circ = 80^\circ,
\]

\[
\text{Area of sector } ADB = \frac{m\overline{AB}}{360^\circ} \cdot \pi r^2
\]

\[
= \frac{80^\circ}{360^\circ} \cdot \pi \cdot 10^2
\]

\[
\approx 69.81 \text{ units}^2
\]

The area of the small sector is about 69.81 square units.

**EXERCISES**

Find the area of the blue shaded region.

18. 240°
19. 27.93 ft²
20. 6 in.
### Example

A regular hexagon is inscribed in \( \odot H \). Find (a) \( m \angle EHG \), and (b) the area of the hexagon.

**a.** \( \angle FHE \) is a central angle, so \( m \angle FHE = \frac{360^\circ}{6} = 60^\circ \).

Apothem \( \overline{GH} \) bisects \( \angle FHE \). So, \( m \angle EHG = 30^\circ \).

**b.** Because \( \triangle EHG \) is a \( 30^\circ \)-\( 60^\circ \)-\( 90^\circ \) triangle, \( GE = \frac{1}{2} \cdot HE = 8 \) and 

\[
GH = \sqrt{3} \cdot GE = 8\sqrt{3}
\]

So, \( s = 16 \) and \( a = 8\sqrt{3} \). Then use the area formula. 

\[
A = \frac{1}{2}a \cdot ns = \frac{1}{2}(8\sqrt{3})(6)(16) \approx 665.1 \text{ square units}
\]

### Exercises

21. **Platter**  
A platter is in the shape of a regular octagon. Find the perimeter and area of the platter if its apothem is 6 inches.

22. **Puzzle**  
A jigsaw puzzle is in the shape of a regular pentagon. Find its area if its radius is 17 centimeters and its side length is 20 centimeters.

### Example

A dart is thrown and hits the square dartboard shown. The dart is equally likely to land on any point on the board. Find the probability that the dart lands in the white region outside the concentric circles.

\[
P(\text{dart lands in white region}) = \frac{\text{Area of white region}}{\text{Area of dart board}} = \frac{24^2 - \pi(12^2)}{24^2} \approx 0.215
\]

The probability that the dart lands in the white region is about 21.5%.

### Exercises

23. A point \( K \) is selected randomly on \( \overline{AC} \) at the right. What is the probability that \( K \) is on \( AB \)?

Find the probability that a randomly chosen point in the figure lies in the shaded region.

24.

25.

26.
In Exercises 1–6, find the area of the shaded polygon.

1. 

2. 

3. 

4. 

5. 

6. 

7. The base of a parallelogram is 3 times its height. The area of the parallelogram is 108 square inches. Find the base and the height.

Quadrilaterals $ABCD$ and $EFGH$ are similar. The perimeter of $ABCD$ is 40 inches and the perimeter of $EFGH$ is 16 inches.

8. Find the ratio of the perimeters of $ABCD$ to $EFGH$.

9. Find the ratio of the corresponding side lengths of $ABCD$ to $EFGH$.

10. Find the ratio of the areas of $ABCD$ to $EFGH$.

Find the indicated measure for the circle shown.

11. Length of $\overline{AB}$

12. Circumference of $\odot F$

13. $m\overline{GH}$

14. Area of shaded sector

15. Area of $\odot N$

16. Radius of $\odot P$

17. TILING A floor tile is in the shape of a regular hexagon and has a perimeter of 18 inches. Find the side length, apothem, and area of the tile.

Find the probability that a randomly chosen point in the figure lies in the region described.

18. In the red region

19. In the blue region
USE ALGEBRAIC MODELS TO SOLVE PROBLEMS

**EXAMPLE 1**  Write and solve an algebraic model for a problem

**FUNDRAISER** You are baking cakes to sell at a fundraiser. It costs $3 to make each cake, and you plan to sell the cakes for $8 each. You spent $20 on pans and utensils. How many cakes do you need to sell to make a profit of $50?

**Solution**

Let \( x \) represent the number of cakes sold.

\[
\text{Income} - \text{Expenses} = \text{Profit}
\]

\[
8x - (3x + 20) = 50 \\
8x - 3x - 20 = 50 \\
5x - 20 = 50 \\
x = 14
\]

You need to sell 14 cakes to make a profit of $50.

**EXERCISES**

Write an algebraic model to represent the situation. Then solve the problem.

1. **BICYCLES** You ride your bike 14.25 miles in 90 minutes. At this rate, how far can you bike in 2 hours?

2. **SHOPPING** Alma spent $39 on a shirt and a jacket. The shirt cost $12. Find the original cost of a jacket if Alma bought it on sale for 25% off.

3. **CELL PHONES** Your cell phone provider charges $29.50 per month for 200 minutes. You pay $.25 per minute for each minute over 200 minutes. In May, your bill was $32.75. How many additional minutes did you use?

4. **EXERCISE** Jaime burns 12.1 calories per minute running and 7.6 calories per minute swimming. He wants to burn at least 400 calories and plans to swim for 20 minutes. How long does he need to run to meet his goal?

5. **CARS** You buy a car for $18,000. The value of the car decreases 10% each year. What will the value of the car be after 5 years?

6. **TICKETS** Student tickets for a show cost $5 and adult tickets cost $8. At one show, $2065 was collected in ticket sales. If 62 more student tickets were sold than adult tickets, how many of each type of ticket was sold?

7. **TENNIS** The height \( h \) in feet of a tennis ball is \( h = -16t^2 + 47t + 6 \), where \( t \) is the time in seconds after being hit. If the ball is not first hit by another player, how long does it take to reach the ground?
Chapter 11  Measuring Length and Area

a. For each cardboard square, multiply the number of circles by the area of one circle.

For the 20 inch square, the radius of each of the 4 circles is 5 inches.

\[
\text{Area of 4 circles} = 4 \times \pi r^2 = 4 \times \pi (5)^2 = 314 \text{ in.}^2
\]

For the 36 inch square, the radius of each of the 9 circles is 6 inches.

\[
\text{Area of 9 circles} = 9 \times \pi r^2 = 9 \times \pi (6)^2 = 1018 \text{ in.}^2
\]

b. For each cardboard square, find the percent of the cardboard square's area that is used for the circles.

Percent for 20 inch square:

\[
\frac{\text{Area of 4 circles}}{\text{Area of cardboard}} = \frac{314}{20^2} = 0.785 \approx 78.5\%
\]

Percent for 36 inch square:

\[
\frac{\text{Area of 9 circles}}{\text{Area of cardboard}} = \frac{1018}{36^2} \approx 0.785 \approx 78.5\%
\]

It doesn’t matter which size of cardboard you use. In each case, you will use about 78.5% of the cardboard’s area.

Below are sample solutions to the problem. Read each solution and the comments in blue to see why the sample represents full credit, partial credit, or no credit.

**SAMPLE 1: Full credit solution**

a. For each cardboard square, multiply the number of circles by the area of one circle.

For the 20 inch square, the radius of each of the 4 circles is 5 inches.

\[
\text{Area of 4 circles} = 4 \times \pi r^2 = 4 \times \pi (5)^2 = 314 \text{ in.}^2
\]

For the 36 inch square, the radius of each of the 9 circles is 6 inches.

\[
\text{Area of 9 circles} = 9 \times \pi r^2 = 9 \times \pi (6)^2 = 1018 \text{ in.}^2
\]

b. For each cardboard square, find the percent of the cardboard square’s area that is used for the circles.

Percent for 20 inch square:

\[
\frac{\text{Area of 4 circles}}{\text{Area of cardboard}} = \frac{314}{20^2} = 0.785 = 78.5\%
\]

Percent for 36 inch square:

\[
\frac{\text{Area of 9 circles}}{\text{Area of cardboard}} = \frac{1018}{36^2} \approx 0.785 = 78.5\%
\]

It doesn’t matter which size of cardboard you use. In each case, you will use about 78.5% of the cardboard’s area.
**SAMPLE 2: Partial credit solution**

a. Use the formula \( A = \pi r^2 \) to find the area of each circle. Divide each diameter in half to get the radius of the circle.

Area of 10 inch diameter circle = \( \pi (5)^2 = 79 \text{ in.}^2 \)

Area of 12 inch diameter circle = \( \pi (6)^2 = 113 \text{ in.}^2 \)

b. Find and compare the percents.

\[
\frac{\text{Area of circles}}{\text{Area of 20 in. square}} = \frac{79}{20^2} = 0.1975 = 19.75\% \\
\frac{\text{Area of circles}}{\text{Area of 36 in. square}} = \frac{113}{36^2} = 0.0872 = 8.72\%
\]

You use 19.75% of the 20 inch cardboard's area, but only 8.72% of the 36 inch cardboard's area. So, you should use the 20 inch cardboard.

**SAMPLE 3: No credit solution**

In part (a), the answer is incomplete because the student does not find the area of all the circles.

The reasoning in part (b) is correct, but the answer is wrong because the student did not consider the area of all the circles.

In part (b), the reasoning and the answer are incorrect.

**PRACTICE**

**Apply the Scoring Rubric**

1. A student’s solution to the problem on the previous page is given below. Score the solution as full credit, partial credit, or no credit. Explain your reasoning. If you choose partial credit or no credit, explain how you would change the solution so that it earns a score of full credit.

a. There are two sizes of circles you can make. Find the area of each.

Area of a circle made from the 20 inch square = \( \pi (5)^2 \approx 78.5 \text{ in.}^2 \)

Area of a circle made from the 36 inch square = \( \pi (6)^2 \approx 113.1 \text{ in.}^2 \)

Then multiply each area by the number of circles that have that area.

Area of circles in 20 inch square = \( 4 \times 78.5 = 314 \text{ in.}^2 \)

Area of circles in 36 inch square = \( 9 \times 113.1 = 1018 \text{ in.}^2 \)

b. Find the percent of each square's area that is used for the signs.

\[
\frac{\text{Area of 4 circles}}{\text{Area of 20 in. square}} = \frac{314}{20} = 15.7\% \\
\frac{\text{Area of 9 circles}}{\text{Area of 36 in. square}} = \frac{1018}{36} = 28.3\%
\]

Because 28.3% > 15.7%, you use a greater percent of the cardboard’s area when you use the 36 inch square.
1. A dog is tied to the corner of a shed with a leash. The leash prevents the dog from moving more than 18 feet from the corner. In the diagram, the shaded sectors show the region over which the dog can roam.
   a. Find the area of the sector with radius 18 feet.
   b. What is the radius of the smaller sector? Find its area. Explain.
   c. Find the area over which the dog can move. Explain.

2. A circle passes through the points $(3, 0), (9, 0), (6, 3),$ and $(6, -3)$.
   a. Graph the circle in a coordinate plane. Give the coordinates of its center.
   b. Sketch the image of the circle after a dilation centered at the origin with a scale factor of 2. How are the coordinates of the center of the dilated circle related to the coordinates of the center of the original circle? Explain.
   c. How are the circumferences of the circle and its image after the dilation related? How are the areas related? Explain.

3. A caterer uses a set of three different-sized trays. Each tray is a regular octagon. The areas of the trays are in the ratio $2 : 3 : 4$.
   a. The area of the smallest tray is about 483 square centimeters. Find the areas of the other trays to the nearest square centimeter. Explain your reasoning.
   b. The perimeter of the smallest tray is 80 centimeters. Find the approximate perimeters of the other trays. Round to the nearest tenth of a centimeter. Explain your reasoning.

4. In the diagram, the diagonals of rhombus $EFGH$ intersect at point $J$, $EG = 6$, and $FH = 8$. A circle with center $J$ is inscribed in $EFGH$, and $XY$ is a diameter of $\odot J$.
   a. Find $EF$. Explain your reasoning.
   b. Use the formula for the area of a rhombus to find the area of $EFGH$.
   c. Use the formula for the area of a parallelogram to write an equation relating the area of $EFGH$ from part (b) to $EF$ and $XY$.
   d. Find $XY$. Then find the area of the inscribed circle. Explain your reasoning.
5. In the diagram, $J$ is the center of two circles, and $K$ lies on $JL$. Given $JL = 6$ and $KL = 2$, what is the ratio of the area of the smaller circle to the area of the larger circle?

- **A** $\sqrt{2} : \sqrt{3}$
- **B** $1:3$
- **C** $2:3$
- **D** $4:9$

6. In the diagram, $TMRS$ and $RNPQ$ are congruent squares, and $\triangle MNR$ is a right triangle. What is the probability that a randomly chosen point on the diagram lies inside $\triangle MNR$?

- **A** 0.2
- **B** 0.25
- **C** 0.5
- **D** 0.75

7. You are buying fertilizer for a lawn that is shaped like a parallelogram. Two sides of the parallelogram are each 300 feet long, and the perpendicular distance between these sides is 150 feet. One bag of fertilizer covers 5000 square feet and costs $14. How much (in dollars) will you spend?

8. In square $ACDE$, $ED = 2$, $AB = BC$, and $AF = FE$. What is the area (in square units) of the shaded region?

9. In the diagram, a rectangle's sides are tangent to two circles with centers at points $P$ and $Q$. The circumference of each circle is $8\pi$ square units. What is the area (in square units) of the rectangle?

10. You are designing a spinner for a board game. An arrow is attached to the center of a circle with diameter 7 inches. The arrow is spun until it stops. The arrow has an equally likely chance of stopping anywhere.

   a. If $x^\circ = 45^\circ$, what is the probability that the arrow points to a red sector? Explain.

   b. You want to change the spinner so the probability that the arrow points to a blue sector is half the probability that it points to a red sector. What values should you use for $x$ and $y$? Explain.

11. In quadrilateral $JKLM$, $JL = 3 \cdot KM$. The area of $JKLM$ is 54 square centimeters.

   a. Find $JL$ and $KM$.

   b. Quadrilateral $NPQR$ is similar to $JKLM$, and its area is 486 square centimeters. Sketch $NPQR$ and its diagonals. Then find the length of $NQ$. Explain your reasoning.
12 Surface Area and Volume of Solids

12.1 Explore Solids
12.2 Surface Area of Prisms and Cylinders
12.3 Surface Area of Pyramids and Cones
12.4 Volume of Prisms and Cylinders
12.5 Volume of Pyramids and Cones
12.6 Surface Area and Volume of Spheres
12.7 Explore Similar Solids

Before

In previous chapters, you learned the following skills, which you’ll use in Chapter 12: properties of similar polygons, areas and perimeters of two-dimensional figures, and right triangle trigonometry.

Prerequisite Skills

VOCABULARY CHECK
1. Copy and complete: The area of a regular polygon is given by the formula $A = \frac{1}{2} \cdot ? \cdot ?$.
2. Explain what it means for two polygons to be similar.

SKILLS AND ALGEBRA CHECK
Use trigonometry to find the value of $x$. (Review pp. 466, 473 for 12.2–12.5.)

3. \[ x \]
   \[ \angle 25^\circ \]
   \[ 30 \]

4. \[ x \]
   \[ \angle 70^\circ \]
   \[ 5 \]

5. \[ x \]
   \[ \angle 50^\circ \]
   \[ 30 \]

Find the circumference and area of the circle with the given dimension. (Review pp. 746, 755 for 12.2–12.5.)

6. $r = 2$ m
7. $d = 3$ in.
8. $r = 2\sqrt{5}$ cm

@HomeTutor Prerequisite skills practice at classzone.com
In Chapter 12, you will apply the big ideas listed below and reviewed in the Chapter Summary on page 856. You will also use the key vocabulary listed below.

**Big Ideas**
1. Exploring solids and their properties
2. Solving problems using surface area and volume
3. Connecting similarity to solids

**KEY VOCABULARY**
- polyhedron, p. 794
  - face, edge, vertex
- Platonic solids, p. 796
- cross section, p. 797
- prism, p. 803
- surface area, p. 803
- lateral area, p. 803
- net, p. 803
- right prism, p. 804
- oblique prism, p. 804
- cylinder, p. 805
- right cylinder, p. 805
- pyramid, p. 810
- regular pyramid, p. 810
- cone, p. 812
- right cone, p. 812
- volume, p. 819
- sphere, p. 838
- great circle, p. 839
- hemisphere, p. 839
- similar solids, p. 847

Knowing how to use surface area and volume formulas can help you solve problems in three dimensions. For example, you can use a formula to find the volume of a column in a building.

**Animated Geometry**
The animation illustrated below for Exercise 31 on page 825 helps you answer this question: What is the volume of the column?

You can use the height and circumference of a column to find its volume.

Drag the sliders to change the height and circumference of the cylinder.

**Animated Geometry at classzone.com**

Other animations for Chapter 12: pages 795, 805, 821, 833, 841, and 852
12.1 Investigate Solids

**MATERIALS** • poster board • scissors • tape • straightedge

**QUESTION** What solids can be made using congruent regular polygons?

Platonic solids, named after the Greek philosopher Plato (427 B.C.–347 B.C.), are solids that have the same congruent regular polygon as each face, or side, of the solid.

**EXPLORE 1** Make a solid using four equilateral triangles

*STEP 1* Make a net
Copy the full-sized triangle from page 793 on poster board to make a template. Trace the triangle four times to make a net like the one shown.

*STEP 2* Make a solid
Cut out your net. Fold along the lines. Tape the edges together to form a solid. How many faces meet at each vertex?

**EXPLORE 2** Make a solid using eight equilateral triangles

*STEP 1* Make a net
Trace your triangle template from Explore 1 eight times to make a net like the one shown.

*STEP 2* Make a solid
Cut out your net. Fold along the lines. Tape the edges together to form a solid. How many faces meet at each vertex?
### Explore 3
Make a solid using six squares

**STEP 1**

Make a net  Copy the full-sized square from the bottom of the page on poster board to make a template. Trace the square six times to make a net like the one shown.

**STEP 2**

Make a solid  Cut out your net. Fold along the lines. Tape the edges together to form a solid. How many faces meet at each vertex?

### Draw Conclusions
Use your observations to complete these exercises

1. The two other convex solids that you can make using congruent, regular faces are shown below. For each of these solids, how many faces meet at each vertex?
   
   a.  
   
   b.  

2. Explain why it is not possible to make a solid that has six congruent equilateral triangles meeting at each vertex.

3. Explain why it is not possible to make a solid that has three congruent regular hexagons meeting at each vertex.

4. Count the number of vertices $V$, edges $E$, and faces $F$ for each solid you made. Make a conjecture about the relationship between the sum $F + V$ and the value of $E$.

### Templates:

- ![Triangle Template](image)
- ![Square Template](image)
12.1 Explore Solids

Key Vocabulary
- polyhedron
- face, edge, vertex
- base
- regular polyhedron
- convex polyhedron
- Platonic solids
- cross section

A polyhedron is a solid that is bounded by polygons, called faces, that enclose a single region of space. An edge of a polyhedron is a line segment formed by the intersection of two faces. A vertex of a polyhedron is a point where three or more edges meet. The plural of polyhedron is polyhedra or polyhedrons.

CLASSIFYING SOLIDS Of the five solids above, the prism and the pyramid are polyhedra. To name a prism or a pyramid, use the shape of the base.

Pentagonal prism
- Bases are pentagons.
- The two bases of a prism are congruent polygons in parallel planes.

Triangular pyramid
- Base is a triangle.
- The base of a pyramid is a polygon.

- Sphere

Bases are pentagons.

Base is a triangle.
EXAMPLE 1  Identify and name polyhedra

Tell whether the solid is a polyhedron. If it is, name the polyhedron and find the number of faces, vertices, and edges.

a.  

Solution

a. The solid is formed by polygons, so it is a polyhedron. The two bases are congruent rectangles, so it is a rectangular prism. It has 6 faces, 8 vertices, and 12 edges.

b. The solid is formed by polygons, so it is a polyhedron. The base is a hexagon, so it is a hexagonal pyramid. It has 7 faces, consisting of 1 base, 3 visible triangular faces, and 3 non-visible triangular faces. The polyhedron has 7 faces, 7 vertices, and 12 edges.

c. The cone has a curved surface, so it is not a polyhedron.

GUIDED PRACTICE for Example 1

Tell whether the solid is a polyhedron. If it is, name the polyhedron and find the number of faces, vertices, and edges.

1.  

EULER’S THEOREM  Notice in Example 1 that the sum of the number of faces and vertices of the polyhedra is two more than the number of edges. This suggests the following theorem, proved by the Swiss mathematician Leonhard Euler (pronounced “oi’-ler”), who lived from 1707 to 1783.

THEOREM 12.1  Euler’s Theorem

The number of faces (F), vertices (V), and edges (E) of a polyhedron are related by the formula $F + V = E + 2$. 

$ F = 6, V = 8, E = 12 
6 + 8 = 12 + 2 $
EXAMPLE 2  Use Euler’s Theorem in a real-world situation

HOUSE CONSTRUCTION  Find the number of edges on the frame of the house.

Solution

The frame has one face as its foundation, four that make up its walls, and two that make up its roof, for a total of 7 faces.

To find the number of vertices, notice that there are 5 vertices around each pentagonal wall, and there are no other vertices. So, the frame of the house has 10 vertices.

Use Euler’s Theorem to find the number of edges.

\[
F + V = E + 2 \quad \text{Euler’s Theorem}
\]

\[
7 + 10 = E + 2 \quad \text{Substitute known values.}
\]

\[
15 = E \quad \text{Solve for } E.
\]

The frame of the house has 15 edges.

REGULAR POLYHEDRA  A polyhedron is regular if all of its faces are congruent regular polygons. A polyhedron is convex if any two points on its surface can be connected by a segment that lies entirely inside or on the polyhedron. If this segment goes outside the polyhedron, then the polyhedron is nonconvex, or concave.

There are five regular polyhedra, called Platonic solids after the Greek philosopher Plato (c. 427 B.C.–347 B.C.). The five Platonic solids are shown.

- Regular tetrahedron 4 faces
- Cube 6 faces
- Regular octahedron 8 faces
- Regular dodecahedron 12 faces
- Regular icosahedron 20 faces

There are only five regular polyhedra because the sum of the measures of the angles that meet at a vertex of a convex polyhedron must be less than 360°. This means that the only possible combinations of regular polygons at a vertex that will form a polyhedron are 3, 4, or 5 triangles, 3 squares, and 3 pentagons.
EXAMPLE 3  Use Euler’s Theorem with Platonic solids

Find the number of faces, vertices, and edges of the regular octahedron. Check your answer using Euler’s Theorem.

Solution

By counting on the diagram, the octahedron has 8 faces, 6 vertices, and 12 edges. Use Euler’s Theorem to check.

\[ F + V = E + 2 \]  \hspace{0.5cm} \text{Euler’s Theorem}

\[ 8 + 6 = 12 + 2 \]  \hspace{0.5cm} \text{Substitute.}

\[ 14 = 14 \]  \hspace{0.5cm} \text{This is a true statement. So, the solution checks.}

ANOTHER WAY
An octahedron has 8 faces, each of which has 3 vertices and 3 edges. Each vertex is shared by 4 faces; each edge is shared by 2 faces. They should only be counted once.

\[ V = \frac{8 \cdot 3}{4} = 6 \]

\[ E = \frac{8 \cdot 3}{2} = 12 \]

EXAMPLE 4  Describe cross sections

Describe the shape formed by the intersection of the plane and the cube.

a.  b.  c.

Solution

a. The cross section is a square.

b. The cross section is a rectangle.

c. The cross section is a trapezoid.

CROSS SECTIONS  Imagine a plane slicing through a solid. The intersection of the plane and the solid is called a cross section. For example, the diagram shows that an intersection of a plane and a triangular pyramid is a triangle.

GUIDED PRACTICE  for Examples 2, 3, and 4

4. Find the number of faces, vertices, and edges of the regular dodecahedron on page 796. Check your answer using Euler’s Theorem.

Describe the shape formed by the intersection of the plane and the solid.

5.  6.  7.
1. **VOCABULARY** Name the five Platonic solids and give the number of faces for each.

2. **WRITING** State Euler’s Theorem in words.

**IDENTIFYING POLYHEDRA** Determine whether the solid is a polyhedron. If it is, name the polyhedron. *Explain* your reasoning.

3. 4. 5.

**ERROR ANALYSIS** *Describe* and correct the error in identifying the solid.

**SKETCHING POLYHEDRA** Sketch the polyhedron.

**APPLYING EULER’S THEOREM** Use Euler’s Theorem to find the value of $n$.

11. Faces: $n$ Vertices: 12 Edges: 18
12. Faces: 5 Vertices: $n$ Edges: 8
13. Faces: 10 Vertices: 16 Edges: $n$
14. Faces: $n$ Vertices: 12 Edges: 30

**APPLYING EULER’S THEOREM** Find the number of faces, vertices, and edges of the polyhedron. Check your answer using Euler’s Theorem.

15. 16. 17.

18. 19. 20.

21. **WRITING** Explain why a cube is also called a regular hexahedron.
12.1 Explore Solids

PUZZLES
Determine whether the solid puzzle is convex or concave.

22. 23. 24.

CROSS SECTIONS
Draw and describe the cross section formed by the intersection of the plane and the solid.

25. 26. 27.

28. ★ MULTIPLE CHOICE What is the shape of the cross section formed by the plane parallel to the base that intersects the red line drawn on the square pyramid?

A Square  B Triangle  C Kite  D Trapezoid

29. ERROR ANALYSIS Describe and correct the error in determining that a tetrahedron has 4 faces, 4 edges, and 6 vertices.

30. ★ MULTIPLE CHOICE Which two solids have the same number of faces?

A A triangular prism and a rectangular prism  B A triangular pyramid and a rectangular prism  C A triangular prism and a square pyramid  D A triangular pyramid and a square pyramid

31. ★ MULTIPLE CHOICE How many faces, vertices, and edges does an octagonal prism have?

A 8 faces, 6 vertices, and 12 edges  B 8 faces, 12 vertices, and 18 edges  C 10 faces, 12 vertices, and 20 edges  D 10 faces, 16 vertices, and 24 edges

32. EULER’S THEOREM The solid shown has 32 faces and 90 edges. How many vertices does the solid have? Explain your reasoning.

33. CHALLENGE Describe how a plane can intersect a cube to form a hexagonal cross section.
34. MUSIC  The speaker shown at the right has 7 faces. Two faces are pentagons and 5 faces are rectangles.
   a. Find the number of vertices.
   b. Use Euler's Theorem to determine how many edges the speaker has.

35. CRAFT BOXES  The box shown at the right is a hexagonal prism. It has 8 faces. Two faces are hexagons and 6 faces are squares. Count the edges and vertices. Use Euler's Theorem to check your answer.

FOOD  Describe the shape that is formed by the cut made in the food shown.

36. Watermelon  37. Bread  38. Cheese

39. ★ SHORT RESPONSE  Name a polyhedron that has 4 vertices and 6 edges. Can you draw a polyhedron that has 4 vertices, 6 edges, and a different number of faces? Explain your reasoning.

40. MULTI-STEP PROBLEM  The figure at the right shows a plane intersecting a cube through four of its vertices. An edge length of the cube is 6 inches.
   a. Describe the shape formed by the cross section.
   b. What is the perimeter of the cross section?
   c. What is the area of the cross section?

41. ★ EXTENDED RESPONSE  Use the diagram of the square pyramid intersected by a plane.
   a. Describe the shape of the cross section shown.
   b. Can a plane intersect the pyramid at a point? If so, sketch the intersection.
   c. Describe the shape of the cross section when the pyramid is sliced by a plane parallel to its base.
   d. Is it possible to have a pentagon as a cross section of this pyramid? If so, draw the cross section.

42. PLATONIC SOLIDS  Make a table of the number of faces, vertices, and edges for the five Platonic solids. Use Euler's Theorem to check each answer.
**REASONING** Is it possible for a cross section of a cube to have the given shape? If yes, describe or sketch how the plane intersects the cube.

43. Circle  44. Pentagon  45. Rhombus
46. Isosceles triangle  47. Regular hexagon  48. Scalene triangle

49. **CUBE** Explain how the numbers of faces, vertices, and edges of a cube change when you cut off each feature.
   a. A corner  b. An edge  c. A face  d. 3 corners

50. **TETRAHEDRON** Explain how the numbers of faces, vertices, and edges of a regular tetrahedron change when you cut off each feature.
   a. A corner  b. An edge  c. A face  d. 2 edges

51. **CHALLENGE** The angle defect $D$ at a vertex of a polyhedron is defined as follows:
   $$D = 360^\circ - \text{(sum of all angle measures at the vertex)}$$
   Verify that for the figures with regular bases below, $DV = 720$ where $V$ is the number of vertices.

**Mixed Review**

Find the value of $x$. (p. 680)

How can you find the surface area of a polyhedron?

A net is a pattern that can be folded to form a polyhedron. To find the surface area of a polyhedron, you can find the area of its net.

**Explore** Create a polyhedron using a net

**STEP 1** Draw a net
Copy the net below on graph paper. Be sure to label the sections of the net.

**STEP 2** Create a polyhedron
Cut out the net and fold it along the black lines to form a polyhedron. Tape the edges together. Describe the polyhedron. Is it regular? Is it convex?

**STEP 3** Find surface area
The surface area of a polyhedron is the sum of the areas of its faces. Find the surface area of the polyhedron you just made. (Each square on the graph paper measures 1 unit by 1 unit.)

**Draw Conclusions** Use your observations to complete these exercises

1. Lay the net flat again and find the following measures.
   - $A$: the area of Rectangle A
   - $P$: the perimeter of Rectangle A
   - $h$: the height of Rectangles B, C, D, and E

2. Use the values from Exercise 1 to find $2A + Ph$. Compare this value to the surface area you found in Step 3 above. What do you notice?

3. Make a conjecture about the surface area of a rectangular prism.

4. Use graph paper to draw the net of another rectangular prism. Fold the net to make sure that it forms a rectangular prism. Use your conjecture from Exercise 3 to calculate the surface area of the prism.
12.2 Surface Area of Prisms and Cylinders

Key Vocabulary
- prism
- lateral faces, lateral edges
- surface area
- lateral area
- net
- right prism
- oblique prism
- cylinder
- right cylinder

A **prism** is a polyhedron with two congruent faces, called **bases**, that lie in parallel planes. The other faces, called **lateral faces**, are parallelograms formed by connecting the corresponding vertices of the bases. The segments connecting these vertices are **lateral edges**. Prisms are classified by the shapes of their bases.

The **surface area** of a polyhedron is the sum of the areas of its faces. The **lateral area** of a polyhedron is the sum of the areas of its lateral faces.

Imagine that you cut some edges of a polyhedron and unfold it. The two-dimensional representation of the faces is called a **net**. As you saw in the Activity on page 802, the surface area of a prism is equal to the area of its net.

**Example 1** Use the net of a prism

Find the surface area of a rectangular prism with height 2 centimeters, length 5 centimeters, and width 6 centimeters.

**Solution**

**STEP 1** Sketch the prism. Imagine unfolding it to make a net.

**STEP 2** Find the areas of the rectangles that form the faces of the prism.

<table>
<thead>
<tr>
<th>Congruent faces</th>
<th>Dimensions</th>
<th>Area of each face</th>
</tr>
</thead>
<tbody>
<tr>
<td>Left and right faces</td>
<td>6 cm by 2 cm</td>
<td>6 \cdot 2 = 12 cm²</td>
</tr>
<tr>
<td>Front and back faces</td>
<td>5 cm by 2 cm</td>
<td>5 \cdot 2 = 10 cm²</td>
</tr>
<tr>
<td>Top and bottom faces</td>
<td>6 cm by 5 cm</td>
<td>6 \cdot 5 = 30 cm²</td>
</tr>
</tbody>
</table>

**STEP 3** Add the areas of all the faces to find the surface area.

The surface area of the prism is \( S = 2(12) + 2(10) + 2(30) = 104 \text{ cm}^2 \).
**RIGHT PRISMS** The height of a prism is the perpendicular distance between its bases. In a right prism, each lateral edge is perpendicular to both bases. A prism with lateral edges that are not perpendicular to the bases is an oblique prism.

**THEOREM**

**THEOREM 12.2** Surface Area of a Right Prism

The surface area $S$ of a right prism is

$$S = 2B + Ph = aP + Ph,$$

where $a$ is the apothem of the base, $B$ is the area of a base, $P$ is the perimeter of a base, and $h$ is the height.

**EXAMPLE 2** Find the surface area of a right prism

Find the surface area of the right pentagonal prism.

**Solution**

**STEP 1** Find the perimeter and area of a base of the prism.

Each base is a regular pentagon.

**Perimeter** $P = 5(7.05) = 35.25$

**Apothem** $a = \sqrt{6^2 - 3.525^2} \approx 4.86$

**STEP 2** Use the formula for the surface area that uses the apothem.

$$S = aP + Ph$$

$$\approx (4.86)(35.25) + (35.25)(9)$$

$$\approx 488.57$$

The surface area of the right pentagonal prism is about 488.57 square feet.

**GUIDED PRACTICE** for Examples 1 and 2

1. Draw a net of a triangular prism.
2. Find the surface area of a right rectangular prism with height 7 inches, length 3 inches, and width 4 inches using (a) a net and (b) the formula for the surface area of a right prism.
CYLINDERS A cylinder is a solid with congruent circular bases that lie in parallel planes. The height of a cylinder is the perpendicular distance between its bases. The radius of a base is the radius of the cylinder. In a right cylinder, the segment joining the centers of the bases is perpendicular to the bases.

The lateral area of a cylinder is the area of its curved surface. It is equal to the product of the circumference and the height, or \(2\pi rh\). The surface area of a cylinder is equal to the sum of the lateral area and the areas of the two bases.

**THEOREM**

**THEOREM 12.3 Surface Area of a Right Cylinder**

The surface area \(S\) of a right cylinder is

\[
S = 2B + Ch = 2\pi r^2 + 2\pi rh,
\]

where \(B\) is the area of a base, \(C\) is the circumference of a base, \(r\) is the radius of a base, and \(h\) is the height.

**EXAMPLE 3** Find the surface area of a cylinder

COMPACT DISCS You are wrapping a stack of 20 compact discs using a shrink wrap. Each disc is cylindrical with height 1.2 millimeters and radius 60 millimeters. What is the minimum amount of shrink wrap needed to cover the stack of 20 discs?

Solution

The 20 discs are stacked, so the height of the stack will be \(20(1.2) = 24\) mm. The radius is 60 millimeters. The minimum amount of shrink wrap needed will be equal to the surface area of the stack of discs.

\[
S = 2\pi r^2 + 2\pi rh
\]

Surface area of a cylinder

\[
= 2\pi(60)^2 + 2\pi(60)(24)
\]

Substitute known values.

\[
= 31,667
\]

Use a calculator.

You will need at least 31,667 square millimeters, or about 317 square centimeters of shrink wrap.
EXAMPLE 4  Find the height of a cylinder

Find the height of the right cylinder shown, which has a surface area of 157.08 square meters.

Solution

Substitute known values in the formula for the surface area of a right cylinder and solve for the height \( h \).

\[
S = 2\pi r^2 + 2\pi rh
\]

\[
157.08 = 2\pi (2.5)^2 + 2\pi (2.5)h
\]

\[
157.08 = 12.5\pi + 5\pi h
\]

\[
157.08 - 12.5\pi = 5\pi h
\]

\[
117.81 \approx 5\pi h
\]

\[
7.5 \approx h
\]

The height of the cylinder is about 7.5 meters.

GUIDED PRACTICE for Examples 3 and 4

3. Find the surface area of a right cylinder with height 18 centimeters and radius 10 centimeters. Round your answer to two decimal places.

4. Find the radius of a right cylinder with height 5 feet and surface area 208\(\pi\) square feet.

12.2 EXERCISES

VOCABULARY  Sketch a triangular prism. Identify its bases, lateral faces, and lateral edges.

WRITING  Explain how the formula \( S = 2B + Ph \) applies to finding the surface area of both a right prism and a right cylinder.

USING NETS  Find the surface area of the solid formed by the net. Round your answer to two decimal places.

1. VOCABULARY  Sketch a triangular prism. Identify its bases, lateral faces, and lateral edges.

2. ★ WRITING  Explain how the formula \( S = 2B + Ph \) applies to finding the surface area of both a right prism and a right cylinder.

3. USING NETS  Find the surface area of the solid formed by the net. Round your answer to two decimal places.
SURFACE AREA OF A PRISM  Find the surface area of the right prism. Round your answer to two decimal places.

6. \hspace{1cm} \hspace{1cm} 7. \hspace{1cm} 8.

SURFACE AREA OF A CYLINDER  Find the surface area of the right cylinder using the given radius \(r\) and height \(h\). Round your answer to two decimal places.

9. \hspace{1cm} 10. \hspace{1cm} 11.

ERROR ANALYSIS  Describe and correct the error in finding the surface area of the right cylinder.

\[ S = 2\pi(36) + 2\pi(48) \\
= 168\pi \\
\approx 528 \text{ cm}^2 \]

ALGEBRA  Solve for \(x\) given the surface area \(S\) of the right prism or right cylinder. Round your answer to two decimal places.

13. \( S = 606 \text{ yd}^2 \) \hspace{1cm} 14. \( S = 1097 \text{ m}^2 \) \hspace{1cm} 15. \( S = 616 \text{ in}^2 \)

SURFACE AREA OF A PRISM  A triangular prism with a right triangular base has leg length 9 units and hypotenuse length 15 units. The height of the prism is 8 units. Sketch the prism and find its surface area.

MULTIPLE CHOICE  The length of each side of a cube is multiplied by 3. What is the change in the surface area of the cube?

A  The surface area is 3 times the original surface area.
B  The surface area is 6 times the original surface area.
C  The surface area is 9 times the original surface area.
D  The surface area is 27 times the original surface area.

SURFACE AREA OF A CYLINDER  The radius and height of a right cylinder are each divided by \(\sqrt{5}\). What is the change in surface area of the cylinder?
19. **SURFACE AREA OF A PRISM** Find the surface area of a right hexagonal prism with all edges measuring 10 inches.

20. **HEIGHT OF A CYLINDER** Find the height of a cylinder with a surface area of $108\pi$ square meters. The radius of the cylinder is twice the height.

21. **CHALLENGE** The *diagonal* of a cube is a segment whose endpoints are vertices that are not on the same face. Find the surface area of a cube with diagonal length 8 units. Round your answer to two decimal places.

22. **BASS DRUM** A bass drum has a diameter of 20 inches and a depth of 8 inches. Find the surface area of the drum.

23. **GIFT BOX** An open gift box is shown at the right. When the gift box is closed, it has a length of 12 inches, a width of 6 inches, and a height of 6 inches.
   a. What is the minimum amount of wrapping paper needed to cover the closed gift box?
   b. Why is the area of the net of the box larger than the amount of paper found in part (a)?
   c. When wrapping the box, why would you want more paper than the amount found in part (a)?

24. ★ **EXTENDED RESPONSE** A right cylinder has a radius of 4 feet and height of 10 feet.
   a. Find the surface area of the cylinder.
   b. Suppose you can either double the radius or double the height. Which do you think will create a greater surface area?
   c. Check your answer in part (b) by calculating the new surface areas.

25. ★ **MULTIPLE CHOICE** Which three-dimensional figure does the net represent?
26. ★ SHORT RESPONSE A company makes two types of recycling bins. One type is a right rectangular prism with length 14 inches, width 12 inches, and height 36 inches. The other type is a right cylinder with radius 6 inches and height 36 inches. Both types of bins are missing a base, so the bins have one open end. Which recycle bin requires more material to make? Explain.

27. MULTI-STEP PROBLEM Consider a cube that is built using 27 unit cubes as shown at the right.
   a. Find the surface area of the solid formed when the red unit cubes are removed from the solid shown.
   b. Find the surface area of the solid formed when the blue unit cubes are removed from the solid shown.
   c. Why are your answers different in parts (a) and (b)? Explain.

28. SURFACE AREA OF A RING The ring shown is a right cylinder of radius \( r_1 \) with a cylindrical hole of \( r_2 \). The ring has height \( h \).
   a. Find the surface area of the ring if \( r_1 \) is 12 meters, \( r_2 \) is 6 meters, and \( h \) is 8 meters. Round your answer to two decimal places.
   b. Write a formula that can be used to find the surface area \( S \) of any cylindrical ring where \( 0 < r_2 < r_1 \).

29. DRAWING SOLIDS A cube with edges 1 foot long has a cylindrical hole with diameter 4 inches drilled through one of its faces. The hole is drilled perpendicular to the face and goes completely through to the other side. Draw the figure and find its surface area.

30. CHALLENGE A cuboctahedron has 6 square faces and 8 equilateral triangle faces, as shown. A cuboctahedron can be made by slicing off the corners of a cube.
   a. Sketch a net for the cuboctahedron.
   b. Each edge of a cuboctahedron has a length of 5 millimeters. Find its surface area.

MIXED REVIEW

The sum of the measures of the interior angles of a convex polygon is given. Classify the polygon by the number of sides. (p. 507)

31. 1260°
32. 1080°
33. 720°
34. 1800°

Find the area of the regular polygon. (p. 762)

35.

36.

37.
A **pyramid** is a polyhedron in which the base is a polygon and the lateral faces are triangles with a common vertex, called the **vertex of the pyramid**. The intersection of two lateral faces is a **lateral edge**. The intersection of the base and a lateral face is a **base edge**. The height of the pyramid is the perpendicular distance between the base and the vertex.

A **regular pyramid** has a regular polygon for a base and the segment joining the vertex and the center of the base is perpendicular to the base. The lateral faces of a regular pyramid are congruent isosceles triangles. The **slant height** of a regular pyramid is the height of a lateral face of the regular pyramid. A nonregular pyramid does not have a slant height.

**Example 1** Find the area of a lateral face of a pyramid

A regular square pyramid has a height of 15 centimeters and a base edge length of 16 centimeters. Find the area of each lateral face of the pyramid.

**Solution**

Use the Pythagorean Theorem to find the slant height $l$.

\[ l^2 = h^2 + \left(\frac{1}{2}b\right)^2 \]

Write formula.

\[ l^2 = 15^2 + 8^2 \]

Substitute for $h$ and $\frac{1}{2}b$.

\[ l^2 = 289 \]

Simplify.

\[ l = 17 \]

Find the positive square root.

The area of each triangular face is $A = \frac{1}{2}bh = \frac{1}{2}(16)(17) = 136$ square centimeters.
12.3 Surface Area of Pyramids and Cones

EXAMPLE 2 Find the surface area of a pyramid

Find the surface area of the regular hexagonal pyramid.

Solution
First, find the area of the base using the formula for the area of a regular polygon, $\frac{1}{2}ap$. The apothem $a$ of the hexagon is $5\sqrt{3}$ feet and the perimeter $P$ is $6 \times 10 = 60$ feet. So, the area of the base $B$ is $\frac{1}{2}(5\sqrt{3})(60) = 150\sqrt{3}$ square feet. Then, find the surface area.

\[
S = B + \frac{1}{2}P\ell
\]

Substitute known values.

\[
= 150\sqrt{3} + \frac{1}{2}(60)(14)
\]

Simplify.

\[
= 150\sqrt{3} + 420
\]

Use a calculator.

\[
= 679.81
\]

The surface area of the regular hexagonal pyramid is about 679.81 ft$^2$.

THEOREM

THEOREM 12.4 Surface Area of a Regular Pyramid

The surface area $S$ of a regular pyramid is

\[
S = B + \frac{1}{2}P\ell,
\]

where $B$ is the area of the base, $P$ is the perimeter of the base, and $\ell$ is the slant height.

SURFACE AREA A regular hexagonal pyramid and its net are shown at the right. Let $b$ represent the length of a base edge, and let $\ell$ represent the slant height of the pyramid.

The area of each lateral face is $\frac{1}{2}bl$ and the perimeter of the base is $P = 6b$. So, the surface area $S$ is as follows.

\[
S = (\text{Area of base}) + 6(\text{Area of lateral face})
\]

Substitute known values.

\[
S = B + 6\left(\frac{1}{2}bl\right) \quad \text{Rewrite } 6\left(\frac{1}{2}bl\right) \text{ as } \frac{3}{2}(6b).\ell.
\]

Substitute $P$ for $6b$.
GUIDED PRACTICE for Examples 1 and 2

1. Find the area of each lateral face of the regular pentagonal pyramid shown.
2. Find the surface area of the regular pentagonal pyramid shown.

CONES A cone has a circular base and a vertex that is not in the same plane as the base. The radius of the base is the radius of the cone. The height is the perpendicular distance between the vertex and the base.

In a right cone, the segment joining the vertex and the center of the base is perpendicular to the base and the slant height is the distance between the vertex and a point on the base edge.

The lateral surface of a cone consists of all segments that connect the vertex with points on the base edge.

SURFACE AREA When you cut along the slant height and base edge and lay a right cone flat, you get the net shown at the right.

The circular base has an area of \( \pi r^2 \) and the lateral surface is the sector of a circle. You can use a proportion to find the area of the sector, as shown below.

\[
\frac{\text{Area of sector}}{\pi l^2} = \frac{\text{Arc length}}{\text{Circumference of circle}}
\]

Set up proportion.

\[
\frac{\text{Area of sector}}{\pi l^2} = \frac{2\pi r}{2\pi l}
\]

Substitute.

\[
\text{Area of sector} = \pi l^2 \cdot \frac{2\pi r}{2\pi l}
\]

Multiply each side by \( \pi l^2 \).

\[
\text{Area of sector} = \pi rl
\]

Simplify.

The surface area of a cone is the sum of the base area, \( \pi r^2 \), and the lateral area, \( \pi rl \). Notice that the quantity \( \pi rl \) can be written as \( \frac{1}{2}(2\pi r)l \), or \( \frac{1}{2}Cl \).

THEOREM 12.5 Surface Area of a Right Cone

The surface area \( S \) of a right cone is

\[
S = B + \frac{1}{2}Cl = \pi r^2 + \pi rl,
\]

where \( B \) is the area of the base, \( C \) is the circumference of the base, \( r \) is the radius of the base, and \( l \) is the slant height.
EXAMPLE 3 Standardized Test Practice

What is the surface area of the right cone?

- A. $72\pi \text{ m}^2$
- B. $96\pi \text{ m}^2$
- C. $132\pi \text{ m}^2$
- D. $136\pi \text{ m}^2$

Solution

To find the slant height $l$ of the right cone, use the Pythagorean Theorem.

\[
l^2 = h^2 + r^2 \quad \text{Write formula.}
\]

\[
l^2 = 8^2 + 6^2 \quad \text{Substitute.}
\]

\[
l = 10 \quad \text{Find positive square root.}
\]

Use the formula for the surface area of a right cone.

\[
S = \pi r^2 + \pi rl
\]

\[
= \pi (6^2) + \pi (6)(10)
\]

\[
= 96\pi
\]

\[\therefore \text{The correct answer is B. } \text{A} \quad \text{B} \quad \text{C} \quad \text{D} \]

EXAMPLE 4 Find the lateral area of a cone

TRAFFIC CONE The traffic cone can be approximated by a right cone with radius 5.7 inches and height 18 inches. Find the approximate lateral area of the traffic cone.

Solution

To find the slant height $l$, use the Pythagorean Theorem.

\[
l^2 = h^2 + r^2 \quad \text{Write formula.}
\]

\[
l^2 = 5^2 + 6^2 \quad \text{Substitute.}
\]

\[
l = 10\quad \text{Find positive square root.}
\]

Find the lateral area.

\[
\text{Lateral area} = \pi rl \quad \text{Write formula.}
\]

\[
= \pi (5.7)(18.9) \quad \text{Substitute known values.}
\]

\[
\approx 338.4 \quad \text{Simplify and use a calculator.}
\]

\[\therefore \text{The lateral area of the traffic cone is about 338.4 square inches.} \]

GUIDED PRACTICE for Examples 3 and 4

3. Find the lateral area of the right cone shown.

4. Find the surface area of the right cone shown.
12.3 EXERCISES

1. **VOCABULARY** Draw a regular square pyramid. Label its height, slant height, and base.

2. ★ **WRITING** Compare the height and slant height of a right cone.

**AREA OF A LATERAL FACE** Find the area of each lateral face of the regular pyramid.

3. 10 cm
4. 15 in.
5. 21 ft

**SURFACE AREA OF A PYRAMID** Find the surface area of the regular pyramid. Round your answer to two decimal places.

6. 3 ft
7. 5 ft
8. 6.9 mm

9. **ERROR ANALYSIS** Describe and correct the error in finding the surface area of the regular pyramid.

**LATERAL AREA OF A CONE** Find the lateral area of the right cone. Round your answer to two decimal places.

10. 7.5 cm
11. 1 in.
12. 7 in.
**SURFACE AREA OF A CONE** Find the surface area of the right cone. Round your answer to two decimal places.

13. [Diagram of a right cone with dimensions: 15 in. and 4 in.]

14. [Diagram of a right cone with dimensions: 20 cm and 26 cm]

15. [Diagram of a right cone with dimensions: 5 ft and 8 ft]

16. **ERROR ANALYSIS** Describe and correct the error in finding the surface area of the right cone.

\[
s = \pi r^2 + \pi r l
\]

\[
= \pi (36) + \pi (36)(10)
\]

\[
= 360\pi \text{ cm}^2
\]

17. **MULTIPLE CHOICE** The surface area of the right cone is 200\(\pi\) square feet. What is the slant height of the cone?

- (A) 10.5 ft
- (B) 17 ft
- (C) 23 ft
- (D) 24 ft

18. A right cone has a radius of 15 feet and a slant height of 20 feet.

19. A right cone has a diameter of 16 meters and a height of 30 meters.

20. A regular pyramid has a slant height of 24 inches. Its base is an equilateral triangle with a base edge length of 10 inches.

21. A regular pyramid has a hexagonal base with a base edge length of 6 centimeters and a slant height of 9 centimeters.

**VISUAL REASONING** In Exercises 18–21, sketch the described solid and find its surface area. Round your answer to two decimal places.

**COMPOSITE SOLIDS** Find the surface area of the solid. The pyramids are regular and the cones are right. Round your answers to two decimal places, if necessary.

22. [Diagram of a composite solid with dimensions: 4 cm, 12 cm, and 5 cm]

23. [Diagram of a composite solid with dimensions: 3 in., 5 in., and 5 in.]

24. [Diagram of a composite solid with dimensions: 3 yd, 4 yd, and 8 yd]

25. **TETRAHEDRON** Find the surface area of a regular tetrahedron with edge length 4 centimeters.

26. **CHALLENGE** A right cone with a base of radius 4 inches and a regular pyramid with a square base both have a slant height of 5 inches. Both solids have the same surface area. Find the length of a base edge of the pyramid. Round your answer to the nearest hundredth of an inch.
27. **CANDLES** A candle is in the shape of a regular square pyramid with base edge length 6 inches. Its height is 4 inches. Find its surface area.

28. **LAMPSHADE** A glass lampshade is shaped like a regular square pyramid.
   a. Approximate the lateral area of the lampshade shown.
   b. Explain why your answer to part (a) is not the exact lateral area.

**USING NETS** Name the figure that is represented by the net. Then find its surface area. Round your answer to two decimal places.

29.  

30.  

31. **SHORT RESPONSE** In the figure, \( AC = 4 \), \( AB = 3 \), and \( DC = 2 \).
   a. Prove \( \triangle ABC \sim \triangle DEC \).
   b. Find \( BC \), \( DE \), and \( EC \).
   c. Find the surface areas of the larger cone and the smaller cone in terms of \( \pi \). Compare the surface areas using a percent.

32. **MULTI-STEP PROBLEM** The sector shown can be rolled to form the lateral surface of a right cone. The lateral surface area of the cone is 20 square meters.
   a. Write the formula for the area of a sector.
   b. Use the formula in part (a) to find the slant height of the cone. Explain your reasoning.
   c. Find the radius and height of the cone.

33. **VOLCANOES** Before 1980, Mount St. Helens was a conic volcano with a height from its base of about 1.08 miles and a base radius of about 3 miles. In 1980, the volcano erupted, reducing its height to about 0.83 mile.

   Approximate the lateral area of the volcano after 1980. (Hint: The ratio of the radius of the destroyed cone-shaped top to its height is the same as the ratio of the radius of the original volcano to its height.)
34. **CHALLENGE** An *Elizabethan collar* is used to prevent an animal from irritating a wound. The angle between the opening with a 16 inch diameter and the side of the collar is 53°. Find the surface area of the collar shown.

**MIXED REVIEW**

Find the value of $x$. (p. 310)

35. 

36. 

In Exercises 37–39, find the area of the polygon. (pp. 720, 730)

37. 

38. 

39. 

**QUIZ for Lessons 12.1–12.3**

1. A polyhedron has 8 vertices and 12 edges. How many faces does the polyhedron have? (p. 794)

Solve for $x$ given the surface area $S$ of the right prism or right cylinder. Round your answer to two decimal places. (p. 803)

2. $S = 366\text{ ft}^2$

3. $S = 717\text{ in.}^2$

4. $S = 567\text{ m}^2$

Find the surface area of the regular pyramid or right cone. Round your answer to two decimal places. (p. 810)

5. 

6. 

7.
1. **SHORT RESPONSE** Using Euler’s Theorem, explain why it is not possible for a polyhedron to have 6 vertices and 7 edges.

2. **SHORT RESPONSE** Describe two methods of finding the surface area of a rectangular solid.

3. **EXTENDED RESPONSE** Some pencils are made from slats of wood that are machined into right regular hexagonal prisms.
   
   a. The formula for the surface area of a new unsharpened pencil without an eraser is
      \[ S = 3\sqrt{3}r^2 + 6rh. \]
      Tell what each variable in this formula represents.

   b. After a pencil is painted, a metal band that holds an eraser is wrapped around one end. Write a formula for the surface area of the visible portion of the pencil, shown below.

   c. After a pencil is sharpened, the end is shaped like a cone. Write a formula to find the surface area of the visible portion of the pencil, shown below.

   d. Use your formulas from parts (b) and (c) to write a formula for the difference of the surface areas of the two pencils. Define any variables in your formula.

4. **GRIDDED ANSWER** The amount of paper needed for a soup can label is approximately equal to the lateral area of the can. Find the lateral area of the soup can in square inches. Round your answer to two decimal places.

5. **SHORT RESPONSE** If you know the diameter \( d \) and slant height \( l \) of a right cone, how can you find the surface area of the cone?

6. **OPEN-ENDED** Identify an object in your school or home that is a rectangular prism. Measure its length, width, and height to the nearest quarter inch. Then approximate the surface area of the object.

7. **MULTI-STEP PROBLEM** The figure shows a plane intersecting a cube parallel to its base. The cube has a side length of 10 feet.
   
   a. Describe the shape formed by the cross section.
   
   b. Find the perimeter and area of the cross section.
   
   c. When the cross section is cut along its diagonal, what kind of triangles are formed?
   
   d. Find the area of one of the triangles formed in part (c).

8. **SHORT RESPONSE** A cone has a base radius of \( 3x \) units and a height of \( 4x \) units. The surface area of the cone is \( 1944\pi \) square units. Find the value of \( x \). Explain your steps.
12.4 Volume of Prisms and Cylinders

Key Vocabulary
• volume

The volume of a solid is the number of cubic units contained in its interior. Volume is measured in cubic units, such as cubic centimeters (cm³).

POSTULATES

POSTULATE 27 Volume of a Cube Postulate
The volume of a cube is the cube of the length of its side.

POSTULATE 28 Volume Congruence Postulate
If two polyhedra are congruent, then they have the same volume.

POSTULATE 29 Volume Addition Postulate
The volume of a solid is the sum of the volumes of all its nonoverlapping parts.

EXAMPLE 1 Find the number of unit cubes

3-D PUZZLE Find the volume of the puzzle piece in cubic units.

Solution
To find the volume, find the number of unit cubes it contains. Separate the piece into three rectangular boxes as follows:

The base is 7 units by 2 units. So, it contains 7 • 2, or 14 unit cubes.
The upper left box is 2 units by 2 units. So, it contains 2 • 2, or 4 unit cubes.
The upper right box is 1 unit by 2 units. So, it contains 1 • 2, or 2 unit cubes.

By the Volume Addition Postulate, the total volume of the puzzle piece is 14 + 4 + 2 = 20 cubic units.
VOLUME FORMULAS The volume of any right prism or right cylinder can be found by multiplying the area of its base by its height.

THEOREMS

**Theorem 12.6 Volume of a Prism**
The volume $V$ of a prism is

$$V = Bh,$$

where $B$ is the area of a base and $h$ is the height.

**Theorem 12.7 Volume of a Cylinder**
The volume $V$ of a cylinder is

$$V = Bh = \pi r^2h,$$

where $B$ is the area of a base, $h$ is the height, and $r$ is the radius of a base.

**Example 2** Find volumes of prisms and cylinders

Find the volume of the solid.

a. Right trapezoidal prism

b. Right cylinder

**Solution**
a. The area of a base is $\frac{1}{2}(3)(6 + 14) = 30$ cm$^2$ and $h = 5$ cm.

$$V = Bh = 30(5) = 150$$ cm$^3$

b. The area of the base is $\pi \cdot 9^2$, or $81\pi$ ft$^2$. Use $h = 6$ ft to find the volume.

$$V = Bh = 81\pi(6) = 486\pi \approx 1526.81$$ ft$^3$

**Example 3** Use volume of a prism

**Algebra** The volume of the cube is 90 cubic inches. Find the value of $x$.

**Solution**
A side length of the cube is $x$ inches.

$$V = x^3$$ Formula for volume of a cube

$$90 \text{ in.}^3 = x^3$$ Substitute for $V$

$$4.48 \text{ in.} \approx x$$ Find the cube root.

**Review Area**
For help with finding the area of a trapezoid, see p. 730.
EXAMPLE 4 Find the volume of an oblique cylinder

Find the volume of the oblique cylinder.

Solution

Cavalieri’s Principle allows you to use Theorem 12.7 to find the volume of the oblique cylinder.

\[
V = \pi r^2 h
\]

Formula for volume of a cylinder

\[
= \pi (4^2)(7)
\]

Substitute known values.

\[
= 112\pi
\]

Simplify.

\[
\approx 351.86
\]

Use a calculator.

The volume of the oblique cylinder is about 351.86 cm\(^3\).
Chapter 12  Surface Area and Volume of Solids

**Example 5** Solve a real-world problem

**SCULPTURE** The sculpture is made up of 13 beams. In centimeters, suppose the dimensions of each beam are 30 by 30 by 90. Find its volume.

**Solution**

The area of the base $B$ can be found by subtracting the area of the small rectangles from the area of the large rectangle.

$$B = \text{Area of large rectangle} - 4 \cdot \text{Area of small rectangle}$$

$$= 90 \cdot 510 - 4(30 \cdot 90)$$

$$= 35,100 \text{ cm}^2$$

Use the formula for the volume of a prism.

$$V = Bh$$

Formula for volume of a prism

$$= 35,100(30)$$

Substitute.

$$= 1,053,000 \text{ cm}^3$$

Simplify.

The volume of the sculpture is $1,053,000 \text{ cm}^3$, or 1.053 m$^3$.

**Guided Practice** for Examples 4 and 5

4. Find the volume of the oblique prism shown below.

5. Find the volume of the solid shown below.

**Exercises**

1. **VOCABULARY** In what type of units is the volume of a solid measured?

2. **WRITING** Two solids have the same surface area. Do they have the same volume? Explain your reasoning.

3. **MULTIPLE CHOICE** How many 3 inch cubes can fit completely in a box that is 15 inches long, 9 inches wide, and 3 inches tall?

   A 15   B 45   C 135   D 405
**USING UNIT CUBES** Find the volume of the solid by determining how many unit cubes are contained in the solid.

4.  

5.  

6.  

**EXAMPLE 2** on p. 820 for Exs. 7–13

**FINDING VOLUME** Find the volume of the right prism or right cylinder. Round your answer to two decimal places.

7.  

8.  

9.  

10.  

11.  

12.  

**ERROR ANALYSIS** Describe and correct the error in finding the volume of a right cylinder with radius 4 feet and height 3 feet.

\[ V = 2\pi rh \]

\[ = 2\pi(4)(3) \]

\[ = 24\pi \text{ ft}^3 \]

\[ * \]

13. **FINDING VOLUME** Sketch a rectangular prism with height 3 feet, width 11 inches, and length 7 feet. Find its volume.

14. **ALGEBRA** Find the length \( x \) using the given volume \( V \).

15.  \[ V = 1000 \text{ in.}^3 \]

16.  \[ V = 45 \text{ cm}^3 \]

17.  \[ V = 128\pi \text{ in.}^3 \]

18. **COMPOSITE SOLIDS** Find the volume of the solid. The prisms and cylinders are right. Round your answer to two decimal places, if necessary.
21. ★ **MULTIPLE CHOICE** What is the height of a cylinder with radius 4 feet and volume $64\pi$ cubic feet?

- A 4 feet  
- B 8 feet  
- C 16 feet  
- D 256 feet

22. **FINDING HEIGHT** The bases of a right prism are right triangles with side lengths of 3 inches, 4 inches, and 5 inches. The volume of the prism is 96 cubic inches. What is the height of the prism?

23. **FINDING DIAMETER** A cylinder has height 8 centimeters and volume 1005.5 cubic centimeters. What is the diameter of the cylinder?

**VOLUME OF AN OBLIQUE SOLID** Use Cavalieri’s Principle to find the volume of the oblique prism or cylinder. Round your answer to two decimal places.

24.  
25.  
26.  

27. **CHALLENGE** The bases of a right prism are rhombuses with diagonals 12 meters and 16 meters long. The height of the prism is 8 meters. Find the lateral area, surface area, and volume of the prism.

**Problem Solving**

28. **JEWELRY** The bead at the right is a rectangular prism of length 17 millimeters, width 9 millimeters, and height 5 millimeters. A 3 millimeter wide hole is drilled through the smallest face. Find the volume of the bead.

29. **MULTI-STEP PROBLEM** In the concrete block shown, the holes are 8 inches deep.

   a. Find the volume of the block using the Volume Addition Postulate.
   b. Find the volume of the block using the formula in Theorem 12.6.
   c. Compare your answers in parts (a) and (b).

30. **OCEANOGRAPHY** The Blue Hole is a cylindrical trench located on Lighthouse Reef Atoll, an island off the coast of Central America. It is approximately 1000 feet wide and 400 feet deep.

   a. Find the volume of the Blue Hole.
   b. About how many gallons of water does the Blue Hole contain? (1 ft$^3 = 7.48$ gallons)
31. **ARCHITECTURE** A cylindrical column in the building shown has circumference 10 feet and height 20 feet. Find its volume. Round your answer to two decimal places.

32. **ROTATIONS** A 3 inch by 5 inch index card is rotated around a horizontal line and a vertical line to produce two different solids, as shown. Which solid has a greater volume? Explain your reasoning.

33. ★ **EXTENDED RESPONSE** An aquarium shaped like a rectangular prism has length 30 inches, width 10 inches, and height 20 inches.
   
   a. **Calculate** You fill the aquarium \( \frac{3}{4} \) full with water. What is the volume of the water?
   
   b. **Interpret** When you submerge a rock in the aquarium, the water level rises 0.25 inch. Find the volume of the rock.
   
   c. **Interpret** How many rocks of the same size as the rock in part (b) can you place in the aquarium before water spills out?

34. **CHALLENGE** A barn is in the shape of a pentagonal prism with the dimensions shown. The volume of the barn is 9072 cubic feet. Find the dimensions of each half of the roof.

---

**MIXED REVIEW**

Find the value of \( x \). Round your answer to two decimal places. (*pp. 466, 473*)

35.  
   \[
   \begin{align*}
   2 & \quad 22.5^\circ \\
   x & \quad \\
   \end{align*}
   \]

36.  
   \[
   \begin{align*}
   7 & \quad 36^\circ \\
   x & \quad \\
   \end{align*}
   \]

37.  
   \[
   \begin{align*}
   x & \quad 75^\circ \\
   5 & \quad \\
   \end{align*}
   \]

Find the area of the figure described. Round your answer to two decimal places. (*pp. 755, 762*)

38. A circle with radius 9.5 inches

39. An equilateral triangle with perimeter 78 meters and apothem 7.5 meters

40. A regular pentagon with radius 10.6 inches

---

**EXTRA PRACTICE** for Lesson 12.4, p. 919  
**ONLINE QUIZ** at classzone.com
MULTIPLE REPRESENTATIONS In Lesson 12.4, you used volume postulates and theorems to find volumes of prisms and cylinders. Now, you will learn two different ways to solve Example 5 on page 822.

Finding Volume by Subtracting Empty Spaces One alternative approach is to compute the volume of the prism formed if the holes in the sculpture were filled. Then, to get the correct volume, you must subtract the volume of the four holes.

**STEP 1** Read the problem. In centimeters, each beam measures 30 by 30 by 90.

The dimensions of the entire sculpture are 30 by 90 by \((4 \cdot 90 + 5 \cdot 30)\), or 30 by 90 by 510.

The dimensions of each hole are equal to the dimensions of one beam.

**STEP 2** Apply the Volume Addition Postulate. The volume of the sculpture is equal to the volume of the larger prism minus 4 times the volume of a hole.

Volume \(V\) of sculpture = Volume of larger prism − Volume of 4 holes

\[
\begin{align*}
V &= 30 \cdot 90 \cdot 510 - 4(30 \cdot 30 \cdot 90) \\
 &= 1,377,000 - 4 \cdot 81,000 \\
 &= 1,377,000 - 324,000 \\
&= 1,053,000
\end{align*}
\]

The volume of the sculpture is 1,053,000 cubic centimeters, or 1.053 cubic meters.

**STEP 3** Check page 822 to verify your new answer, and confirm that it is the same.
Finding Volume of Pieces Another alternative approach is to use the dimensions of each beam.

**STEP 1** Look at the sculpture. Notice that the sculpture consists of 13 beams, each with the same dimensions. Therefore, the volume of the sculpture will be 13 times the volume of one beam.

**STEP 2** Write an expression for the volume of the sculpture and find the volume.

Volume of sculpture = 13(Volume of one beam)

= 13(30 \cdot 30 \cdot 90)

= 13 \cdot 81,000

= 1,053,000

The volume of the sculpture is 1,053,000 cm³, or 1.053 m³.

### Practice

1. **PENCIL HOLDER** The pencil holder has the dimensions shown.

   a. Find its volume using the Volume Addition Postulate.
   
   b. Use its base area to find its volume.

2. **ERROR ANALYSIS** A student solving Exercise 1 claims that the surface area is found by subtracting four times the base area of the cylinders from the surface area of the rectangular prism. Describe and correct the student’s error.

3. **REASONING** You drill a circular hole of radius \( r \) through the base of a cylinder of radius \( R \). Assume the hole is drilled completely through to the other base. You want the volume of the hole to be half the volume of the cylinder. Express \( r \) as a function of \( R \).

4. **FINDING VOLUME** Find the volume of the solid shown below. Assume the hole has square cross sections.

5. **FINDING VOLUME** Find the volume of the solid shown to the right.

6. **SURFACE AREA** Refer to the diagram of the sculpture on page 826.
   
   a. Describe a method to find the surface area of the sculpture.
   
   b. Explain why adding the individual surface areas of the beams will give an incorrect result for the total surface area.
12.5 Investigate the Volume of a Pyramid

MATERIALS
• ruler   • poster board   • scissors   • tape   • uncooked rice

QUESTION How is the volume of a pyramid related to the volume of a prism with the same base and height?

EXPLORE Compare the volume of a prism and a pyramid using nets

STEP 1 Draw nets Use a ruler to draw the two nets shown below on poster board. (Use \(1\frac{7}{16}\) inches to approximate \(\sqrt{2}\) inches.)

STEP 2 Create an open prism and an open pyramid Cut out the nets. Fold along the dotted lines to form an open prism and an open pyramid, as shown below. Tape each solid to hold it in place, making sure that the edges do not overlap.

STEP 3 Compare volumes Fill the pyramid with uncooked rice and pour it into the prism. Repeat this as many times as needed to fill the prism. How many times did you fill the pyramid? What does this tell you about the volume of the solids?

DRAW CONCLUSIONS Use your observations to complete these exercises

1. Compare the area of the base of the pyramid to the area of the base of the prism. Placing the pyramid inside the prism will help. What do you notice?
2. Compare the heights of the solids. What do you notice?
3. Make a conjecture about the ratio of the volumes of the solids.
4. Use your conjecture to write a formula for the volume of a pyramid that uses the formula for the volume of a prism.
Recall that the volume of a prism is $Bh$, where $B$ is the area of a base and $h$ is the height. In the figure at the right, you can see that the volume of a pyramid must be less than the volume of a prism with the same base area and height. As suggested by the Activity on page 828, the volume of a pyramid is one third the volume of a prism.

**THEOREMS**

**For Your Notebook**

**THEOREM 12.9 Volume of a Pyramid**

The volume $V$ of a pyramid is

$$V = \frac{1}{3}Bh,$$

where $B$ is the area of the base and $h$ is the height.

**THEOREM 12.10 Volume of a Cone**

The volume $V$ of a cone is

$$V = \frac{1}{3}Bh = \frac{1}{3}\pi r^2h,$$

where $B$ is the area of the base, $h$ is the height, and $r$ is the radius of the base.

**EXAMPLE 1** Find the volume of a solid

Find the volume of the solid.

**a.**

$$V = \frac{1}{3}Bh = \frac{1}{3}(\frac{1}{2} \cdot 4 \cdot 6)(9) = 36 \text{ m}^3$$

**b.**

$$V = \frac{1}{3}(\pi r^2)h = \frac{1}{3}(\pi \cdot 2.2^2)(4.5) = 7.26\pi = 22.81 \text{ cm}^3$$
Chapter 12  Surface Area and Volume of Solids

**EXAMPLE 2** Use volume of a pyramid

**ALGEBRA** Originally, the pyramid had height 144 meters and volume 2,226,450 cubic meters. Find the side length of the square base.

**Solution**

\[
V = \frac{1}{3} Bh
\]

Write formula.

\[
2,226,450 = \frac{1}{3}(x^2)(144)
\]

Substitute.

\[
6,679,350 = 144x^2
\]

Multiply each side by 3.

\[
46,384 = x^2
\]

Divide each side by 144.

\[
215 = x
\]

Find the positive square root.

Originally, the side length of the base was about 215 meters.

**EXAMPLE 3** Use trigonometry to find the volume of a cone

Find the volume of the right cone.

**Solution**

To find the radius \( r \) of the base, use trigonometry.

\[
tan 65^\circ = \frac{opp.}{adj.}
\]

Write ratio.

\[
tan 65^\circ = \frac{16}{r}
\]

Substitute.

\[
r = \frac{16}{\tan 65^\circ} \approx 7.46
\]

Solve for \( r \).

Use the formula for the volume of a cone.

\[
V = \frac{1}{3}(\pi r^2)h = \frac{1}{3}\pi(7.46^2)(16) = 932.45 \text{ ft}^3
\]
**Example 4**  
**Find volume of a composite solid**

Find the volume of the solid shown.

**Solution**

\[
\text{Volume of solid} = \text{Volume of cube} + \text{Volume of pyramid}
\]

\[
= s^3 + \frac{1}{3} Bh
\]

\[
= 6^3 + \frac{1}{3}(6)^2 \cdot 6
\]

\[
= 216 + 72
\]

\[
= 288
\]

The volume of the solid is 288 cubic meters.

**Example 5**  
**Solve a multi-step problem**

**SCIENCE** You are using the funnel shown to measure the coarseness of a particular type of sand. It takes 2.8 seconds for the sand to empty out of the funnel. Find the flow rate of the sand in milliliters per second. (1 mL = 1 cm³)

**Solution**

**STEP 1** Find the volume of the funnel using the formula for the volume of a cone.

\[
V = \frac{1}{3}(\pi r^2)h = \frac{1}{3}\pi(4^2)(6) \approx 101 \text{ cm}^3 = 101 \text{ mL}
\]

**STEP 2** Divide the volume of the funnel by the time it takes the sand to empty out of the funnel.

\[
\frac{101 \text{ mL}}{2.8 \text{ s}} \approx 36.07 \text{ mL/s}
\]

The flow rate of the sand is about 36.07 milliliters per second.

**Guided Practice**  
for Examples 3, 4, and 5

4. Find the volume of the cone at the right. Round your answer to two decimal places.

5. A right cylinder with radius 3 centimeters and height 10 centimeters has a right cone on top of it with the same base and height 5 centimeters. Find the volume of the solid. Round your answer to two decimal places.

6. **WHAT IF?** In Example 5, suppose a different type of sand is used that takes 3.2 seconds to empty out of the funnel. Find its flow rate.
1. **VOCABULARY** Explain the difference between a *triangular prism* and a *triangular pyramid*. Draw an example of each.

2. ★ **WRITING** Compare the volume of a square pyramid to the volume of a square prism with the same base and height as the pyramid.

### VOLUME OF A SOLID

Find the volume of the solid. Round your answer to two decimal places.

3. 

4. 

5. 

6. 

7. 

8. 

### ERROR ANALYSIS

Describe and correct the error in finding the volume of the right cone or pyramid.

9. 

10. 

11. ★ **MULTIPLE CHOICE** The volume of a pyramid is 45 cubic feet and the height is 9 feet. What is the area of the base?

   A) 3.87 ft²
   B) 5 ft²
   C) 10 ft²
   D) 15 ft²

### ALGEBRA

Find the value of $x$.

12. Volume = 200 cm³

13. Volume = $216\pi$ in³

14. Volume = $7\sqrt{3}$ ft³
12.5 Volume of Pyramids and Cones

**VOLUME OF A CONE** Find the volume of the right cone. Round your answer to two decimal places.

15. [Diagram of a cone with dimensions provided]

16. [Diagram of a cone with dimensions provided]

17. [Diagram of a cone with dimensions provided]

18. ★ **MULTIPLE CHOICE** What is the approximate volume of the cone?

- A) 47.23 ft$^3$
- B) 236.14 ft$^3$
- C) 269.92 ft$^3$
- D) 354.21 ft$^3$

19. **HEIGHT OF A CONE** A cone with a diameter of 8 centimeters has volume 143.6 cubic centimeters. Find the height of the cone. Round your answer to two decimal places.

**COMPOSITE SOLIDS** Find the volume of the solid. The prisms, pyramids, and cones are right. Round your answer to two decimal places.

20. [Diagram of a composite solid with dimensions provided]

21. [Diagram of a composite solid with dimensions provided]

22. [Diagram of a composite solid with dimensions provided]

23. [Diagram of a composite solid with dimensions provided]

24. [Diagram of a composite solid with dimensions provided]

25. [Diagram of a composite solid with dimensions provided]

26. **FINDING VOLUME** The figure at the right is a cone that has been warped but whose cross sections still have the same area as a right cone with equal base area and height. Find the volume of this solid.

27. **FINDING VOLUME** Sketch a regular square pyramid with base edge length 5 meters inscribed in a cone with height 7 meters. Find the volume of the cone. *Explain* your reasoning.

28. **CHALLENGE** Find the volume of the regular hexagonal pyramid. Round your answer to the nearest hundredth of a cubic foot. In the diagram, $m \angle ABC = 35^\circ$. 

![Diagram of a hexagonal pyramid with dimensions provided]
29. **CAKE DECORATION** A pastry bag filled with frosting has height 12 inches and radius 4 inches. A cake decorator can make 15 flowers using one bag of frosting.

   a. How much frosting is in the pastry bag? Round your answer to the nearest cubic inch.

   b. How many cubic inches of frosting are used to make each flower?

   POPCORN A snack stand serves a small order of popcorn in a cone-shaped cup and a large order of popcorn in a cylindrical cup.

   30. Find the volume of the small cup.

   31. How many small cups of popcorn do you have to buy to equal the amount of popcorn in a large container? Do not perform any calculations. *Explain.*

   32. Which container gives you more popcorn for your money? *Explain.*

   **USING NETS** In Exercises 33 and 34, use the net to sketch the solid. Then find the volume of the solid. Round your answer to two decimal places.

   33. 

   34. 

   35. ★ **EXTENDED RESPONSE** A pyramid has height 10 feet and a square base with side length 7 feet.

      a. How does the volume of the pyramid change if the base stays the same and the height is doubled?

      b. How does the volume of the pyramid change if the height stays the same and the side length of the base is doubled?

      c. *Explain* why your answers to parts (a) and (b) are true for any height and side length.

   36. **AUTOMATIC FEEDER** Assume the automatic pet feeder is a right cylinder on top of a right cone of the same radius. (1 cup = 14.4 in.³)

      a. Calculate the amount of food in cups that can be placed in the feeder.

      b. A cat eats one third of a cup of food, twice per day. How many days will the feeder have food without refilling it?
37. **NAUTICAL PRISMS** The nautical deck prism shown is composed of the following three solids: a regular hexagonal prism with edge length 3.5 inches and height 1.5 inches, a regular hexagonal prism with edge length 3.25 inches and height 0.25 inch, and a regular hexagonal pyramid with edge length 3 inches and height 3 inches. Find the volume of the deck prism.

38. **MULTI-STEP PROBLEM** Calculus can be used to show that the average value of $r^2$ of a circular cross section of a cone is \( \frac{r_b^2}{3} \), where \( r_b \) is the radius of the base.
   a. Find the average area of a circular cross section of a cone whose base has radius \( R \).
   b. Show that the volume of the cone can be expressed as follows:
      \[
      V_{\text{cone}} = (\text{Average area of a circular cross section}) \cdot (\text{Height of cone})
      \]

39. **MULTIPLE REPRESENTATIONS** Water flows into a reservoir shaped like a right cone at the rate of 1.8 cubic meters per minute. The height and diameter of the reservoir are equal.
   a. **Using Algebra** As the water flows into the reservoir, the relationship \( h = 2r \) is always true. Using this fact, show that \( V = \frac{\pi h^3}{12} \).
   b. **Making a Table** Make a table that gives the height \( h \) of the water after 1, 2, 3, 4, and 5 minutes.
   c. **Drawing a Graph** Make a graph of height versus time. Is there a linear relationship between the height of the water and time? Explain.

**FRUSTUM** A frustum of a cone is the part of the cone that lies between the base and a plane parallel to the base, as shown. Use the information to complete Exercises 40 and 41.

One method for calculating the volume of a frustum is to add the areas of the two bases to their geometric mean, then multiply the result by \( \frac{1}{3} \) the height.

40. Use the measurements in the diagram at the left above to calculate the volume of the frustum.

41. Complete parts (a) and (b) below to write a formula for the volume of a frustum that has bases with radii \( r_1 \) and \( r_2 \) and a height \( h_2 \).
   a. Use similar triangles to find the value of \( h_1 \) in terms of \( h_2 \), \( r_1 \), and \( r_2 \).
   b. Write a formula in terms of \( h_2 \), \( r_1 \), and \( r_2 \) for 
      \[
      V_{\text{frustum}} = (\text{Original volume}) - (\text{Removed volume})
      \]
   c. Show that your formula in part (b) is equivalent to the formula involving geometric mean described above.
42. **CHALLENGE** A square pyramid is inscribed in a right cylinder so that the base of the pyramid is on a base of the cylinder, and the vertex of the pyramid is on the other base of the cylinder. The cylinder has radius 6 feet and height 12 feet. Find the volume of the pyramid. Round your answer to two decimal places.

---

**MIXED REVIEW**

In Exercises 43–45, find the value of x. (p. 397)

43.  

44.  

45.  

46. Copy the diagram at the right. Name a radius, diameter, and chord. (p. 651)

47. Name a minor arc of $\odot F$. (p. 659)

48. Name a major arc of $\odot F$. (p. 659)

Find the area of the circle with the given radius $r$, diameter $d$, or circumference $C$. (p. 755)

49. $r = 3\, \text{m}$

50. $d = 7\, \text{mi}$

51. $r = 0.4\, \text{cm}$

52. $C = 8\pi\, \text{in.}$

---

**QUIZ for Lessons 12.4–12.5**

Find the volume of the figure. Round your answer to two decimal places, if necessary. (pp. 819, 829)

1.  

2.  

3.  

4.  

5.  

6.  

7. Suppose you fill up a cone-shaped cup with water. You then pour the water into a cylindrical cup with the same radius. Both cups have a height of 6 inches. Without doing any calculation, determine how high the water level will be in the cylindrical cup once all of the water is poured into it. Explain your reasoning. (p. 829)
12.5 Minimize Surface Area

**MATERIALS**
- computer

**QUESTION**
How can you find the minimum surface area of a solid with a given volume?

A manufacturer needs a cylindrical container with a volume of 72 cubic centimeters. You have been asked to find the dimensions of such a container so that it has a minimum surface area.

**EXAMPLE**
Use a spreadsheet

**STEP 1** Make a table
Make a table with the four column headings shown in Step 4. The first column is for the given volume $V$. In cell A2, enter 72. In cell A3, enter the formula “=A2”.

**STEP 2** Enter radius
The second column is for the radius $r$. Cell B2 stores the starting value for $r$. So, enter 2 into cell B2. In cell B3, use the formula “=B2+0.05” to increase $r$ in increments of 0.05 centimeter.

**STEP 3** Enter formula for height
The third column is for the height. In cell C2, enter the formula “=A2/(PI()*B2^2)”. Note: Your spreadsheet might use a different expression for $\pi$.

**STEP 4** Enter formula for surface area
The fourth column is for the surface area. In cell D2, enter the formula “=2*PI()*B2^2+2*PI()*B2^2*C2”.

<table>
<thead>
<tr>
<th>A</th>
<th>B</th>
<th>C</th>
<th>D</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Volume $V$</td>
<td>Radius $r$</td>
<td>Height $= V/(\pi r^2)$</td>
</tr>
<tr>
<td>2</td>
<td>72.00</td>
<td>2.00</td>
<td>=A2/(PI()*B2^2)</td>
</tr>
<tr>
<td>3</td>
<td>=A2</td>
<td>=B2+0.05</td>
<td></td>
</tr>
</tbody>
</table>

**STEP 5** Create more rows
Use the **Fill Down** feature to create more rows. Rows 3 and 4 of your spreadsheet should resemble the one below.

<table>
<thead>
<tr>
<th>A</th>
<th>B</th>
<th>C</th>
<th>D</th>
</tr>
</thead>
<tbody>
<tr>
<td>...</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>72.00</td>
<td>2.05</td>
<td>5.45</td>
</tr>
<tr>
<td>4</td>
<td>72.00</td>
<td>2.10</td>
<td>5.20</td>
</tr>
</tbody>
</table>

**PRACTICE**
1. From the data in your spreadsheet, which dimensions yield a minimum surface area for the given volume? Explain how you know.

2. **WHAT IF?** Find the dimensions that give the minimum surface area if the volume of a cylinder is instead $200\pi$ cubic centimeters.
A sphere is the set of all points in space equidistant from a given point. This point is called the center of the sphere. A radius of a sphere is a segment from the center to a point on the sphere. A chord of a sphere is a segment whose endpoints are on the sphere. A diameter of a sphere is a chord that contains the center.

As with circles, the terms radius and diameter also represent distances, and the diameter is twice the radius.

**THEOREM** 12.11  *Surface Area of a Sphere*

The surface area $S$ of a sphere is

$$S = 4\pi r^2,$$

where $r$ is the radius of the sphere.

**USE FORMULAS** If you understand how a formula is derived, then it will be easier for you to remember the formula.

**SURFACE AREA FORMULA** To understand how the formula for the surface area of a sphere is derived, think of a baseball. The surface area of a baseball is sewn from two congruent shapes, each of which resembles two joined circles, as shown.

So, the entire covering of the baseball consists of four circles, each with radius $r$. The area $A$ of a circle with radius $r$ is $A = \pi r^2$. So, the area of the covering can be approximated by $4\pi r^2$. This is the formula for the surface area of a sphere.
**Example 1** Find the surface area of a sphere

Find the surface area of the sphere.

**Solution**

\[ S = 4\pi r^2 \]

Formula for surface area of a sphere

\[ = 4\pi(8^2) \]

Substitute 8 for \( r \).

\[ = 256\pi \]

Simplify.

\[ \approx 804.25 \]

Use a calculator.

The surface area of the sphere is about 804.25 square inches.

---

**Example 2** Standardized Test Practice

The surface area of the sphere is \( 20.25\pi \) square centimeters. What is the diameter of the sphere?

- **A**: 2.25 cm
- **B**: 4.5 cm
- **C**: 5.5 cm
- **D**: 20.25 cm

**Solution**

\[ S = 4\pi r^2 \]

Formula for surface area of a sphere

\[ 20.25\pi = 4\pi r^2 \]

Substitute \( 20.25\pi \) for \( S \).

\[ 5.0625 = r^2 \]

Divide each side by \( 4\pi \).

\[ 2.25 = r \]

Find the positive square root.

The diameter of the sphere is \( 2r = 2 \times 2.25 = 4.5 \) centimeters.

The correct answer is B. **B**  **C**  **D**

---

**Guided Practice** for Examples 1 and 2

1. The diameter of a sphere is 40 feet. Find the surface area of the sphere.
2. The surface area of a sphere is \( 30\pi \) square meters. Find the radius of the sphere.

**Great Circles** If a plane intersects a sphere, the intersection is either a single point or a circle. If the plane contains the center of the sphere, then the intersection is a great circle of the sphere. The circumference of a great circle is the circumference of the sphere. Every great circle of a sphere separates the sphere into two congruent halves called hemispheres.
**EXAMPLE 3** Use the circumference of a sphere

**EXTREME SPORTS** In a sport called *sphereing*, a person rolls down a hill inside an inflatable ball surrounded by another ball. The diameter of the outer ball is 12 feet. Find the surface area of the outer ball.

**Solution**

The diameter of the outer sphere is 12 feet, so the radius is $\frac{12}{2} = 6$ feet.

Use the formula for the surface area of a sphere.

$$S = 4\pi r^2 = 4\pi (6^2) = 144\pi$$

- The surface area of the outer ball is $144\pi$, or about 452.39 square feet.

**GUIDED PRACTICE** for Example 3

3. In Example 3, the circumference of the inner ball is $6\pi$ feet. Find the surface area of the inner ball. Round your answer to two decimal places.

**VOLUME FORMULA** Imagine that the interior of a sphere with radius $r$ is approximated by $n$ pyramids, each with a base area of $B$ and a height of $r$. The volume of each pyramid is $\frac{1}{3}Br$ and the sum of the base areas is $nB$. The surface area of the sphere is approximately equal to $nB$, or $4\pi r^2$. So, you can approximate the volume $V$ of the sphere as follows.

$$V = n\left(\frac{1}{3}Br\right)$$

- Each pyramid has a volume of $\frac{1}{3}Br$.

$$= \frac{1}{3}(nB)r$$

- Regroup factors.

$$= \frac{1}{3}(4\pi r^2)r$$

- Substitute $4\pi r^2$ for $nB$.

$$= \frac{4}{3}\pi r^3$$

- Simplify.

**THEOREM**

**THEOREM 12.12** Volume of a Sphere

The volume $V$ of a sphere is

$$V = \frac{4}{3}\pi r^3,$$

where $r$ is the radius of the sphere.
**Example 4** Find the volume of a sphere

The soccer ball has a diameter of 9 inches. Find its volume.

**Solution**

The diameter of the ball is 9 inches, so the radius is \( \frac{9}{2} = 4.5 \) inches.

\[
V = \frac{4}{3} \pi r^3
\]

Formula for volume of a sphere

\[
= \frac{4}{3} \pi (4.5)^3
\]

Substitute.

\[
= 121.5\pi
\]

Simplify.

\[
\approx 381.70
\]

Use a calculator.

The volume of the soccer ball is \( 121.5\pi \), or about 381.70 cubic inches.

**Example 5** Find the volume of a composite solid

Find the volume of the composite solid.

**Solution**

\[
\text{Volume of solid} = \text{Volume of cylinder} - \text{Volume of hemisphere}
\]

\[
= \pi r^2 h - \frac{1}{2} \left( \frac{4}{3} \pi r^3 \right)
\]

Formulas for volume

\[
= \pi (2)^2 (2) - \frac{2}{3} \pi (2)^3
\]

Substitute.

\[
= 8\pi - \frac{2}{3} (8\pi)
\]

Multiply.

\[
= \frac{24}{3} \pi - \frac{16}{3} \pi
\]

Rewrite fractions using least common denominator.

\[
= \frac{8}{3} \pi
\]

Simplify.

The volume of the solid is \( \frac{8}{3} \pi \), or about 8.38 cubic inches.

**Guided Practice** for Examples 4 and 5

4. The radius of a sphere is 5 yards. Find the volume of the sphere. Round your answer to two decimal places.

5. A solid consists of a hemisphere of radius 1 meter on top of a cone with the same radius and height 5 meters. Find the volume of the solid. Round your answer to two decimal places.
1. **VOCABULARY** What are the formulas for finding the surface area of a sphere and the volume of a sphere?

2. ★ **WRITING** When a plane intersects a sphere, what point in the sphere must the plane contain for the intersection to be a great circle? Explain.

**FINDING SURFACE AREA** Find the surface area of the sphere. Round your answer to two decimal places.

3. 4 ft

4. 7.5 cm

5. 18.3 m

6. ★ **MULTIPLE CHOICE** What is the approximate radius of a sphere with surface area $32\pi$ square meters?
   - (A) 2 meters
   - (B) 2.83 meters
   - (C) 4.90 meters
   - (D) 8 meters

**USING A GREAT CIRCLE** In Exercises 7–9, use the sphere below. The center of the sphere is $C$ and its circumference is $9.6\pi$ inches.

7. Find the radius of the sphere.

8. Find the diameter of the sphere.

9. Find the surface area of one hemisphere.

10. **ERROR ANALYSIS** Describe and correct the error in finding the surface area of a hemisphere with radius 5 feet.

\[
S = 4\pi r^2
= 4\pi (5)^2
= 100\pi
= 314.16 \text{ ft}^2
\]

11. **GREAT CIRCLE** The circumference of a great circle of a sphere is $48.4\pi$ centimeters. What is the surface area of the sphere?

**FINDING VOLUME** Find the volume of the sphere using the given radius $r$ or diameter $d$. Round your answer to two decimal places.

12. $r = 6$ in.

13. $r = 40$ mm

14. $d = 5$ cm
15. **ERROR ANALYSIS** Describe and correct the error in finding the volume of a sphere with diameter 16 feet.

\[
V = \frac{4}{3}\pi r^2 \\
= \frac{4}{3}\pi (8)^2 \\
= 85.33 \approx 268.08 \text{ ft}^2
\]

**USING VOLUME** In Exercises 16–18, find the radius of a sphere with the given volume \(V\). Round your answers to two decimal places.

16. \(V = 1436.76 \text{ m}^3\)  
17. \(V = 91.95 \text{ cm}^3\)  
18. \(V = 20,814.37 \text{ in.}^3\)

19. **FINDING A DIAMETER** The volume of a sphere is \(36\pi\) cubic feet. What is the diameter of the sphere?

20. ★ **MULTIPLE CHOICE** Let \(V\) be the volume of a sphere, \(S\) be the surface area of the sphere, and \(r\) be the radius of the sphere. Which equation represents the relationship between these three measures?

   \[
   \begin{align*}
   \text{A} & \quad V = \frac{rS}{3} \\
   \text{B} & \quad V = \frac{r^2S}{3} \\
   \text{C} & \quad V = \frac{3}{2}rS \\
   \text{D} & \quad V = \frac{3}{2}r^2S
   \end{align*}
   \]

**COMPOSITE SOLIDS** Find the surface area and the volume of the solid. The cylinders and cones are right. Round your answer to two decimal places.

21.  
22.  
23.

**USING A TABLE** Copy and complete the table below. Leave your answers in terms of \(\pi\).

<table>
<thead>
<tr>
<th>Radius of sphere</th>
<th>Circumference of great circle</th>
<th>Surface area of sphere</th>
<th>Volume of sphere</th>
</tr>
</thead>
<tbody>
<tr>
<td>24. 10 ft</td>

</table>

28. ★ **MULTIPLE CHOICE** A sphere is inscribed in a cube of volume 64 cubic centimeters. What is the surface area of the sphere?

   \[
   \begin{align*}
   \text{A} & \quad 4\pi \text{ cm}^2 \\
   \text{B} & \quad \frac{32}{3}\pi \text{ cm}^2 \\
   \text{C} & \quad 16\pi \text{ cm}^2 \\
   \text{D} & \quad 64\pi \text{ cm}^2
   \end{align*}
   \]

29. **CHALLENGE** The volume of a right cylinder is the same as the volume of a sphere. The radius of the sphere is 1 inch.

   a. Give three possibilities for the dimensions of the cylinder.

   b. Show that the surface area of the cylinder is sometimes greater than the surface area of the sphere.
30. **GRAIN SILO** A grain silo has the dimensions shown. The top of the silo is a hemispherical shape. Find the volume of the grain silo.

31. **GEOGRAPHY** The circumference of Earth is about 24,855 miles. Find the surface area of the Western Hemisphere of Earth.

32. **MULTI-STEP PROBLEM** A ball has volume 1427.54 cubic centimeters.
   a. Find the radius of the ball. Round your answer to two decimal places.
   b. Find the surface area of the ball. Round your answer to two decimal places.

33. **SHORT RESPONSE** Tennis balls are stored in a cylindrical container with height 8.625 inches and radius 1.43 inches.
   a. The circumference of a tennis ball is 8 inches. Find the volume of a tennis ball.
   b. There are 3 tennis balls in the container. Find the amount of space within the cylinder not taken up by the tennis balls.

34. **EXTENDED RESPONSE** A partially filled balloon has circumference \(27\pi\) centimeters. Assume the balloon is a sphere.
   a. Calculate Find the volume of the balloon.
   b. Predict Suppose you double the radius by increasing the air in the balloon. Explain what you expect to happen to the volume.
   c. Justify Find the volume of the balloon with the radius doubled. Was your prediction from part (b) correct? What is the ratio of this volume to the original volume?

35. **GEOGRAPHY** The Torrid Zone on Earth is the area between the Tropic of Cancer and the Tropic of Capricorn, as shown. The distance between these two tropics is about 3250 miles. You can think of this distance as the height of a cylindrical belt around Earth at the equator, as shown.
   a. Estimate the surface area of the Torrid Zone and the surface area of Earth. (Earth’s radius is about 3963 miles at the equator.)
   b. A meteorite is equally likely to hit anywhere on Earth. Estimate the probability that a meteorite will land in the Torrid Zone.
36. **Reasoning** List the following three solids in order of (a) surface area, and (b) volume, from least to greatest.

<table>
<thead>
<tr>
<th>Solid I</th>
<th>Solid II</th>
<th>Solid III</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1" alt="Solid I" /></td>
<td><img src="image2" alt="Solid II" /></td>
<td><img src="image3" alt="Solid III" /></td>
</tr>
</tbody>
</table>

37. **Rotation** A circle with diameter 18 inches is rotated about its diameter. Find the surface area and the volume of the solid formed.

38. **Technology** A cylinder with height $2x$ is inscribed in a sphere with radius 8 meters. The center of the sphere is the midpoint of the altitude that joins the centers of the bases of the cylinder.
   a. Show that the volume $V$ of the cylinder is $2\pi x(64 - x^2)$.
   b. Use a graphing calculator to graph $V = 2\pi x(64 - x^2)$ for values of $x$ between 0 and 8. Find the value of $x$ that gives the maximum value of $V$.
   c. Use the value for $x$ from part (b) to find the maximum volume of the cylinder.

39. **Challenge** A sphere with radius 2 centimeters is inscribed in a right cone with height 6 centimeters. Find the surface area and the volume of the cone.

---

### Mixed Review

In Exercises 40 and 41, the polygons are similar. Find the ratio (red to blue) of their areas. Find the unknown area. Round your answer to two decimal places. *(p. 737)*

40. Area of $\triangle ABC = 42 \text{ ft}^2$
   Area of $\triangle DEF = ?$

   ![Triangle ABC](image4)

41. Area of $PQRS = 195 \text{ cm}^2$
   Area of $JKLM = ?$

   ![Rectangle PQRS](image5)

Find the probability that a randomly chosen point in the figure lies in the shaded region. *(p. 771)*

42. ![Shaded Region](image6)

43. ![Shaded Region](image7)

44. A cone is inscribed in a right cylinder with volume 330 cubic units. Find the volume of the cone. *(pp. 819, 829)*

---

Extra Practice for Lesson 12.6, p. 919  
Online Quiz at classzone.com
12.7 Investigate Similar Solids

**MATERIALS** • paper • pencil

**QUESTION** How are the surface areas and volumes of similar solids related?

**EXPLORE** Compare the surface areas and volumes of similar solids

The solids shown below are similar.

![Solids](image)

**STEP 1** Make a table Copy and complete the table below.

<table>
<thead>
<tr>
<th>Pair</th>
<th>Scale factor of Solid A to Solid B</th>
<th>Surface area of Solid A, $S_A$</th>
<th>Surface area of Solid B, $S_B$</th>
<th>$\frac{S_A}{S_B}$</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pair 1</td>
<td>$\frac{1}{2}$</td>
<td>?</td>
<td>?</td>
<td>?</td>
</tr>
<tr>
<td>Pair 2</td>
<td>?</td>
<td>?</td>
<td>$63\pi$</td>
<td>?</td>
</tr>
<tr>
<td>Pair 3</td>
<td>?</td>
<td>?</td>
<td>?</td>
<td>$\frac{9}{1}$</td>
</tr>
</tbody>
</table>

**STEP 2** Insert columns Insert columns for $V_A$, $V_B$, and $\frac{V_A}{V_B}$. Use the dimensions of the solids to find $V_A$, the volume of Solid A, and $V_B$, the volume of Solid B. Then find the ratio of these volumes.

**STEP 3** Compare ratios Compare the ratios $\frac{S_A}{S_B}$ and $\frac{V_A}{V_B}$ to the scale factor.

**DRAW CONCLUSIONS** Use your observations to complete these exercises

1. Make a conjecture about how the surface areas and volumes of similar solids are related to the scale factor.

2. Use your conjecture to write a ratio of surface areas and volumes if the dimensions of two similar rectangular prisms are $l$, $w$, $h$, and $kl$, $kw$, $kh$. 

---

**ACTIVITY** Investigating Geometry

---

**ACTIVITY** Investigating Geometry

---
12.7 Explore Similar Solids

**Before**
You used properties of similar polygons.

**Now**
You will use properties of similar solids.

**Why**
So you can determine a ratio of volumes, as in Ex. 26.

---

**Key Vocabulary**

- **similar solids**
  
  Two solids of the same type with equal ratios of corresponding linear measures, such as heights or radii, are called **similar solids**. The common ratio is called the **scale factor** of one solid to the other solid. Any two cubes are similar, as well as any two spheres.

---

Two solids of the same type with equal ratios of corresponding linear measures, such as heights or radii, are called **similar solids**. The common ratio is called the **scale factor** of one solid to the other solid. Any two cubes are similar, as well as any two spheres.

---

The green cylinders shown above are not similar. Their heights are equal, so they have a 1:1 ratio. The radii are different, however, so there is no common ratio.

---

**Example 1** Identify similar solids

Tell whether the given right rectangular prism is similar to the right rectangular prism shown at the right.

**a.**

\[
\begin{array}{c}
\text{Similar cylinders} \\
\text{Nonsimilar cylinders}
\end{array}
\]

**Solution**

\[
\begin{array}{c}
\text{a. Lengths } \frac{4}{8} = \frac{1}{2} \\
\text{Widths } \frac{2}{4} = \frac{1}{2} \\
\text{Heights } \frac{2}{2} = \frac{1}{1}
\end{array}
\]

- The prisms are not similar because the ratios of corresponding linear measures are not all equal.

**b.**

\[
\begin{array}{c}
\text{Lengths } \frac{6}{4} = \frac{3}{2} \\
\text{Widths } \frac{3}{2} \\
\text{Heights } \frac{2}{3}
\end{array}
\]

- The prisms are similar because the ratios of corresponding linear measures are all equal. The scale factor is 2:3.

---

**COMPARE RATIOS**
To compare the ratios of corresponding side lengths, write the ratios as fractions in simplest form.
Chapter 12 Surface Area and Volume of Solids

EXAMPLE 2 Use the scale factor of similar solids

PACKAGING The cans shown are similar with a scale factor of 87:100. Find the surface area and volume of the larger can.

Solution

Use Theorem 12.13 to write and solve two proportions.

$\frac{\text{Surface area of I}}{\text{Surface area of II}} = \frac{a^2}{b^2}$

$\frac{51.84}{87^2} = \frac{a^2}{b^2}$

$\frac{51.84}{100^2} = \frac{a^2}{b^2}$

$\text{Surface area of II} = \frac{51.84}{100^2}$

$\text{Surface area of II} = 68.49$

$\text{Volume of I} = \frac{a^3}{b^3}$

$\frac{28.27}{87^3} = \frac{a^3}{b^3}$

$\frac{28.27}{100^3} = \frac{a^3}{b^3}$

$\text{Volume of II} = \frac{28.27}{100^3}$

$\text{Volume of II} = 42.93$

The surface area of the larger can is about 68.49 square inches, and the volume of the larger can is about 42.93 cubic inches.
**EXAMPLE 3**  Find the scale factor

The pyramids are similar. Pyramid P has a volume of 1000 cubic inches and Pyramid Q has a volume of 216 cubic inches. Find the scale factor of Pyramid P to Pyramid Q.

**Solution**

Use Theorem 12.13 to find the ratio of the two volumes.

\[
\frac{a^3}{b^3} = \frac{1000}{216}
\]

Write ratio of volumes.

\[
\frac{a}{b} = \frac{10}{6}
\]

Find cube roots.

\[
\frac{a}{b} = \frac{5}{3}
\]

Simplify.

\[\text{The scale factor of Pyramid P to Pyramid Q is } 5:3.\]

**EXAMPLE 4**  Compare similar solids

**CONSUMER ECONOMICS**  A store sells balls of yarn in two different sizes. The diameter of the larger ball is twice the diameter of the smaller ball. If the balls of yarn cost $7.50 and $1.50, respectively, which ball of yarn is the better buy?

**Solution**

**STEP 1**  Compute the ratio of volumes using the diameters.

\[
\frac{\text{Volume of large ball}}{\text{Volume of small ball}} = \frac{2^3}{1^3} = \frac{8}{1}, \text{or } 8:1
\]

**STEP 2**  Find the ratio of costs.

\[
\frac{\text{Price of large ball}}{\text{Volume of small ball}} = \frac{7.50}{1.50} = \frac{5}{1}, \text{or } 5:1
\]

**STEP 3**  Compare the ratios in Steps 1 and 2.

If the ratios were the same, neither ball would be a better buy. Comparing the smaller ball to the larger one, the price increase is less than the volume increase. So, you get more yarn for your dollar if you buy the larger ball of yarn.

\[\text{The larger ball of yarn is the better buy.}\]

**GUIDED PRACTICE**  for Examples 2, 3, and 4

3. Cube C has a surface area of 54 square units and Cube D has a surface area of 150 square units. Find the scale factor of C to D. Find the edge length of C, and use the scale factor to find the volume of D.

4. **WHAT IF?**  In Example 4, calculate a new price for the larger ball of yarn so that neither ball would be a better buy than the other.
1. **VOCABULARY** What does it mean for two solids to be similar?

2. **★ WRITING** How are the volumes of similar solids related?

**IDENTIFYING SIMILAR SOLIDS** Tell whether the pair of right solids is similar. *Explain* your reasoning.

3. \( \text{I: 7 in.} \quad \text{II: 4 in.} \)

4. \( \text{I: 11 ft} \quad \text{II: 14.8 ft} \)

5. \( \text{I: 4.5 m} \quad \text{II: 6 m} \)

6. \( \text{I: 18 cm} \quad \text{II: 27 cm} \)

7. **★ MULTIPLE CHOICE** Which set of dimensions corresponds to a triangular prism that is similar to the prism shown?
   - A 2 feet by 1 foot by 5 feet
   - B 4 feet by 2 feet by 8 feet
   - C 9 feet by 6 feet by 20 feet
   - D 15 feet by 10 feet by 25 feet

**USING SCALE FACTOR** Solid A (shown) is similar to Solid B (not shown) with the given scale factor of A to B. Find the surface area and volume of Solid B.

8. Scale factor of 1 : 2

9. Scale factor of 3 : 1

10. Scale factor of 5 : 2

11. **ERROR ANALYSIS** The scale factor of two similar solids is 1 : 4. The volume of the smaller Solid A is \(500\pi\). Describe and correct the error in writing an equation to find the volume of the larger Solid B.
EXAMPLE 3 on p. 849 for Exs. 12–18

**FINDING SCALE FACTOR** In Exercises 12–15, Solid I is similar to Solid II. Find the scale factor of Solid I to Solid II.

<table>
<thead>
<tr>
<th>Exercise</th>
<th>Solid I</th>
<th>Solid II</th>
<th>Scale Factor</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.</td>

16. **MULTIPLE CHOICE** The volumes of two similar cones are $8\pi$ and $27\pi$. What is the ratio of the lateral areas of the cones?

- A \( \frac{8}{27} \)
- B \( \frac{1}{3} \)
- C \( \frac{4}{9} \)
- D \( \frac{2}{3} \)

17. **FINDING A RATIO** Two spheres have volumes $2\pi$ cubic feet and $16\pi$ cubic feet. What is the ratio of the surface area of the smaller sphere to the surface area of the larger sphere?

18. **FINDING SURFACE AREA** Two cylinders have a scale factor of 2 : 3. The smaller cylinder has a surface area of $78\pi$ square meters. Find the surface area of the larger cylinder.

**COMPOSITE SOLIDS** In Exercises 19–22, Solid I is similar to Solid II. Find the surface area and volume of Solid II.

<table>
<thead>
<tr>

</tbody>
</table>

23. **ALGEBRA** Two similar cylinders have surface areas of $54\pi$ square feet and $384\pi$ square feet. The height of each cylinder is equal to its diameter. Find the radius and height of both cylinders.
24. **CHALLENGE** A plane parallel to the base of a cone divides the cone into two pieces with the dimensions shown. Find each ratio described.
   a. The area of the top shaded circle to the area of the bottom shaded circle
   b. The slant height of the top part of the cone to the slant height of the whole cone
   c. The lateral area of the top part of the cone to the lateral area of the whole cone
   d. The volume of the top part of the cone to the volume of the whole cone
   e. The volume of the top part of the cone to the volume of the bottom part

25. **COFFEE MUGS** The heights of two similar coffee mugs are 3.5 inches and 4 inches. The larger mug holds 12 fluid ounces. What is the capacity of the smaller mug?

26. **ARCHITECTURE** You have a pair of binoculars that is similar in shape to the structure on page 847. Your binoculars are 6 inches high, and the height of the structure is 45 feet. Find the ratio of the volume of your binoculars to the volume of the structure.

27. **PARTY PLANNING** Two similar punch bowls have a scale factor of 3:4. The amount of lemonade to be added is proportional to the volume. How much lemonade does the smaller bowl require if the larger bowl requires 64 fluid ounces?

28. **OPEN-ENDED MATH** Using the scale factor 2:5, sketch a pair of solids in the correct proportions. Label the dimensions of the solids.

29. **MULTI-STEP PROBLEM** Two oranges are both spheres with diameters 3.2 inches and 4 inches. The skin on both oranges has an average thickness of $\frac{1}{8}$ inch.
   a. Find the volume of each unpeeled orange.
   b. **Compare** the ratio of the diameters to the ratio of the volumes.
   c. Find the diameter of each orange after being peeled.
   d. **Compare** the ratio of surface areas of the peeled oranges to the ratio of the volumes of the peeled oranges.

---

**EXAMPLE 4** on p. 849 for Exs. 25–27

**STANDARDIZED TEST PRACTICE**

**WORKED-OUT SOLUTIONS** on p. WS1

**MULTIPLE REPRESENTATIONS**
30. **ALGEBRA** Use the two similar cones shown.
   a. What is the scale factor of Cone I to Cone II? What should the ratio of the volume of Cone I to the volume of Cone II be?
   b. Write an expression for the volume of each solid.
   c. Write and simplify an expression for the ratio of the volume of Cone I to the volume of Cone II. Does your answer agree with your answer to part (a)? *Explain.*

31. **★ EXTENDED RESPONSE** The scale factor of the model car at the right to the actual car is 1 : 18.
   a. The model has length 8 inches. What is the length of the actual car?
   b. Each tire of the model has a surface area of 12.1 square inches. What is the surface area of each tire of the actual car?
   c. The actual car’s engine has volume 8748 cubic inches. Find the volume of the model car’s engine.

32. **USING VOLUMES** Two similar cylinders have volumes $16\pi$ and $432\pi$. The larger cylinder has lateral area $72\pi$. Find the lateral area of the smaller cylinder.

33. **★ SHORT RESPONSE** A snow figure is made using three balls of snow with diameters 25 centimeters, 35 centimeters, and 45 centimeters. The smallest weighs about 1.2 kilograms. Find the total weight of the snow used to make the snow figure. *Explain* your reasoning.

34. **MULTIPLE REPRESENTATIONS** A gas is enclosed in a cubical container with side length $s$ in centimeters. Its temperature remains constant while the side length varies. By the *Ideal Gas Law*, the pressure $P$ in atmospheres (atm) of the gas varies inversely with its volume.
   a. **Writing an Equation** Write an equation relating $P$ and $s$. You will need to introduce a constant of variation $k$.
   b. **Making a Table** Copy and complete the table below for various side lengths. Express the pressure $P$ in terms of the constant $k$.

<table>
<thead>
<tr>
<th>Side length $s$ (cm)</th>
<th>1</th>
<th>2</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>$P$ (atm)</td>
<td>?</td>
<td>$8k$</td>
<td>$k$</td>
</tr>
</tbody>
</table>

   c. **Drawing a Graph** For this particular gas, $k = 1$. Use your table to sketch a graph of $P$ versus $s$. Place $P$ on the vertical axis and $s$ on the horizontal axis. Does the graph show a linear relationship? *Explain.*

35. **CHALLENGE** A plane parallel to the base of a pyramid separates the pyramid into two pieces with equal volumes. The height of the pyramid is 12 feet. Find the height of the top piece.
Determine whether the triangles are similar. If they are, write a similarity statement. (p. 381)

36. \(\triangle ABC\) and \(\triangle DEF\)

37. \(\triangle WXY\) and \(\triangle UVZ\)

38. \(\triangle QRS\) and \(\triangle TPR\)

The sum of the measures of the interior angles of a convex polygon is given. Classify the polygon by the number of sides. (p. 507)

39. 900°
40. 180°
41. 540°
42. 1080°

Write a standard equation of the circle with the given center and radius. (p. 699)

43. Center (2, 5), radius 4
44. Center (−3, 2), radius 6

Sketch the described solid and find its surface area. Round your answer to two decimal places, if necessary. (p. 803)

45. Right rectangular prism with length 8 feet, width 6 feet, and height 3 feet
46. Right regular pentagonal prism with all edges measuring 12 millimeters
47. Right cylinder with radius 4 inches and height 4 inches
48. Right cylinder with diameter 9 centimeters and height 7 centimeters

**Mixed Review**

**Quiz for Lessons 12.6–12.7**

Find the surface area and volume of the sphere. Round your answers to two decimal places. (p. 838)

1. \(r = 7\) cm
2. \(r = 11.5\) m
3. \(r = 21.4\) ft

Solid A (shown) is similar to Solid B (not shown) with the given scale factor of A to B. Find the surface area \(S\) and volume \(V\) of Solid B. (p. 847)

4. Scale factor of 1 : 3
5. Scale factor of 2 : 3
6. Scale factor of 5 : 4

4. \(S = 114\) in.\(^2\)
   \(V = 72\) in.\(^3\)

5. \(S = 170\pi\) m\(^2\)
   \(V = 300\pi\) m\(^3\)

6. \(S = 383\pi\) cm\(^2\)
   \(V = 440\) cm\(^3\)

7. Two similar cones have volumes \(729\pi\) cubic feet and \(343\pi\) cubic feet. What is the scale factor of the larger cone to the smaller cone? (p. 847)
**MIXED REVIEW of Problem Solving**

**Lessons 12.4–12.7**

1. **MULTI-STEP PROBLEM** You have a container in the shape of a right rectangular prism with inside dimensions of length 24 inches, width 16 inches, and height 20 inches.
   
   a. Find the volume of the inside of the container.
   
   b. You are going to fill the container with boxes of cookies that are congruent right rectangular prisms. Each box has length 8 inches, width 2 inches, and height 3 inches. Find the volume of one box of cookies.
   
   c. How many boxes of cookies will fit inside the cardboard container?

2. **SHORT RESPONSE** You have a cup in the shape of a cylinder with inside dimensions of diameter 2.5 inches and height 7 inches.
   
   a. Find the volume of the inside of the cup.
   
   b. You have an 18 ounce bottle of orange juice that you want to pour into the cup. Will all of the juice fit? Explain your reasoning. (1 in.³ = 0.554 fluid ounces)

3. **EXTENDED RESPONSE** You have a funnel with the dimensions shown.

   ![Funnel Diagram]

   a. Find the approximate volume of the funnel.
   
   b. You are going to use the funnel to put oil in a car. Oil flows out of the funnel at a rate of 45 milliliters per second. How long will it take to empty the funnel when it is full of oil? (1 mL = 1 cm³)
   
   c. How long would it take to empty a funnel with radius 10 cm and height 6 cm?
   
   d. *Explain* why you can claim that the time calculated in part (c) is greater than the time calculated in part (b) without doing any calculations.

4. **EXTENDED RESPONSE** An official men's basketball has circumference 29.5 inches. An official women's basketball has circumference 28.5 inches.
   
   a. Find the surface area and volume of the men's basketball.
   
   b. Find the surface area and volume of the women's basketball using the formulas for surface area and volume of a sphere.
   
   c. Use your answers in part (a) and the Similar Solids Theorem to find the surface area and volume of the women's basketball. Do your results match your answers in part (b)?

5. **GRIDDED ANSWER** To accurately measure the radius of a spherical rock, you place the rock into a cylindrical glass containing water. When you do so, the water level rises $\frac{9}{64}$ inch. The radius of the glass is 2 inches. What is the radius of the rock?

6. **SHORT RESPONSE** Sketch a rectangular prism and label its dimensions. Change the dimensions of the prism so that its surface area increases and its volume decreases.

7. **SHORT RESPONSE** A hemisphere and a right cone have the same radius and the height of the cone is equal to the radius. *Compare* the volumes of the solids.

8. **SHORT RESPONSE** *Explain* why the height of a right cone is always less than its slant height. Include a diagram in your answer.
**Big Idea 1**

Exploring Solids and Their Properties

Euler’s Theorem is useful when finding the number of faces, edges, or vertices on a polyhedron, especially when one of those quantities is difficult to count by hand.

For example, suppose you want to find the number of edges on a regular icosahedron, which has 20 faces. You count 12 vertices on the solid. To calculate the number of edges, use Euler’s Theorem:

\[ F + V = E + 2 \]

Write Euler’s Theorem.

\[ 20 + 12 = E + 2 \]

Substitute known values.

\[ 30 = E \]

Solve for \( E \).

**Big Idea 2**

Solving Problems Using Surface Area and Volume

<table>
<thead>
<tr>
<th>Figure</th>
<th>Surface Area</th>
<th>Volume</th>
</tr>
</thead>
<tbody>
<tr>
<td>Right prism</td>
<td>( S = 2B + Ph )</td>
<td>( V = Bh )</td>

<tr>
<td>Right cylinder</td>
<td>( S = 2B + Ch )</td>
<td>( V = Bh )</td>
</tr>
<tr>
<td>Regular pyramid</td>
<td>( S = B + \frac{1}{2}Pl )</td>
<td>( V = \frac{1}{3}Bh )</td>
</tr>
<tr>
<td>Right cone</td>
<td>( S = B + \frac{1}{2}Cl )</td>
<td>( V = \frac{1}{3}Bh )</td>
</tr>
<tr>
<td>Sphere</td>
<td>( S = 4\pi r^2 )</td>
<td>( V = \frac{4}{3}\pi r^3 )</td>
</tr>
</tbody>
</table>

The volume formulas for prisms, cylinders, pyramids, and cones can be used for oblique solids.

While many of the above formulas can be written in terms of more detailed variables, it is more important to remember the more general formulas for a greater understanding of why they are true.

**Big Idea 3**

Connecting Similarity to Solids

The similarity concepts learned in Chapter 6 can be extended to 3-dimensional figures as well.

Suppose you have a right cylindrical can whose surface area and volume are known. You are then given a new can whose linear dimensions are \( k \) times the dimensions of the original can. If the surface area of the original can is \( S \) and the volume of the original can is \( V \), then the surface area and volume of the new can can be expressed as \( k^2S \) and \( k^3V \), respectively.
12 CHAPTER REVIEW

REVIEW KEY VOCABULARY

For a list of postulates and theorems, see pp. 926–931.

- polyhedron, p. 794
- face, edge, vertex, base

VOCABULARY EXERCISES

1. Copy and complete: A ? is the set of all points in space equidistant from a given point.

2. WRITING Sketch a right rectangular prism and an oblique rectangular prism. Compare the prisms.

EXPERIENCE EXAMPLES AND EXERCISES

Use the review examples and exercises below to check your understanding of the concepts you have learned in each lesson of Chapter 12.

12.1 Explore Solids pp. 794–801

EXAMPLE

A polyhedron has 16 vertices and 24 edges. How many faces does the polyhedron have?

\[ F + V = E + 2 \]
\[ F + 16 = 24 + 2 \]
\[ F = 10 \]

The polyhedron has 10 faces.

EXERCISES

Use Euler’s Theorem to find the value of \( n \).

3. Faces: 20
   Vertices: \( n \)
   Edges: 30

4. Faces: \( n \)
   Vertices: 6
   Edges: 12

5. Faces: 14
   Vertices: 24
   Edges: \( n \)
**12.2 Surface Area of Prisms and Cylinders**

**Example**

Find the surface area of the right cylinder.

\[ S = 2\pi r^2 + 2\pi rh \]

- Write formula.
- Substitute for \( r \) and \( h \).
- Simplify.
- Use a calculator.

\[ S = 2\pi (16)^2 + 2\pi (16)(25) \]

\[ = 1312\pi \]

\[ \approx 4121.77 \]

The surface area of the cylinder is about 4121.77 square inches.

**Exercises**

Find the surface area of the right prism or right cylinder. Round your answer to two decimal places, if necessary.

6. [Diagram]

7. [Diagram]

8. [Diagram]

9. A cylinder has a surface area of \( 44\pi \) square meters and a radius of 2 meters. Find the height of the cylinder.

**12.3 Surface Area of Pyramids and Cones**

**Example**

Find the lateral area of the right cone.

\[ \text{Lateral area} = \pi rl \]

- Write formula.
- Substitute for \( r \) and \( l \).
- Simplify.
- Use a calculator.

\[ \text{Lateral area} = \pi (6)(16) \]

\[ = 96\pi \]

\[ \approx 301.59 \]

The lateral area of the cone is about 301.59 square centimeters.

**Exercises**

10. Find the surface area of a right square pyramid with base edge length 2 feet and height 5 feet.

11. The surface area of a cone with height 15 centimeters is \( 500\pi \) square centimeters. Find the radius of the base of the cone. Round your answer to two decimal places.

12. Find the surface area of a right octagonal pyramid with height 2.5 yards, and its base has apothem length 1.5 yards.
**12.4 Volume of Prisms and Cylinders**  
pp. 819–825

**Example**

Find the volume of the right triangular prism.

The area of the base is $B = \frac{1}{2}(6)(8) = 24$ square inches. Use $h = 5$ to find the volume.

\[
V = Bh \quad \text{Write formula.}
\]
\[
= 24(5) \quad \text{Substitute for } B \text{ and } h.
\]
\[
= 120 \quad \text{Simplify.}
\]

The volume of the prism is 120 cubic inches.

**Exercises**

Find the volume of the right prism or oblique cylinder. Round your answer to two decimal places.

13.  
14.  
15.  

**12.5 Volume of Pyramids and Cones**  
pp. 829–836

**Example**

Find the volume of the right cone.

The area of the base is $B = \pi r^2 = \pi (11)^2 \approx 380.13$ cm$^2$. Use $h = 20$ to find the volume.

\[
V = \frac{1}{3}Bh \quad \text{Write formula.}
\]
\[
\approx \frac{1}{3}(380.13)(20) \quad \text{Substitute for } B \text{ and } h.
\]
\[
\approx 2534.20 \quad \text{Simplify.}
\]

The volume of the cone is about 2534.20 cubic centimeters.

**Exercises**

16. A cone with diameter 16 centimeters has height 15 centimeters. Find the volume of the cone. Round your answer to two decimal places.

17. The volume of a pyramid is 60 cubic inches and the height is 15 inches. Find the area of the base.
12.6 Surface Area and Volume of Spheres

**Example**

Find the surface area of the sphere.

\[ S = 4\pi r^2 \]

Write formula.

\[ = 4\pi (7)^2 \]

Substitute 7 for \( r \).

\[ = 196\pi \]

Simplify.

The surface area of the sphere is \( 196\pi \), or about 615.75 square meters.

**Exercises**

18. **Astronomy** The shape of Pluto can be approximated as a sphere of diameter 2390 kilometers. Find the surface area and volume of Pluto. Round your answer to two decimal places.

19. A solid is composed of a cube with side length 6 meters and a hemisphere with diameter 6 meters. Find the volume of the solid. Round your answer to two decimal places.

12.7 Explore Similar Solids

**Example**

The cones are similar with a scale factor of 1:2. Find the surface area and volume of Cone II given that the surface area of Cone I is 384 \( \pi \) square inches and the volume of Cone I is 768 \( \pi \) cubic inches.

Use Theorem 12.13 to write and solve two proportions.

\[
\begin{align*}
\text{Surface area of I} &= \frac{a^2}{b^2} \\
\text{Volume of I} &= \frac{a^3}{b^3} \\
384\pi &= \frac{1^2}{2^2} \\
768\pi &= \frac{1^3}{2^3} \\
\text{Surface area of II} &= 1536\pi \text{ in.}^2 \\
\text{Volume of II} &= 6144\pi \text{ in.}^3
\end{align*}
\]

The surface area of Cone II is 1536\( \pi \), or about 4825.48 square inches, and the volume of Cone II is 6144\( \pi \), or about 19,301.93 cubic inches.

**Exercises**

20. Scale factor of 1:4

\[
\begin{align*}
S &= 62 \text{ cm}^2 \\
V &= 30 \text{ cm}^3
\end{align*}
\]

21. Scale factor of 1:3

\[
\begin{align*}
S &= 112\pi \text{ m}^2 \\
V &= 160\pi \text{ m}^3
\end{align*}
\]

22. Scale factor of 2:5

\[
\begin{align*}
S &= 144\pi \text{ yd}^2 \\
V &= 288\pi \text{ yd}^3
\end{align*}
\]
1. Find the number of faces, vertices, and edges of the polyhedron. Check your answer using Euler’s Theorem.

2. Find the surface area of the solid. The prisms, pyramids, cylinders, and cones are right. Round your answer to two decimal places, if necessary.

3. Find the volume of the right prism or right cylinder. Round your answer to two decimal places, if necessary.

4. In Exercises 13–15, solve for \( x \).

5. 16. **MARBLES** The diameter of the marble shown is 35 millimeters. Find the surface area and volume of the marble.

6. 17. **PACKAGING** Two similar cylindrical cans have a scale factor of 2:3. The smaller can has surface area \( 308\pi \) square inches and volume \( 735\pi \) cubic inches. Find the surface area and volume of the larger can.
One cubic foot of concrete weighs about 150 pounds. What is the approximate weight of the cylindrical section of concrete pipe shown?

- **A** 145 lb
- **B** 686 lb
- **C** 2738 lb
- **D** 5653 lb

**Problem 1**

**Plan**

**INTERPRET THE DIAGRAM** The pipe is a cylinder with length 36 inches and diameter 48 inches. The hollow center is also a cylinder with length 36 inches and diameter 45 inches. Find the volume of concrete used (in cubic feet). Then multiply by 150 pounds per cubic foot to find the weight of the concrete.

**Solution**

**STEP 1**

Find the volume of a cylinder with diameter 48 inches and height 36 inches.

\[ V = \pi r^2 h = \pi (24^2)(36) \approx 65,144 \text{ in.}^3 \]

Find the volume of a cylinder with diameter 45 inches and height 36 inches.

\[ V = \pi r^2 h = \pi (22.5^2)(36) \approx 57,256 \text{ in.}^3 \]

To find the volume of concrete used in the pipe, subtract the smaller volume from the larger volume.

Volume of concrete used in pipe \(\approx 65,144 - 57,256 = 7889 \text{ in.}^3\)

Use unit analysis to convert 7889 cubic inches to cubic feet. There are 12 inches in 1 foot, so there are \(12^3 = 1728\) cubic inches in 1 cubic foot.

\[ \frac{7889 \text{ in.}^3}{1728 \text{ in.}^3} \approx 4.57 \text{ ft}^3 \]

To find the weight of the pipe, multiply the volume of the concrete used in the pipe by the weight of one cubic foot of concrete.

Weight of pipe \(\approx 4.57 \text{ ft}^3 \cdot \frac{150 \text{ lb}}{1 \text{ ft}^3} = 685.5 \text{ lb}\)

The weight of the pipe is about 686 pounds.

The correct answer is **B**. **A** **B** **C** **D**
What is the ratio of the surface area of Cone I to the surface area of Cone II?

A 1:2  B 1:4  C 3:5  D 3:8

Plan

**INTERPRET THE DIAGRAM**  The diagram shows that the cones have the same radius, but different slant heights. Find and compare the surface areas.

**Solution**

Use the formula for the surface area of a cone.

Surface area of Cone I = \( \pi r^2 + \pi rl = \pi(3^2) + \pi(3)(6) = 9\pi + 18\pi = 27\pi \)

Surface area of Cone II = \( \pi r^2 + \pi rl = \pi(3^2) + \pi(3)(12) = 9\pi + 36\pi = 45\pi \)

Write a ratio.

\[
\frac{\text{Surface area of Cone I}}{\text{Surface area of Cone II}} = \frac{27\pi}{45\pi} = \frac{3}{5}, \text{ or } 3:5
\]

The correct answer is C. A B C D

**PRACTICE**

1. The amount a cannister can hold is proportional to its volume. The large cylindrical cannister in the table holds 2 kilograms of flour. About how many kilograms does the similar small cannister hold?

   A 0.5 kg  B 1 kg  C 1.3 kg  D 1.6 kg

2. The solid shown is made of a rectangular prism and a square pyramid. The height of the pyramid is one third the height of the prism. What is the volume of the solid?

   A \( 457 \frac{1}{3} \text{ ft}^3 \)  B \( 6402 \frac{2}{3} \text{ ft}^3 \)  C \( 6860 \text{ ft}^3 \)  D \( 10,976 \text{ ft}^3 \)
MULTIPLE CHOICE

In Exercises 1 and 2, use the diagram, which shows a bin for storing wood.

1. The bin is a prism. What is the shape of the base of the prism?
   A Triangle    B Rectangle    C Square    D Trapezoid

2. What is the surface area of the bin?
   A 3060 in.²    B 6480 in.²    C 6960 in.²    D 8760 in.²

3. In the paperweight shown, a sphere with diameter 5 centimeters is embedded in a glass cube. What percent of the volume of the paperweight is taken up by the sphere?
   A About 30%    B About 40%    C About 50%    D About 60%

4. What is the volume of the solid formed when rectangle \(JKLM\) is rotated 360° about \(KL\)?
   A \(\pi\)    B \(3\pi\)    C \(6\pi\)    D \(9\pi\)

5. The skylight shown is made of four glass panes that are congruent isosceles triangles. One square foot of the glass used in the skylight weighs 3.25 pounds. What is the approximate total weight of the glass used in the four panes?
   A 10 lb    B 15 lb    C 29 lb    D 41 lb

6. The volume of the right cone shown below is \(16\pi\) cubic centimeters. What is the surface area of the cone?
   A \(12\pi\) cm²    B \(18\pi\) cm²    C \(36\pi\) cm²    D \(72\pi\) cm²

7. The shaded surface of the skateboard ramp shown is divided into a flat rectangular portion and a curved portion. The curved portion is one fourth of a cylinder with radius \(r\) feet and height \(h\) feet. Which equation can be used to find the area of the top surface of the ramp?
   A \(2\pi rh + 2\pi r^2\)    B \(2\pi rh + 2\pi r h\)    C \(2\pi rh + \frac{1}{4}\pi r^2\)    D \(2\pi rh + \frac{1}{2}\pi r h\)
8. The scale factor of two similar triangular prisms is 3:5. The volume of the larger prism is 175 cubic inches. What is the volume (in cubic inches) of the smaller prism?

9. Two identical octagonal pyramids are joined together at their bases. The resulting polyhedron has 16 congruent triangular faces and 10 vertices. How many edges does it have?

10. The surface area of Sphere A is 27 square meters. The surface area of Sphere B is 48 square meters. What is the ratio of the diameter of Sphere A to the diameter of Sphere B, expressed as a decimal?

11. The volume of a square pyramid is 54 cubic meters. The height of the pyramid is 2 times the length of a side of its base. What is the height (in meters) of the pyramid?

12. Two cake layers are right cylinders, as shown. The top and sides of each layer will be frosted, including the portion of the top of the larger layer that is under the smaller layer. One can of frosting covers 100 square inches. How many cans do you need to frost the cake?

13. The height of Cylinder B is twice the height of Cylinder A. The diameter of Cylinder B is half the diameter of Cylinder A. Let \( r \) be the radius and let \( h \) be the height of Cylinder A. Write expressions for the radius and height of Cylinder B. Which cylinder has a greater volume? Explain.

14. A cylindrical oil tank for home use has the dimensions shown.
   
   - Find the volume of the tank to the nearest tenth of a cubic foot.
   - Use the fact that 1 cubic foot = 7.48 gallons to find how many gallons of oil are needed to fill the tank.
   - A homeowner uses about 1000 gallons of oil in a year. Assuming the tank is empty each time it was filled, how many times does the tank need to be filled during the year?

15. A manufacturer is deciding whether to package a product in a container shaped like a prism or one shaped like a cylinder. The manufacturer wants to use the least amount of material possible. The prism is 4 inches tall and has a square base with side length 3 inches. The height of the cylinder is 5 inches, and its radius is 1.6 inches.
   
   - Find the surface area and volume of each container. If necessary, round to the nearest tenth.
   - For each container, find the ratio of the volume to the surface area. Explain why the manufacturer should compare the ratios before making a decision.
Find the value of $x$ that makes $m \parallel n$. (p. 161)

1. 

2. 

3. 

Find the value of the variable. (p. 397)

4. 

5. 

6. 

Explain how you know that the quadrilateral is a parallelogram. (p. 522)

7. 

8. 

9. 

Find the value of the variable. (pp. 651, 672, 690)

10. 

11. 

12. 

Find the area of the shaded region. (p. 755)

13. 

14. 

15. 

Find the surface area and volume of the right solid. Round your answer to two decimal places. (pp. 803, 810, 819, 829)

16. 

17. 

18.
19. **PHYSICS** Find the coordinates of point $P$ that will allow the triangular plate of uniform thickness to be balanced on a point. (p. 319)

20. **SYMMETRY** Copy the figure on the right. Determine whether the figure has line symmetry and whether it has rotational symmetry. Identify all lines of symmetry and angles of rotation that map the figure onto itself. (p. 619)

21. **TWO-WAY RADIOS** You and your friend want to test a pair of two-way radios. The radios are expected to transmit voices up to 6 miles. Your location is identified by the point $(-2, 4)$ on a coordinate plane where units are measured in miles. (p. 699)

   a. Write an inequality that represents the area expected to be covered by the radios.

   b. Determine whether your friend should be able to hear your voice when your friend is located at $(2, 0)$, $(3, 9)$, $(-6, -1)$, $(-6, 8)$, and $(-7, 5)$. Explain your reasoning.

22. **COVERED BRIDGE** A covered bridge has a roof with the dimensions shown. The top ridge of the roof is parallel to the base of the roof. The hidden back and left sides are the same as the front and right sides. Find the total area of the roof. (pp. 720, 730)

23. **CANDLES** The candle shown has diameter 2 inches and height 5.5 inches. (pp. 803, 819)

   a. Find the surface area and volume of the candle. Round your answer to two decimal places.

   b. The candle has a burning time of about 30 hours. Find the approximate volume of the candle after it has burned for 18 hours.

24. **GEOGRAPHY** The diameter of Earth is about 7920 miles. If approximately 70 percent of Earth’s surface is covered by water, how many square miles of water are on Earth’s surface? Round your answer to two decimal places. (p. 838)

Skills Review Handbook

Operations with Rational Numbers

**Example**  
Add or subtract:  

a. Write the fractions with the same denominator, then add.  
\[
\frac{3}{4} + \frac{5}{8} = -\frac{6}{8} + \frac{5}{8} = -\frac{1}{8}
\]

b. To subtract a rational number, add its opposite.  
8.5 − (−1.4) = 8.5 + 1.4 = 9.9  
*The opposite of −1.4 is 1.4, because (−1.4) + (1.4) = 0.*

The product or quotient of two numbers with the *same* sign is *positive*.  
The product or quotient of two numbers with *different* signs is *negative*.

**Example**  
Multiply:  

a. 4(5)  
\[4(5) = 20\]

b. (−4)(−5)  
\[(-4)(-5) = 20\]

c. 4(−5)  
\[4(-5) = -20\]

**Example**  
Divide \(\frac{1}{4} \div \frac{2}{5}\).  
To divide by a fraction, multiply by its reciprocal.  
\[\frac{1}{4} \div \frac{2}{5} = \frac{1}{4} \times \frac{5}{2} = \frac{5}{8}\]  
The reciprocal of \(\frac{2}{5}\) is \(\frac{5}{2}\), because \(\frac{2}{5} \times \frac{5}{2} = 1\).

**Practice**  
Add, subtract, multiply, or divide.  

1. 4 − (−7)  
2. −13 + 28  
3. −5 · 3  
4. 32 ÷ (−8)  
5. (−2)(−3)(−4)  
6. −8.1 + 4.5  
7. (−2.7) ÷ (−9)  
8. 0.85 − 0.9  
9. 12.1 + (−0.5)  
10. (−2.6) · (−8.1)  
11. −1.5 − 3.4  
12. −3.6 ÷ 1.5  
13. −3.1 · 4.2  
14. 0.48 ÷ 4  
15. −5.4 + (−3.8)  
16. 0.6 − 1.8  
17. \(\frac{5}{6} - \frac{1}{4}\)  
18. \(\frac{3}{4} \cdot \frac{7}{12}\)  
19. \(\frac{4}{7} ÷ \frac{2}{3}\)  
20. \(\frac{11}{12} + \frac{7}{9}\)  
21. \(\frac{2}{3} + (−\frac{1}{4})\)  
22. \(\frac{5}{12} ÷ \frac{3}{8}\)  
23. \(\frac{7}{9} − (−\frac{1}{6})\)  
24. \(\frac{5}{8} + \frac{2}{11}\)
Simplifying and Evaluating Expressions

To evaluate expressions involving more than one operation, mathematicians have agreed on the following set of rules, called the order of operations.

1. Evaluate expressions inside grouping symbols.
2. Evaluate powers.
3. Multiply and divide from left to right.
4. Add and subtract from left to right.

**Example**

Simplify: a. \(10 + (1 - 5)^2 \div (-8)\)  
b. \(3|9 + 2| - 2 \cdot 6\)

\[
\begin{align*}
a. & \quad 10 + (1 - 5)^2 \div (-8) \\
& \quad = 10 + (-4)^2 \div (-8) \\
& \quad = 10 + 16 \div (-8) \\
& \quad = 10 + (-2) \\
& \quad = 8 \\
b. & \quad 3|9 + 2| - 2 \cdot 6 \\
& \quad = 3(-7) - 2 \cdot 6 \\
& \quad = 21 - 12 \\
& \quad = 9
\end{align*}
\]

To evaluate an algebraic expression, substitute values for the variables. Evaluate the resulting numerical expression using the order of operations.

**Example**

Evaluate the expression when \(x = 4\) and \(y = 9\).

\[
\begin{align*}
a. & \quad \frac{x^2 - 1}{x + 2} - \frac{4^2 - 1}{4 + 2} \\
& \quad = \frac{16 - 1}{6} - \frac{15}{2} \\
& \quad = 2 \frac{1}{2} \\
b. & \quad [(2x + y) - 3x] \div 2 = (-x + y) \div 2 = (-4 + 9) \div 2 = 5 \div 2 = 2.5 \\
c. & \quad 2|x - 3y| = 2|4 - 3(9)| = 2|4 - 27| = 2|-23| = 223 = 46
\end{align*}
\]

**Practice**

Simplify the expression.

1. \(5^2 - (-2)^3\)  
2. \(-8 \cdot 3 - 12 \div 2\)  
3. \(21 \cdot (-7 + 4) - 4^3\)  
4. \(24 \div (8 - |5 - 1|)\)
5. \(4(2 - 5)^2\)  
6. \(4 + 21 \div 7 - 6^2\)  
7. \(19.6 \div (2.8 \div 0.4)\)  
8. \(20 - 4[2 + (10 - 3^2)]\)
9. \(\frac{6 + 3 \cdot 4}{2^2 - 7}\)  
10. \(\frac{18 + |2|}{(4 - 6)^2}\)  
11. \(3(6x) + 7x\)  
12. \(3|5y + 4y|\)

Evaluate the expression when \(x = -3\) and \(y = 5\).

13. \(-4x^2\)  
14. \((-4x)^2\)  
15. \(x(x + 8)\)  
16. \((11 - x) \div 2\)
17. \(3 \cdot |x - 2|\)  
18. \(7x^2 - 2y\)  
19. \(5 - |3x + y|\)  
20. \(4x^3 + 3y\)
21. \(\frac{y^2 - 1}{5 - y^2}\)  
22. \(|6y| - |x|\)  
23. \(\frac{-6(2x + y)}{5 - x}\)  
24. \(\frac{x - 7}{x + 7} + 1\)
Properties of Exponents

An exponent tells you how many times to multiply a base. The expression $4^5$ is called a power with base 4 and exponent 5.

$4^5 = 4 \times 4 \times 4 \times 4 \times 4 = 1024$

<td>$\frac{a^m}{a^n} = a^{m - n}, a \neq 0$</td>
<td>$\left(\frac{a}{b}\right)^m = \frac{a^m}{b^m}, b \neq 0$</td>
<td>$a^{-n} = \frac{1}{a^n}, a \neq 0$</td>
<td>$a^0 = 1, a \neq 0$</td>
</tr>
<tr>
<td>Subtract exponents.</td>
<td>Find the power of the numerator and the power of the denominator.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Example**

Simplify the expression. Use positive exponents.

a. $x^2 \cdot x^5 = x^{2+5} = x^7$

b. $(2xy)^3 = 2^3 \cdot x^3 \cdot y^3 = 8x^3y^3$

c. $(y^4)^5 = y^{4 \cdot 5} = y^{20}$

d. $(-35)^0 = 1$

e. $\frac{m^9}{m^6} = m^{9-6} = m^3$

f. $\left(\frac{z}{4}\right)^3 = \frac{z^3}{4^3} = \frac{z^3}{64}$

g. $12^{-4} = \frac{1}{12^4} = \frac{1}{20,736}$

h. $\frac{20x^2y^{-4}z^5}{4x^4yz^3} = \frac{20}{4} \cdot x^{(2-4)} \cdot y^{(-4-1)} \cdot z^{(5-3)} = 5x^{-2}y^{-5}z^2 = \frac{5z^2}{x^2y^5}$

**Practice**

Evaluate the power.

1. $5^2$

2. $\left(-\frac{1}{2}\right)^3$

3. $4^{-2}$

4. $13^0$

5. $5^3 \cdot 5^4$

6. $\left(\frac{3}{5}\right)^{-2}$

7. $(7^4)^4$

8. $\frac{4^6}{4^4}$

Simplify the expression. Write your answer using only positive exponents.

9. $a^5 \cdot a \cdot a^{-2}$

10. $3x^3 \cdot (2x)^3$

11. $5a^2 \cdot b^{-4}$

12. $(m^{-2})^{-3}$

13. $\left(\frac{3}{n}\right)^4$

14. $\left(\frac{x^{5/3}}{x^2}\right)$

15. $\frac{1}{m^2}$

16. $\left(\frac{a^3}{3b}\right)^{-2}$

17. $(4 \cdot x^3 \cdot y)^2$

18. $(2n)^4 \cdot (3n)^2$

19. $(5a^3b^{-2}c)^{-1}$

20. $(r^2st)^0$

21. $\frac{16x^2y}{2xy}$

22. $\frac{(3r^{-3}s^2)^2}{10s}$

23. $\frac{3a^2b^0c}{21a^{-3}b^2c^2}$

24. $\frac{6kn}{9k^2}$

25. $6x^2 \cdot 5xy$

26. $2(r^{-4}s^2t)^{-3}$

27. $(5a^{-3}bc^4)^{-2} \cdot 15a^8$

28. $(3x^2y)^2 \cdot (-4xy^3)$
Using the Distributive Property

You can use the **Distributive Property** to simplify some expressions. Here are four forms of the Distributive Property.

\[ a(b + c) = ab + ac \quad \text{and} \quad (b + c)a = ba + ca \quad \text{Addition} \]
\[ a(b - c) = ab - ac \quad \text{and} \quad (b - c)a = ba - ca \quad \text{Subtraction} \]

**Example**

Write the expression without parentheses.

\begin{align*}
\text{a.} \quad x(x - 7) &= x(x) - x(7) \\
&= x^2 - 7x \\
\text{b.} \quad (n + 5)(-3) &= n(-3) + (5)(-3) \\
&= -3n - 15
\end{align*}

Like terms are terms of an expression that have identical variable parts. You can use the Distributive Property to combine like terms and to simplify expressions that include adding, subtracting, factoring, and dividing polynomials.

**Example**

Simplify the expression.

\begin{align*}
\text{a.} \quad -2x^2 + 6x^2 &= (-2 + 6)x^2 = 4x^2 \\
\text{b.} \quad 9y - 4y + 8y &= (9 - 4 + 8)y = 13y \\
\text{c.} \quad 5(x^2 - 3x) + (x + 2) &= 5x^2 - 15x + x + 2 = 5x^2 - 15 + 1)x + 2 = 5x^2 - 14x + 2 \\
\text{d.} \quad (3x^2 - 4x + 1) - (2x^2 - x - 7) &= (3 - 2)x^2 + (-4 + 1)x + (1 + 7) = x^2 - 3x + 8 \\
\text{e.} \quad \frac{2x^2 - 4x}{2x} &= \frac{2x(x - 2)}{2x} = x - 2
\end{align*}

**Practice**

Use the Distributive Property to write an equivalent expression.

1. \(3(x + 7)\) \hspace{1cm} 2. \(-2(9a - 5)\) \hspace{1cm} 3. \((5n - 2)8\) \hspace{1cm} 4. \(x(3x - 4)\)

5. \(- (x + 6)\) \hspace{1cm} 6. \((5b + c)(2a)\) \hspace{1cm} 7. \(4(3x^2 - 2x + 4)\) \hspace{1cm} 8. \(-5a(-a + 3b - 1)\)

Simplify the expression.

9. \(3x^2 - 9x^2 + x^2\) \hspace{1cm} 10. \(4x - 7x + 12x\) \hspace{1cm} 11. \(3n + 5 - n\) \hspace{1cm} 12. \(-6r + 3s - 5r + 8\)

13. \(12h^2 + 5h^3 - 7h^2\) \hspace{1cm} 14. \(6.5a + 2.4 - 5a\) \hspace{1cm} 15. \((x + 8) - (x - 2)\) \hspace{1cm} 16. \(4.5(2r - 6) - 3r\)

17. \(\frac{1}{2}a + \frac{2}{5}a\) \hspace{1cm} 18. \(\frac{1}{4}(x^2 - 4) + x\) \hspace{1cm} 19. \(\frac{15n + 20}{5}\) \hspace{1cm} 20. \(\frac{16r - 12r^2}{2r}\)

21. \((a^2 - 81) + (a^2 + 6a + 5)\) \hspace{1cm} 22. \((5a^2 + 3a - 2) - (2a^2 - a + 6)\)

23. \(2x + 3x(x - 4) + 5\) \hspace{1cm} 24. \(3r(5r + 2) - 4(2r^2 - r + 3)\)

25. \(\frac{8a^3b + 4ab^2}{2ab} - 2ab\) \hspace{1cm} 26. \(7h^2 + 14h - 35 + 21h\)
Binomial Products

To multiply two binomials, you can use the Distributive Property systematically. Multiply the first terms, the outer terms, the inner terms, and the last terms of the binomials. This method is called FOIL for the words First, Outer, Inner, and Last.

For certain binomial products, you can also use a special product pattern.

\[(a + b)^2 = a^2 + 2ab + b^2 \quad (a - b)^2 = a^2 - 2ab + b^2 \quad (a - b)(a + b) = a^2 - b^2\]

**Example**

Find the product.

\[(x + 2)(3x - 4) = x(3x) + x(-4) + 2(3x) + 2(-4)\]

<table>
<thead>
<tr>
<th>First</th>
<th>Outer</th>
<th>Inner</th>
<th>Last</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

\[= 3x^2 - 4x + 6x - 8\]

\[= 3x^2 + 2x - 8\]

a. \((x + 5)^2\)

\[= x^2 + 2(x)(5) + 5^2\]

\[= x^2 + 10x + 25\]

b. \((y - 3)^2\)

\[= y^2 - 2(y)(3) + 3^2\]

\[= y^2 - 6y + 9\]

c. \((z + 4)(z - 4)\)

\[= z^2 - 4^2\]

\[= z^2 - 16\]

To simplify some expressions, multiply binomials first.

**Example**

Simplify the expression.

\[2(x + 1)(x + 6) - 4(x^2 - 5x + 4) = 2(x^2 + 7x + 6) - 4(x^2 - 5x + 4)\]

Multiply binomials.

\[= 2x^2 + 14x + 12 - 4x^2 + 20x - 16\]

Distributive Property

\[= -2x^2 + 34x - 4\]

Combine like terms.

**Practice**

Find the product.

1. \((a - 2)(a - 9)\)

2. \((y - 4)^2\)

3. \((t - 5)(t + 8)\)

4. \((5n + 1)(n - 4)\)

5. \((5a + 2)^2\)

6. \((x - 10)(x + 10)\)

7. \((c + 4)(4c - 3)\)

8. \((n + 7)^2\)

9. \((8 - z)^2\)

10. \((a + 1)(a - 1)\)

11. \((2x + 1)(x + 1)\)

12. \((-7z + 6)(3z - 4)\)

13. \((2x - 3)(2x + 3)\)

14. \((5 + n)^2\)

15. \((2d - 1)(3d + 2)\)

16. \((a + 3)(a + 3)\)

17. \((k - 1.2)^2\)

18. \((6x - 5)(2x - 3)\)

19. \((6 - z)(6 + z)\)

20. \((4 - 5g)(3g + 2)\)

Simplify the expression.

21. \(3(y - 4)(y + 2) + (2y - 1)(y + 8)\)

22. \(4(t^2 + 3t - 4) + 2(t - 1)(t + 5)\)

23. \(2(x + 2)(x - 2) + (x - 3)(x + 3)\)

24. \(2(2c^2 + 3c - 1) + 7(c + 2)^2\)
Radical Expressions

A square root of a number \( n \) is a number \( m \) such that \( m^2 = n \). For example, \( 9^2 = 81 \) and \( (-9)^2 = 81 \), so the square roots of 81 are 9 and \(-9\).

Every positive number has two square roots, one positive and one negative. Negative numbers have no real square roots. The square root of zero is zero.

The radical symbol, \( \sqrt{\ } \), represents a nonnegative square root: \( \sqrt{81} = 9 \). The opposite of a square root is negative: \( -\sqrt{81} = -9 \).

A perfect square is a number that is the square of an integer. So, 81 is a perfect square. A radicand is a number or expression inside a radical symbol.

<table>
<thead>
<tr>
<th>Properties of Radicals</th>
<th>Simplest Form of a Radical Expression</th>
</tr>
</thead>
<tbody>
<tr>
<td>For ( a \geq 0 ) and ( b \geq 0 ):</td>
<td>• No perfect square factors other than 1 in the radicand</td>
</tr>
<tr>
<td>( \sqrt{ab} = \sqrt{a} \cdot \sqrt{b} )</td>
<td>• No fractions in the radicand</td>
</tr>
<tr>
<td>( \sqrt{\frac{a}{b}} = \frac{\sqrt{a}}{\sqrt{b}} )</td>
<td>• No radical signs in the denominator of a fraction</td>
</tr>
</tbody>
</table>

**Example**

Simplify the expression.

a. \( \sqrt{9 + 36} = \sqrt{45} = \sqrt{9} \cdot 5 = 3 \sqrt{5} \)

b. \( \sqrt{50} - \sqrt{32} = \sqrt{25 \cdot 2} - \sqrt{16 \cdot 2} = 5 \sqrt{2} - 4 \sqrt{2} = 1 \sqrt{2} = \sqrt{2} \)

c. \( \sqrt{18} \cdot \sqrt{72} = \sqrt{18 \cdot 72} = \sqrt{1296} = 36 \)

d. \( (8 \sqrt{3})^2 = 8^2 \cdot (\sqrt{3})^2 = 64 \cdot 3 = 192 \)

e. \( \frac{6}{\sqrt{2}} = \frac{6 \sqrt{2}}{2} = 3 \sqrt{2} \)

**Practice**

Find all square roots of the number or write no square roots.

1. 100  
2. 64  
3. \( \frac{1}{4} \)  
4. \( \frac{9}{25} \)

5. \(-16\)  
6. 0  
7. 0.81  
8. 0.0016

Simplify the expression.

9. \( \sqrt{121} \)  
10. \( -\sqrt{169} \)  
11. \( -\sqrt{99} \)  
12. \( \sqrt{48} \)

13. \( \sqrt{16 + 4} \)  
14. \( \sqrt{(-4)^2 + 6^2} \)  
15. \( \sqrt{175} - \sqrt{28} \)  
16. \( \sqrt{32} + \sqrt{162} \)

17. \( \sqrt{8} \cdot \sqrt{10} \)  
18. \( 4\sqrt{6} \cdot 2\sqrt{15} \)  
19. \( \sqrt{210} \cdot 420 \)  
20. \( (9\sqrt{3})^2 \)

21. \( \sqrt{137} \cdot \sqrt{137} \)  
22. \( \sqrt{12} \cdot \sqrt{48} \)  
23. \( 5\sqrt{18} \cdot \sqrt{2} \)  
24. \( 3\sqrt{7} \cdot 5\sqrt{11} \)

25. \( \frac{\sqrt{192}}{\sqrt{3}} \)  
26. \( \frac{2}{\sqrt{49}} \)  
27. \( \frac{12}{\sqrt{6}} \)  
28. \( \frac{2}{\sqrt{5}} \)
### Solving Linear Equations

To solve a linear equation, you isolate the variable.

**Add** the same number to each side of the equation.

**Subtract** the same number from each side of the equation.

**Multiply** each side of the equation by the same nonzero number.

**Divide** each side of the equation by the same nonzero number.

#### Example

Solve the equation:  

a. \(3x - 5 = 13\)  
  
\[
3x - 5 + 5 = 13 + 5 \\
3x = 18 \\
\frac{3x}{3} = \frac{18}{3} \\
x = 6
\]

b. \(2(y - 3) = y + 4\)  
  
\[
2y - 6 = y + 4 \\
2y - y - 6 + 4 = y + 4 - y - 4 \\
y = 10
\]

**CHECK**  
\[
3x - 5 = 13 \\
3(6) - 5 = 13 \\
13 = 13 \checkmark
\]

\[
2(y - 3) = y + 4 \\
2(10 - 3) = 10 + 4 \\
14 = 14 \checkmark
\]

#### Practice

Solve the equation.

1. \(x - 8 = 23\)
2. \(n + 12 = 0\)
3. \(-18 = 3y\)
4. \(\frac{a}{6} = 7\)
5. \(\frac{2}{3}r = 26\)
6. \(-\frac{4}{5}t = -8\)
7. \(-4.8 = 1.5z\)
8. \(0 = -3x + 12\)
9. \(72 = 90 - x\)
10. \(7(y - 2) = 21\)
11. \(5 = 4k + 2 - k\)
12. \(4n + 1 = -2n + 8\)
13. \(2c + 3 = 4(c - 1)\)
14. \(9 - (3r - 1) = 12\)
15. \(12m + 3(2m + 6) = 0\)
16. \(\frac{6}{5}y - 2 = 10\)
17. \(\frac{w - 8}{3} = 4\)
18. \(-\frac{1}{4}(12 + h) = 7\)
19. \(2c - 8 = 24\)
20. \(2.8(5 - t) = 7\)
21. \(2 - c = -3(2c + 1)\)
22. \(-4k + 8 = 12 - 5k\)
23. \(3(z - 2) + 8 = 23\)
24. \(12 = 5(-3r + 2) - (r - 1)\)
25. \(12(z + 12) = 15^2\)
26. \(2 \cdot 3.14 \cdot r = 94.2\)
27. \(3.1(2f + 1.2) = 0.2(f - 6)\)
28. \(5(3r - 2) = -3(7 - t)\)
29. \(20a - 12(a - 3) = 4\)
30. \(5.5(h - 5.5) = 18.18\)
31. \(\frac{1}{2} \cdot b \cdot 8 = 10\)
32. \(\frac{4x + 12}{2} = 3x - 5\)
33. \(\frac{10 + 7y}{4} = \frac{5 - y}{3}\)
34. \(\frac{9 - 2x}{7} = x\)
35. \(\frac{23 - 11c}{7} = 5c\)
36. \(\frac{4n - 28}{3} = 2n\)
Solving and Graphing Linear Inequalities

You can graph solutions to equations and inequalities on a number line.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Meaning</th>
<th>Equation or Inequality</th>
<th>Graph</th>
</tr>
</thead>
<tbody>
<tr>
<td>=</td>
<td>equals</td>
<td>( x = 3 )</td>
<td></td>
</tr>
<tr>
<td>&lt;</td>
<td>is less than</td>
<td>( x &lt; 3 )</td>
<td></td>
</tr>
<tr>
<td>≤</td>
<td>is less than or equal to</td>
<td>( x ≤ 3 )</td>
<td></td>
</tr>
<tr>
<td>&gt;</td>
<td>is greater than</td>
<td>( x &gt; 3 )</td>
<td></td>
</tr>
<tr>
<td>≥</td>
<td>is greater than or equal to</td>
<td>( x ≥ 3 )</td>
<td></td>
</tr>
</tbody>
</table>

You can use properties of inequalities to solve linear inequalities.

Add the same number to each side of the inequality.

Subtract the same number from each side of the inequality.

Multiply each side of the inequality by the same positive number. If you multiply by a negative number, reverse the direction of the inequality symbol.

Divide each side of the inequality by the same positive number. If you divide by a negative number, reverse the direction of the inequality symbol.

**Example**

Solve the inequality. Graph the solution.

\[ 2x + 1 \leq 5 \]

Subtract 1 from each side.

\[ 2x \leq 4 \]

Divide each side by 2.

\[ x \leq 2 \]

**Practice**

Solve the inequality. Graph the solution.

1. \( x - 2 < 5 \)
2. \( 16 < x + 5 \)
3. \( 10 - n \geq 6 \)
4. \( 2z \geq -9 \)
5. \( 8c + 24 < 0 \)
6. \( 6 \geq -3a \)
7. \( 5a - 3 \geq -8 \)
8. \( 2n + 7 < 17 \)
9. \( 5 > 0.5y + 3 \)
10. \( 5 - 3x \leq x + 13 \)
11. \( 5r + 2r \leq 6r - 1 \)
12. \( y - 3 \leq 2y + 5 \)
13. \( -2.4m \geq 3.6m - 12 \)
14. \( -2(t - 6) > 7t - 6 \)
15. \( 4(8 - z) + 2 > 3z - 8 \)
16. \( -\frac{3}{4}n > 3 \)
17. \( \frac{c}{5} - 8 \leq -6 \)
18. \( \frac{n - 5}{2} \geq \frac{2n - 6}{3} \)
Solving Formulas

A formula is an equation that relates two or more real-world quantities. You can rewrite a formula so that any one of the variables is a function of the other variable(s). In each case you isolate a variable on one side of the equation.

**Example**

Solve the formula for the indicated variable.

a. Solve $C = 2\pi r$ for $r$.

\[
\frac{C}{2\pi} = r
\]

b. Solve $P = a + b + c$ for $a$.

\[
P - b - c = a + b - b + c - c
\]

Subtract.

\[
P - b - c = a
\]

Simplify.

\[
a = P - b - c
\]

Rewrite.

**Example**

Rewrite the equation so that $y$ is a function of $x$.

a. $2x + y = 3$

\[
2x - 2x + y = 3 - 2x
\]

Subtract 2x.

\[
y = 3 - 2x
\]

Simplify.

b. $\frac{1}{4}y = x$

\[
4 \cdot \frac{1}{4}y = 4 \cdot x
\]

Multiply by 4.

\[
y = 4x
\]

Simplify.

**Practice**

Solve the formula for the indicated variable.

1. Solve $P = 4s$ for $s$.
2. Solve $d = rt$ for $r$.
3. Solve $V = \ell wh$ for $\ell$.
4. Solve $V = \pi r^2 h$ for $h$.
5. Solve $A = \frac{1}{2}bh$ for $b$.
6. Solve $d = \frac{m}{v}$ for $v$.
7. Solve $P = 2(l + w)$ for $w$.
8. Solve $I = prt$ for $r$.
9. Solve $F = \frac{9}{5}C + 32$ for $C$.
10. Solve $A = \frac{1}{2}h(b_1 + b_2)$ for $h$.
11. Solve $S = 2\pi r^2 + 2\pi rh$ for $h$.
12. Solve $A = P(1 + r)^t$ for $P$.

Rewrite the equation so that $y$ is a function of $x$.

13. $2x + y = 7$
14. $5x + 3y = 0$
15. $3x - y = -2$
16. $y + 1 = -2(x - 2)$
17. $\frac{4}{5}y = x$
18. $\frac{1}{4}x + 2y = 5$
19. $1.8x - 0.3y = 4.5$
20. $y - 4 = \frac{1}{3}(x + 6)$
Graphing Points and Lines

A coordinate plane is formed by the intersection of a horizontal number line called the x-axis and a vertical number line called the y-axis. The axes meet at a point called the origin and divide the coordinate plane into four quadrants, labeled I, II, III, and IV.

Each point in a coordinate plane is represented by an ordered pair. The first number is the x-coordinate, and the second number is the y-coordinate.

**Example**

Give the coordinates of points A and B in the graph above.

Start at the origin. Count 4 units left and 2 units up. Point A is at (−4, 2).

Start at the origin. Count 1 unit right and 3 units down. Point B is at (1, −3).

A solution of an equation in x and y is an ordered pair (x, y) that makes the equation true. The graph of such an equation is the set of points in a coordinate plane that represent all the solutions. A linear equation has a line as its graph.

**Example**

Graph the equation $y = 2x − 3$.

Make a table of values, graph each point, and draw the line.

<table>
<thead>
<tr>
<th>x</th>
<th>$y = 2x − 3$</th>
<th>(x, y)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>$y = 2(0) − 3 = −3$</td>
<td>(0, −3)</td>
</tr>
<tr>
<td>1</td>
<td>$y = 2(1) − 3 = −1$</td>
<td>(1, −1)</td>
</tr>
<tr>
<td>2</td>
<td>$y = 2(2) − 3 = 1$</td>
<td>(2, 1)</td>
</tr>
</tbody>
</table>

0 units right or left, 3 units down
1 unit right, 1 unit down
2 units right, 1 unit up

**Practice**

Use the graph shown. Give the coordinates of the point.

1. C
2. D
3. E
4. F
5. G
6. H

Plot the point in a coordinate plane.

7. J(−3, 1)
8. K(2, −2)
9. L(0, −1)
10. $M\left(\frac{3}{2}, 3\right)$
11. $N\left(\frac{5}{2}, \frac{1}{2}\right)$
12. P(4.5, 0)

Use a table of values to graph the equation.

13. $y = 3x − 2$
14. $y = −2x + 1$
15. $y = \frac{2}{3}x − 3$
16. $y = \frac{1}{2}x$
17. $y = 1.5x − 2.5$
18. $y = 4 − 3x$
19. $4x + 2y = 0$
20. $2x − y = 3$
Slope and Intercepts of a Line

The slope of a nonvertical line is the ratio of the vertical change, called the rise, to the horizontal change, called the run. The table below shows some types of lines and slopes.

<table>
<thead>
<tr>
<th>Rising Line</th>
<th>Falling Line</th>
<th>Horizontal Line</th>
<th>Vertical Line</th>
</tr>
</thead>
<tbody>
<tr>
<td>Positive Slope</td>
<td>Negative Slope</td>
<td>Zero Slope</td>
<td>Undefined Slope</td>
</tr>
</tbody>
</table>

**Example**
Find the slope of the line.

Use the graph of the line.

\[
\text{Slope} = \frac{\text{rise}}{\text{run}} = \frac{2 \text{ units up}}{5 \text{ units right}} = \frac{2}{5}
\]

An \(x\)-intercept is the \(x\)-coordinate of a point where a graph crosses the \(x\)-axis. A \(y\)-intercept is the \(y\)-coordinate of a point where a graph crosses the \(y\)-axis. The line graphed at the right has \(x\)-intercept 2 and \(y\)-intercept 3.

**Example**
Find the \(x\)-intercept and the \(y\)-intercept of the graph of \(x - 4y = 8\).

To find the \(x\)-intercept, let \(y = 0\).

\[
x - 4(0) = 8
\]

\[
x = 8
\]

The \(x\)-intercept is 8.

To find the \(y\)-intercept, let \(x = 0\).

\[
0 - 4y = 8
\]

\[
y = -2
\]

The \(y\)-intercept is \(-2\).

**Practice**
Find the slope and intercept(s) of the line graphed.

1. \[
\begin{align*}
\text{Slope} &= \frac{1}{1} = 1 \\
\text{Intercepts} &= (0, -1), (1, 0)
\end{align*}
\]

2. \[
\begin{align*}
\text{Slope} &= \frac{-1}{1} = -1 \\
\text{Intercepts} &= (0, 1), (1, 0)
\end{align*}
\]

3. \[
\begin{align*}
\text{Slope} &= \frac{1}{1} = 1 \\
\text{Intercepts} &= (0, 0)
\end{align*}
\]

4. \[
\begin{align*}
\text{Slope} &= \frac{-1}{1} = -1 \\
\text{Intercepts} &= (0, 1), (1, 0)
\end{align*}
\]

Find the intercepts of the line with the given equation.

5. \(5x - y = 15\)
6. \(2x + 4y = 12\)
7. \(y = -x + 3\)
8. \(y = 3x - 2\)
9. \(-3x + y = -6\)
10. \(y = -2x - 7\)
11. \(y = 5x\)
12. \(9x - 3y = 15\)
Systems of Linear Equations

A **system of linear equations** in two variables is shown at the right. A **solution** of such a system is an ordered pair \((x, y)\) that satisfies both equations. A solution must lie on the graph of both equations.

**Example**

**Use substitution to solve the linear system above.**

Solve Equation 2 for \(x\).

\[
\begin{align*}
\text{Equation 2: } x - y &= -1 \\
\text{Revised Equation 2: } x &= y + 1
\end{align*}
\]

In Equation 1, substitute \(y + 1\) for \(x\). Solve for \(y\).

\[
\begin{align*}
\text{Equation 1: } x + 2y &= 5 \\
(y + 1) + 2y &= 5 \\
3y &= 4 \\
y &= 2
\end{align*}
\]

In Revised Equation 2, substitute 2 for \(y\).

\[
\begin{align*}
x &= y + 1 = 2 - 1 = 1
\end{align*}
\]

Because \(x = 1\) and \(y = 2\), the solution \((x, y)\) is \((1, 2)\).

The graph verifies that \((1, 2)\) is the point of intersection of the lines.

**Example**

**Use elimination to solve the linear system above.**

Multiply Equation 2 by 2, then add equations.

\[
\begin{align*}
\text{Equation 1: } x + 2y &= 5 \\
\text{Equation 2: } 2x - 2y &= -2 \\
\end{align*}
\]

\[
\begin{align*}
x + 2y &= 5 \\
2x - 2y &= -2
\end{align*}
\]

\[
\begin{align*}
3x &= 3 \\
x &= 1
\end{align*}
\]

Substitute 1 for \(x\) in Equation 2 and solve for \(y\).

\[
\begin{align*}
1 - y &= -1 \\
2 &= y
\end{align*}
\]

Because \(x = 1\) and \(y = 2\), the solution \((x, y)\) is \((1, 2)\).

Substitute 1 for \(x\) and 2 for \(y\) in each original equation to check.

**Practice**

**Use substitution to solve the linear system. Check your solution.**

1. \(3x - 5y = 1\) \(y = 2x - 3\)
2. \(7x + 4y = -13\) \(x = -6y + 9\)
3. \(-4x + 3y = -19\) \(2x + y = 7\)
4. \(x + y = -7\) \(2x - 5y = 21\)
5. \(4x + 9y = -3\) \(x + 2y = 0\)
6. \(0.5x + y = 5\) \(1.5x - 2.5y = 4\)
7. \(2x + 4y = -18\) \(3x - y = 1\)
8. \(4x + 7y = 3\) \(6x + y = 14\)

**Use elimination to solve the linear system. Check your solution.**

9. \(3x - 6y = -3\) \(12x + 6y = 48\)
10. \(12x + 20y = 56\) \(-12x - 7y = -4\)
11. \(4x - y = 1\) \(2x + 3y = -17\)
12. \(10x + 15y = 90\) \(5x - 4y = -1\)
13. \(18x + 63y = -27\) \(3x + 9y = -6\)
14. \(5x + 7y = 23\) \(20x - 30y = 5\)
15. \(8x - 5y = 14\) \(10x - 2y = 9\)
16. \(-5x + 8y = 4\) \(6x - 5y = -14\)
Linear Inequalities

A linear inequality in \( x \) and \( y \) can be written in one of the forms shown at the right. A solution of a linear inequality is an ordered pair \((x, y)\) that satisfies the inequality. A graph of a linear inequality is the graph of all the solutions.

**Example**

Graph the linear inequality \( x + y < 4 \).

Graph the corresponding equation \( x + y = 4 \). Use a dashed line to show that the points on the line are not solutions of the inequality.

Test a point on either side of the line to see if it is a solution.

<table>
<thead>
<tr>
<th>Test ((3, 2)) in ( x + y &lt; 4 ):</th>
<th>Test ((0, 0)) in ( x + y &lt; 4 ):</th>
</tr>
</thead>
<tbody>
<tr>
<td>( 3 + 2 = 4 \times )</td>
<td>( 0 + 0 = 4 \times )</td>
</tr>
<tr>
<td>So ((3, 2)) is not a solution.</td>
<td>So ((0, 0)) is a solution.</td>
</tr>
</tbody>
</table>

Shade the half-plane that includes a test point that is a solution.

Two or more linear inequalities form a system of linear inequalities. A solution of such a system is an ordered pair \((x, y)\) that satisfies all the inequalities in the system. A graph of the system shows all the solutions of the system.

**Example**

Graph the system of linear inequalities \( x \geq -2 \) and \( y \leq 3 \).

Graph the linear inequality \( x \geq -2 \). Use a solid line for the graph of \( x = 2 \) to show that the points on the line are solutions of the inequality. Shade the half-plane to the right of the line.

Graph the linear inequality \( y \leq 3 \). Use a solid line for the graph of \( y = 3 \). Shade the half-plane below the line.

The intersection of the shaded half-planes is a graph of the system.

Check solution point \((0, 0)\) in both inequalities \( x \geq -2 \) and \( y \leq 3 \).

| 0 \( \geq \) -2 | and | 0 \( \leq \) 3 |

**Practice**

Graph the linear inequality.

1. \( x + y \geq 3 \)
2. \( x - y < -2 \)
3. \( y \leq -3x \)
4. \( x - 4y > 4 \)
5. \( y > 1 \)
6. \( x \leq 2 \)
7. \( 5x - y \geq 5 \)
8. \( 2x + 5y < 10 \)

Graph the system of linear inequalities.

9. \( x > 1 \)
   \( y > -2 \)
10. \( x \leq 4 \)
    \( x \geq -2 \)
11. \( x - y \leq 1 \)
    \( x + y \leq 5 \)
12. \( y < x \)
    \( y \geq 3x \)
13. \( 2x - y \leq 1 \)
    \( 2y - y \geq -3 \)
14. \( x \geq 0 \)
    \( y \geq 0 \)
15. \( y > -4 \)
    \( y < -2 \)
16. \( 4x - y \geq -5 \)
    \( 7x + 2y \leq 10 \)
Quadratic Equations and Functions

A quadratic equation is an equation that can be written in the standard form $ax^2 + bx + c = 0$, where $a \neq 0$. A quadratic equation can have two solutions, one solution, or no real solutions. When $b = 0$, you can use square roots to solve the quadratic equation.

**Example** Solve the quadratic equation.

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a. $x^2 + 5 = 29$</td>
<td>b. $3x^2 - 4 = -4$</td>
<td>c. $-6x^2 + 3 = 21$</td>
</tr>
<tr>
<td>$x^2 = 24$</td>
<td>$3x^2 = 0$</td>
<td>$-6x^2 = 18$</td>
</tr>
<tr>
<td>$x = \pm \sqrt{24}$</td>
<td>$x^2 = 0$</td>
<td>$x^2 = -3$</td>
</tr>
<tr>
<td>$x = \pm 2\sqrt{6} = \pm 4.90$</td>
<td>$x = 0$</td>
<td>$x = 0$</td>
</tr>
</tbody>
</table>

Two solutions | One solution | No real solution

A quadratic function is a function that can be written in the standard form $y = ax^2 + bx + c$, where $a \neq 0$.

The graph of a quadratic equation is a U-shaped curve called a parabola. The vertex is the lowest point of a parabola that opens upward ($a > 0$) or the highest point of a parabola that opens downward ($a < 0$). The vertical line passing through the vertex is the axis of symmetry.

To graph a quadratic function, you can make a table of values, plot the points, and draw the parabola. The $x$-intercepts of the graph (if any) are the real solutions of the corresponding quadratic equation.

**Example** Graph the quadratic function. Label the vertex.

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>a. $y = x^2 - 4$</td>

<td>c. $y = x^2 + 1$</td>
</tr>
<tr>
<td>$x$</td>
<td>$y$</td>
<td>$x$</td>
</tr>
<tr>
<td>$-2$</td>
<td>0</td>
<td>$-2$</td>
</tr>
<tr>
<td>$-1$</td>
<td>-3</td>
<td>$-1$</td>
</tr>
<tr>
<td>0</td>
<td>-4</td>
<td>0</td>
</tr>
<tr>
<td>1</td>
<td>-3</td>
<td>1</td>
</tr>
<tr>
<td>2</td>
<td>0</td>
<td>2</td>
</tr>
</tbody>
</table>

Two $x$-intercepts | One $x$-intercept | No $x$-intercepts
You can use the **quadratic formula** to solve any quadratic equation.

The solutions of the quadratic equation $ax^2 + bx + c = 0$ are

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \text{ where } a \neq 0 \text{ and } b^2 - 4ac \geq 0.$$

**Example**

Use the quadratic formula to solve the equation $8x^2 + 6x = 1$.

Write the equation in standard form and identify $a$, $b$, and $c$.

The equation $8x^2 + 6x = 1$ is equivalent to $8x^2 + 6x - 1 = 0$. So, $a = 8$, $b = 6$, and $c = -1$.

Use the quadratic formula and simplify.

$$x = \frac{-6 \pm \sqrt{6^2 - 4(8)(-1)}}{2(8)} = \frac{-6 \pm \sqrt{36 + 32}}{16} = \frac{-6 \pm 2\sqrt{17}}{16} = -\frac{3 \pm \sqrt{17}}{8}$$

The solutions of the equation are $-\frac{3 + \sqrt{17}}{8} \approx 0.14$ and $-\frac{3 - \sqrt{17}}{8} \approx -0.89$.

Check the solutions in the original equation.

$8(0.14)^2 + 6(0.14) \pm 1 \quad 8(-0.89)^2 + 6(-0.89) \pm 1$

$0.9968 \approx 1 \checkmark \quad 0.9968 \approx 1 \checkmark$

**Practice**

Solve the quadratic equation.

1. $x^2 = 144$
2. $x^2 + 7 = -5$
3. $x^2 - (x + 1)^2 = 5$
4. $x^2 - 18 = 0$
5. $8x^2 + 3 = 3$
6. $5x^2 - 2 = -12$
7. $(2x + 3)^2 - 4 = 4x^2 - 7$
8. $3x^2 + 2 = 14$
9. $1 - 4x^2 = 13$
10. $12 - 5x^2 = 12$
11. $15 - 9x^2 = 10$
12. $(x + 2)^2 + 2 = (x - 2)^2 + 8$

Graph the quadratic function. Label the vertex.

13. $y = x^2$
14. $y = x^2 - 3$
15. $y = -x^2 + 4$
16. $y = -2x^2$
17. $y = x^2 + 2$
18. $y = -x^2 - 1$
19. $y = \frac{1}{2}x^2$
20. $y = -\frac{1}{4}x^2$
21. $y = \frac{3}{4}x^2 - 2$
22. $y = 3x^2 + 1$
23. $y = (x - 1)^2$
24. $y = -(x + 2)^2$

Use the quadratic formula to solve the quadratic equation.

25. $x^2 + 6x + 5 = 0$
26. $x^2 - 4x - 2 = 0$
27. $x^2 + 6x = -9$
28. $2x = 8x^2 - 3$
29. $x^2 + 7x + 5 = 1$
30. $x^2 + 2x + 5 = 0$
31. $2x^2 + 8x - 3 = -11$
32. $x^2 + 5x = 6$
33. $5x^2 - 6 = 2x$
34. $3x^2 + 7x - 4 = 0$
35. $2x^2 - 3x = -4$
36. $4x + 4 = 3x^2$
37. $3x^2 - x = 5$
38. $(x + 4)(x - 4) = 8$
39. $(x + 2)(x - 2) = 1$
Functions

A function can be described by a table of values, a graph, an equation, or words.

Example

Graph the exponential functions $y = 2^x$ and $y = -2^x$.

For each function, make a table of values, plot the points, and draw a curve.

<table>
<thead>
<tr>
<th>$x$</th>
<th>$y = 2^x$</th>
<th>$(x, y)$</th>
<th>$x$</th>
<th>$y = -2^x$</th>
<th>$(x, y)$</th>
</tr>
</thead>
<tbody>
<tr>
<td>−2</td>
<td>$2^{-2} = \frac{1}{4}$</td>
<td>$\left(-2, \frac{1}{4}\right)$</td>
<td>−2</td>
<td>$-2^{-2} = -\frac{1}{4}$</td>
<td>$\left(-2, -\frac{1}{4}\right)$</td>
</tr>
<tr>
<td>0</td>
<td>$2^0 = 1$</td>
<td>$(0, 1)$</td>
<td>0</td>
<td>$-2^0 = -1$</td>
<td>$(0, -1)$</td>
</tr>
<tr>
<td>1</td>
<td>$2^1 = 2$</td>
<td>$(1, 2)$</td>
<td>1</td>
<td>$-2^1 = -2$</td>
<td>$(1, -2)$</td>
</tr>
<tr>
<td>2</td>
<td>$2^2 = 4$</td>
<td>$(2, 4)$</td>
<td>2</td>
<td>$-2^2 = -4$</td>
<td>$(2, -4)$</td>
</tr>
</tbody>
</table>

Example

Use the values in the table to find Luke's hourly pay rate.

$66 \div 8 = 8.25 \quad 123.75 \div 15 = 8.25 \quad 330 \div 40 = 8.25$

Write an equation using words. Then use variables.

Earnings = Hourly pay rate $\cdot$ Hours worked

$e = 8.25h$

Let $e$ be earnings and $h$ be hours worked.

$e = 8.25(25)$ Substitute 25 for $h$.

$e = 206.25$ Multiply.

Practice

Make a table of values and graph the function.

1. $y = 3^x$
2. $y = -3^x$
3. $y = (0.5)^x$
4. $y = -(0.5)^x$
5. $y = 2x$
6. $y = 2x^2$
7. $y = 2x^3$
8. $y = |2x|$

Write an equation for the function described by the table.

9. $\begin{array}{c|c|c|c|c|}
   x & 1 & 2 & 3 & 4 \\
   y & 1 & 4 & 9 & 16
\end{array}$

10. $\begin{array}{c|c|c|c}
    x & −2 & −1 & 0 \\
    y & 2 & 1 & 0
\end{array}$

11. Write an equation using Sue's hourly pay rate of $12. How much does Sue earn in 6 hours? How many hours must Sue work to earn $420?
Problem Solving with Percents

You can use equations to solve problems with percents. Replace words with symbols as shown in the table. To estimate with percents, use compatible numbers.

<table>
<thead>
<tr>
<th>Words</th>
<th>Symbols</th>
</tr>
</thead>
<tbody>
<tr>
<td>a is p percent of b.</td>
<td>$a = p \cdot b$</td>
</tr>
</tbody>
</table>

**Example**

**Use the percent equation to answer the question.**

<table>
<thead>
<tr>
<th>a. What is 45% of 60?</th>
<th>b. What percent of 28 is 7?</th>
<th>c. 30% of what number is 12?</th>
</tr>
</thead>
<tbody>
<tr>
<td>$a = 0.45 \times 60$</td>
<td>$7 = p \times 28$</td>
<td>$12 = 0.3 \times b$</td>
</tr>
<tr>
<td>$a = 27$</td>
<td>$7 ÷ 28 = p$</td>
<td>$12 ÷ 0.3 = b$</td>
</tr>
<tr>
<td></td>
<td>$0.25 = p$</td>
<td>$40 = b$</td>
</tr>
<tr>
<td></td>
<td>$25% = p$</td>
<td></td>
</tr>
</tbody>
</table>

**Example**

**Solve the problem.**

- **a.** Estimate 77% of 80.
  
  $\text{77\% of 80} \approx 75\% \times 80$
  
  $= \frac{3}{4} \times 80 = 60$

- **b.** Find the percent of change from $25 to $36.
  
  $\text{new} - \text{old} = \frac{36 - 25}{25} = \frac{11}{25} = 0.44 = 44\%$ increase

**Practice**

1. A history test has 30 questions. How many questions must you answer correctly to earn a grade of 80%?
2. A class of 27 students has 15 girls. What percent of the class is boys?
3. Jill’s goal is to practice her clarinet daily at least 80% of the time. She practiced 25 days in October. Did Jill meet her goal in October?
4. The price of a CD player is $98. About how much will the CD player cost with a 25% discount?
5. A jacket is on sale for $48. The original price was $60. What is the percent of discount?
6. A choir had 38 singers, then 5 more joined. What is the percent of increase?
7. A newspaper conducts a survey and finds that 475 of the residents who were surveyed want a new city park. The newspaper reports that 95% of those surveyed want a new park. How many residents were surveyed?
8. Ron received a raise at work. Instead of earning $8.75 per hour, he will earn $9.25. What is the percent of increase in Ron’s hourly wage?
9. A school has 515 students. About 260 students ride the school bus. Estimate the percent of the school’s students who ride the school bus.
Converting Measurements and Rates

The Table of Measures on page 921 gives many statements of equivalent measures. For each statement, you can write two different conversion factors.

<table>
<thead>
<tr>
<th>Statement of Equivalent Measures</th>
<th>Conversion Factors</th>
</tr>
</thead>
<tbody>
<tr>
<td>100 cm = 1 m</td>
<td>100 cm 1 m = 1 and 1 m 100 cm = 1</td>
</tr>
</tbody>
</table>

To convert from one unit of measurement to another, multiply by a conversion factor. Use a conversion factor that allows you to divide out the original unit and keep the desired unit. You can also convert from one rate to another.

**Example**

Copy and complete: a. 5.4 m = ? cm  
b. 9 ft² = ? in.²

a. \(5.4 \text{ m} \times \frac{100 \text{ cm}}{1 \text{ m}} = 540 \text{ cm}\)

b. 1 ft = 12 in., so 1 ft² = 12 • 12 = 144 in.²  
   Use the conversion factor \(\frac{144 \text{ in.}^2}{1 \text{ ft}^2}\).
   \(9 \text{ ft}^2 \times \frac{144 \text{ in.}^2}{1 \text{ ft}^2} = 1296 \text{ in.}^2\)

**Example**

Copy and complete: \(425 \frac{\text{ft}}{\text{min}} = ? \frac{\text{mi}}{\text{h}}\).

Use the conversion factors \(\frac{60 \text{ min}}{1 \text{ h}}\) and \(\frac{1 \text{ mi}}{5280 \text{ ft}}\).

\(425 \frac{\text{ft}}{\text{min}} \times \frac{60 \text{ min}}{1 \text{ h}} \times \frac{1 \text{ mi}}{5280 \text{ ft}} \approx 4.8 \frac{\text{mi}}{\text{h}}\)

**Practice**

Copy and complete the statement.

1. 500 cm = ? m
2. 7 days = ? hours
3. 48 oz = ? lb
4. 14.8 kg = ? g
5. 3200 mL = ? L
6. 1200 sec = ? min
7. 10 gal = ? cups
8. 1 km = ? mm
9. 1 mi = ? in.
10. 90 ft² = ? yd²
11. 4 ft² = ? in.²
12. 12 cm² = ? mm²
13. 3 m³ = ? cm³
14. 2 yd³ = ? in.³
15. 6500 mm³ = ? cm³
16. 12 \(\frac{\text{mi}}{\text{min}}\) = ? \(\frac{\text{mi}}{\text{h}}\)
17. 17 km sec = ? \(\frac{\text{km}}{\text{min}}\)
18. 0.9 \(\frac{\text{m}}{\text{min}}\) = ? \(\frac{\text{mm}}{\text{min}}\)
19. 58 \(\frac{\text{mi}}{\text{min}}\) = ? \(\frac{\text{ft}}{\text{sec}}\)
20. 82 \(\frac{\text{cm}}{\text{min}}\) = ? \(\frac{\text{m}}{\text{h}}\)
21. 60 \(\frac{\text{mi}}{\text{h}}\) = ? \(\frac{\text{ft}}{\text{min}}\)
22. 17 \(\frac{\text{km}}{\text{h}}\) = ? \(\frac{\text{m}}{\text{sec}}\)
23. 0.09 \(\frac{\text{m}^3}{\text{min}}\) = ? \(\frac{\text{mm}^3}{\text{min}}\)
24. 0.6 \(\frac{\text{km}^2}{\text{year}}\) = ? \(\frac{\text{m}^2}{\text{month}}\)
Mean, Median, and Mode

Three measures of central tendency are mean, median, and mode. One or more of these measures may be more representative of a given set of data than the others.

| The **mean** of a data set is the sum of the values divided by the number of values. The mean is also called the **average.** | The **median** of a data set is the middle value when the values are written in numerical order. If a data set has an even number of values, the median is the mean of the two middle values. | The **mode** of a data set is the value that occurs most often. A data set can have no mode, one mode, or more than one mode. |

**Example**

The website hits for one week are listed. Which measure of central tendency best represents the data? *Explain.*

<table>
<thead>
<tr>
<th>Website Hits for One Week</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Day</strong></td>
</tr>
<tr>
<td>Monday</td>
</tr>
<tr>
<td>Tuesday</td>
</tr>
<tr>
<td>Wednesday</td>
</tr>
<tr>
<td>Thursday</td>
</tr>
<tr>
<td>Friday</td>
</tr>
<tr>
<td>Saturday</td>
</tr>
<tr>
<td>Sunday</td>
</tr>
</tbody>
</table>

**Mean**

Add the values. Then divide by the number of values.

\[
\text{Mean} = \frac{88 + 95 + 87 + 84 + 92 + 95 + 11}{7} = 88.71
\]

**Median**

Write the values in order from least to greatest. Then find the middle value(s).

\[
11, 84, 87, 88, 92, 95, 95
\]

Median = 88

**Mode**

Find the value that occurs most often.

Mode = 95

An outlier is a value that is much greater or lower than the other values in a data set. In the data set above, the outlier 11 causes the mean to be lower than the other six data values. So, the mean does not represent the data well. The mode, 95, does not represent the data well because it is the highest value. The median, 88, best represents the data because all but one value lie close to it.

**Practice**

Tell which measure of central tendency best represents the given data. *Explain.*

1. Daily high temperatures (°F) for a week: 75, 74, 74, 70, 69, 68, 67
2. Movie ticket prices: $6.75, $7.50, $7.25, $6.75, $7, $7.50, $7.25, $6.75, $7
3. Number of eggs bought: 12, 12, 12, 18, 18, 12, 6, 12, 12, 12, 24, 18
4. Number of children in a family: 0, 0, 0, 1, 1, 1, 2, 2, 2, 2, 3, 4, 4, 5
5. Ages of employees: 36, 22, 30, 27, 41, 58, 33, 27, 62, 39, 21, 24, 22
6. Shoe sizes in a shipment: 5, 5 1/2, 6, 6 1/2, 7, 7 1/2, 7 1/2, 8, 8, 8, 8 1/2, 9, 9 1/2, 10
7. Test scores: 97%, 65%, 68%, 98%, 72%, 60%, 94%, 100%, 99%
8. Favorite of 3 colors: blue, yellow, red, yellow, red, red, blue, red, red, blue
Displaying Data

There are many ways to display data. An appropriate data display can help you analyze the data. The table summarizes how data are shown in some data displays.

<table>
<thead>
<tr>
<th>Data Display</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Circle Graph</td>
<td>Shows data as parts of a whole.</td>
</tr>
<tr>
<td>Bar Graph</td>
<td>Compares data in distinct categories.</td>
</tr>
<tr>
<td>Histogram</td>
<td>Compares data in intervals.</td>
</tr>
<tr>
<td>Line Graph</td>
<td>Shows how data change over time.</td>
</tr>
<tr>
<td>Stem-and-Leaf Plot</td>
<td>Shows data in numerical order.</td>
</tr>
<tr>
<td>Box-and-Whisker Plot</td>
<td>Shows distribution of data in quartiles.</td>
</tr>
</tbody>
</table>

**Example**
The table shows bike sales at a shop. Display the data in two appropriate ways. *Describe* what each display shows about the data.

<table>
<thead>
<tr>
<th>Season</th>
<th>Winter</th>
<th>Spring</th>
<th>Summer</th>
<th>Fall</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bikes sold</td>
<td>15</td>
<td>51</td>
<td>49</td>
<td>25</td>
</tr>
</tbody>
</table>

In the bar graph, the heights of the bars can be used to compare sales for the four seasons. Bikes sales were strongest in the spring and summer. The circle graph shows the percent of annual sales for each season. Almost \( \frac{3}{4} \) of the bikes were sold in the spring and summer.

**Example**
The test scores for a class were 82, 99, 68, 76, 84, 100, 79, 92, 100, 82, 81, 60, 95, 98, 74, 95, 84, 88. Display the distribution of the scores.

Use a stem-and-leaf plot to organize the data. Identify the lower and upper extremes, the median, and the lower and upper quartiles (the medians of the lower and upper half of the ordered data set.)

<table>
<thead>
<tr>
<th>Score</th>
<th>60</th>
<th>74</th>
<th>84</th>
<th>95</th>
<th>100</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>08</td>
<td>46</td>
<td>24</td>
<td>58</td>
<td></td>
</tr>
<tr>
<td></td>
<td>12</td>
<td>25</td>
<td>58</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>00</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Key: 7 | 4 = 74

Lower and upper extremes: 60 and 100
Median: 84
Lower and upper quartiles: 79 and 95

Then make a box-and-whisker plot. Draw a number line. Below it, plot the lower extreme (60), the lower quartile (79), the median (84), the upper quartile (95), and the upper extreme (100). Draw boxes and “whiskers,” as shown.
**PRACTICE**

Name a data display that would be appropriate for the situation. (There may be more than one choice.) *Explain* your reasoning.

1. A store owner keeps track of how many cell phones are sold each week. The owner wants to see how sales change over a six-month period.

2. You measure the daily high temperature for 31 days in July. You want to see the distribution of the temperatures.

3. The ages of people in a survey are grouped into these intervals: 20–29, 30–39, 40–49, 50–59, 60–69, 70–79. You want to compare the numbers of people in the various groups.

Make a data display that can be used to answer the question. *Explain* why you chose this display. Then answer the question.

4. The table gives the number of gold medals won by U.S. athletes at five Summer Olympic games. *Question:* How has the number of medals won changed over time?

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of gold medals</td>
<td>36</td>
<td>37</td>
<td>44</td>
<td>40</td>
<td>35</td>
</tr>
</tbody>
</table>

5. Students were surveyed about the amounts they spent at a mall one Saturday. These are the amounts (in dollars): 5, 70, 10, 40, 42, 45, 50, 4, 3, 10, 12, 15, 20, 5, 30, 35, 70, 80. *Question:* If the dollar amounts are grouped into intervals such as 0–9, 10–19, and so on, in which interval do the greatest number of students fall?

Display the data in two appropriate ways. *Describe* what each display shows about the data.

6. During a game, a high school soccer team plays 2 forwards, 4 midfielders, 4 defenders, and 1 goalkeeper.

7. A high school has 131 students taking Geometry. The number of students in each class are: 18, 16, 17, 15, 16, 14, 17 and 18.

8. The table gives the number of calories in 8 different pieces of fresh fruit.

<table>
<thead>
<tr>
<th>Fruit</th>
<th>Apple</th>
<th>Banana</th>
<th>Mango</th>
<th>Orange</th>
<th>Peach</th>
<th>Pear</th>
<th>Plum</th>
<th>Tangerine</th>
</tr>
</thead>
<tbody>
<tr>
<td>Calories</td>
<td>117</td>
<td>100</td>
<td>85</td>
<td>65</td>
<td>35</td>
<td>60</td>
<td>40</td>
<td>35</td>
</tr>
</tbody>
</table>

The ages of actors in a community theater play are 18, 25, 19, 32, 26, 15, 33, 12, 36, 16, 18, 30, 25, 24, 32, 30, 13, 15, 37, 35, 72, 35. Use these data for Exercises 9–11.

9. Make a stem-and-leaf plot of the data. Identify the lower and upper extremes, the median, and the lower and upper quartiles of the data set.

10. Make a box-and-whisker plot of the data. About what percent of the actors are over 18? How does the box-and-whisker plot help you answer this question?

11. Suppose the two oldest actors drop out of the play. Draw a new box-and-whisker plot without the data values for those actors. How does the distribution of the data change? *Explain*.
Sampling and Surveys

A survey is a study of one or more characteristics of a group. A population is the group you want information about. A sample is part of the population. In a random sample, every member of a population has an equal chance of being selected for a survey. A random sample is most likely to represent the population. A sample that is not representative is a biased sample.

Using a biased sample may affect the results of a survey. In addition, survey results may be influenced by the use of biased questions. A biased question encourages a particular response.

**Example**

Read the description of the survey. Identify any biased samples or questions. Explain.

a. A movie theater owner wants to know how often local residents go to the movies each month. The owner asks every tenth ticket buyer.
   - The sample (every tenth ticket buyer) is unlikely to represent the population (local residents). It is biased because moviegoers are over-represented.

b. The mayor’s office asks a random sample of the city’s residents the following question: Do you support the necessary budget cuts proposed by the mayor?
   - The sample is random, so it is not biased. The question is biased because the word necessary suggests that people should support the budget cuts.

**Practice**

Read the description of the survey. Identify any biased samples or questions. Explain.

1. The coach of a high school soccer team wants to know whether students are more likely to come watch the team’s games on Wednesdays or Thursdays. The team’s first game is on a Friday. The coach asks all the students who come to watch which day they prefer.

2. A town’s recreation department wants to know whether to build a new skateboard park. The head of the department visits a local park and asks people at the park whether they would like to have a skateboard park built.

3. A television producer wants to know whether people in a city would like to watch a one-hour local news program or a half-hour local news program. A television advertisement is run several times during the day asking viewers to e-mail their preference.

4. The teachers at a music school want to know whether the students at the school practice regularly. Five of the ten teachers at the school ask their students the following question: How many hours do you spend practicing each day?

5. A skating rink owner wants to know the ages of people who use the rink. Over a two-week period, the owner asks every tenth person who uses the rink his or her age.

6. A cello teacher asks some of his students, “Do you practice every day?”
Counting Methods

To count the number of possibilities in a situation, you can make an organized list, draw a tree diagram, make a table, or use the counting principle.

**The Counting Principle**

If one event can occur in \( m \) ways, and for each of these ways a second event can occur in \( n \) ways, then the number of ways that the two events can occur together is \( m \times n \).

The counting principle can be extended to three or more events.

**Example** Use four different counting methods to find the number of possible salad specials.

**Salad Special $5.95**

Choose 1 salad and 1 dressing

**Salad:** Lettuce or Spinach

**Dressing:** Ranch, Blue cheese, or Italian

**Method 1 Make an Organized List**

Pair each salad with each dressing and list each possible special.

- Lettuce salad with ranch
- Lettuce salad with blue cheese
- Lettuce salad with Italian
- Spinach salad with ranch
- Spinach salad with blue cheese
- Spinach salad with Italian

Count the number of specials listed. There are 6 possible salad specials.

**Method 2 Draw a Tree Diagram**

Arrange the salads and dressings in a tree diagram.

<table>
<thead>
<tr>
<th>Salad</th>
<th>Dressing</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lettuce</td>
<td>Ranch</td>
</tr>
<tr>
<td></td>
<td>Blue cheese</td>
</tr>
<tr>
<td></td>
<td>Italian</td>
</tr>
<tr>
<td>Spinach</td>
<td>Ranch</td>
</tr>
<tr>
<td></td>
<td>Blue cheese</td>
</tr>
<tr>
<td></td>
<td>Italian</td>
</tr>
</tbody>
</table>

Count the number of branches in the tree diagram. There are 6 possible salad specials.

**Method 3 Make a Table**

List the salads in the left column. List the dressings in the top row.

<table>
<thead>
<tr>
<th>Brazilian Salad</th>
<th>Blue Cheese Salad</th>
<th>Italian Salad</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lettuce</td>
<td>Lettuce</td>
<td>Lettuce</td>
</tr>
<tr>
<td></td>
<td>Blue cheese</td>
<td>Blue cheese</td>
</tr>
<tr>
<td></td>
<td>Italian</td>
<td>Italian</td>
</tr>
<tr>
<td>Spinach</td>
<td>Spinach</td>
<td>Spinach</td>
</tr>
<tr>
<td></td>
<td>Blue cheese</td>
<td>Blue cheese</td>
</tr>
<tr>
<td></td>
<td>Italian</td>
<td>Italian</td>
</tr>
</tbody>
</table>

Count the number of cells filled. There are 6 possible salad specials.

**Method 4 Use the Counting Principle**

There are 2 choices of salad, so \( m = 2 \).

There are 3 choices of dressing, so \( n = 3 \).

By the counting principle, the number of ways that the salad and dressing choices can be combined is \( m \times n = 2 \times 3 = 6 \).

There are 6 possible salad specials.
TYLER MUST CHOOSE A 4-DIGIT PASSWORD FOR HIS BANK ACCOUNT. FIND THE NUMBER OF POSSIBLE 4-DIGIT PASSWORDS USING FOUR DIFFERENT DIGITS.

Because there are many possible passwords, use the counting principle.

For one of the digits in the password, there are 10 choices: 0, 1, 2, 3, 4, 5, 6, 7, 8, and 9. Because one of these digits will be used for the first digit, there are only 9 choices for the next, 8 for the next after that, and so on.

\[
\begin{array}{c}
\text{10 choices} \\
\times \\
\text{9 choices} \\
\times \\
\text{8 choices} \\
\times \\
\text{7 choices} \\
\text{for first digit} \\
\text{for second digit} \\
\text{for third digit} \\
\text{for fourth digit} \\
\end{array}
\]

\[10 \times 9 \times 8 \times 7 = 5040\]

\[\checkmark\] There are 5040 possible 4-digit passwords using four different digits.

PRACTICE

USE ONE OF THE METHODS DESCRIBED IN THE EXAMPLES ON PAGES 891 AND 892 TO SOLVE EACH PROBLEM. EXPLAIN YOUR REASONING.

1. Ann takes three pairs of shorts (red, blue, and green) and five T-shirts (black, white, yellow, orange, and brown) on a trip. Find the number of different shorts and T-shirt outfits Ann can wear while on the trip.

2. Art students can choose any two pieces of colored paper for a project. There are six colors available and students must choose two different colors. Find the number of different color combinations that can be chosen.

3. Steve must choose four characters for his computer password. Each character can be any letter from A through Z or any digit from 0 through 9. All letters and digits may be used more than once. Find the number of possible passwords.

4. A restaurant offers a pizza special, as shown at the right. Assuming that two different toppings are ordered, find the number of two-topping combinations that can be ordered.

5. Each of the locker combinations at a gym uses three numbers from 0 through 49. Find the number of different locker combinations that are possible.

6. A movie theater sells three sizes of popcorn and six different soft drinks. Each soft drink can be bought in one of three sizes. Find the number of different popcorn and soft drink combinations that can be ordered.

7. A class has 28 students and elects two students to be class officers. One student will be president and one will be vice president. How many different combinations of class officers are possible?

8. Some students are auditioning for parts in the play Our Town. Twenty girls try out for the parts listed at the right. In how many different ways can 5 of the 20 girls be assigned these roles?

9. Bill, Allison, James, and Caroline are friends. In how many different ways can they stand in a row for a photo?

10. A cafeteria serves 4 kinds of sandwiches: cheese, veggie, peanut butter, and bologna. Students can choose any two sandwiches for lunch. How many different sandwich combinations are possible?
Probability

The **probability** of an event is a measure of the likelihood that the event will occur. An event that cannot occur has a probability of 0, and an event that is certain to occur has a probability of 1. Other probabilities lie between 0 and 1. You can write a probability as a decimal, a fraction, or a percent.

When you consider the probability of two events occurring, the events are called **compound events**. Compound events can be dependent or independent.

### Two events are independent events if the occurrence of one event does not affect the occurrence of another.

For two independent events \( A \) and \( B \),

\[
P(A \text{ and } B) = P(A) \cdot P(B).
\]

### Two events are dependent events if the occurrence of one event does affect the occurrence of another.

For two dependent events \( A \) and \( B \),

\[
P(A \text{ and } B) = P(A) \cdot P(B \mid A),
\]

where \( P(B \mid A) \) is the probability of \( B \) given that \( A \) has occurred.

**Example**

A box holds 12 yellow marbles and 12 orange marbles. Without looking, you take a marble. Then you take another marble without replacing the first. Find the probability that both marbles are yellow.

There are 24 marbles in the box when you take the first one, and only 23 when you take the second. So, the events are dependent.

\[
P(A \text{ and } B) = P(A) \cdot P(B \mid A) = \frac{12}{24} \cdot \frac{11}{23} = \frac{11}{46} \approx 0.24, \text{ or } 24\% 
\]

**Practice**

Identify the events as independent or dependent. Then answer the question.

1. There are 20 socks in your drawer, and 12 of them are white. You grab a sock without looking. Then you grab a second sock without putting the first one back. What is the probability that both socks are white?

2. You flip a coin two times. What is the probability that you get heads each time?

3. Your math, literature, Spanish, history, and science homework assignments are organized in five folders. You randomly choose one folder, finish your assignment, and then choose a new folder. What is the probability that you do your math homework first, and then history?

4. You roll a red number cube and a blue number cube. What is the probability that you roll an even number on the red cube and a number greater than 2 on the blue cube?

5. You flip a coin three times. What is the probability that you do not get heads on any of the flips?
# Problem Solving Plan and Strategies

Here is a 4-step problem solving plan that you can use to solve problems.

| **STEP 1** | **Read and understand the problem.** | Read the problem carefully. Organize the given information and decide what you need to find. Check for unnecessary or missing information. Supply missing facts, if needed. |
| **STEP 2** | **Make a plan to solve the problem.** | Choose a problem solving strategy. Choose the correct operations to use. Decide if you will use a tool such as a calculator, graph, or spreadsheet. |
| **STEP 3** | **Carry out the plan to solve the problem.** | Use the problem solving strategy and any tools you have chosen. Estimate before you calculate, if possible. Do any calculations that are needed. Answer the question that the problem asks. |
| **STEP 4** | **Check to see if your answer is reasonable.** | Reread the problem. See if your answer agrees with the given information and with any estimate you have made. |

Here are some problem solving strategies that you can use to solve problems.

<table>
<thead>
<tr>
<th><strong>Strategy</strong></th>
<th><strong>When to use</strong></th>
<th><strong>How to use</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Guess, check, and revise</td>
<td>Guess, check, and revise when you need a place to start or you want to see how the problem works.</td>
<td>Make a reasonable guess. Check to see if your guess solves the problem. If it does not, revise your guess and check again.</td>
</tr>
<tr>
<td>Draw a diagram or a graph</td>
<td>Draw a diagram or a graph when a problem involves any relationships that you can represent visually.</td>
<td>Draw a diagram or a graph that shows given information. See what your diagram reveals that can help you solve the problem.</td>
</tr>
<tr>
<td>Make a table or an organized list</td>
<td>Make a table or list when a problem requires you to record, generate, or organize information.</td>
<td>Make a table with columns, rows, and any given information. Generate a systematic list that can help you solve the problem.</td>
</tr>
<tr>
<td>Use an equation or a formula</td>
<td>Use an equation or a formula when you know a relationship between quantities.</td>
<td>Write an equation or formula that shows the relationship between known quantities. Solve the equation to solve the problem.</td>
</tr>
<tr>
<td>Use a proportion</td>
<td>Use a proportion when you know that two ratios are equal.</td>
<td>Write a proportion using the two equal ratios. Solve the proportion to solve the problem.</td>
</tr>
<tr>
<td>Look for a pattern</td>
<td>Look for a pattern when a problem includes numbers or diagrams that you need to analyze.</td>
<td>Look for a pattern in any given information. Organize, extend, or generalize the pattern to help you solve the problem.</td>
</tr>
<tr>
<td>Break a problem into parts</td>
<td>Break a problem into parts when a problem cannot be solved in one step but can be solved in parts.</td>
<td>Break the problem into parts and solve each part. Put the answers together to help you solve the original problem.</td>
</tr>
<tr>
<td>Solve a simpler or related problem</td>
<td>Solve a simpler or related problem when a problem seems difficult and can be made easier by using simpler numbers or conditions.</td>
<td>Think of a way to make the problem easier. Solve the simpler or related problem. Use what you learned to help you solve the original problem.</td>
</tr>
<tr>
<td>Work backward</td>
<td>Work backward when a problem gives you an end result and you need to find beginning conditions.</td>
<td>Work backward from the given information until you solve the problem. Work forward through the problem to check your answer.</td>
</tr>
</tbody>
</table>
**Example**

A marching band receives a $2800 donation to buy new drums and piccolos. Each drum costs $350 and each piccolo costs $400. How many of each type of instrument can the band buy?

**STEP 1** Choose two strategies, *Use an Equation* and *Draw a Graph*.

**STEP 2** Write an inequality. Let $d =$ the number of drums and $p =$ the number of piccolos.

<table>
<thead>
<tr>
<th>Cost of drums</th>
<th>Number of drums</th>
<th>Cost of piccolos</th>
<th>Number of piccolos</th>
<th>$\leq$</th>
</tr>
</thead>
</table>

$$350d + 400p \leq 2800$$

**STEP 3** Graph and shade the solution region of the inequality.

The band can buy only whole numbers of instruments. Also, you can assume that the band will buy at least one of each type of instrument. Mark each point in the solution region that has whole number coordinates greater than or equal to 1.

The red points on the graph show 21 different ways that the band can buy drums and piccolos without spending more than $2800.

**Practice**

1. A cell phone company offers a plan with an initial registration fee of $25 and a monthly fee of $15. How much will the plan cost for one year?

2. Rita wants to attend a swim camp that costs $220. She has $56 in a bank account. She also earns $25 each week walking dogs. Will Rita be able to make a full payment for the camp in 5 weeks? Explain your reasoning.

3. What is the 97th number in the pattern 4, 3, 2, 1, 4, 3, 2, 1, 4, 3, 2, 1, . . .?

4. Sam makes a down payment of $120 on a $360 bike. He will pay $30 each month until the balance is paid. How many monthly payments will he make?

5. Marie is buying tree seedlings for the school. She can spend no more than $310 on aspen and birch trees. She wants at least 20 trees in all and twice as many aspen trees as birch trees. Find three possible ways that Marie can buy the trees.

6. In how many different ways can you make 75¢ in change using quarters, dimes, and nickels?

7. Charlie is cutting a rectangular cake that is 9 inches by 13 inches into equal-sized rectangular pieces. Each piece of cake should be at least 2 inches on each side. What is the greatest number of pieces Charlie can cut?

8. Streamers cost $1.70 per roll and balloons cost $1.50 per bag. If the student council has $40 to spend for parent night and buys 10 rolls of streamers, how many bags of balloons can the student council buy?
Chapter 1

1.1 In Exercises 1–5, use the diagram.
1. Name three points that are collinear. Then give a name for the line that contains the points.
2. Name the intersection of plane ABC and \( \vec{EG} \).
3. Name two pairs of opposite rays.
5. Name a line that intersects plane AFD at more than one point.

1.2 In the diagram, \( P, Q, R, S, \) and \( T \) are collinear, \( PT = 54, QT = 42, QS = 31, \) and \( RS = 17 \). Find the indicated length.
6. \( PQ \)
7. \( PS \)
8. \( QR \)
9. \( PR \)
10. \( ST \)
11. \( RT \)

1.2 Point \( B \) is between \( A \) and \( C \) on \( \overline{AC} \). Use the given information to write an equation in terms of \( x \). Solve the equation. Then find \( AB \) and \( BC \), and determine whether \( \overline{AB} \) and \( \overline{BC} \) are congruent.

12. \( AB = x + 3 \)
13. \( AB = 3x - 7 \)
14. \( AB = 11x - 16 \)
\[ BC = 2x + 1 \]
\[ BC = 3x - 1 \]
\[ BC = 8x - 1 \]
\[ AC = 10 \]
\[ AC = 16 \]
\[ AC = 78 \]

15. \( AB = 4x - 5 \)
16. \( AB = 14x + 5 \)
17. \( AB = 3x - 7 \)
\[ BC = 2x - 7 \]
\[ BC = 10x + 15 \]
\[ BC = 2x + 5 \]
\[ AC = 54 \]
\[ AC = 80 \]
\[ AC = 108 \]

1.3 Find the coordinates of the midpoint of the segment with the given endpoints.
18. \( A(2, -4), B(7, 1) \)
19. \( C(-3, -2), D(-8, 4) \)
20. \( E(-2.3, -1.9), F(3.1, -9.7) \)
21. \( G(3, -7), H(-1, 9) \)
22. \( I(4, 3), J(2, 2) \)
23. \( K(1.7, -7.9), L(8.5, -8.2) \)

1.3 Find the length of the segment with given endpoint and midpoint \( M \).
24. \( Z(0, 1) \) and \( M(7, 1) \)
25. \( Y(4, 3) \) and \( M(1, 7) \)
26. \( X(0, -1) \) and \( M(12, 4) \)
27. \( W(5, 3) \) and \( M(-10, -5) \)
28. \( V(-3, -4) \) and \( M(9, 5) \)
29. \( U(3, 2) \) and \( M(11, -4) \)

1.4 Use the given information to find the indicated angle measure.
30. \( m \angle QPS = ? \)
31. \( m \angle LMN = ? \)
32. \( m \angle XWZ = ? \)
1.4 33. Given \( m \angle ABC = 133^\circ \), find \( m \angle ABD \).

34. Given \( m \angle GHK = 17^\circ \), find \( m \angle KJH \).

1.5 Tell whether \( \angle 1 \) and \( \angle 2 \) are vertical angles, adjacent angles, a linear pair, complementary, or supplementary. There may be more than one answer.

1.5 Use the diagram.

35. 

36. 

37.

1.5 Use the diagram.

38. Name two supplementary angles that are not a linear pair.

39. Name two vertical angles that are not complementary.

40. Name three pairs of complementary angles. Tell whether each pair contains vertical angles, adjacent angles, or neither.

1.6 Tell whether the figure is a polygon. If it is not, explain why. If it is, tell whether it is convex or concave.

41. 

42. 

43. 

44.

1.6 In Exercises 45 and 46, use the diagram.

45. Identify two different equilateral polygons in the diagram. Classify each by the number of sides.

46. Name one of each of the following figures as it appears in the five-pointed star diagram: triangle, quadrilateral, pentagon, hexagon, heptagon.

1.7 Use the information about the figure to find the indicated measure.

47. Area = 91 cm\(^2\) 
Find the length \( l \).

48. Find the area of the triangle.

49. Area = 66 m\(^2\) 
Find the height \( h \).

1.7 Find the perimeter and area of the triangle with the given vertices. Round to the nearest tenth.

50. \( A(2, 1), B(3, 6), C(6, 1) \)

51. \( D(1, 1), E(3, 1), F(6, 5) \)
Chapter 2

2.1 Describe the pattern in the numbers. Write the next number in the pattern.
1. 17, 23, 15, 21, 13, 19,…
2. 1, 0.5, 0.25, 0.125, 0.0625,…
3. 2, 3, 5, 7, 11, 13,…
4. 7.0, 7.5, 8.0, 8.5,…
5. 1, \frac{1}{3}, \frac{1}{9}, \frac{1}{27},…
6. 2, 2, 4, 6, 10, 16, 26,…

2.1 Show the conjecture is false by finding a counterexample.
7. The difference of any two numbers is a value that lies between those two numbers.
8. The value of 2x is always greater than the value of x.
9. If an angle A can be bisected, then angle A must be obtuse.

2.2 For the given statement, write the if-then form, the converse, the inverse, and the contrapositive.
10. Two lines that intersect form two pairs of vertical angles.
11. All squares are four-sided regular polygons.

2.2 Decide whether the statement is true or false. If false, provide a counterexample.
12. If a figure is a hexagon, then it is a regular polygon.
13. If two angles are complementary, then the sum of their measures is 90°.

2.3 Write the statement that follows from the pair of statements that are given.
14. If a triangle is equilateral, then it has congruent angles.
   If a triangle has congruent angles, then it is regular.
15. If two coplanar lines are not parallel, then they intersect.
   If two lines intersect, then they form congruent vertical angles.

2.3 Select the word(s) that make(s) the conclusion true.
16. John only does his math homework when he is in study hall. John is doing his math homework. So, John (is, may be, is not) in study hall.
17. May sometimes buys pretzels when she goes to the supermarket. May is at the supermarket. So, she (will, might, will not) buy pretzels.

2.4 Use the diagram to determine if the statement is true or false.
18. \overrightarrow{SV} \perp \text{plane } Z
19. \overrightarrow{XU} \text{ intersects plane } Z \text{ at point } Y.
20. \overrightarrow{TW} \text{ lies in plane } Z.
21. \angle SYT \text{ and } \angle WYS \text{ are vertical angles.}
22. \angle SYT \text{ and } \angle TYV \text{ are complementary angles.}
23. \angle TYU \text{ and } \angle UYW \text{ are a linear pair.}
24. \angle UYV \text{ is acute.}
2.5 Solve the equation. Write a reason for each step.

25. \(4x + 15 = 39\)  
26. \(6x + 47 = 10x - 9\)  
27. \(2(-7x + 3) = -50\)  
28. \(54 + 9x = 3(7x + 6)\)  
29. \(13(2x - 3) - 20x = 3\)  
30. \(31 + 25x = 7x - 14 + 3x\)

2.6 Copy and complete the statement. Name the property illustrated.

31. If \(m\angle JKL = m\angle GHI\) and \(m\angle GHI = m\angle ABC\), then \(? = ?\).
32. If \(m\angle MNO = m\angle PQR\), then \(m\angle PQR = ?\)
33. \(m\angle XYZ = ?\)

2.6 34. Copy and complete the proof.

\[\text{GIVEN} \quad \text{Point C is in the interior of } \angle ABD.\]
\[\text{PROVE} \quad \angle ABC \text{ and } \angle CBD \text{ are complementary.}\]

2.6 35. Use the given information and the diagram to prove the statement.

\[\text{GIVEN} \quad \overline{XY} \cong \overline{YZ} \cong \overline{XZ}\]
\[\text{PROVE} \quad \text{The perimeter of } \triangle XYZ \text{ is } 3 \cdot XY.\]

2.7 Copy and complete the statement. \(\angle AGD\) is a right angle and \(\overrightarrow{AB}, \overrightarrow{CD},\) and \(\overrightarrow{EF}\) intersect at point G.

36. If \(m\angle CFG = 158^\circ\), then \(m\angle EGD = ?\).
37. If \(m\angle EGA = 67^\circ\), then \(m\angle FGD = ?\).
38. If \(m\angle FGC = 149^\circ\), then \(m\angle EGA = ?\).
39. \(m\angle DGB = ?\)
40. \(m\angle FGH = ?\)

2.7 41. Write a two-column proof.

\[\text{GIVEN} \quad \angle UKV \text{ and } \angle VKW \text{ are complements.}\]
\[\text{PROVE} \quad \angle YKZ \text{ and } \angle XKY \text{ are complements.}\]
Chapter 3

3.1 Classify the angle pair as corresponding, alternate interior, alternate exterior, or consecutive interior angles.

1. \(\angle 6\) and \(\angle 2\)
2. \(\angle 7\) and \(\angle 2\)
3. \(\angle 5\) and \(\angle 3\)
4. \(\angle 4\) and \(\angle 5\)
5. \(\angle 1\) and \(\angle 5\)
6. \(\angle 3\) and \(\angle 6\)

3.1 Copy and complete the statement. List all possible correct answers.

7. \(\angle AMB\) and ___ are corresponding angles.
8. \(\angle AML\) and ___ are alternate interior angles.
9. \(\angle CJD\) and ___ are alternate exterior angles.
10. \(\angle LMJ\) and ___ are consecutive interior angles.
11. ___ is a transversal of \(\overline{AD}\) and \(\overline{HE}\).

3.2 Find \(m\angle 1\) and \(m\angle 2\). Explain your reasoning.

12. \(\angle 1\) 136° 13. \(\angle 1\) 12°
14. \(\angle 1\) 106°

3.2 Find the values of \(x\) and \(y\).

15. \((100 - y)^\circ\) 81° \(9x^\circ\)
16. \((13y + 5)^\circ\) 3x° \((5y - 5)^\circ\)
17. \((6y + 1)^\circ\) \((3x - 10)^\circ\) \((2x + 15)^\circ\)

3.3 Is there enough information to prove \(m \parallel n\)? If so, state the postulate or theorem you would use.

18. 
19. 
20. 

3.3 Can you prove that lines \(a\) and \(b\) are parallel? If so, explain how.

21. 
22. 
23. 

900  Student Resources
3.4 Tell whether the lines through the given points are parallel, perpendicular, or neither. Justify your answer.

24. Line 1: (7, 4), (10, 5)
   Line 2: (2, 3), (8, 5)

Chapter 4

4.1 A triangle has the given vertices. Graph the triangle and classify it by its sides. Then determine if it is a right triangle.

1. \(A(-1, -2), B(-1, 2), C(4, 2)\)  
2. \(A(-1, -1), B(3, 1), C(2, -2)\)  
3. \(A(-3, 4), B(2, 4), C(5, -2)\)

4.1 Find the value of \(x\). Then classify the triangle by its angles.

4. \(3x°\)  
5. \((x + 1)°\)  
6. \((x + 5)°\)

4.2 Write a congruence statement for any figures that can be proved congruent. Explain your reasoning.

7.  
8.  
9.  

4.2 Find the value of \(x\).

10.  
11. \((7x - 5)°\)

4.3 Decide whether the congruence statement is true. Explain your reasoning.

12. \(\triangle PQR \cong \triangle TUV\)  
13. \(\triangle JKM \cong \triangle LMK\)  
14. \(\triangle ACD \cong \triangle BDC\)

4.3 Use the given coordinates to determine if \(\triangle ABC \cong \triangle PQR\).

15. \(A(-2, 1), B(2, 6), C(6, 2), P(-1, -2), Q(3, 3), R(7, -1)\)  
16. \(A(-4, 5), B(2, 6), C(-2, 3), P(2, 1), Q(8, 2), R(5, -1)\)

4.4 Name the congruent triangles in the diagram. Explain.

17.  
18.  
19.  

902 Student Resources
4.5 Is it possible to prove that the triangles are congruent? If so, state the postulate or theorem you would use.

20. \( \triangle GHL, \triangle JKL \)  
21. \( \triangle MNQ, \triangle PNQ \)  
22. \( \triangle STW, \triangle UVW \)

20. \( \triangle GHL, \triangle JKL \)

21. \( \triangle MNQ, \triangle PNQ \)

22. \( \triangle STW, \triangle UVW \)

4.5 Tell whether you can use the given information to determine whether \( \triangle ABC \equiv \triangle DEF \). Explain your reasoning.

23. \( \angle A \equiv \angle D, AB \equiv DE, \angle B \equiv \angle E \)

24. \( AB \equiv DE, BC \equiv EF, \angle A \equiv \angle D \)

4.6 Use the information in the diagram to write a plan for proving that \( \angle 1 \equiv \angle 2 \).

25. \( A \)

26. \( D \)

27. \( Q \)

4.6 Use the vertices of \( \triangle ABC \) and \( \triangle DEF \) to show that \( \angle A \equiv \angle D \). Explain.

28. \( A(0, 8), B(6, 0), C(0, 0), D(3, 10), E(9, 2), F(3, 2) \)

29. \( A(-3, -2), B(-2, 3), C(2, 2), D(5, 1), E(6, 6), F(10, 5) \)

4.7 Find the value(s) of the variable(s).

30.

31.

32.

33.

34.

35.

4.8 Copy the figure and draw its image after the transformation.

36. Reflection: in the \( y \)-axis

37. Reflection: in the \( x \)-axis

38. Translation: \((x, y) \rightarrow (x - 3, y + 7)\)

4.8 Use the coordinates to graph \( AB \) and \( CD \). Tell whether \( CD \) is a rotation of \( AB \) about the origin. If so, give the angle and direction of rotation.

39. \( A(4, 2), B(1, 1), C(-4, -2), D(-1, -1) \)

40. \( A(-1, 3), B(0, 2), C(-1, 2), D(-3, 1) \)
Chapter 5

5.1 Copy and complete the statement.
1. $\overline{LN} \parallel ?$
2. $\overline{CB} \parallel ?$
3. $\overline{MN} \parallel ?$
4. $AM = ? = ?$
5. $MN = ? = ?$

5.1 Place the figure in a coordinate plane in a convenient way. Assign coordinates to each vertex.
6. Isosceles right triangle: leg length is 4 units
7. Scalene triangle: one side length is 6 units
8. Square: side length is 5 units
9. Right triangle: leg lengths are $s$ and $t$

5.2 Find the length of $\overline{AB}$.
10.

5.2 In Exercises 13–17, use the diagram. $\overrightarrow{LN}$ is the perpendicular bisector of $\overline{JK}$.
13. Find $KN$.
15. Find $KP$.
17. Is $P$ on $LN$?

5.3 Use the information in the diagram to find the measure.
18. Find $m \angle ABC$.
19. Find $EH$.
20. $m \angle JKL = 50^\circ$. Find $LM$.

5.3 Can you find the value of $x$? Explain.
21.
22.
23.
5.4 \( P \) is the centroid of \( \triangle DEF \), \( FP = 14 \), \( RE = 24 \), and \( PS = 8.5 \). Find the length of the segment.

24. \( \overline{TF} \)
25. \( \overline{DP} \)
26. \( \overline{DS} \)
27. \( \overline{PR} \)

5.4 Use the diagram shown and the given information to decide whether \( \overline{BD} \) is a perpendicular bisector, an angle bisector, a median, or an altitude of \( \triangle ABC \).

28. \( \overline{BD} \perp \overline{AC} \)
29. \( \angle ABD = \angle CBD \)
30. \( \overline{AD} \cong \overline{CD} \)
31. \( \overline{BD} \perp \overline{AC} \) and \( \overline{AD} \cong \overline{CD} \)
32. \( \triangle ABD \cong \triangle CBD \)
33. \( \overline{BD} \perp \overline{AC} \) and \( \overline{AB} \cong \overline{CB} \)

5.5 List the sides and angles in order from smallest to largest.

34. \( \triangle PQR \)
35. \( \triangle LJK \)
36. \( \triangle EFG \)

5.5 Describe the possible lengths of the third side of the triangle given the lengths of the other two sides.

37. 9 inches, 8 inches
38. 24 feet, 13 feet
39. 3 inches, 9 inches
40. 1 foot, 17 inches
41. 4 feet, 2 yards
42. 2 yards, 6 feet

5.6 Copy and complete with \( > \), \( < \) or \( = \). Explain.

43. \( LN \ ? \ PR \)
44. \( VU \ ? \ ST \)
45. \( m\angle WXY \ ? \ m\angle WYZ \)
46. \( m\angle 1 \ ? \ m\angle 2 \)
47. \( JK \ ? \ MN \)
48. \( BC \ ? \ DE \)
49. \( GH \ ? \ QR \)
50. \( m\angle 3 \ ? \ m\angle 4 \)
51. \( m\angle 5 \ ? \ m\angle 6 \)
Chapter 6

6.1 The measures of the angles of a triangle are in the extended ratio given. Find the measures of the angles of the triangle.

1. 1:3:5
2. 1:5:6
3. 2:3:5
4. 5:6:9

6.1 Solve the proportion.

5. \( \frac{x}{14} = \frac{6}{21} \)
6. \( \frac{15}{y} = \frac{20}{4} \)
7. \( \frac{3}{2z + 1} = \frac{1}{7} \)
8. \( \frac{a - 3}{2} = \frac{2a - 1}{6} \)

9. \( \frac{6}{3} = \frac{x + 8}{-1} \)
10. \( \frac{x + 6}{3} = \frac{x - 5}{2} \)
11. \( \frac{x - 2}{4} = \frac{x + 10}{10} \)
12. \( \frac{12}{8} = \frac{5 + t}{t - 3} \)

6.1 Find the geometric mean of the two numbers.

13. 4 and 9
14. 3 and 48
15. 9 and 16
16. 7 and 11

6.2 Copy and complete the statement.

17. If \( \frac{7}{x} = \frac{9}{y} \), then \( \frac{x}{y} = ? \).
18. If \( \frac{2}{8} = \frac{1}{x} \), then \( \frac{8 + 2}{2} = ? \).

6.2 Use the diagram and the given information to find the unknown length.

19. Given \( \frac{NJ}{NK} = \frac{NL}{NM} \), find \( NK \).
20. Given \( \frac{CB}{DE} = \frac{BA}{EF} \), find \( CA \).

6.3 Determine whether the polygons are similar. If they are, write a similarity statement and find the scale factor.

21.

22.

6.3 In the diagram, \( \triangle PQR \sim \triangle LMN \).

23. Find the scale factor of \( \triangle PQR \) to \( \triangle LMN \).
24. Find the values of \( x, y, \) and \( z \).
25. Find the perimeter of each triangle.

6.3 \( \triangle ABC \sim \triangle DEF \). Identify the blue special segment and find the value of \( y \).
6.4 In Exercises 28–31, determine whether the triangles are similar. If they are, write a similarity statement. **Explain** your reasoning.

28.\[ \triangle PQR \sim \triangle VWU \]

29.\[ \triangle ABC \sim \triangle DEF \]

30.\[ \triangle WXYZ \sim \triangle VWYX \]

31.\[ \triangle JKL \sim \triangle MNP \]

6.5 Show that the triangles are similar and write a similarity statement. **Explain** your reasoning.

32.\[ \triangle VWX \sim \triangle YZ \]

33.\[ \triangle HKL \sim \triangle JMN \]

6.6 Use the diagram to find the value of each variable.

34.\[ \triangle a \sim \triangle 34 \]

35.\[ \triangle x \sim \triangle 6 \]

36.\[ \triangle \sim \triangle 5 \]

6.7 Draw a dilation of the polygon with the given vertices using the given scale factor of \( k \).

37. \( A(1, 1), B(4, 1), C(1, 2); k = 3 \)

38. \( A(2, 2), B(-2, 2), C(-1, -1), D(2, -1); k = 5 \)

39. \( A(2, 2), B(8, 2), C(2, 6); k = \frac{1}{2} \)

40. \( A(3, -6), B(6, -6), C(6, 9), D(-3, 9); k = \frac{1}{3} \)

6.7 Determine whether the dilation from Figure A to Figure B is a **reduction** or an **enlargement**. Then find its scale factor.

41.\[ A \sim B \]

42.\[ A \sim B \]
Chapter 7

7.1 Find the unknown side length of the right triangle using the Pythagorean Theorem or a Pythagorean triple.

1. $\text{48} \quad x \quad 14$

2. $\text{24} \quad x \quad 51$

3. $\text{144} \quad x \quad 156$

7.1 Find the area of the isosceles triangle.

4. $\text{25 m} \quad h \quad 25 m$

5. $\text{26 ft} \quad h \quad 20 ft$

6. $\text{17 cm} \quad h \quad 17 cm$

7.2 Tell whether the given side lengths of a triangle can represent a right triangle.

7. 24, 32, and 40

8. 21, 72, and 75

9. 11, 25, and 27

10. 7, 11, and 13

11. 17, 19, and $5\sqrt{26}$

12. 9, 10, and $\sqrt{181}$

7.2 Decide if the segment lengths form a triangle. If so, would the triangle be acute, right, or obtuse?

13. 14, 21, and 25

14. 32, 60, and 68

15. 11, 19, and 32

16. 3, 9, and $3\sqrt{11}$

17. 12, 15, and $3\sqrt{40}$

18. $4\sqrt{21}$, 25, and 31

7.3 Write a similarity statement for the three similar triangles in the diagram. Then complete the proportion.

19. $\frac{AB}{AD} = \frac{BC}{?}$

20. $\frac{KJ}{HJ} = \frac{?}{JG}$

21. $\frac{SR}{RQ} = \frac{?}{R}$

7.3 Find the value of the variable. Round decimal answers to the nearest tenth.

22. $\frac{5}{x}$

23. $\frac{y}{4}$

24. $\frac{3}{5}$

25. $\frac{6}{y}$

26. $\frac{x}{7}$

27. $\frac{3}{y}$
7.4 Find the value of each variable. Write your answers in simplest radical form.

28. \[ \frac{x}{y} = \frac{\sqrt{2}}{2} \]

29. \[ \frac{g}{h} = \frac{\sqrt{3}}{2} \]

30. \[ \frac{a}{b} = \frac{\sqrt{2}}{2} \]

31. \[ \frac{m}{n} = \frac{\sqrt{3}}{2} \]

32. \[ \frac{s}{t} = \frac{\sqrt{2}}{2} \]

33. \[ \frac{w}{v} = \frac{\sqrt{3}}{2} \]

7.5 Find \( \tan A \) and \( \tan B \). Write each answer as a fraction and as a decimal rounded to four places.

34. \[ \frac{27}{9\sqrt{13}} \]

35. \[ \frac{20\sqrt{34}}{60} \]

36. \[ \frac{24}{8\sqrt{58}} \]

7.5 Use a tangent ratio to find the value of \( x \). Round to the nearest tenth. Check your solution using the tangent of the other acute angle.

37. \[ 27^\circ \]

38. \[ 69^\circ \]

39. \[ 41^\circ \]

7.6 Use a sine or cosine ratio to find the value of each variable. Round decimals to the nearest tenth.

40. \[ \frac{x}{y} = \frac{14}{44} \]

41. \[ \frac{y}{x} = \frac{8}{32} \]

42. \[ \frac{x}{y} = \frac{26}{17} \]

43. \[ \frac{\sqrt{3}}{\sqrt{3}} \]

44. \[ \frac{5.7}{x} = \frac{54^\circ}{y} \]

45. \[ \frac{14^\circ}{y} \]

7.7 Solve the right triangle. Round decimal answers to the nearest tenth.

46. \[ \triangle DEF \]

47. \[ \triangle JGH \]

48. \[ \triangle ABC \]
Chapter 8

8.1 Find the value of \( x \).
1. \[
\begin{array}{c}
128^\circ & 61^\circ \\
59^\circ & x^\circ
\end{array}
\]
2. \[
\begin{array}{c}
91^\circ & x^\circ \\
140^\circ & 82^\circ
\end{array}
\]
3. \[
\begin{array}{c}
149^\circ & 153^\circ \\
122^\circ & 115^\circ
\end{array}
\]
4. \[
\begin{array}{c}
x^\circ \\
136^\circ & 146^\circ
\end{array}
\]
5. \[
\begin{array}{c}

\begin{array}{c}
x^\circ \\
100^\circ & 101^\circ
\end{array}
\]

8.1 Find the measure of an interior angle and an exterior angle of the indicated regular polygon.
7. Regular hexagon
8. Regular 9-gon
9. Regular 17-gon

8.2 Find the value of each variable in the parallelogram.
10. \[
\begin{array}{c}
a = 12 \\
b = 7
\end{array}
\]
11. \[
\begin{array}{c}
a = 14 \\
2a + 4 = b + 1
\end{array}
\]
12. \[
\begin{array}{c}
a = \frac{2}{3}a \\
b = 18
\end{array}
\]
13. \[
\begin{array}{c}
a^\circ \\
b^\circ & 63^\circ
\end{array}
\]
14. \[
\begin{array}{c}
a^\circ \\
3a^\circ & b^\circ
\end{array}
\]
15. \[
\begin{array}{c}
a = 2b + 4 \\
b = 7
\end{array}
\]

8.2 Use the diagram to copy and complete the statement.
16. \( \angle WXV \equiv ? \)
17. \( \angle ZWV \equiv ? \)
18. \( \angle WVX \equiv ? \)
19. \( WV = ? \)
20. \( WZ = ? \)
21. \( 2 \cdot ZV = ? \)

8.3 The vertices of quadrilateral \( ABCD \) are given. Draw \( ABCD \) in a coordinate plane and show that it is a parallelogram.
22. \( A(5, 6), B(7, 3), C(5, -2), D(3, 1) \)
23. \( A(-8, 2), B(-6, 3), C(-1, 2), D(-3, 1) \)
24. \( A(-1, 11), B(2, 14), C(6, 11), D(3, 8) \)
25. \( A(-1, -5), B(4, -4), C(6, -9), D(1, -10) \)

8.3 Describe how to prove that quadrilateral \( PQRS \) is a parallelogram.
26. \[
\begin{array}{c}
P \\
S
\end{array}
\]
27. \[
\begin{array}{c}
P \\
S
\end{array}
\]
28. \[
\begin{array}{c}
P \\
S
\end{array}
\]
8.4 Classify the special quadrilateral. Explain your reasoning.

29. ABCD

30. PQRS

31. VWXY

8.4 The diagonals of rhombus LMNP intersect at Q. Given that LM = 5 and \( m\angle QLM = 30^\circ \), find the indicated measure.

32. \( m\angle LMQ \)

33. \( m\angle LQM \)

34. MN

8.5 Find the value of \( x \).

35. \( \frac{19}{31} \)

36. \( \frac{x}{34} \)

37. \( \frac{0.6}{x} \)

8.5 \( RSTV \) is a kite. Find \( m\angle V \).

38. \( \frac{80^\circ}{75^\circ} \)

39. \( \frac{60^\circ}{104^\circ} \)

40. \( \frac{80^\circ}{75^\circ} \)

8.6 Give the most specific name for the quadrilateral. Explain your reasoning.

41. parallelogram

42. kite

43. rhombus

44. rhombus

45. kite

46. rectangle

8.6 The vertices of quadrilateral \( DEFG \) are given. Give the most specific name for \( DEFG \). Justify your answer.

47. \( D(6, 8), E(9, 12), F(12, 8), G(9, 6) \)

48. \( D(1, 2), E(4, 1), F(3, -2), G(0, -1) \)

49. \( D(10, 3), E(14, 4), F(20, 2), G(12, 0) \)

50. \( D(-2, 10), E(1, 13), F(5, 13), G(-2, 6) \)
Chapter 9

9.1 \( \triangle A'B'C' \) is the image of \( \triangle ABC \) after a translation. Write a rule for the translation. Then verify that the translation is an isometry.

1. \[ \begin{array}{c}
A \quad 1 \\
B \quad 2 \\
C \quad 3 \\
\end{array} \]

2. \[ \begin{array}{c}
A' \quad 1 \\
B' \quad 2 \\
C' \quad 3 \\
\end{array} \]

9.1 Use the point \( P(7, -3) \). Find the component form of the vector that describes the translation to \( P' \).

3. \( P'(-3, 4) \)

4. \( P'(1, -1) \)

5. \( P'(3, 2) \)

6. \( P'(-8, -11) \)

9.2 Add, subtract, or multiply.

7. \[ \begin{bmatrix} 2 \\ 7 \end{bmatrix} + \begin{bmatrix} 3 \\ 4 \end{bmatrix} \]

8. \[ \begin{bmatrix} 5 & -3 \\ -9 & 4 \end{bmatrix} - \begin{bmatrix} 0 & 1 \\ 4 & -1 \end{bmatrix} \]

9. \[ \begin{bmatrix} 7 & -3 \\ 5 & 9 \end{bmatrix} \begin{bmatrix} 2 & -1 \\ 6 & 8 \end{bmatrix} \]

9.2 Find the image matrix that represents the translation of the polygon. Then graph the polygon and its image.

10. \[ \begin{bmatrix} 3 & -5 & 7 \\ -2 & -2 & 1 \end{bmatrix} ; \text{6 units left} \]

11. \[ \begin{bmatrix} 1 & 9 & 4 & 3 \\ 5 & 6 & 5 & 2 \end{bmatrix} ; \text{1 unit right and 7 units down} \]

12. \[ \begin{bmatrix} 7 & -3 & 0 \\ 6 & 8 & -4 \end{bmatrix} ; \text{3 units right and 4 units up} \]

13. \[ \begin{bmatrix} 9 & 6 & 4 & 2 & 3 \\ -1 & -4 & -4 & -4 & 2 \end{bmatrix} ; \text{4 units left and 5 units up} \]

9.3 Graph the reflection of the polygon in the given line.

14. \( y \)-axis

15. \( x = 1 \)

16. \( y = x \)

9.4 Rotate the figure the given number of degrees about the origin. List the coordinates of the vertices of the image.

17. \( 270^\circ \)

18. \( 180^\circ \)

19. \( 90^\circ \)
9.4 Find the image matrix that represents the rotation of the polygon about the origin. Then graph the polygon and its image.

\[
\begin{align*}
P &\quad Q &\quad R \\
1 &\quad 2 &\quad 4 \quad &\quad S &\quad T &\quad V \\
4 &\quad 1 &\quad 3 &\quad A &\quad B &\quad C &\quad D \\
\end{align*}
\]

20. \[
\begin{bmatrix} 1 & 2 & 4 \\ 4 & 1 & 3 \end{bmatrix}; 180^\circ \\
\] 21. \[
\begin{bmatrix} 4 & 2 & 1 \\ 2 & -3 & 0 \end{bmatrix}; 90^\circ \\
\] 22. \[
\begin{bmatrix} 4 & -1 & -2 & 1 \\ 0 & -1 & -2 & -3 \end{bmatrix}; 270^\circ \\
\]

9.5 The vertices of \(\triangle ABC\) are \(A(1, 1), B(4, 1),\) and \(C(2, 4)\). Graph the image of \(\triangle ABC\) after a composition of the transformations in the order they are listed.

23. Translation: \((x, y) \to (x - 2, y + 3)\)
Rotation: \(270^\circ\) about the origin

24. Reflection: in the line \(x = 2\)
Translation: \((x, y) \to (x + 3, y)\)

25. Rotation: \(180^\circ\) about the origin
Reflection: in the line \(y = -2\)

9.5 Find the angle of rotation that maps \(A\) onto \(A'\).

27. | 28. |

9.6 Determine whether the flag has line symmetry and whether it has rotational symmetry. Identify all lines of symmetry and angles of rotation that map the figure onto itself.

29. | 30. | 31. 

9.7 Copy the diagram. Then draw the given dilation.

32. Center \(B; k = 2\) 
33. Center \(E; k = 3\) 
34. Center \(D; k = \frac{1}{2}\) 
35. Center \(A; k = \frac{2}{3}\) 
36. Center \(C; k = \frac{3}{2}\) 
37. Center \(E; k = \frac{1}{3}\) 

9.7 Find the image matrix that represents a dilation of a polygon centered at the origin with a given scale factor. Then graph the polygon and its image.

\[
\begin{align*}
G &\quad H &\quad J \\
1 &\quad 3 &\quad 4 \quad &\quad K &\quad L &\quad M &\quad N \\
4 &\quad 2 &\quad 4 &\quad 2 &\quad 4 &\quad 5 &\quad 6 \\
\end{align*}
\]

38. \[
\begin{bmatrix} 1 & 3 & 4 \\ 4 & 2 & 4 \end{bmatrix}; k = 3 \\
\] 39. \[
\begin{bmatrix} 2 & 4 & 5 & 6 \\ -2 & -2 & 4 & 0 \end{bmatrix}; k = \frac{1}{2} \\
\] 40. \[
\begin{bmatrix} -3 & -3 & -1 \\ -1 & -3 & -3 \end{bmatrix}; k = 4 \\
\]
Chapter 10

10.1 Use the diagram to give an example of the term.
1. Radius
2. Common tangent
3. Tangent
4. Secant
5. Center
6. Point of tangency
7. Chord
8. Diameter

10.1 Find the value(s) of the variable. \( P, Q, \) and \( R \) are points of tangency.

9. \[
\begin{align*}
P & = r - 3 \\
Q & = 5
\end{align*}
\]

10. \[
\begin{align*}
P & = r - 2 \\
Q & = 4
\end{align*}
\]

11. \[
\begin{align*}
P & = 2x + 7 \\
Q & = 3x - 5
\end{align*}
\]

12. \[
\begin{align*}
P & = x + 5 \\
Q & = 9x^2 + x + 1
\end{align*}
\]

13. \[
\begin{align*}
P & = x^2 - 7 \\
Q & = (x - 1)^2
\end{align*}
\]

14. \[
\begin{align*}
P & = 4x + 7 \\
Q & = 6x + 9
\end{align*}
\]

10.2 \( AC \) and \( BD \) are diameters of \( \odot G \). Determine whether the arc is a minor arc, a major arc, or a semicircle of \( \odot G \). Then find the measure of the arc.

15. \( ED \)

16. \( EB \)

17. \( EC \)

18. \( BEC \)

19. \( BC \)

20. \( BCD \)

10.2 In \( \odot C \), \( m\overline{AD} = 50^\circ \), \( B \) bisects \( \overline{AD} \), and \( \overline{AE} \) is a diameter. Find the measure of the arc.

21. \( AED \)

22. \( BD \)

23. \( DE \)

24. \( BA \)

10.3 Find the measure of \( \overline{AB} \).

25.

26.

27.

10.3 In Exercises 28–30, what can you conclude about the diagram shown? State theorems to justify your answer.

28.

29.

30.
10.4 Find the values of the variables.

31. $y = 8$
   $x = 8$
   $40$

32. $x = 8$
   $y = 8$
   $20$

33. $(4y + 10)^\circ$
   $(2x - 5)^\circ$

34. $y = 8$
   $x = 8$
   $95$

35. $x = 8$
   $y = 8$
   $56$

36. $(x + 20)^\circ$
   $(y + 27)^\circ$

10.5 Find the value of $x$.

37. $x = 35$
   $55$

38. $x = 138$
   $50$

39. $x = 110$

40. $x = 110$
   $(12x + 3)^\circ$

10.6 Find the value of $x$.

41. $x = 110$
   $(10x + 3)^\circ$

42. $x = 110$
   $6$
   $8$
   $2$

10.7 Use the given information to write the standard equation for the circle.

49. The center is $(0, -2)$, and the radius is 4 units.

50. The center is $(2, -3)$, and a point on the circle is $(7, -8)$.

51. The center is $(m, n)$, and a point on the circle is $(m + h, n + k)$.

10.7 Graph the equation.

52. $x^2 + y^2 = 25$

53. $x^2 + (y - 5)^2 = 121$

54. $(x + 4)^2 + (y - 1)^2 = 49$
Chapter 11

11.1 Find the area of the polygon.

1. 

2. 

3. 

4. 

11.1 The lengths of the hypotenuse and one leg of a right triangle are given. Find the perimeter and area of the triangle.

5. Hypotenuse: 25 cm; leg: 20 cm

6. Hypotenuse: 51 ft; leg: 24 ft

11.1 Find the value of \( x \).

7. \( A = 22 \text{ ft}^2 \)

8. \( A = 14.3 \text{ in.}^2 \)

9. \( A = 7.2 \text{ m}^2 \)

10. \( A = 276 \text{ cm}^2 \)

11.2 Find the area of the trapezoid.

11. 

12. 

13. 

14. 

11.2 Find the area of the rhombus or kite.

15. 

16. 

17. 

18. 

11.3 The ratio of the areas of two similar figures is given. Write the ratio of the lengths of the corresponding sides.

19. Ratio of areas = 100:81

20. Ratio of areas = 25:100

21. Ratio of areas = 8:1

11.3 Use the given area to find \( ST \).

22. \( \triangle ABC \sim \triangle RST \)

23. \( DEFG \sim RSTU \)

24. \( HJKL \sim RSTU \)
11.4 Find the circumference of the red circle.

25. [Image of a circle with a radius of 5 units]

26. [Image of a square with a side length of 4 units]

27. [Image of two overlapping circles with a distance of 27 units between their centers]

28. [Image of a circle with a radius of 8 units]

11.4 Find the length of $AB$.

29. [Image of a circle with a radius of 3 m]

30. [Image of a circle with a 120° angle at B]

31. [Image of a circle with a 30° angle at A]

32. [Image of a circle with a 150° angle at A]

11.5 Find the exact area of a circle with the given radius $r$ or diameter $d$. Then find the area to the nearest hundredth.

33. $r = 3$ in.  
34. $r = 2.5$ cm  
35. $d = 20$ ft  
36. $d = 13$ m

11.5 Find the areas of the sectors formed by $\angle DFE$.

37. [Image of a sector with a central angle of 45° and a radius of 5 in.]

38. [Image of a sector with a central angle of 100° and a radius of 7 ft]

39. [Image of a sector with a central angle of 22° and a radius of 22 cm]

40. [Image of a sector with a central angle of 240° and a radius of 2 yd]

11.6 Find the measure of a central angle of a regular polygon with the given number of sides.

41. 8 sides  
42. 12 sides  
43. 20 sides  
44. 25 sides

11.6 Find the perimeter and area of the regular polygon.

45. [Image of an 18-sided polygon]

46. [Image of a 6-sided polygon]

47. [Image of a 4.5-sided polygon]

48. [Image of a 12-sided polygon]

11.7 Find the probability that a randomly chosen point in the figure lies in the shaded region.

49. [Image of a shaded triangle]

50. [Image of a shaded circle]

51. [Image of a shaded triangle]

52. [Image of two overlapping circles]

11.7 53. A local radio station plays your favorite song once every two hours. Your favorite song is 4.5 minutes long. If you randomly turn on the radio, what is the probability that your favorite song will be playing?
Chapter 12

12.1 Determine whether the solid is a polyhedron. If it is, name the polyhedron. Explain your reasoning.

1. 2. 3. 4.

12.1 5. Determine the number of faces on a solid with six vertices and ten edges.

12.2 Find the surface area of the right prism. Round to two decimal places.

6. 7. 8.

12.2 Find the surface area of the right cylinder with the given radius \( r \) and height \( h \). Round to two decimal places.

9. \( r = 2 \text{ cm} \) \( h = 11 \text{ cm} \) 
10. \( r = 1 \text{ m} \) \( h = 1 \text{ m} \) 
11. \( r = 22 \text{ in.} \) \( h = 9 \text{ in.} \) 
12. \( r = 17 \text{ mm} \) \( h = 5 \text{ mm} \)

12.2 Solve for \( x \) given the surface area \( S \) of the right prism or right cylinder. Round to two decimal places.

13. \( S = 192 \text{ in.}^2 \) 
14. \( S = 33.7 \text{ m}^2 \) 
15. \( S = 754 \text{ ft}^2 \)

12.3 Find the surface area of the regular pyramid. Round to two decimal places.

16. 17. 18.

12.3 Find the surface area of the right cone. Round to two decimal places.

19. 20. 21.
12.4 Find the volume of the right prism or right cylinder. Round to two decimal places.

22. \(4 \text{ ft} \times 3.5 \text{ ft} \times 2 \text{ ft}\)

23. \(14 \text{ cm} \times 14 \text{ cm} \times 20 \text{ cm}\)

24. \(2.3 \text{ mm} \times 7.2 \text{ mm} \times \) (cylinder)

12.4 Find the value of \(x\). Round to two decimal places, if necessary.

25. \(V = 8 \text{ cm}^3\)

26. \(V = 72 \text{ ft}^3\)

27. \(V = 628 \text{ in.}^3\)

12.5 Find the volume of the solid. Round to two decimal places.

28. \(15 \text{ in.} \times 12 \text{ in.} \times 8 \text{ in.}\)

29. \(3 \text{ ft} \times 6 \text{ ft} \times x\)

30. \(8 \text{ in.} \times x \times x\)

12.5 Find the volume of the right cone. Round to two decimal places.

31. \(18 \text{ in.} \times 45^\circ\)

32. \(8 \text{ ft} \times 30^\circ \times 10 \text{ m}\)

33. \(4.2 \text{ ft} \times 68^\circ \times 11.4 \text{ m}\)

12.6 Find the surface area and volume of a sphere with the given radius \(r\) or diameter \(d\). Round to two decimal places.

34. \(r = 13 \text{ m}\)

35. \(r = 1.8 \text{ in.}\)

36. \(d = 28 \text{ yd}\)

37. \(d = 13.7 \text{ cm}\)

38. \(r = 20 \text{ in.}\)

39. \(r = 17.5 \text{ mm}\)

40. \(d = 15.2 \text{ m}\)

41. \(d = 23 \text{ ft}\)

12.7 Solid A (shown) is similar to Solid B (not shown) with the given scale factor of A to B. Find the surface area and volume of Solid B.

42. Scale factor of 3 : 2

43. Scale factor of 2 : 1

44. Scale factor of 4 : 7

12.7 45. Two similar cylinders have volumes \(12\pi\) cubic units and \(324\pi\) cubic units. Find the scale factor of the smaller cylinder to the larger cylinder.

## Metric

### Length

<table>
<thead>
<tr>
<th>Metric</th>
<th>Equivalent in Other Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>10 millimeters (mm)</td>
<td>1 centimeter (cm)</td>
</tr>
<tr>
<td>100 cm</td>
<td>1 meter (m)</td>
</tr>
<tr>
<td>1000 mm</td>
<td>1 kilometer (km)</td>
</tr>
</tbody>
</table>

### Area

<table>
<thead>
<tr>
<th>Metric</th>
<th>Equivalent in Other Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>100 square millimeters</td>
<td>1 square centimeter (cm²)</td>
</tr>
<tr>
<td>10,000 cm²</td>
<td>1 square meter (m²)</td>
</tr>
<tr>
<td>10,000 m²</td>
<td>1 hectare (ha)</td>
</tr>
</tbody>
</table>

### Volume

<table>
<thead>
<tr>
<th>Metric</th>
<th>Equivalent in Other Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>1000 cubic millimeters</td>
<td>1 cubic centimeter (cm³)</td>
</tr>
<tr>
<td>1,000,000 cm³</td>
<td>1 cubic meter (m³)</td>
</tr>
</tbody>
</table>

### Liquid Capacity

<table>
<thead>
<tr>
<th>Metric</th>
<th>Equivalent in Other Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>1000 milliliters (mL)</td>
<td>1 liter (L)</td>
</tr>
<tr>
<td>1000 cubic centimeters</td>
<td>1 liter (L)</td>
</tr>
<tr>
<td>1000 L</td>
<td>1 kiloliter (kL)</td>
</tr>
</tbody>
</table>

### Mass

<table>
<thead>
<tr>
<th>Metric</th>
<th>Equivalent in Other Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>1000 milligrams (mg)</td>
<td>1 gram (g)</td>
</tr>
<tr>
<td>1000 g</td>
<td>1 kilogram (kg)</td>
</tr>
<tr>
<td>1000 kg</td>
<td>1 metric ton (t)</td>
</tr>
</tbody>
</table>

### Temperature

#### Degrees Celsius (°C)

- 0°C = freezing point of water
- 37°C = normal body temperature
- 100°C = boiling point of water

#### Degrees Fahrenheit (°F)

- 32°F = freezing point of water
- 98.6°F = normal body temperature
- 212°F = boiling point of water

## United States Customary

### Length

<table>
<thead>
<tr>
<th>Metric</th>
<th>Equivalent in Other Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>12 inches (in.)</td>
<td>1 foot (ft)</td>
</tr>
<tr>
<td>36 in.</td>
<td>1 yard (yd)</td>

<tr>
<td>4 qt</td>
<td>1 gallon (gal)</td>
</tr>
</tbody>
</table>

### Weight

<table>
<thead>
<tr>
<th>Metric</th>
<th>Equivalent in Other Units</th>
</tr>
</thead>
<tbody>
<tr>
<td>16 ounces (oz)</td>
<td>1 pound (lb)</td>
</tr>
<tr>
<td>2000 lb</td>
<td>1 ton</td>
</tr>
</tbody>
</table>

---

Tables 921
### Formulas

#### Angles

- **Sum of the measures of the interior angles of a triangle:** $180^\circ$ (p. 218)

- **Sum of the measures of the interior angles of a convex $n$-gon:** $(n - 2) \cdot 180^\circ$ (p. 507)

- **Exterior angle of a triangle:** $m \angle 1 = m \angle A + m \angle B$ (p. 219)

- **Sum of the measures of the exterior angles of a convex polygon:** $360^\circ$ (p. 509)

#### Right Triangles

- **Pythagorean Theorem:** $c^2 = a^2 + b^2$ (p. 433)

- **Trigonometric ratios:**
  - $\sin A = \frac{BC}{AB}$ (p. 473)
  - $\cos A = \frac{AC}{AB}$ (p. 473)
  - $\tan A = \frac{BC}{AC}$ (p. 466)

- **$45^\circ$-$45^\circ$-$90^\circ$ triangle** (p. 457)

- **$30^\circ$-$60^\circ$-$90^\circ$ triangle** (p. 459)

- **Ratio of sides:**
  - $1:1:\sqrt{2}$
  - $1:1:3:2$

- **$\triangle ABC \sim \triangle ACD \sim \triangle CBD$** (p. 449)

- **$BD = \frac{CD}{AD} \cdot \frac{AB}{CB}$** (p. 451)

- **$BD = \frac{CD}{AD}$** and $CD = \sqrt{AD \cdot DB}$ (pp. 359, 452)

#### Circles

- **Angle and segments formed by two chords:**
  - $m \angle 1 = \frac{1}{2}(m \overarc{CD} + m \overarc{AB})$ (p. 681)
  - $EA \cdot EC = EB \cdot ED$ (p. 689)

- **Angle and segments formed by a tangent and a secant:**
  - $m \angle 2 = \frac{1}{2}(m \overarc{BC} - m \overarc{AB})$ (p. 681)
  - $EB^2 = EA \cdot EC$ (p. 691)

- **Angle and segments formed by two tangents:**
  - $m \angle 3 = \frac{1}{2}(m \overarc{AQB} - m \overarc{AB})$ (p. 681)
  - $EA = EB$ (p. 654)

- **Angle and segments formed by two secants:**
  - $m \angle 4 = \frac{1}{2}(m \overarc{CD} - m \overarc{AB})$ (p. 681)
  - $EA \cdot EC = EB \cdot ED$ (p. 690)

#### Coordinate Geometry

- Given: points $A(x_1, y_1)$ and $B(x_2, y_2)$

  - **Midpoint of $\overline{AB}$:** $\left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2}\right)$ (p. 16)

  - **$AB = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$** (p. 17)

  - **Slope of $\overline{AB}$:** $\frac{y_2 - y_1}{x_2 - x_1}$ (p. 171)

  - **Slope-intercept form of a linear equation with slope $m$ and y-intercept $b$:** $y = mx + b$ (p. 180)

- **Standard equation of a circle with center $(h, k)$ and radius $r$:** $(x - h)^2 + (y - k)^2 = r^2$ (p. 699)

  - **Taxicab distance $AB$:** $|x_2 - x_1| + |y_2 - y_1|$ (p. 198)
**Surface Area**

- **Right prism:** $S = 2B + Ph$  
  
- **Right cylinder:** $S = 2B + Ch = 2\pi r^2 + 2\pi rh$  
  
- **Regular pyramid:** $S = B + \frac{1}{2}P\ell$  
  
- **Right cone:** $S = B + \frac{1}{2}C\ell = \pi r^2 + \pi r\ell$  
  
- **Sphere:** $S = 4\pi r^2$  

**Volume**

- **Cube:** $V = s^3$  
  
- **Prism:** $V = Bh$  
  
- **Cylinder:** $V = Bh = \pi r^2h$  
  
- **Pyramid:** $V = \frac{1}{3}Bh$  
  
- **Cone:** $V = \frac{1}{3}Bh = \frac{1}{3}\pi r^2h$  
  
- **Sphere:** $V = \frac{4}{3}\pi r^3$  

**Miscellaneous**

- Geometric mean of $a$ and $b$: $\sqrt{a \cdot b}$  
  
- **Euler’s Theorem for Polyhedra:** $V = F - E + 2$  
  
- Given: similar polygons or similar solids  
  
- **Ratio of perimeters** = $a:b$  
  
- **Ratio of areas** = $a^2:b^2$  
  
- **Ratio of volumes** = $a^3:b^3$  
  
- Given a quadratic equation $ax^2 + bx + c = 0$,  
  
  the solutions are given by the formula:  
  
  $$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

</table>
Theorems

2.1 Properties of Segment Congruence
Segment congruence is reflexive, symmetric, and transitive.

Reflexive: For any segment \( AB, AB \cong AB \).
Symmetric: If \( AB \cong CD \), then \( CD \cong AB \).
Transitive: If \( AB \cong CD \) and \( CD \cong EF \), then \( AB \cong EF \). (p. 113)

2.2 Properties of Angles Congruence
Angle congruence is reflexive, symmetric, and transitive.

Reflexive: For any angle \( \angle A \), \( \angle A \cong \angle A \).
Symmetric: If \( \angle A \cong \angle B \), then \( \angle B \cong \angle A \).
Transitive: If \( \angle A \cong \angle B \) and \( \angle B \cong \angle C \), then \( \angle A \cong \angle C \). (p. 113)

2.3 Right Angles Congruence Theorem
All right angles are congruent. (p. 124)

2.4 Congruent Supplements Theorem
If two angles are supplementary to the same angle (or to congruent angles), then the two angles are congruent. (p. 125)

2.5 Congruent Complements Theorem
If two angles are complementary to the same angle (or to congruent angles), then the two angles are congruent. (p. 125)

2.6 Vertical Angles Congruence Theorem
Vertical angles are congruent. (p. 126)

2.7 Alternate Interior Angles Theorem
If two parallel lines are cut by a transversal, then the pairs of alternate interior angles are congruent. (p. 155)

2.8 Alternate Exterior Angles Theorem
If two parallel lines are cut by a transversal, then the pairs of alternate exterior angles are congruent. (p. 155)

2.9 Consecutive Interior Angles Theorem
If two parallel lines are cut by a transversal, then the pairs of consecutive interior angles are supplementary. (p. 155)

2.10 Alternate Interior Angles Converse
If two lines are cut by a transversal so the alternate interior angles are congruent, then the lines are parallel. (p. 162)

2.11 Alternate Exterior Angles Converse
If two lines are cut by a transversal so the alternate exterior angles are congruent, then the lines are parallel. (p. 162)

3.6 Consecutive Interior Angles Converse
If two lines are cut by a transversal so the consecutive interior angles are supplementary, then the lines are parallel. (p. 162)

3.7 Transitive Property of Parallel Lines
If two lines are parallel to the same line, then they are parallel to each other. (p. 164)

3.8 If two lines intersect to form a linear pair of congruent angles, then the lines are perpendicular. (p. 190)

3.9 If two lines are perpendicular, then they intersect to form four right angles. (p. 190)

3.10 If two sides of two adjacent acute angles are perpendicular, then the angles are complementary. (p. 191)

3.11 Perpendicular Transversal Theorem
If a transversal is perpendicular to one of two parallel lines, then it is perpendicular to the other. (p. 192)

3.12 Lines Perpendicular to a Transversal Theorem
In a plane, if two lines are perpendicular to the same line, then they are parallel to each other. (p. 192)

4.1 Triangle Sum Theorem
The sum of the measures of the interior angles of a triangle is 180°. (p. 218)

Corollary
The acute angles of a right triangle are complementary. (p. 220)

4.2 Exterior Angle Theorem
The measure of an exterior angle of a triangle is equal to the sum of the measures of the two nonadjacent interior angles. (p. 219)

4.3 Third Angles Theorem
If two angles of one triangle are congruent to two angles of another triangle, then the third angles are also congruent. (p. 227)

4.4 Properties of Triangle Congruence
Triangle congruence is reflexive, symmetric, and transitive.

Reflexive: For any \( \triangle ABC, \triangle ABC \cong \triangle ABC \).
Symmetric: If \( \triangle ABC \cong \triangle DEF \), then \( \triangle DEF \cong \triangle ABC \).
Transitive: If \( \triangle ABC \cong \triangle DEF \) and \( \triangle DEF \cong \triangle JKL \), then \( \triangle ABC \cong \triangle JKL \). (p. 228)
4.5 Hypotenuse-Leg (HL) Congruence Theorem If the hypotenuse and a leg of a right triangle are congruent to the hypotenuse and a leg of a second right triangle, then the two triangles are congruent. (p. 241)

4.6 Angle-Angle-Side (AAS) Congruence Theorem If two angles and a non-included side of one triangle are congruent to two angles and the corresponding non-included side of a second triangle, then the two triangles are congruent. (p. 249)

4.7 Base Angles Theorem If two sides of a triangle are congruent, then the angles opposite them are congruent. (p. 264)

Corollary If a triangle is equilateral, then it is equiangular. (p. 265)

4.8 Converse of the Base Angles Theorem If two angles of a triangle are congruent, then the sides opposite them are congruent. (p. 264)

Corollary If a triangle is equiangular, then it is equilateral. (p. 265)

5.1 Midsegment Theorem The segment connecting the midpoints of two sides of a triangle is parallel to the third side and is half as long as that side. (p. 295)

5.2 Perpendicular Bisector Theorem If a point is on a perpendicular bisector of a segment, then it is equidistant from the endpoints of the segment. (p. 303)

5.3 Converse of the Perpendicular Bisector Theorem If a point is equidistant from the endpoints of a segment, then it is on the perpendicular bisector of the segment. (p. 303)

5.4 Concurrency of Perpendicular Bisectors Theorem The perpendicular bisectors of a triangle intersect at a point that is equidistant from the vertices of the triangle. (p. 305)

5.5 Angle Bisector Theorem If a point is on the bisector of an angle, then it is equidistant from the two sides of the angle. (p. 310)

5.6 Converse of the Angle Bisector Theorem If a point is in the interior of an angle and is equidistant from the sides of the angle, then it lies on the bisector of the angle. (p. 310)

5.7 Concurrency of Angle Bisectors of a Triangle The angle bisectors of a triangle intersect at a point that is equidistant from the sides of the triangle. (p. 312)

5.8 Concurrency of Medians of a Triangle The medians of a triangle intersect at a point that is two thirds of the distance from each vertex to the midpoint of the opposite side. (p. 319)

5.9 Concurrency of Altitudes of a Triangle The lines containing the altitudes of a triangle are concurrent. (p. 320)

5.10 If one side of a triangle is longer than another side, then the angle opposite the longer side is larger than the angle opposite the shorter side. (p. 328)

5.11 If one angle of a triangle is larger than another angle, then the side opposite the larger angle is longer than the side opposite the smaller angle. (p. 328)

5.12 Triangle Inequality Theorem The sum of the lengths of any two sides of a triangle is greater than the length of the third side. (p. 330)

5.13 Hinge Theorem If two sides of one triangle are congruent to two sides of another triangle, and the included angle of the first is larger than the included angle of the second, then the third side of the first is longer than the third side of the second. (p. 335)

5.14 Converse of the Hinge Theorem If two sides of one triangle are congruent to two sides of another triangle, and the third side of the first is longer than the third side of the second, then the included angle of the first is larger than the included angle of the second. (p. 335)

6.1 If two polygons are similar, then the ratio of their perimeters is equal to the ratios of their corresponding side lengths. (p. 374)

6.2 Side-Side-Side (SSS) Similarity Theorem If the corresponding side lengths of two triangles are proportional, then the triangles are similar. (p. 388)

6.3 Side-Angle-Side (SAS) Similarity Theorem If an angle of one triangle is congruent to an angle of a second triangle and the lengths of the sides including these angles are proportional, then the triangles are similar. (p. 390)

6.4 Triangle Proportionality Theorem If a line parallel to one side of a triangle intersects the other two sides, then it divides the two sides proportionally. (p. 397)

6.5 Converse of the Triangle Proportionality Theorem If a line divides two sides of a triangle proportionally, then it is parallel to the third side. (p. 397)
6.6 If three parallel lines intersect two transversals, then they divide the transversals proportionally. \( (p. 398) \)

6.7 If a ray bisects an angle of a triangle, then it divides the opposite side into segments whose lengths are proportional to the lengths of the other two sides. \( (p. 398) \)

7.1 **Pythagorean Theorem** In a right triangle, the square of the length of the hypotenuse is equal to the sum of the squares of the lengths of the legs. \( (p. 433) \)

7.2 **Converse of the Pythagorean Theorem** If the square of the length of the longest side of a triangle is equal to the sum of the squares of the lengths of the other two sides, then the triangle is a right triangle. \( (p. 441) \)

7.3 If the sum of the lengths of the two legs of a right triangle is greater than the length of the hypotenuse, then the triangle is an acute triangle. \( (p. 442) \)

7.4 If the sum of the lengths of the two legs of a right triangle is less than the length of the hypotenuse, then the triangle is an obtuse triangle. \( (p. 442) \)

7.5 If the altitude is drawn to the hypotenuse of a right triangle, then the two triangles formed are similar to the original triangle and to each other. \( (p. 449) \)

7.6 **Geometric Mean (Altitude) Theorem** In a right triangle, the altitude from the right angle to the hypotenuse divides the hypotenuse into two segments. The length of the altitude is the geometric mean of the lengths of the two segments. \( (p. 452) \)

7.7 **Geometric Mean (Leg) Theorem** In a right triangle, the altitude from the right angle to the hypotenuse divides the hypotenuse into two segments. The length of each leg of the right triangle is the geometric mean of the lengths of hypotenuse and the segment of the hypotenuse that is adjacent to the leg. \( (p. 452) \)

7.8 **45°-45°-90° Triangle Theorem** In a 45°-45°-90° triangle, the hypotenuse is \( \sqrt{2} \) times as long as each leg. \( (p. 457) \)

7.9 **30°-60°-90° Triangle Theorem** In a 30°-60°-90° triangle, the hypotenuse is twice as long as the shorter leg, and the longer leg is \( \sqrt{3} \) times as long as the shorter leg. \( (p. 459) \)

8.1 **Polygon Interior Angles Theorem** The sum of the measures of the interior angles of a convex \( n \)-gon is \( (n - 2) \cdot 180° \). \( (p. 507) \)

**Corollary** The sum of the measures of the interior angles of a quadrilateral is 360°. \( (p. 507) \)

8.2 **Polygon Exterior Angles Theorem** The sum of the measures of the exterior angles of a convex polygon, one angle at each vertex, is 360°. \( (p. 509) \)

8.3 If a quadrilateral is a parallelogram, then its opposite sides are congruent. \((p. 515)\)

8.4 If a quadrilateral is a parallelogram, then its opposite angles are congruent. \((p. 515)\)

8.5 If a quadrilateral is a parallelogram, then its consecutive angles are supplementary. \((p. 516)\)

8.6 If a quadrilateral is a parallelogram, then its diagonals bisect each other. \((p. 517)\)

8.7 If both pairs of opposite sides of a quadrilateral are congruent, then the quadrilateral is a parallelogram. \((p. 522)\)

8.8 If both pairs of opposite angles of a quadrilateral are congruent, then the quadrilateral is a parallelogram. \((p. 522)\)

8.9 If one pair of opposite sides of a quadrilateral are congruent and parallel, then the quadrilateral is a parallelogram. \((p. 523)\)

8.10 If the diagonals of a quadrilateral bisect each other, then the quadrilateral is a parallelogram. \((p. 523)\)

**Rhombus Corollary** A quadrilateral is a rhombus if and only if it has four congruent sides. \((p. 533)\)

**Rectangle Corollary** A quadrilateral is a rectangle if and only if it has four right angles. \((p. 533)\)

**Square Corollary** A quadrilateral is a square if and only if it is a rhombus and a rectangle. \((p. 533)\)

8.11 A parallelogram is a rhombus if and only if its diagonals are perpendicular. \((p. 535)\)

8.12 A parallelogram is a rhombus if and only if each diagonal bisects a pair of opposite angles. \((p. 535)\)

8.13 A parallelogram is a rectangle if and only if its diagonals are congruent. \((p. 535)\)

8.14 If a trapezoid is isosceles, then both pairs of base angles are congruent. \((p. 543)\)

8.15 If a trapezoid has a pair of congruent base angles, then it is an isosceles trapezoid. \((p. 543)\)
8.16 A trapezoid is isosceles if and only if its diagonals are congruent. (p. 543)

8.17 **Midsegment Theorem for Trapezoids** The midsegment of a trapezoid is parallel to each base and its length is one half the sum of the lengths of the bases. (p. 544)

8.18 If a quadrilateral is a kite, then its diagonals are perpendicular. (p. 545)

8.19 If a quadrilateral is a kite, then exactly one pair of opposite angles are congruent. (p. 545)

9.1 **Translation Theorem** A translation is an isometry. (p. 573)

9.2 **Reflection Theorem** A reflection is an isometry. (p. 591)

9.3 **Rotation Theorem** A rotation is an isometry. (p. 601)

9.4 **Composition Theorem** The composition of two (or more) isometries is an isometry. (p. 609)

9.5 **Reflections in Parallel Lines** If lines $k$ and $m$ are parallel, then a reflection in line $k$ followed by a reflection in line $m$ is the same as a translation. If $P'$ is the image of $P$, then:

1. $PP'$ is perpendicular to $k$ and $m$, and
2. $PP'' = 2d$, where $d$ is the distance between $k$ and $m$. (p. 609)

9.6 **Reflections in Intersecting Lines** If lines $k$ and $m$ intersect at point $P$, then a reflection in $k$ followed by a reflection in $m$ is the same as a rotation about point $P$. The angle of rotation is $2x^\circ$, where $x^\circ$ is the measure of the acute or right angle formed by $k$ and $m$. (p. 610)

10.1 In a plane, a line is tangent to a circle if and only if the line is perpendicular to a radius of the circle at its endpoint on the circle. (p. 653)

10.2 Tangent segments from a common external point are congruent. (p. 654)

10.3 In the same circle, or in congruent circles, two minor arcs are congruent if and only if their corresponding chords are congruent. (p. 664)

10.4 If one chord is a perpendicular bisector of another chord, then the first chord is a diameter. (p. 665)

10.5 If a diameter of a circle is perpendicular to a chord, then the diameter bisects the chord and its arc. (p. 665)

10.6 In the same circle, or in congruent circles, two chords are congruent if and only if they are equidistant from the center. (p. 666)

10.7 **Measure of an Inscribed Angle Theorem** The measure of an inscribed angle is one half the measure of its intercepted arc. (p. 672)

10.8 If two inscribed angles of a circle intercept the same arc, then the angles are congruent. (p. 673)

10.9 If a right triangle is inscribed in a circle, then the hypotenuse is a diameter of the circle. Conversely, if one side of an inscribed triangle is a diameter of the circle, then the triangle is a right triangle and the angle opposite the diameter is the right angle. (p. 674)

10.10 A quadrilateral can be inscribed in a circle if and only if its opposite angles are supplementary. (p. 675)

10.11 If a tangent and a chord intersect at a point on a circle, then the measure of each angle formed is one half the measure of its intercepted arc. (p. 680)

10.12 **Angles Inside the Circle** If two chords intersect inside a circle, then the measure of each angle is one half the sum of the measures of the arcs intercepted by the angle and its vertical angle. (p. 681)

10.13 **Angles Outside the Circle** If a tangent and a secant, two tangents, or two secants intersect outside a circle, then the measure of the angle formed is one half the difference of the measures of the intercepted arcs. (p. 681)

10.14 **Segments of Chords Theorem** If two chords intersect in the interior of a circle, then the product of the lengths of the segments of one chord is equal to the product of the lengths of the segments of the other chord. (p. 689)

10.15 **Segments of Secants Theorem** If two secant segments share the same endpoint outside a circle, then the product of the lengths of one secant segment and its external segment equals the product of the lengths of the other secant segment and its external segment. (p. 690)

10.16 **Segments of Secants and Tangents Theorem** If a secant segment and a tangent segment share an endpoint outside a circle, then the product of the lengths of the secant segment and its external segment equals the square of the length of the tangent segment. (p. 691)

11.1 **Area of a Rectangle** The area of a rectangle is the product of its base and height. $A = bh$ (p. 720)
11.2 Area of a Parallelogram The area of a parallelogram is the product of a base and its corresponding height. \( A = bh \) (p. 721)

11.3 Area of a Triangle The area of a triangle is one half the product of a base and its corresponding height. \( A = \frac{1}{2}bh \) (p. 721)

11.4 Area of a Trapezoid The area of a trapezoid is one half the product of the height and the sum of the lengths of the bases. \( A = \frac{1}{2}(b_1 + b_2)(p. 730) \)

11.5 Area of a Rhombus The area of a rhombus is one half the product of the lengths of its diagonals. \( A = \frac{1}{2}d_1d_2 \) (p. 731)

11.6 Area of a Kite The area of a kite is one half the product of the lengths of its diagonals. \( A = \frac{1}{2}d_1d_2 \) (p. 731)

11.7 Areas of Similar Polygons If two polygons are similar with the lengths of corresponding sides in the ratio of \( a : b \), then the ratio of their areas is \( a^2 : b^2 \). (p. 737)

11.8 Circumference of a Circle The circumference \( C \) of a circle is \( C = \pi d \) or \( C = 2\pi r \), where \( d \) is the diameter of the circle and \( r \) is the radius of the circle. (p. 746)

Arc Length Corollary In a circle, the ratio of the length of a given arc to the circumference is equal to the ratio of the measure of the arc to 360°.

\[
\frac{\text{Arc length of } AB}{2\pi} = \frac{m_{AB}}{360^\circ}, \text{ or } \\
\text{Arc length of } AB = \frac{m_{AB}}{360^\circ} \cdot 2\pi (p. 747)
\]

11.9 Area of a Circle The area of a circle is \( \pi \) times the square of the radius. \( A = \pi r^2 \) (p. 755)

11.10 Area of a Sector The ratio of the area \( A \) of a sector of a circle to the area of the whole circle \( (\pi r^2) \) is equal to the ratio of the measure of the intercepted arc to 360°.

\[
\frac{A}{\pi r^2} = \frac{m_{AB}}{360^\circ}, \text{ or } A = \frac{m_{AB}}{360^\circ} \cdot \pi r^2 (p. 756)
\]

11.11 Area of a Regular Polygon The area of a regular \( n \)-gon with side length \( s \) is half the product of the apothem \( a \) and the perimeter \( P \), so \( A = \frac{1}{2}aP \), or \( A = \frac{1}{2}a \cdot ns \). (p. 763)

12.1 Euler’s Theorem The number of faces \( (F) \), vertices \( (V) \), and edges \( (E) \) of a polyhedron are related by the formula \( F + V = E + 2 \). (p. 795)

12.2 Surface Area of a Right Prism The surface area \( S \) of a right prism is \( S = 2B + Ph = aP + Ph \), where \( a \) is the apothem of the base, \( B \) is the area of a base, \( P \) is the perimeter of a base, and \( h \) is the height. (p. 804)

12.3 Surface Area of a Right Cylinder The surface area \( S \) of a right cylinder is \( S = 2B + Ch = 2\pi r^2 + 2\pi rh \), where \( B \) is the area of a base, \( C \) is the circumference of a base, \( r \) is the radius of a base, and \( h \) is the height. (p. 805)

12.4 Surface Area of a Regular Pyramid The surface area \( S \) of a regular pyramid is \( S = B + \frac{1}{2}Pl \), where \( B \) is the area of the base, \( P \) is the perimeter of the base, and \( l \) is the slant height. (p. 811)

12.5 Surface Area of a Right Cone The surface area \( S \) of a right cone is \( S = B + \frac{1}{2}Ch = \pi r^2 + \pi rl \), where \( B \) is the area of the base, \( C \) is the circumference of the base, \( r \) is the radius of the base, and \( l \) is the slant height. (p. 812)

12.6 Volume of a Prism The volume \( V \) of a prism is \( V = Bh \), where \( B \) is the area of a base and \( h \) is the height. (p. 820)

12.7 Volume of a Cylinder The volume \( V \) of a cylinder is \( V = Bh = \pi r^2 h \), where \( B \) is the area of a base, \( h \) is the height, and \( r \) is the radius of a base. (p. 820)

12.8 Cavalieri’s Principle If two solids have the same height and the same cross-sectional area at every level, then they have the same volume. (p. 821)

12.9 Volume of a Pyramid The volume \( V \) of a pyramid is \( V = \frac{1}{3}Bh \), where \( B \) is the area of the base and \( h \) is the height. (p. 829)

12.10 Volume of a Cone The volume \( V \) of a cone is \( V = \frac{1}{3}Bh = \frac{1}{3}\pi r^2 h \), where \( B \) is the area of the base, \( h \) is the height, and \( r \) is the radius of the base. (p. 829)

12.11 Surface Area of a Sphere The surface area \( S \) of a sphere with radius \( r \) is \( S = 4\pi r^2 \). (p. 838)

12.12 Volume of a Sphere The volume \( V \) of a sphere with radius \( r \) is \( V = \frac{4}{3}\pi r^3 \). (p. 840)

12.13 Similar Solids Theorem If two similar solids have a scale factor of \( a : b \), then corresponding areas have a ratio of \( a^2 : b^2 \) and corresponding volumes have a ratio of \( a^3 : b^3 \). (p. 848)
Additional Proofs

Proof of Theorem 4.5
Hypotenuse-Leg (HL) Congruence Theorem

**THEOREM 4.5**
**PAGE 241**
If the hypotenuse and a leg of a right triangle are congruent to the hypotenuse and a leg of a second right triangle, then the two triangles are congruent.

**GIVEN**
- In $\triangle ABC$, $\angle C$ is a right angle.
- In $\triangle DEF$, $\angle F$ is a right angle.
- $AB \cong DE$, $AC \cong DF$

**PROVE**
- $\triangle ABC \cong \triangle DEF$

**Plan for Proof**
Construct $\triangle DGF$ with $GF \perp EG$, as shown. Prove that $\triangle ABC \cong \triangle DGF$. Then use the fact that corresponding parts of congruent triangles are congruent to show that $\triangle DGF \cong \triangle DEF$. By the Transitive Property of Congruence, you can show that $\triangle ABC \cong \triangle DEF$.

**Proof of Theorem 5.8**

**Concurrency of Medians of a Triangle**

**GIVEN** △OBC; medians \( \overline{OM}, \overline{BN}, \) and \( \overline{CQ} \)

**PROVE** The medians intersect in a point \( P; \) that point is two thirds of the distance from vertices \( O, B, \) and \( C \) to midpoints \( M, N, \) and \( Q. \)

**Plan for Proof** The medians \( \overline{OM} \) and \( \overline{BN} \) intersect at some point \( P. \) Show that point \( P \) lies on \( \overline{CQ}. \) Then show that \( OP = \frac{2}{3} OM, BP = \frac{2}{3} BN, \) and \( CP = \frac{2}{3} CQ. \)

**STEP 1** Find the equations of the lines containing the medians \( \overline{OM}, \overline{BN}, \) and \( \overline{CQ}. \)

By the Midpoint Formula,

- the coordinates of \( M \) are \( \left( \frac{6b + 6a}{2}, \frac{6c + 0}{2} \right) = (3b + 3a, 3c); \)
- the coordinates of \( N \) are \( \left( \frac{0 + 6a}{2}, \frac{0 + 0}{2} \right) = (3a, 0); \)
- the coordinates of \( Q \) are \( \left( \frac{6b + 0}{2}, \frac{6c + 0}{2} \right) = (3b, 3c). \)

By the slope formula,

- slope of \( \overline{OM} = \frac{3c - 0}{3b + 3a - 0} = \frac{3c}{3b + 3a} = \frac{c}{b + a}; \)
- slope of \( \overline{BN} = \frac{6c - 0}{6b - 3a} = \frac{6c}{6b - 3a} = \frac{2c}{2b - a}; \)
- slope of \( \overline{CQ} = \frac{0 - 3c}{6a - 3b} = \frac{-3c}{6a - 3b} = \frac{-c}{2a - b} = \frac{c}{b - 2a}. \)

Using the **point-slope form of an equation of a line**, the equation of \( \overline{OM} \) is \( y - 0 = \frac{c}{b + a}(x - 0), \) or \( y = \frac{c}{b + a}x; \)

the equation of \( \overline{BN} \) is \( y - 0 = \frac{2c}{2b - a}(x - 3a), \) or \( y = \frac{2c}{2b - a}(x - 3a); \)

the equation of \( \overline{CQ} \) is \( y - 0 = \frac{c}{b - 2a}(x - 6a), \) or \( y = \frac{c}{b - 2a}(x - 6a). \)

**STEP 2** Find the coordinates of the point \( P \) where two medians (say, \( \overline{OM} \) and \( \overline{BN} \)) intersect. Using the substitution method, set the values of \( y \) in the equations of \( \overline{OM} \) and \( \overline{BN} \) equal to each other:

- \( \frac{c}{b + a}x = \frac{2c}{2b - a}(x - 3a) \)
- \( cx(2b - a) = 2c(x - 3a)(b + a) \)
- \( 2cxb - cxa = 2cxb + 2cxa - 6cab - 6ca^2 \)
- \( -3cxa = -6cab - 6ca^2 \)
- \( x = 2b + 2a \)

Substituting to find \( y, y = \frac{c}{b + a}x = \frac{c}{b + a}(2b + 2a) = 2c. \)

So, the coordinates of \( P \) are \( (2b + 2a, 2c). \)
**STEP 3** Show that \( P \) is on \( \overline{CQ} \).

Substituting the x-coordinate for \( P \) into the equation of \( \overline{CQ} \),

\[
y = \frac{c}{b-2a}([2b + 2a] - 6a) = \frac{c}{b-2a}(2b - 4a) = 2c.
\]

So, \( P(2b + 2a, 2c) \) is on \( \overline{CQ} \) and the three medians intersect at the same point.

**STEP 4** Find the distances \( OM, OP, BN, BP, CQ, \) and \( CP \).

Use the *Distance Formula*.

\[
OM = \sqrt{(3b + 3a - 0)^2 + (3c - 0)^2} = \sqrt{(3(b + a))^2 + (3c)^2} = \\
\sqrt{9(b + a)^2 + c^2} = 3\sqrt{(b + a)^2 + c^2}
\]

\[
OP = \sqrt{(2b + 2a - 0)^2 + (2c - 0)^2} = \sqrt{(2(b + a))^2 + (2c)^2} = \\
\sqrt{4(b + a)^2 + c^2} = 2\sqrt{(b + a)^2 + c^2}
\]

\[
BN = \sqrt{(3a - 6b)^2 + (0 - 6c)^2} = \sqrt{(3a - 6b)^2 + (-6c)^2} = \\
\sqrt{(3(a - 2b))^2 + (3(-2c))^2} = \sqrt{9(a - 2b)^2 + 9(4c^2)} = \\
\sqrt{9((a - 2b)^2 + 4c^2)} = 3\sqrt{(a - 2b)^2 + 4c^2}
\]

\[
BP = \sqrt{(2b + 2a - 6b)^2 + (2c - 6c)^2} = \sqrt{(2a - 4b)^2 + (-4c)^2} = \\
\sqrt{(2(a - 2b))^2 + (2(-2c))^2} = \sqrt{4(a - 2b)^2 + 4(4c^2)} = \\
\sqrt{4((a - 2b)^2 + 4c^2)} = 2\sqrt{(a - 2b)^2 + 4c^2}
\]

\[
CQ = \sqrt{(6a - 3b)^2 + (0 - 3c)^2} = \sqrt{(3(2a - b))^2 + (-3c)^2} = \\
\sqrt{9((2a - b)^2 + c^2)} = 3\sqrt{(2a - b)^2 + c^2}
\]

\[
CP = \sqrt{(6a - (2b + 2a))^2 + (0 - 2c)^2} = \sqrt{(4a - 2b)^2 + (-2c)^2} = \\
\sqrt{(2(2a - b))^2 + 4c^2} = \sqrt{4((2a - b)^2 + c^2)} = \\
2\sqrt{(2a - b)^2 + c^2}
\]

**STEP 5** Multiply \( OM, BN, \) and \( CQ \) by \( \frac{2}{3} \).

\[
\frac{2}{3}OM = \frac{2}{3} \left(3\sqrt{(b + a)^2 + c^2}\right) \\
= 2\sqrt{(b + a)^2 + c^2}
\]

\[
\frac{2}{3}BN = \frac{2}{3} \left(3\sqrt{(a - 2b)^2 + 4c^2}\right) \\
= 2\sqrt{(a - 2b)^2 + 4c^2}
\]

\[
\frac{2}{3}CQ = \frac{2}{3} \left(3\sqrt{(2a - b)^2 + c^2}\right) \\
= 2\sqrt{(2a - b)^2 + c^2}
\]

Thus, \( OP = \frac{2}{3}OM, BP = \frac{2}{3}BN, \) and \( CP = \frac{2}{3}CQ \).
Proof of Theorem 5.9
Concurrency of Altitudes of a Triangle

**GIVEN** ▶ \( \triangle OGH \)

**PROVE** ▶ The altitudes to the sides of \( \triangle OGH \) all intersect at \( J \).

**Plan for Proof** Find the equations of the lines containing the altitudes of \( \triangle OGH \). Find the intersection point of two of these lines. Show that the intersection point is also on the line containing the third altitude.

**STEP 1** Find the slopes of the lines containing the sides \( \overline{OH} \), \( \overline{GH} \), and \( \overline{OG} \).

Slope of \( \overline{OH} = \frac{c}{b} \)    Slope of \( \overline{GH} = \frac{c}{b-a} \)    Slope of \( \overline{OG} = 0 \)

**STEP 2** Use the Slopes of Perpendicular Lines Postulate to find the slopes of the lines containing the altitudes.

Slope of line containing altitude to \( \overline{OH} \) is \( -\frac{b}{c} \)

Slope of line containing altitude to \( \overline{GH} \) is \( \frac{a}{b} \)

The line containing the altitude to \( \overline{OG} \) has an undefined slope.

**STEP 3** Use the point-slope form of an equation of a line to write equations for the lines containing the altitudes.

An equation of the line containing the altitude to \( \overline{OH} \) is

\[
y - 0 = -\frac{b}{c}(x - a), \text{ or } y = -\frac{b}{c}x + \frac{ab}{c}.
\]

An equation of the line containing the altitude to \( \overline{GH} \) is

\[
y - 0 = \frac{a}{b}(x - 0), \text{ or } y = \frac{a}{b}x - x.
\]

An equation of the vertical line containing the altitude to \( \overline{OG} \) is \( x = b \).

**STEP 4** Find the coordinates of the point \( J \) where the lines containing two of the altitudes intersect. Using substitution, set the values of \( y \) in two of the above equations equal to each other, then solve for \( x \):

\[
\begin{align*}
-\frac{b}{c}x + \frac{ab}{c} &= \frac{a}{b}x \\
\frac{ab}{c} &= \frac{a}{b}x + \frac{b}{c}x \\
\frac{ab}{c} &= \frac{a}{c}x \\
x &= b
\end{align*}
\]

Next, substitute to find \( y \):

\[
y = \frac{b}{c}x - \frac{b}{c}(b) + \frac{ab}{c} = \frac{ab - b^2}{c}.
\]

So, the coordinates of \( J \) are \( \left( b, \frac{ab - b^2}{c} \right) \).

**STEP 5** Show that \( J \) is on the line that contains the altitude to side \( \overline{OG} \). \( J \) is on the vertical line with equation \( x = b \) because its \( x \)-coordinate is \( b \). Thus, the lines containing the altitudes of \( \triangle OGH \) are concurrent.
**Proof of Theorem 8.17**  
**Midsegment Theorem for Trapezoids**

**GIVEN**  
Trapezoid $ABCD$ with midsegment $\overline{MN}$

**PROVE**  
$\overline{MN} \parallel \overline{AB}$, $\overline{MN} \parallel \overline{DC}$, 

$\overline{MN} = \frac{1}{2}(\overline{AB} + \overline{DC})$

**Plan for Proof**  
Draw $\overline{AN}$, then extend $\overline{AN}$ and $\overline{DC}$ so that they intersect at point $G$. Then prove that $\triangle ANB \cong \triangle GNC$, and use the fact that $\overline{MN}$ is a midsegment of $\triangle ADG$ to prove that $\overline{MN} = \frac{1}{2}(\overline{AB} + \overline{DC})$.

</table>
**Proof of Theorem 10.10**  
**A Theorem about Inscribed Quadrilaterals**

**STEP 1** Prove that if a quadrilateral is inscribed in a circle, then its opposite angles are supplementary.

**GIVEN** ▶ $DEFG$ is inscribed in $\odot C$.

**PROVE** ▶ $\angle D$ and $\angle F$ are supplementary, $\angle E$ and $\angle G$ are supplementary.

**Paragraph Proof**  
Arcs $EFG$ and $GDE$ together make a circle, so $m\widehat{EFG} + m\widehat{GDE} = 360^\circ$ by the Arc Addition Postulate. $\angle D$ is inscribed in $\widehat{EFG}$ and $\angle F$ is inscribed in $\widehat{GDE}$, so the angle measures are half the arc measures. Using the Substitution and Distributive Properties, the sum of the measures of the opposite angles is

$$m\angle D + m\angle F = \frac{1}{2}m\widehat{EFG} + \frac{1}{2}m\widehat{GDE} = \frac{1}{2}(m\widehat{EFG} + m\widehat{GDE}) = \frac{1}{2}(360^\circ) = 180^\circ.$$  

So, $\angle D$ and $\angle F$ are supplementary by definition. Similarly, $\angle E$ and $\angle G$ are inscribed in $\widehat{FGD}$ and $\widehat{DEF}$ and $m\angle E + m\angle G = 180^\circ$. Then $\angle E$ and $\angle G$ are supplementary by definition.

**STEP 2** Prove that if the opposite angles of a quadrilateral are supplementary, then the quadrilateral can be inscribed in a circle.

**GIVEN** ▶ $\angle E$ and $\angle G$ are supplementary (or $\angle D$ and $\angle F$ are supplementary).

**PROVE** ▶ $DEFG$ is inscribed in $\odot C$.

**Plan for Proof**  
Draw the circle that passes through $D, E,$ and $F$. Use an *indirect proof* to show that the circle also passes through $G$. Begin by assuming that $G$ does not lie on $\odot C$.

**Case 1** $G$ lies inside $\odot C$. Let $H$ be the intersection of $DG$ and $\odot C$. Then $DEFH$ is inscribed in $\odot C$ and $\angle E$ is supplementary to $\angle DHF$ (by proof above). Then $\angle DGF \cong \angle DHF$ by the given information and the Congruent Supplements Theorem. This implies that $\overline{FG} \parallel \overline{FH}$, which is a contradiction.

**Case 2** $G$ lies outside $\odot C$. Let $H$ be the intersection of $DG$ and $\odot C$. Then $DEFH$ is inscribed in $\odot C$ and $\angle E$ is supplementary to $\angle DHF$ (by proof above). Then $\angle DGF \cong \angle DHF$ by the given information and the Congruent Supplements Theorem. This implies that $\overline{FG} \parallel \overline{FH}$, which is a contradiction.

Because the original assumption leads to a contradiction in both cases, $G$ lies on $\odot C$ and $DEFG$ is inscribed in $\odot C$. 

THEOREM 10.10  
PAGEx675  
A quadrilateral can be inscribed in a circle if and only if its opposite angles are supplementary.

Selected Answers

Chapter 1

1.1 Skill Practice (pp. 5–7)  
1. a. point Q; b. line segment MN  
c. ray ST  
d. line FG  
e. line g  
5. Sample answer: points R, Q, S; point T  
7. Yes; through any three points not on the same line, there is exactly one plane.  
9. \( \overrightarrow{VY}, \overrightarrow{VX}, \overrightarrow{VZ}, \overrightarrow{VV} \)  
11. \( \overrightarrow{WX} \)

23. Sample:

25. Sample:

27. on the line  
29. not on the line  
31. on the line  
33. -1  
35. -8  

1.1 Problem Solving (pp. 7–8)  
41. intersection of a line and a plane  
43. Four points are not necessarily coplanar; no; three points determine a unique plane.  
45. a–c.

1.2 Skill Practice (pp. 12–13)  
1. \( MN \) means segment \( MN \) while \( MN \) is the length of \( \overline{MN} \).  
3. 2.1 cm  
5. 3.5 cm  
7. 44  
9. 23  
11. 13  
13. congruent  
15. not congruent  
17. 7  
19. 9  
21. 10  
23. 20  
25. 30  
29. \( 3x - 16 \) + \( 4x - 8 \) = 60; 12; 20; 40

1.2 Problem Solving (pp. 13–14)  
33. a. 1883 mi; b. about 50 mi/h  
35. a. Sample:  

1.3 Skill Practice (pp. 19–20)  
3. \( 10 \frac{1}{4} \) in.  
5. 26 cm  
7. 4 \( \frac{3}{4} \) in.  
9. 2 \( \frac{3}{8} \) in.  
11. 10  
13. 1  
15. 70  
17. (5, 5)  
19. (1, 4)  
21. \( \left[ 1 \frac{1}{2}, -1 \right] \)  
23. \( \left( \frac{m \cdot n}{2}, \frac{n}{2} \right) \)  
when \( x_1 \) and \( y_1 \) are replaced by zero in the Midpoint Formula and \( x_1 \) and \( y_1 \) are replaced by \( m \) and \( n \) the result is \( \left( \frac{m}{2}, \frac{n}{2} \right) \).  
25. \( (-3, 10) \)  
27. (4, 8)  
29. \( (-18, 22) \)

31. 4.5  
33. 5.7  
35. 7; \( -\frac{1}{2} \) \( 40 \); 5  
39. 9; \( -\frac{3}{2} \) \( 2 \)

43. \( AB = 3\sqrt{5}, CD = 2\sqrt{10} \); not congruent  
45. \( JK = 8\sqrt{2}, LM = \sqrt{130} \); not congruent

1.3 Problem Solving (pp. 21–22)  
49. House  
Library  
School  
2.85 km

51. objects \( B \) and \( D \); objects \( A \) and \( C \)

1.4 Skill Practice (pp. 28–31)  
1. Sample:

3. \( \angle ABC, \angle B, \angle CBA; B, \overrightarrow{BA}, \overrightarrow{BC} \)  
5. \( \angle MTP, \angle T, \angle PTM; T, \overrightarrow{TM}, \overrightarrow{TP} \)  
7. straight  
9. right  
11. 90°; right  
13. 135°; obtuse  
15–19. Sample answers are given.  
15. \( \angle BCA \); right  
17. \( \angle DFB \); straight  
19. \( \angle CDB \); acute  
23. 65°  
25. 55°  
29. \( m \angle XWY = 104°, m \angle ZWY = 52° \)

Selected Answers
31. \( m \angle XWZ = 35.5^\circ \), \( m \angle YWZ = 35.5^\circ \) 33. 38° 35. 142° 37. 53°
39. If a ray bisects \( \angle AGC \) its vertex must be at point \( G \). Sample:

41. 80° 43. 75°; both angle measures are 5° less.
45.

\[ \text{Acute. Sample answer: } (-2, 0) \]

47.

\[ \text{Obtuse. Sample answer: } (2, 0) \]

1.4 Problem Solving (pp. 31–32) 51. 34° 53. a. 112° b. 56° c. 56° d. 56° 55. Sample answer: acute: \( \angle ABG \), obtuse: \( \angle ABC \), right: \( \angle DGE \), straight: \( \angle DGF \)
57. about 140° 59. about 62° 61. about 107°

1.5 Skill Practice (pp. 38–40)
1. No. Sample answer: Any two angles whose angle measures add up to 90° are complementary, but they do not have to have a common vertex and side.
3. adjacent 5. adjacent 7. \( \angle GLH \) and \( \angle HLI \), \( \angle GLJ \) and \( \angle JLK \) 9. 69° 11. 85° 13. 25° 15. 153° 17. 135°, 45° 19. 54°, 36° 21. linear pair 23. vertical angles 25. linear pair 27. neither 29. The angles are complementary so they should be equal to 90°; \( x + 3x = 90^\circ \), \( 4x = 90 \), \( x = 22.5 \). 31. 10, 35 33. 55, 30 35. Never; a straight angle is 180°, and it is not possible to have a supplement of an angle that is 180°.
37. Always; the sum of complementary angles is 90°, so each angle must be less than 90°, making them acute. 39. 71°, 19° 41. 68°, 22° 43. 58°, 122°

1.5 Problem Solving (pp. 40–41) 47. neither 49–51. Sample answers are given. 49. \( \angle FGB \), \( \angle BGC \) 51. \( \angle AGE \), \( \angle EGD \) 53. Sample answer: Subtract 90° from \( m \angle FGB \). 55. a. \( y_1 = 90 - x \), \( 0 < x < 90 \);
\( y_2 = 180 - x \), \( 0 < x < 180 \); the measure of the complement must be less than 90° and the measure of its supplement must be less than 180°.

55. b.  55. c.  

1.6 Skill Practice (pp. 44–46) 1. \( n \) is the number of sides of a polygon. 3. polygon; concave 5. polygon; convex 9. Pentagon; regular; it has 5 congruent sides and angles. 11. Triangle; neither; the sides and/or the angles are not all congruent. 13. Quadrilateral; equiangular; it has 4 sides and 4 congruent angles. 15. 8 in. 17. 3 ft 19. sometimes 21. never 23. never

25. Sample: 27. Sample:

29. 1

1.6 Problem Solving (pp. 46–47) 33. triangle; regular 35. octagon; regular 39. 105 mm; each side of the button is 15 millimeters long, so the perimeter of the button is 15(7) = 105 millimeters. 41. a. 3 b. 5 c. 6 d. 8

1.7 Skill Practice (pp. 52–54) 1. Sample answer: The diameter is twice the radius. 3. \( \frac{52(9)}{2} = 234 \text{ ft} \). 5. 22.4 m, 29.4 m²
7. 180 yd, 1080 yd² 9. 36 cm, 36 cm² 11. 84.8 cm, 572.3 cm² 13. 76.0 cm, 459.7 cm² 15. 59.3 cm, 280.4 cm²

17. 12.4 21. 1.44 23. 8,000,000 25. 3,456 27. 14.5 m 29. 4.5 in. 31. 6 in., 3 in. 33. Octagon; dodecagon; the square has 4 sides, so a polygon with the same side length and twice the perimeter would have to have 4(4) = 8 sides, an octagon; a polygon with the same side length and three times the perimeter would have to have 4(3) = 12 sides, a dodecagon. 35. \( \sqrt{346} \) in. 37. 5\( \sqrt{42} \) km

1.7 Problem Solving (pp. 54–56) 41. 1350 yd²; 450 ft 43. a. 15 in. b. 6 in.; the spoke is 21 inches long from the center to the tip, and it is 15 inches from the center to the outer edge, so 21 – 15 = 6 inches is the length of the handle.
45. a. 106.4 m²  b. 380 rows, 175 columns. *Sample answer:* The panel is 1520 centimeters high and each module is 4 centimeters so there are 1520 \div 4 = 380 rows; the panel is 700 centimeters wide and each module is 4 centimeters therefore there are 700 \div 4 = 175 columns.

**1.7 Problem Solving Workshop (p. 57)**

1. 2.4 h 3. $26,730$

**Chapter Review (pp. 60–63)**

1. endpoints 3. midpoint

5. *Sample answer:* points $P, Y, Z$ 7. $YZ, YX$ 9. 1.2

11. 7 13. 16 15. 8.6; (3.5, 3.5) 17. 16.4; (5, −0.5)

19. 5 21. 162°; obtuse 23. 7° 25. 88° 27. 124° 29. 168° 31. 92°, 88°; obtuse 33. Quadrilateral; equiangular; it has four congruent angles but its four sides are not all congruent. 35. 21 37. 14 in., 11.3 in.² 39. 5 m

**Algebra Review (p. 65)**

1. 6 3. −2 5. $\frac{1}{2}$ 7. 4 9. −11

11. 17 people

**Chapter 2**

**2.1 Skill Practice (pp. 75–76)**

1. *Sample answer:* A guess based on observation

3. The numbers are 4 times the previous number; 768. 9. The rate of decrease is increasing by 1; −6. 11. The numbers are increasing by successive multiples of 3; 25. 13. even

15. *Sample answer:* $(3 + 4)^2 = 7^2 = 49 \neq 3^2 + 4^2 = 9 + 16 = 25$ 17. *Sample answer:* $3 \times 6 = 18$ 19. To be true, a conjecture must be true for all cases. 21. $y = 2x$

23. Previous numerator becomes the next denominator while the numerator is one more than the denominator; $\frac{6}{5}$

25. 0.25 is being added to each number; 1.45.

27. Multiply the first number by 10 to get the second number, take half of the second number to get the third number, and repeat the pattern; 500.

29. $r > 1$; 0 < $r < 1$; raising numbers greater than one by successive natural numbers increases the result while raising a number between 0 and 1 by successive natural numbers decreases the result.

**2.1 Problem Solving (pp. 77–78)**

33. *Sample answer:* The number of e-mail messages will increase in 2004; the number of e-mail messages has increased for the past 7 years.

35. a. $x$ \quad $y$

\begin{align*}
-3 & \quad -5 \\
0 & \quad 1 \\
5 & \quad 11 \\
7 & \quad 15 \\
12 & \quad 25 \\
15 & \quad 31
\end{align*}

b. c. Double the value of $x$ and add 1 to the result, $y = 2x + 1$.

37. a. sum, two  b. 144, 233, 377  c. *Sample answer:* spiral patterns on the head of a sunflower

**2.2 Skill Practice (pp. 82–84)**

1. converse 3. If $x = 6$, then $x^2 = 36$. 5. If a person is registered to vote, then they are allowed to vote. 7. If an angle is a right angle, then its angle measure is 90°; if an angle measures 90°, then it is a right angle; if an angle is not a right angle, then it does not measure 90°; if an angle does not measure 90°, then it is not a right angle.

9. If $3x + 10 = 16$, then $x = 2$; if $x = 2$, then $3x + 10 = 16$; if $3x + 10 \neq 16$, then $x \neq 2$; if $x \neq 2$, then $3x + 10 \neq 16$.

11. False. *Sample answer:*

13. False. *Sample answer:* $m \angle ABC = 60°$, $m \angle GEF = 120°$ 15. False. *Sample answer:* $2$

17. False; there is no indication of a right angle in the diagram. 19. An angle is obtuse if and only if its measure is between 90° and 180°. 21. Points are coplanar if and only if they lie on the same plane.

23. good definition 27. If $-x > -6$, then $x < 6$; true. 29. *Sample answer:* If the dog sits, she gets a treat.

**2.2 Problem Solving (pp. 84–85)**

31. true 33. Find a counterexample. *Sample answer:* Tennis is a sport but the participants do not wear helmets. 35. *Sample answer:* If a student is a member of the Jazz band, then the student is a member of the Band but not the Chorus. 37. no

**2.3 Skill Practice (pp. 90–91)**

1. Detachment

3. *Sample answer:* The door to this room is closed.

5. $-15 < -12$ 7. If a rectangle has four equal side lengths, then it is a regular polygon. 9. If you play the clarinet, then you are a musician. 11. The sum is even; the sum of two even integers is even; $2n$ and $2m$ are even, $2n + 2m = 2(m + n)$, $2(n + m)$ is even.

Selected Answers  SA3
13. Linear pairs are not the only pairs of angles that are supplementary; angles \( C \) and \( D \) are supplementary, the sum of their measures is \( 180^\circ \).

2.3 Problem Solving (pp. 91–93)
17. You will get a raise if the revenue is greater then its cost.
19. is 

1.3 Problem Solving (pp. 91–93)
17. You will get a raise if the revenue is greater than its cost.

2.3 Problem Solving (pp. 91–93)
19. is 

Extension (p. 95)
1. \( \sim q \rightarrow \sim p \)
3. Polygon \( ABCDE \) is not equiangular and not equilateral.
5. Polygon \( ABCDE \) is equiangular and equilateral if and only if it is a regular polygon.
7. No; it is false when the hypothesis is true while the conclusion is false.

2.4 Skill Practice (pp. 99–100)
1. line perpendicular to a plane
3. Postulate 5
5. a. If three points are not collinear, then there exists exactly one plane that contains all three points.

2.5 Skill Practice (pp. 108–109)
1. Reflexive Property of Equality for Angle Measure
7. \( 4x + 9 = 16 - 3x \) Given

27. \( \text{Sample answer:} \) Postulate 9 guarantees three noncollinear points on a plane while Postulate 5 guarantees that through any two there exist exactly one line therefore there exists at least one line in the plane.

2.4 Problem Solving (pp. 101–102)
31. Postulate 7
33. \( \text{Sample answer:} \) A stoplight with a red, yellow, and green light.
35. \( \text{Sample answer:} \) A line passing through the second row of the pyramid.

2.4 Problem Solving (pp. 101–102)
37. \( \text{Sample answer:} \) The person at the top and the two people at each end of the bottom row.

39. a. \( \text{Sample:} \)

2.4 Problem Solving (pp. 101–102)
39. b. Building A  c. right angle  d. No; since \( \angle CAE \) is obtuse, Building E must be on the east side of Building A  e. Street 1

41. They must be collinear. \( \text{Sample:} \)

43. They must be noncollinear. \( \text{Sample:} \)
9. \(3(2x + 11) = 9\)  
   \(6x + 33 = 9\)  
   \(6x = -24\)  
   \(x = -4\)  
   Division Property of Equality

11. \(44 - 2(3x + 4) = -18x\)  
   Given  
   \(44 - 6x - 8 = -18x\)  
   Distributive Property  
   \(36 - 6x = -18x\)  
   Simplify.  
   \(36 = -12x\)  
   Addition Property of Equality  
   \(-3 = x\)  
   Division Property of Equality

13. \(2x - 15 - x = 21 + 10x\)  
   Given  
   \(x - 15 = 21 + 10x\)  
   Simplify.  
   \(-15 = 21 + 9x\)  
   Subtraction Property of Equality  
   \(-36 = 9x\)  
   Subtraction Property of Equality  
   \(-4 = x\)  
   Division Property of Equality

15. \(5x + y = 18\)  
   Given  
   \(y = 18 - 5x\)  
   Subtraction Property of Equality

17. \(12 - 3y = 30x - 12\)  
   Given  
   \(-9y = 30x - 12\)  
   Subtraction Property of Equality  
   \(y = 30x - 12\)  
   Division Property of Equality  
   \(-3 = \frac{30x - 12}{3}\)  
   Simplify.  
   \(-3 = 10x + 4\)  
   Simplify.

19. \(2y + 0.5x = 16\)  
   Given  
   \(2y = -0.5x + 16\)  
   Subtraction Property of Equality  
   \(y = -\frac{0.5x + 16}{2}\)  
   Division Property of Equality  
   \(y = -0.25x + 8\)  
   Simplify.

21. \(20 + CD\)  
   23. \(AB, CD\)  
   25. \(m \angle 1 = m \angle 3\)  
   27. Sample answer: Look in the mirror and see your reflection; 12 in. = 1 ft, so 1 ft = 12 in.; 10 pennies = 1 dime and 1 dime = 2 nickels, so 10 pennies = 2 nickels.

29. \(AD = CB\)  
   Given  
   \(DC = BA\)  
   Given  
   \(AC = AC\)  
   Reflexive Property of Congruence  
   \(AD + DC = CB + DC\)  
   Addition Property of Equality  
   \(AD + DC = CB + BA\)  
   Substitution  
   \(AD + DC + AC = CB + BA + AC\)  
   Addition Property of Equality  

2.6 Skill Practice (pp. 116–117)  
1. A theorem is a statement that can be proven; a postulate is a rule that is accepted without proof.  
3. Substitution; 4. \(AC = 11\)  
5. \(SE\)  
7. \(\angle J, \angle L\)  
9. Reflexive Property of Congruence  
11. Reflexive Property of Congruence  
13. The reason is the Transitive Property of Congruence, not the Reflexive Property of Congruence.

17. **Equation**  
   **Explanation**  
   **Reason**  
   \(\overline{QR} \cong \overline{PQ}\)  
   Write original statement.  
   Given

   2x + 5 = 10 - 3x  
   Marked in original statement.  
   Transitive Property of Congruent Segments

   \(5x + 5 = 10\)  
   Add 3x to each side.  
   Division Property of Equality

   \(5x = 5\)  
   Subtract 5 from each side.  
   Subtraction Property of Equality

   \(x = 1\)  
   Divide each side by 5.  
   Division Property of Equality

19. A proof is deductive reasoning because it uses facts, definitions, accepted properties, and laws of logic.

2.6 Problem Solving (pp. 118–119)  
21. Definition of angle bisector; 4. Transitive Property of Congruence

23. **Statements**  
   **Reasons**  
   1. \(2AB = AC\)  
      1. Given
   2. \(AC = AB + BC\)  
      2. Segment Addition Postulate
   3. \(2AB = AB + BC\)  
      3. Transitive Property of Segment Equality
   4. \(AB = BC\)  
      4. Subtraction Property of Equality

25. **Statements**  
   **Reasons**  
   1. \(A\) is an angle.  
      1. Given
   2. \(m \angle A = m \angle A\)  
      2. Reflexive Property of Equality
   3. \(\angle A \equiv \angle A\)  
      3. Definition of congruent angles
27. Equiangular; the Transitive Property of Congruent Angles implies $m\angle 1 = m\angle 3$, so all angle measures are the same.

29. a. (Image)

b. Given: $RS \cong CF$, $SM = MC = FD$, Prove: $RM \cong CD$

<table>

43. Statements | Reasons
--- | ---
1. \( \angle QRS \) and \( \angle PSR \) are supplementary. | 1. Given
2. \( \angle QRS \) and \( \angle QRL \) are a linear pair. | 2. Definition of linear pair
3. \( \angle QRS \) and \( \angle QRL \) are supplementary. | 3. Definition of linear pair
4. \( \angle QRL \) and \( \angle PSR \) are supplementary. | 4. Congruent Supplements Theorem

45. a. \[\text{Diagram of a triangle with angles and bisectors.}\]

45. b. \( \angle STV \) is bisected by \( TW \), and \( TX \) and \( TW \) are opposite rays, \( \angle STX \equiv \angle VTX \)

45. c. Statements | Reasons
--- | ---
1. \( \angle STV \) is bisected by \( TW \); \( TX \) and \( TW \) are opposite rays. | 1. Given
2. \( \angle STW \equiv \angle VTW \) | 2. Definition of angle bisector
3. \( \angle VTW \) and \( \angle VTX \) are a linear pair; \( \angle STW \) and \( \angle STX \) are a linear pair. | 3. Definition of linear pair
4. \( \angle VTW \) and \( \angle VTX \) are supplementary; \( \angle STW \) and \( \angle STX \) are supplementary. | 4. Definition of linear pair
5. \( \angle STW \) and \( \angle VTX \) are supplementary. | 5. Substitution
6. \( \angle STX \equiv \angle VTX \) | 6. Congruent Supplements Theorem

**Chapter Review (pp. 134–137)** 1. theorem
3. \( m \angle A = m \angle C \) 5. Sample answer: \(-\frac{10}{2} = 5\)
7. Yes. Sample answer: This is the definition for complementary angles. \( \angle B \) measures 90°.
11. The sum of two odd integers is even. Sample answer: \( 7 + 1 = 8; 2n + 1 \) and \( 2m + 1 \) are odd, but their sum \((2n + 1) + (2m + 1) = 2m + 2n + 2 = 2(m + n + 1) \) is even.

**Chapter 3**

3.1 Skill Practice (pp. 150–151) 1. transversal \( \overline{AB} \)
5. \( \overline{BF}, \overline{MK}, \overline{LS} \) 9. No. Sample answer: There is no arrow indicating they are parallel. 11. \( \angle 1 \) and \( \angle 5 \), \( \angle 3 \) and \( \angle 7 \), \( \angle 2 \) and \( \angle 6 \), \( \angle 4 \) and \( \angle 8 \) 13. \( \angle 1 \) and \( \angle 8 \), \( \angle 2 \) and \( \angle 7 \)
15. \( \angle 1 \) and \( \angle 8 \) are not in corresponding positions. \( \angle 1 \) and \( \angle 8 \) are alternate exterior angles.
17. 1 line
19. consecutive interior
21. alternate exterior
23. corresponding

25. never
27. sometimes

29. \( \angle CFJ, \angle HJG \) 31. \( \angle DFG, \angle CJH \)
3.1 Problem Solving (pp. 151–152) 35. skew 39. The adjacent interior angles are supplementary thus the measure of the other two angles must be 90°. 41. false

3.2 Skill Practice (pp. 157–158)
1. Sample:

3.1 Problem Solving (pp. 159–160)
37. Statements Reasons
1. p ⊥ q 1. Given
2. ∠1 ≅ ∠3 2. Corresponding Angles Postulate
3. ∠3 ≅ ∠2 3. Vertical Angles Congruence Theorem
4. ∠1 ≅ ∠4 4. Transitive Property of Angle Congruence

39. a. yes; ∠1 and ∠4, ∠1 and ∠5, ∠1 and ∠8, ∠4 and ∠5, ∠4 and ∠8, ∠5 and ∠8, ∠3 and ∠2, ∠3 and ∠7, ∠3 and ∠6, ∠2 and ∠7, ∠2 and ∠6, ∠7 and ∠6; yes; ∠1 and ∠3, ∠1 and ∠2, ∠1 and ∠6, ∠1 and ∠7, ∠2 and ∠4, ∠2 and ∠5, ∠2 and ∠8, ∠3 and ∠4, ∠3 and ∠8, ∠3 and ∠5, ∠5 and ∠6, ∠5 and ∠7, ∠6 and ∠8, ∠7 and ∠8. b. Sample answer: The transversal stays parallel to the floor.

41. Statements Reasons
1. n ⊥ p 1. Given
2. ∠1 ≅ ∠3 2. Corresponding Angles Postulate
3. ∠3 and ∠2 are supplementary. 3. Definition of linear pair
4. ∠1 and ∠2 are supplementary. 4. Substitution

3.3 Skill Practice (pp. 165–167)
1. Sample:

3.3 Problem Solving (pp. 167–169) 29. Alternate Interior Angles Converse Theorem 31. substitution, Definition of supplementary angles, Consecutive Interior Angles Theorem 33. Yes. Sample answer: 1st is parallel to 2nd by the Corresponding Angles Converse Postulate. 2nd is parallel to 3rd by the Alternate Exterior Angles Converse Theorem. 3rd is parallel to 4th by the Alternate Interior Angles Converse Theorem. They are all parallel by the Transitive Property of Parallel Lines.

35. Statements Reasons
1. a ⊥ b, ∠2 ≅ ∠3 1. Given
2. ∠2 and ∠4 are supplementary. 2. Consecutive Interior Angles Theorem
3. ∠3 and ∠4 are supplementary. 3. Substitution
4. c ⊥ d 4. Consecutive Interior Angles Converse Theorem
37. You are given that \( \angle 3 \) and \( \angle 5 \) are supplementary. By the Linear Pair Postulate, \( \angle 5 \) and \( \angle 6 \) are also supplementary. So \( \angle 3 \equiv \angle 6 \) by the Congruent Supplements Theorem. By the converse of the Alternate Interior Angles Theorem, \( m \parallel n \).

39. a. Sample answer: Corresponding Angles Converse Theorem. 
   b. Slide the triangle along a fixed horizontal line and use the edge that forms the 90° angle to draw vertical lines.

40. 41. Vertical Angles Congruence Theorem followed by the Consecutive Interior Angles Converse Postulate. 
   42. Vertical Angles Congruence Theorem followed by the Corresponding Angles Converse Postulate.

3.4 Skill Practice (pp. 175–176)  
1. The slope of a nonvertical line is the ratio of vertical change (rise) to horizontal change (run) between any two points on the line. 
2.  \( \frac{1}{2} \)  
3. 9. 0  
4. 11. Slope was computed using \( \frac{\text{rise}}{\text{run}} \), it should be \( \frac{y_2 - y_1}{x_2 - x_1} \). 
5. Perpendicular; the product of their slopes is -1. 
6. Perpendicular; the product of their slopes is -1.

17. 
18. line 2  
19. line 1

23. -2  
24. 7

27.  
28.

29.  
30.

34. Problem Solving (pp. 176–178)  
33. \( \frac{2}{3} \)

35. line b; line c. Sample:

37. a.

39. $1150 per year  
41. a. 1985 to 1990. Sample answer: about 2 million people per year.  
   b. 1995 to 2000. Sample answer: about 3 million people per year. 
   c. Sample answer: There was a moderate but steady increase in attendance for the NFL over the time period of 1985–2000.

3.5 Skill Practice (pp. 184–186)  
1. The point of intersection on the y-axis when graphing a line.

3. \( y = \frac{4}{3}x - 4 \)  
4. \( y = -\frac{3}{2}x - \frac{1}{2} \)  
5. \( y = \frac{3}{2}x - \frac{3}{2} \)  
6. \( y = \frac{3}{2}x - \frac{3}{2} \)  
7. \( y = \frac{3}{2}x - \frac{3}{2} \)  
8. \( y = \frac{3}{2}x - \frac{3}{2} \)  
9. \( y = \frac{3}{2}x - \frac{3}{2} \)  
10. \( y = \frac{3}{2}x - \frac{3}{2} \)

11. \( y = 3x + 2 \)  
12. \( y = -\frac{5}{2}x \)  
13. \( y = -\frac{11}{5}x - 12 \)  
14. \( y = 4x - 16 \)  
15. \( y = -\frac{2}{3}x - \frac{22}{3} \)  
16. \( y = 7 \)  
17. \( y = -2x - 1 \)  
18. \( y = \frac{1}{5}x + \frac{37}{5} \)  
19. \( y = -\frac{5}{2}x - 4 \)  
20. \( y = -\frac{3}{7}x + \frac{4}{7} \)  
21. \( y = \frac{1}{2}x + 2 \)  
22. \( y = -\frac{5}{2}x - 4 \)  
23. \( y = -\frac{3}{7}x + \frac{4}{7} \)  
24. \( y = \frac{1}{2}x + 10 \)

45. To find the x-intercept, let \( y = 0 \), \( 5x - 3(0) = -15 \), \( x = -3, (-3, 0) \). To find the y-intercept, let \( x = 0 \), \( 5(0) - 3y = -15 \), \( y = 5 \), \( (0, 5) \). 

47. \( y = 0.5x + 7 \) and \( -x + 2y = -5 \)  
48. 4; \( y = -x + 4 \)  
50. -20, 10; \( y = \frac{1}{2}x + 10 \)
3.5 Problem Solving (pp. 186–187)
61. \(y = 2.1x + 2000\); slope: gain in weight per day; \(y\)-intercept: starting weight before the growth spurt
63. \(2x + 3y = 24\);
\(A\): cost of a small slice; \(B\): cost of a large slice,
\(C\): amount of money you can spend
65. \(a. \ 2b + c = 13, \ 5b + 2c = 27.50\)
b. \(c. \ Sample \ answer: \ It’s \ where \ the \ number \ of \ packages \ of \ beads \ and \ the \ number \ of \ packages \ of \ clasps \ would \ be \ the \ same \ for \ both \ girls.\)

3.5 Problem Solving Workshop (p. 189)
1. 27 h
3. 115 buttons
5. \(Sample \ answer: \ In \ each \ case \ an \ equation \ modeling \ the \ situation \ was \ solved.\)

3.6 Skill Practice (pp. 194–195)
1. \(\overline{AB}; \ it’s \perpendicular \ to \ the \ parallel \ lines. \)
3. If two sides of two adjacent acute angles are perpendicular, then the angles are complementary. 5. 25° 7. 52° 9. Since the two angles labeled \(x°\) form a linear pair of congruent angles, \(r \perpendicular n\); since the two lines are perpendicular to the same line, they are parallel to each other.
11. \(Sample \ answer: \ Draw \ a \ line. \ Construct \ a \ second \ line \ perpendicular \ to \ the \ first \ line. \ Construct \ a \ third \ line \ perpendicular \ to \ the \ second \ line. \ There \ is \ no \ information \ to \ indicate \ that \ y \parallel z \ or \ y \perpendicular x. \)
13. 17. 19. \(Sample \ answer: \ Lines \ \(f\) and \(g\); they \ are \ perpendicular \ to \ line \ \(d. \)
23. 4.1 27. 2.5

3.6 Problem Solving (pp. 196–197)
29. Point \(C\); the shortest distance is the length of the perpendicular segment.
31. \(m \angle 1 + m \angle 2 = 180°; \ Definition \ of \ angle \ congruence; \ Definition \ of \ perpendicular. \)
33. \(\angle 1 \) is a right angle; Definition of perpendicular lines

27. 2  29. a. \( y = -x + 10 \)  b. \( y = x + 14 \)  31. Yes; if two lines intersect to form a linear pair of congruent angles, then the lines are perpendicular.  33. Sample answer: parallel and perpendicular lines
35. 89 mi
37. If you want the lowest television prices, then come see Matt’s TV Warehouse; if you want the lowest television prices; come see Matt’s TV Warehouse.  39. Yes. Sample answer: Transitive Property of Congruence of Segments

Chapter 4

4.1 Skill Practice (pp. 221–222)  1. C  3. F  5. B
7. No; in a right triangle, the other two angles are complementary so they are both less than 90°.  9. equilateral, equiangular
11. isosceles; right triangle

4.1 Problem Solving (pp. 223–224)  41. 2 in.; 60°; in an equilateral triangle all sides have the same length \( \frac{8}{3} \). In an equiangular triangle the angles always measure 60°.  45. 115°  47. 65°
49. a. \( 2\sqrt{2}x + 5\sqrt{2}x + 2\sqrt{2}x = 180 \)  b. 40°, 100°, 40°  c. obtuse  51. Sample answer: They both reasoned correctly but their initial plan was incorrect. The measure of the exterior angle should be 150°.

4.2 Skill Practice (pp. 228–229)

1. \( \triangle K \equiv RS, KL \equiv ST \), \( JL \equiv RT, \angle J \equiv \angle R \), \( \angle K \equiv \angle S, \angle L \equiv \angle T \)
3. \( \angle A \) and \( \angle D \), \( \angle C \) and \( \angle F \), \( \angle B \) and \( \angle E \), \( \overline{AB} \) and \( \overline{DE} \), \( \overline{AC} \) and \( \overline{DF} \), \( \overline{BC} \) and \( \overline{EF} \). Sample answer: \( \triangle CAB \equiv \triangle FDE \).  5. 124°  7. 8  9. \( \triangle ZYX \)  11. \( \triangle XYZ \equiv \triangle ZWX \); all corresponding sides and angles are congruent.  13. \( \triangle BAG \equiv \triangle CDF \); all corresponding sides and angles are congruent.  15. 20  17. Student still needs to show that corresponding sides are congruent.  19. 3, 1

4.2 Problem Solving (pp. 230–231)  23. Reflexive Property of Congruent Triangles  25. length, width, and depth
27. Yes; alternate interior angles are congruent.

29. no
31. **a.** Corresponding parts of congruent figures are congruent. **b.** They are supplementary to two congruent angles and therefore are congruent. **c.** Sample answer: All right angles are congruent. **d.** Yes; all corresponding parts of both triangles are congruent.

### 4.2 Problem Solving Workshop (p. 232)

1. **a.**

   ![Diagram](image1)

2. **b.**

   ![Diagram](image2)

### 4.3 Skill Practice (pp. 236–237)

1. corresponding angles
2. corresponding sides
3. not true; \( \triangle RST \cong \triangle PQT \)
4. true; SSS
5. congruent
6. congruent
7. true; SSS
8. congruent by the SAS Congruence Postulate.
9. They are congruent by the SAS Congruence Postulate.

### 4.3 Problem Solving (pp. 238–239)

23. Gate 1. Sample answer: Gate 1 has a diagonal support that forms two triangles with fixed side lengths, and these triangles cannot change shape. Gate 2 is not stable because that gate is a quadrilateral which can take many different shapes.

25. **Statements**

   1. \( WX \cong VZ, \ WY \cong VY, \ VZ \cong YX \)
   2. \( WX \cong VZ \)
   3. \( WY \cong VY, \ YZ \cong YX \)
   4. \( WY + YZ = VY + YZ \)
   5. \( WY + YZ = VY + YX \)
   6. \( WZ = VX \)
   7. \( WZ \cong VX \)
   8. \( \triangle VWX \cong \triangle WVZ \)

   **Reasons**

   1. Given
   2. Reflexive Property of Congruence
   3. Definition of segment congruence
   4. Addition Property of Equality
   5. Substitution Property of Equality
   6. Segment Addition Postulate
   7. Definition of segment congruence
   8. SSS

27. **Statements**

   1. \( FM \cong FN, \ DM \cong HN, \ EF \cong GF, \ DE \cong HG \)
   2. \( MN = NM \)
   3. \( FM = FN, \ DM = HN, \ EF = GF \)
   4. \( EF + FN = GF + FN, \ DM + MN = HN + MN \)
   5. \( EF + FN = GF + FM, \ DM + MN = HN + NM \)
   6. \( EN = GM, \ DN = HM \)
   7. \( \overline{EN} \cong \overline{GM}, \ DN \cong HM \)
   8. \( \triangle DEN \cong \triangle HGM \)

   **Reasons**

   1. Given
   2. Reflexive Property of Equality
   3. Definition of segment congruence
   4. Addition Property of Equality
   5. Substitution Property of Equality
   6. Segment Addition Postulate
   7. Definition of segment congruence
   8. SSS

29. Only one triangle can be created from three fixed sides.

### 4.4 Skill Practice (pp. 243–244)

1. included
2. \( \angle XYZ \)
3. \( \angle ZYW \)
4. \( \angle XYZ \)
5. not enough
6. not enough
7. Sample answer: \( \triangle STU, \triangle RVU \); they are congruent by SAS.

19. **A** **B** **C** **E** **F** **G** **H** **D**

21. SAS
22. Yes; they are congruent by the SAS Congruence Postulate.
23. **A** **B** **C** **E** **F** **G** **H** **D**

24. **A** **B** **C** **E** **F** **G** **H** **D**

25. \( \overline{AC} \cong \overline{DF} \)
26. \( \overline{BC} \cong \overline{EF} \)

29. Because \( \overline{RM} \perp \overline{PQ}, \angle RMQ \) and \( \angle RMP \) are right angles and thus are congruent. \( \overline{QM} \cong \overline{MP} \) and \( \overline{MR} \cong \overline{MR} \). It follows that \( \triangle RMP \cong \triangle RMQ \) by SAS.

### 4.4 Problem Solving (pp. 245–246)

31. SAS
32. Two sides and the included angle of one sail need to be congruent to the corresponding sides and angle of the second sail; the two sails need to be right triangles with congruent hypotenuses and one pair of congruent corresponding legs.

35. **Statements**

   1. \( \overline{PQ} \) bisects \( \angle SPT \), \( \overline{ST} \parallel \overline{TP} \)
   2. \( \angle SPQ \cong \angle TPQ \)
   3. \( \overline{PQ} \cong \overline{PQ} \)
   4. \( \triangle SPQ \cong \triangle TPQ \)

   **Reasons**

   1. Given
   2. Definition of angle bisector
   3. Reflexive Property of Congruence
   4. SAS
Alternate Interior Angles Theorem applies.

They are congruent by ASA.

The triangles are congruent by SAS.

The triangles are congruent by ASA if it is included, or ASA if it is not included. If the side is not congruent by either AAS, if the side is not congruent by SSS. Now HK ≅ LP and PL ≅ PL leads to

The triangles are congruent by SSS.

A flow proof shows the flow of a logical argument.

AAS. The angle is not the included angle; the triangles cannot be said to be congruent. Show

3. Yes; the SAS Congruence Postulate

4. Using parts 21a, 21b, and the fact that AC ≅ CA, it can be shown they are congruent by ASA.

Two pairs of angles and an included pair of sides are congruent. The triangles are congruent by SAS.

3. The triangles are congruent by either AAS, if the side is not included, or ASA if it is the included side.

The angle is not the included angle; the triangles cannot be said to be congruent. Show

Congruent parts of Congruent Triangles Postulate.

The triangles are congruent by SSS.

AAS. The angle is not the included angle; the triangles cannot be said to be congruent. Show

Sample answer:

Given

Show

By Corr. parts of Congruent Triangles Postulate.

AAS since ∠NLM ≅ ∠PLQ by the Vertical Angles Congruence Theorem. Then use the Corresponding Parts of Congruent Triangles Theorem.

No; there is no AAA postulate or theorem. No; the segments that are congruent are not corresponding sides.
37. Statements | Reasons
--- | ---
1. \( \overline{MN} \equiv \overline{KN}, \)  
\( \angle PMN \equiv \angle LKN \) | 1. Given
2. \( \angle MNP \equiv \angle KNL \) | 2. Vertical Angles  
Congruence Theorem
3. \( \triangle PMN \equiv \triangle LKN \) | 3. ASA
4. \( MP \equiv KL, \)  
\( \angle MPJ \equiv \angle KLQ \) | 4. Corr. parts of \( \equiv \triangle \)  
are \( \equiv \).
5. \( MJ \equiv PN, \)  
\( KQ \equiv LN \) | 5. Given in diagram
6. \( \angle KQL \) and \( \angle MJP \)  
are right angles. | 6. Theorem 3.9
7. \( \angle KQL \equiv \angle MJP \) | 7. Right Angles  
Congruence Theorem
8. \( \triangle MJP \equiv \triangle KQL \) | 8. AAS
9. \( \angle 1 \equiv \angle 2 \) | 9. Corr. parts of \( \equiv \triangle \)  
are \( \equiv \).

4.7 Skill Practice (pp. 267–268) 1. The angle formed by the legs is the vertex angle. 3. \( A, D; \) Base Angles Theorem 5. \( CD, CE; \) Converse of Base Angles Theorem 7. 12 9. 60° 11. 20 13. 8 15. 39, 39 17. 45, 5 21. There is not enough information to find \( x \) or \( y \). We need to know the measure of one of the vertex angles. 23. 16 ft 25. 39 in. 27. possible 31. \( \triangle ABD \equiv \triangle CDB \) by SAS making \( BA \equiv BC \) by Corresponding parts of congruent triangles are congruent. 33. 60, 120; solve the system \( x + y = 180 \) and \( 180 + 2x - y = 180. \) 35. 50°, 50°, 80°; 65°, 65°, 50°; there are two distinct exterior angles. If the angle is supplementary to the base angle, the base angle measures 50°. If the angle is supplementary to the vertex angle, then the base angle measures 65°.

4.7 Problem Solving (pp. 269–270)
39. 41. a. \( \angle A, \angle ACB, \angle CBD, \) and \( \angle CDB \) are congruent and \( BC \equiv CB \) making \( \triangle ABC \equiv \triangle BCD \) by AAS. b. \( \triangle ABC, \triangle BCD, \triangle CDE, \triangle DEF, \triangle EFG \) c. \( \triangle BCD, \triangle CDE, \triangle DEF, \triangle EFG \)
43. If a triangle is equilateral it is also isosceles, using these two facts it can be shown that the triangle is equiangular.
47. Yes; \( m \angle ABC = 50° \) and \( m \angle BAC = 50°. \) The Converse of Base Angles Theorem guarantees that \( \overline{AC} \equiv \overline{BC} \) making \( \triangle ABC \) isosceles. 49. Sample answer: Choose point \( P(x, y) \neq (2, 2) \) and set \( PT = PU. \) Solve the equation \( \sqrt{x^2 + (y - 4)^2} = \sqrt{(x - 4)^2 + y^2} \) and get \( y = x. \) The point \( (2, 2) \) is excluded because it is a point on \( \overline{TU}. \)

4.8 Skill Practice (pp. 276–277) 1. Subtract one from each \( x \)-coordinate and add 4 to each \( y \)-coordinate. 3. translation 5. reflection 7. no

9. 13. \( (x, y) \rightarrow (x - 4, y - 2) \) 15. \( (x, y) \rightarrow (x + 2, y - 1) \)
17. not a rotation
19. not a rotation
21. not a rotation
23. not a rotation
25. Yes; take any point or any line and rotate 360°.
27. (3, 4) 29. (2, 3) 31. (13, -5) 33. \( \overline{UV} \) 35. \( \triangle DST \)
4.8 Problem Solving (pp. 278–279) 39. 90° clockwise, 90° counterclockwise 41. a. (x, y) → (x - 1, y + 2) b. (x, y) → (x + 2, y - 1) c. No; the translation needed does not match a knight's move.

Chapter Review (pp. 282–285) 1. equiangular 3. An isosceles triangle has at least two congruent sides while a scalene triangle has no congruent sides. 5. ∠L, ∠Q and ∠M, ∠R and ∠N; PQ and LM, QR and MN, RP and NL 7. 120° 9. 60° 11. 60° 13. 18 15. true; SSS 17. true; SAS 19. ∠F, ∠J

21. Show △ACD and △BED are congruent by SAS, which makes AD congruent to BD. △ABD is then an isosceles triangle, which makes ∠1 and ∠2 congruent. 23. Show △QVS congruent to △QVT by SSS, which gives us ∠QSV congruent to ∠QTV. Using vertical angles and the Transitive Property you get ∠1 congruent to ∠2. 25. 20

Algebra Review (p. 287)
1. x > 2
3. x ≤ -9
5. y < -1
7. k ≥ -12
9. x < -5
11. n ≥ -3
13. 2, 8 15. 0, 8 17. -7/3 19. -0.8, 3.4 21. -1/3 23. -5, 14 25. -6/5 27. 27/3

Chapter 5
5.1 Skill Practice (pp. 298–299) 1. midsegment 3. 13
5, 6 7. XZ 9. YX 11. YL 13. (0, 0), (7, 0), (0, 7)
15. Sample answer: (0, 0), (2m, 0), (a, b) 17. (0, 0), (s, 0), (s, s), (0, s) 19. Sample answer: (0, 0), (r, 0), (0, s)

21. AB = \sqrt{p^2 + q^2}, BC = \sqrt{p'^2 + q'^2}, CA = 2p, 0, (p, 0); no; yes; it’s not a right triangle because none of the slopes are negative reciprocals and it is isosceles because two of the sides have the same measure.

23. AB = m, 0, \left(\frac{m}{2}, \frac{n}{2}\right), BC = n, 0, \left(\frac{m}{2}, \frac{n}{2}\right), CA = \sqrt{m^2 + n^2}, \frac{n}{m}; yes; no; one side is vertical and one side is horizontal thus the triangle is a right triangle. It is not isosceles since none of the sides have the same measure.

25. 13 27. You don’t know that DE and BC are parallel. 29. (0, k). Sample answer: Since △OPQ and △RSQ are right triangles with OP ≅ RS and PQ ≅ SQ, the triangles are congruent by SAS. 33. GE = \frac{1}{2} DB, EF = \frac{1}{2} BC, area of △EFG = \frac{1}{2} DB \left(\frac{1}{2} BC\right) = \frac{1}{8} DB(BC), area of △BCD = \frac{1}{2} (DB)(BC).

5.1 Problem Solving (pp. 300–301) 35. 10 ft 37. The coordinates of W are (3, 3) and the coordinates of V are (7, 3). The slope of WV is 0 and the slope of OH is 0 making WV \parallel OH. WV = 4 and OH = 8 thus WV = \frac{1}{2} OH. 39. 16. Sample answer: DE is half the length of FG which makes FG = 8. FG is half the length of AC which makes AC = 16. 41. Sample answer: You already know the coordinates of D are (q, r) and can show the coordinates of F are (p, 0) since \left(\frac{2p + 0}{2}, \frac{0 + 0}{2}\right) = (p, 0). The slope of DE is \frac{r - 0}{q - p} = \frac{r}{q - p} and the slope of BC is \frac{2q - 0}{2q - p} = \frac{r}{q - p} making them parallel. DF = \sqrt{(q - p)^2 + r^2} and BC = \sqrt{(2q - 2p)^2 + (2r)^2} = 2\sqrt{(q - p)^2 + r^2} making DF = 1 BC. 43. a. \frac{1}{2} 4 b. \frac{5}{4} 4 c. 19 45. Sample answer: △ABD and △CBD are congruent right isosceles triangles with A(0, p), B(0, 0), C(p, 0) and D\left(\frac{p}{2}, \frac{p}{2}\right).

AB = p, BC = p, and AB is a vertical line and BC is a horizontal line, so \overline{AB} \perp \overline{BC}. By definition, △ABC is a right isosceles triangle.
Selected Answers

5.1 Problem Solving Workshop (p. 302) 1. The slopes of $AC$ and $BC$ are negative reciprocals of each other, so $AC \perp BC$ making $\angle C$ a right angle; $AC = \sqrt{2}$ and $BC = h\sqrt{2}$ making $\triangle ABC$ isosceles.

3. a. $JL = LK = h$ and $\overline{JL}$ is a horizontal line and $\overline{LK}$ is a vertical line, so $\overline{JL} \perp \overline{LK}; h\sqrt{2}, (h, \frac{h}{2})$.

5. Sample answer: $PQRS$ with $P(0, 0), Q(0, m), R(n, m)$, and $S(n, 0)$. $PR = QS = \sqrt{m^2 + n^2}$ making $\overline{PR} \equiv \overline{QS}$.

5.2 Skill Practice (pp. 306–307) 1. circumcenter 3. 15 5. 55 7. yes 11. 35 13. 50 15. Yes; the converse of the Perpendicular Bisector Theorem guarantees $L$ is on $JP$. 17. 11 19. Sample:

21. Always; congruent sides are created.

5.2 Problem Solving (pp. 308–309) 25. Theorem 5.4 shows you that you can find a point equidistant from three points by using the perpendicular bisectors of the sides of the triangle formed by the three points.

27. Statements

1. $CA = CB$
2. Draw $PC \perp AB$
3. $CA \equiv CB$
4. $CP \equiv CP$
5. $\angle CPA \equiv \angle CPB$
6. $\triangle CPA \equiv \triangle CPB$
7. $PA \equiv PB$
8. $C$ is on the perpendicular bisector of $AB$.

Reasons

1. Given
2. Perpendicular Postulate
3. Definition of segment congruence
4. Reflexive Property of congruence
5. Definition of $\perp$ lines

5.3 Skill Practice (pp. 313–314) 1. bisector 3. 20° 5. 9 7. No; you don’t know that $\angle BAD \equiv \angle CAD$. 9. No; you don’t know that $\overline{HF} \perp \overline{EF}$, or $\overline{HG} \perp \overline{EG}$.
11. No; you don’t know that $\overline{HF} \perp \overline{EF}$, or $\overline{HG} \perp \overline{EG}$.
13. 4 15. No; the segments with length $x$ and 3 are not perpendicular to their respective rays. 17. Yes; $x = 7$ using the Angle Bisector Theorem. 19. 9 21. $GD$ is not the perpendicular distance from $G$ to $CE$. The same is true about $GF$; the distance from $G$ to each side of the triangle is the same. 25. 0.5

5.3 Problem Solving (pp. 315–316) 29. at the incenter of the pond

31. a. Equilateral; 3; the angle bisector would also be the perpendicular bisector. 33. The bisector would be different than the corresponding perpendicular bisector.

33. perpendicular bisectors;

(10, 10); 100 yd; about 628 yd
35. Statements | Reasons
---|---
1. \( \angle BAC \) with \( D \) interior, \( DB \perp \overline{AC}, DC \perp \overline{AC}, DB = DC \) | 1. Given
2. \( \angle ABD \) and \( \angle ACD \) are right angles. | 2. Definition of perpendicular
3. \( \triangle ABD \) and \( \triangle ACD \) are right triangles. | 3. Definition of right triangle
4. \( DB \cong DC \) | 4. Definition of segment congruence
5. \( AD \cong AD \) | 5. Reflexive Property of Segment Congruence
6. \( \triangle ABD \cong \triangle ACD \) | 6. HL
7. \( \angle BAD \cong \angle CAD \) | 7. Corr. parts of \( \cong \triangle \)s are \( \cong \)
8. \( \overline{AD} \) bisects \( \angle BAC \). | 8. Definition of angle bisector

37. a. Use the Concurrency of Angle Bisectors of Triangle Theorem; if you move the circle to any other spot it will extend into the walkway.

b. Yes; the incenter will allow the largest tent possible.

5.4 Skill Practice (pp. 322–323) 1. circumcenter: when it is an acute triangle, when it is a right triangle, when it is an obtuse triangle; incenter: always, never, never;
   centroid: always, never, never; orthocenter: when it is an acute triangle, when it is a right triangle, when it is an obtuse triangle
   2. Definition of perpendicular
   3. Definition of right triangle
   4. Definition of segment congruence
   5. Reflexive Property of Segment Congruence
   6. Given
   7. \( DB = DC \)
   8. \( \overline{AD} \) bisects \( \angle BAC \).

33. \( \frac{5}{2} \) 35. 4

5.4 Problem Solving (pp. 324–325) 37. B; it is the centroid of the triangle. 39. about 12.3 in.\(^2\); median
41.

43. b. Their areas are the same. c. They weigh the same; it means the weight of \( \triangle ABC \) is evenly distributed around its centroid.

5.5 Skill Practice (pp. 331–332) 1. \( \angle A, \overline{BC}, \angle B, \overline{CA}; \angle C, \overline{AB} \) 3. Sample answer: The longest side is opposite the largest angle. The shortest side is opposite the smallest angle. 5. Sample answer: The longest side is opposite the obtuse angle and the two angles with the same measure are opposite the sides with the same length.
9. \( XY, YZ, ZX \) 11. \( DF, FG, GD \)
13. 17. No; \( 3 + 6 \) is not greater than 9. 19. yes
21. 7 in. < \( x \) < 17 in. 23. 6 ft < \( x \) < 30 ft
25. 16 in. < \( x \) < 64 in. 27. \( \angle A \) and \( \angle B \) are the nonadjacent interior angles to \( \angle 1 \) thus by the Exterior Angle Inequality Theorem \( m \angle 1 = m \angle A + m \angle B \), which guarantees \( m \angle 1 > m \angle A \) and \( m \angle 1 > m \angle B \). 29. The longest side is not opposite the largest angle.
31. yes; \( \angle Q, \angle P, \angle R \) 33. 2 < \( x \) < 15
35. \( \angle WXY, \angle Z, \angle ZXY, \angle WYX \) \( \angle ZYX, \angle W; \angle ZYX \) is the largest angle in \( \triangle ZXY \) and \( \angle WYX \) is the middle sized angle in \( \triangle WXY \) making \( \angle W \) the largest angle. \( m \angle WXY + m \angle W = m \angle Z + m \angle ZXY \) making \( \angle WXY \) the smallest.
Theorem. If the locations are not collinear then the distance could be 1 mile or 2 miles. If the locations are not collinear then the distance must be between 1 mile and 2 miles because of the Triangle Inequality Theorem.

5.5 Problem Solving (pp. 333–334) 37. \( m \angle P < m \angle Q, m \angle P < m \angle R; m \angle Q = m \angle R \) 39. a. The sum of the other two side lengths is less than 1080. b. No; the sum of the distance from Granite Peak to Fort Peck Lake and Granite Peak to Glacier National Park must be more than 565. c. \( d > 76 \) km, \( d < 1054 \) km d. The distance is less than 489 kilometers.

5.6 Skill Practice (pp. 338–339) 1. You temporarily assume that the desired conclusion is false, and this leads to a logical contradiction. 3. > 5. < 7. = 11. Suppose \( xy \) is even. 13. \( \angle A \) could be a right angle. 15. The Hinge Theorem is about triangles not quadrilaterals. 17. \( x > \frac{1}{2} \) 19. Using the Converse of the Hinge Theorem \( \angle NRQ > \angle NRP \). Since \( \angle NRQ \) and \( \angle NRP \) are a linear pair \( \angle NRQ \) must be obtuse and \( \angle NRP \) must be acute.

5.6 Problem Solving (pp. 340–341) 23. E, A, D, B, C 25. a. It gets larger; it gets smaller. b. \( KM \) c. Sample answer: Since \( NL = NK = NM \) and as \( m \angle LNK \) increases \( KL \) increases and \( m \angle KNM \) decreases as \( KM \) decreases, you have two pair of congruent sides with \( m \angle LNK \) eventually larger than \( m \angle KNM \). The Hinge Theorem guarantees \( KL \) will eventually be larger than \( KM \). 27. Prove: If \( x \) is divisible by 4, then \( x \) is even. Proof: Since \( x \) is divisible by 4, \( x = 4a \). When you factor out a 2, you get \( x = 2(2a) \) which is in the form \( 2n \), which implies \( x \) is an even number; you start the same way by assuming what you are to prove is false, then proceed to show this leads to a contradiction.

Chapter Review (pp. 344–347) 1. midpoint 3. B 5. 6.2 Problem Solving (pp. 368–370) 23. 1 in. = \( \frac{1}{3} \) mi 25. about 8 mi 27. about 0.0022 mm 29. 48 ft

31. \( \frac{a}{b} = \frac{c}{d} \) 33. \( \frac{a}{b} = \frac{c}{d} \)

35. \( \frac{a + c}{b + d} = \frac{a - c}{b - d} \)

\( (a + c)(b - d) = (a - c)(b + d) \)

\( ab - ad + bc - cd = ab + ad - bc - cd \)

\( -ad + bc = ad - bc \)

\( -2ad = -2bc \)

\( \frac{ad}{b} = \frac{bc}{a} \)
6.3 Skill Practice (pp. 376–377) 1. congruent, proportional 3. \( \angle A \equiv \angle L, \angle B \equiv \angle M, \angle C \equiv \angle N \); \( \frac{AB}{LM} = \frac{BC}{MN} = \frac{CA}{NL} \) 4. \( \angle H \equiv \angle W, \angle J \equiv \angle X, \angle K \equiv \angle Y \); \( \angle L \equiv \angle Z \); \( \frac{HJ}{WX} = \frac{IK}{XY} = \frac{KL}{YZ} = \frac{LH}{ZW} \) 7. similar; 

\[ RSTU \sim WXYZ, \frac{2}{3}. \]

11. 85, 34 13. The larger triangle's perimeter was doubled but should have been halved; perimeter of B 14. 15. always 17. never 19. altitude, 24 21. \( \frac{2}{3} \) in., \( \frac{13}{2} \) in. 23. \( \frac{11}{5} \)

25. \( \frac{17}{3} \) 27. No; in similar triangles corresponding angles are congruent.

6.3 Problem Solving (pp. 378–379) 31. No; the lengths are not proportional. 33. a. 2.8, 4.2, 5.6, 2.1

b. 

\[ y = \frac{10}{7} x, \frac{10}{7}; \text{they are the same.} \]

35. Yes; if \( \ell = w \) then the larger and smaller image would be similar. Sample answer: Let \( \ell = 8, w = 8, \) and \( a = 4; \frac{w}{w + a} = \frac{8}{12} = \frac{8}{12} = \frac{2}{3} \). 37. a. They have the same slope. b. \( \angle BOA \equiv \angle DOC \) by the Vertical Angles Theorem. \( \angle BCO \equiv \angle DCO \) by the Alternate Interior Angles Theorem. \( \angle BAO \equiv \angle DCO \) by the Alternate Interior Angles Theorem. 37. c. \(-3, 0), \( (0, 4), (6, 0), (0, -8); AO = 3, OB = 4, BA = 5, CO = 6, OD = 8, DC = 10 \) d. Since corresponding angles are congruent and the ratios of corresponding sides are all the same the triangles are similar.

6.4 Skill Practice (pp. 384–385) 1. similar 3. \( \triangle FED \)

5. 15, \( y \) 7. 20 9. similar; \( \triangle FGH \sim \triangle DKL \) 11. not similar 13. similar; \( \triangle YZX \sim \triangle YWU \) 15. The AA Similarity Postulate is for triangles, not quadrilaterals. 17. 5 should be replaced by 9, which is the length of the corresponding side of the larger triangle. Sample answer: \( \frac{4}{9} = \frac{6}{x} \)

19. Sample:

\[ \frac{2 \text{ cm}}{3 \text{ cm}} \]

21. \( (10, 0) \) 23. \( (24, 0) \)

b. \( m \angle ADE = m \angle ACB \) and \( m \angle AED = m \angle ABC \) c. \( \triangle ADE \sim \triangle ACB \) 37. a. Sample:

\[ \frac{4}{9} = \frac{6}{x} \]

b. \( \frac{m \angle ADE = m \angle ACB}{m \angle AED = m \angle ABC} \) c. 3. \( \frac{DE}{CB} = \frac{1}{2} \) e. The measures of the angles change, but the equalities remain the same. The lengths of the sides change, but they remain proportional; yes; the triangles remain similar by the AA Similarity Postulate.
**6.5 Skill Practice** (pp. 391–393) 1. \( \frac{AC}{PX} = \frac{CB}{XQ} = \frac{AB}{PQ} \)

3. \( \frac{18}{12} = \frac{15}{10} = \frac{12}{8} = \frac{3}{2} \)

5. \( \triangle RST \) 7. similar; \( \triangle FDE \sim \triangle XWY; 2:3 \)

9. 3

11. \( \triangle ABC \sim \triangle DEC, \angle ACB \equiv \angle DCE \) by the Vertical Angles Congruence Theorem and \( \frac{AC}{DC} \equiv \frac{BC}{EC} = \frac{3}{2} \).

The triangles are similar using the SAS Similarity Theorem. **Sample answer:** The triangle correspondence is not listed in the correct order; \( \triangle ABC \sim \triangle RQP. \)

15.

They are similar by the AA Similarity Postulate.

17.

They are not similar since the ratio of corresponding sides is not constant.

19. 45° 21. 24 23. 16√2

**6.5 Problem Solving** (pp. 393–395) 29. The triangle whose sides measure 4 inches, 4 inches, and 7 inches is similar to the triangle whose sides measure 3 inches, 3 inches, and 5.25 inches. 31. \( \angle CBD \equiv \angle CAE \)

33. a. AA Similarity Postulate b. 75 ft c. 66 ft

35. **Sample answer:** Given that \( D \) and \( E \) are midpoints of \( AB \) and \( BC \) respectively the Midsegment Theorem guarantees that \( AC \parallel DE \). By the Corresponding Angles Postulate \( \angle A \equiv \angle BDE \) and so \( \angle BDE \) is a right angle. Reasoning similarly \( AB \parallel EF \).

By the Alternate Interior Angles Congruence Theorem \( \angle BDE \equiv \angle DEF \). This makes \( \angle DEF \) a right angle that measures 90°.

**6.6 Skill Practice** (pp. 400–401)

1. If a line parallel to one side of a triangle intersects the other two sides then it divides the two sides proportionally.

3. 9 5. Parallel; \( \frac{8}{5} = \frac{12}{7.5} \) so the Converse of the Triangle Proportionality Theorem applies. 7. Parallel; \( \frac{20}{18} = \frac{25}{22.5} \) so the Converse of the Triangle Proportionality Theorem applies. 9. 10 11. 1 15. 9 17. \( a = 9, b = 4, c = 3, d = 2 \)

19. a–b. See figure in part (c).

**6.6 Problem Solving** (pp. 402–403) 21. 350 yd

23. Since \( k_1 \parallel k_2 \parallel k_3 \), \( \angle FDA \equiv \angle CAD \) and \( \angle CDA \equiv \angle FAD \) by the Alternate Interior Angles Congruence Theorem. \( \triangle ACD \sim \triangle DFA \) by the AA Similarity Postulate. Let point \( G \) be at the intersection of \( AD \) and \( BE \). Using the Triangle Proportionality Theorem \( \frac{CR}{BA} = \frac{DG}{GA} \) and \( \frac{DE}{EF} = \frac{DG}{GA} \). Using the Transitive Property of Equality \( \frac{CR}{BA} \equiv \frac{DE}{EF} \).

25. The ratio of the lengths of the other two sides is 1:1 since in an isosceles triangle these two sides are congruent.

27. Since \( XW \parallel AZ, \angle AXZ \equiv \angle WXZ \) using the Alternate Interior Angles Congruence Theorem. This makes \( \triangle AXZ \) isosceles because it is shown that \( \angle A \equiv \angle WXZ \) and by the Converse of the Base Angles Theorem, \( AX = XZ \). Since \( XW \parallel AZ \) using the Triangle Proportionality Theorem you get \( \frac{YW}{WZ} = \frac{XY}{AX} \).

**6.6 Problem Solving Workshop** (p. 405)

1. a. 270 yd b. 67.5 yd c. 4.5 mi/h d. 5.25, 7.5

**Extension** (p. 407) 1. 3:1. **Sample answer:** It’s one unit longer; each of the three edges went from measuring one unit to four edges each measuring \( \frac{1}{3} \) of a unit.
two ratios are set equal to one another. Sample answer: \( \frac{2}{4} = \frac{3}{5} \). 5. 45°, 45°, 90°. 7. \( \frac{20}{3} \). 9. similar;

\( ABCD \sim EFGH \). 11. 68 in. 13. The Triangle Sum Theorem tells you that \( \angle D = 60° \) so \( \angle A \equiv \angle D \) and it was given that \( \angle C \equiv \angle F \) which gives you \( \triangle ABC \sim \triangle DEF \) using the AA Similarity Postulate.

15. Since \( \frac{4}{8} = \frac{3.5}{7} \) and the included angle, \( \angle C \), is congruent to itself, \( \triangle BCD \sim \triangle ACE \) by the SAS Similarity Theorem. 17. not parallel

19.

21.

Algebra Review (p. 423) 1. \( \pm 10 \) 3. \( \pm \sqrt{17} \) 5. \( \pm \sqrt{10} \) 7. \( \pm 2\sqrt{5} \) 9. \( \pm 3\sqrt{2} \) 11. \( \frac{\sqrt{15}}{5} \) 13. \( \frac{\sqrt{21}}{2} \) 15. \( \frac{1}{10} \). 17. \( \frac{\sqrt{2}}{2} \)

Cumulative Review (pp. 428–429) 1. a. 33° b. 123°

3. a. 2° b. 92°

5. \( 3x - 19 = 47 \) Given

3x = 66 Addition Property of Equality

x = 22 Division Property of Equality

7. \(-5(x + 2) = 25 \) Given

\( x + 2 = -5 \) Division Property of Equality

\( x = -7 \) Subtraction Property of Equality

9. Alternate Interior Angles Theorem

11. Corresponding Angles Postulate 13. Linear Pair Postulate 15. 78°, 78°, 24°; acute 17. congruent; \( \triangle ABC \equiv \triangle CDA \), SSS Congruence Theorem 19. not congruent 21. 8 23. similar; \( \triangle FCD \sim \triangle FHG \), SAS Similarity Theorem 25. not similar

27. a. \( y = 59x + 250 \) b. The slope is the monthly membership and the \( y \)-intercept is the initial cost to join the club. c. \( S958 \) 29. Sample answer: Since \( BC \parallel AD \), you know that \( \angle CBD \equiv \angle ADB \) by the Alternate Interior Angles Theorem. \( \overline{BD} \equiv \overline{BD} \) by the Reflexive Property of Segment Congruence and with \( \overline{BC} \equiv \overline{AD} \) given, then \( \triangle BCD \equiv \triangle DAB \) by the SAS Congruence Theorem. 31. 43 mi < \( d < 397 \) mi

Chapter 7

7.1 Skill Practice (pp. 436–438) 1. Pythagorean triple

3. 130 5. 58 7. In Step 2, the Distributive Property was used incorrectly; \( x^2 = 49 + 576, x^2 = 625, x = 25 \).
9. about 9.1 in. 11. 120 m² 13. 48 cm² 15. 40
19. 15, leg 21. 52, hypotenuse 23. 21, leg 25. 11√2

7.1 Problem Solving (pp. 438–439) 31. about 127.3 ft
33. Sample answer: The longest side of the triangle is opposite the largest angle, which in a right triangle is the right angle.

35. a–b.

7.2 Skill Practice (pp. 444–445) 1. hypotenuse 3. right triangle 5. not a right triangle 7. right triangle 9. right triangle 11. right triangle 13. right triangle 15. yes; acute 17. yes; obtuse 19. yes; right 21. no 23. yes; obtuse 27. right 31. < 33. 8 < x < 12

7.2 Problem Solving (pp. 445–447) 35. Measure diagonally across the painting and it should be about 12.8 inches. 37. a. 5 b. \(3^2 + 4^2 = 5^2\) therefore \(\triangle ABC\) is a right triangle.

7.3 Skill Practice (pp. 453–454) 1. similar 3. \(\triangle FHG \sim \triangle HEG \sim \triangle FEH\) 5. about 53.7 ft 7. about 6.7 ft 9. \(\triangle QSR \sim \triangle STR \sim \triangle QTS; RQ\) 11. Sample answer: The proportion must compare corresponding parts, \[\frac{v}{z} = \frac{z}{w + v}\] 13. about 6.7 15. about 45.6 17. about 6.3 21. 3 23. \(x = 9, y = 15, z = 20\) 25. right triangle; about 6.7 27. 25, 12

7.3 Problem Solving (pp. 455–456) 29. about 1.1 ft 31. 15 ft; no, but the values are very close 33. a. \(FH, GF, EF\); each segment has a vertex as an endpoint and is perpendicular to the opposite side. b. \(\sqrt{35}\) c. about 35.5
37. Statements | Reasons
--- | ---
1. \( \triangle ABC \) is a right triangle; \( \overline{CD} \) is the altitude to \( \overline{AB} \). | 1. Given
2. \( \triangle ABC \sim \triangle CBD \) | 2. Theorem 7.5
3. \( \frac{AB}{BC} = \frac{BD}{CD} \) | 3. Definition of similar figures
4. \( \triangle ABC \sim \triangle ACD \) | 4. Theorem 7.5
5. \( \frac{AB}{AC} = \frac{AD}{BD} \) | 5. Definition of similar figures

7.4 Skill Practice (pp. 461–462) 1. an isosceles right triangle 3. \( 7\sqrt{2} \) 5. 3 \( \cdot \) 2; 4 in. 9. \( x = 3, y = 6 \)
11. \( \begin{array}{c|ccccc}
| \hline \hline
| a | 7 | 11 | 5\sqrt{2} | 6 | \sqrt{5} \\
| b | 7 | 11 | 5\sqrt{2} | 6 | \sqrt{5} \\
| c | 7\sqrt{2} | 11\sqrt{2} | 10 | 6\sqrt{2} | \sqrt{10} \\
\hline \end{array} \)
13. \( x = \frac{15}{\sqrt{2}}, y = \frac{15}{\sqrt{2}} \) 15. \( p = 12, q = 12\sqrt{3} \)
17. \( t = 4\sqrt{2}, u = 7 \) 21. The hypotenuse of a 45°-45°-90° triangle should be \( x\sqrt{2} \), if \( x = \sqrt{5} \), then the hypotenuse is \( \sqrt{10} \).
23. \( f = \frac{20\sqrt{3}}{3}, g = \frac{10\sqrt{3}}{3} \)
25. \( x = 4, y = \frac{4\sqrt{3}}{3} \)

7.4 Problem Solving (pp. 463–464) 27. 5.5 ft 29. Sample answer: Method 1. Use the Angle-Angle Similarity postulate, because by definition of an isosceles triangle, the base angles must be the same and in a right isosceles triangle, the angles are 45°. Method 2. Use the Side-Angle-Side Similarity Theorem, because the right angle is always congruent to another right angle and the ratio of sides of an isosceles triangle will always be the same. 31. 10\( \sqrt{3} \) in. 33. a. 45°-45°-90°
for all triangles b. \( \frac{3\sqrt{2}}{2} \) in. \( \times \frac{3\sqrt{2}}{2} \) in. c. 1.5 in. \( \times \) 1.5 in.

7.5 Skill Practice (pp. 469–470) 1. the opposite leg, the adjacent leg 3. \( \frac{24}{7} \) or 3.4286, \( \frac{7}{24} \) or 0.2917 5. \( \frac{12}{5} \) or 2.4, \( \frac{5}{12} \) or 0.4167 7. 7.6 9. 6; 6; they are the same.
11. \( 4\sqrt{3}; 4\sqrt{3} \); they are the same. 13. Tangent is the ratio of the opposite and the adjacent side, not adjacent to hypotenuse. \( \frac{80}{18} \) 15. You need to know:
that the triangle is a right triangle, which angle you will be applying the ratio to, and the lengths of the opposite side and the adjacent side to the angle. 19. 15.5 21. 77.4 23. 60.6 25. 27.6 27. 60; 54 29. 82; 154.2

7.5 Problem Solving (pp. 471–472) 31. 555 ft 33. about 33.4 ft 35. \( \tan A = \frac{a}{b} \) \( \tan B = \frac{b}{a} \); the tangent of one acute angle is the reciprocal of the other acute angle; complementary.
37. a. 29 ft b. 3 ramps and 2 landings;
c. 96 ft

7.6 Skill Practice (pp. 477–478) 1. the opposite leg, the hypotenuse 3. \( \frac{4}{5} \) or 0.8, \( \frac{3}{5} \) or 0.6 5. \( \frac{28}{33} \) or 0.5283, \( \frac{45}{53} \) or 0.8491 7. \( \frac{3}{5} \) or 0.6, \( \frac{4}{5} \) or 0.8 9. \( \frac{1}{2} \) or 0.5, \( \frac{\sqrt{2}}{2} \) or 0.8660 11. \( \alpha = 14.9, b = 11.1 \) 13. \( s = 17.7, r = 19.0 \)
15. \( m = 6.7, n = 10.4 \) 17. The triangle must be a right triangle, and you need either an acute angle measure and the length of one side or the lengths of two sides of the triangle. 19. 3.0 21. 20.2
23. 12; \( \frac{2\sqrt{2}}{2} \) or 0.9428, \( \frac{1}{3} \) or 0.3333 25. 3; \( \frac{\sqrt{5}}{3} \) or 0.4472, \( \frac{2\sqrt{5}}{5} \) or 0.8944 27. 33; \( \frac{56}{65} \) or 0.8615, \( \frac{33}{65} \) or 0.5077 31. about 18 cm

7.6 Problem Solving (pp. 479–480) 33. about 36.9 ft 35. a. b. About 18.1 ft; the height that the spool is off the ground has to be added.

37. Both; since different angles are used in each ratio, both the sine and cosine relationships can be used to correctly answer the question.
1. about 8.8 ft, about 18 ft.

3. The cosine ratio is the adjacent side over the hypotenuse, not opposite over adjacent;

\[ \cos A = \frac{7}{25} \]

5. \[ \cos 34^\circ = \frac{x}{17} \]

\[ x^2 + 9.5^2 = 17^2 \]

7.7 Problem Solving (pp. 485–487) 1. angles, sides 3. 33.7°

5. 74.1° 7. 53.1°

11. \( N = 25^\circ, NP = 21.4, NQ = 23.7 \)

13. \( A \approx 36.9^\circ, B \approx 53.1^\circ, AC = 15 \)

15. \( G \approx 29^\circ, J \approx 61^\circ, HJ = 7.7 \)

17. \( D \approx 29.7^\circ, E \approx 60.3^\circ, ED \approx 534 \)

19. Since an angle was given, the \( \sin^{-1} \) should not have been used; \( \sin 36 = \frac{7}{WX} \)

21. 30° 22. 70.7°

25. 45°

7.7 Problem Solving (pp. 487–489) 35. about 59.7°

37. \( \tan \frac{1}{BC} = \frac{AC}{BC} \) Sample answer: The information needed to determine the measure of \( A \) was given if you used the tangent ratio, this will make the answer more accurate since no rounding has occurred.

39. a.

b. 

c. Sample answer: The longer the rack, the closer to 20° the angle gets.

41. a. 38.4 ft b. about 71.2 ft c. about 48.7 ft

d. About 61.7°, about 51.7°; neither; the sides are not the same, so the triangles are not congruent, and the angles are not the same, so the triangles are not similar. e. I used tangent because the height and the distance along the ground form a tangent relationship for the angle of elevation.

7.6 Problem Solving Workshop (p. 482) 1. about 8.8 ft, about 18 ft.

3. The cosine ratio is the adjacent side over the hypotenuse, not opposite over adjacent;

\[ \cos A = \frac{7}{25} \]

5. \[ \cos 34^\circ = \frac{x}{17} \]

\[ x^2 + 9.5^2 = 17^2 \]

Chapter 8

8.1 Skill Practice (pp. 510–511)

1. Sample:

3. 1260° 5. 2520°

7. quadrilateral 9. 13-gon 11. 117

13. 88\( \frac{1}{3} \) 15. 66

17. The sum of the measures of the exterior angles of any convex \( n \)-gon is always 360°; the sum of the measures of the exterior angles of an octagon is the same as the sum of the measures of the exterior angles of a hexagon. 19. 108°, 72° 21. 176°, 4°

23. The interior angle measures are the same in both pentagons and the ratio of corresponding sides would be the same. 25. 40
8.1 Problem Solving (pp. 512–513)  29. 720°  31. 144°; 36°  
33. In a pentagon draw all the diagonals from one vertex. Observe that the polygon is divided up into three triangles. Since the sum of the measures of the interior angles of each triangle is 180° the sum of the measures of the interior angles of the pentagon is 
\[(5 - 2) \cdot 180° = 5 \cdot 180° = 540°.\]
35. Sample answer: In a convex n-gon the sum of the measures of the interior angles is 
\[(n - 2) \cdot 180°\]
using the Polygon Interior Angles Theorem. Since each of the n interior angles form a linear pair with their corresponding exterior angles you know that the sum of the measures of the n interior and exterior is angles 180°n. Subtracting the sum of the interior angle measures from the sum of the measures of the linear pairs 
\[180°n - [(n - 2) \cdot 180°]\]
you get 360°.

8.2 Skill Practice (pp. 518–519)  1. A parallelogram is a quadrilateral with both pairs of opposite sides parallel; opposite sides are congruent, opposite angles are congruent, consecutive angles are supplementary, and the diagonals bisect each other.
3. \[x = 9, y = 15\] 5. \[a = 55\] 7. \[d = 126, z = 28\] 9. 129°  
11. 61° 13. \[a = 3, b = 10\] 15. \[x = 4, y = 4\] 17. \[BC;\]
opposite sides of a parallelogram are congruent. 19. \[\angle DAC;\] alternate interior angles are congruent. 21. 47°; consecutive angles of a parallelogram are supplementary and alternate interior angles are congruent. 23. 120°; \[\angle EJF\] and \[\angle FJG\] are a linear pair. 25. 35°; Triangle Sum Theorem 27. 130°; sum of the measures of \[\angle HGE\] and \[\angle EGF\]. 31. 26°, 154°  
33. 20, 60°; \[UV \perp TS = QR\] using the fact that opposite sides are congruent and the Transitive Property of Equality. \[\angle TUS \equiv \angle VSU\] using the Alternate Interior Angles Congruence Theorem and \[m \angle TSU = 60°\] using the Triangle Sum Theorem. 35. Sample answer: In a parallelogram opposite angles are congruent. \[\angle A\] and \[\angle C\] are opposite angles but not congruent.

8.2 Problem Solving (pp. 520–521)  39. a. 3 in.  b. 70°  
c. It decreases; it gets longer; the sum of the measures of the interior angles always is 360°. As \(m \angle Q\) increases so does \(m \angle S\) therefore \(m \angle P\) must decrease to maintain the sum of 180°. As \(m \angle Q\) decreases \(m \angle P\) increases moving \(Q\) farther away from \(S\).
41. Sample:

Since \(\triangle ABC \cong \triangle DCB\) you know \(\angle ACB \equiv \angle DBC\) and \(\angle ABC \equiv \angle DCB\). Using the Alternate Interior Angles Converse \(BD \parallel AC\) and \(AB \parallel CD\) thus making \(ABDC\) a parallelogram; if two more triangles are positioned the same as the first, you can line up the pair of congruent sides and form a larger parallelogram because both pairs of alternate interior angles are congruent. Using the Alternate Interior Angles Converse, opposite sides are parallel. 43. Sample answer: Given that \(PQRS\) is a parallelogram you know that \(Q\overline{R} \parallel PS\) with \(\overline{QP}\) a transversal. By definition and the fact that \(\angle Q\) and \(\angle P\) are consecutive interior angles they are supplementary using the Consecutive Interior Angles Theorem. \[x° + y° = 180°\] by definition of supplementary angles.

8.3 Skill Practice (pp. 526–527)  1. The definition of a parallelogram is that it is a quadrilateral with opposite pairs of parallel sides. Since \(AB, CD\) and \(AD, BC\) are opposite pairs of parallel sides the quadrilateral \(ABCD\) is a parallelogram. 3. The congruent sides must be opposite one another. 5. Theorem 8.7 7. Since both pairs of opposite sides of \(JKLM\) always remain congruent, \(JKLM\) is always a parallelogram and \(JK\) remains parallel to \(ML\). 9. 8

11. Sample answer: \(AB = CD = 5\) and \(BC = DA = 8\)

13. Sample answer: \(AB = CD = 5\) and \(BC = DA = \sqrt{65}\)
15. **Sample answer**: Show \( \triangle ADB \cong \triangle CBD \) using the SAS Congruence Postulate. This makes \( AB \parallel CD \) and \( BA \parallel CD \) using corresponding parts of congruent triangles are congruent. 17. **Sample answer**: Show \( AB \parallel DC \) by the Alternate Interior Angles Converse, and show \( AB \parallel BC \) by the Corresponding Angles Converse. 19. 114 21. 50 23. \( PQRS \) is a parallelogram if and only if \( \angle P + \angle R = \angle Q + \angle S \). 25. \((-3, 2)\); since \( DA \) must be parallel and congruent to \( BC \) the slope and length of \( BC \) find point \( D \) by starting at point \( A \). 27. \((-5, -3)\); since \( DA \) must be parallel and congruent to \( BC \) use the slope and length of \( BC \) to find point \( D \) by starting at point \( A \). 29. **Sample answer**: Draw a line passing through points \( A \) and \( B \). At points \( A \) and \( B \) construct \( AP \) and \( BQ \) such that the angle each ray makes with the line is the same. Mark off congruent segments starting at \( A \) and \( B \) along \( AP \) and \( BQ \) respectively. Draw the line segment joining these two endpoints.

### 8.3 Problem Solving (pp. 528–529)

31. **a.** \( EFJK, FGHJ, EGHK \); in each case opposite pairs of sides are congruent. **b.** Since \( EGHK \) is a parallelogram, opposite sides are congruent. **33.** Alternate Interior Angles Congruence Theorem, Reflexive Property of Segment Congruence, Given, SAS, Corr. Parts of \( \cong \triangle \) are \( \cong \), Theorem 8.7

35. The opposite sides that are not marked in the given diagram are not necessarily the same length.

37. In a quadrilateral if consecutive angles are supplementary then the quadrilateral is a parallelogram; in \( ABCD \) you are given \( \angle A \) and \( \angle B \), \( \angle C \) and \( \angle D \) are supplementary which gives you \( m \angle A = m \angle C \). Also \( \angle B \) and \( \angle C \), \( \angle C \) and \( \angle D \) are supplementary which give you \( m \angle B = m \angle D \). So \( ABCD \) is a parallelogram by Theorem 8.8.

39. It is given that \( KP \equiv MP \) and \( JP \equiv LP \) by definition of segment bisector. \( \angle KPL \equiv \angle MPL \) and \( \angle KJP \equiv \angle MLP \) since they are vertical angles. \( \triangle KPL \equiv \triangle MPJ \) and \( \triangle KJP \equiv \triangle ML \) by the SAS Congruence Postulate. Using corresponding parts of congruent triangles are congruent, \( \overline{KJ} \equiv ML \).

and \( \overline{JM} \equiv \overline{LK} \). Using Theorem 8.7, \( JKLM \) is a parallelogram.

41. **Sample answer**: Consider the diagram. \( \overline{FG} \) is the midsegment of \( \triangle CBD \) and therefore is parallel to \( \overline{BD} \) and half of its length. \( \overline{EH} \) is the midsegment of \( \triangle ABD \) and therefore is parallel to \( \overline{BD} \) and half of its length. This makes \( \overline{EH} \) and \( \overline{FG} \) both parallel and congruent. Using Theorem 8.9, \( EFGH \) is a parallelogram.

### 8.4 Skill Practice (pp. 537–539)

1. **Square** 3–8. **3.** Sometimes; \( JKLM \) would need to be a square. **5.** Always; in a rhombus all four sides are congruent. **7.** Sometimes; diagonals are congruent if the rhombus is a square.

9–14. **9.** Always; in a rectangle all interior angles measure 90°. **11.** Sometimes; adjacent sides are congruent if the rectangle is a square. **13.** Sometimes; adjacent sides are congruent if the rectangle is a square. **15.** Square; the quadrilateral has four congruent sides and angles. **17.** Rhombus. **Sample answer**: The fourth angle measure is 40°, meaning that both pairs of opposite sides are parallel. So the figure is a parallelogram with two consecutive sides congruent. But this is only possible if the remaining two sides are also congruent, so the quadrilateral is a rhombus.

19. **rectangle, square** 21. **rhombus, square** 23. parallelogram, rectangle, rhombus, square 25. **7x – 4 is not necessarily equal to 3x + 14;**
(7x - 4) + (3x + 4) = 90, x = 9. 27. Rectangle; JKL M is a quadrilateral with four right angles; x = 10, y = 15.
29. Parallelogram; EFGH is a quadrilateral with opposite pairs of sides congruent; x = 13, y = 2.
33. 90° 35. 16 37. 12 39. 112° 41. 5 43. about 5.6

45. 45° 47. 1 49. \(\sqrt{2}\)
51. Rhombus; four congruent sides and opposite sides are parallel; \(4\sqrt{2}\).

**8.4 Problem Solving (pp. 539–540)**
55. Measure the diagonals. If they are the same it is a square.
57. If a quadrilateral is a rhombus, then it has four congruent sides; if a quadrilateral has four congruent sides, then it is a rhombus; the conditional statement is true since a quadrilateral is a parallelogram and a rhombus is a parallelogram with four congruent sides; the converse is true since a quadrilateral with four congruent sides is also a parallelogram with four congruent sides making it a rhombus. 59. If a quadrilateral is a square, then it is a rhombus and a rectangle; if a quadrilateral is a rhombus and a rectangle, then it is a square; the conditional statement is true since a square is a parallelogram with four right angles and four congruent sides; the converse is true since a rhombus has four right angles and thus a square follows.
61. Since WXYZ is a rhombus the diagonals are perpendicular, making \(\triangle WVX\), \(\triangle WVZ\), \(\triangle YVX\), and \(\triangle YVZ\) right triangles. Since WXYZ is a rhombus \(WX = XY = YZ = ZW\). Using Theorem 8.11 \(WV \equiv WV\) and \(ZV = ZV\). Now \(\triangle WVX \equiv \triangle WVZ \equiv \triangle YVX \equiv \triangle YVZ\). Using corresponding parts of congruent triangles are congruent, you now know \(\triangle WVZ \equiv \triangle WZX\) and \(\triangle YVZ \equiv \triangle YVZ\) which implies \(WY\) bisects \(ZW\) and \(XZ\). Similarly \(\triangle VZ\) bisects \(Z\) and \(Y\). This implies \(Z\) bisects \(Z\) and \(Y\).
63. Sample answer: Let rectangle \(ABCD\) have vertices (0, 0), (a, 0), (a, b), and (0, b) respectively. The diagonal \(AC\) has a length of \(\sqrt{a^2 + b^2}\) and diagonal \(BD\) has a length of \(\sqrt{a^2 + b^2}\).

\[AC = BD = \sqrt{a^2 + b^2}\]

**8.5 Skill Practice (pp. 546–547)**
1. \[\text{trapezoid}\]
3. \[\text{not a trapezoid}\]
5. \[130°, 50°, 150°\]
7. \[118°, 62°, 62°\]
11. \(\text{Trapezoid; } EF \parallel HG\text{ since they are both perpendicular to } EH\). 13. 14 15. 66.5 17. Only one pair of opposite angles in a kite is congruent. In this case \(m \angle B = m \angle D = 120°; m \angle A + m \angle B + m \angle C + m \angle D = 360°, m \angle A + 120° + 50° + 120° = 360°, so } m \angle A = 70°. 19. 80° 21. \(WX = XY = 3\sqrt{2}, YZ = ZW = \sqrt{34}\). 23. \(XY = YZ = 5\sqrt{5}\), \(WX = WZ = 461\). 25. 2 27. 2.3
29.
33. A kite or a general quadrilateral are the only quadrilaterals where a point on a line containing one of its sides can be found inside the figure.

**8.5 Problem Solving (pp. 548–549)**
35. Sample:
37. Since \(BC \parallel AE\) and \(AB \parallel EC\), \(ABCE\) is a parallelogram which makes \(AB \equiv EC\). Using the Transitive Property of Segment Congruence, \(CE \equiv CD\) making \(\triangle ECD\) isosceles. Since \(\triangle ECD\) is isosceles \(\angle D \equiv \angle CED\). \(A \equiv \angle CED\) using the Corresponding Angles Congruence Postulate, therefore \(\angle A \equiv \angle D\) using the Transitive Property of Angle Congruence. \(\angle CED\) and \(\angle CEA\) form a linear pair and therefore are supplementary. \(\angle A\) and \(\angle ABC\), \(\angle CEA\) and \(\angle ECB\) are supplementary since they are consecutive pairs of angles in a parallelogram. Using the Congruent Supplements Theorem \(\angle B \equiv \angle C \equiv \angle ECB\). 39. Given \(JKLM\) is an isosceles trapezoid with \(KL \parallel JK\) and \(JK \equiv LM\). Since pairs of base angles are congruent in an isosceles trapezoid \(\angle JKL \equiv \angle MLK\). Using the Reflexive Property of Segment Congruence \(KL \equiv KL\). \(\triangle JKL \equiv \triangle MLK\) using the SAS Congruence Postulate. Using corresponding parts of congruent triangles are congruent, \(\angle JL \equiv \angle KM\). 

Selected Answers  SA27
41. Given $ABCD$ is a kite with $AB \cong CB$ and $AD \cong CD$. Using the Reflexive Property of Segment Congruence, $BD \cong BD$ and $ED \cong ED$. Using the SSS Congruence Postulate, $\triangle BAD \cong \triangle BCD$. Using corresponding parts of congruent triangles are congruent, $\angle CDE \cong \angle ADE$. Using the SAS Congruence Postulate, $\triangle CDE \cong \triangle ADE$. Using corresponding parts of congruent triangles are congruent, $\angle CED \cong \angle AED$. Since $\angle CED$ and $\angle AED$ are congruent and form a linear pair, they are right angles. This makes $AC \perp BD$.

**Extension** (p. 551)

15. Trapezoid; there is one pair of parallel sides.

17. isosceles trapezoid

19. No; $m \angle F = 109^\circ$ which is not congruent to $\angle E$.

21. Kite; it has two pair of consecutive congruent sides. 23. Rectangle; opposite sides are parallel with four right angles. 25. a. rhombus, square, kite  b. Parallelogram, rectangle, trapezoid; two consecutive pairs of sides are always congruent and one pair of opposite angles remain congruent. 27. Sample answer: $m \angle B = 60^\circ$ or $m \angle C = 120^\circ$; then $AB \parallel CD$ and the base angles would be congruent. 29. No; if $m \angle JKL = m \angle KJM = 90^\circ$, $JKLM$ would be a rectangle. 31. Yes; $JKLM$ has one pair of non-congruent parallel sides with congruent diagonals.

8.6 Problem Solving (pp. 556–557)

33. trapezoid

35. parallelogram 37. Consecutive interior angles are supplementary making each interior angle $90^\circ$.

39. a. Using the definition of a regular hexagon, $UV \cong VQ \cong RS \cong ST$ and $\angle V \cong \angle S$. Using the SAS Congruence Postulate, $\triangle QVU \cong \triangle RST$ and is isosceles. b. Using the definition of a regular hexagon, $QR \cong RT$. Using corresponding parts of congruent triangles are congruent, $QU \cong RU$.

c. Since $\angle Q \equiv \angle R \equiv \angle T \equiv \angle U$ and $\angle VUQ \equiv \angle VQU \equiv \angle STR \equiv \angle SRT$, you know that $\angle UQR \equiv \angle QRT \equiv \angle RTU \equiv \angle TUQ$ by the Angle Addition Postulate; $90^\circ$. d. Rectangle; there are 4 right angles and opposite sides are congruent.

9.3 **Skill Practice** (pp. 593–594)  
1. a line which acts like a mirror to reflect an image across the line
   3.
   5.

9.3 **Problem Solving** (pp. 595–596)  
31. Case 4  
33. Case 1  
35. a. Given a reflection in \(m\)  
maps \(P\) to \(P'\) and \(Q\) to \(Q'\).  
Using the definition of a line of reflection \(\overline{QS} \equiv \overline{Q'S}\) and \(\angle QSR \equiv \angle Q'SR\). Using the Reflexive Property of Segment Congruence, \(\overline{RS} \equiv \overline{RS}\). Using the SAS Congruence Postulate, \(\triangle RSQ \equiv \triangle R'SQ'\).
b. Using corresponding parts of congruent triangles are congruent, \( \overline{RQ} \cong \overline{R'Q'} \). Using the definition of a line of reflection \( \overline{PR} \cong \overline{P'R} \). Since \( \overline{PP'} \) and \( \overline{QQ'} \) are both perpendicular to \( m \), they are parallel. Using the Alternate Interior Angles Theorem, \( \angle SQ'R \cong \angle P'RQ' \) and \( \angle SQR \cong \angle PRQ \). Using corresponding parts of congruent triangles are congruent, \( \angle SQR \cong \angle PRQ \). Using the Transitive Property of Angle Congruence, \( \angle P'RQ' \cong \angle PRQ \). \( \Delta PRQ \cong \Delta P'RQ' \) using the SAS Congruence Postulate. Using corresponding parts of congruent triangles are congruent, \( \overline{PQ} \cong \overline{P'Q'} \) which implies \( PQ = P'Q' \). 

37. Given a reflection in \( m \) maps \( P \) to \( P' \) and \( Q \) to \( Q' \). Also, \( P \) lies on \( m \), and \( \overline{PQ} \) is not perpendicular to \( m \). Draw \( Q'Q \) intersecting \( m \) at point \( R \). Using the definition of line of reflection \( m \) is the perpendicular bisector of \( \overline{Q'Q} \) which implies \( \overline{QR} \cong \overline{QR} \), \( \angle Q'R' \cong \angle QRP \), and \( P \) and \( P' \) are the same point. Using the Reflexive Property of Segment Congruence, \( \overline{RP} \cong \overline{RP} \). Using the SAS Congruence Postulate, \( \triangle Q'R'P' \cong \triangle QRP \). Using corresponding parts of congruent triangles are congruent, \( \overline{Q'P'} \cong \overline{QP} \) which implies \( Q'P' = QP \). 

39. a. \( (3, 5) \) b. \( (0, 6); (-1, 4) \) c. In every case point \( C \) bisects each line segment.

9.4 Skill Practice (pp. 602–603) 1. a point which a figure is turned about during a rotation transformation 3. Reflection; the horses are reflected across the edge of the stream which acts like a line of symmetry. 5. Translation; the train moves horizontally from right to left. 7. A 9. 

13. \( J'(-1, -4), K'(-5, -5), L'(-7, -2), M'(-2, -2) \) 

15. 

17. 

19. The rotation matrix should be first; 

\[
\begin{bmatrix}
0 & 1 \\
-1 & 0
\end{bmatrix}
\begin{bmatrix}
-1 & 2 \\
1 & 3
\end{bmatrix}
\]

25. \((-3, 2, 0)\)

9.4 Problem Solving (pp. 604–605) 29. \( 270^\circ \); the line segment joining \( A' \) to the center of rotation is perpendicular to the line segment joining \( A \) to the center of rotation. 31. \( 120^\circ \); the line segment joining \( A' \) to the center of rotation is rotated \( \frac{1}{3} \) of a circle from the line segment joining \( A \) to the center of rotation. 33. a rotation about a point. Angle Addition Postulate, Transitive, Addition, \( \Delta RPQ \equiv \Delta R'P'Q' \), Corr. Parts of \( \equiv \) are \( \equiv \), definition of segment congruence 35. Given a rotation about \( P \) maps \( Q \) to \( Q' \) and \( R \) to \( R' \). \( P \) and \( R \) are the same point. Using the definition of rotation about a point \( P \), \( PQ = PQ' \) and \( P, R, \) and \( R' \) are the same point. Substituting \( R \) for \( P \) on the left and \( R' \) for \( P \) on the right side, you get \( RQ = R'Q' \).

9.4 Problem Solving Workshop (p. 606) 1. 

3. Since they are rotating in opposite directions they will each place you at \( 90^\circ \) below your reference line. 5. The \( x \)-coordinate is now \(-4\); the \( y \)-coordinate is now \(3\).

9.5 Skill Practice (pp. 611–613) 1. parallel 3. 

5. 

Selected Answers  SA31
9.5 Problem Solving (pp. 613–615) 27. Sample answer: 
\((x, y) \rightarrow (x + 9, y)\), reflected over a horizontal line that separates the left and right prints 31. reflection 33. translation 35. Use the Rotation Theorem followed by the Reflection Theorem. 37. Given a reflection in \(l\) maps \(JK\) to \(J'K'\), a reflection in \(m\) maps \(J'K'\) to \(J''K''\), \(l \parallel m\) and the distance between \(l\) and \(m\) is \(d\). Using the definition of reflection \(l\) is the perpendicular bisector of \(KK''\) and \(m\) is perpendicular bisector of \(K'K''\). Using the Segment Addition Postulate, \(KK'' + K'K'' = KK''\). It follows that \(KK''\) is perpendicular to \(l\) and \(m\). Using the definition of reflection the distance from \(K\) to \(l\) is the same as the distance from \(K\) to \(K'\) and the distance from \(K'\) to \(m\) is the same as the distance from \(m\) to \(K''\). Since the distance from \(l\) to \(K'\) plus the distance from \(K'\) to \(m\) is \(d\), it follows that \(K'K'' = 2d\). 39. a. translation and a rotation b. One transformation is not followed by the second. They are done simultaneously.

9.6 Skill Practice (pp. 621–623) 1. If a figure has rotational symmetry it is the point about which the figure is rotated. 3. 1 5. 1 7. yes, \(72^\circ\) or \(144^\circ\) about the center 9. no 11. Line symmetry, rotational symmetry; there are four lines of symmetry, two passing through the outer opposite pairs of leaves and two passing through the inner opposite pairs of leaves; \(90^\circ\) or \(180^\circ\) about the center. 15. There is no rotational symmetry; the figure has 1 line of symmetry but no rotational symmetry.
17. Sample:

19. Sample:

21. Sample:

23. No; what’s on the left and right of the first line would have to be the same as what’s on the left and right of the second line which is not possible.

27. Sample:

No; the result is the same.

31. No; the ratio of the lengths of corresponding sides is not the same.

9.7 Problem Solving (pp. 631–632)

33. 300 mm

35. 940 mm

37. a. 6 b. 10.5 in.

39. a. 0 4 -2 2 2 -2 -4 0 -8 4

b. c. 0 -2 1 -1 -1 1

d. A reflection in both the x-axis and y-axis occurs as well as dilation.

41. It’s the center point of the dilation.

Chapter Review (pp. 636–639)

1. isometry

3. Count the number of rows, n, and the number of columns, m. The dimensions are $n \times m$.

Sample answer: $\begin{bmatrix} 2 & 0 & 3 \\ -1 & 4 & 7 \end{bmatrix}$ is $2 \times 3$.

5. A
11. bisect each other; 5, 3.

13. rotational symmetry; two, 180° about the center

15. line symmetry, no rotational symmetry; one rotational symmetry, rotational symmetry; two, 180° about the center

17. line symmetry, no rotational symmetry; one rotational symmetry, rotational symmetry; two, 180° about the center

Chapter 10

10.1 Skill Practice (pp. 655–657) 1. diameter 3. G 5. C
7. F 9. B 11. \( \overline{AB} \) is not a secant it is a chord; the length of chord \( \overline{AB} \) is 6. 13. 6, 12
15. 4

19. not tangent; \( 9^2 + 15^2 \neq 18^2 \)

21. 10 23. \( \angle 4, \angle 5, \angle 7 \)
25. \( 132° \)
27. about 105 mi
29. about $7.69
31. translations

10.1 Problem Solving (pp. 657–658) 35. radial spokes
37. 14,426 mi
39. a. Since \( R \) is exterior to \( \odot Q \), \( QR > QP \).
  b. Since \( QR \) is perpendicular to line \( m \) it must be the shortest distance from \( Q \) to line \( m \), thus \( QR < QP \).
  c. It was assumed \( QP \) was not perpendicular to line \( m \) but \( QR \) was perpendicular to line \( m \). Since \( R \) is outside of \( \odot Q \) you know that \( QR > QP \) but Exercise 39b tells you that \( QR < QP \) which is a contradiction. Therefore, line \( m \) is perpendicular to \( QP \).

41. Given \( SR \) and \( ST \) are tangent to \( \odot P \). Construct \( PR, PR \), and \( PS \). Since \( PR \) and \( PT \) are radii of \( \odot P \), \( PR \equiv PT \). With \( PS \equiv PS \), using the HL Congruence Theorem \( \triangle P \equiv \triangle T \). Using corresponding parts of congruent triangles are congruent, \( SR \equiv ST \).

10.2 Skill Practice (pp. 661–662) 1. congruent
3. minor arc; 70° 5. minor arc; 135° 7. minor arc; 115°
9. major arc; 245° 13. Not congruent; they are arcs of circles that are not congruent.
15. You can tell that the circles are congruent since they have the same radius \( \overline{CD} \) .
19. Sample answer: 15°, 185°
10.2 Problem Solving (p. 663) 23. 18°

10.3 Skill Practice (pp. 667–668) 1. Sample answer: Point Y bisects \( \overline{XZ} \) if \( \overline{XY} \cong \overline{YZ} \). 3. 75° 5. 8 7. 5; use Theorem 10.5 and solve \( 5x - 6 = 2x + 9 \). 9. 5; use Theorem 10.6 and solve \( 18 = 5x - 7 \). 11. \( \frac{7}{3} \); use Theorem 10.6 and solve \( 4x + 1 = x + 8 \).
13. \( H \) bisects \( \overline{FG} \) and \( \overline{FG} \); Theorem 10.5. 17. You don’t know that \( \overline{AC} \perp \overline{DB} \) therefore you can’t show \( \overline{BC} \cong \overline{CD} \).
19. Diameter; the two triangles are congruent using the SAS Congruence Postulate which makes \( \overline{AB} \) the perpendicular bisector of \( \overline{CD} \). Use Theorem 10.4. 21. Using the facts that \( \triangle APB \) is equilateral which makes it equiangular and that \( m \overline{AC} = 30° \) you can conclude that \( m \angle APD = m \angle BPD = 30° \). You now know that \( m \overline{BC} = 30° \) which makes \( \overline{AC} \cong \overline{BC} \). \( \triangle APD \cong \triangle BPD \) using the SAS Congruence Postulate since \( BP \cong AP \) and \( PD \cong PD \). Using corresponding parts of congruent triangles are congruent, \( \overline{AD} \cong \overline{BD} \).
Along with \( \overline{DC} \cong \overline{DC} \) you have \( \triangle ADC \cong \triangle BDC \) using the SSS Congruence Postulate. 23. From the diagram \( m \angle AC = m \angle CB \) and \( m \angle AB = x° \), so you know that \( m \angle AC + m \angle CB + x° = 360° \). Replacing \( m \angle CB \) by \( m \angle AC \) and solving for \( m \angle AC \) you get \( m \angle AC = \frac{360° - x°}{2} \). This along with the fact that all arcs have integral measure implies that \( x \) is even.

10.3 Problem Solving (pp. 669–670) 25. \( \overline{AB} \) should be congruent to \( \overline{BC} \). 27. Given \( \overline{AB} \cong \overline{CD} \). Since \( \overline{PA} \), \( \overline{PB} \), \( \overline{PC} \), and \( \overline{PD} \) are radii of \( \odot P \), they are congruent. Using the SSS Congruence Postulate, \( \triangle PCD \cong \triangle PAB \).
Using corresponding parts of congruent triangles are congruent, \( \angle CPD \cong \angle APB \). With \( m \angle CPD = m \angle APB \) and the fact they are both central angles you now have \( m \overline{CD} = m \overline{AB} \) which leads to \( \overline{CD} \cong \overline{AB} \).
29. a. The length of a chord in a circle is the distance from the center of the circle to the chord decreases.
   
   c. Given radius \( r \) and real numbers \( a \) and \( b \) such that \( r > a > b > 0 \). Let \( a \) be the distance from one chord to the center of the circle and \( b \) be the distance from a second chord to the center of the circle. Using the Pythagorean Theorem the length of the chord \( a \) units away from the center is \( 2\sqrt{r^2 - a^2} \) and the length of the chord \( b \) units away from the center is \( \sqrt{r^2 - b^2} \). Using properties of

real numbers \( \sqrt{r^2 - b^2} > \sqrt{r^2 - a^2} \). 31. Given \( \overline{QS} \) is perpendicular bisector of \( \overline{RT} \) in \( \odot L \). Suppose \( L \) is not on \( \overline{QS} \). Since \( \overline{LT} \) and \( \overline{LR} \) are radii of the circle they are congruent. With \( \overline{PL} \cong \overline{PL} \) you now have \( \triangle RLP \cong \triangle TLP \) using the SSS Congruence Postulate. \( \angle RLP \) and \( \angle TPL \) are now congruent and they form a linear pair. This makes them right angles and leads to \( \overline{QL} \) being perpendicular to \( \overline{RT} \). Using the Perpendicular Postulate, \( L \) must be on \( \overline{QS} \) and thus \( \overline{QS} \) must be a diameter.

10.4 Skill Practice (pp. 676–677) 1. inscribed 3. 42° 5. 10° 7. 120° 9. The measure of the arcs add up to \( 370° \); change the measure of \( \angle Q \) to \( 40° \) or change the measure of \( \overline{QS} \) to \( 90° \). 11. \( \angle JMK \), \( \angle JKL \) and \( \angle LKM \), \( \angle JLM \). 13. \( x = 100 \), \( y = 85 \) 15. \( a = 20 \), \( b = 22 \)
17. a. \( 36° \); 180° b. about 25.7°; 180° c. 20°; 180° 19. 90° 21. Yes; opposite angles are 90° and thus are supplementary. 23. No; opposite angles are not supplementary. 25. Yes; opposite angles are supplementary.

10.4 Problem Solving (pp. 677–679) 27. 220,000 km

29. Double the length of the radius. 31. Given \( \angle B \) inscribed in \( \odot Q \). Let \( \angle L = x° \). Point \( Q \) lies on \( \overline{BC} \). Since all radii of a circle are congruent, \( \overline{AQ} \cong \overline{BQ} \). Using the Base Angles Theorem, \( \angle B = \angle A \) which implies \( m \angle A = x° \). Using the Exterior Angles Theorem, \( m \angle AQC = 2x° \) which implies \( m \angle AC = 2x° \).
Solving for \( x \), you get \( \frac{1}{2} m \angle AC = x° \). Substituting you get \( \frac{1}{2} m \angle AC = m \angle B \).
33. Given: \( \overline{ABC} \) is inscribed in \( \odot Q \). Point \( Q \) is in the exterior of \( \overline{ABC} \); Prove: \( m \angle ABC = \frac{1}{2} m \angle AC \); construct the diameter \( \overline{BD} \) of \( \odot Q \) and show \( m \angle ABD = \frac{1}{2} m \angle AD \) and \( m \angle CBD = \frac{1}{2} m \angle CD \).
Use the Arc Addition Postulate and the Angle Addition Postulate to show \( m \angle ABD - m \angle CBD = m \angle ABC \). Then use substitution to show \( 2m \angle ABC = m \angle AC \).
35. Case 1: Given: \( \odot D \) with inscribed \( \triangle ABC \) where \( AC \) is a diameter of \( \odot D \); Prove \( \triangle ABC \) is a right triangle; let \( E \) be a point on \( AC \). Show that \( m \angle EAC = 180^\circ \) and then that \( m \angle B = 90^\circ \). Case 2: Given: \( \odot D \) with inscribed \( \triangle ABC \) with \( \angle B \) a right angle; Prove: \( AC \) is a diameter of \( \odot D \); using the Measure of an Inscribed Angle Theorem, show that \( m \angle C = 180^\circ \). 39. yes

10.5 Skill Practice (pp. 683–684) 1. outside 3. 130° 5. 130° 7. 115° 9. 90° 11. 56° 15. 100° 17. 120°, 100°, 140° 19. a.

b. \( m \overline{AB} = 2m \angle BAC \), \( m \overline{AB} = 2(180 - m \angle BAC) \)
c. when \( AB \) is perpendicular to line \( t \) at point \( A \)

10.5 Problem Solving (pp. 685–686) 23. 50° 25. about 2.8° 27. Given \( \overrightarrow{CA} \) tangent to \( \odot Q \) at \( A \) and diameter \( \overline{AB} \). Using Theorem 10.1, \( AB \) is perpendicular to \( \overrightarrow{CA} \). It follows that \( m \angle CAB = 90^\circ \). This is half of 180°, which is \( m \overline{AB} \); Case 1: the center of the circle is interior to \( \angle CAB \), Case 2: the center of the circle is exterior to \( \angle CAB \).

Construct diameter \( \overline{AD} \). Case 1: Let \( B \) be a point on the left semicircle. Use Theorem 10.1 to show \( m \angle CAB = 90^\circ \). Use the Angle Addition Postulate and the Arc Addition Postulate to show that \( m \angle CAD = \frac{1}{2} m \overline{AB} \). Case 2: Let \( B \) be a point on the right semicircle. Prove similarly to Case 1.

10.6 Skill Practice (pp. 692–693) 1. external segment 3. 5 5. 4 7. 6 9. 12 11. 4 13. 5 15. 1 17. 18

10.6 Problem Solving (pp. 694–695)

21. Statements Reasons
1. Two intersecting chords in the same circle. 1. Given
2. Draw \( AC \) and \( BD \).
3. \( \angle ACD \equiv \angle ABD \), \( \angle CAB \equiv \angle CDB \)
4. \( \triangle ACE \sim \triangle DEB \)
5. \( \frac{EA}{EC} = \frac{ED}{EB} \)
6. \( EA \cdot EB = EC \cdot ED \)

23. Given a secant segment containing the center of the circle and a tangent segment sharing an endpoint outside of a circle. Draw \( AC \) and \( AD \).

\( \angle ADC \) is inscribed, therefore \( m \angle ADC = \frac{1}{2} m \overline{AC} \).

\( \angle CAE \) is formed by a secant and a tangent, therefore \( m \angle CAE = \frac{1}{2} m \overline{AC} \). This implies \( \angle ADC \equiv \angle CAE \).

\( \angle E \equiv \angle E \), therefore \( \triangle AEC \sim \triangle DEC \) using the AA Similarity Postulate. Using corresponding sides of similar triangles are proportional, \( \frac{EA}{EC} = \frac{ED}{EB} \). Cross multiplying you get \( EA^2 = EC \cdot ED \).

25. Given \( EB \) and \( ED \) are secant segments. Draw \( \overline{AD} \) and \( BC \). Using the Measure of an Inscribed Angle Theorem, \( m \angle B = \frac{1}{2} m \overline{AC} \) and \( m \angle D = \frac{1}{2} m \overline{AC} \) which implies \( m \angle B \equiv m \angle D \). Using the Reflexive Property of Angle Congruence, \( \angle E \equiv \angle E \). Using the AA Similarity Postulate, \( \triangle BCE \sim \triangle DAE \). Using corresponding sides of similar triangles are proportional, \( \frac{EA}{EC} = \frac{ED}{EB} \). Cross multiplying you get \( EA \cdot EB = EC \cdot ED \).

27. a. 60° b. Using the Vertical Angles Theorem, \( \angle ACB \equiv \angle FCE \). Since \( m \angle CAB = 60^\circ \) and \( m \angle EFD = 60^\circ \), then \( \angle CAB \equiv \angle EFD \). Using the AA Similarity Postulate, \( \triangle ABC \sim \triangle FEC \). \( \frac{y}{3} = \frac{x + 10}{6} ; y = \frac{x + 10}{2} \)
d. \( y^2 = x(x + 16) \) e. 2, 6 f. Since \( \frac{CE}{CB} = \frac{2}{1} \), let \( CE = 2x \) and \( CB = x \). Using Theorem 10.14, \( 2x^2 = 60 \) which implies \( x = \sqrt{30} \) which implies \( CE = 2\sqrt{30} \).
10.6 Problem Solving Workshop (p. 696) 1. \(2\sqrt{13}\) 3. \(\frac{24}{5}\) 5. Problem Solving 27. The height (or width) always remains the same as the figure is rolled on its edge. 43.a. (1, 9), 13 b. \((x - 1)^2 + (y - 9)^2 = 169\)

9. $51.4^\circ$ 11. $22.5^\circ$ 13. $135^\circ$ 15. about 289.24 units$^2$
17. 7.5 is not the measure of a side length, it is the measure of the base of the triangle, it needs to be doubled to become the measure of the side length; $A = \frac{1}{2} a \cdot n s$, $A = \frac{1}{2} (13)(6)(15) = 585$ units$^2$. 19. about 122.5 units, about 1131.8 units$^2$
21. 63 units, about 294.3 units$^2$ 23. apothem, side length; special right triangles or trigonometry; about 392 units$^2$
25. side length; Pythagorean Theorem or trigonometry; about 204.9 units$^2$ 27. about 79.6 units$^2$ 29. about 1.4 units$^2$ 31. True; since the radius is the same, the circle around the $n$-gons is the same but more and more of the circle is covered as the value of $n$ increases. 33. False; the radius can be equal to the side length as it is in a hexagon.

11.6 Problem Solving (pp. 767–768) 37. 1.2 cm, about 4.8 cm$^2$; about 1.6 cm$^2$ 39. 15.5 in.$^2$; 25.8 in.$^2$
41. $\frac{360}{6} = 60$, so the central angle is $60^\circ$. All of the triangles are of the same side length, $r$, and therefore all six triangles have a vertex on the center with central angle $60^\circ$ and side lengths $r$.
43. Because $P$ is both the incenter and circumcenter of $\triangle ABC$ and letting $E$ be the midpoint of $AB$, you can show that $BD$ and $CE$ are both medians of $\triangle ABC$ and they intersect at $P$. By theConcurrency of Medians of a Triangle Theorem, $BP = \frac{2}{3} BD$ and $CP = \frac{2}{3} CE$. Using algebra, show that $2PD = CP$.
45. a. About 141.4 cm$^2$; square: about 225 cm$^2$, pentagon: about 247.7 cm$^2$, hexagon: about 259.9 cm$^2$, decagon: about 277 cm$^2$; the area is getting larger with each larger polygon. b. about 286.22 cm$^2$, 286.41 cm$^2$

c. circle; about 286.5 cm$^2$
of the small triangle is 4, the area is \(9\frac{1}{3}\), which is the numerator of the fraction. 25. about 82.7%

27. 100%, 50%

11.7 Problem Solving (pp. 776–777) 31. a. \(\frac{2}{5}\) or 40%  
b. \(\frac{3}{5}\) or 60% 33. \(\frac{1}{6}\) or about 16.7%

35. The probability stays the same; the sector takes up the same percent of the area of the circle regardless of the length of the radius. Sample answer: Let the central angle be 90° and the radius be 2 units. The probability for that sector is \(\frac{4\pi}{4\pi} = \frac{1}{4}\). Let the radius be doubled. The probability is \(\frac{16\pi}{16\pi} = \frac{1}{4}\). 37. a. \(\frac{1}{81}\) or 1.2%  
b. about 2.4%  
c. about 45.4%

Chapter Review (pp. 780–783) 1. two radii of a circle 3. \(XZ\) 5. 60 units\(^2\) 7. 448 units\(^2\) 9. 8 units\(^2\) 11. 24 units\(^2\)

13. 10 : 13, 100 : 169, 152.1 cm\(^2\) 15. about 30 ft 17. about 26.09 units 19. about 17.72 in.\(^2\) 21. about 39.76 in., about 119.29 in.\(^2\) 23. \(\frac{4}{7}\) 25. about 76.09%

Algebra Review (p. 785) 1. \(d = (\frac{\sqrt{14.25}}{1.5}) (2)\); 19 mi 3. 29.50 + 0.25\(m\) = 32.75; 13 min 5. 18000\((1 - 0.1)^5\) = \(A\); $10,628.82 7. 0 = -16\(t^2\) + 47\(t\) + 6; about 3.06 sec

Chapter 12 12.1 Skill Practice (pp. 798–799) 1. tetrahedron, 4 faces; hexahedron or cube, 6 faces; octahedron, 8 faces; dodecahedron, 12 faces; icosahedron, 20 faces 3. Polyhedron; pentagonal pyramid; the solid is formed by polygons and the base is a pentagon. 5. Not a polyhedron; the solid is not formed by polygons.

7. 9. 11. 8 13. 24 15. 4, 4, 6 17. 5, 6, 9 19. 8, 12, 18 21. A cube has six faces, and “hexa” means six. 23. convex 25. circle 27. triangle

29. The concepts of edge and vertex are confused; the number of vertices is 4, and the number of edges is 6.

12.1 Problem Solving (pp. 800–801) 35. 18, 12 37. square 39. Tetrahedron; no; you cannot have a different number of faces because of Euler’s Theorem. 41. a. trapezoid  
b. Yes. Sample:  
c. square  
d. Yes. Sample:  
43. no 45. no 47. Yes. Sample:

49. a. It will increase the number of faces by 1, the number of vertices by 2, and the number of edges by 3.  
b. It will increase the number of faces by 1, the number of vertices by 2 and the number of edges by 3.  
c. It will not change the number of faces, vertices, or edges.  
d. It will increase the number of faces by 3, the number of vertices by 6, and the number of edges by 9.
12.2 Skill Practice (pp. 806–808)

1. lateral face

3. 150.80 in.²
5. 27,513.6 ft²
7. 196.47 m²
9. 14.07 in.²
11. 804.25 in.²
13. 9 yd
15. 10.96 in.
19. 1119.62 in.²

12.2 Problem Solving (pp. 808–809)

23. a. 360 in.²
b. There is overlap in some of the sides of the box.
c. Sample answer: It is easier to wrap a present if you have some overlap of wrapping paper.

27. a. 54 units²
b. 52 units²
c. When the red cubes are removed, inner faces of the cubes remaining replace the area of the red cubes that are lost. When the blue cubes are removed, there are still 2 faces of the blue cubes whose area is not replaced by inner faces of the remaining cubes. Therefore, the area of the solid after removing blue cubes is 2 units² less than the solid after removing red cubes.

29. cube

1. height

3. 40 cm²
5. 580 ft²
7. 672.5 mm²

9. The height of the pyramid is used rather than the slant height; \( S = 6^2 + \frac{1}{2}(24)(5) = 96 \text{ ft}^2 \).
11. 12.95 in.²
13. 238.76 in.²
15. 226.73 ft²
19. 981.39 m²

12.3 Problem Solving (pp. 816–817)

27. a. 96 in.²
31. a. Given: \( AB \perp AC; \overrightarrow{DE} \perp \overrightarrow{DC} \)

Prove: \( \triangle ABC \sim \triangle DEC \)

Statements | Reasons
--- | ---
1. \( AB \perp AC; \overrightarrow{DE} \perp \overrightarrow{DC} \) | 1. Given
2. \( \angle BAC \) and \( \angle EDC \) are right angles. | 2. Definition of perpendicular
3. \( \angle BAC \cong \angle EDC \) | 3. Right angles are congruent.
4. \( \overrightarrow{AB} \parallel \overrightarrow{DE} \) | 4. If two lines are cut by a transversal so that corresponding angles are congruent, then the lines are parallel.

5. \( \angle ABC \cong \angle DEC \) | 5. Corresponding Angles Postulate
6. \( \triangle ABC \sim \triangle DEC \) | 6. AA Similarity Postulate

b. 5, \( \frac{5}{2} \)
c. larger cone: \( 24\pi \text{ units}^2 \), smaller cone: \( 6\pi \text{ units}^2 \); the small cone has 25% of the surface area of the large cone.
33. about 24.69 mi²

12.4 Skill Practice (pp. 822–824)

1. cubic units
5. 18 units³
7. 175 in.³
9. 2630.55 cm³
11. 314.16 in.³
13. The radius should be squared; \( V = \pi r^2 h = \pi (4^2)(3) = 48\pi \text{ ft}^3 \).
15. 10 in.
17. 8 in.
19. 821.88 ft³
23. 12.65 cm
25. 2814.87 ft³

12.4 Problem Solving (pp. 824–825)

29. a. 720 in.³
b. 720 in.³
c. They are the same.
31. 159.15 ft³
33. a. 4500 in.³
b. 150 in.³
c. 10 rocks

12.4 Problem Solving Workshop (p. 827)

1. a. about 56.55 in.³
b. about 56.55 in.³
3. \( r = \frac{R\sqrt{2}}{2} \)
5. about 7.33 in.³

12.5 Skill Practice (pp. 832–833)

1. A triangular prism is a solid with two bases that are triangles and parallelograms for the lateral faces while a triangular pyramid is a solid with a triangle for a base and triangles for lateral faces.
The slant height is used in the volume formula instead of the height; $V = \frac{1}{3} \pi (9^2)(12) = 324\pi \approx 1018 \text{ ft}^3$.

13. 6 in.

15. 3716.85 ft$^3$

17. 987.86 cm$^3$

19. 8.57 cm

21. 833.33 in.$^3$

23. 16.70 cm$^3$

25. 26.39 yd$^3$

27. About 91.63 m$^3$

**12.5 Problem Solving** (pp. 834–836)

29. a. 201 in.$^3$

b. 13.4 in.$^3$

31. 3; since the cone and cylinder have the same radius and height, the volume of the cone is used in the volume formula instead of the height; $V = \frac{1}{3} \pi r^2 h$.

b. If you replace the side length in the volume formula, it will multiply the volume by 4.

c. If you replace the height in the volume formula, it will multiply the volume by 4 because $(2s)^2 = 4s^2$.

37. About 77.99 in.$^3$

39. $V_{\text{cone}} = \frac{1}{3} Bh = \frac{1}{3} \pi r^2 h = \frac{\pi}{3} \left(\frac{1}{2} h\right)^2 \cdot h = \frac{\pi h^3}{12}$.

where $B$ is the area of the base of the cone, $r$ is the radius, and $h$ is the height.

5. Each number is \( \frac{1}{3} \) of the previous number; \( \frac{1}{81} \).
7. Sample answer: \(-8 - (-5) = -3 \) 9. Sample answer: \( m \angle A = 90^\circ \) 11. If-then form: if a figure is a square, then it is a four-sided regular polygon; Converse: if a figure is a four-sided regular polygon, then it is a square; Inverse: if a figure is not a square, then it is not a four-sided regular polygon; Contrapositive: if a figure is not a four-sided regular polygon, then it is not a square. 13. true
15. If two coplanar lines are not parallel, then they form congruent vertical angles. 17. might 19. true
21. false 23. true
25. \( 4x + 15 = 39 \) Write original equation. \( 4x = 24 \) Subtraction Property of Equality \( x = 6 \) Division Property of Equality
27. \( 2(-7x + 3) = -50 \) Write original equation. \(-14x + 6 = -50 \) Distributive Property \(-14x = -56 \) Subtraction Property of Equality \( x = 4 \) Division Property of Equality
29. \( 13(2x - 3) = 20x = 3 \) Write original equation. \( 26x = 39 \) Substitution Property of Equality \( 6x = 39 = 3 \) Simple 6x = 42 Division Property of Equality \( x = 7 \) Division Property of Equality
31. \( m \angle KIL, m \angle ABC \); Transitive Property of Equality
33. \( m \angle XYZ \); Reflexive Property of Equality

21. Statements | Reasons
--- | ---
1. \( \overline{XY} \cong \overline{YZ} \cong \overline{ZX} \) | 1. Given
2. \( \overline{XY} = \overline{YZ} = \overline{ZX} \) | 2. Definition of congruence for segments
3. Perimeter of \( \triangle XYZ = \overline{XY} + \overline{YZ} + \overline{ZX} \) | 3. Perimeter formula
4. Perimeter of \( \triangle XYZ = \overline{XY} + \overline{XY} + \overline{XY} \) | 4. Substitution
5. Perimeter of \( \triangle XYZ = 3 \cdot \overline{XY} \) | 5. Simplify.
37. \( 23^\circ \) 39. \( 90^\circ \)
41. Statements | Reasons
--- | ---
1. \( \angle UKV \) and \( \angle VKW \) are complements. | 1. Given
2. \( m \angle UKV + m \angle VKW = 90^\circ \) | 2. Definition of complementary angles
3. \( \angle UKV \cong \angle KXY, \angle VKW \cong \angle KYZ \) | 3. Vertical angles are congruent.
4. \( \angle UKV = m \angle KXY, \angle VKW = m \angle KYZ \) | 4. Definition of angle congruence
5. \( m \angle KYZ + m \angle KXY = 90^\circ \) | 5. Substitution
6. \( m \angle KYZ \) and \( m \angle KXY \) are complements. | 6. Definition of complementary angles

Chapter 3 (pp. 900–901) 1. corresponding 3. consecutive interior 5. corresponding 7. \( \angle HLM \) and \( \angle MJC \) 9. \( \angle FKL \) and \( \angle AML \)
11. \( \overline{BG} \) and \( \overline{CF} \) 13. \( 68^\circ, 112^\circ; m \angle 1 = 68^\circ \) because if two parallel lines are cut by a transversal, then the alternate interior angles are congruent, \( m \angle 2 = 112^\circ \) because it is a linear pair with \( \angle 1 \). 15. 9, 1
17. 25, 19. Yes; if two lines are cut by a transversal so that a pair of consecutive interior angles are supplementary, then the lines are parallel. 21. Yes; if two lines are cut by a transversal so that alternate interior angles are congruent, then the lines are parallel. 23. Yes; if two lines are cut by a transversal so that a pair of consecutive interior angles are supplementary, then the lines are parallel. 25. Neither; the slopes are not equal and they are not opposite reciprocals. 27. Line 2 29. Line 1
31. \( y = \frac{2}{3}x + 2 \) 33. \( y = -2x \) 35. \( y = x + 10 \)
37. \( y = \frac{2}{3}x + \frac{38}{5} \) 39. \( 69^\circ \) 41. \( 73^\circ \) 43. \( 38^\circ \)
45. 1. Given; 2. \( \triangle ABC \) is a right angle; 3. Definition of right angle; 4. \( \overline{BD} \) bisects \( \angle ABC \); 5. Definition of angle bisector; 6. \( m \angle ABD, m \angle BDC \); 7. Substitution Property of Equality; 8. \( m \angle ABD \); 9. Simplify; 10. Division Property of Equality

Selected Answers  SA45
Chapter 4 (pp. 902–903)

1. scalene; right triangle

3. scalene; not a right triangle

5. 58; acute  7. \(\triangle DFG \cong \triangle FDE\); SAS Congruence Postulate or ASA Congruence Postulate

9. \(STWX \cong UTWV\); all pairs of corresponding angles and sides are congruent. 11. 7 13. No; a true congruence statement would be \(\triangle JKM \cong \triangle LKM\).

15. congruent  17. \(\triangle XUV \cong \triangle VWX\); since \(\overline{XV} \cong \overline{XV}\), with the givens you can use the HL Congruence Theorem. 19. \(\triangle HIL \cong \triangle KLF\); use alternate interior angles to get \(\angle HIL \cong \angle JLK\). Since \(\overline{JI} \cong \overline{JL}\), with the given you can use the SAS Congruence Postulate.

21. yes; AAS Congruence Theorem 23. Yes; use the ASA Congruence Postulate. 25. State the givens from the diagram, and state that \(\overline{AB} \cong \overline{AC}\) by the Reflexive Property of Congruence. Then use the SAS Congruence Postulate to prove \(\triangle ABC \cong \triangle CDA\), and state \(\angle 1 \cong \angle 2\) because corresponding parts of congruent triangles are congruent.

27. State the givens from the diagram and state that \(\overline{SR} \cong \overline{SR}\) by the Reflexive Property of Congruence. Then use the Segment Addition Postulate to show that \(\overline{PR} \cong \overline{US}\). Use the SAS Congruence Postulate to prove \(\triangle QPR \cong \triangle TUR\), and state \(\angle 1 \cong \angle 2\) because corresponding parts of congruent triangles are congruent.

29. \(AB = DE = 26\); \(AC = DF = \sqrt{41}\); \(BC = EF = \sqrt{17}\); \(\triangle ABC \cong \triangle DEF\) by the SSS Congruence Postulate, and \(\angle A \cong \angle D\) because corresponding parts of congruent triangles are congruent.

31. \(x = 6, y = 48\) 33. \(x = 2\)

35. \(x = 28, y = 29\)

Chapter 5 (pp. 904–905)

1. \(\overline{AB}\) 3. \(\overline{AC}\) 5. \(\overline{LC}, \overline{AL}\)

7. Sample answer: \(A(1, 0), B(0, 4), C(7, 0)\)

9.

11. 14 13 12 15. 24 17. yes 19. 15 21. No; there is not enough information. 23. Yes; \(x = 17\) by the Angle Bisector Theorem. 25. 17 27. 8 29. angle bisector

31. perpendicular bisector 33. perpendicular bisector and angle bisector 35. \(\overline{JK}, \overline{LK}, \overline{JL}, \angle L, \angle J, \angle K\)

37. 1 in. < \(\ell\) < 17 in. 39. 6 in. < \(\ell\) < 12 in.

41. 2 ft < \(\ell\) < 10 ft 43. > 45. > 47. = 49. > 51. <

Chapter 6 (pp. 906–907)

1. 20°, 60°, 100° 3. 36°, 54°, 90°

5. 4 7. 10 9. –10 11. 10 13. 6 15. 12 17. \(\frac{y}{9}\) 19. 4

21. similar; \(\triangle RPN \sim \triangle STUV, 11:20\) 23. 3:1

25. \(\triangle PQR \sim \triangle LMN; 30\) 27. angle bisector, 7

29. not similar 31. Similar; \(\triangle JKL \sim \triangle NPM\); since \(\overline{JK} \parallel \overline{NP}\) and \(\overline{KL} \parallel \overline{PM}\), \(\angle J \cong \angle PNM\) and \(\angle L \cong \angle PMN\) by the Corresponding Angles Postulate. Then the triangles are similar by the AA Similarity Postulate.

33. Since \(\frac{\overline{KH}}{\overline{TS}} = \frac{\overline{KL}}{\overline{TR}} = \frac{\overline{HI}}{\overline{SR}} = \frac{3}{5}\)

35. \(x = 3, y = 8.4\)
41. enlargement; 1:3

Chapter 7 (pp. 908–909) 1. 50 3. 60 5. 240 ft² 7. right triangle 9. not a right triangle 11. right triangle 13. triangle; acute 15. not a triangle 17. triangle; acute 19. \( \triangle ADB \sim \triangle BDC \sim \triangle ABC; DB \)
21. \( \triangle PSQ \sim \triangle QSR \sim \triangle PQR; RP \)
23. 2 25. 4.8
27. 9.7 29. \( g = 9, h = 9\sqrt{3} \)
31. \( m = 5\sqrt{3}, n = 10 \)
33. \( v = 20, w = 10 \) 35. \( \frac{3}{5}, 0.6; \) \( \frac{5}{3}, 1.6667 \)
37. 6.1
39. 16.5 41. \( x = 12.8, y = 15.1 \)
43. \( x = 7.5, y = 7.7 \)
45. \( x = 16.0, y = 16.5 \) 47. \( GH = 9.2, m \angle G = 49.4°, m \angle H = 40.6° \)

Chapter 8 (pp. 910–911) 1. 112 3. 117 5. 68 7. 120°, 60°
9. about 158.8°, about 21.2° 11. \( a = 5, b = 5 \)
13. \( a = 117°, b = 63° \)
15. \( a = 7, b = 3 \) 17. \( \angle XYZ \)
19. \( YV \)
21. \( ZX \)

23. \( \overline{AB} \parallel \overline{DC}, \overline{AD} \parallel \overline{BC} \)

25. \( \overline{AB} \parallel \overline{DC}, \overline{AD} \parallel \overline{BC} \)

27. Show \( \angle QPR \equiv \angle SRP \) making \( \angle SPQ \equiv \angle QRS \). You now have opposite pairs of angles congruent which makes the quadrilateral a parallelogram.

29. Square; since the quadrilateral is both a rectangle and rhombus it is a square. 31. Rectangle; since the quadrilateral is a parallelogram with congruent diagonals it is a rectangle. 33. 90° 35. 25 37. 0.4
39. 98° 41. Parallelogram; the diagonals bisect one another. 43. Rhombus; it is a parallelogram with perpendicular diagonals. 45. Isosceles trapezoid; it has one pair of parallel opposite sides and congruent base angles. 47. Kite; it has consecutive pairs of congruent sides and perpendicular diagonals.
49. Trapezoid; it has one pair of parallel sides.

Chapter 9 (pp. 912–913) 1. \( (x, y) \rightarrow (x + 4, y - 2); \) \( AB = A'B', BC = B'C', AC = A'C' \) 3. \( (-10, 7) \)

27. 88° 29. Line symmetry, rotational symmetry; the figure has two lines of symmetry, one line passing horizontally through the center of the circle and the other passing vertically through the center of the circle; it has rotational symmetry of 180°.
31. Line symmetry, no rotational symmetry; the figure has one line of symmetry passing vertically through the center of the rectangle; it does not have rotational symmetry.
Chapter 10 (pp. 914–915) 1. Sample answer: \( KF \)

3. Sample answer: \( CD \) 5. Sample answer: \( K \) 7. \( GH \)

9. \( \frac{8}{3} \) 11. 12 13. 4 15. minor arc; 30° 17. minor arc; 105° 19. minor arc; 105° 21. 310° 23. 130° 25. 115°

27. 45° 29. \( AB \parallel DE \) using Theorem 10.3.

31. \( x = 90°, y = 50° \) 33. \( x = 25, y = 22 \) 35. \( x = 7, y = 14 \) 37. 45

39. 55 41. 3 43. 2 45. 2 47. 3 49. \( x^2 + (y + 2)^2 = 16 \)

51. \( (x - m)^2 + (y - n)^2 = h^2 + k^2 \)

53.

Chapter 11 (pp. 916–917) 1. 143 units\(^2\) 3. 56.25 units\(^2\) 5. 60 cm, 150 cm\(^2\) 7. 5 9. 0.8 11. 22 units\(^2\) 13. 70 units\(^2\) 15. 72 units\(^2\) 17. 13.5 units\(^2\) 19. 10:9 21. 2\(\sqrt{2} : 1 \) 23. 14 m 25. about 15.71 units 27. about 28.27 units 29. about 4.71 m 31. about 2.09 in.
